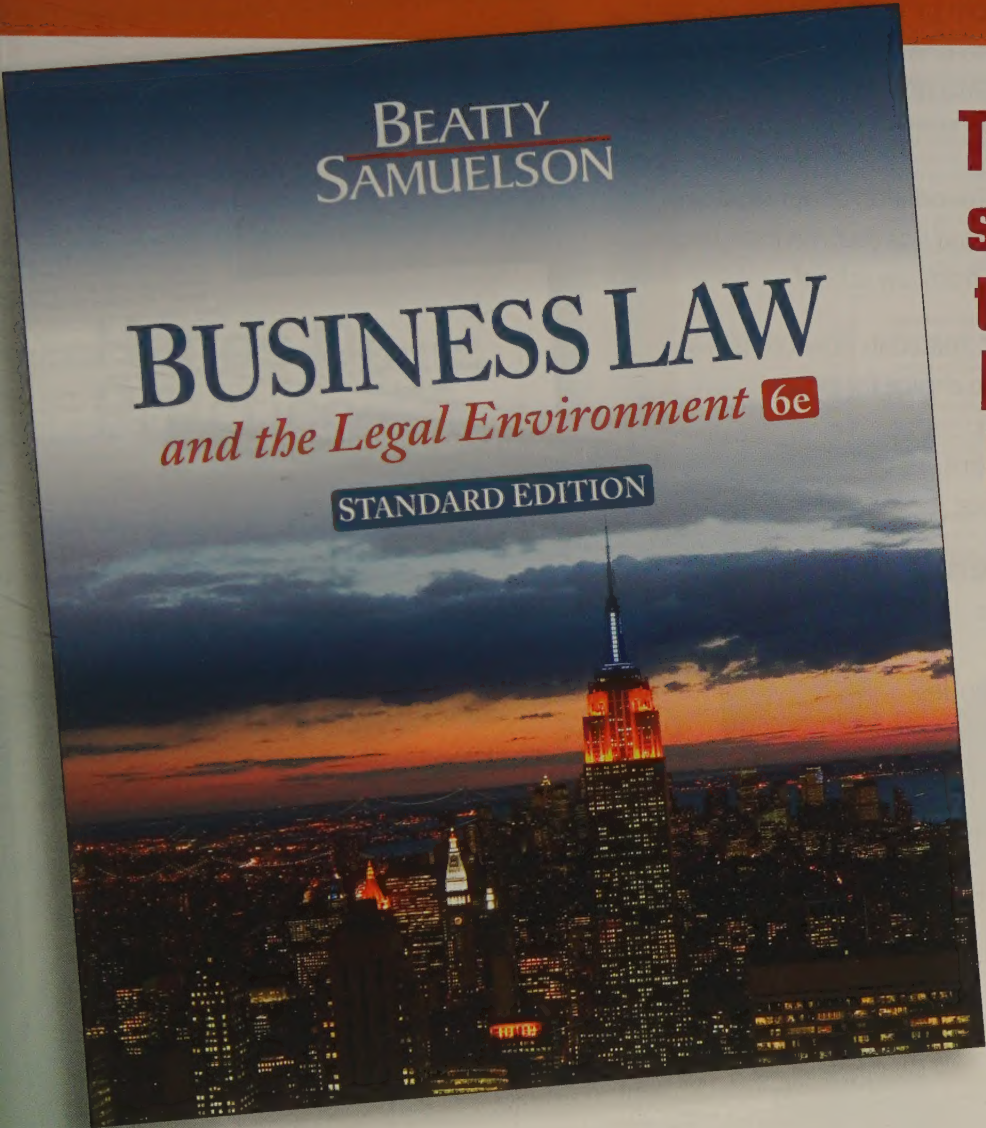
Putting it All into Practice

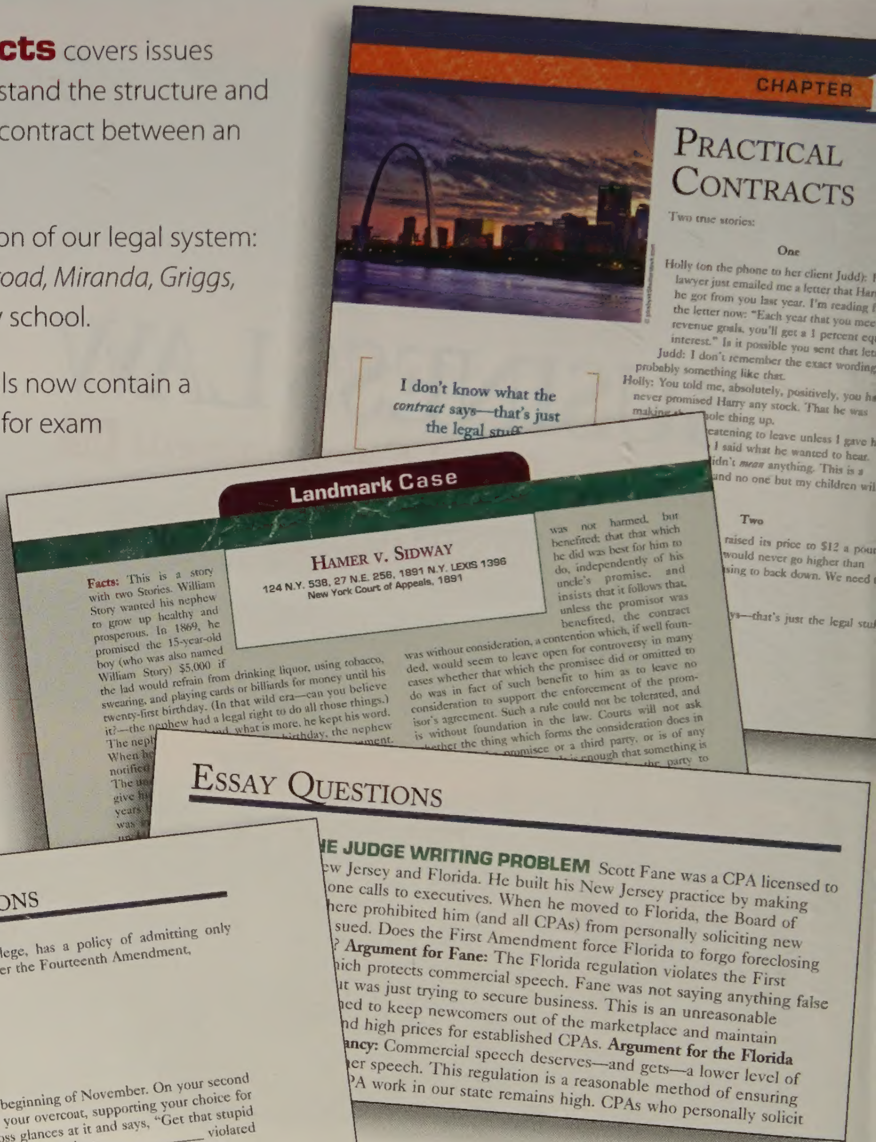


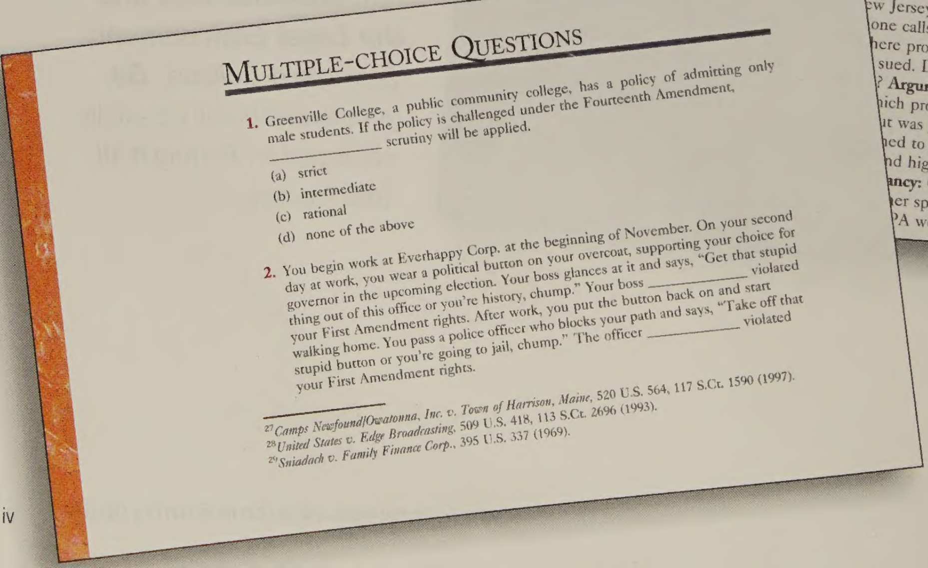
Today's students are tomorrow's business leaders.

Not only do they need to know the legal ramifications of the decisions they will make as managers, they also need hands-on experience with the real-world legal issues and dilemmas they may face as professionals. One text delivers. With ***Business Law and the Legal Environment, Standard Edition, 6e***, your students will be solidly equipped for *Putting It All Into Practice.*

Beatty/Samuelson helps your students Put it into Practice

- New chapter on **Practical Contracts** covers issues your students will really use—how to understand the structure and content of a contract. Examples from a real contract between an actor and a movie studio.
- **Landmark Cases** are the foundation of our legal system: *International Shoe, Palsgraf v. Long Island Railroad, Miranda, Griggs, Chiarella.* The cases you remember from law school.
- Revitalized **End-of-Chapter** materials now contain a broader range of questions: multiple choice for exam prep, essay questions for homework assignments, and discussion questions to enhance the classroom experience.
- Reorganized **Table of Contents** provides a separate unit of chapters that are primarily of interest to CPA students. Additional CPA Topics includes the chapters on secured transactions, negotiable instruments, and accountants' liability.





EXAM Strategy

Question: Fox's Fine Furs claims that Ermine owes $68,000 for a mink coat on which she has stopped making payments. Fox files a complaint and also asks the court clerk to *garnish* Ermine's wages. A garnishment is a court order to an employer to withhold an employee's wages, or a portion of them, and pay the money into court so that there will be money for the plaintiff, if it wins. What constitutional issue does Fox's request for garnishment raise?

Strategy: Ermine is in danger of losing part of her income, which is property. The Due Process Clause prohibits the government (the court) from taking life, liberty or property without due process. What process is Ermine entitled to? (See the "Result" at the end of this section.)

Hallmark Features

Exam Review

1. **CONSTITUTION** The Constitution is a series of compromises about power. (pp. 103–105)
2. **ARTICLES I, II AND III** Article I of the Constitution creates the Congress and grants all legislative power to it. Article II establishes the office of president and defines executive powers. Article III creates the Supreme Court and permits lower federal courts; the article also outlines the powers of the federal judiciary. (pp. 105–111)
3. **COMMERCE CLAUSE** Under the Commerce Clause, Congress may regulate any activity that has a substantial effect on interstate commerce. (pp. 105–107)
4. **INTERSTATE COMMERCE** A state may not regulate commerce in any way that will interfere with interstate commerce. (p. 105)

EXAM Strategy

Question: Maine exempted many charitable institutions from real estate taxes but denied this benefit to a charity that primarily benefited out-of-state residents. Camp Newfound was a Christian Science organization, and 95 percent of its summer campers came from other states. Camp Newfound sued Maine. Discuss.

Strategy: The state was treating organizations differently depending on what states their campers come from. This raised *Commerce Clause* issues. Did the positive aspect or dormant aspect of that clause apply? The dormant aspect applied. What does it state? Apply that standard to theses facts. (See the "Result" at the end of this section.)

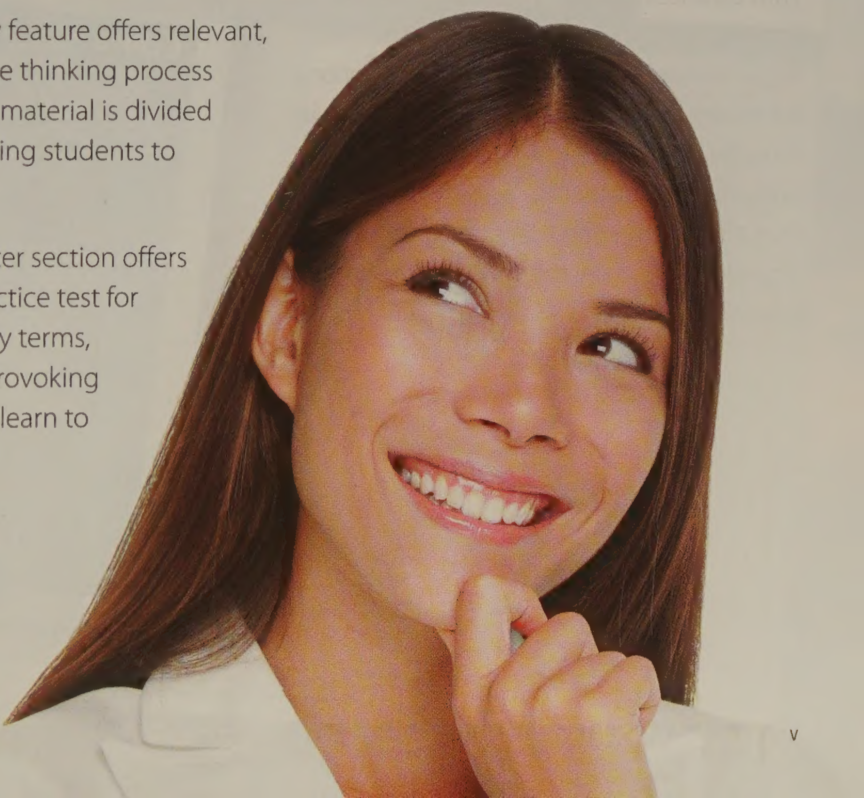
5. **SUPREMACY CLAUSE** Under the Supremacy Clause, if there is a conflict between federal and state statutes, the federal law preempts the field. Even without a conflict, federal law preempts if Congress intended to exercise exclusive control.

Hands-On Practice

Throughout the text, students put chapter concepts into practice with these challenging features:

Exam Strategy: This innovative new feature offers relevant, practical examples that help students learn the thinking process necessary to apply the law. Essential practice material is divided up in a "Problem/Strategy/Result" format, helping students to effectively analyze legal situations.

Exam Review: The new end-of-chapter section offers an excellent study guide for students—or practice test for instructors to assign. It provides a review of key terms, new "Exam Strategy" excerises, and thought-provoking questions that help students apply what they learn to real-business situations.



Active Learning

Active learning features test and enhance understanding throughout each chapter by asking students to practice applying what they have learned in realistic, contextual situations.

Devil's Advocate

You Be the Judge

Ethics

Devil's Advocate Underage drinking is a serious problem. The Court should allow states wide leeway in their efforts to lim the harm. Even if the regulations are imperfect, they may help reduce the damage.

You be the Judge

Kim v. Son
2009 Cal. App. LEXIS 2011
Court of Appeal of California, 2009

Facts: Stephen Son was a part owner and operator of two corporations. Because the businesses were corporations, Son was not personally liable for the debts of either one.

Jinsoo Kim invested a total of about $170,000 in the companies. Eventually, both of them failed, and Kim lost his investment. Son felt guilty over Kim's losses.

Later, Son and Kim met in a sushi restaurant and drank heroic quantities of alcohol. At one point, Son pricked his finger with a safety pin and wrote the following in his own blood: "Sir, please forgive me. Because of my deeds, you have suffered financially. I will repay you to the best of my ability." In return, Kim agreed not to sue him for the money owed.

Son later refused to honor the bloody document and pay Kim the money. Kim filed suit to enforce their contract.

The judge determined that the promise did not create a contract because there had been no consideration.

You Be The Judge: *Was there consideration?*

Argument for Kim: As a part of the deal made at the sushi restaurant, Kim agreed not to sue Son. What could be more of a forbearance than that? Kim had a right to sue at any time, and he gave the right up. Even if Kim was unlikely to win, Son would still prefer not to be sued.

Besides, the fact that Son signed the agreement in blood indicates how seriously he took the obligation to repay his loyal investor. At a minimum, Son eased his guilty conscience by making the agreement, and surely that is worth something.

Argument for Son: Who among you has not at one point or another become intoxicated, experienced emotions more powerful than usual, and regretted them the next morning? Whether calling an ex-girlfriend and professing endless love or writing out an agreement in your own blood, it is all the same.

A promise not to file a meritless lawsuit has no value at all. It did not matter to Son whether or not Kim filed suit because Kim could not possibly win. If this promise counts as value, then the concept of consideration is meaningless because anyone can promise not to sue anytime. Son had no obligation to pay Kim. And the bloody napkin does not change that fact because it was made withou… eration of any kind. It is an ordinar… …ct that creates any legal…

Ethics As the Arizona court notes, its decision agrees with the majority of courts that have considered the issue. In most (but not all) states, anyone serving alcohol to a minor is liable for injuries that result to a third party. The case raises other important issues.

- Should a social host who serves alcohol to an *adult* be liable for resulting harm? New Jersey has answered "Yes" to this question. In the Garden State, if a social host pours drinks for a friend, aware that he is becoming drunk, and the friend injures a third party, the host is fully liable. The majority of states to consider this issue have reached the opposite conclusion, holding that a social host is not liable for harm caused by an adult drinker. Are the majority of states correct to distinguish between adult and underage guests, holding a social host liable only for serving minors? Or is New Jersey correct to scrap this distinction?
- Many states now have some type of **dram act**, making liquor stores, bars, and restaurants liable for serving drinks to intoxicated customers who later cause harm. Dram shop laws force a financial dilemma on such firms. The more a tavern or café encourages its customers to drink, the greater its revenue—but also the larger its risk of a liability lawsuit. Do dram shop laws work? Yes, answer the authors of one economic study. In states with such statutes, bars monitor underage drinking more aggressively, refuse drinks earlier to an intoxicated customer, check the references of their own employees more carefully, and prohibit their workers from drinking on the job. Dram shop laws may be a promising way to reduce drunk driving accidents.[1] But are these laws reasonable? Is holding a bar responsible more reasonable than holding liable a person hosting a party at his house?
- There are many signs that society is fed up with drunk drivers. Some states have considered reducing blood alcohol limits for drunk driving to .05, which would place a typical person "over the limit" after two drinks. Are such proposals reasonable?

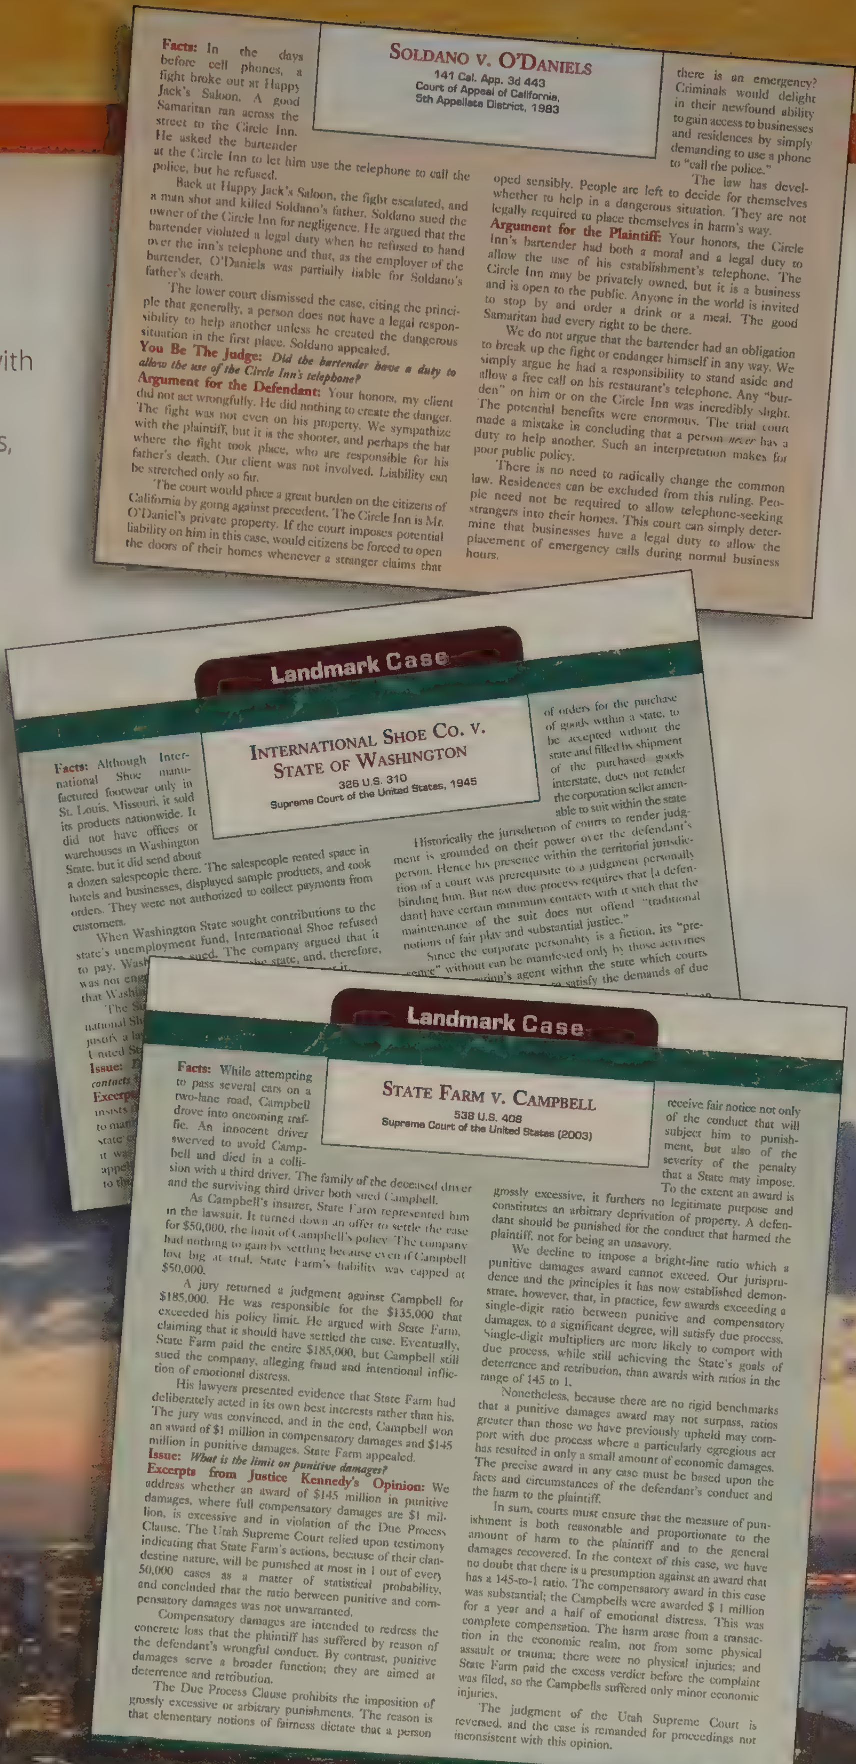
Concepts in Context

This text's strong narrative was developed with business students, not law students, in mind. It drives understanding of general legal concepts by putting them into context for students. The authors' clear, concise style introduces each topic with familiar, everyday scenarios that students can easily relate to. Plus, these intriguing scenarios grab students' attention and make them want to keep reading.

New Cases

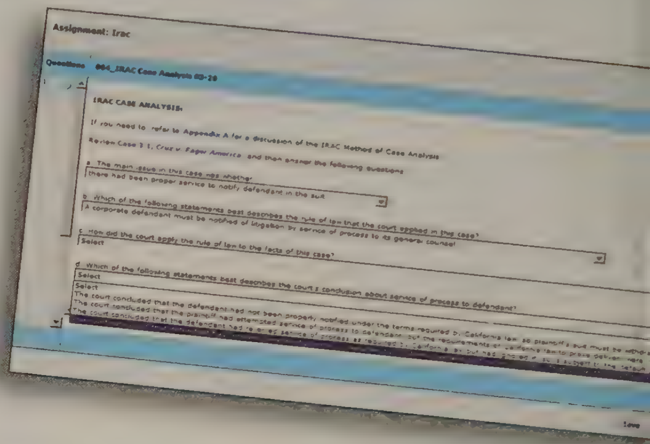
Captivating cases in the new edition give students an up-close, personal experience with business law in action. New and interesting cases bring legal concepts to life for students, enabling them to see firsthand how the law can apply to real-world situations.

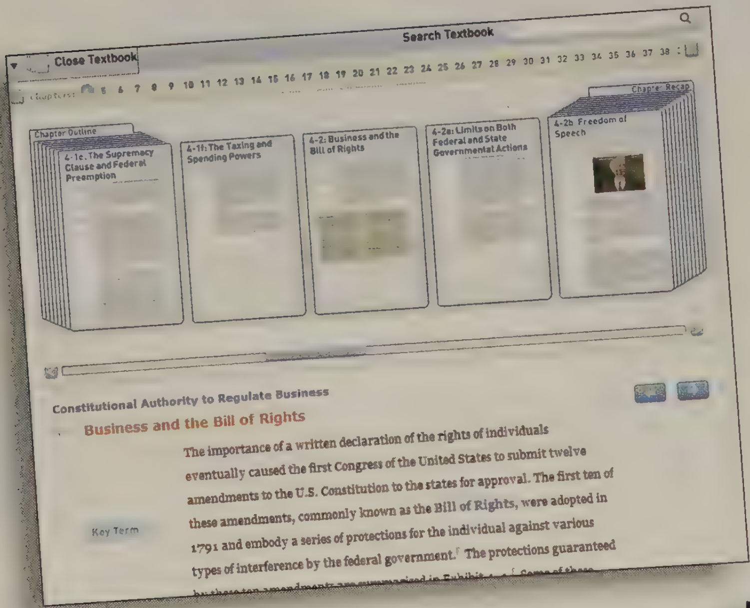
- Soldano v. O'Daniels
- Totes-Isotoner Co. v. United States
- Reid v. Google
- State Farm v. Campbell
- eBay v. Newmark



Put it into Practice Online

The innovative **CengageNOW** ***for Business Law*** web-based application offers ready-made, automatically graded homework assignments. Only **CengageNOW** reports content as it relates to core business program, national, and even regional learning standards, allowing you to track student performance throughout your course. A number of assignment question types test a variety of student proficiencies—from simple reading comprehension to more complex critical thinking, legal reasoning, and case analysis skills. Visit **www.cengage.com/coursemaster** for more details.



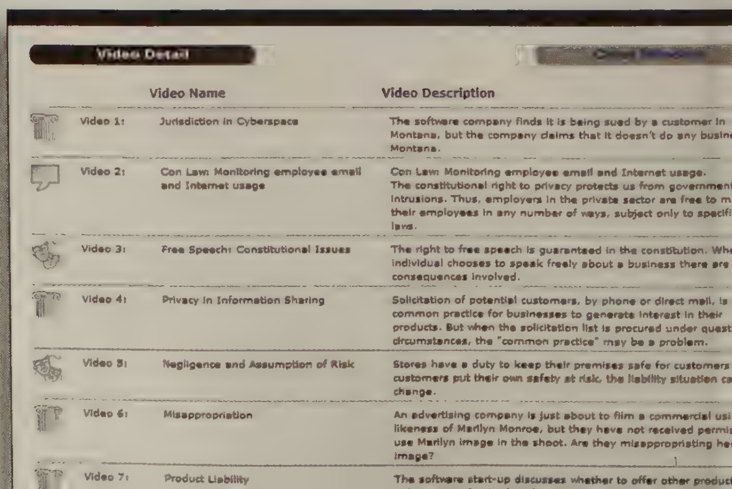


Aplia for Business Law

is an online, interactive homework solution that ensures students stay on top of their coursework with regularly scheduled critical thinking and case analysis assignments. Find more details at **www.aplia.com/cengage**.

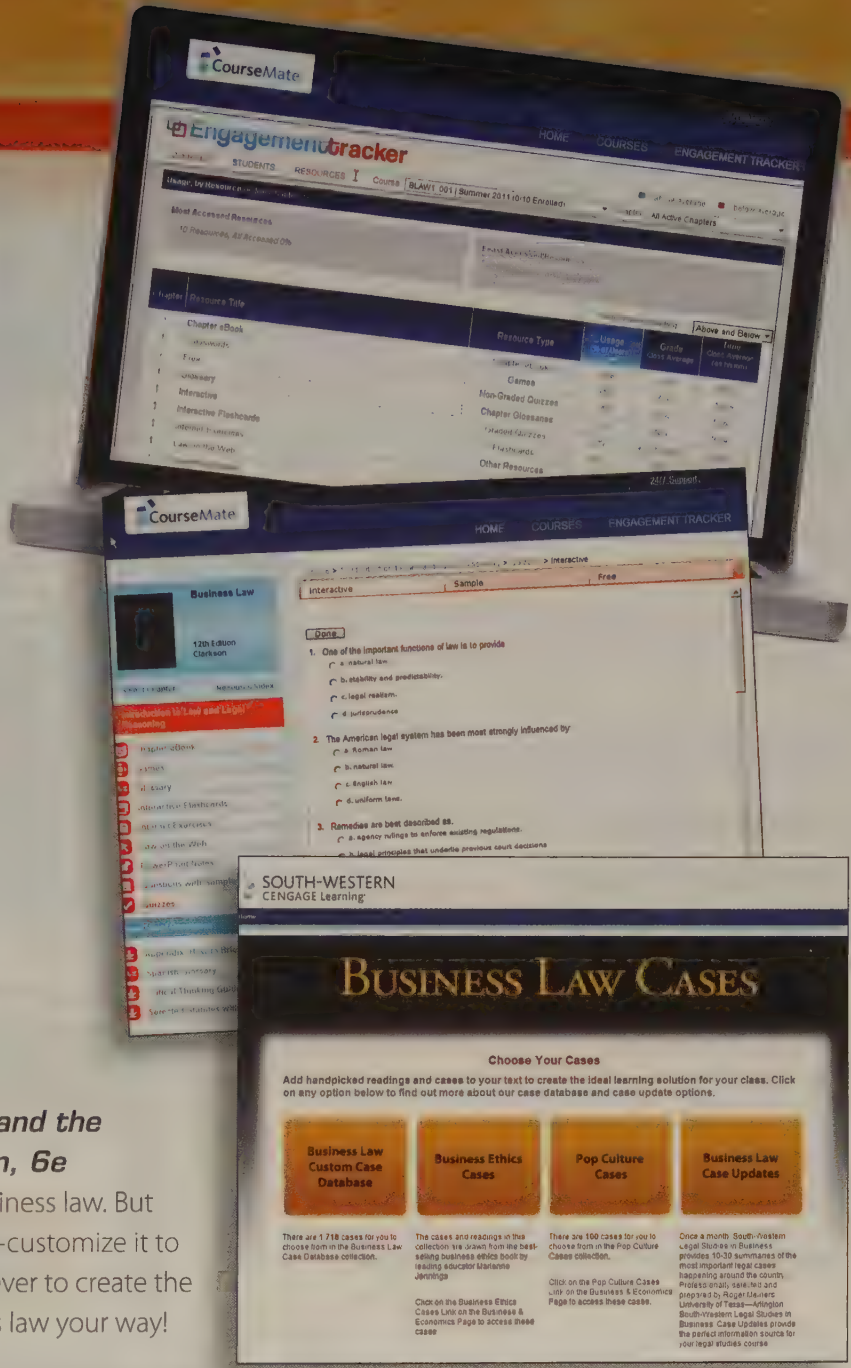
The Business Law Digital Video Library

is our most popular digital asset! And it's no wonder: The DVL helps your students link their everyday experiences to legal ideas, spark classroom discussion, and reinforce core concepts. Learn more at **http://wdvl.westbuslaw.com/**.



CourseMate

Cengage Learning's CourseMate brings course concepts to life with interactive learning, study, and exam preparation tools that support the printed textbook. And, with CourseMate's Engagement Tracker feature, you can uncover which concepts are most difficult for your class and monitor time on task. You'll be able to identify at-risk students early and see class and individual progress. Find out more at **www.cengage.com/coursemate**.



Flexible, Customizable Content

Beatty/Samuelson's Business Law and the Legal Environment, Standard Edition, 6e truly sets the standard for excellence in business law. But there is one way to make it even stronger—customize it to fit your unique needs. Now it's easier than ever to create the perfect learning solutions to teach business law your way!

Cengage Case Database Collections

Add handpicked readings and cases to your text to create the ideal learning solution for your class. Take a look at our case databases below and find out more about our case database and case update options at **www.cengage.com/community/blaw.**

Note from the Authors

New to This Edition

A New Chapter: Practical Contracts

The contracts chapters in this and other business law texts focus on the *theory* of contract law. And that theory is important. But our students tell us that theory, by itself, is not enough. They need to know how these abstract rules operate in *practice*. They want to understand the structure and content of a standard agreement. Our students ask questions such as: Do I need a written agreement? What do these legal terms *really* mean? Are any important provisions missing? What happens if a provision is unclear? Do I need to hire a lawyer? How can I use a lawyer most effectively? These are the questions that we answer in this new chapter. As an illustration throughout the chapter, we use a real contract between a movie studio and an actor.

Landmark Cases

As a general rule, we want our cases to be as current as possible—reporting on the world as it is now. However, sometimes students can benefit from reading vintage cases that are still good law and also provide a deep understanding of how and why the law has developed as it has. Thus, for example, we have added *Miranda v. Arizona*. Reading this case provides students with a much better understanding of why the Supreme Court created Miranda rights. And this context helps students follow the recent Supreme Court rulings on *Miranda*. Other landmark cases include: *Palsgraf v. Long Island Railroad*, *Hawkins v. McGee* (the case of the hairy hand), *Hadley v. Baxendale*, *Griggs v. Duke Power Co.*, and *Chiarella v. United States*.

CPA Material

We have made two changes to the CPA material. First, faculty have told us that they are sometimes pressured to teach the CPA material, even if not really necessary, because students feel cheated if they skip a chapter. To solve this problem, we have created a separate unit entitled **Additional CPA Topics**. In it, we have placed topics that are of primary interest to accounting students: Secured Transactions, Negotiable Instruments, and Accountants' Liability. Certainly all professors have the option of including this material in their courses, but those who want to skip it will now have free rein to do so.

Second, to reflect the changes in the new CPA exam, we have eliminated the chapter on Article 4 of the UCC, entitled Liability for Negotiable Instruments: Banks and Their Customers. We have taken this step for several reasons: (1) this material is no longer covered on the CPA exam, (2) it is not as relevant as it used to be and (3) faculty would like more breathing room in their syllabus. Also, we felt that class time would be better spent on Practical Contracts than on a third day of negotiable instruments.

The New Patent Law

This statute represents the most major change in patent law in our lifetime.

End of Chapter Material

To facilitate student learning and class discussion, we have overhauled the study questions at the end of the chapters. They are now divided into three parts:

1. Multiple Choice Questions. Many instructors use this format in their tests, so it seemed appropriate to provide practice questions. The answers to these multiple choice questions are available to students online.
2. Essay Questions. Students can use these as study questions and professors can also assign them as written homework problems.
3. Discussion Questions. Instructors can use these questions to enhance class discussion. If assigned in advance, students will have a chance to think about the answers before class. This format is familiar to students because business cases often pose discussion questions in advance.

New Material

We have, of course, added substantial new material, with a particular focus on the Internet and social media. For example, there is a discussion in the Securities Law chapter about special issues involving Facebook and LinkedIn. The Employment Law chapter includes a section on social media. The chapter on the Life and Death of a Corporation uses Facebook's charter as an illustration. There are new cases involving eBay and craigslist. In addition, the chapter on Starting a Business includes a new section about Benefit organizations—both Corporations and LLCs.

Staying Current: Our Blog, Facebook and Twitter

Business law changes rapidly. To find out about new developments, visit our blog at bizlawupdate.com. If you "like" our Facebook page at Beatty Business Law or follow us on Twitter @bizlawupdate, you will automatically receive a notification whenever we post to the blog.

The Beatty/Samuelson Difference

It has been 18 years since we began work on the first edition of this textbook. At the time, publishers warned us that our undertaking was risky because there were already so many business law texts. Despite these warnings, we were convinced that there was a market for a business law book that was different from all the others. Our goal was to capture the passion and excitement, the sheer enjoyment, of the law. Business law is notoriously complex, and as authors, we are obsessed with accuracy. Yet this intriguing subject also abounds with human conflict and hard-earned wisdom, forces that can make a law book sparkle.

Now, as the sixth edition goes to press, we look back over the past eighteen years and are touched by unsolicited comments from students, such as these posted on Amazon: "Glad I purchased this. It really helps put the law into perspective and allows me as a leader to make intelligent decisions. Thanks." Or, "I enjoyed learning business law and was happy my college wanted this book. THUMBS UP!" We think of the students who have emailed us to say, "In terms of clarity, comprehensiveness and vividness of style, I think it's probably the best textbook I've ever used in any subject," and "I had no idea business law could be so interesting." Or the faculty who have told us, "Until I read your book I never really understood UCC 2-207" or, "With your book, we have great class discussions." Comments such as these never cease to thrill us and to make us grateful that we persisted in writing a business law text like no other—a book that is precise and authoritative, *yet a pleasure to read.*

Comprehensive. Staying comprehensive means staying current. This sixth edition contains nearly 100 new cases. Almost all were reported within the last two or three years, and many within the last 12 months. We never include a new court opinion merely because it is recent. Yet the law evolves continually, and our willingness to toss out old cases and add important new ones ensures that this book—and its readers—remain on the frontier of legal developments.

Strong Narrative. The law is full of great stories, and we use them. Your students and ours should come to class excited. Look at Chapter 3, on dispute resolution. No tedious list of next steps in litigation, this chapter teaches the subject by tracking a double-indemnity lawsuit. An executive is dead. Did he drown accidentally, obligating the insurance company to pay? Or did the businessman commit suicide, voiding the policy? The student follows the action from the discovery of the body, through each step of the lawsuit, to the final appeal.

Students read stories and remember them. Strong narratives provide a rich context for the remarkable quantity of legal material presented. When students care about the material they are reading, they persevere. We have been delighted to find that they also arrive in class eager to question, discuss, and learn.

Precise. The great joy of using English accurately is the power it gives us to attack and dissect difficult issues, rendering them comprehensible to any lay reader. This text takes on the most complex legal topics of the day, yet it is appropriate for *all college and graduate level students*. Accessible prose goes hand in hand with legal precision. We take great pride in walking our readers through the most serpentine mazes this tough subject can offer. UCC section 2-207, on "battle of forms" conflicts, is hardly sexy material, but it is important. We spotlight the real-world need for section 2-207, and then use pinpoint directions to guide our readers through its many switchbacks, arriving at a full understanding with sanity and good humor intact.

As we explore this extraordinary discipline, we lure readers along with quirky anecdotes and colorful diagrams. However, before the trip is over, we insist that students:

- gauge policy and political considerations,
- grapple with legal and social history,
- spot the nexus between disparate doctrines, and
- confront tough moral choices.

Authoritative. We insist, as you do, on a law book that is indisputably accurate. A professor must teach with assurance, confident that every paragraph is the result of exhaustive research and meticulous presentation. Dozens of tough-minded people spent thousands of hours reviewing this book, and we are delighted with the stamp of approval we have received from trial and appellate judges, working attorneys, scholars, and teachers.

We reject the cloudy definitions and fuzzy explanations that can invade judicial opinions and legal scholarship. To highlight the most important rules, we use bold print, and then follow with vivacious examples written in clear, forceful English. We cheerfully venture into contentious areas, relying on very recent decisions. Can a creditor pierce the veil of an LLC? What are the rights of an LLC member in the absence of an operating agreement? Where there is doubt about the current (or future) status of a doctrine, we say so. In areas of particularly heated debate, we footnote our work: we want you to have absolute trust in this book.

A Book for Students. We have written this book as if we were speaking directly to our students. We provide black letter law, but we also explain concepts in terms that hook students. Every chapter begins with a story, either fictional or real, to illustrate the issues in

the chapter and provide context. Over the years, we have learned how much more successfully we can teach when our students are intrigued. No matter what kind of a show we put on in class, *they are only learning when they want to learn.*

Many of our students were not yet born when George H. W. Bush was elected president. They come to college with varying levels of preparation; many now arrive from other countries. We have found that to teach business law most effectively we must provide its context. Only with this background do students grasp the importance and impact of our laws.

At the same time, we enjoy offering "nuts and bolts" information that grab students: how to obtain a free credit report, how scam artists create car accidents in order to file fraudulent insurance claims, how to create a living will. Students respond enthusiastically to this approach. One professor asked a student to compare our book with the one that the class was then using. This was the student's reaction: "I really enjoy reading the [Beatty & Samuelson] textbook, and I have decided that I will give you this memo ASAP, but I am keeping the book until Wednesday so that I may continue reading. Thanks! :-)"

Along with other professors, we have used this text in courses for undergraduates, MBAs, and Executive MBAs, the students ranging in age from 18 to 55. This book works, as some unsolicited comments indicate:

- An undergraduate wrote, "This is the best textbook I have had in college, on any subject."
- A business law professor stated that the "clarity of presentation is superlative. I have never seen the complexity of contract law made this readable."
- An MBA student commented, "I think the textbook is great. The book is relevant, easy to understand, and interesting."
- A state supreme court justice wrote that the book is "a valuable blend of rich scholarship and easy readability. Students and professors should rejoice with this publication."
- A Fortune 500 vice president, enrolled in an Executive MBA program, commented, "I really liked the chapters. They were crisp, organized, and current. The information was easy to understand and enjoyable."
- An undergraduate wrote, "The textbook is awesome. A lot of the time I read more than what is assigned—I just don't want to stop."

Humor. Throughout the text we use humor—judiciously—to lighten and enlighten. Not surprisingly, students have applauded—but is wit appropriate? How dare we employ levity in this venerable discipline? We offer humor because we take law seriously. We revere the law for its ancient traditions, its dazzling intricacy, its relentless though imperfect attempt to give order and decency to our world. Because we are confident of our respect for the law, we are not afraid to employ some levity. Leaden prose masquerading as legal scholarship does no honor to the field.

Humor also helps retention. Research shows that the funnier or more bizarre the example, the longer students will remember it. Students are more likely to remember a contract problem described in an original setting, and from that setting recall the underlying principle. By contrast, one widget is hard to distinguish from another.

Features

We chose the features for our book with great care. Each feature responds to an essential pedagogical goal. Here are some of those goals and the matching feature.

Exam Strategy

GOAL: To help students learn more effectively and to prepare for exams. In developing this feature, we asked ourselves: What do students want? The short answer is—a good grade in the course. How many times a semester does a student ask you, "What can I do to study for the exam?" We are happy to help them study and earn a good grade because that means that they will also be learning.

About six times per chapter, we stop the action and give students a two-minute quiz. In the body of the text, again in the end-of-chapter review, and also in the Instructor's Manual, we present a typical exam question. Here lies the innovation: we guide the student in analyzing the issue. We teach the reader—over and over—how to approach a question: to start with the overarching principle, examine the fine point raised in the question, apply the analysis that courts use, and deduce the right answer. This skill is second nature to lawyers but not to students. Without practice, too many students panic, jumping at a convenient answer, and leaving aside the tools they have spent the course acquiring. Let's change that. Students love the Exam Strategy feature.

You Be The Judge

GOAL: Get them thinking independently. When reading case opinions, students tend to accept the court's "answer." Judges, of course, try to write decisions that appear indisputable, when in reality they may be controversial—or wrong. From time to time we want students to think through the problem and reach their own answer. Virtually every chapter contains a You Be The Judge feature, providing the facts of the case and conflicting appellate arguments. The court's decision, however, appears only in the Instructor's Manual. Because students do not know the result, discussions are more complex and lively.

Devil's Advocate

GOAL: Encourage deeper analysis. In this feature we provide short critical commentary on the decision just reported. We are reminding students that the court's holding is the work of mortals. There is generally a very respectable counter-argument, which at least some people will find more persuasive. Students should consider the opposing view and practice formulating their own positions, independent of the judges' reasoning. A student who concludes, after analyzing alternative views, that the court got it right, understands the holding more comprehensively than one who never considered the other side.

For example, in Chapter 8, on Criminal Law, we include the famous *Ewing* case on cruel and unusual punishment, but follow it with a Devil's Advocate feature arguing against a sentence of 25 years to life in a shoplifting case.

Ethics

GOAL: Make ethics real. We ask ethical questions about cases, legal issues, and commercial practices. Is it fair for one party to void a contract by arguing, months after the fact, that there was no consideration? What is a manager's ethical obligation when asked to provide a reference for a former employee? What is wrong with bribery? What is the ethical obligation of developed nations to dispose of toxic waste from computers? We believe that asking the questions, and encouraging discussion, reminds students that ethics is an essential element of justice, and of a satisfying life.

Cases

GOAL: Let the judges speak. Each case begins with a summary of the facts and a statement of the issue. Next comes a tightly edited version of the decision, in the court's own language, so that students "hear" the law developing in the diverse voices of our many judges. We cite cases using a modified bluebook form. In the principal cases in each

chapter, we provide the state or federal citation, the regional citation, and the LEXIS or Westlaw citation. We also give students a brief description of the court. Because many of our cases are so recent, some will have only a LEXIS or Westlaw citation.

End of Chapter Exam Review and Questions

GOAL: Encourage students to practice! At the end of the chapters we provide a list of review points and several additional Exam Strategy exercises in the Question/Strategy/Result format. We also challenge the students with 15 or more problems—Multiple Choice, Essay Questions and Discussion Questions. The questions include the following:

- *You Be The Judge Writing Problem.* The students are given appellate arguments on both sides of the question and must prepare a written opinion.
- *Ethics.* This question highlights the ethical issues of a dispute and calls upon the student to formulate a specific, reasoned response.
- *CPA Questions.* For topics covered by the CPA exam, administered by the American Institute of Certified Public Accountants, the Exam Review includes questions from previous CPA exams.

Answers to all the Multiple Choice questions are available to the students online through www.cengagebrain.com.

Author Transition

Jeffrey Beatty fought an unremitting ten-year battle against a particularly aggressive form of leukemia which, despite his great courage and determination, he ultimately lost. Jeffrey, a gentleman to the core, was an immensely kind, funny, and thoughtful human being, someone who sang and danced, and who earned the respect and affection of colleagues and students alike. In writing these books he wanted students to see and understand the impact of law in their everyday lives as well as its role in supporting human dignity, and what's more, he wanted students to laugh.

Because of the length of Jeffrey's illness, we had ample time to develop an author-transition plan. Through a combination of new and old methods (social media and personal connections), we were able to identify a wonderfully talented group of applicants—graduates of top law schools who had earned myriad teaching and writing prizes. We read two rounds of blind submissions and met with finalists. In the end, we are thrilled to report that Dean Bredeson has joined the Beatty/Samuelson author team. A member of the faculty at the University of Texas McCombs School of Business, Dean is a devoted teacher who has received the school's highest teaching award for the last four years. He is also the author of the text, *Applied Business Ethics*. Dean has a number of qualities that are essential to a textbook writer: a keen insight into explaining complex material in an engaging manner, meticulous attention to detail, an ability to meet deadlines, and a wry sense of humor.

Teaching Materials

For more information about any of these ancillaries, contact your Cengage Learning/South-Western Legal Studies Sales Representative, or visit the Beatty & Samuelson Business Law (Standard Edition) Web site at **www.cengagebrain.com**.

Instructor's Manual. The Instructor's Manual, available on both the IRCD and the Instructor's Support Site at www.cengagebrain.com, includes special features to enhance class discussion and student progress:

- Exam Strategy Problems. If your students would like more of these problems, there is an additional section of Exam Strategy problems in the Instructor's Manual.
- Dialogues. These are a series of questions-and-answers on pivotal cases and topics. The questions provide enough material to teach a full session. In a pinch, you could walk into class with nothing but the manual and use the Dialogues to conduct an exciting class.
- Action learning ideas: interviews, quick research projects, drafting exercises, classroom activities, commercial analyses, and other suggested assignments that get students out of their chairs and into the diverse settings of business law.
- Skits. Various chapters have lively skits that students can perform in class, with no rehearsal, to put legal doctrine in a real-life context.
- A chapter theme and a quote of the day.
- Current Focus. This feature offers updates of text material.
- Additional cases and examples.
- Answers to You Be the Judge cases from the text and to the Exam Review questions found at the end of each chapter.

Test Bank. The test bank offers hundreds of multiple choice, short answer and essay problems and may be obtained online at **www.cengagebrain.com** or on the Instructor's Resource CD.

ExamView Testing Software—Computerized Testing Software. This testing software contains all of the questions in the test bank. This program is an easy-to-use test creation software compatible with Microsoft Windows. Instructors can add or edit questions, instructions, and answers; they can also select questions by previewing them on the screen, selecting them randomly, or selecting them by number. ExamView gives instructors the ability to create and administer quizzes online, whether over the Internet, a local area network (LAN), or a wide area network (WAN). The ExamView testing software is available on the Instructor's Resource CD.

Instructor's Resource CD (IRCD). The IRCD contains the ExamView testing software files, the test bank in Microsoft Word files, the Instructor's Manual in Microsoft Word files, and the Microsoft PowerPoint Lecture Review Slides.

Microsoft PowerPoint Lecture Review Slides. PowerPoint slides are available for use by instructors for enhancing their lectures and to aid students in note taking. Download these slides at **www.cengagebrain.com**. The PowerPoint slides are also available on the IRCD.

CengageNOW. This robust, online course management system gives you more control in less time and delivers better student outcomes—NOW. CengageNOW for *Business Law and the Legal Environment* 6e has been expanded to include six homework types that align with the six levels of Bloom's taxonomy: Knowledge: Chapter Review; Comprehension: Business Law Scenarios; Application: Legal Reasoning; Analysis: IRAC; Synthesis: Exam Strategy; and Evaluation: Business Wisdom. Used together, CengageNOW will ensure that students develop the higher-level thinking skills they need to reach an advanced understanding of the material.

Aplia. Engage, prepare and educate your students with this ideal online learning solution. Aplia's™ business law solution ensures that students stay on top of their coursework with regularly scheduled homework assignments and automatic grading with detailed,

immediate feedback on every question. Interactive teaching tools and content further increase engagement and understanding. Aplia™ assignments match the language, style, and structure of *Business Law and the Legal Environment* 6e, allowing your students to apply what they learn in the text directly to their homework.

Business Law CourseMate. Cengage Learning's Business Law CourseMate brings course concepts to life with interactive learning, study, and exam preparation tools—including an e-book–that supports the printed textbook. Designed to address a variety of learning styles, students will have access to flashcards, Learning Objectives, and the Key Terms for quick reviews. A set of auto-gradable, interactive quizzes will allow students to instantly gauge their comprehension of the material. On the instructor's side, all quiz scores and student activity are mapped within a set of intuitive student performance analytical tools called Engagement Tracker, which helps the instructor identify at-risk students. An interactive blog helps connect book concepts to real-world situations happening now.

WebTutor™ for Blackboard® or WebCT®. Jumpstart your course with this interactive, web-based, teaching and learning resource that is designed specifically for *Business Law and the Legal Environment* 6e. Easily blend, add, edit, reorganize, or delete content, including media assets, quizzing, Web links, discussion topics, interactive games and exercises, and more. These tools supplement the classroom experience and ensure students leave with the resources they need to succeed.

Business Law Digital Video Library. This dynamic online video library features over 60 video clips that spark class discussion and clarify core legal principles. The library is organized into four series:

- ***Legal Conflicts in Business*** includes specific modern business and e-commerce scenarios.
- ***Ask the Instructor*** contains straightforward explanations of concepts for student review.
- ***Drama of the Law*** features classic business scenarios that spark classroom participation.
- ***LawFlix*** contains clips from many popular films, including *The Money Pit*, *Midnight Run*, and *Casino*.
- ***Real World Legal*** takes students out of the classroom and into real life situations, encouraging them to consider the legal aspects of decision-making in the business world.
- ***Business Ethics in Action*** challenges students to examine ethical dilemmas in the world of business.

Access to the Business Law Digital Video Library is available as an optional package with each new student text at no additional charge. Students with used books can purchase access to the video clips online. For more information about the Business Law Digital Video Library, visit: **www.cengagebrain.com**.

A Handbook of Basic Law Terms, Black's Law Dictionary Series. This paperback dictionary, prepared by the editor of the popular Black's Law Dictionary, can be packaged for a small additional cost with any new South-Western Legal Studies in Business text.

Student Guide to the Sarbanes-Oxley Act. This brief overview for business students explains the Sarbanes-Oxley Act, what is required of whom, and how it might affect students in their business life. Available as an optional package with the text.

Interaction with the Authors. This is our standard: every professor who adopts this book must have a superior experience. We are available to help in any way we can. Adopters of this text often call us or email us to ask questions, obtain a syllabus, offer suggestions,

share pedagogical concerns, or inquire about ancillaries. (And if you would like to share your course syllabus, please send it to us so that we can post it on our blog, bizlawupdate.com.) One of the pleasures of working on this project has been this link to so many colleagues around the country. We value those connections, are eager to respond, and would be happy to hear from you.

About the Authors

Jeffrey F. Beatty was an Associate Professor of Business Law at the Boston University School of Management. After receiving his B.A. from Sarah Lawrence and his J.D. from Boston University, he practiced with the Greater Boston Legal Services representing indigent clients. At Boston University, he won the Metcalf Cup and Prize, the university's highest teaching award. Professor Beatty also wrote plays and television scripts that were performed in Boston, London, and Amsterdam.

Susan S. Samuelson is a Professor of Business Law at Boston University's School of Management. After earning her A.B. at Harvard University and her J.D. at Harvard Law School, Professor Samuelson practiced with the firm of Choate, Hall and Stewart. She has written many articles on legal issues for scholarly and popular journals, including the *American Business Law Journal*, *Ohio State Law Journal*, *Boston University Law Review*, *Harvard Journal on Legislation*, *National Law Journal*, *Sloan Management Review*, *Inc. Magazine*, *Better Homes and Gardens*, and *Boston Magazine*. At Boston University she won the Broderick Prize for excellence in teaching. Professor Samuelson is the Faculty Director of the Boston University Executive MBA program.

Dean A. Bredeson is a Senior Lecturer at the University of Texas' McCombs School of Business, where he has been on the faculty for 16 years. He also holds a J.D. from the University of Texas. He has previously published *Student Guide to the Sarbanes-Oxley Act* and two textbooks which explore the intersection of law and ethics: *Applied Business Ethics* and *Ethics in the Workplace*. He is a four-time winner of the Lockheed-Martin Award, which is awarded each year to the one member of the faculty at McCombs with the highest student course evaluations in undergraduate courses. He is also among the youngest-ever recipients of the Board of Regents Teaching Award, the UT System's highest teaching honor.

For Jeffrey, best of colleagues and dearest of friends.

The Legal Environment

CHAPTER 1

Introduction To Law

© r.nagy/Shutterstock.com

Near Campus

Alan Dawson dumped his Calculus II textbook into his backpack. Outside, a light snow began to fall. With a sigh, he left his apartment and headed out into the early December evening.

Halfway to the library, he encountered a group of his friends "Hey, Alan, we're done with finals," said Gary with a flourish. "You should come to Thirsty's with us."

"I can't. I have my Calculus final tomorrow."

"Carrie's going to be there." Gary raised his eyebrows.

"Come on, Dawson! Be a man! Come on!" said the others. Without a word, Alan reversed direction and headed away from the library. His friends cheered loudly.

When he opened the door, he saw Alan rolling around on the floor, groaning.

At Thirsty's Bar

Anna stood behind the bar and watched four bikers enter. They wore jackets with gang insignia, and purple headscarves. One of them approached the bar. "Four Budweisers," he said to Anna.

After gathering her courage, Anna said, "Look, you guys know you can't wear your colors in here."

"What are you gonna do about it, missy?" the biker asked. When she didn't reply, he leaned closer to her. "Four beers."

Anna thought about it for a moment, then gathered four Budweiser longnecks and placed them on the bar. The biker tossed down a $10 bill, took the beers, and joined his three associates at a table.

Anna eyed the telephone on the counter behind her. The owner of Thirsty's had told her to call the cops immediately if she saw any gang colors in there. But the bikers were watching her, and she decided not to make a call right away.

At a back table

"I'm not going home for a few more days," Alan said to Carrie.

"I'm not either. We should do something," Carrie said.

"Yeah," Alan said, trying hard to not seem too excited. "Have you, ah, seen the new DiCaprio movie? We could go see that."

"That would be great."

Alan blissfully made small talk with Carrie, unaware of the bikers or anyone else in the bar.

Eventually, he excused himself and made his way to the restroom.

As he washed his hands, he saw two bikers in the mirror. "Howdy, college boy," one of them said. It was the last thing Alan remembered for awhile.

Twenty minutes later

"Hey, where's Alan?" Gary asked

Carrie said, "I think he went to the restroom."

Frowning, Gary headed back to the men's room. When he opened the door, he saw Alan rolling around on the floor, groaning. His shirt was torn, his face bloody.

"Oh, man, what happened? Are you OK?" Gary asked.

"No," Alan replied.

Gary thumbed 911 on his cell phone.

"Wait a moment," you may be thinking. "Are we reading a chapter on business law or one about biker crimes in a roadside tavern?" Both. Later in the chapter we examine a real case that mirrors the opening scenario. The crime committed against Alan will enable us to explore one of the law's basic principles, negligence. Should a pub owner pay money damages to the victim of gang violence? The owner herself did nothing aggressive. Should she have prevented the harm? Does her failure to stop the assault make her responsible? What begins as a gang incident ends up an issue of commercial liability.

Law is powerful, essential, and fascinating. We hope this book will persuade you of all three ideas. We place great demands on our courts, asking them to make our large, complex, and sometimes violent society into a safer, fairer, more orderly place. Judges must reason their way through countless complex issues.

Three Important Ideas about Law

Power

The strong reach of the law touches nearly everything we do, especially at work. Consider a mid-level manager at Sublime Corp., which manufactures and distributes video games.

During the course of a day's work, she might negotiate a deal with a game developer (contract law). Before signing any deals, she might research whether similar games already exist which might diminish her ability to market the proposed new game (intellectual

property law). One of her subordinates might complain about being harassed by a coworker (employment law). Another worker may complain about being required to work long hours (administrative law). And she may consider investing her own money in her company's stock, but she may wonder whether she will get into trouble if she invests based on inside information (securities law).

It is not only as a corporate manager that you will confront the law. As a voter, investor, juror, entrepreneur, and community member, you will influence and be affected by the law. Whenever you take a stance about a legal issue, whether in the corporate office, in the voting booth, or as part of local community groups, you help to create the fabric of our nation. Your views are vital. This book will offer you knowledge and ideas from which to form and continually reassess your legal opinions and values.

Importance

Law is also essential. *Every* society of which we have any historical record has had some system of laws. For example, consider the Visigoths, a nomadic European people who overran much of present-day France and Spain during the fifth and sixth centuries A.D. Their code admirably required judges to be "quick of perception, clear in judgment, and lenient in the infliction of penalties." It detailed dozens of crimes.

Our legal system is largely based upon the English model, but many societies contributed ideas. The Iroquois Native Americans, for example, played a role in the creation of our own government. Five major nations made up the Iroquois group: the Mohawk, Cayuga, Oneida, Onondaga, and Seneca. Each nation governed its own domestic issues. But each nation also elected "sachems" to a League of the Iroquois. The league had authority over any matters that were common to all, such as relations with outsiders. Thus, by the fifteenth century, the Iroquois had solved the problem of *federalism:* how to have two levels of government, each with specified powers. Their system impressed Benjamin Franklin and others and influenced the drafting of our Constitution, with its powers divided between state and federal governments.[1]

Fascination

In 1835, the young French aristocrat Alexis de Tocqueville traveled through the United States, observing the newly democratic people and the qualities that made them unique. One of the things that struck de Tocqueville most forcefully was the American tendency to file suit: "Scarcely any political question arises in the United States that is not resolved, sooner or later, into a judicial question."[2] De Tocqueville got it right: For better or worse, we do expect courts to solve many problems.

Not only do Americans litigate—they watch each other do it. Every television season offers at least one new courtroom drama to a national audience breathless for more cross-examination. Almost all of the states permit live television coverage of real trials. The most heavily viewed event in the history of the medium was the O.J. Simpson murder trial. In most nations, coverage of judicial proceedings is not allowed.[3]

The law is a big part of our lives, and it is wise to know something about it. Within a few weeks, you will probably find yourself following legal events in the news with keener

[1] JackWeatherford, *Indian Givers* (New York: Fawcett Columbine, 1988), pp. 133–150.
[2] Alexis deTocqueville, *Democracy in America* (1835), Vol. 1, Ch. 16.
[3] Regardless of whether we allow cameras, it is an undeniable benefit of the electronic age that we can obtain information quickly. From time to time, we will mention websites of interest. Some of these are for nonprofit groups, while others are commercial sites. We do not endorse or advocate on behalf of any group or company; we simply wish to alert you to what is available.

interest and deeper understanding. In this chapter, we develop the background for our study. We look at where law comes from: its history and its present-day institutions. In the section on jurisprudence, we examine different theories about what "law" really means. And finally we see how courts—and students—analyze a case.

ORIGINS OF OUR LAW

It would be nice if we could look up "the law" in one book, memorize it, and then apply it. But the law is not that simple, and *cannot* be that simple, because it reflects the complexity of contemporary life. In truth, there is no such thing as "the law." Principles and rules of law actually come from *many different* sources. Why is this so? In part because we inherited a complex structure of laws from England.

Additionally, ours is a nation born in revolution and created, in large part, to protect the rights of its people from the government. The Founding Fathers created a national government but insisted that the individual states maintain control in many areas. As a result, each state has its own government with exclusive power over many important areas of our lives. To top it off, the Founders guaranteed many rights to the people alone, ordering national *and* state governments to keep clear. This has worked, but it has caused a multilayered system, with 50 state governments and one federal government all creating and enforcing law.

English Roots

England in the tenth century was a rustic agricultural community with a tiny population and very little law or order. Vikings invaded repeatedly, terrorizing the Anglo-Saxon peoples. Criminals were hard to catch in the heavily forested, sparsely settled nation. The king used a primitive legal system to maintain a tenuous control over his people.

England was divided into shires, and daily administration was carried out by a "shire reeve," later called a sheriff. The shire reeve collected taxes and did what he could to keep peace, apprehending criminals and acting as mediator between feuding families. Two or three times a year, a shire court met; lower courts met more frequently. Today, this method of resolving disputes lives on as mediation, which we will discuss in Chapter 3.

Because there were so few officers to keep the peace, Anglo-Saxon society created an interesting method of ensuring public order. Every freeman belonged to a group of 10 freemen known as a "tithing," headed by a "tithingman." If anyone injured a person outside his tithing or interfered with the king's property, all 10 men of the tithing could be forced to pay. Today, we still use this idea of collective responsibility in business partnerships. All partners are personally responsible for the debts of the partnership. They could potentially lose their homes and all assets because of the irresponsible conduct of one partner. That liability has helped create new forms of business organization, including limited liability companies.

When cases did come before an Anglo-Saxon court, the parties would often be represented either by a clergyman, by a nobleman, or by themselves. There were few professional lawyers. Each party produced "oath helpers," usually 12, who would swear that one version of events was correct. The Anglo-Saxon oath helpers are forerunners of our modern jury of 12 persons.

Medieval tenants in demesne *harrowing, plowing, and seeding a field.*

In 1066, the Normans conquered England. William the Conqueror made a claim never before made in England: that he owned all of the land. The king then granted sections of his lands to his favorite noblemen, as his tenants in chief, creating the system of feudalism. These tenants in chief then granted parts of their land to *tenants in demesne*, who actually occupied a particular estate. Each tenant in demesne owed fidelity to his lord (hence, "landlord"). So what? Just this: land became the most valuable commodity in all of England, and our law still reflects that. One thousand years later, American law still regards land as special. The statute of frauds, which we study in the section on contracts, demands that contracts for the sale or lease of property be in writing. And landlord-tenant law, vital to students and many others, still reflects its ancient roots. Some of a landlord's rights are based on the 1,000-year-old tradition that land is uniquely valuable.

In 1250, Henry de Bracton (d. 1268) wrote a legal treatise that still influences us. *De Legibus et Consuetudinibus Angliae* (*On the Laws and Customs of England*), written in Latin, summarized many of the legal rulings in cases since the Norman Conquest. De Bracton was teaching judges to rule based on previous cases. He was helping to establish the idea of **precedent**. The doctrine of precedent, which developed gradually over centuries, requires that judges decide current cases based on previous rulings. This vital principle is the heart of American common law. Precedent ensures predictability. Suppose a 17-year-old student promises to lease an apartment from a landlord, but then changes her mind. The landlord sues to enforce the lease. The student claims that she cannot be held to the agreement because she is a minor. The judge will look for precedent, that is, older cases dealing with the same issue, and he will find many holding that a contract generally may not be enforced against a minor. That precedent is binding on this case, and the student wins. The accumulation of precedent, based on case after case, makes up the **common law**.

Precedent
The tendency to decide current cases based on previous rulings.

Common law
Judge-made law.

In the end, today's society is dramatically different from that of medieval English society. But interestingly, legal disputes from hundreds of years ago are often quite recognizable today. Some things have changed but others never do.

Here is an actual case from more than six centuries ago, in the court's own language. The plaintiff claims that he asked the defendant to heal his eye with "herbs and other medicines." He says the defendant did it so badly that he blinded the plaintiff in that eye.

THE OCULIST'S CASE (1329)

LI MS. Hale 137 (1), fo. 150, Nottingham[4]

Attorney Launde [for defendant]: Sir, you plainly see how [the plaintiff claims] that he had submitted himself to [the defendant's] medicines and his care; and after that he can assign no trespass in his person, inasmuch as he submitted himself to his care: but this action, if he has any, sounds naturally in breach of covenant. We demand [that the case be dismissed].

Excerpts from Judge Denum's Decision: I saw a Newcastle man arraigned before my fellow justice and me for the death of a man. I asked the reason for the indictment, and it was said that he had slain a man under his care, who died within four days afterwards. And because I saw that he was a [doctor] and that he had not done the thing feloniously but [accidentally] I ordered him to be discharged. And suppose a blacksmith, who is a man of skill, injures your horse with a nail, whereby you lose your horse: you shall never have recovery against him. No more shall you here.

Afterwards the plaintiff did not wish to pursue his case any more.

[4] J.Baker and S.Milsom, Sources of English Legal History (London: Butterworth & Co., 1986).

This case from 1329 is an ancient medical malpractice action. Attorney Launde does not deny that his client blinded the plaintiff. He claims that the plaintiff has brought the wrong kind of lawsuit. Launde argues that the plaintiff should have brought a case of "covenant," that is, a lawsuit about a contract.

Judge Denum decides the case on a different principle. He gives judgment to the defendant because the plaintiff voluntarily sought medical care. He implies that the defendant would lose only if he had attacked the plaintiff. As we will see when we study negligence law, this case might have a different outcome today. Note also the informality of the judge's ruling. He rather casually mentions that he came across a related case once before and that he would stand by that outcome. The idea of precedent is just beginning to take hold.

Law in the United States

The colonists brought with them a basic knowledge of English law, some of which they were content to adopt as their own. Other parts, such as religious restrictions, were abhorrent to them. Many had made the dangerous trip to America precisely to escape persecution, and they were not interested in recreating their difficulties in a new land. Finally, some laws were simply irrelevant or unworkable in a world that was socially and geographically so different. American law ever since has been a blend of the ancient principles of English common law and a zeal and determination for change.

During the nineteenth century, the United States changed from a weak, rural nation into one of vast size and potential power. Cities grew, factories appeared, and sweeping movements of social migration changed the population. Changing conditions raised new legal questions. Did workers have a right to form industrial unions? To what extent should a manufacturer be liable if its product injured someone? Could a state government invalidate an employment contract that required 16-hour workdays? Should one company be permitted to dominate an entire industry?

In the twentieth century, the rate of social and technological change increased, creating new legal puzzles. Were some products, such as automobiles, so inherently dangerous that the seller should be responsible for injuries even if no mistakes were made in manufacturing? Who should clean up toxic waste if the company that had caused the pollution no longer existed? If a consumer signed a contract with a billion-dollar corporation, should the agreement be enforced even if the consumer never understood it? New and startling questions arise with great regularity. Before we can begin to examine the answers, we need to understand the sources of contemporary law.

Sources of Contemporary Law

Throughout the text, we will examine countless legal ideas. But binding rules come from many different places. This section describes the significant *categories* of laws in the United States.

United States Constitution

America's greatest legal achievement was the writing of the United States Constitution in 1787. It is the supreme law of the land.[5] Any law that conflicts with it is void. This federal Constitution does three basic things. First, it establishes the national government of the

[5]The Constitution took effect in 1788, when 9 of 13 colonies ratified it. Two more colonies ratified it that year, and the last of the 13 did so in 1789, after the government was already in operation. The complete text of the Constitution appears in Appendix A.

United States, with its three branches. Second, it creates a system of checks and balances among the branches. And third, the Constitution guarantees many basic rights to the American people.

Branches of Government

The Founding Fathers sought a division of government power. They did not want all power centralized in a king or in anyone else. And so, the Constitution divides legal authority into three pieces: legislative, executive, and judicial power.

Legislative power gives the ability to create new laws. In Article I, the Constitution gives this power to the Congress which is comprised of two chambers—a Senate and a House of Representatives. Voters in all 50 states elect representatives who go to Washington, D.C., to serve in the Congress and debate new legal ideas.

The House of Representatives has 435 voting members. A state's voting power is based on its population. Large states (Texas, California, and Florida) send dozens of representatives to the House. Some small states (Wyoming, North Dakota, and Delaware) send only one. The Senate has 100 voting members—two from each state.

Executive power is the authority to enforce laws. Article II of the Constitution establishes the president as commander-in-chief of the armed forces and the head of the executive branch of the federal government.

Judicial power gives the right to interpret laws and determine their validity. Article III places the Supreme Court at the head of the judicial branch of the federal government. Interpretive power is often underrated, but it is often every bit as important at the ability to create laws in the first place. For instance, the Supreme Court ruled that privacy provisions of the Constitution protect a woman's right to abortion, although neither the word "privacy" nor "abortion" appears in the text of the Constitution.[6]

At times, courts void laws altogether. For example, in 1995, the Supreme Court ruled that the *Gun-Free School Zones Act of 1990* was unconstitutional because Congress did not have the authority to pass such a law.[7]

Checks and Balances

Sidney Crosby would score 300 goals per season if checking were not allowed in the National Hockey League. But because opponents are allowed to hit Crosby and the rest of his teammates on the Penguins, he is held to a much more reasonable 50 goals per year.

Political checks work in much the same way. They allow one branch of the government to trip up another.

The authors of the Constitution were not content merely to divide government power three ways. They also wanted to give each part of the government some power over the other two branches. Many people complain about "gridlock" in Washington, but the government is slow and sluggish by design. The Founding Fathers wanted to create a system that, without broad agreement, would tend towards inaction.

The president can veto Congressional legislation. Congress can impeach the president. The Supreme Court can void laws passed by Congress. The president appoints judges to the federal courts, including the Supreme Court, but these nominees do not serve unless approved by the Senate. Congress (with help from the 50 states) can override the Supreme Court by amending the Constitution. The president and the Congress influence the Supreme Court by controlling who is placed on the court in the first place.

Many of these checks and balances will be examined in more detail in Chapter 4.

---

[6] *Roe v. Wade*, 410 U.S. 113 (1973).

[7] *United States v. Alfonso Lopez, Jr.*, 514 U.S. 549 (1995).

Fundamental Rights

The Constitution also grants many of our most basic liberties. For the most part, they are found in the amendments to the Constitution. The First Amendment guarantees the rights of free speech, free press, and the free exercise of religion. The Fourth, Fifth, and Sixth Amendments protect the rights of any person accused of a crime. Other amendments ensure that the government treats all people equally and that it pays for any property it takes from a citizen.

By creating a limited government of three branches and guaranteeing basic liberties to all citizens, the Constitution became one of the most important documents ever written.

Statutes

The second important source of law is statutory law. The Constitution gave to the United States Congress the power to pass laws on various subjects. These laws are called **statutes,** and they can cover absolutely any topic, so long as they do not violate the Constitution.

Statute
A law created by a legislative body.

Almost all statutes are created by the same method. An idea for a new law—on taxes, health care, texting while driving, or any other topic, big or small—is first proposed in the Congress. This idea is called a *bill.* The House and Senate then independently vote on the bill. To pass Congress, the bill must win a simple majority vote in each of these chambers.

If Congress passes a bill, it goes to the White House for the president's approval. If the president signs it, a new statute is created. It is no longer a mere idea; it is the law of the land. If the president refuses to approve, or *vetoes* a bill, it does not become a statute unless Congress overrides the veto. To do that, both the House and the Senate must approve the bill by a two-thirds majority. If this happens, it becomes a statute without the president's signature.

Common Law

Binding legal ideas often come from the courts. Judges generally follow *precedent*. When courts decide a case, they tend to apply the legal rules that other courts have used in similar cases.

The principle that precedent is binding on later cases is called *stare decisis,* which means "let the decision stand." *Stare decisis* makes the law predictable, and this in turn enables businesses and private citizens to plan intelligently.

It is important to note that precedent is binding only on *lower* courts. For example, if the Supreme Court decided a case in one way in 1965, it is under no obligation to follow precedent if the same issue arises in 2015.

Sometimes, this is quite beneficial. In 1896, the Supreme Court decided (unbelievably) that segregation—separating people by race in schools, hotels, public transportation, and other public services—was legal under certain conditions.[8] In 1954, on the exact same issue, the court changed its mind.[9]

In other circumstances, it is more difficult to see the value in breaking with an established rule.

Court Orders

Judges have the authority to issue court orders that place binding obligations on specific people or companies. An injunction, for example, is a court order to stop doing something. A judge might order a stalker to stay more than 500 yards away from an ex-boyfriend or -girlfriend. Lindsey Lohan might be ordered to stop drinking and enter rehab. Courts have the authority to imprison or fine those who violate their orders.

---

[8] *Plessy v. Ferguson*, 163 U.S.537 (1896).
[9] *Brown v. Board of Education of Topeka*, 347 U.S. 483 (1954) .

Administrative Law

In a society as large and diverse as ours, the executive and legislative branches of government cannot oversee all aspects of commerce. Congress passes statutes about air safety, but United States senators do not stand around air traffic towers, serving coffee to keep everyone awake. The executive branch establishes rules concerning how foreign nationals enter the United States, but presidents are reluctant to sit on the dock of the bay, watching the ships come in. Administrative agencies do this day-to-day work.

Most government agencies are created by Congress. Familiar examples are the Environmental Protection Agency (EPA), the Securities and Exchange Commission (SEC), and the Internal Revenue Service (IRS), whose feelings are hurt if it does not hear from you every April 15. Agencies have the power to create laws called *regulations*.

Treaties

The Constitution authorizes the president to make treaties with foreign nations. These must then be ratified by the United States Senate by a two-thirds vote. When they are ratified, they are as binding upon all citizens as any federal statute. In 1994 the Senate ratified the North American Free Trade Agreement (NAFTA) with Mexico and Canada. NAFTA was controversial then and remains so today—but it is the law of the land.

Classifications

We have seen where law comes from. Now we need to classify the various types of laws. First, we will distinguish between criminal and civil law. Then, we will take a look at the intersection between law and morality.

Criminal and Civil Law

Criminal law
Criminal law prohibits certain behavior.

It is a crime to embezzle money from a bank, to steal a car, to sell cocaine. **Criminal law** concerns behavior so threatening that society outlaws it altogether. Most criminal laws are statutes, passed by Congress or a state legislature. The government itself prosecutes the wrongdoer, regardless of what the bank president or car owner wants. A district attorney, paid by the government, brings the case to court. The injured party, for example the owner of the stolen car, is not in charge of the case, although she may appear as a witness. The government will seek to punish the defendant with a prison sentence, a fine, or both. If there is a fine, the money goes to the state, not to the injured party.

Civil law
Civil law regulates the rights and duties between parties.

Civil law is different, and most of this book is about civil law. **The civil law regulates the rights and duties between parties.** Tracy agrees in writing to lease you a 30,000-square-foot store in her shopping mall. She now has a *legal duty* to make the space available. But then another tenant offers her more money, and she refuses to let you move in. Tracy has violated her duty, but she has not committed a crime. The government will not prosecute the case. It is up to you to file a civil lawsuit. Your case will be based on the common law of contract. You will also seek equitable relief, namely, an injunction ordering Tracy not to lease to anyone else. You should win the suit, and you will get your injunction and some money damages. But Tracy will not go to jail.

Some conduct involves both civil and criminal law. Suppose Tracy is so upset over losing the court case that she becomes drunk and causes a serious car accident. She has committed the crime of driving while intoxicated, and the state will prosecute. Tracy may be fined or imprisoned. She has also committed negligence, and the injured party will file a lawsuit against her, seeking money. We will again see civil and criminal law joined together in the *Pub Zone* case, later in the chapter.

Federal Form of Government. Principles and rules of law come from many sources. The government in Washington creates and enforces law throughout the nation. But 50 state governments exercise great power in local affairs. And citizens enjoy constitutional protection from both state and federal government. The Founding Fathers wanted this balance of power and rights, but the overlapping authority creates legal complexity.

Law and Morality

Law is different from morality, yet the two are obviously linked. There are many instances when the law duplicates what all of us would regard as a moral position. It is negligent to drive too fast in a school district, and few would dispute the moral value of seeking to limit harm to students. And the same holds with contract law: If the owner of land agrees in writing to sell property to a buyer at a stated price, both the buyer and the seller must go through with the deal, and the legal outcome matches our moral expectations.

On the other hand, we have had laws that we now clearly regard as immoral. At the turn of the century, a factory owner could typically fire a worker for any reason at all—including, for example, his religious or political views. It is immoral to fire a worker because she is Jewish—and today the law prohibits it.

Finally, there are legal issues where the morality is less clear. You are walking down a country lane and notice a three-year-old child playing with matches near a barn filled with hay. Are you obligated to intervene? No, says the law, though many think that is preposterous. (See Chapter 4, on common law, for more about this topic.) A company buys property and then discovers, buried under the ground, toxic waste that will cost $300,000 to clean up. The original owner has gone bankrupt. Should the new owner be forced to pay for the cleanup? If the new owner fails to pay for the job, who will? (See Chapter 40, on environmental law, for more discussion on this issue.)

Chapter 2 will further examine the bond between law and morality.

JURISPRUDENCE

Jurisprudence
The philosophy of law.

We have had a glimpse of legal history and a summary of the present-day sources of American law. But what *is* law? That question is the basis of a field known as **jurisprudence**. What is the real nature of law? Can there be such a thing as an "illegal" law?

Legal Positivism

Sovereign
The recognized political power, whom citizens obey.

This philosophy can be simply stated: Law is what the sovereign says it is. The **sovereign** is the recognized political power whom citizens obey, so in the United States, both state and federal governments are sovereign. A legal positivist holds that whatever the sovereign declares to be the law *is* the law, whether it is right or wrong.

The primary criticism of legal positivism is that it seems to leave no room for questions of morality. A law permitting a factory owner to fire a worker because she is Catholic is surely different from a law prohibiting arson. Do citizens in a democracy have a duty to consider such differences? Consider the following example.

Most states allow citizens to pass laws directly at the ballot box, a process called voter referendum. California voters often do this, and during the 1990s, they passed one of the state's most controversial laws. Proposition 187 was designed to curb illegal immigration into the state by eliminating social spending for undocumented aliens. Citizens debated the measure fiercely but passed it by a large margin. One section of the new law forbade public schools from educating illegal immigrants. The law obligated a principal to inquire into the immigration status of all children enrolled in the school and to report undocumented students to immigration authorities. Several San Diego school principals rejected the new rules, stating that they would neither inquire into immigration status nor report undocumented aliens. Their statements produced a heated response. Some San Diego residents castigated the school officials as lawbreakers, claiming that

- A school officer who knowingly disobeyed a law was setting a terrible example for students, who would assume they were free to do the same;
- The principals were advocating permanent residence and a free education for anyone able to evade our immigration laws; and

- The officials were scorning grass-roots democracy by disregarding a law passed by popular referendum.

Others applauded the principals' position, asserting that

- The referendum's rules would transform school officials from educators into border police, forcing them to cross-examine young children and their parents;
- The new law was foolish because it punished innocent children for violations committed by their parents; and
- Our nation has long respected civil disobedience based on humanitarian ideals, and these officials were providing moral leadership to the whole community.

Ultimately, no one had to decide whether to obey Proposition 187. A federal court ruled that only Congress had the power to regulate immigration and that California's attempt was unconstitutional and void. The debate over immigration reform—and ethics—did not end, however. It continues to be a thorny issue.

Natural Law

St. Thomas Aquinas (1225–1274) answered the legal positivists even before they had spoken. In his *Summa Theologica*, he argued that an unjust law is no law at all and need not be obeyed. It is not enough that a sovereign makes a command. The law must have a moral basis.

> **St. Thomas Aquinas argued that an unjust law is no law at all …**

Where do we find the moral basis that would justify a law? Aquinas says that "good is that which all things seek after." Therefore, the fundamental rule of all laws is that "good is to be done and promoted, and evil is to be avoided." This sounds appealing, but also vague. Exactly which laws promote good and which do not? Is it better to have a huge corporation dominate a market or many smaller companies competing? Did the huge company get that way by being better than its competitors? If Wal-Mart moves into a rural area, establishes a mammoth store, and sells inexpensive products, is that "good"? Yes, if you are a consumer who cares only about prices. No, if you are the owner of a Main Street store driven into bankruptcy. Maybe, if you are a resident who values small-town life but wants lower prices.

Legal Realism

Legal realists take a very different tack. They claim it does not matter what is written as law. What counts is who enforces that law and by what process. All of us are biased by issues such as income, education, family background, race, religion, and many other factors. These personal characteristics, they say, determine which contracts will be enforced and which ignored, why some criminals receive harsh sentences while others get off lightly, and so on.

Judge Jones hears a multimillion dollar lawsuit involving an airplane crash. Was the airline negligent? The law is the same everywhere, but legal realists say that Jones's background will determine the outcome. If she spent 20 years representing insurance companies, she will tend to favor the airline. If her law practice consisted of helping the "little guy," she will favor the plaintiff.

Other legal realists argue, more aggressively, that those in power use the machinery of the law to perpetuate their control. The outcome of a given case will be determined by the needs of those with money and political clout. A court puts "window dressing" on a decision, they say, so that society thinks there are principles behind the law. A problem with legal realism, however, is its denial that any lawmaker can overcome personal bias. Yet clearly some do act unselfishly.

SUMMARY OF JURISPRUDENCE	
Legal Positivism	Law is what the sovereign says.
Natural Law	An unjust law is no law at all.
Legal Realism	Who enforces the law counts more than what is in writing.

No one school of jurisprudence is likely to seem perfect. We urge you to keep the different theories in mind as you read cases in the book. Ask yourself which school of thought is the best fit for you.

Working with the Book's Features

In this section, we introduce a few of the book's features and discuss how you can use them effectively. We will start with *cases.*

Analyzing a Case

A law case is the decision a court has made in a civil lawsuit or criminal prosecution. Cases are the heart of the law and an important part of this book. Reading them effectively takes practice. This chapter's opening scenario is fictional, but the following real case involves a similar situation. Who can be held liable for the assault? Let's see.

Kuehn v. Pub Zone

364 N.J. Super. 301, 835 A.2d 692
Superior Court of New Jersey, Appellate Division, 2003

Facts: Maria Kerkoulas owned the Pub Zone bar. She knew that several motorcycle gangs frequented the tavern. From her own experience tending bar, and conversations with city police, she knew that some of the gangs, including the Pagans, were dangerous and prone to attack customers for no reason. Kerkoulas posted a sign prohibiting any motorcycle gangs from entering the bar while wearing "colors," that is, insignia of their gangs. She believed that gangs without their colors were less prone to violence, and experience proved her right.

Rhino, Backdraft, and several other Pagans, all wearing colors, pushed their way past the tavern's bouncer and approached the bar. Although Kerkoulas saw their colors, she allowed them to stay for one drink. They later moved towards the back of the pub, and Kerkoulas believed they were departing. In fact, they followed a customer named Karl Kuehn to the men's room, where without any provocation they savagely beat him. Kuehn was knocked unconscious and suffered brain hemorrhaging, disc herniation, and numerous fractures of facial bones. He was forced to undergo various surgeries, including eye reconstruction.

Although the government prosecuted Rhino and Backdraft for their vicious assault, our case does not concern that prosecution. Kuehn sued the Pub Zone, and that is the case we will read. The jury awarded him $300,000 in damages. However, the trial court judge overruled the jury's verdict. He granted a judgment for the Pub Zone, meaning that the tavern owed nothing. The judge ruled that the pub's owner could not have foreseen the attack on Kuehn, and had no duty to protect him from an outlaw motorcycle gang. Kuehn appealed, and the appeals court's decision follows:

Issue: ***Did the Pub Zone have a duty to protect Kuehn from the Pagans' attack?***

Excerpts from Judge Payne's Decision: Whether a duty exists depends upon an evaluation of a number of factors including the nature of the underlying risk of harm, that is, its foreseeability and severity, the opportunity and ability to exercise care to prevent the harm, the comparative interests of and the relationships between or among the parties, and, ultimately, based on considerations of public policy and fairness, the societal interest in the proposed solution.

Since the possessor [of a business] is not an insurer of the visitor's safety, he is ordinarily under no duty to exercise any care until he knows or has reason to know that the acts of the third person are occurring, or are about to occur. He may, however, know or have reason to know, from past experience, that there is a likelihood of conduct on the part of third persons in general which is likely to endanger the safety of the visitor, even though he has no reason to expect it on the part of any particular individual.

We find the totality of the circumstances presented in this case give rise to a duty on the part of the Pub Zone to have taken reasonable precautions against the danger posed by the Pagans as a group. In this case, there was no reason to suspect any particular Pagan of violent conduct. However, the gang was collectively known to Kerkoulas to engage in random violence. Thus, Kerkoulas had knowledge as the result of past experience and from other sources that there was a likelihood of conduct on the part of third persons in general that was likely to endanger the safety of a patron at some unspecified future time. A duty to take precautions against the endangering conduct thus arose.

We do not regard our recognition of a duty in this case to give rise to either strict or absolute liability on the part of the Pub Zone. To fulfill its duty in this context, the Pub Zone was merely required to employ "reasonable" safety precautions. It already had in place a prohibition against bikers who were wearing their colors, and that prohibition, together with the practice of calling the police when a breach occurred, had been effective in greatly diminishing the occurrence of biker incidents on the premises. The evidence establishes that the prohibition was not enforced on the night at issue, that three Pagans were permitted entry while wearing their colors, and the police were not called. Once entry was achieved, the Pub Zone remained under a duty to exercise reasonable precautions against an attack.

The jury's verdict must therefore be reinstated.

Analysis

Let's take it from the top. The case is called *Kuehn v. Pub Zone*. Karl Kuehn is the **plaintiff**, the person who is suing. The Pub Zone is being sued, and is called the **defendant**. In this example, the plaintiff's name happens to appear first but that is not always true. When a defendant loses a trial and files an appeal, *some* courts reverse the names of the parties.

Plaintiff
The party who is suing.

Defendant
The party being sued.

The next line gives the legal citation, which indicates where to find the case in a law library. We explain in the footnote how to locate a book if you plan to do research.[10]

The *Facts* section provides a background to the lawsuit, written by the authors of this text. The court's own explanation of the facts is often many pages long, and may involve complex matters irrelevant to the subject covered in this book, so we relate only what is necessary. This section will usually include some mention of what happened at the trial

---

[10]If you want to do legal research, you need to know where to find particular legal decisions. A case citation guides you to the correct volume(s). The full citation of our case is *Kuehn v. Pub Zone*, 364 N.J. Super. 301, 835 A.2d 692. The string of numbers identifies two different books in which you can find the full text of this decision. The first citation is to "N.J. Super," which means the official court reporter of the state of New Jersey. New Jersey, like most states, reports its law cases in a series of numbered volumes. This case appears in volume 364 of the New Jersey Superior Court reporters. If you go to a law library and find that book, you can then turn to page 301 and—*voila!*—you have the case. The decision is also reported in another set of volumes, called the regional reporters. This series of law reports is grouped by geographic region. New Jersey is included in the Atlantic region, so our case appears in reporters dedicated to that region. The "A" stands for Atlantic. After a series of reporters reaches volume 999, a second set begins. Our case appears in volume 835 of the second set of the Atlantic reporters ("A.2d"), at page 692. In addition, most cases are now available online, and your professor or librarian can show you how to find them electronically.

court. Lawsuits always begin in a trial court. The losing party often appeals to a court of appeals, and it is usually an appeals court decision that we are reading. The trial judge ruled in favor of Pub Zone, but later, in the decision we are reading, Kuehn wins.

The *Issue* section is very important. It tells you what the court had to decide—and also why you are reading the case. In giving its decision, a court may digress. If you keep in mind the issue and relate the court's discussion to it, you will not get lost.

Excerpts from Judge Payne's Decision begins the court's discussion. This is called the *holding,* meaning a statement of who wins and who loses. The holding also includes the court's *rationale,* which is the reasoning behind the decision.

The holding that we provide is an edited version of the court's own language. Some judges write clear, forceful prose, others do not. Either way, their words give you an authentic feel for how judges think and rule, so we bring it to you in the original. Occasionally we use brackets [ ] to substitute our language for that of the court, either to condense or to clarify. Notice the brackets in the second paragraph of the Pub Zone decision. Judge Payne explains the point at much greater length, so we have condensed some of his writing into the phrase "of a business."

We omit a great deal. A court's opinion may be 3 pages or it may be 75. We do not use ellipses (…) to indicate these deletions, because there is more taken out than kept in, and we want the text to be clean. When a court quotes an earlier decision verbatim but clearly adopts those words as its own, we generally delete the quotation marks, as well as the citation to the earlier case. If you are curious about the full holding, you can always look it up.

Let us look at a few of Judge Payne's points. The holding begins with a discussion of *duty*. The court explains that whether one person (or bar) owes a duty to protect another depends upon several factors, including whether the harm could be foreseen, how serious the injury could be, and whether there was an opportunity to prevent it.

Judge Payne then points out that the owner of a business is not an insurer of a visitor's safety. Typically, the owner has a duty to a visitor *only* if he has a reason to know that some harm is likely to occur. How would a merchant know that? Based on the character of the business, suggests the judge, or the owner's experience with particular people.

The judge then applies this general rule to the facts of this case. He concludes that the Pub Zone did in fact have a duty to protect Kuehn from the Pagans' attack. Based on Kerkoulas's experience, and warnings received from the police, she knew that the gang was dangerous and should have foreseen that admitting them in their "colors" greatly increased the chance of an attack.

Next, the court points out that it is not requiring the Pub Zone to *guarantee* everyone's safety. The bar was merely obligated to do a *reasonable* job. The prohibition on colors was a good idea, and calling the police had also proven effective. The problem of course was that in this case, Kerkoulas ignored her own rule about gang insignia and failed to call the police.

Based on all the evidence, the jury's finding of liability was reasonable, and its verdict must be reinstated. In other words, Kuehn, who lost at the trial, wins on appeal. What the court has done is to *reverse* the lower court's decision, meaning to turn the loser into the winner. In other cases, we will see an appellate court *remand* the case, meaning to send it back down to the lower court for additional steps. Or the appellate judges could *affirm* the lower court's decision, meaning to leave it unchanged.

Devil's Advocate

Each chapter has several cases. After some of them, a "Devil's Advocate" feature offers you a contrasting view of the legal issue. This is not part of the case, but is instead a suggestion of another perspective on the problem discussed. The authors take no position for or against the court's decision, but merely want you to consider an alternate view, and decide which analysis of the law makes more sense to you—that of the court or the Devil's Advocate. Is the following view persuasive?

Devil's Advocate A court should not force small businesses to guarantee their customers' safety. Two or three violent men, whether motorcycle gang members or frustrated professors, could enter a grocery store or clothing retailer at any time and mindlessly attack innocent visitors. Random attacks are just that—random, unforeseeable. No merchant should be required to anticipate them. Send the criminals to jail, but do not place the burden on honest business people.

Exam Strategy

This feature gives you practice analyzing cases the way lawyers do—and the way *you* must on tests. Law exams are different from most others because you must determine the issue from the facts provided. Too frequently, students faced with a law exam forget that the questions relate to the issues in the text and those discussed in class. Understandably, students new to law may focus on the wrong information in the problem or rely on material learned elsewhere. Exam Strategy teaches you to figure out exactly what issue is at stake, and then analyze it in a logical, consistent manner. Here is an example, relating to the element of "duty," which the court discussed in the Pub Zone case.

EXAM Strategy

Question: The Big Red Traveling (BRT) Carnival is in town. Tony arrives at 8:00 p.m., parks in the lot—and is robbed at gunpoint by a man who beats him and escapes with his money. There are several police officers on the carnival grounds, but no officer is in the parking lot at the time of the robbery. Tony sues, claiming that brighter lighting and more police in the lot would have prevented the robbery. There has never before been any violent crime—robbery, beating, or otherwise—at any BRT carnival. BRT claims it had no duty to protect Tony from this harm. Who is likely to win?

Strategy: Begin by isolating the legal issue. What are the parties disputing? They are debating whether BRT had a duty to protect Tony from an armed robbery, committed by a stranger. Now ask yourself: How do courts decide whether a business has a duty to prevent this kind of harm? The Pub Zone case provides our answer. A business owner is not an ensurer of the visitor's safety. The owner generally has no duty to protect a customer from the criminal act of a third party, unless the owner knows the harm is occurring or could foresee it is about to happen. (In the Pub Zone case, the business owner *knew* of the gang's violent history, and could have foreseen the assault.) Now apply that rule to the facts of this case.

Result: There has never been a violent attack of any kind at a BRT carnival. BRT cannot foresee this robbery, and has no duty to protect against it. The carnival wins.

You Be the Judge

Many cases involve difficult decisions for juries and judges. Often both parties have legitimate, opposing arguments. Most chapters in this book will have a feature called "You Be the Judge," in which we present the facts of a case but not the court's holding.

We offer you two opposing arguments based on the kinds of claims the lawyers made in court. We leave it up to you to debate and decide which position is stronger or to add your own arguments to those given.

The following case is another negligence lawsuit, with issues that overlap those of the Pub Zone case. This time the court confronts a fight that resulted in a death. The victim's distraught family sued the owner of a bar, claiming that one of his employees was partly responsible for the death. Once again, the defendant asked the court to dismiss the case, claiming that he owed no duty to protect the victim—the same argument made by the Pub Zone.

But there is a difference here—this time the defendant owned the bar across the street, not the one where the fight took place. Could he be held legally responsible for the death? You be the judge.

You be the Judge

Soldano v. O'Daniels

141 Cal. App. 3d 443
Court of Appeal of California,
5th Appellate District, 1983

Facts: In the days before cell phones, a fight broke out at Happy Jack's Saloon. A good Samaritan ran across the street to the Circle Inn. He asked the bartender at the Circle Inn to let him use the telephone to call the police, but he refused.

Back at Happy Jack's Saloon, the fight escalated, and a man shot and killed Soldano's father. Soldano sued the owner of the Circle Inn for negligence. He argued that the bartender violated a legal duty when he refused to hand over the inn's telephone and that, as the employer of the bartender, O'Daniels was partially liable for Soldano's father's death.

The lower court dismissed the case, citing the principle that generally, a person does not have a legal responsibility to help another unless he created the dangerous situation in the first place. Soldano appealed.

You Be The Judge: ***Did the bartender have a duty to allow the use of the Circle Inn's telephone?***

Argument for the Defendant: Your honors, my client did not act wrongfully. He did nothing to create the danger. The fight was not even on his property. We sympathize with the plaintiff, but it is the shooter, and perhaps the bar where the fight took place, who are responsible for his father's death. Our client was not involved. Liability can be stretched only so far.

The court would place a great burden on the citizens of California by going against precedent. The Circle Inn is Mr. O'Daniel's private property. If the court imposes potential liability on him in this case, would citizens be forced to open the doors of their homes whenever a stranger claims that there is an emergency? Criminals would delight in their newfound ability to gain access to businesses and residences by simply demanding to use a phone to "call the police."

The law has developed sensibly. People are left to decide for themselves whether to help in a dangerous situation. They are not legally required to place themselves in harm's way.

Argument for the Plaintiff: Your honors, the Circle Inn's bartender had both a moral and a legal duty to allow the use of his establishment's telephone. The Circle Inn may be privately owned, but it is a business and is open to the public. Anyone in the world is invited to stop by and order a drink or a meal. The good Samaritan had every right to be there.

We do not argue that the bartender had an obligation to break up the fight or endanger himself in any way. We simply argue he had a responsibility to stand aside and allow a free call on his restaurant's telephone. Any "burden" on him or on the Circle Inn was incredibly slight. The potential benefits were enormous. The trial court made a mistake in concluding that a person *never* has a duty to help another. Such an interpretation makes for poor public policy.

There is no need to radically change the common law. Residences can be excluded from this ruling. People need not be required to allow telephone-seeking strangers into their homes. This court can simply determine that businesses have a legal duty to allow the placement of emergency calls during normal business hours.

Chapter Conclusion

We depend upon the law to give us a stable nation and economy, a fair society, a safe place to live and work. These worthy goals have occupied ancient kings and twenty-first-century lawmakers alike. But while law is a vital tool for crafting the society we want, there are no easy answers about how to create it. In a democracy, we all participate in the crafting. Legal rules control us, yet *we* create *them*. A working knowledge of the law can help build a successful career—and a solid democracy.

EXAM REVIEW

1. **THE FEDERAL SYSTEM** Our federal system of government means that law comes from a national government in Washington, D.C., and from 50 state governments. (p. 7)

2. **LEGAL HISTORY** The history of law foreshadows many current legal issues, including mediation, partnership liability, the jury system, the role of witnesses, the special value placed on land, and the idea of precedent. (pp. 5–6)

3. **PRIMARY SOURCES OF LAW** The primary sources of contemporary law are

   - United States Constitution and state constitutions;
   - Statutes, which are drafted by legislatures;
   - Common law, which is the body of cases decided by judges, as they follow earlier cases, known as precedent;
   - Court orders, which place obligations on specific people or companies;
   - Administrative law, the rules and decisions made by federal and state administrative agencies; and
   - Treaties, agreements between the United States and foreign nations. (p. 7)

EXAM Strategy

Question: The stock market crash of 1929 and the Great Depression that followed were caused in part because so many investors blindly put their money into stocks they knew nothing about. During the 1920s, it was often impossible for an investor to find out what a corporation was planning to do with its money, who was running the corporation, and many other vital things. Congress responded by passing the Securities Act of 1933, which required a corporation to divulge more information about itself before it could seek money for a new stock issue. What kind of law did Congress create?

Strategy: What is the question seeking? The question asks you which *type* of law Congress created when it passed the 1933 Securities Act. What are the primary kinds of law? Administrative law consists of rules passed by agencies. Congress is not a federal agency. Common law is the body of cases decided by judges. Congress is not a judge. Statutes are laws passed by legislatures. Congress is a legislature. (See the "Result" at the end of this section.)

4. **CRIMINAL LAW** Criminal law concerns behavior so threatening to society that it is outlawed altogether. Civil law deals with duties and disputes between parties, not with outlawed behavior. (p. 10)

EXAM Strategy

Question: Bill and Diane are hiking in the woods. Diane walks down a hill to fetch fresh water. Bill meets a stranger, who introduces herself as Katrina. Bill sells a kilo of cocaine to Katrina, who then flashes a badge and mentions how much she enjoys her job at the Drug Enforcement Agency. Diane, heading back to camp with the water, meets Freddy, a motorist whose car has overheated. Freddy is late for a meeting where he expects to make a $30 million profit; he's desperate for water for his car. He promises to pay Diane $500 tomorrow if she will give him the pail of water, which she does. The next day, Bill is in jail and Freddy refuses to pay for Diane's water. Explain the criminal law/civil law distinction and what it means to Bill and Diane. Who will do what to whom, with what results?

Strategy: You are asked to distinguish between criminal and civil law. What is the difference? The criminal law concerns behavior that threatens society and is therefore outlawed. The government prosecutes the defendant. Civil law deals with the rights and duties between parties. One party files a suit against the other. Apply those different standards to these facts. (See the "Result" at the end of this section.)

5. **JURISPRUDENCE** Jurisprudence is concerned with the basic nature of law. Three theories of jurisprudence are

- Legal positivism: The law is what the sovereign says it is.
- Natural law: An unjust law is no law at all.
- Legal realism: Who enforces the law is more important than what the law says. (pp. 12–15)

3. Result: The Securities Act of 1933 is a statute.

4. Result: The government will prosecute Bill for dealing in drugs. If convicted, he will go to prison. The government will take no interest in Diane's dispute. However, if she chooses, she may sue Freddy for $500, the amount he promised her for the water. In that civil lawsuit, a court will decide whether Freddy must pay what he promised; however, even if Freddy loses, he will not go to jail.

Multiple-Choice Questions

1. The United States Constitution is among the finest legal accomplishments in the history of the world. Which of the following influenced Ben Franklin, Thomas Jefferson, and the rest of the Founding Fathers?
   (a) English common-law principles
   (b) The Iroquois's system of federalism
   (c) Both A and B
   (d) None of the above

2. Which of the following parts of the modern legal system are "borrowed" from medieval England?
   (a) Jury trials
   (b) Special rules for selling land
   (c) Following precedent
   (d) All of the above

3. Union organizers at a hospital wanted to distribute leaflets to potential union members, but hospital rules prohibited leafleting in areas of patient care, hallways, cafeterias, and any areas open to the public. The National Labor Relations Board, a government agency, ruled that these restrictions violated the law and ordered the hospital to permit the activities in the cafeteria and coffee shop. What kind of law was it creating?
   (a) A statute
   (b) Common law
   (c) A constitutional amendment
   (d) Administrative regulation

4. If the Congress creates a new statute with the president's support, it must pass the idea by a ____________ majority vote in the House and the Senate. If the president vetoes a proposed statute and the Congress wishes to pass it without his support, the idea must pass by a ____________ majority vote in the House and Senate.
   (a) simple; simple
   (b) simple; two-thirds
   (c) simple; three-fourths
   (d) two-thirds; three-fourths

5. What part of the Constitution addresses the most basic liberties?
   (a) Article I
   (b) Article II
   (c) Article III
   (d) Amendments

Essay Questions

1. Burglar Bob breaks into Vince Victim's house. Bob steals a flat-screen TV and laptop and does a significant amount of damage to the property before he leaves. Fortunately, Vince has a state-of-the-art security system. It captures excellent images of Bob, who is soon caught by police.

   Assume that two legal actions follow, one civil and one criminal. Who will be responsible for bringing the civil case? What will be the outcome if the jury believes that Bob burgled Vince's house? Who will be responsible for bringing the criminal case? What will be the outcome if the jury believes that Bob burgled Vince's house?

2. As "The Oculist's Case" indicates, the medical profession has faced a large number of lawsuits for centuries. In Texas, a law provides that, so long as a doctor was not reckless and did not intentionally harm a patient, recovery for "pain and suffering" is limited to $750,000. In many other states, no such limit exists. If a patient will suffer a lifetime of pain after a botched operation, for example, he might recover millions in compensation.

   Which rule seems more sensible to you – the "Texas" rule, or the alternative?

3. **YOU BE THE JUDGE WRITING PROBLEM** Should trials be televised? Here are a few arguments to add to those in the chapter. You be the judge. **Arguments against live television coverage:** We have tried this experiment and it has failed. Trials fall into two categories: Those that create great public interest and those that do not. No one watches dull trials, so we do not need to broadcast them. The few that are interesting have all become circuses. Judges and lawyers have shown that they cannot resist the temptation to play to the camera. Trials are supposed to be about justice, not entertainment. If a citizen seriously wants to follow a case, she can do it by reading the daily newspaper. **Arguments for live television coverage:** It is true that some televised trials have been unseemly affairs, but that is the fault of the presiding judges, not the media. Indeed, one of the virtues of television coverage is that millions of people now understand that we have a lot of incompetent people running our courtrooms. The proper response is to train judges to run a tight trial by prohibiting grandstanding by lawyers. Access to accurate information is the foundation on which a democracy is built, and we must not eliminate a source of valuable data just because some judges are ill-trained or otherwise incompetent.

4. Leslie Bergh and his two brothers, Milton and Raymond, formed a partnership to help build a fancy saloon and dance hall in Evanston, Wyoming. Later, Leslie met with his friend and drinking buddy, John Mills, and tricked Mills into investing in the saloon. Leslie did not tell Mills that no one else was investing cash or that the entire enterprise was already bankrupt. Mills mortgaged his home, invested $150,000 in the saloon—and lost every penny of it. Mills sued all three partners for fraud. Milton and Raymond defended on the grounds that they did not commit the fraud; only Leslie did. The defendants lost. Was that fair? By holding them liable, what general idea did the court rely on? What Anglo-Saxon legal custom did the ruling resemble?

5. *Kuehn v. Pub Zone* and *Soldano v. O'Daniels* both involve attacks in a bar. Should they have the same result? If so, in which way—in favor of the injured plaintiffs or owner-defendants? If not, why should they have different outcomes? What are the key facts that lead you to believe as you do?

Discussion Questions

1. Do you believe that there are too many lawsuits in the United States? If so, do you place more blame for the problem on lawyers or on individuals who go to court? Is there anything that would help the problem, or will we always have large numbers of lawsuits?

2. In the 1980s, the Supreme Court ruled that it is legal for protesters to burn the American flag. This activity counts as free speech under the Constitution. If the Court hears a new flag-burning case in this decade, should it consider changing its ruling, or should it follow precedent? Is following past precedent something that seems sensible to you: always, usually, sometimes, rarely, or never?

3. When should a business be held legally responsible for customer safety? Consider the following statements, and circle the appropriate answer:

   a. A business should keep customers safe from its own employees.

      strongly agree agree neutral disagree strongly disagree

   b. A business should keep customers safe from other customers.

      strongly agree agree neutral disagree strongly disagree

   c. A business should keep customers safe from themselves. (Example: an intoxicated customer who can no longer walk straight.)

      strongly agree agree neutral disagree strongly disagree

   d. A business should keep people outside its own establishment safe if it is reasonable to do so.

      strongly agree agree neutral disagree strongly disagree

4. In his most famous novel, *The Red and the Black*, the French author Stendhal (1783–1842) wrote: "There is no such thing as 'natural law': this expression is nothing but old nonsense. Prior to laws, what is natural is only the strength of the lion, or the need of the creature suffering from hunger or cold, in short, need." What do you think? Does legal positivism or legal realism seem more sensible to you?

5. At the time of this writing, voters are particularly disgruntled. A good many people seem to be disgusted with government. For this question, we intentionally avoid distinguishing between Democrats and Republicans, and we intentionally do not name any particular president. Consider the following statements, and circle the appropriate answer:

   a. I believe that members of Congress usually try to do the right thing for America.

      strongly agree agree neutral disagree strongly disagree

   b. I believe that presidents usually try to do the right thing for America.

      strongly agree agree neutral disagree strongly disagree

   c. I believe that Supreme Court justices usually try to do the right thing for America.

      strongly agree agree neutral disagree strongly disagree

CHAPTER 2

BUSINESS ETHICS AND SOCIAL RESPONSIBILITY

Three people talk about their temptation to lie:

1. During college, I used drugs—some cocaine, but mostly prescription painkillers. Things got pretty bad. At one point, I would wait outside emergency rooms hoping to buy drugs from people who were leaving. But that was three years ago. I went into rehab and have been clean ever since. I don't even drink. I've applied for a job, but the application asks if I have ever used drugs illegally. I am afraid that if I tell the truth, I will never get a job. What should I say on the application?

I've applied for a job, but the application asks if I have ever used drugs illegally. I am afraid that if I tell the truth, I will never get a job. What should I say?

2. I process payroll at my company, so I know how much everyone earns, including the top executives. This could make for some good gossip, but I have never told anyone about anybody else's salary. Yesterday, the CEO went to my boss to confirm that *she*, my boss, is doing the processing of salaries for top management. It turns out that it is against company policy for me to do it, but my boss handed it off to me anyway. She lied to the CEO and said that she was doing it. Then she begged me not to tell the truth if the CEO checked with me. Now he has called me to go see him. What do I say if he asks about the payroll?

3. I am in charge of a project to redesign a software program that is one of our company's top products. Most of our engineers are French, and I studied the language in college. I enjoy going out with the team in the evenings, and I have become pretty good

friends with everyone. Recently, my boss told me that once the project is finished, all the engineers will be laid off. He joked about how "the French will be fried when they find out." Since they are not U.S. citizens, they will have to leave the country unless they get jobs right away. If I tell them the boss's plan, they will start looking for other jobs and my project could be in the tank. That would be really bad for the company, not to mention a disaster for me. One of the engineers wants to make an offer on a house, so he asked me about his future at the company. What do I say?

Introduction

This text, for the most part, covers legal ideas. The law dictates how a person *must* behave. This chapter examines **ethics,** or how people *should* behave. It will examine ethical dilemmas that commonly arise in workplaces, and present tools for making decisions when the law does not require or prohibit any particular choice.

Ethics
How people ought to act.

If a person is intent on lying, cheating, and stealing his way through a career, then he is unlikely to be dissuaded by anything in this or any other course. But, for the large majority of people who want to do the right thing, it will be useful to study new ways of approaching difficult problems.

Ethics lies largely beyond the realm of law, so we present a unique feature in this chapter. You will notice that it contains "Ethics Cases" and discussion questions in place of legal cases. It is our hope that these scenarios will generate lively classroom debates on right and wrong. It is important for future leaders to hear a variety of points of view. In your career, you will work with and manage diverse groups of people. If you have insight into how different people perceive ethical issues, you will be better off.

We also hope that hearing these different points of view will help you develop your own Life Principles. These principles are the rules by which you live your life. For example, the opening scenario dealt with lying. It is easy to say, "I will always tell the truth," but many people believe that it is ethically acceptable to lie in certain situations. For example, a large man holding a big knife demands, "Where's Jamie?" You know where Jamie is, but you might be tempted to send the murderer off in the opposite direction and then call the police. At the other end of the spectrum, you could decide that you will lie whenever it seems to be in your best interest. The problem with this approach is that you will soon find that no one trusts you. Where in between these two extremes do your Life Principles fit? Something to think about throughout this chapter (and throughout your life as well). If you develop these Life Principles now, you will be prepared when facing ethical dilemmas in the future.

In this chapter, we will present five basic issues:

1. Why bother to act ethically at all?[1]
2. What is the most important consideration when making an ethical decision? To do the right thing for the right reason, or to do what produces the most favorable results?

[1]Some of the ethics cases and discussion questions featured in this chapter are adapted from *Applied Business Ethics* by Dean A. Bredeson, Cengage Learning, 2011.

3. Should you apply your personal ethics in the workplace, or should you have different ethical values at home and at work?
4. Is the primary role of corporations to make money, or do they have responsibilities to workers, communities, customers, and other "stakeholders"?
5. When, if ever, is lying acceptable?

Why Bother to Act Ethically at All?

Ethical decision making generates a range of benefits for employees, companies, and society. Although ethical business practices are not required, the remainder of this chapter makes the case that they are sound.

Society as a Whole Benefits from Ethical Behavior

John Akers, the former chairman of IBM, argues that without ethical behavior, a society cannot be economically competitive. He puts it this way:

> Ethics and competitiveness are inseparable. We compete as a society. No society anywhere will compete very long or successfully with people stabbing each other in the back; with people trying to steal from each other; with everything requiring notarized confirmation because you can't trust the other fellow; with every little squabble ending in litigation; and with government writing reams of regulatory legislation, tying business hand and foot to keep it honest. That is a recipe not only for headaches in running a company, but for a nation to become wasteful, inefficient, and noncompetitive. There is no escaping this fact: the greater the measure of mutual trust and confidence in the ethics of a society, the greater its economic strength.[2]

People Feel Better When They Behave Ethically

Researchers who study happiness find that people expect material goods to make them happier than they actually do. Sure, you enjoy driving that snazzy new car home from the dealership, but afterward your happiness quickly returns to its natural base level. People find themselves on the so-called "hedonic treadmill"—struggling to buy more and more things so they can get that buyer's high, only to discover that they can never buy enough to maintain the thrill. Most people feel that they would be happier if their income were just a little bit higher—no matter how high it is. So what does make people happy in the long run? Good relationships, satisfying work, ties to the community—and all of these are available at no financial cost.

Every businessperson has many opportunities to be dishonest. Consider how one person felt when he resisted temptation:

> Occasionally a customer forgot to send a bill for materials shipped to us for processing.... It would have been so easy to rationalize remaining silent. After all, didn't they deserve to lose because of their inefficiency? However, upon instructing our staff to inform the parties of their errors, I found them eager to do so. They were actually bursting with pride.... Our honesty was beneficial in subtle ways. The "inefficient" customer remained loyal for years.... [O]ur highly moral policy had a marvelously beneficial effect on our employees. Through the years, many an employee visited my office to let me know that they liked working for a "straight" company.[3]

---

[3]Hugh Aaron, "Doing the Right Thing in Business," *Wall Street Journal,* June 21, 1993, p. A10.

Profitability is generally not what motivates managers to care about ethics. Managers want to feel good about themselves and the decisions they have made; they want to sleep at night. Their decisions—to lay off employees, install safety devices in cars, burn a cleaner fuel—affect people's lives. When two researchers asked businesspeople why they cared about ethics, the answers had little to do with profitability:

> The businesspeople we interviewed set great store on the regard of their family, friends, and the community at large. They valued their reputations, not for some nebulous financial gain but because they took pride in their good names.[4]

Unethical Behavior Can Be Very Costly

Unethical behavior is a risky business strategy—it may lead to disaster. An engaged couple made a reservation, and put down a $1,500 deposit, to hold their wedding reception at a New Hampshire restaurant. Tragically, the bride died four months before the wedding. Invoking the terms of the contract, the restaurant owner refused to return the couple's deposit. In a letter to the groom, he admitted, "Morally, I would of course agree that the deposit should be returned." When newspapers reported this story, customers deserted the restaurant and it was forced into bankruptcy—over a $1,500 disagreement.[5] Unethical behavior does not always damage a business, but it certainly has the potential of destroying a company overnight. So why take the risk?

Even if unethical behavior does not devastate a business, it can cause other, subtler damage. In one survey, a majority of those questioned said that they had witnessed unethical behavior in their workplace and that this behavior had reduced productivity, job stability, and profits. Unethical behavior in an organization creates a cynical, resentful, and unproductive workforce.

Although there is no *guarantee* that ethical behavior pays in the short or long run, there is evidence that the ethical company is more *likely* to win financially. Ethical companies tend to have a better reputation, more creative employees, and higher returns than those that engage in wrongdoing.[6]

But if we decide that we want to behave ethically, how do we know what ethical behavior is?

Utilitarian vs. Deontological Ethics

When making ethical decisions, people sometimes focus on the reason for the decision—they want to do what is right. Thus, if they think it is wrong to lie, then they will tell the truth no matter what the consequence. Other times, people think about the outcome of their actions. They will do whatever it takes to achieve the right result, no matter what. This choice—between doing right and getting the right result—has been the subject of much philosophical debate.

Utilitarian Ethics

In 1863, Englishman John Stuart Mill wrote *Utilitarianism*. He was not the first person to write on utilitarian ethics, but his book has best stood the test of time. To Mill, a correct decision was one that tended to maximize overall happiness and minimize overall pain. Risk management and cost-benefit analyses are examples of utilitarian business practices.

Utilitarianism is, in some ways, an almost mathematical approach to ethics. Consider this classic example. If you have two extra baseball tickets and two friends, and if you decide to share the tickets, you might be naturally inclined to give one to each friend. But what if one of your friends likes baseball and the other does not? The transaction might look something like this:

Friend 1: (1 ticket) x (1 unit of happiness per ticket) = 1 unit of happiness produced

Friend 2: (1 ticket) x (0 units of happiness per ticket) = 0 units of happiness produced

Overall happiness generated by the gifts = 1 unit of happiness

A utilitarian might suggest giving both tickets to the friend who would appreciate them. The transaction might then look like this:

Friend 1: (2 tickets) x (1 unit of happiness per ticket) = 2 units of happiness produced

Friend 2: (0 tickets) x (0 units of happiness per ticket) = 0 units of happiness produced

Overall happiness generated by the gifts = 2 units of happiness

The best Hollywood line that reflects utilitarian thinking comes from *Star Trek II: The Wrath of Khan*. Toward the end, Mr. Spock saves the *Enterprise* but in so doing takes a lethal dose of radiation. Captain Kirk cradles the dying Spock and says, "Spock! WHY?" Spock replies, "Because Captain, the needs of the many outweigh the needs of the few (cough) or one."

The critics of utilitarian thought are many. Some argue that it is simply not possible to "measure" happiness in the way that one would measure distance or the passage of time. Others say that utilitarians simply let the ends justify the means, and that they allow for bad behavior so long as the it generates good in the end. A third group argues that utilitarian and other hedonistic philosophies err in equating pleasure with ethical behavior, and pain with wrongful behavior. Caring for an elderly relative with Alzheimer's disease, for example, might generate little pleasure and much pain, but it is still a worthwhile and good endeavor.

Deontological Ethics

Many ethicists believe that utilitarians have it all wrong, and that the *results* of a decision are not as important as the *reason* for which it is made. To a deontological thinker, the ends do not justify the means.

The best-known proponent of the deontological model was 18th-century German philosopher Immanuel Kant. He thought that human beings possessed a unique dignity and that no decision that treated people as commodities could be considered just, even if the decision tended to maximize overall happiness, or profit, or any other quantifiable

measure. In his view, a sense of duty or obligation was the best justification for any action. Although not all followers of deontological ethics agree with Kant's specific ideas, most agree that utilitarianism is lacking, and that winning in the end does not automatically make a decision right. Ethical decisions, they argue, are those made for good and moral reasons in the first place, regardless of the outcome.

In the following example, both sides end up better off, but is the operation ethically sound?

Ethics Case: HIV Treatment

Alpha Company has developed a new drug that is an effective treatment for HIV, the virus that causes AIDS. It is not a cure, but it postpones the onset of AIDS indefinitely.

Before this breakthrough, HIV-positive patients were treated with a "cocktail" of medications. Although effective, the combination of drugs required patients to take several pills at a time several times per day. Alpha Company's drug is a single pill that must be taken only twice per day. Because it is more convenient, patients would be less likely to miss doses.

Alpha spent tens of millions of dollars developing the drug, but now that is has been developed, each pill only costs a few dollars to manufacture. Alpha charges $4,150 for a 30-day supply, or about $50,000 per year. The pills generally are not covered by insurance plans. The older "cocktail" of drugs is still available from other drug companies at a much lower cost.

Alpha has a program that makes its drug available at no cost in extreme circumstances, and about 1 percent of the patients taking the drug receive it directly from Alpha at no charge. Alpha has several successful drugs and had earnings of nearly $3 billion last year.

Some activists have called on Alpha to do the following:

- Reduce the price of its drugs for all patients to $35,000 per year. This would be $10,000 above the cost of the older treatment.
- Expand its free drug program to cover 10 percent of the drug's current users.

Questions

1. Should Alpha meet the first demand and reduce its prices across the board? What is a fair price?
2. Should Alpha meet the second demand and expand its free drug program? What guidelines should it use?
3. Justify your answers to Questions 1 and 2 using the ideas presented in this section. Utilitarians might respond to this scenario by saying, "A profitable drug company will stay in business longer, develop more useful medications, and benefit more people in the long run. Alpha is under no ethical obligation to make either policy change." A Kantian thinker might argue, "Alpha has a duty to help people when it is able to do so. It should reduce the price to all patients and provide free drugs to those who need it." Which line of reasoning makes more sense to you?

Applying Personal Ethics in the Workplace

Should you behave in the workplace the way you do at home, or do you have a separate set of ethics for each part of your life? What if your employees behave badly outside of work—should that affect their employment? Consider the following case.

Ethics Case: No Sheen on Sheen

Charlie Sheen, the star of the hit CBS TV show *Two and a Half Men*, has admitted to using large quantities of cocaine. He has been hospitalized with drug overdoses and has been charged with both misdemeanor and felony drug offenses, which have led to probation several times. When asked about entering rehab, he said that only losers go to recovery programs and he could cure himself with his mind. He openly spent tens of thousands of dollars on prostitutes. His second wife filed a restraining order against him, alleging that he had pushed her down the stairs and threatened to kill her. He was also charged with a felony for threatening his third wife. She claims that he held a knife to her throat and said "You better be in fear. If you tell anybody, I'll kill you." Then there was the widely reported incident in the Plaza Hotel in New York City in which the police escorted him to the hospital after he trashed his room and threatened the prostitute whom he had hired—all while his ex-wife and children slept in a room across the hall. Five months later, the police removed his twin sons from his house after their mother obtained a restraining order. On a radio show, Sheen made anti-Semitic comments about his boss, called him a clown and a charlatan, and said that he "violently hated him." This boss was the most successful producer of comedy shows in the business.

Questions

1. If CBS fired Sheen from his TV show, the network would lose tens of millions of dollars. At what point, if any, should CBS have fired him? If not for this, then for what?
2. Would you fire a warehouse worker who behaved this way? How much revenue does an employee have to bring in to be able to buy his way out of bad behavior?
3. What would you say to someone who argues that the goal at work is to make as much money as possible, but at home it is to be a kind and honorable human being?

Stakeholder Ethics

A fundamental question in business ethics is: *What is the purpose of a corporation?* The answer to this question has changed over time. To begin at the beginning …

In a famous 1919 lawsuit[7], Henry Ford was sued by the Dodge brothers and other major shareholders of Ford Motor Company. The shareholders were upset because Ford paid essentially no dividends, despite fabulous profits. The shareholders complained, especially about Ford's use of corporate profits to support humanitarian and charitable works. The Michigan Supreme Court found in favor of the shareholders because corporation laws at the time required corporate boards to put shareholders first. The Dodge brothers won enough money to start their own car company, which still exists as part of Chrysler.

Companies were legally required to follow the "shareholder model" until the decade after the close of World War II. In the late 1940s and early 1950s, the attitude of many powerful politicians toward corporations changed. Many believed that American companies had contributed mightily to stopping the Nazis, and that without the massive volume of armaments and supplies that American corporations produced, Hitler might well have been victorious. There was a feeling that corporations were an essential part of society.

[7] *Dodge v. Ford*, 170 N.W. 668 (Mich. 1919).

Many politicians wanted corporations to be able to participate more fully in American life: They softened restrictive language in corporation laws so that companies could "do good deeds." Such action was not and is still not required, but it is *allowed*.

Definitions

The Shareholder Model

Noted economist Milton Friedman argued that corporations have two primary responsibilities. First, they must comply with the law. Second, they must make as much money as possible for shareholders. In his view, if shareholder and stakeholder interests conflict, the company should act in the best interests of the shareholders. After all, only shareholders have put their own money on the line. To do otherwise is, according to Friedman, "imposing a tax" on the shareholders.

The Stakeholder Model

The alternative point of view is that corporations should take care of more than shareholders alone. It is not that the owners of a corporation should be ignored—shareholders are included as one of several groups of stakeholders in a firm. But, a company must also look out for (among others) its employees, its customers, and the communities in which it operates. It may even be that companies have an obligation to broader interests such as "society" or "the environment."

The basic notion of stakeholder ethics is that even if a company will make a smaller profit for shareholders, it should nonetheless pay decent wages, support charitable causes, and so forth. A great many Fortune 500 companies put the stakeholder model into practice.

The Debate

Every executive will treat employees well if she believes that doing so will lead to increased profits. Every executive is in favor of donating money to charity if the donation improves the company's image and thereby pays for itself. But such win-win cases are not ethical dilemmas.

In a true dilemma, a company considers an action that would not increase the shareholders' return in any certain or measureable way. In such cases, the shareholder model advises, "Don't spend the shareholders' money." The stakeholder model counsels, "It is often OK to consider the interests of stakeholders other than the owners."

As with most all ethics questions, neither side is "right" in the sense that everyone agrees or that the law requires following either set of ideas. Countless companies follow each of the models.

The remainder of this section examines a company's ethical obligation to three specific stakeholders: employees, customers, and international contractors.

The Organization's Responsibility to Its Employees

Organizations cannot be successful without good workers. In many circumstances, the shareholder and stakeholder models agree that employees should be treated well. Disgruntled workers are likely to be unmotivated and unproductive. But sometimes looking out for employees may not lead to higher profits. In these cases, does an organization have a duty to "take care" of its workers? The shareholder model says no; the stakeholder model takes the opposite view.

Corporate leaders are often faced with difficult decisions when the issue of layoffs arises. Choices can be particularly difficult to navigate when outsourcing is an option. *Outsourcing* refers to cutting jobs at home and relocating operations to another country.

Read the following scenario and critique the CEO's decision making.

Ethics Case: The Storm After the Storm

Yanni is the CEO of Cloud Farm, a company that provides online data centers for Internet companies. Because these data centers are enormous, they are located in rural areas where they are often the main employer. A series of tornados has just destroyed a data center near Farmfield, Arkansas, a town with a population of roughly 5,000 people. Farmfield is a three-hour drive from the nearest city, Little Rock.

Here is the good news: the insurance payout will cover the full cost of rebuilding. Indeed, the payout will be so generous that Cloud Farm could build a bigger and better facility than the one destroyed. The bad news? Data centers are much more expensive to build and operate in the United States than in Africa, Asia, or Latin America. Yanni could take the money from the insurance company and build three data centers overseas. He has asked Adam and Zoe to present the pros and cons of relocating.

Adam says: "If we rebuild overseas, our employees will never find equivalent jobs. We pay $20 an hour, and the other jobs in town are mostly minimum-wage. And remember how some of the guys worked right through Christmas to set up for that new client. They have been loyal to us—we owe them something in return. And it's not just bad for Farmfield or Arkansas, it's bad for the country. We can't continue to ship jobs overseas."

Zoe responds: "That is the government's problem, not ours. We'll pay to retrain the workers, which, frankly, is a generous offer. Our investors get a return of 4 percent; the industry average is closer to 8 percent. If we act like a charity to support Farmfield, we could all lose our jobs. It is our obligation to do what's best for our shareholders—which, in this case, happens to be what's right for us, too."

Questions

1. If you were in Yanni's position, would you rebuild the plant in Arkansas or relocate overseas?
2. Do you agree with Zoe's argument that it is the government's responsibility to create and protect American jobs, and that it is a CEO's job to increase shareholder wealth?
3. Imagine that you personally own $10,000 worth of shares in Cloud Farm. Would you be upset with a decision to rebuild the data center in the United States?
4. If Cloud Farm decides to rebuild in Arkansas, should it pay the workers while the center is being rebuilt? If yes, should it apply to all the workers, or just the high-level ones who might leave if they were not paid?
5. What is your Life Principle on this issue? Would you be willing to risk your job to protect your employees?

An Organization's Responsibility to Its Customers

Customers are another group of essential stakeholders. A corporation must gain and retain loyal buyers if it is to stay in business for long. Treating customers well usually increases profits and helps shareholders.

But when, if ever, does an organization go too far? If a leader "puts customers first" in a way that significantly diminishes the bottom line, has she acted inappropriately? The shareholder model says yes.

After reading the following scenario, assess which option is best.

Ethics Case: Fanning Customer Wrath

Mark is the plant manager at Cooper Fan Company. For six months, he has been angling to ink a deal with Rooms-to-Go, a housewares company. With this contract, company profits would soar and he could hire 75 new workers. It would not hurt his bonus or job security,

either. But now the shift foreman at the factory is reporting bad news—an engineer says there may be a problem with the CPRF-300 model, one of Cooper's most popular offerings. With a sinking heart, Mark goes to investigate.

Ann, the engineer, shows Mark the standard remote control. "Notice," she says, "four buttons—Lo, Hi, Off, and Reverse." Mark hits the Lo button, and a ceiling fan just above his head starts to rotate lazily. He pushes Off, and the blades slow to a stop.

"So what's the problem?" Mark asks.

"It's the Reverse button. Most of our models have a switch on top of the fan itself that allows for the fan to spin clockwise or counterclockwise. This way, fans can blow air downward in the summer to cool the room and then draw air upward in the winter to make the same room feel warmer. But that means twice a year, homeowners have to drag out a ladder to change the switch.

"The CPRF-300 solves this problem by putting the Reverse button on the remote control. No ladders, no changing of switches. The problem is that the remote allows the reverse feature to be engaged while the fan is running. Watch."

Ann presses Hi on the remote and waits for the blades to cycle up to speed. When the blades are a blur, she pushes Reverse. There are several rapid clicks and a soft grinding sound as the blades lose speed. The noises stop after a few seconds, the blades slow, come to a stop, change direction, and begin to speed up again.

"If someone does that once or twice, no problem," Ann says. But eventually, the fans all fail. We tested 50 of them—switching back and forth between Hi and Reverse over and over. At somewhere between 75 and 150 reversals, they break. For most of them, it isn't a big problem—they just stop working. Three of them emitted sparks but did nothing else. One of them started a fire. And the last one threw out a half-inch piece of metal from the inner casing. Probably wouldn't kill someone, but it could certainly have put out an eye."

"So who's going to switch back and forth like that 75 times?" Mark asks.

"A kid might want to make a game of it. And, although there have been no reports of any problems, it may be that we are just lucky. So far. The engineers have designed a new fan that solves this problem. But what do we do in the meantime about the 50,000 CPRF-300s that have already been sold?"

Here are Mark's options:

- Recall all the CPRF-300s. Fixing or replacing the fans would probably cost several million dollars. A recall would also jeopardize the Rooms-to-Go contract.
- Never issue a recall. If a fan fails and someone sues, it would probably cost \$20,000 to \$200,000 per incident. But if someone dies in a fire or is disabled by flying debris, then all bets are off. There is no upper limit on a worst-case scenario like that.
- Delay the recall for a month or two, until the Rooms-to-Go contract is resolved one way or the other.

Questions

1. If you were in Mark's position, would you recommend a recall today? How about in two months, after the Rooms-to-Go deal has been completed?
2. Ann's testing showed 6 percent "bad" results (sparks) and 4 percent "really bad" results (fire and thrown metal). Would your answers to Question 1 change if Ann's testing had shown 18 percent "bad" and 12 percent "really bad" results? What if it had shown the same number of "bad" results but zero "really bad" results?
3. What Life Principle are you applying in this situation?

4. Assume that no recall is made, that a fan started a fire and burned a home in your town to the ground, and that a local newspaper identified the ceiling fan as the cause. The newspaper later reports that the Cooper Fan Company knew about the potential problem and did nothing about it. As a consumer, would you consider buying Cooper fans, or would you pass them by even if they were competitive in pricing, appearance, and features?

Organization's Responsibility to Overseas Contract Workers

© Salamanderman/Shutterstock

What are the ethical obligations of a company that uses foreign workers?

Industrialization has always been the first stepping stone out of dire poverty.

Do an American company's ethical obligations end at the border? What ethical duties does an American manager owe to stakeholders in countries where the culture and economic circumstances are very different? Should American companies (and consumers) buy goods that are produced in sweatshop factories?

Industrialization has always been the first stepping stone out of dire poverty—it was in England in centuries past, and it is now in the developing world. Eventually, higher productivity leads to higher wages. In China, factory managers have complained that their employees want to work even longer hours to earn more money. The results in China have been nothing short of remarkable. During the Industrial Revolution in England, per-capita output doubled in 58 years; in China, it took only 10 years.

During the past 50 years, Taiwan and South Korea welcomed sweatshops. During the same period, India resisted what it perceived to be foreign exploitation. Although all three countries started at the same economic level, Taiwan and South Korea today have much lower levels of infant mortality and much higher levels of education than India.[8]

When governments or customers try to force factories in the developing world to pay higher wages, the factory owners typically either relocate to lower-wage countries or mechanize, thereby reducing the need for workers. In either case, the local economy suffers. Companies argue that higher wages lead to increased prices, which in turn drive away customers.

Ethics Case: The Dragon's Den

Ellen is the CEO of a large electronics manufacturer that makes cell phones, among other items. She is reviewing a consultant's report on Quality Dragon Limited, which operates the factory in China where the cell phones are made. She is considering whether to renew the firm's contract for a new three-year term.

The consultant "infiltrated" the Quality Dragon factory by getting a job and working there for a month. Portions of the consultant's report follow.

---

[8]The data in this and the preceding paragraph are from Nicholas D. Kristof and Sheryl Wu Dunn, "Two Cheers for Sweatshops," *New York Times Magazine*, Sept. 24, 2000, p. 70.

We were awakened at 5 a.m. every day. They always shouted at us and ordered us to hurry. We were fed a poor meal, and were always at our stations by 5:30, although work did not begin until 6. We worked from 6 until 1 p.m. with one 10-minute restroom break at 9 a.m. We were not permitted to talk to coworkers. If we did, even quietly, we were docked pay and the supervisors screamed at us. If we made an assembly error, we lost pay and the supervisors screamed at us. If we yawned, we lost pay and the supervisors screamed at us. If we failed to meet an hourly quota, we lost pay and the supervisors screamed at us.

I drilled holes into the outer casing of your phones at the place where a charger can be plugged in. My quota was to process 120 per hour. The holes had to be perfectly located and perfectly straight. Every 30 seconds, a new one. It was difficult to keep focus. I tried to make fewer than 10 errors per day. One day I made only 4 errors. Another day I made 18. On that day, my supervisor slapped me and docked my entire day's pay.

We had 30 minutes for lunch. The company provides a poor meal. We were permitted to pay for better food at the cafeteria, but it was very expensive. We could speak quietly at lunch.

At 1:30, we went back to work until 8:30. We had another 10-minute break at 4:30. Work was more difficult in the afternoon. The sun warmed the factory. Water was not allowed on the assembly floor. Sometimes, water was available at the restroom break. The supervisors were angrier and less patient after lunch. They called us names that no one should be called. If we missed our quota, we had to work late. This happened several times over the month.

Eventually, we were fed and returned to our dorm. We had 12 men to a room, and we slept in bunk beds that were three bunks high. The room smelled bad, and there were ants.

We worked six days per week. On Sundays, most workers spent much of their day sleeping. The company did provide televisions and chess sets in the recreation building.

I was supposed to earn $150 for the month. But the supervisors always looked for reasons to dock my pay. No one gets full pay. I ended up with $110 at the end of the month. For long-term workers, "take-home pay" is actually lower because there are things they must buy from the factory store. Workers are required to shave, but they have to buy their own razor blades. They also have to buy soap. The company provides a jumpsuit once a year, but workers have to buy socks and underwear.

Life in the factory could be worse, but it is very difficult.

Questions

1. Is the CEO morally required to use her negotiating power to insist upon better treatment of the people who make her company's products? What is your Life Principle?
2. In your opinion, does the treatment described seem reasonable? If not, what parts of the consultant's story indicate to you that workers are being treated wrongfully?
3. Assume that correcting the problems listed below would each result in a 1 percent cost increase for this company. Assume that you are in Ellen's position as CEO. Which of the following items would you insist upon, keeping in mind that each one increases your labor costs?
   - Reducing employees' workdays to a maximum of 12 hours
   - Improving the quality of food served to employees
   - Eliminating the practice of reducing pay for employees who exceed their quota for errors
   - Building additional dorms so that workers sleep with no more than four to a room
   - Prohibiting unpaid or forced overtime

4. As a consumer, are you keenly aware of how much things cost? Would you notice if food prices rose by 5 percent? What about smart phones, computers, and televisions—would a 5 percent increase in the price of these items be noticeable? What if the increase was 2 percent? How much extra would you be willing to pay for your cell phone so that workers could be treated better than the ones in this factory?

When, If Ever, is Lying Acceptable?

Does deception in business amount to lying or bluffing?

We are taught from an early age that we must tell the truth. And usually, honesty is the best policy. The consequences of lying can be severe: students are suspended, employees are fired, and witnesses are convicted of perjury. Sometimes the problems are more subtle but still significant: a loss of trust, a loss of opportunities.

But in some specific circumstances, intentional deception is tolerated, even admired. In sports, for example, athletes spend countless hours perfecting techniques designed to trick opponents. If Peyton Manning looks one way and throws the other, no one is upset even though his intention is to deceive the defensive backs. In other settings, lying is equally acceptable. When poker players bluff their way through lousy hands, we call them "skilled."

But what about in business? Does the presence of *competition* make a difference? Can the ends ever justify the means when it is not a life-and death situation? Consider the following scenario.

Ethics Case: Truth (?) in Borrowing

"Yes," Harold insisted indignantly. "I *am* going to walk in there and give them a file of fake documents. And hope to heaven that I can walk out of there with a $100,000 loan, even if it is fraudulent. What of it? Ethics are all very well when business is good, but now I'm desperate. Without that loan, no payroll and then no business."

"And what happens when you get caught?" his brother demanded. "Don't expect me to come visit you in jail every Sunday."

"Don't worry, they'll never figure it out. I'm only exaggerating the numbers a little, and I've never fudged a single thing in 20 years of banking with them. They won't look too closely. And it's not like the bank is going to lose its money. Orders are already picking up, and they'll come all the way back, just like they did in the last two recessions. I'll pay the bank every penny back—with interest—this time next year. Who gets hurt?"

Questions

1. Rate Harold's plan to lie to his bank to secure the $100,000 loan so that he is able to pay his employees. Is it completely wrongful? Completely justified? Somewhere in between? How does it fit with your Life Principle?

2. Now assume that a year passes, and that business does in fact pick up for Harold's company. He is able to repay the loan in full, with interest. No one is laid off from his company, no one misses a paycheck, and his lie is never caught. Is your assessment of his actions the same? Do the ends at least partially justify the means?

3. What is your Life Principle about telling lies? When is making a misrepresentation acceptable? To protect someone's life or physical safety? To protect a job? To protect another person's feelings? To gain an advantage? When others expect it and may do the same? (Would bluffing in a game of poker be different from cheating on an exam or on your taxes?)
4. What would you say about the three examples in the opening scenario? Do you have the same rule when lying to protect yourself, as opposed to others?

Chapter Conclusion

Even employees who are ethical in their personal lives may find it difficult to uphold their standards at work if those around them behave differently. Managers wonder what they can do to create an ethical environment in their companies. In the end, the surest way to infuse ethics throughout an organization is for top executives to behave ethically themselves. When leaders assess the impact that their decisions will have on stakeholders, they go a long way towards behaving ethically.

Few employees will bother to "do the right thing" unless they observe that their bosses value and support such behavior. To ensure a more ethical world, managers must be an example for others, both within and outside their organizations.

Exam Review

1. **ETHICS** The law dictates how a person *must* behave. Ethics governs how people *should* behave.
2. **LIFE PRINCIPLES** Life Principles are the rules by which you live your life. If you develop these Life Principles now, you will be prepared when facing ethical dilemmas in the future.
3. **WHY BOTHER TO ACT ETHICALLY AT ALL?**
    - Society as a whole benefits from ethical behavior.
    - People feel better when they behave ethically.
    - Unethical behavior can be very costly.
    - Ethical behavior is more likely to pay off.
4. **UTILITARIANISM V. DEONTOLOGICAL ETHICS** Utilitarian thinkers believe that moral actions produce the greatest good for the greatest number. Deontological thinkers such as Immanuel Kant argue that, when assessing whether a decision is the most ethical choice, the end result is immaterial. Kantian thinkers believe that moral choices must be made for sound reasons, and that decisions motivated by a sense of duty or a respect for human dignity are particularly ethical.

5. **PERSONAL VS. WORK ETHICS** Should you apply your personal ethics in the workplace, or should you have different ethical values at home and at work?

6. **PURPOSE OF CORPORATIONS** Is the primary role of corporations to make money, or do companies have responsibilities to workers, communities, customers, and other stakeholders?

7. **ETHICS OVERSEAS** What ethical duties does an American manager owe to stakeholders in countries where the culture and economic circumstances are very different? Should American companies (and consumers) buy goods that are produced in sweatshop factories?

8. **LYING** When, if ever, is lying acceptable?

Multiple-Choice Questions

1. Milton Friedman was a strong believer in the ____________ model. He ______________ argue that a corporate leader's sole obligation is to make money for the company's owners.
   (a) Shareholder; did
   (b) Shareholder; did not
   (c) Stakeholder; did
   (d) Stakeholder; did not

2. In the 1919 lawsuit *Dodge v. Ford*, the Dodge brothers and other major shareholders sued Henry Ford and his board of directors over nonpayment of dividends. The Michigan Supreme Court sided with _______________. Incorporation laws at the time ____________ companies to follow the shareholder model.
   (a) Ford; required
   (b) Ford; permitted
   (c) The Dodge brothers; required
   (d) The Dodge brothers; permitted

3. Which of the following historic events led to a significant change in corporation laws, permitting companies to follow the stakeholder model?
   (a) The Great Depression
   (b) World War II
   (c) The election of John F. Kennedy
   (d) The moon landing
   (e) The Supreme Court's decision in *Brown v. Board of Education*

4. Which of the following wrote the book *Utilitarianism* and believed that moral actions should "generate the greatest good for the greatest number"?
   (a) Milton Friedman
   (b) John Stuart Mill
   (c) Immanuel Kant
   (d) None of the above

5. Which of the following believed that the dignity of human beings must be respected, and that the most ethical decisions are made out of a sense of duty or obligation?
   (a) Milton Friedman
   (b) John Stuart Mill
   (c) Immanuel Kant
   (d) None of the above

ESSAY QUESTIONS

1. Executives were considering the possibility of moving their company to a different state. They wanted to determine if employees would be willing to relocate, but they did not want the employees to know the company was contemplating a move because the final decision had not yet been made. Instead of asking the employees directly, the company hired a firm to carry out a telephone survey. When calling the employees, these "pollsters" pretended to be conducting a public opinion poll and identified themselves as working for the new state's Chamber of Commerce. Has this company behaved in an ethical manner? Would there have been a better way to obtain this information?

2. When a fire destroyed the Malden Mills factory in Lawrence, Massachusetts, its 70-year-old owner, Aaron Feuerstein, could have shut down the business, collected the insurance money, and sailed off into retirement. But a layoff of the factory's 3,000 employees would have been a major economic blow to the region. So instead, Feuerstein kept the workers on the payroll while he rebuilt the factory. These actions gained him a national reputation as a business hero. Many consumers promised to buy more of the company's Polartec fabric. In the end, however, the story did not have a fairy-tale ending: five years after the fire, Malden Mills filed bankruptcy papers. The company was not able to pay off the loans it had incurred to keep the business going.

   Did Feuerstein do the right thing?

3. Many socially responsible funds are now available to investors who want to make ethical choices. The Amana Fund buys stocks that comply with Islamic laws. For example, it will not invest in holdings that earn interest, which is prohibited under Islamic law. The Ava Maria Fund is designed for Catholic investors, the Timothy Funds for evangelicals. The Sierra Fund focuses on environmentally friendly investments, while the Women's Equity Fund chooses companies that promote women's interests in the workplace. On average, however, these socially responsible investments earn a lower return than standard index funds that mirror the performance of a stock index, such as the Standard & Poor's 500.

   Are socially responsible funds attractive to you? Do you now, or will you in the future, use them in saving for your own retirement?

4. When James Kilts became CEO of Gillette Co., the consumer products giant had been a mainstay of the Boston community for a hundred years. But the organization was going through hard times: Its stock was trading at less than half its peak price, and some of its storied brands of razors were wilting under intense competitive pressure. In four short years, Kilts turned Gillette around—strengthening its core brands, cutting jobs, and paying off debt. With the company's stock up 61 percent, Kilts had added $20 billion in shareholder value.

Then Kilts suddenly sold Gillette to Procter & Gamble Co. (P&G) for $57 billion. So short was Kilts's stay in Boston that he never moved his family from their home in Rye, New York. The deal was sweet for Gillette shareholders—the company's stock price went up 13 percent in one day. And tasty also for Kilts—his payoff was $153 million, including a $23.9 million reward from P&G for having made the deal and for a "change in control" clause in his employment contract that was worth $12.6 million. In addition, P&G agreed to pay him $8 million a year to serve as vice chairman after the merger. When he retires, his pension will be $1.2 million per year. Moreover, two of his top lieutenants were offered payments totaling $57 million.

Any downside to this deal? Four percent of the Gillette workforce—6,000 employees—were fired. If the payouts to the top three Gillette executives were divided among these 6,000, each unemployed worker would receive $35,000. The loss of this many employees (4,000 of whom lived in New England) had a ripple effect throughout the area's economy. Although Gillette shareholders certainly benefited in the short run from the sale, their profit would have been even greater without this $210 million payout to the executives. Moreover, about half the increase in Gillette revenues during the time that Kilts was running the show were attributable to currency fluctuations. A cheaper dollar increased revenue overseas. If the dollar had moved in the opposite direction, there might not have been any increase in revenue. Indeed, for the first two years after Kilts joined Gillette, the stock price declined. It wasn't until the dollar turned down that the stock price improved.

Do CEOs who receive sweeteners have too strong an incentive to sell their companies? Is it unseemly for them to be paid so much when many employees will lose their jobs?

5. Many of America's largest consumer product companies, such as Wal-Mart, Nike, and Land's End, buy fabric produced in China by Fountain Set Holdings Ltd. Chinese government investigators recently discovered that Fountain Set has contaminated a local river by dumping dye waste into it. What responsibility do U.S. companies have to ensure safe environmental practices by overseas suppliers?

Discussion Questions

1. Darby has been working for 14 months at Holden Associates, a large management consulting firm. She is earning $75,000 a year, which *sounds* good but does not go very far in New York City. It turns out that her peers at competing firms are typically paid 20 percent more and receive larger annual bonuses. Darby works about 60 hours a week—more if she is traveling. A number of times, she has had to reschedule her vacation or cancel personal plans to meet client deadlines. She hopes to go to business school in a year and has already begun the application process.

   Holden has a policy that permits any employee who works as late as 8:00 P.M. to eat dinner at company expense. The employee can also take a taxi home. Darby is in the habit of staying until 8:00 P.M. every night, whether or not her workload requires it. Then she orders enough food for dinner, with leftovers for lunch the next day. She has managed to cut her grocery bill to virtually nothing. Sometimes she invites her boyfriend to join her for dinner. As a student, he is always hungry and broke. Darby often uses the Holden taxi to take them back to his apartment, although the cab fare is twice as high as to her own place.

Sometimes Darby stays late to work on her business school applications. Naturally, she uses Holden equipment to print out and photocopy the finished applications. Darby has also been known to return catalog purchases through the Holden mailroom on the company dime. Many employees do that, and the mailroom workers do not seem to mind.

Is Darby doing anything wrong? How would you behave in these circumstances?

2. H. B. Fuller Co. of St. Paul is a leading manufacturer of industrial glues. Its mission statement says the company "will conduct business legally and ethically." It has endowed a university chair in business ethics and donates 5 percent of its profits to charity. But now it is under attack for selling its shoemakers' glue, Resistol, in Central America. Many homeless children in these countries have become addicted to Resistol's fumes. So widespread is the problem that glue-sniffers in Central America are called *resistoleros*. Glue manufacturers in Europe have added a foul-smelling oil to their glue that discourages abusers. Fuller fears that the smell may also discourage legitimate users. What should Fuller do?

3. According to the Electronic Industries Association, questionable returns have become the toughest problem plaguing the consumer electronics industry. Some consumers purchase electronic equipment to use once or twice for a special occasion and then return it—a radar detector for a weekend getaway or a camcorder to record a wedding. Or a customer might return a cordless telephone because he cannot figure out how it works. The retailer's staff lacks the expertise to help, so they refund the customer's money and ship the phone back to the manufacturer labeled as defective. Excessive and unwarranted returns force manufacturers to repackage and reship perfectly good products, imposing extra costs that squeeze their profits and raise prices to consumers. One retailer returned a cordless telephone that was two years old and had been chewed up by a dog. What ethical obligations do consumers and retailers have in these circumstances?

4. Genentech, Inc., manufactured Protropin, a genetically engineered version of the human growth hormone. This drug's purpose was to enhance the growth of short children. Protropin was an important product for Genentech, accounting for more than one-third of the company's total revenue of $217 million. Although the drug was approved for the treatment of children whose bodies made inadequate quantities of growth hormone, many doctors prescribed it for children with normal amounts of growth hormone who simply happened to be short. There was no firm evidence that the drug actually increased growth for short children with normal growth hormone. Moreover, many people questioned whether it is appropriate to prescribe such a powerful drug for cosmetic reasons, especially when the drug might not work. Nor was there proof that Protropin was safe over the long term. Was Genentech behaving ethically? Should it have discouraged doctors from prescribing the drug to normal, short children?

5. Rapper Ice-T's song "Cop Killer" generated significant controversy when it was released. Among other things, its lyrics anticipate slitting a policeman's throat. Such lyrics have become reasonably common today, but they were much less common 20 years ago.

When "Cop Killer" was recorded, Time Warner, Inc., was struggling with a $15 billion debt and a depressed stock price. Had Time Warner renounced rap albums with harsh themes, its reputation in the music business—and future profits—might have suffered. This damage might even have spilled over into the multimedia market, which was crucial to Time Warner's future.

Did Time Warner do anything wrong when it decided to release "Cop Killer"?

CHAPTER 3

DISPUTE RESOLUTION

© r.nagy/Shutterstock.com

Tony Caruso had not returned for dinner, and his wife, Karen, was nervous. She put on some sandals and hurried across the dunes, a half mile to the ocean shore. She soon came upon Tony's dog, Blue, tied to an old picket fence. Tony's shoes and clothing were piled neatly nearby. Karen and friends searched frantically throughout the evening.

A little past midnight, Tony's body washed ashore, his lungs filled with water. A local doctor concluded he had accidentally drowned.

Karen and her friends were not the only ones who were distraught. Tony had been partners with Beth Smiles in an environmental consulting business, Enviro-Vision. They were good friends, and Beth was emotionally devastated. When she was able to focus on business issues, Beth filed an insurance claim with the Coastal Insurance Group. Beth hated to think about Tony's death in financial terms, but she was relieved that the struggling business would receive $2 million on the life insurance policy.

A little past midnight, Tony's body washed ashore, his lungs filled with water.

Several months after filing the claim, Beth received this reply from Coastal: "Under the policy issued to Enviro-Vision, we are conditionally liable in the amount of $1 million in the event of Mr. Caruso's death. If his death is accidental, we are conditionally liable to pay double indemnity of $2 million. But pursuant to section H(5), death by suicide is not covered.

"After a thorough investigation, we have concluded that Anthony Caruso's death was an act of suicide, as defined in section B(11) of the policy. Your claim is denied in its entirety." Beth was furious. She was convinced Tony was incapable of suicide. And her company could not afford the $2 million loss. She decided to consult her lawyer, Chris Pruitt.

Three Fundamental Areas of Law

This case is a fictionalized version of several real cases based on double indemnity insurance policies. In this chapter, we follow Beth's dispute with Coastal from initial interview through appeal, using it to examine three fundamental areas of law: the structure of our court systems, civil lawsuits, and alternative dispute resolution.

When Beth Smiles meets with her lawyer, Chris Pruitt brings a second attorney from his firm, Janet Booker, who is an experienced **litigator**, that is, a lawyer who handles court cases. If they file a lawsuit, Janet will be in charge, so Chris wants her there for the first meeting. Janet probes about Tony's home life, the status of the business, his personal finances, everything. Beth becomes upset that Janet doesn't seem sympathetic, but Chris explains that Janet is doing her job: she needs all the information, good and bad.

Litigation versus Alternative Dispute Resolution

Janet starts thinking about the two methods of dispute resolution: litigation and alternative dispute resolution. **Litigation** refers to lawsuits, the process of filing claims in court, and ultimately going to trial. **Alternative dispute resolution** is any other formal or informal process used to settle disputes without resorting to a trial. It is increasingly popular with corporations and individuals alike because it is generally cheaper and faster than litigation, and we will focus on this topic in the last part of this chapter.

Litigation
The process of filing claims in court and ultimately going to trial.

Alternative dispute resolution
Any other formal or informal process used to settle disputes without resorting to a trial.

Court Systems

The United States has over 50 *systems* of courts. One nationwide system of *federal* courts serves the entire country. In addition, each individual *state*—such as Texas, California, and Florida—has its court system. The state and federal courts are in different buildings, have different judges, and hear different kinds of cases. Each has special powers and certain limitations.

State Courts

The typical state court system forms a pyramid, as Exhibit 3.1 shows. Some states have minor variations on the exhibit. For example, Texas has two top courts: A Supreme Court for civil cases and a Court of Criminal Appeals for criminal cases.

Trial Courts

Almost all cases start in trial courts, which are endlessly portrayed on television and in film. There is one judge, and there will often (but not always) be a jury. This is the only court to hear testimony from witnesses and receive evidence. **Trial courts** determine the facts of a particular dispute and apply to those facts the law given by earlier appellate court decisions.

Trial courts
Determine the facts of a particular dispute and apply to those facts the law given by earlier appellate court decisions.

In the Enviro-Vision dispute, the trial court will decide all important facts that are in dispute. Did Tony Caruso die? Did he drown? Assuming he drowned, was his death accidental or suicide? Once the jury has decided the facts, it will apply the law to those facts. If Tony Caruso died accidentally, contract law provides that Beth Smiles is entitled to double indemnity benefits. If the jury decides he killed himself, Beth gets nothing.

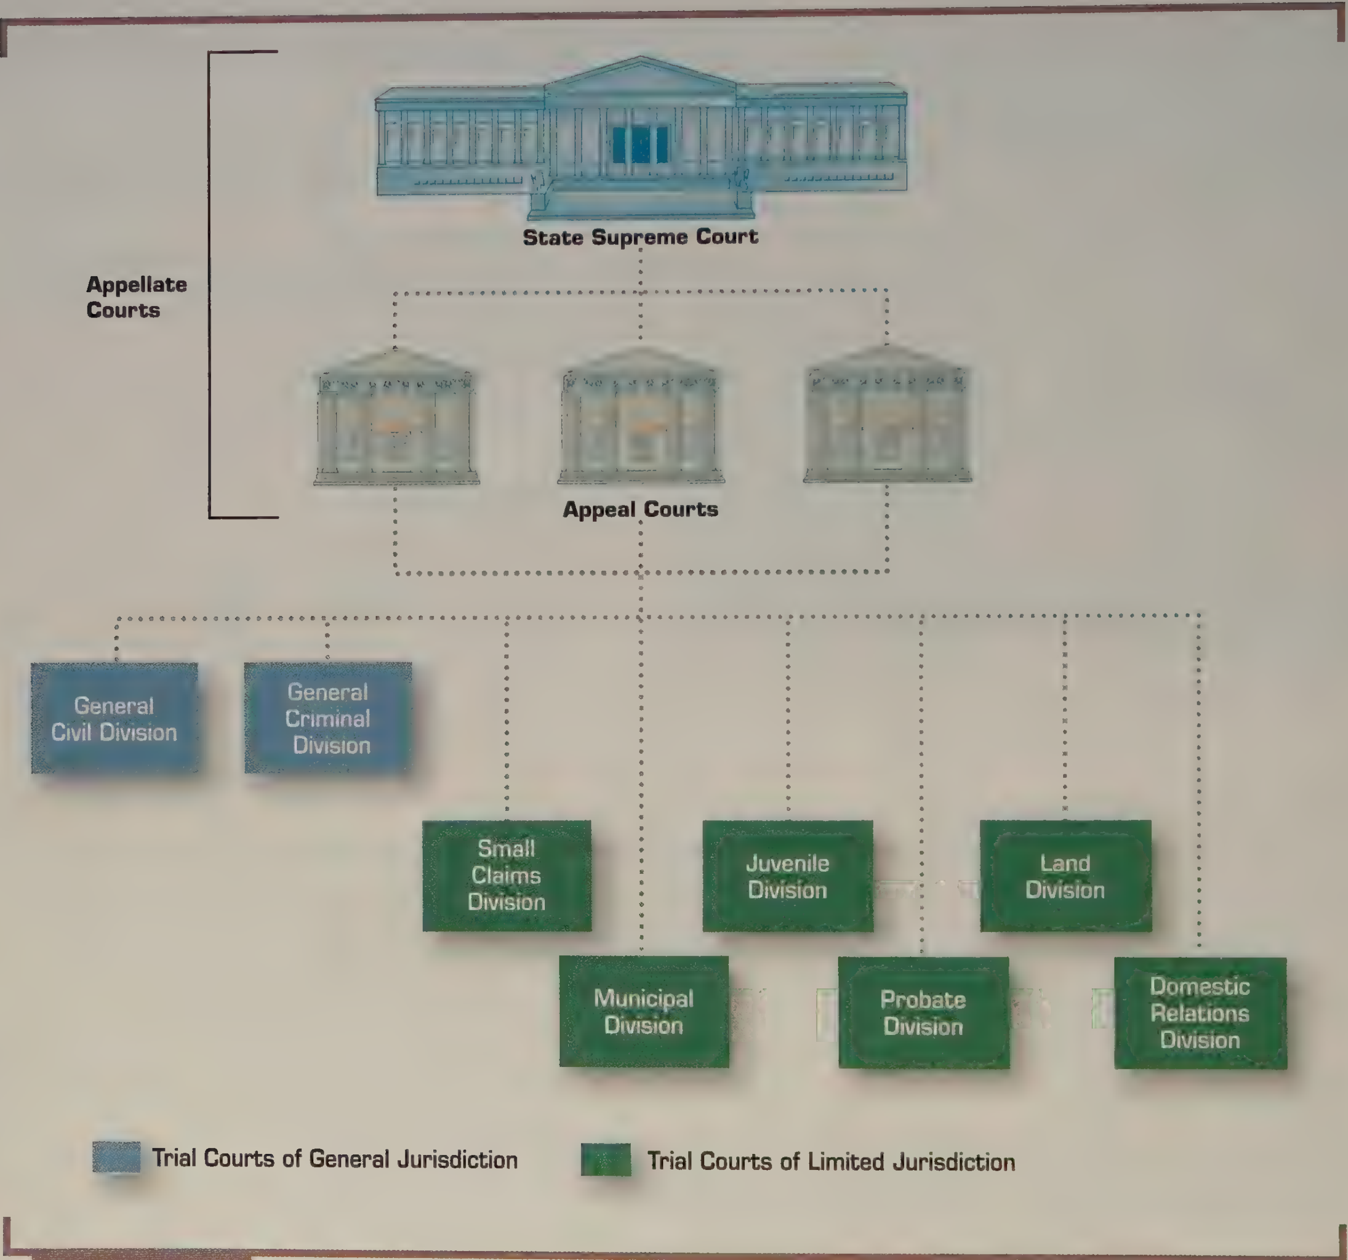

EXHIBIT 3.1 A trial court determines facts, while an appeals court ensures that the lower court correctly applied the law to those facts.

Facts are critical. That may sound obvious, but in a course devoted to legal principles, it is easy to lose track of the key role that factual determinations play in the resolution of any dispute. In the Enviro-Vision case, we will see that one bit of factual evidence goes undetected, with costly consequences.

Jurisdiction
A court's power to hear a case.

Jurisdiction refers to a court's power to hear a case. In state or federal court, a plaintiff may start a lawsuit only in a court that has jurisdiction over that kind of case. Some courts have very limited jurisdiction, while others have the power to hear almost any case.

Subject Matter Jurisdiction

Subject matter jurisdiction means that a court has the authority to hear a particular type of case.

Trial Courts of Limited Jurisdiction. These courts may hear only certain types of cases. Small claims court has jurisdiction only over civil lawsuits involving a maximum of, say, $5,000 (the amount varies from state to state). A juvenile court hears only cases involving minors. Probate court is devoted to settling the estates of deceased persons, though in some states it will hear certain other cases as well.

Trial Courts of General Jurisdiction. Trial courts of general jurisdiction, however, can hear a very broad range of cases. The most important court, for our purposes, is the general civil division. This court may hear virtually any civil lawsuit. In one day it might hear a $450 million shareholders' derivative lawsuit, an employment issue involving freedom of religion, and a foreclosure on a mortgage. Most of the cases we study start in this court.[1] If Enviro-Vision's case against Coastal goes to trial in a state court, it will begin in the trial court of general jurisdiction.

Personal Jurisdiction

In addition to subject matter jurisdiction, courts must also have **personal jurisdiction** over the defendant. Personal jurisdiction is the legal authority to require the defendant to stand trial, pay judgments, and the like. When plaintiffs file lawsuits, defendants sometimes make a *special appearance* to challenge a court's personal jurisdiction. If the court agrees with the defendant's argument, the lawsuit will be dismissed.

Personal jurisdiction generally exists, if:

1. For individuals, the defendant is a resident of the state in which a lawsuit is filed. For companies, the defendant is doing business in that state.
2. The defendant takes a formal step to defend a lawsuit. Most papers filed with a court count as formal steps, but special appearances do not.
3. A **summons** is *served* on a defendant. A summons is the court's written notice that a lawsuit has been filed against the defendant, The summons must be delivered to the defendant when she is physically within the state in which the lawsuit is filed.

For example, Texarkana straddles the Texas/Arkansas border. If a lawsuit is filed in a Texas court, a defendant who lives in Arkansas can be served if, when walking down the street in Texarkana, she steps across the state line into Texas. Corporations are required to hire a registered agent in any state in which they do business. If a registered agent receives a summons, then the corporation is served.

---

[1]Note that the actual name of the court will vary from state to state. In many states it is called *superior court* because it has power superior to the courts of limited jurisdiction. In New York it is called *supreme court* (anything to confuse the layperson); in some states it is called *court of common pleas;* in Oregon and other states it is a *circuit court.* They are all civil trial courts of general jurisdiction. Within this branch, some states are beginning to establish specialized business courts to hear complex commercial disputes. At least one state has created a cybercourt for high-tech cases. Lawyers will argue their cases by teleconference and present evidence via streaming video.

4. A **long-arm statute** applies. If all else fails—the defendant does not reside in the state, does not defend the lawsuit, and has not been served with a summons while in the state—a court still can obtain jurisdiction under long-arm statutes. These statutes typically claim jurisdiction over someone who commits a tort, signs a contract, or conducts "regular business activities" in the state.

As a general rule, courts tend to apply long-arm statutes aggressively, hauling defendants into their courtrooms. However, the due process guarantees in the United States Constitution require fundamental fairness in the application of long-arm statutes. Therefore, courts can claim personal jurisdiction only if a defendant has had *minimum contacts* with a state. In other words, it is unfair to require a defendant to stand trial in another state if he has had no meaningful interaction with that state.

In the following Landmark Case, the Supreme Court explains its views on this important constitutional issue.

Landmark Case

International Shoe Co. v. State of Washington

326 U.S. 310
Supreme Court of the United States, 1945

Facts: Although International Shoe manufactured footwear only in St. Louis, Missouri, it sold its products nationwide. It did not have offices or warehouses in Washington State, but it did send about a dozen salespeople there. The salespeople rented space in hotels and businesses, displayed sample products, and took orders. They were not authorized to collect payments from customers.

When Washington State sought contributions to the state's unemployment fund, International Shoe refused to pay. Washington sued. The company argued that it was not engaged in business in the state, and, therefore, that Washington courts had no jurisdiction over it.

The Supreme Court of Washington ruled that International Shoe did have sufficient contacts with the state to justify a lawsuit there. International Shoe appealed to the United States Supreme Court.

Issue: ***Did International Shoe have sufficient minimum contacts in Washington State to permit jurisdiction there?***

Excerpts from Chief Justice Stone's Decision: Appellant insists that its activities within the state were not sufficient to manifest its "presence" there and that in its absence, the state courts were without jurisdiction, that consequently, it was a denial of due process for the state to subject appellant to suit. Appellant [International Shoe] refers to those cases in which it was said that the mere solicitation of orders for the purchase of goods within a state, to be accepted without the state and filled by shipment of the purchased goods interstate, does not render the corporation seller amenable to suit within the state.

Historically the jurisdiction of courts to render judgment is grounded on their power over the defendant's person. Hence his presence within the territorial jurisdiction of a court was prerequisite to a judgment personally binding him. But now due process requires that [a defendant] have certain minimum contacts with it such that the maintenance of the suit does not offend "traditional notions of fair play and substantial justice."

Since the corporate personality is a fiction, its "presence" without can be manifested only by those activities of the corporation's agent within the state which courts will deem to be sufficient to satisfy the demands of due process.

"Presence" in the state in this sense has never been doubted when the activities of the corporation there have not only been continuous and systematic, but also give rise to the liabilities sued on, even though no consent to be sued or authorization to an agent to accept service of process has been given. Conversely, it has been generally recognized that the casual presence of the corporate agent or even his conduct of single or isolated items of activities in a state in the corporation's behalf are not

enough to subject it to suit on causes of action unconnected with the activities there. To require the corporation in such circumstances to defend the suit away from its home or other jurisdiction where it carries on more substantial activities has been thought to lay too great and unreasonable a burden on the corporation to comport with due process.

But to the extent that a corporation exercises the privilege of conducting activities within a state, it enjoys the benefits and protection of the laws of that state. The exercise of that privilege may give rise to obligations.

Applying these standards, the activities carried on in behalf of appellant in the State of Washington were neither irregular nor casual. They were systematic and continuous throughout the years in question. They resulted in a large volume of interstate business, in the course of which appellant received the benefits and protection of the laws of the state, including the right to resort to the courts for the enforcement of its rights. The obligation which is here sued upon arose out of those very activities. It is evident that these operations establish sufficient contacts or ties with the state of the forum to make it reasonable and just, according to our traditional conception of fair play and substantial justice, to permit the state to enforce the obligations which appellant has incurred there.

The state may maintain the present suit to collect the tax.

Affirmed.

Appellate Courts

Appellate courts are entirely different from trial courts. Three or more judges hear the case. There are no juries, ever. These courts do not hear witnesses or take new evidence. They hear appeals of cases already tried below. **Appeals courts** generally accept the facts given to them by trial courts and review the trial record to see if the court made errors of law.

Appeals courts
Have the right to review decisions of trial courts.

Higher courts generally defer to lower courts on factual findings. Juries and trial court judges see all evidence as it is presented, and they are in the best position to evaluate it. An appeals court will accept a factual finding unless there was *no evidence at all* to support it. If the jury decides that Tony Caruso committed suicide, the appeals court will normally accept that fact, even if the appeals judges consider the jury's conclusion dubious. On the other hand, if a jury concluded that Tony had been murdered, an appeals court would overturn that finding if neither side had introduced any evidence of murder during the trial.

An appeals court reviews the trial record to make sure that the lower court correctly applied the law to the facts. If the trial court made an **error of law**, the appeals court may require a new trial. Suppose the jury concludes that Tony Caruso committed suicide but votes to award Enviro-Vision $1 million because it feels sorry for Beth Smiles. That is an error of law: if Tony committed suicide, Beth is entitled to nothing. An appellate court will reverse the decision. Or suppose that the trial judge permitted a friend of Tony's to state that he was certain Tony would never commit suicide. Normally, such opinions are not permissible in trial, and it was a legal error for the judge to allow the jury to hear it.

Court of Appeals. The party that loses at the trial court may appeal to the intermediate court of appeals. The party filing the appeal is the **appellant**. The party opposing the appeal (because it won at trial) is the **appellee**.

Appellant
The party filing the appeal.

Appellee
The party opposing the appeal.

This court allows both sides to submit written arguments on the case, called **briefs**. Each side then appears for oral argument, usually before a panel of three judges. The appellant's lawyer has about 15 minutes to convince the judges that the trial court made serious errors of law, and that the decision should be **reversed**, that is, nullified. The appellee's lawyer has the same time to persuade the court that the trial court acted correctly, and that the result should be **affirmed**, that is, permitted to stand.

Briefs
Written arguments on the case.

Reversed
Nullified.

Affirmed
Permitted to stand.

State Supreme Court. This is the highest court in the state, and it accepts some appeals from the court of appeals. In most states, there is no absolute right to appeal to the Supreme Court. If the high court regards a legal issue as important, it accepts the case. It then takes briefs and hears oral argument just as the appeals court did. If it considers the

matter unimportant, it refuses to hear the case, meaning that the court of appeals' ruling is the final word on the case.[2]

In most states, seven judges, often called *justices*, sit on the Supreme Court. They have the final word on state law.

Federal Courts

As discussed in Chapter 1, federal courts are established by the United States Constitution, which limits what kinds of cases can be brought in any federal court. See Exhibit 3.2. For our purposes, two kinds of civil lawsuits are permitted in federal court: federal question cases and diversity cases.

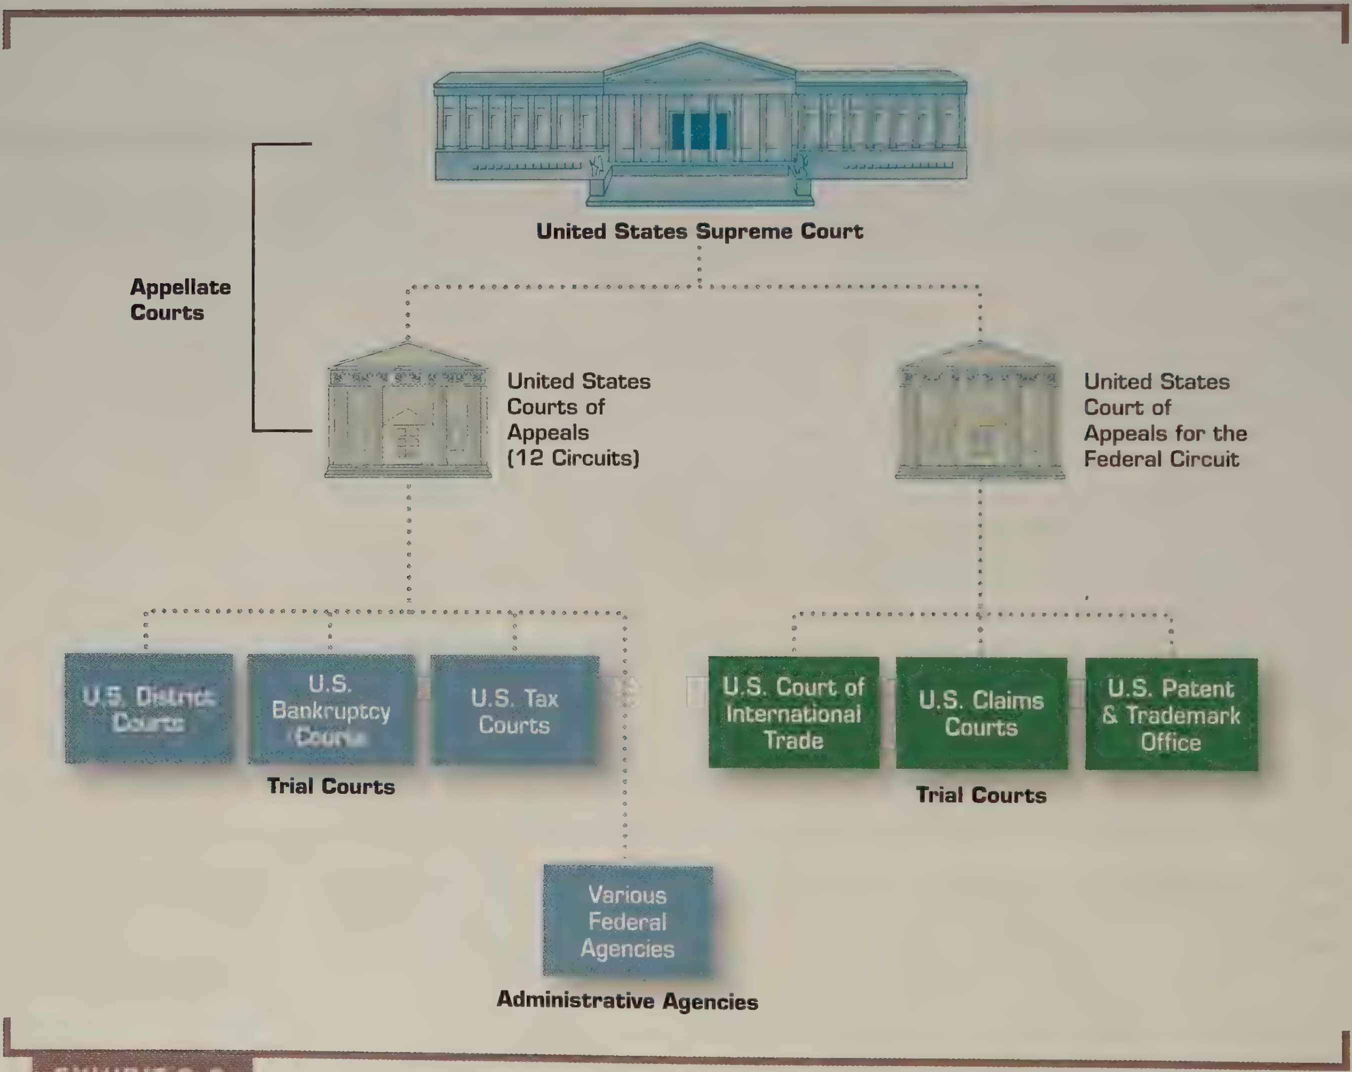

EXHIBIT 3.2

[2] In some states with smaller populations, there is no intermediate appeals court. All appeals from trial courts go directly to the state supreme court.

Federal Question Cases

A claim based on the United States Constitution, a federal statute, or a federal treaty is called a **federal question** case.[3] Federal courts have jurisdiction over these cases. If the Environmental Protection Agency (a part of the federal government) orders Logging Company not to cut in a particular forest, and Logging Company claims that the agency has wrongly deprived it of its property, that suit is based on a federal statute and is thus a federal question. If Little Retailer sues Mega Retailer, claiming that Mega has established a monopoly, that claim is also based on a statute—the Sherman Antitrust Act—and creates federal question jurisdiction. Enviro-Vision's potential suit merely concerns an insurance contract. The federal district court has no federal question jurisdiction over the case.

Federal question
A case in which the claim is based on the United States Constitution, a federal statute, or a federal treaty.

Diversity Cases

Even if no federal law is at issue, federal courts have **diversity jurisdiction** when (1) the plaintiff and defendant are citizens of different states *and* (2) the amount in dispute exceeds $75,000. The theory behind diversity jurisdiction is that courts of one state might be biased against citizens of another state. To ensure fairness, the parties have the option to use a federal court as a neutral playing field.

Diversity jurisdiction
(1) The plaintiff and defendant are citizens of different states *and* (2) the amount in dispute exceeds $75,000.

Enviro-Vision is located in Oregon and Coastal Insurance is incorporated in Georgia.[4] They are citizens of different states and the amount in dispute far exceeds $75,000. Janet could file this case in United States District Court based on diversity jurisdiction.

Trial Courts

United States District Court. This is the primary trial court in the federal system. The nation is divided into about 94 districts, and each has a district court. States with smaller populations have one district. States with larger populations have several; Texas is divided geographically into four districts.

Other Trial Courts. There are other, specialized trial courts in the federal system. Bankruptcy Court, Tax Court, and the United States Court of International Trade all handle name-appropriate cases. The United States Claims Court hears cases brought against the United States, typically on contract disputes. The Foreign Intelligence Surveillance Court is a very specialized, secret court, which oversees requests for surveillance warrants against suspected foreign agents.

Judges. The president of the United States nominates all federal court judges, from district court to Supreme Court. The nominees must be confirmed by the Senate. Once confirmed, federal judges serve for "life in good behavior." Many federal judges literally stay on the job for life. Recently, still-active Judge Wesley Brown of Kansas tied a record as the oldest federal judge in history when he turned 103.

Appellate Courts

United States Courts of Appeals. These are the intermediate courts of appeals. As the map below shows, they are divided into "circuits," which are geographical areas. There are 11 numbered circuits, hearing appeals from district courts. For example, an appeal from the Northern District of Illinois would go to the Court of Appeals for the Seventh Circuit.

A 12th court, the Court of Appeals for the District of Columbia, hears appeals only from the district court of Washington, D.C. This is a particularly powerful court because so many

---

[3] 28 U.S.C. §1331 governs federal question jurisdiction and 28 U.S.C. §1332 covers diversity jurisdiction.

[4] For diversity purposes, a corporation is a citizen of the state in which it is incorporated and the state in which it has its principal place of business.

suits about federal statutes begin in the district court for the District of Columbia. Also in Washington is the 13th Court of Appeals, known as the Federal Circuit. It hears appeals from specialized trial courts, as shown in Exhibit 3.2.

Within one circuit there are many circuit judges, up to about 50 judges in the largest circuit, the Ninth. When a case is appealed, three judges hear the appeal, taking briefs and hearing oral arguments.

United States Supreme Court. This is the highest court in the country. There are nine justices on the Court. One justice is the chief justice and the other eight are associate justices. When they decide a case, each justice casts an equal vote. The chief justice's special power comes from his authority to assign opinions to a given justice. The justice assigned to write an opinion has an opportunity to control the precise language and thus to influence the voting by other justices.

The Supreme Court has the power to hear appeals in any federal case and in certain cases that began in state courts. Generally, it is up to the Court whether or not it will accept a case. A party that wants the Supreme Court to review a lower court ruling must file a petition for a **writ of *certiorari***, asking the Court to hear the case. Four of the nine justices must vote in favor of hearing a case before a writ will be granted. The Court receives several thousand requests every year but usually accepts fewer than 100. Most

Writ of certiorari

A petition asking the Supreme Court to hear a case.

cases accepted involve either an important issue of constitutional law or an interpretation of a major federal statute.

EXAM Strategy

Question: Mark has sued Janelle, based on the state common law of negligence. He is testifying in court, explaining how Janelle backed a rented truck out of her driveway and slammed into his Lamborghini, causing $82,000 in damages. Where would this take place?

(a) State appeals court

(b) United States Court of Appeals

(c) State trial court

(d) Federal District Court

(e) Either state trial court or Federal District Court

Strategy: The question asks about trial and appellate courts, and also about state versus federal courts. One issue at a time, please. What are the different functions of trial and appellate courts? *Trial* courts use witnesses, and often juries, to resolve factual disputes. *Appellate* courts never hear witnesses and never have juries. Applying that distinction to these facts tells us whether we are in a trial or appeals court.

Next Issue: *State* trial courts may hear lawsuits on virtually any issue. *Federal District Courts* may only hear two kinds of cases: Federal question (those involving a statute or constitutional provision); or diversity (where the parties are from different states *and* the amount at issue is $75,000 or higher). Apply what we know to the facts here.

Result: We are in a trial court because Mark is testifying. Could we be in Federal District Court? No. The suit is based on state common law. This is not a diversity case because the parties live in the same state. We are in a state trial court.

LITIGATION

Janet Booker decides to file the Enviro-Vision suit in the Oregon trial court. She thinks that a state court judge may take the issue more seriously than a federal district court judge.

Pleadings

The documents that begin a lawsuit are called the **pleadings**. These consist of the complaint, the answer, and sometimes a reply.

Complaint

The plaintiff files in court a **complaint**, which is a short, plain statement of the facts she is alleging and the legal claims she is making. The purpose of the complaint is to inform the defendant of the general nature of the claims and the need to come into court and protect his interests.

Janet Booker files the complaint, as shown below. Since Enviro-Vision is a partnership, she files the suit on behalf of Beth personally.

Pleadings
The documents that begin a lawsuit, consisting of the complaint, the answer, and sometimes a reply.

Complaint
A short, plain statement of the facts alleged and the legal claims made.

STATE OF OREGON
CIRCUIT COURT

Multnomah County | Civil Action No. ________

Elizabeth Smiles,
Plaintiff

JURY TRIAL DEMANDED

v.
Coastal Insurance Company, Inc.,
Defendant

COMPLAINT

Plaintiff Elizabeth Smiles states that:

1. She is a citizen of Multnomah County, Oregon.
2. Defendant Coastal Insurance Company, Inc., is incorporated under the laws of Georgia and has as its usual place of business 148 Thrift Street, Savannah, Georgia.
3. On or about July 5, 2012, plaintiff Smiles ("Smiles"), Defendant Coastal Insurance Co, Inc. ("Coastal") and Anthony Caruso entered into an insurance contract ("the contract"), a copy of which is annexed hereto as Exhibit "A." This contract was signed by all parties or their authorized agents, in Multnomah County, Oregon.
4. The contract obligates Coastal to pay to Smiles the sum of two million dollars ($2 million) if Anthony Caruso should die accidentally.
5. On or about September 20, 2012, Anthony Caruso accidentally drowned and died while swimming.
6. Coastal has refused to pay any sum pursuant to the contract.
7. Coastal has knowingly, willingly and unreasonably refused to honor its obligations under the contract.

WHEREFORE, plaintiff Elizabeth Smiles demands judgment against defendant Coastal for all monies due under the contract; demands triple damages for Coastal's knowing, willing, and unreasonable refusal to honor its obligations; and demands all costs and attorney's fees, with interest.
ELIZABETH SMILES,
By her attorney,
[Signed]
Janet Booker
Pruitt, Booker & Bother
983 Joy Avenue
Portland, OR
October 18, 2012

Service

When she files the complaint in court, Janet gets a summons, which is a paper ordering the defendant to answer the complaint within 20 days. A sheriff or constable then *serves* the two papers by delivering them to the defendant. Coastal's headquarters are in Georgia, so the state of Oregon has required Coastal to specify someone as its agent for receipt of service in Oregon.

Answer

Once the complaint and summons are served, Coastal has 20 days in which to file an answer. Coastal's answer, shown below, is a brief reply to each of the allegations in the complaint. The answer tells the court and the plaintiff exactly what issues are in dispute. Since Coastal admits that the parties entered into the contract that Beth claims they did, there is no need for her to prove that in court. The court can focus its attention on the disputed issue: whether Tony Caruso died accidentally.

STATE OF OREGON
CIRCUIT COURT

Multnomah County

Civil Action No. 09-5626

Elizabeth Smiles,
Plaintiff
v.
Coastal Insurance Company, Inc.,
Defendant

ANSWER

Defendant Coastal Insurance Company, Inc., answers the complaint as follows:

1. Admit.
2. Admit.
3. Admit.
4. Admit.
5. Deny.
6. Admit.
7. Deny.

COASTAL INSURANCE COMPANY, INC.,
By its attorney,
[Signed]
Richard B. Stewart
Kiley, Robbins, Stewart & Glote
333 Victory Boulevard
Portland, OR
October 30, 2012

If the defendant fails to answer in time, the plaintiff will ask for a **default judgment**. In granting a default judgment, the judge accepts every allegation in the complaint as true and renders a decision that the plaintiff wins without a trial.

Default judgment
A decision that the plaintiff wins without a trial because the defendant failed to answer in time.

Recently, two men sued PepsiCo, claiming that the company stole the idea for Aquafina water from them. They argued that they should receive a portion of the profits for every bottle of Aquafina ever sold.

PepsiCo failed to file a timely answer, and the judge entered a default judgment in the amount of $1.26 billion. On appeal, the default judgment was overturned and PepsiCo was able to escape paying the massive sum, but other defendants are sometimes not so lucky.

It is important to respond to courts on time.

Counter-Claim

Sometimes a defendant does more than merely answer a complaint and files a **counter-claim**, meaning a second lawsuit by the defendant against the plaintiff. Suppose that after her complaint was filed in court, Beth had written a letter to the newspaper, calling Coastal a bunch of "thieves and scoundrels who spend their days mired in fraud and larceny." Coastal would not have found that amusing. The company's answer would have included a counter-claim against Beth for libel, claiming that she falsely accused the insurer of serious criminal acts. Coastal would have demanded money damages.

Counter-claim
A second lawsuit by the defendant against the plaintiff.

If Coastal counter-claimed, Beth would have to file a **reply**, which is simply an answer to a counter-claim. Beth's reply would be similar to Coastal's answer, admitting or denying the various allegations.

Reply
An answer to a counter-claim.

Class Actions

Suppose Janet uncovers evidence that Coastal denies 80 percent of all life insurance claims, calling them suicide. She could ask the court to permit a **class action**. If the court granted her request, she would represent the entire group of plaintiffs, including those

Class action
One plaintiff represents the entire group of plaintiffs, including those who are unaware of the lawsuit or even unaware they were harmed.

who are unaware of the lawsuit or even unaware they were harmed. Class actions can give the plaintiffs much greater leverage, since the defendant's potential liability is vastly increased. In the back of her mind, Janet has thoughts of a class action, *if* she can uncover evidence that Coastal has used a claim of suicide to deny coverage to a large number of claimants.

Notice how potent a class action can be. From his small town in Maine, Ernie decides to get rich quickly. On the Internet, he advertises "Energy Breakthrough! Cut your heating costs 15 percent for only $25." In response, 100,000 people send him their money, and they receive a photocopied graph, illustrating that if you wear two sweaters instead of one, you will feel 15 percent warmer. Ernie has deceitfully earned $2,500,000 in pure profit. What can the angry homeowners do? Under the laws of fraud and consumer protection, they have a legitimate claim to their $25, and perhaps even to treble damages ($75). But few will sue, because the time and effort required would be greater than the money recovered.

Economists analyze such legal issues in terms of *efficiency*. The laws against Ernie's fraud are clear and well intended, but they will not help in this case because it is too expensive for 100,000 people to litigate such a small claim. The effort would be hugely *inefficient*, both for the homeowners and for society generally. The economic reality may permit Ernie to evade the law's grasp.

That is one reason we have class actions. A dozen or so "heating plan" buyers can all hire the same lawyer. This attorney will file court papers in Maine on behalf of *everyone*, nationwide, who has been swindled by Ernie—including the 99,988 people who have yet to be notified that they are part of the case. Now the con artist, instead of facing a few harmless suits for $25, must respond to a multimillion-dollar claim being handled by an experienced lawyer. Treble damages become menacing: three times $25 times 100,000 is no joke, even to a cynic like Ernie. He may also be forced to pay for the plaintiffs' attorney, as well as all costs of notifying class members and disbursing money to them. With one lawyer representing an entire class, the legal system has become fiercely efficient.

Congress recently passed a statute designed to force large, multi-state class actions out of state courts, into federal. Proponents of the new law complained that state courts often gave excessive verdicts, even for frivolous lawsuits. They said the cases hurt businesses while enriching lawyers. Opponents argued that the new law was designed to shield large corporations from paying for the harm they caused by sending the cases into a federal system that is often hostile to such suits.

Judgment on the Pleadings

Motion
A formal request to the court to take some step or issue an order.

A party can ask the court for a judgment based simply on the pleadings themselves, by filing a motion to dismiss. A **motion** is a formal request to the court that the court take some step or issue some order. During a lawsuit, the parties file many motions. A **motion to dismiss** is a request that the court terminate a case without permitting it to go further. Suppose that a state law requires claims on life insurance contracts to be filed within three years, and Beth files her claim four years after Tony's death. Coastal would move to dismiss based on this late filing. The court might well agree, and Beth would never get into court.

Discovery

Discovery
The pre-trial opportunity for both parties to learn the strengths and weaknesses of the opponent's case.

Few cases are dismissed on the pleadings. Most proceed quickly to the next step. **Discovery** is the critical, pre-trial opportunity for both parties to learn the strengths and weaknesses of the opponent's case.

The theory behind civil litigation is that the best outcome is a negotiated settlement and that parties will move toward agreement if they understand the opponent's case. That is likeliest to occur if both sides have an opportunity to examine most of the evidence the

other side will bring to trial. Further, if a case does go all the way to trial, efficient and fair litigation cannot take place in a courtroom filled with surprises. On television dramas, witnesses say astonishing things that amaze the courtroom (and keep viewers hooked through the next commercial). In real trials, the lawyers know in advance the answers to practically all questions asked because discovery has allowed them to see the opponent's documents and question its witnesses. The following are the most important forms of discovery.

© Digital Vision/Getty Images

Depositions provide a chance for one party's lawyer to question the other party, or a potential witness, under oath.

Interrogatories. These are written questions that the opposing party must answer, in writing, under oath.

Depositions. These provide a chance for one party's lawyer to question the other party, or a potential witness, under oath. The person being questioned is the **deponent**. Lawyers for both parties are present. During depositions, and in trial, good lawyers choose words carefully and ask questions calculated to advance their cause. A fine line separates ethical, probing questions from those that are tricky, and a similar line divides answers that are merely unhelpful from perjury.

Deponent
The person being questioned.

Production of Documents and Things. Each side may ask the other side to produce relevant documents for inspection and copying; to produce physical objects, such as part of a car alleged to be defective; and for permission to enter on land to make an inspection, for example, at the scene of an accident.

Physical and Mental Examination. A party may ask the court to order an examination of the other party, if his physical or mental condition is relevant, for example, in a case of medical malpractice.

Janet Booker begins her discovery with interrogatories. Her goal is to learn Coastal's basic position and factual evidence and then follow up with more detailed questioning during depositions. Her interrogatories ask for every fact Coastal relied on in denying the claim. She asks for the names of all witnesses, the identity of all documents, including electronic records, the description of all things or objects that they considered. She requests the names of all corporate officers who played any role in the decision and of any expert witnesses Coastal plans to call. Interrogatory No. 18 demands extensive information on all *other* claims in the past three years that Coastal has denied based on alleged suicide. Janet is looking for evidence that would support a class action.

Beth remarks on how thorough the interrogatories are. "This will tell us what their case is." Janet frowns and looks less optimistic: she's done this before.

Coastal has 30 days to answer Janet's interrogatories. Before it responds, Coastal mails to Janet a notice of deposition, stating its intention to depose Beth Smiles. Beth and Janet will go to the office of Coastal's lawyer, and Beth will answer questions under oath. But at the same time Coastal sends this notice, it sends *25 other notices of deposition*. The company will depose Karen Caruso as soon as Beth's deposition is over. Coastal also plans to depose all seven employees of Enviro-Vision; three neighbors who lived near Tony and Karen's beach house; two policemen who participated in the search; the doctor and two nurses

involved in the case; Tony's physician; Jerry Johnson, Tony's tennis partner; Craig Bergson, a college roommate; a couple who had dinner with Tony and Karen a week before his death; and several other people.

Beth is appalled. Janet explains that some of these people might have relevant information. But there may be another reason that Coastal is doing this: the company wants to make this litigation hurt. Janet will have to attend every one of these depositions. Costs will skyrocket.

Motion for a protective order
A request that the court limit discovery.

Janet files a **motion for a protective order**. This is a request that the court limit Coastal's discovery by decreasing the number of depositions. Janet also calls Rich Stewart and suggests that they discuss what depositions are really necessary. Rich insists that all of the depositions are important. This is a $2 million case and Coastal is entitled to protect itself. As both lawyers know, **the parties are entitled to discover anything that could reasonably lead to valid evidence**.

> But there may be another reason that Coastal is doing this: the company wants to make this litigation hurt.

Before Beth's deposition date arrives, Rich sends Coastal's answers to Enviro-Vision's interrogatories. The answers contain no useful information whatsoever. For example, Interrogatory No. 10 asked, "If you claim that Anthony Caruso committed suicide, describe every fact upon which you rely in reaching that conclusion." Coastal's answer simply says, "His state of mind, his poor business affairs, and the circumstances of his death all indicate suicide."

Janet calls Rich and complains that the interrogatory answers are a bad joke. Rich disagrees, saying that it is the best information they have so early in the case. After they debate it for 20 minutes, Rich offers to settle the case for $100,000. Janet refuses and makes no counteroffer.

Janet files a **motion to compel answers to interrogatories**, in other words, a formal request that the court order Coastal to supply more complete answers. Janet submits a **memorandum** with the motion, which is a supporting argument. Although it is only a few pages long, the memorandum takes several hours of online research and writing to prepare—more costs. Janet also informs Rich Stewart that Beth will not appear for the deposition, since Coastal's interrogatory answers are inadequate.

Rich now files *his* motion to compel, asking the court to order Beth Smiles to appear for her deposition. The court hears all of the motions together. Janet argues that Coastal's interrogatory answers are hopelessly uninformative and defeat the whole purpose of discovery. She claims that Coastal's large number of depositions creates a huge and unfair expense for a small firm.

Rich claims that the interrogatory answers are the best that Coastal can do thus far and that Coastal will supplement the answers when more information becomes available. He argues against Interrogatory No. 18, the one in which Janet asked for the names of other policyholders whom Coastal considered suicides. He claims that Janet is engaging in a fishing expedition that would violate the privacy of Coastal's insurance customers and provide no information relevant to this case. He demands that Janet make Beth available for a deposition.

These discovery rulings are critical because they will color the entire lawsuit. A trial judge has to make many discovery decisions before a case reaches trial. At times, the judge must weigh the need of one party to see documents against the other side's need for privacy. One device a judge can use in reaching a discovery ruling is an **in camera inspection**, meaning that the judge views the requested documents alone, with no lawyers present, and decides whether the other side is entitled to view them.

E-Discovery. The biggest change in litigation in the last decade is the explosive rise of electronic discovery. Companies send hundreds, or thousands, or millions of e-mails—every day. Many have attachments, sometimes hundreds of pages long. In addition, businesses

large and small have vast amounts of data stored electronically. All of this information is potentially subject to discovery.

It is enormously time-consuming and expensive for companies to locate all of the relevant material, separate it from irrelevant or confidential matter, and furnish it. A firm may be obligated to furnish *millions* of e-mails to the opposing party. In one recent case, a defendant had to pay 31 lawyers full time, for six months, just to wade through the e-ocean of documents and figure out which had to be supplied and how to produce it. Not surprisingly, this data eruption has created a new industry: high-tech companies that assist law firms in finding, sorting, and delivering electronic data.

Who is to say what must be supplied? What if an e-mail string contains individual e-mails that are clearly privileged (meaning a party need not divulge them), but others that are not privileged? May a company refuse to furnish the entire string? Many will try. However, some courts have ruled that companies seeking to protect e-mail strings must create a log describing every individual e-mail and allow the court to determine which are privileged.[5]

When the cost of furnishing the data becomes burdensome, who should pay, the party seeking the information or the one supplying it? In a recent $4 million corporate lawsuit, the defendant turned over 3,000 e-mails and 211,000 other documents. But the trial judge noted that many of the e-mail attachments—sometimes 12 to an e-mail—had gone missing, and required the company to produce them. The defendant protested that finding the attachments would cost an additional $206,000. The judge ordered the company to do it, and bear the full cost.

Both sides in litigation sometimes use gamesmanship during discovery. Thus, if an individual sues a large corporation, for example, the company may deliberately make discovery so expensive that the plaintiff cannot afford the legal fees. And if a plaintiff has a poor case, he might intentionally try to make the discovery process more expensive for the defendant than his settlement offer. Even if a defendant expects to win at trial, an offer to settle a case for $50,000 can look like a bargain if discovery alone will cost $100,000. Some defendants refuse, but others are more pragmatic.

The following case illustrates another common discovery problem: refusal by one side to appear for deposition. Did the defendant cynically believe that long delay would win the day, given that the plaintiff was 78 years old? What can a court do in such a case?

Stinton v. Robin's Wood, Inc.

45 A.D. 3d 203, 842 NYS2d 477
New York App. Div., 2007

Facts: Ethel Flanzraich, 78 years old, slipped and fell on the steps of property owned by Robin's Wood. She broke her left leg and left arm. Flanzraich sued, claiming that Robin's Wood caused her fall because its employee, Anthony Monforte, had negligently painted the stairs. In its answer to the complaint, Robin's Wood denied all of the significant allegations.

During a preliminary conference with the trial judge, the parties agreed to hold depositions of both parties on August 4. Flanzraich appeared for deposition but Robin's Wood did not furnish its employee, Monforte, nor did it offer any other company representative. The court then ordered the deposition of the defendant to take place the following April 2. Again, Robin's Wood produced neither Monforte nor anyone else. On July 16, the court ordered the defendant to produce its representative within 30 days. Once more, no one showed up for deposition.

[5] *Universal Service Fund Telephone Billing Practices Litigation*, 232 F.R.D. 669 (D. Kan. 2005).

On August 18—over *one year* after the original deposition date—Flanzraich moved to strike the defendant's answer, meaning that the plaintiff would win by default. The company argued that it had made diligent efforts to locate Monforte and force him to appear. However, all of the letters sent to Monforte were addressed care of Robin's Wood. Finally, the company stated that it no longer employed Monforte.

The trial judge granted the motion to strike the answer. That meant that Robin's Wood was liable for Flanraich's fall. The only remaining issue was damages. The court determined that Robin's Wood owed $22,631 for medical expenses, $150,000 for past pain and suffering, and $300,000 for future pain and suffering. One day later, Flanraich died, of other causes. Robin's Wood appealed.

Issue: ***Did the trial court abuse its discretion by striking the defendant's answer?***

Excerpts from Judge McCarthy's Decision: We find no merit to the defendant's claim that the [trial court] improvidently exercised its discretion in striking its answer. An action should be determined on the merits whenever possible. However, a court, in its discretion, may invoke the drastic remedy of striking an answer if it determines that the defendant's failure to comply with discovery demands is willful and contumacious.

The willful and contumacious character of [defendant's] conduct may be inferred from the defendant's noncompliance with [three] court orders directing such a deposition. Although the defendant may not have been able to produce Monforte after he left its employ, the defendant failed to explain why it produced neither another representative for the deposition nor timely disclosed to the decedent that it no longer employed Monforte. Either of these actions would have afforded the decedent the opportunity to subpoena Monforte for a nonparty deposition, had she so desired. For instance, by producing its representative for a deposition, the decedent would have had the ability to explore the whereabouts of Monforte and, in all likelihood, would have obtained information regarding how to contact him since the record indicates that the defendant had such information. This is especially important here where the decedent was elderly at the time of the accident and delays in discovery could only serve to prejudice her and unjustly benefit the defendant. Moreover, the defendant failed to explain why it did not produce Monforte for a deposition during the time he was under its employ.

Affirmed.

In the Enviro-Vision case, the judge rules that Coastal must furnish more complete answers to the interrogatories, especially as to why the company denied the claim. However, he rules against Interrogatory No. 18, the one concerning other claims Coastal has denied. This simple ruling kills Janet's hope of making a class action of the case. He orders Beth to appear for the deposition. As to future depositions, Coastal may take any 10 but then may take additional depositions only by demonstrating to the court that the deponents have useful information.

Rich proceeds to take Beth's deposition. It takes two full days. He asks about Enviro-Vision's past and present. He learns that Tony appeared to have won their biggest contract ever from Rapid City, Oregon, but that he then lost it when he had a fight with Rapid City's mayor. He inquires into Tony's mood, learns that he was depressed, and probes in every direction he can to find evidence of suicidal motivation. Janet and Rich argue frequently over questions and whether Beth should have to answer them. At times, Janet is persuaded and permits Beth to answer; other times, she instructs Beth not to answer. For example, toward the end of the second day, Rich asks Beth whether she and Tony had been sexually involved. Janet instructs Beth not to answer. This fight necessitates another trip into court to determine whether Beth must answer. The judge rules that Beth must discuss Tony's romantic life only if Coastal has some evidence that he was involved with someone outside his marriage. The company lacks any such evidence.

Now limited to 10 depositions, Rich selects his nine other deponents carefully. For example, he decides to depose only one of the two nurses; he chooses to question Jerry Johnson, the tennis partner, but not Craig Bergson, the former roommate; and so forth. When we look at the many legal issues this case raises, his choices seem minor. In fact, unbeknownst to Rich or anyone else, his choices may determine the outcome of the case.

As we will see later, Craig Bergson has evidence that is possibly crucial to the lawsuit. If Rich decides not to depose him, neither side will ever learn the evidence and the jury will never hear it. A jury can decide a case only based on the evidence presented to it. *Facts are elusive—and often controlling.*

In each deposition, Rich carefully probes with his questions, sometimes trying to learn what he actually does not know, sometimes trying to pin down the witness to a specific version of facts so that Rich knows how the witness will testify at trial. Neighbors at the beach testify that Tony seemed tense; one testifies about seeing Tony, unhappy, on the beach with his dog. Another testifies he had never before seen Blue tied up on the beach. Karen Caruso admits that Tony had been somewhat tense and unhappy the last couple of months. She reluctantly discusses their marriage, admitting there were problems.

Other Discovery. Rich sends Requests to Produce Documents, seeking medical records about Tony. Once again, the parties fight over which records are relevant, but Rich gets most of what he wants. Janet does less discovery than Rich because most of the witnesses she will call are friendly witnesses. She can interview them privately without giving any information to Coastal. With the help of Beth and Karen, Janet builds her case just as carefully as Rich, choosing the witnesses who will bolster the view that Tony was in good spirits and died accidentally.

She deposes all the officers of Coastal who participated in the decision to deny insurance coverage. She is particularly aggressive in pinning them down as to the limited information they had when they denied Beth's claim.

Summary Judgment

When discovery is completed, both sides may consider seeking summary judgment. **Summary judgment** is a ruling by the court that no trial is necessary because some essential facts are not in dispute. The purpose of a trial is to determine the facts of the case, that is, to decide who did what to whom, why, when, and with what consequences. If there are no relevant facts in dispute, then there is no need for a trial.

Summary judgment
A ruling by the court that no trial is necessary because some essential facts are not in dispute.

In the following case, the defendant won summary judgment, meaning that the case never went to trial. And yet, this was only the beginning of trouble for that defendant, Bill Clinton.

JONES V. CLINTON

990 F. Supp. 657, 1998 U.S. Dist. LEXIS 3902
United States District Court for the Eastern District of Arkansas, 1998

Facts: In 1991, Bill Clinton was governor of Arkansas. Paula Jones worked for a state agency, the Arkansas Industrial Development Commission (AIDC). When Clinton became president, Jones sued him, claiming that he had sexually harassed her. She alleged that, in May 1991, the governor arranged for her to meet him in a hotel room in Little Rock, Arkansas. When they were alone, he put his hand on her leg and slid it toward her pelvis. She escaped from his grasp, exclaimed, "What are you doing?" and said she was "not that kind of girl." She was upset and confused, and sat on a sofa near the door. She claimed that Clinton approached her, "lowered his trousers and underwear, exposed his penis and told her to kiss it." Jones was horrified, jumped up and said she had to leave. Clinton responded by saying, "Well, I don't want to make you do anything you don't want to do," and pulled his pants up. He added that if she got in trouble for leaving work, Jones should "have Dave call me immediately and I'll take care of it." He also said, "You are smart. Let's keep this between ourselves." Jones remained at AIDC until February 1993, when she moved to California because of her husband's job transfer.

President Clinton denied all of the allegations. He also filed for summary judgment, claiming that Jones had not alleged facts that justified a trial. Jones opposed the motion for summary judgment.

Issue: ***Was Clinton entitled to summary judgment or was Jones entitled to a trial?***

Excerpts from Judge Wright's Decision: [To establish this type of a sexual harassment case, a plaintiff must show

that her refusal to submit to unwelcome sexual advances resulted in a tangible job detriment, meaning that she suffered a specific loss. Jones claims that she was denied promotions, given a job with fewer responsibilities, isolated physically, required to sit at a workstation with no work to do, and singled out as the only female employee not to be given flowers on Secretary's Day.]

There is no record of plaintiff ever applying for another job within AIDC, however, and the record shows that not only was plaintiff never downgraded, her position was reclassified upward from a Grade 9 classification to a Grade 11 classification, thereby increasing her annual salary. Indeed, it is undisputed that plaintiff received every merit increase and cost-of-living allowance for which she was eligible during her nearly two-year tenure with the AIDC and consistently received satisfactory job evaluations.

Although plaintiff states that her job title upon returning from maternity leave was no longer that of purchasing assistant, her job duties prior to taking maternity leave and her job duties upon returning to work both involved data input. That being so, plaintiff cannot establish a tangible job detriment. A transfer that does not involve a demotion in form or substance and involves only minor changes in working conditions, with no reduction in pay or benefits, will not constitute an adverse employment action, otherwise every trivial personnel action that an irritable employee did not like would form the basis of a discrimination suit.

Finally, the Court rejects plaintiff's claim that she was subjected to hostile treatment having tangible effects when she was isolated physically, made to sit in a location from which she was constantly watched, made to sit at her workstation with no work to do, and singled out as the only female employee not to be given flowers on Secretary's Day. Plaintiff may well have perceived hostility and animus on the part of her supervisors, but these perceptions are merely conclusory in nature and do not, without more, constitute a tangible job detriment. Although it is not clear why plaintiff failed to receive flowers on Secretary's Day in 1992, such an omission does not give rise to a federal cause of action.

In sum, the Court finds that a showing of a tangible job detriment or adverse employment action is an essential element of plaintiff's sexual harassment claim and that plaintiff has not demonstrated any tangible job detriment or adverse employment action for her refusal to submit to the Governor's alleged advances. The President is therefore entitled to summary judgment [on this claim].

In other words, the court acknowledged that there were factual disputes, but concluded that even if Jones proved each of her allegations, she would *still* lose the case, because her allegations fell short of a legitimate case of sexual harassment. Jones appealed the case. Later the same year, as the appeal was pending and the House of Representatives was considering whether to impeach President Clinton, the parties settled the dispute. Clinton, without acknowledging any of the allegations, agreed to pay Jones $850,000 to drop the suit.

Janet and Rich each consider moving for summary judgment, but both correctly decide that they would lose. There is one major fact in dispute: Did Tony Caruso commit suicide? Only a jury may decide that issue. As long as there is *some evidence* supporting each side of a key factual dispute, the court may not grant summary judgment.

EXAM strategy

Question: You are a judge. Mel has sued Kevin, claiming that while Kevin was drunk, he negligently drove his car down Mel's street, and destroyed rare trees on a lot that Mel owns, next to his house. Mel's complaint stated that three witnesses at a bar saw Kevin take at least eight drinks less than an hour before the damage was done. In Kevin's answer, he denied causing the damage and denied being in the bar that night.

Kevin's lawyer has moved for summary judgment. He proves that three weeks before the alleged accident, Mel sold the lot to Tatiana.

Mel's lawyer opposes summary judgment. He produces a security camera tape proving that Kevin was in the bar, drinking beer, 34 minutes before the damage was done. He produces a signed statement from Sandy, a landscape gardener who lives across the street from the scene. Sandy states that she heard a crash, hurried to the windows, and saw

Kevin's car weaving away from the damaged trees. She is a landscape gardener and estimates the tree damage at $30,000 to $40,000. How should you rule on the motion?

Strategy: Do not be fooled by red herrings about Kevin's drinking or the value of the trees. Stick to the question: Should you grant summary judgment? Trials are necessary to resolve disputes about essential factual issues. Summary judgment is appropriate when there are no essential facts in dispute. Is there an essential fact not in dispute? Find it. Apply the rule. Being a judge is easy!

Result: It makes no difference whether Kevin was drunk or sober, whether he caused the harm or was at home in bed. Because Mel does not own the property, he cannot recover for the damage to it. He cannot win. You should grant Kevin's summary judgment motion.

Final Preparation

Well over 90 percent of all lawsuits are settled before trial. But the parties in the Enviro-Vision dispute are unable to compromise, so each side gears up for trial. The attorneys make lists of all witnesses they will call. They then prepare each witness very carefully, rehearsing the questions they will ask. It is considered ethical and proper to rehearse the questions, provided the answers are honest and come from the witness. It is unethical and illegal for a lawyer to tell a witness what to say. It also makes for a weaker presentation of evidence—witnesses giving scripted answers are often easy to spot. The lawyers also have colleagues cross-examine each witness, so that the witnesses are ready for the questions the other side's lawyer will ask.

This preparation takes hours and hours, for many days. Beth is frustrated that she cannot do the work she needs to for Enviro-Vision because she is spending so much time preparing the case. Other employees have to prepare as well, especially for cross-examination by Rich Stewart, and it is a terrible drain on the small firm. More than a year after Janet filed her complaint, they are ready to begin trial.

Trial

Adversary System

Our system of justice assumes that the best way to bring out the truth is for the two contesting sides to present the strongest case possible to a neutral factfinder. Each side presents its witnesses and then the opponent has a chance to cross-examine. The adversary system presumes that by putting a witness on the stand and letting both lawyers question her, the truth will emerge.

The judge runs the trial. Each lawyer sits at a large table near the front. Beth, looking tense and unhappy, sits with Janet. Rich Stewart sits with a Coastal executive. In the back of the courtroom are benches for the public. On one bench sits Craig Bergson. He will watch the entire proceeding with intense interest and a strange feeling of unease. He is convinced he knows what really happened.

Janet has demanded a jury trial for Beth's case, and Judge Rowland announces that they will now impanel the jury.

Right to Jury Trial

Not all cases are tried to a jury. As a general rule, both plaintiff and defendant have a right to demand a jury trial when the lawsuit is one for money damages. For example, in a typical contract lawsuit, such as Beth's insurance claim, both plaintiff and defendant have

a jury trial right whether they are in state or federal court. Even in such a case, though, the parties may *waive* the jury right, meaning they agree to try the case to a judge. Also, if the plaintiff is seeking an equitable remedy such as an injunction, there is no jury right for either party.

Voir Dire

Voir dire
The process of selecting a jury.

The process of selecting a jury is called **voir dire**, which means "to speak the truth."[6] The court's goal is to select an impartial jury; the lawyers will each try to get a jury as favorable to their side as possible. A court sends letters to potential jurors who live in its county. Those who do not report for jury duty face significant consequences.

Challenges for cause
A claim that a juror has demonstrated probable bias.

Peremptory challenges
The right to excuse a juror for virtually any reason.

When voir dire begins, potential jurors are questioned individually, sometimes by the judge and sometimes by the two lawyers, as each side tries to ferret out potential bias. Each lawyer may make any number of **challenges for cause**, claiming that a juror has demonstrated probable bias. For example, if a prospective juror in the Enviro-Vision case works for an insurance company, the judge will excuse her on the assumption that she would be biased in favor of Coastal. If the judge perceives no bias, the lawyer may still make a limited number of **peremptory challenges**, entitling him to excuse that juror for virtually any reason, which need not be stated in court. For example, if Rich Stewart believes that a juror seems hostile to him personally, he will use a peremptory challenge to excuse that juror, even if the judge sensed no animosity. The process continues until 14 jurors are seated. Twelve will comprise the jury; the other two are alternates who hear the case and remain available in the event one of the impaneled jurors becomes ill or otherwise cannot continue.

Although jury selection for a case can sometimes take many days, in the Enviro-Vision case, the first day of the hearing ends with the jury selected. In the hallway outside the court, Rich offers Janet $200,000 to settle. Janet reports the offer to Beth and they agree to reject it. Craig Bergson drives home, emotionally confused. Only three weeks before his death, Tony had accidentally met his old roommate and they had had several drinks. Craig believes that what Tony told him answers the riddle of this case.

PEREDA V. PARAJON

957 So.2d 1194
Florida Court of Appeals, 2007

Facts: Maria Parajon sued Diana Pereda for injuring her in a car accident. During voir dire, Parajon's lawyer asked the panel of prospective jurors these questions: "Is there anybody sitting on this panel now that has ever been under the care of a physician for personal injuries, whether you had a lawsuit or not? In other words, you may not have had any sort of lawsuit, but you slipped and fell—you had any accidents?"

Several of the prospective jurors raised their hands, allowing the lawyers to question more deeply into possible bias. However, Lisa Berg, a prospective juror who happened to be a lawyer, did not respond. Berg and others were seated as jurors, and ultimately awarded Parajon $450,000 for medical damages and pain and suffering.

After the trial, questioned in court by the judge, Berg admitted that three years earlier she had been injured in a

[6] Students of French note that *voir* means "to see" and assume that *voir dire* should translate as "to see, to speak." However, the legal term is centuries old and derives not from modern French but from Old French, in which *voir* meant "truth."

car accident, hired a lawyer to sue, and settled out of court for $4,000. Asked about the settlement, Berg replied, "I think everyone always wants more money."

Parajon moved for a new trial but the judge denied the motion. Parajon appealed.

Issue: ***Is Parajon entitled to a new trial based on Berg's failure to disclose her own personal injury lawsuit?***

Excerpts from Judge Rothenberg's Decision: To determine whether a juror's nondisclosure warrants a new trial, the complaining party must show that: (1) the information is relevant and material to jury service in the case; (2) the juror concealed the information during questioning; and (3) the failure to disclose the information was not attributable to the complaining party's lack of diligence.

Both Parajon's and Pereda's respective counsels may indeed have been influenced to challenge Berg peremptorily had the facts of her personal injury litigation history been known. Berg's personal injury claim was not remote in time. Berg settled out of court at the urging of her parents in order to put the matter behind her. Her involvement in this matter may have affected her point of view in [this case]. Her nondisclosure, which precluded counsel's ability to question Berg about the experience and to fairly evaluate her as a prospective juror, was material.

It is clear from the record that Berg concealed her personal injury litigation history. She is a lawyer and an officer of the court. It is, therefore, difficult to imagine that she did not think the questions posed by Parajon's counsel applied to her.

The record evidence demonstrates that other prospective jurors, none of whom were lawyers, clearly understood what type of information Parajon's counsel was asking them to disclose. We find that Parajon's counsel made a diligent inquiry.

Reversed and remanded for a new trial.

Opening Statements

The next day, each attorney makes an opening statement to the jury, summarizing the proof he or she expects to offer, with the plaintiff going first. Janet focuses on Tony's successful life, his business and strong marriage, and the tragedy of his accidental death.[7]

Rich works hard to establish a friendly rapport with the jury. If members of the jury like him, they will tend to pay more attention to his presentation of evidence. He expresses regret about the death. Nonetheless, suicide is a clear exclusion from the policy. If insurance companies are forced to pay claims never bargained for, everyone's insurance rates will go up.

Burden of Proof

In civil cases, the plaintiff has the burden of proof. That means that the plaintiff must convince the jury that its version of the case is correct; the defendant is not obligated to disprove the allegations.

The plaintiff's burden in a civil lawsuit is to prove its case by a **preponderance of the evidence**. It must convince the jury that its version of the facts is at least *slightly more likely* than the defendant's version. Some courts describe this as a "51–49" persuasion, that is, that plaintiff's proof must "just tip" credibility in its favor. By contrast, in a criminal case, the prosecution must demonstrate **beyond a reasonable doubt** that the defendant is guilty. The burden of proof in a criminal case is much tougher because the likely consequences are, too. See Exhibit 3.3.

Preponderance of the evidence
The plaintiff's burden in a civil lawsuit.

Beyond a reasonable doubt
The government's burden in a criminal prosecution.

[7]Janet Booker has dropped her claim for triple damages against Coastal. To have any hope of such a verdict, she would have to show that Coastal had no legitimate reason at all for denying the claim. Discovery has convinced her that Coastal will demonstrate some rational reasons for what it did.

EXHIBIT 3.3 *Burden of Proof.* In a civil lawsuit, a plaintiff wins with a mere preponderance of the evidence. But the prosecution must persuade a jury beyond a reasonable doubt in order to win a criminal conviction.

Plaintiff's Case

Because the plaintiff has the burden of proof, Janet puts in her case first. She wants to prove two things. First, that Tony died. That is easy because the death certificate clearly demonstrates it and Coastal does not seriously contest it. Second, in order to win double indemnity damages, she must show that the death was accidental. She will do this with the testimony of the witnesses she calls, one after the other. Her first witness is Beth. When a lawyer asks questions of her own witness, it is **direct examination**. Janet brings out all the evidence she wants the jury to hear: that the business was basically sound, though temporarily troubled, that Tony was a hard worker, why the company took out life insurance policies, and so forth.

Direct examination
When a lawyer asks questions of her own witness.

Cross-examine
To ask questions of an opposing witness.

Then Rich has a chance to **cross-examine** Beth, which means to ask questions of an opposing witness. He will try to create doubt in the jury's mind. He asks Beth only questions for which he is certain of the answers, based on discovery. Rich gets Beth to admit that the firm was not doing well the year of Tony's death; that Tony had lost the best client the firm ever had; that Beth had reduced salaries; and that Tony had been depressed about business.

Rules of Evidence

The lawyers are not free simply to ask any question they want. The **law of evidence** determines what questions a lawyer may ask and how the questions are to be phrased, what answers a witness may give, and what documents may be introduced. The goal is to get the best evidence possible before the jurors so they can decide what really happened. In general, witnesses may only testify about things they saw or heard.

These rules are complex, and a thorough look at them is beyond the scope of this chapter. However, they can be just as important in resolving a dispute as the underlying substantive law. Suppose that a plaintiff's case depends upon the jury hearing about a certain conversation, but the rules of evidence prevent the lawyer from asking about it. That conversation might just as well never have occurred.

Janet calls an expert witness, a marine geologist, who testifies about the tides and currents in the area where Tony's body was found. The expert testifies that even experienced swimmers can be overwhelmed by a sudden shift in currents. Rich objects strenuously that this is irrelevant, because there is no testimony that there *was* such a current at the time of Tony's death. The judge permits the testimony.

Karen Caruso testifies that Tony was in "reasonably good" spirits the day of his death, and that he often took Blue for walks along the beach. Karen testifies that Blue was part Newfoundland. Rich objects that testimony about Blue's pedigree is irrelevant, but Janet insists it will show why Blue was tied up. The judge allows the testimony. Karen says that whenever Blue saw them swim, he would instinctively go into the water and pull them to shore. Does that explain why Blue was tied up? Only the jury can answer.

Cross-examination is grim for Karen. Rich slowly but methodically questions her about Tony's state of mind and brings out the problems with the company, his depression, and tension within the marriage. Janet's other witnesses testify essentially as they did during their depositions.

Is the breed relevant?

Motion for Directed Verdict

At the close of the plaintiff's case, Rich moves for a directed verdict, that is, a ruling that the plaintiff has entirely failed to prove some aspect of her case. Rich is seeking to win without even putting in his own case. He argues that it was Beth's burden to prove that Tony died accidentally and that she has entirely failed to do that.

A directed verdict is permissible only if the evidence so clearly favors the defendant that reasonable minds could not disagree on it. If reasonable minds could disagree, the motion must be denied. Here, Judge Rowland rules that the plaintiff has put in enough evidence of accidental death that a reasonable person could find in Beth's favor. The motion is denied.

Directed verdict
A ruling that the plaintiff has entirely failed to prove some aspect of her case.

There is no downside for Rich to ask for a directed verdict. The trial continues as if he had never made such a motion.

Defendant's Case

Rich now puts in his case, exactly as Janet did, except that he happens to have fewer witnesses. He calls the examining doctor, who admits that Tony could have committed suicide by swimming out too far. On cross-examination, Janet gets the doctor to acknowledge that he has no idea whether Tony intentionally drowned. Rich also questions several neighbors as to how depressed Tony had seemed and how unusual it was that Blue was tied up. Some of the witnesses Rich deposed, such as the tennis partner Jerry Johnson, have nothing that will help Coastal's case, so he does not call them.

Craig Bergson, sitting in the back of the courtroom, thinks how different the trial would have been had he been called as a witness. When he and Tony had the fateful drink, Tony had been distraught: business was terrible, he was involved in an extramarital affair that he could not end, and he saw no way out of his problems. He had no one to talk to and had been hugely relieved to speak with Craig. Several times Tony had said, "I just can't go on like this. I don't want to, anymore." Craig thought Tony seemed suicidal and urged him to see a therapist Craig knew and trusted. Tony had said that it was good advice, but Craig is unsure whether Tony sought any help.

This evidence would have affected the case. Had Rich Stewart known of the conversation, he would have deposed Craig and the therapist. Coastal's case would have been far stronger, perhaps overwhelming. But Craig's evidence will never be heard. Facts are critical. Rich's decision to depose other witnesses and omit Craig may influence the verdict more than any rule of law.

Closing Arguments

Both lawyers sum up their case to the jury, explaining how they hope the jury will interpret what they have heard. Janet summarizes the plaintiff's version of the facts, claiming that Blue was tied up so that Tony could swim without worrying about him. Rich claims that business and personal pressures had overwhelmed Tony. He tied up his dog, neatly folded his clothes, and took his own life.

Jury Instructions

Judge Rowland instructs the jury as to its duty. He tells them that they are to evaluate the case based only on the evidence they heard at trial, relying on their own experience and common sense.

He explains the law and the burden of proof, telling the jury that it is Beth's obligation to prove that Tony died. If Beth has proven that Tony died, she is entitled to $1 million; if she has proven that his death was accidental, she is entitled to $2 million. However, if Coastal has proven suicide, Beth receives nothing. Finally, he states that if they are unable to decide between accidental death and suicide, there is a legal presumption that it was accidental. Rich asks Judge Rowland to rephrase the "legal presumption" part but the judge declines.

Verdict

The jury deliberates informally, with all jurors entitled to voice their opinion. Some deliberations take two hours; some take two weeks. Many states require a unanimous verdict; others require only, for example, a 10–2 vote in civil cases.

This case presents a close call. No one saw Tony die. Yet even though they cannot know with certainty, the jury's decision will probably be the final word on whether he took his own life. After a day and a half of deliberating, the jury notifies the judge that it has reached a verdict. Rich Stewart quickly makes a new offer: $350,000. (The two sides have the right to settle a case until the moment when the last appeal is decided.) Beth hesitates but turns it down.

The judge summons the lawyers to court, and Beth goes as well. The judge asks the foreman if the jury has reached a decision. He states that it has: the jury finds that Tony Caruso drowned accidentally, and awards Beth Smiles $2 million.

Motions after the Verdict

Judgment *non obstante veredicto*
A judgment notwithstanding the jury's verdict.

Rich immediately moves for a **judgment *non obstante veredicto*** (JNOV), meaning a judgment notwithstanding the jury's verdict. He is asking the judge to overturn the jury's verdict. Rich argues that the jury's decision went against all of the evidence. He also claims that the judge's instructions were wrong and misled the jury.

Judge Rowland denies the JNOV. Rich immediately moves for a new trial, making the same claim, and the judge denies the motion. Beth is elated that the case is finally over—until Janet says she expects an appeal. Craig Bergson, leaving the courtroom, wonders if he did the right thing. He felt sympathy for Beth and none for Coastal. Yet now he is neither happy nor proud.

Appeals

Two days later, Rich files an appeal to the court of appeals. The same day, he phones Janet and increases his settlement offer to $425,000. Beth is tempted but wants Janet's advice. Janet says the risks of an appeal are that the court will order a new trial, and they would start

all over. But to accept this offer is to forfeit over $1.5 million. Beth is unsure what to do. The firm desperately needs cash now, and appeals may take years. Janet suggests they wait until oral argument, another eight months.

Rich files a brief arguing that there were two basic errors at the trial: first, that the jury's verdict is clearly contrary to the evidence; and second, that the judge gave the wrong instructions to the jury. Janet files a reply brief, opposing Rich on both issues. In her brief, Janet cites many cases that she claims are **precedent**: earlier decisions by the state appellate courts on similar or identical issues.

Precedent
Earlier decisions by the state appellate courts on similar issues.

Eight months later, the lawyers representing Coastal and Enviro-Vision appear in the court of appeals to argue their case. Rich, the appellant, goes first. The judges frequently interrupt his argument with questions. They show little sympathy for his claim that the verdict was against the facts. They seem more sympathetic with his second point, that the instructions were wrong.

When Janet argues, all of their questions concern the judge's instructions. It appears they believe the instructions were in error. The judges take the case under advisement, meaning they will decide some time in the future—maybe in two weeks, maybe in five months.

Appeals Court Options

The court of appeals can **affirm** the trial court, allowing the decision to stand. The court may **modify** the decision, for example, by affirming that the plaintiff wins but decreasing the size of the award. (That is unlikely here; Beth is entitled to $2 million or nothing.) The court might **reverse and remand**, nullifying the lower court's decision and returning the case to the lower court for a new trial. Or it could simply **reverse**, turning the loser (Coastal) into the winner, with no new trial.

Affirm
To allow the decision to stand.

Modify
To affirm the outcome but with changes.

Reverse and remand
To nullify the lower decision and return the case for reconsideration or retrial.

Reverse
To turn the loser into the winner.

What will it do here? On the factual issue it will probably rule in Beth's favor. There *was* evidence from which a jury could conclude that Tony died accidentally. It is true that there was also considerable evidence to support Coastal's position, but that is probably not enough to overturn the verdict. If reasonable people could disagree on what the evidence proves, an appellate court generally refuses to change the jury's factual findings. The court of appeals is likely to rule that a reasonable jury *could* have found accidental death, even if the appellate judges personally suspect that Tony may have killed himself.

The judge's instructions raise a more difficult problem. Some states would require a more complex statement about "presumptions."[8]

What does a court of appeals do if it decides the trial court's instructions were wrong? If it believes the error rendered the trial and verdict unfair, it will remand the case, that is, send it back to the lower court for a new trial. However, the court may conclude that the mistake was **harmless error**. A trial judge cannot do a perfect job, and not every error is fatal. The court may decide the verdict was fair in spite of the mistake.

Harmless error
A mistake by the trial judge that was too minor to affect the outcome.

Janet and Beth talk. Beth is very anxious and wants to settle. She does not want to wait four or five months, only to learn that they must start all over. Janet urges that they wait a few weeks to hear from Rich: they don't want to seem too eager.

A week later, Rich telephones and offers $500,000. Janet turns it down, but says she will ask Beth if she wants to make a counter-offer. She and Beth talk. They agree that they will settle for $1 million. Janet then calls Rich and offers to settle for $1.7 million. Rich and Janet

---

[8]Judge Rowland probably should have said, "The law presumes that death is accidental, not suicide. So if there were no evidence either way, the plaintiff would win because we presume accident. But if there is competing evidence, the presumption becomes irrelevant. If you think that Coastal Insurance has introduced some evidence of suicide, then forget the legal presumption. You must then decide what happened based on what you have seen and heard in court, and on any inferences you choose to draw." Note that the judge's instructions were different, though similar.

debate the merits of the case. Rich later calls back and offers $750,000, saying he doubts that he can go any higher. Janet counters with $1.4 million, saying she doubts she can go any lower. They argue, both predicting that they will win on appeal.

Rich calls, offers $900,000 and says, "That's it. No more." Janet argues for $1.2 million, expecting to nudge Rich up to $1 million. He doesn't nudge, instead saying, "Take it or leave it." Janet and Beth talk it over. Janet telephones Rich and accepts $900,000 to settle the case.

If they had waited for the court of appeals decision, would Beth have won? It is impossible to know. It is certain, though, that whoever lost would have appealed. Months would have passed waiting to learn if the state supreme court would accept the case. If that court had agreed to hear the appeal, Beth would have endured another year of waiting, brief writing, oral argument, and tense hoping. The high court has all of the options discussed: to affirm, modify, reverse and remand, or simply reverse.

Alternative Dispute Resolution

As we have seen in the previous section, trials can be trying. Lawsuits can cause prolonged periods of stress, significant legal bills, and general unpleasantness. Many people and companies prefer to settle cases out of court. Alternative dispute resolution (ADR) provides several semi-formal methods of resolving conflicts. We will look at different types of ADR and analyze their strengths and weaknesses.

Negotiation

In most cases, the parties negotiate, whether personally or through lawyers. Fortunately, the great majority of disputes are resolved this way. Negotiation often begins as soon as a dispute arises and may last a few days or several years.

Mediation

Mediation is the fastest growing method of dispute resolution in the United States. Here, a neutral person, called a *mediator*, attempts to guide the two disputing parties toward a voluntary settlement. (In some cases, there may be two or more mediators, but we will use the singular.) Generally, the two disputants voluntarily enter mediation, although some judges order the parties to try this form of ADR before allowing a case to go to trial.

A mediator does not render a decision in the dispute, but uses a variety of skills to move the parties toward agreement. Often a mediator will shuttle between the antagonists, hearing their arguments, sorting out the serious issues from the less important, prompting the parties and lawyers alike to consider new perspectives, and looking for areas of agreement. Mediators must earn the trust of both parties, listen closely, try to diffuse anger and fear, and build the will to settle. Good mediators do not need a law degree, but they must have a sense of humor and low blood pressure.

Mediation has several major advantages. Because the parties maintain control of the process, the two antagonists can speak freely. They need not fear conceding too much, because no settlement takes effect until both parties sign. All discussions are confidential, further encouraging candid talk. This is particularly helpful in cases involving proprietary information that might be revealed during a trial.

Of all forms of dispute resolution, mediation probably offers the strongest "win–win" potential. Since the goal is voluntary settlement, neither party needs to fear that it will end up the loser. This is in sharp contrast to litigation, where one party is very likely to lose.

Removing the fear of defeat often encourages thinking and talking that are more open and realistic than negotiations held in the midst of a lawsuit. Studies show that over 75 percent of mediated cases do reach a voluntary settlement. Such an agreement is particularly valuable to parties that wish to preserve a long-term relationship. Consider two companies that have done business successfully for 10 years but now are in the midst of a million-dollar trade dispute. A lawsuit could last three or more years and destroy any chance of future trade. However, if the parties mediate the disagreement, they might reach an amicable settlement within a month or two and could quickly resume their mutually profitable business.

This form of ADR works for disputes both big and small. Two college roommates who cannot get along may find that a three-hour mediation session restores tranquility in the apartment. On a larger scale, consider the work of former U.S. Senator George Mitchell, who mediated the Anglo-Irish peace agreement, setting Northern Ireland on the path to peace for the first time in three centuries. Like most good mediators, Mitchell was remarkably patient. In an early session, Mitchell permitted the head of one militant party to speak without interruption—for seven straight hours. The diatribe yielded no quick results, but Mitchell believed that after Northern Ireland's tortured history, any nonviolent discussions represented progress.

Arbitration

In this form of ADR, the parties agree to bring in a neutral third party, but with a major difference: the arbitrator has the power to impose an award. The arbitrator allows each side equal time to present its case and, after deliberation, issues a binding decision, generally without giving reasons. Unlike mediation, arbitration ensures that there will be a final result, although the parties lose control of the outcome.

Judge Judy and similar TV court shows are examples of arbitration. Before the shows are taped, people involved in a real dispute sign a contract in which they give up the right to go to court over the incident and agree to be bound by the judge's decision.

Parties in arbitration give up many additional rights that litigants retain, including discovery and class action. In arbitration, as already discussed as applied to trials, *discovery* allows the two sides in a lawsuit to obtain documentary and other evidence from the opponent before the dispute is decided. Arbitration permits both sides to keep secret many files that would have to be divulged in a court case, potentially depriving the opposing side of valuable evidence. A party may have a stronger case than it realizes, and the absence of discovery may permanently deny it that knowledge. As discussed earlier in this chapter, a *class action* is a suit in which one injured party represents a large group of people who have suffered similar harm. Arbitration eliminates this possibility, since injured employees face the employer one at a time. Finally, the fact that an arbitrator may not provide a written, public decision bars other plaintiffs, and society generally, from learning what happened.

Traditionally, parties sign arbitration agreements *after* some incident took place. A car accident would happen first, and the drivers would agree to arbitration second. But today, many parties agree *in advance* to arbitrate any disputes that may arise in the future. For example, a new employee may sign an agreement requiring arbitration of any future disputes with his employer; a customer opening an account with a stockbroker or bank—or health plan—may sign a similar form, often without realizing it. The good news is fewer lawsuits; the bad news is you might be the person kept out of court.

Assume that you live in Miami. Using the Internet, you order a $1,000 ThinkLite laptop computer, which arrives in a carton loaded with six fat instructional manuals and many small leaflets. You read some of the documents and ignore others. For four weeks,

you struggle to make your computer work, to no avail. Finally, you call ThinkLite and demand a refund, but the company refuses. You file suit in your local court, at which time the company points out that buried among the hundreds of pages it mailed you was a *mandatory arbitration form*. This document prohibits you from filing suit against the company and states that if you have any complaint with the company, you must fly to Chicago, pay a $2,000 arbitrator's fee, plead your case before an arbitrator selected by the Laptop Trade Association of America, and, should you lose, pay ThinkLite's attorneys' fees, which could be several thousand dollars. Is that mandatory arbitration provision valid? It is too early to say with finality, but thus far, the courts that have faced such clauses have enforced them.[9]

Chapter Conclusion

No one will ever know for sure whether Tony Caruso took his own life. Craig Bergson's evidence might have tipped the scales in favor of Coastal. But even that is uncertain, since the jury could have found him unpersuasive. After two years, the case ends with a settlement and uncertainty—both typical lawsuit results. The missing witness is less common but not extraordinary. The vaguely unsatisfying feeling about it all is only too common and indicates why most parties settle out of court.

EXAM REVIEW

1. **COURT SYSTEMS** There are many *systems* of courts, one federal and one in each state. A federal court will hear a case only if it involves a federal question or diversity jurisdiction. (pp. 43–49)

2. **TRIAL AND APPELLATE COURTS** Trial courts determine facts and apply the law to the facts; appeals courts generally accept the facts found by the trial court and review the trial record for errors of law. (pp. 49–51)

EXAM Strategy

Question: Jade sued Kim, claiming that Kim promised to hire her as an in-store model for $1,000 per week for 8 weeks. Kim denied making the promise, and the jury was persuaded: Kim won. Jade has appealed, and now offers Steve as a witness. Steve will testify to the Appeals Court that he saw Kim hire Jade as a model, exactly as Jade claimed. Will Jade win on appeal?

Strategy: Before you answer, make sure you know the difference between trial and appellate courts. What is the difference? Apply that distinction here. (See the "Result" at the end of this section.)

---

[9]See, e.g., *Hill v. Gateway* 2000, 105 F.3d 1147, 1997 U.S. App. LEXIS 1877 (7th Cir. 1997), upholding a similar clause.

3. **PLEADINGS** A complaint and an answer are the two most important pleadings, that is, documents that start a lawsuit. (pp. 51–54)

4. **DISCOVERY** Discovery is the critical pre-trial opportunity for both parties to learn the strengths and weaknesses of the opponent's case. Important forms of discovery include interrogatories, depositions, production of documents and objects, physical and mental examinations, and requests for admission. (pp. 54–59)

5. **MOTIONS** A motion is a formal request to the court. (pp. 54, 66)

6. **SUMMARY JUDGMENT** Summary judgment is a ruling by the court that no trial is necessary because there are no essential facts in dispute. (pp. 59–61)

7. **JURY TRIALS** Generally, both plaintiff and defendant may demand a jury in any lawsuit for money damages. (pp. 61–66)

8. **VOIR DIRE** Voir dire is the process of selecting jurors in order to obtain an impartial panel. (p. 62)

EXAM Strategy

Question: You are a lawyer, representing the plaintiff in a case of alleged employment discrimination. The court is selecting a jury. Based on questions you have asked, you believe that juror number 3 is biased against your client. You explain this to the judge, but she disagrees. Is there anything you can do?

Strategy: The question focuses on your rights during voir dire. If you believe that a juror will not be fair, you may make two different types of challenge. What are they? (See the "Result" at the end of this section.)

9. **BURDEN OF PROOF** The plaintiff's burden of proof in a civil lawsuit is preponderance of the evidence, meaning that its version of the facts must be at least slightly more persuasive than the defendant's. In a criminal prosecution, the government must offer proof beyond a reasonable doubt in order to win a conviction. (pp. 63–64)

10. **RULES OF EVIDENCE** The rules of evidence determine what questions may be asked during trial, what testimony may be given, and what documents may be introduced. (pp. 65–65)

11. **VERDICTS** The verdict is the jury's decision in a case. The losing party may ask the trial judge to overturn the verdict, seeking a JNOV or a new trial. Judges seldom grant either. (pp. 65–66)

12. **APPEALS** An appeals court has many options. The court may affirm, upholding the lower court's decision; modify, changing the verdict but leaving the same party victorious; reverse, transforming the loser into the winner; and/or remand, sending the case back to the lower court. (pp. 47–50, 66–68)

13. **ADR** Alternative dispute resolution is any formal or informal process to settle disputes without a trial. Mediation, arbitration, and other forms of ADR are growing in popularity. (pp. 68–70)

2. Result: Trial courts use witnesses to help resolve fact disputes. Appellate courts review the record to see if there have been errors of law. Appellate courts never hear witnesses, and they will not hear Steve. Jade will lose her appeal.

8. Result: You have already made a *challenge for cause*, claiming bias, but the judge has rejected your challenge. If you have not used up all of your *peremptory challenges*, you may use one to excuse this juror, without giving any reason.

Multiple-Choice Questions

1. The burden of proof in a civil trial is to prove a case ____________________. The burden of proof rests with the ____________________.

(a) beyond a reasonable doubt; plaintiff
(b) by a preponderance of the evidence; plaintiff
(c) beyond a reasonable doubt; defendant
(d) by a preponderance of the evidence; defendant

2. Alice is suing Betty. After the discovery process, Alice believes that no relevant facts are in dispute, and that there is no need for a trial. She should move for …

(a) a judgment on the pleadings
(b) a directed verdict
(c) a summary judgment
(d) a JNOV

3. Glen lives in Illinois. He applies for a job with an Missouri company, and he is told, amazingly, that the job is open only to white applicants. He will now sue the Missouri company under the Civil Rights Act, a federal statute. Can Glen sue in federal court?

(a) Yes, absolutely.
(b) Yes, but only if he seeks damages of at least $75,000. Otherwise, he must sue in a state court.
(c) Yes, but only if the Missouri company agrees. Otherwise, he must sue in a state court.
(d) No, absolutely not. He must sue in a state court.

4. A default judgment can be entered if which of the following is true?

(a) A plaintiff presents her evidence at trial and clearly fails to meet her burden of proof.
(b) A defendant loses a lawsuit and does not pay a judgment within 180 days.
(c) A defendant fails to file an answer to a plaintiff's complaint on time.
(d) A citizen fails to obey an order to appear for jury duty.

5. Barry and Carl are next-door neighbors. Barry's dog digs under Carl's fence and does $500 worth of damage to Carl's garden. Barry refuses to pay for the damage, claiming that Carl's cats "have been digging up my yard for years."

The two argue repeatedly, and the relationship turns frosty. Of the following choices, which has no outside decision maker and is most likely to allow the neighbors to peacefully coexist after working out the dispute?

(a) Trial
(b) Arbitration
(c) Mediation

Essay Questions

1. You plan to open a store in Chicago, specializing in rugs imported from Turkey. You will work with a native Turk who will purchase and ship the rugs to your store. You are wise enough to insist on a contract establishing the rights and obligations of both parties and would prefer an ADR clause. But you do not want a clause that will alienate your overseas partner. What kind of ADR clause should you include, and why?

2. Which court(s) have jurisdiction over each of these lawsuits—state or federal? Explain your reasoning for each answer.

- Pat wants to sue his next-door neighbor, Dorothy, claiming that Dorothy promised to sell him the house next door.
- Paula, who lives in New York City, wants to sue Dizzy Movie Theatres, whose principal place of business is Dallas. She claims that while she was in Texas on holiday, she was injured by their negligent maintenance of a stairway. She claims damages of $30,000.
- Phil lives in Tennessee. He wants to sue Dick, who lives in Ohio. Phil claims that Dick agreed to sell him 3,000 acres of farmland in Ohio, worth over $2 million.
- Pete, incarcerated in a federal prison in Kansas, wants to sue the United States government. He claims that his treatment by prison authorities violates three federal statutes.

3. British discovery practice differs from that in the United States. Most discovery in Britain concerns documents. The lawyers for the two sides, called *solicitors*, must deliver to the opposing side a list of all relevant documents in their possession. Each side may then request to look at and copy those it wishes. Depositions are rare. What advantages and disadvantages are there to the British practice?

4. Trial practice also is dramatically different in Britain. The parties' solicitors do not go into court. Courtroom work is done by different lawyers, called barristers. The barristers have very limited rights to interview witnesses before trial. They know the substance of what each witness intends to say but do not rehearse questions and answers, as in the United States. Which approach do you consider more effective? More ethical? What is the purpose of a trial? Of pre-trial preparation?

5. Claus Scherer worked for Rockwell International and was paid over $300,000 per year. Rockwell fired Scherer for alleged sexual harassment of several workers, including his secretary, Terry Pendy. Scherer sued in United States District Court, alleging that Rockwell's real motive in firing him was his high salary.

Rockwell moved for summary judgment, offering deposition transcripts of various employees. Pendy's deposition detailed instances of harassment, including comments about her body, instances of unwelcome touching, and discussions of extramarital affairs. Another deposition, from a Rockwell employee who investigated the allegations, included complaints by other employees as to Scherer's harassment. In his own deposition, which he offered to oppose summary judgment, Scherer testified that he could not recall the incidents alleged by Pendy and others. He denied generally that he had sexually harassed anyone. The district court granted summary judgment for Rockwell. Was its ruling correct?

Discussion Questions

1. In the Tony Caruso case described throughout this chapter, the defendant offers to settle the case at several stages. Knowing what you do now about litigation, would you have accepted any of the offers? If so, which one(s)? If not, why not?

2. The burden of proof in civil cases is fairly low. A plaintiff wins a lawsuit if he is 51 percent convincing, and then he collects 100 percent of his damages. Is this result reasonable? Should a plaintiff in a civil case be required to prove his case beyond a reasonable doubt? Or, if a plaintiff is only 51 percent convincing, should he get only 51 percent of his damages?

3. Large numbers of employees have signed mandatory arbitration agreements in employment contracts. Courts usually uphold these clauses. Imagine that you signed a contract with an arbitration agreement, that the company later mistreated you, and that you could not sue in court. Would you be upset? Or would you be relieved to go through the faster and cheaper process of arbitration?

4. Imagine a state law that allows for residents to sue "spammers"—those who send uninvited commercial messages through e-mail—for $30. One particularly prolific spammer sends messages to hundreds of thousands of people.

   John Smith, a lawyer, signs up 100,000 people to participate in a class-action lawsuit. According to the agreements with his many clients, Smith will keep one-third of any winnings. In the end, Smith wins a $3 million verdict and pockets $1 million. Each individual plaintiff receives a check for $20.

   Is this lawsuit a reasonable use of the court's resources? Why or why not?

5. Higher courts are reluctant to review a lower court's *factual* findings. Should this be so? Would appeals be fairer if appellate courts reviewed *everything*?

CHAPTER 4

© r.nagy/Shutterstock.com

Common Law, Statutory Law, and Administrative Law

"Just hit the big red STOP button on the wall next to you, and I'll untie myself."
The hiker looks at the button, then back at Gary.
"I really need to go," he says.
"WHAT?!"
"If I don't get home soon, I'm going to miss *Oprah*."

Harry Homicide captures Gary and hauls him to the Old Abandoned Mill. Inside the mill, Harry sets a plank of wood atop a conveyor belt and ties Gary securely to the board.

"And now, Gary ... my arch-enemy ... I will have my REVENGE," Harry shouts. With a flourish, he presses a large green button marked START. The conveyor belt starts to move. A very large circular blade at the end of the belt begins to turn and cut into the plank. "Bwah hah hah hah!" Harry laughs in triumph.

Gary moves slowly toward the blade. Very, very slowly. Harry Homicide taps his foot. He sighs, frowns, and checks his watch. "Well," he says, "I think it is safe to assume that it's all over for you, Gary. You should never have crossed me. And so, farewell!" Harry makes a dramatic exit.

Gary works at his bonds frantically. He begins to weep. But then—a hiker appears in the doorway! "Hey! Help! Untie me!" Gary shouts. He can't believe his good fortune.

The hiker mumbles something. "What's that?" Gary shouts. "I can't hear you. Help me—hurry!"

The hiker speaks up. "I said I'm not any good untying knots. Never have been."

Gary's mouth drops open. "Fine, that's fine," he says. "Just hit the big red STOP button on the wall next to you, and I'll untie myself."

The hiker looks at the button, then back at Gary. "I really need to go," he says.

"WHAT?!"

"If I don't get home soon, I'm going to miss *Oprah*."

"You can't be serious!"

"I am serious. I find her empathy and common sense refreshing."

"Oh, boy," Gary mutters to himself. Then, louder, "That's fine, just fine. Just punch the button and you can be on your way in two seconds. Please!"

The hiker takes one last look at the STOP button. "I have to go," he says. Without another word, he leaves.

In his last moments, Gary cannot decide whether he is more irritated with the hiker or Harry Homicide.

Common Law

Gary and the hiker present a classic legal puzzle: what, if anything, must a bystander do when he sees someone in danger? We will examine this issue to see how the common law works.

Common law
Judge-made law.

The **common law** is judge-made law. It is the sum total of all the cases decided by appellate courts. The common law of Pennsylvania consists of all cases decided by appellate courts in that state. The Illinois common law is made up of all of the cases decided by Illinois appellate courts. Two hundred years ago, almost all of the law was common law. Today, common law still predominates in tort, contract, and agency law, and it is very important in property, employment, and some other areas.

Stare Decisis

Stare decisis
"Let the decision stand," that is, the ruling from a previous case.

Precedent
An earlier case that decided the issue.

Nothing perks up a course like Latin. ***Stare decisis*** means "let the decision stand." It is the essence of the common law. Once a court has decided a particular issue, it will generally apply the same rule in similar cases in the future . Suppose the highest court of Arizona must decide whether a contract signed by a 16-year-old can be enforced against him. The court will look to see if there is **precedent**, that is, whether the high court of Arizona has already decided a similar case. The Arizona court looks and finds several earlier cases, all holding that such contracts may not be enforced against a minor. The court will probably apply that precedent and refuse to enforce the contract in this case. Courts do not always follow precedent, but they generally do: *stare decisis*.

A desire for predictability created the doctrine of *stare decisis*. The value of predictability is apparent: people must know what the law is. If contract law changed daily, an entrepreneur who leased factory space and then started buying machinery would be uncertain if the factory would actually be available when she was ready to move in. Will the landlord slip out of the lease? Will the machinery be ready on time? The law must be knowable. Yet there must also be flexibility in the law, some means to respond to new problems and a changing social climate. Sometimes, we are better off if we are not encumbered by ironclad rules established before electricity was discovered. These two ideas are in conflict: the more flexibility we permit, the less predictability we enjoy. We will watch the conflict play out in the bystander cases.

Bystander Cases

This country inherited from England a simple rule about a **bystander's obligations: you have no duty to assist someone in peril unless you created the danger.** In *Union Pacific Railway Co. v. Cappier*,[1] through no fault of the railroad, a train struck a man. Railroad employees saw the incident happen but did nothing to assist him. By the time help arrived, the victim had died. The court held that the railroad had no duty to help the injured man:

> With the humane side of the question courts are not concerned. It is the omission or negligent discharge of legal duties only which come within the sphere of judicial cognizance. For withholding relief from the suffering, for failure to respond to the calls of worthy charity, or for faltering in the bestowment of brotherly love on the unfortunate, penalties are found not in the laws of men but in [the laws of God].

As harsh as this judgment might seem, it was an accurate statement of the law at that time in both England and the United States: bystanders need do nothing. Contemporary writers found the rule inhumane and cruel, and even judges criticized it. But—*stare decisis*—they followed it. With a rule this old and well established, no court was willing to scuttle it. What courts did do was seek openings for small changes.

Eighteen years after the Kansas case of *Cappier*, a court in nearby Iowa found the basis for one exception. Ed Carey was a farm laborer, working for Frank Davis. While in the fields, Carey fainted from sunstroke and remained unconscious. Davis simply hauled him to a nearby wagon and left him in the sun for an additional four hours, causing serious permanent injury. The court's response:

> It is unquestionably the well-settled rule that the master is under no legal duty to care for a sick or injured servant for whose illness or injury he is not at fault. Though not unjust in principle, this rule, if carried unflinchingly and without exception to its logical extreme, is sometimes productive of shocking results. To avoid this criticism [we hold that where] a servant suffers serious injury, or is suddenly stricken down in a manner indicating the immediate and emergent need of aid to save him from death or serious harm, the master, if present is in duty bound to take such reasonable measures as may be practicable to relieve him, even though such master be not chargeable with fault in bringing about the emergency.[2]

And this is how the common law often changes: bit by tiny bit. In Iowa, a bystander could now be liable *if* he was the employer and *if* the worker was suddenly stricken and *if* it was an emergency and *if* the employer was present. That is a small change but an important one.

For the next 50 years, changes in bystander law came very slowly. Consider *Osterlind v. Hill*, a case from 1928.[3] Osterlind rented a canoe from Hill's boatyard, paddled into the lake, and promptly fell into the water. For *30 minutes*, he clung to the side of the canoe and shouted for help. Hill heard the cries but did nothing; Osterlind drowned. Was Hill liable? No, said the court: a bystander has no liability. Not until half a century later did the same court reverse its position and begin to require assistance in extreme cases. Fifty years is a long time for the unfortunate Osterlind to hold on.[4]

In the 1970s, changes came more quickly.

Tarasoff v. Regents of the University of California

17 Cal. 3d 425, 551 P.2d 334, 131 Cal. Rptr. 14
Supreme Court of California, 1976

Facts: On October 27, 1969, Prosenjit Poddar killed Tatiana Tarasoff. Tatiana's parents claimed that two months earlier, Poddar had confided his intention to kill Tatiana to Dr. Lawrence Moore, a psychologist employed by the University of California at Berkeley. They sued the university, claiming that Dr. Moore should have warned Tatiana and/or should have arranged for Poddar's confinement.

Issue: ***Did Dr. Moore have a duty to Tatiana Tarasoff, and did he breach that duty?***

Excerpts from Justice Tobriner's Decision: Although under the common law, as a general rule, one person owed no duty to control the conduct of another, nor to warn those endangered by such conduct, the courts have carved out an exception to this rule in cases in which the defendant stands in some special relationship to either the person whose conduct needs to be controlled or in a relationship to the foreseeable victim of that conduct. Applying this exception to the present case, we note that a relationship of defendant therapists to either Tatiana or Poddar will suffice to establish a duty of care.

We recognize the difficulty that a therapist encounters in attempting to forecast whether a patient presents a serious danger of violence. Obviously we do not require that the therapist, in making that determination, render a perfect performance; the therapist need only exercise that reasonable degree of skill, knowledge, and care ordinarily possessed and exercised by members of [the field] under similar circumstances.

In the instant case, however, the pleadings do not raise any question as to failure of defendant therapists to predict that Poddar presented a serious danger of violence. On the contrary, the present complaints allege that defendant therapists did in fact predict that Poddar would kill, but were negligent in failing to warn.

In our view, once a therapist does in fact determine, or under applicable professional standards reasonably should have determined, that a patient poses a serious danger of violence to others, he bears a duty to exercise reasonable care to protect the foreseeable victim of that danger.

[The Tarasoffs have stated a legitimate claim against Dr. Moore.]

The *Tarasoff* exception applies when there is some special relationship, such as therapist–patient. What if there is no such relationship? Remember the *Soldano v. O'Daniels* case from Chapter 1, in which the bartender refused to call the police.

As in the earlier cases we have seen, this lawsuit presented an emergency. But the exception created in *Carey v. Davis* applied only if the bystander was an employer, and that in *Tarasoff* only for a doctor. In *Soldano,* the bystander was neither. Should the law require him to act, that is, should it carve a new exception? Here is what the California court decided:

> Many citizens simply "don't want to get involved." No rule should be adopted [requiring] a citizen to open up his or her house to a stranger so that the latter may use the telephone to call for emergency assistance. As Mrs. Alexander in Anthony Burgess' *A Clockwork Orange* learned to her horror, such an action may be fraught with danger. It does not follow, however, that use of a telephone in a public portion of a business should be refused for a legitimate emergency call.
>
> We conclude that the bartender owed a duty to [Soldano] to permit the patron from Happy Jack's to place a call to the police or to place the call himself. It bears emphasizing that the duty in this case does not require that one must go to the aid of another. That is not the issue here. The employee was not the good samaritan intent on aiding another. The patron was.

And so, courts have made several subtle changes to the common law rule. Let's apply them to the opening scenario. If Gary's family sues the hiker, will they be successful? Probably not.

The hiker did not employ Gary, nor did the two men have any special relationship. The hiker did not stand in the way of someone else trying to call the police. He may be morally culpable for refusing to press a button and save a life, but he will not be legally liable unless an entirely new change to the common law occurs.

The bystander rule, that hardy oak, is alive and well. Various initials have been carved into its bark—the exceptions we have seen and a variety of others—but the trunk is strong and the leaves green. Perhaps someday the proliferating exceptions will topple it, but the process of the common law is slow and that day is nowhere in sight.

EXAM Strategy

Question: When Rachel is walking her dog, Bozo, she watches a skydiver float to earth. He lands in an enormous tree, suspended 45 feet above ground. "Help!" the man shouts. Rachel hurries to the tree and sees the skydiver bleeding profusely. She takes out her cell phone to call 911 for help, but just then Bozo runs away. Rachel darts after the dog, afraid that he will jump in a nearby pond and emerge smelling of mud. She forgets about the skydiver and takes Bozo home. Three hours later, the skydiver expires.

The victim's family sues Rachel. She defends by saying she feared that Bozo would have an allergic reaction to mud, and that in any case she could not have climbed 45 feet up a tree to save the man. The family argues that the dog is not allergic to mud, that even if he is, a pet's inconvenience pales compared to human life, and that Rachel could have phoned for emergency help without climbing an inch. Please rule.

Strategy: The family's arguments might seem compelling, but are they relevant? Rachel is a bystander, someone who perceives another in danger. What is the rule concerning a bystander's obligation to act? Apply the rule to the facts of this case.

Result: A bystander has no duty to assist someone in peril unless she created the danger. Rachel did not create the skydiver's predicament. She had no obligation to do anything. Rachel wins.

STATUTORY LAW

More law is created by statute than by the courts. Statutes affect each of us every day, in our business, professional, and personal lives. When the system works correctly, this is the one part of the law over which "we the people" have control. We elect the legislators who pass state statutes; we vote for the senators and representatives who create federal statutes.

Every other November, voters in all 50 states cast ballots for members of Congress. The winners of congressional elections convene in Washington, D.C. and create statutes. In this section, we look at how Congress does its work creating statutes.[5] Using the Civil Rights Act as a backdrop, we will follow a bill as it makes its way through Congress and beyond.

[5]State legislatures operate similarly in creating state laws.

Bill
A proposed statute.

Veto
The power of the president to reject bills passed by Congress.

Bills

Congress is organized into two houses, the House of Representatives and the Senate. Either house may originate a proposed statute, which is called a **bill**. To become law, the bill must be voted on and approved by both houses. Once both houses pass it, they will send it to the president. If the president signs the bill, it becomes law and is then a statute. If the president opposes the bill, he will **veto** it, in which case it is not law.[6]

If you visit either house of Congress, you will probably find half a dozen legislators on the floor, with one person talking and no one listening. This is because most of the work is done in committees. Both houses are organized into dozens of committees, each with special functions. The House currently has about 25 committees (further divided into about 150 subcommittees) and the Senate has approximately 20 committees (with about 86 subcommittees). For example, the armed services committee of each house oversees the huge defense budget and the workings of the armed forces. Labor committees handle legislation concerning organized labor and working conditions. Banking committees develop expertise on financial institutions. Judiciary committees review nominees to the federal courts. There are dozens of other committees, some very powerful, because they control vast amounts of money, and some relatively weak. Few of us ever think about the House Agricultural Subcommittee on Specialty Crops. But if we owned a family peanut farm, we would pay close attention to the subcommittee's agenda, because those members of Congress would pay close attention to us.

When a bill is proposed in either house, it is referred to the committee that specializes in that subject. Why are bills proposed in the first place? For any of several reasons:

- ***New Issue, New Worry.*** If society begins to focus on a new issue, Congress may respond with legislation. We consider below, for example, the congressional response in the 1960s to employment discrimination.
- ***Unpopular Judicial Ruling.*** If Congress disagrees with a judicial interpretation of a statute, the legislators may pass a new statute to modify or "undo" the court decision. For example, if the Supreme Court misinterprets a statute about musical copyrights, Congress may pass a new law correcting the Court's error. However, the legislators have no such power to modify a court decision based on the Constitution. When the Supreme Court ruled that lawyers had a right *under the First Amendment* to advertise their services, Congress lacked the power to change the decision.
- ***Criminal Law.*** Statutory law, unlike common law, is prospective. Legislators are hoping to control the future. And that is why almost all criminal law is statutory. A court cannot retroactively announce that it *has been* a crime for a retailer to accept kickbacks from a wholesaler. Everyone must know the rules in advance because the consequences—prison, a felony record—are so harsh.

Discrimination: Congress and the Courts

The civil rights movement of the 1950s and 1960s convinced most citizens that African Americans suffered significant and unacceptable discrimination in jobs, housing, voting, schools, and other basic areas of life. Demonstrations and boycotts, marches and counter-marches, church bombings and killings persuaded the nation that the problem was vast and urgent.

In 1963 President Kennedy proposed legislation to guarantee equal rights in these areas. The bill went to the House Judiciary Committee, which heard testimony for

[6] Congress may, however, attempt to override the veto. See the discussion following.

weeks. Witnesses testified that blacks were often unable to vote because of their race, that landlords and home sellers adamantly refused to sell or rent to African Americans, that education was grossly unequal, and that blacks were routinely denied good jobs in many industries. Eventually, the Judiciary Committee approved the bill and sent it to the full House.

The bill was dozens of pages long and divided into "titles," with each title covering a major issue. Title VII concerned employment. We will consider the progress of Title VII in Congress and in the courts. Here is one section of Title VII, as reported to the House floor:[7]

© AP Photo/Bill Hudson

A civil rights demonstrator being arrested by the police.

> Sec. 703(a). It shall be an unlawful employment practice for an employer—
>
> (1) to fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, or national origin; or
>
> (2) to limit, segregate, or classify his employees in any way which would deprive or tend to deprive any individual of employment opportunities or otherwise adversely affect his status as an employee, because of such individual's race, color, religion, or national origin.

Debate

The proposed bill was intensely controversial and sparked argument throughout Congress. Here are some excerpts from one day's debate on the House floor, on February 8, 1964:[8]

> MR. WAGGONNER. I speak to you in all sincerity and ask for the right to discriminate if I so choose because I think it is my right. I think it is my right to choose my social companions. I think it is my right if I am a businessman to run it as I please, to do with my own as I will. I think that is a right the Constitution gives to every man. I want the continued right to discriminate and I want the other man to have the right to continue to discriminate against me, because I am discriminated against every day. I do not feel inferior about it.
>
> I ask you to forget about politics, forget about everything except the integrity of the individual, leaving to the people of this country the right to live their lives in the manner they choose to live. Do not destroy this democracy for a Socialist government. A vote for this bill is no less.
>
> MR. CONTE. If the serious cleavage which pitted brother against brother and citizen against citizen during the tragedy of the Civil War is ever to be justified, it can be justified in this House and then in the other body with the passage of this legislation which can and must reaffirm the rights to all individuals which are inherent in our Constitution.
>
> The distinguished poet Mark Van Doren has said that "equality is absolute or no, nothing between can stand," and nothing should now stand between us and the passage of strong and effective civil rights legislation. It is to this that we are united in a strong bipartisan coalition today, and when the laws of the land proclaim that the 88th Congress acted effectively, judiciously, and wisely, we can take pride in our accomplishments as free men.

---

[7] The section number in the House bill was actually 704(a); we use 703 here because that is the number of the section when the bill became law and the number to which the Supreme Court refers in later litigation.

[8] The order of speakers is rearranged, and the remarks are edited.

Other debate was less rhetorical and aimed more at getting information. The following exchange anticipates a 30-year controversy on quotas:

> MR. JOHANSEN. I have asked for this time to raise a question and I would ask particularly for the attention of the gentleman from New York [MR. GOODELL] because of a remark he made—and I am not quarreling with it. I understood him to say there is no plan for balanced employment or for quotas in this legislation .... I am raising a question as to whether in the effort to eliminate discrimination—and incidentally that is an undefined term in the bill—we may get to a situation in which employers and conceivably union leaders, will insist on legislation providing for a quota system as a matter of self-protection.
>
> Now let us suppose this hypothetical situation exists with 100 jobs to be filled. Let us say 150 persons apply and suppose 75 of them are Negro and 75 of them are white. Supposing the employer ... hires 75 white men. [Does anyone] have a right to claim they have been discriminated against on the basis of color?
>
> MR. GOODELL. It is the intention of the legislation that if applicants are equal in all other respects there will be no restriction. One may choose from among equals. So long as there is no distinction on the basis of race, creed, or color it will not violate the act.

The debate on racial issues carried on. Later in the day, Congressman Smith of Virginia offered an amendment that could scarcely have been smaller—or more important:

> Amendment offered by MR. SMITH of Virginia: On page 68, line 23, after the word "religion," insert the word "sex."

In other words, Smith was asking that discrimination on the basis of sex also be outlawed, along with the existing grounds of race, color, national origin, and religion. Congressman Smith's proposal produced the following comments:

> MR. CELLER. You know, the French have a phrase for it when they speak of women and men. They say "vive la difference." I think the French are right. Imagine the upheaval that would result from adoption of blanket language requiring total equality. Would male citizens be justified in insisting that women share with them the burdens of compulsory military service? What would become of traditional family relationships? What about alimony? What would become of the crimes of rape and statutory rape? I think the amendment seems illogical, ill timed, ill placed, and improper.
>
> MRS. ST. GEORGE. Mr. Chairman, I was somewhat amazed when I came on the floor this afternoon to hear the very distinguished chairman of the Committee on the Judiciary [MR. CELLER] make the remark that he considered the amendment at this point illogical. I can think of nothing more logical than this amendment at this point.
>
> There are still many States where women cannot serve on juries. There are still many States where women do not have equal educational opportunities. In most States and, in fact, I figure it would be safe to say, in all States—women do not get equal pay for equal work. That is a very well known fact. And to say that this is illogical. What is illogical about it? All you are doing is simply correcting something that goes back, frankly to the Dark Ages.

The debate continued. Some supported the "sex" amendment because they were determined to end sexual bias. But politics are complex. Some *opponents* of civil rights supported the amendment because they believed that it would make the legislation less popular and cause Congress to defeat the entire Civil Rights bill.

That strategy did not work. The amendment passed, and sex was added as a protected trait. And, after more debate and several votes, the entire bill passed the House. It went to the Senate, where it followed a similar route from Judiciary Committee to full Senate. Much of the Senate debate was similar to what we have seen. But some senators raised a new issue, concerning §703(2), which prohibited *segregating or classifying* employees based on any of the protected categories (race, color, national origin, religion, or sex). Senator Tower was

concerned that §703(2) meant that an employee in a protected category could never be given any sort of job test. So the Senate amended §703 to include a new subsection:

> Sec. 703(h). Notwithstanding any other provision of this title, it shall not be an unlawful employment practice for an employer ... to give and to act upon the results of any professionally developed ability test provided that such test ... is not designed, intended or used to discriminate because of race, color, religion, sex or national origin.

With that amendment, and many others, the bill passed the Senate.

Conference Committee

Civil rights legislation had now passed both houses, but the bills were no longer the same due to the many amendments. This is true with most legislation. The next step is for the two houses to send representatives to a House–Senate Conference Committee. This committee examines all of the differences between the two bills and tries to reach a compromise. With the Civil Rights bill, Senator Tower's amendment was left in; other Senate amendments were taken out. When the Conference Committee had settled every difference between the two versions, the new, modified bill was sent back to each house for a new vote.

The House of Representatives and the Senate again angrily debated the compromise language reported from the Conference Committee. Finally, after years of violent public demonstrations and months of debate, each house passed the same bill. President Johnson promptly signed it. The Civil Rights Act of 1964 was law. See Exhibit 4.1.

But the passing of a statute is not always the end of the story. Sometimes courts must interpret congressional language and intent.

Statutory Interpretation

Title VII of the Civil Rights Act obviously prohibited an employer from saying to a job applicant, "We don't hire minorities." In some parts of the country, that had been common practice; after the Civil Rights Act passed, it became rare. Employers who routinely hired whites only, or promoted only whites, found themselves losing lawsuits. A new group of cases arose, those in which some job standard was set that appeared to be racially neutral, yet had a discriminatory effect. In North Carolina, the Duke Power Co. required that applicants for higher paying, promotional positions meet two requirements: they must have a high school diploma, and they must pass a standardized written test. There was no evidence that either requirement related to successful job performance. Blacks met the requirements in lower percentages than whites, and consequently whites obtained a disproportionate share of the good jobs.

Title VII did not precisely address this kind of case. It clearly outlawed overt discrimination. Was Duke Power's policy overt discrimination, or was it protected by Senator Tower's amendment, §703(h)? The case went all the way to the Supreme Court, where the Court had to interpret the new law.

Courts are often called upon to interpret a statute, that is, to explain precisely what the language means and how it applies in a given case. There are three primary steps in a court's statutory interpretation:

- ***Plain Meaning Rule.*** When a statute's words have ordinary, everyday significance, the court will simply apply those words. Section 703(a)(1) of the Civil Rights Act prohibits firing someone because of her religion. Could an employer who had fired a Catholic because of her religion argue that Catholicism is not really a religion, but more of a social group? No. The word "religion" has a plain meaning and courts apply its commonsense definition.

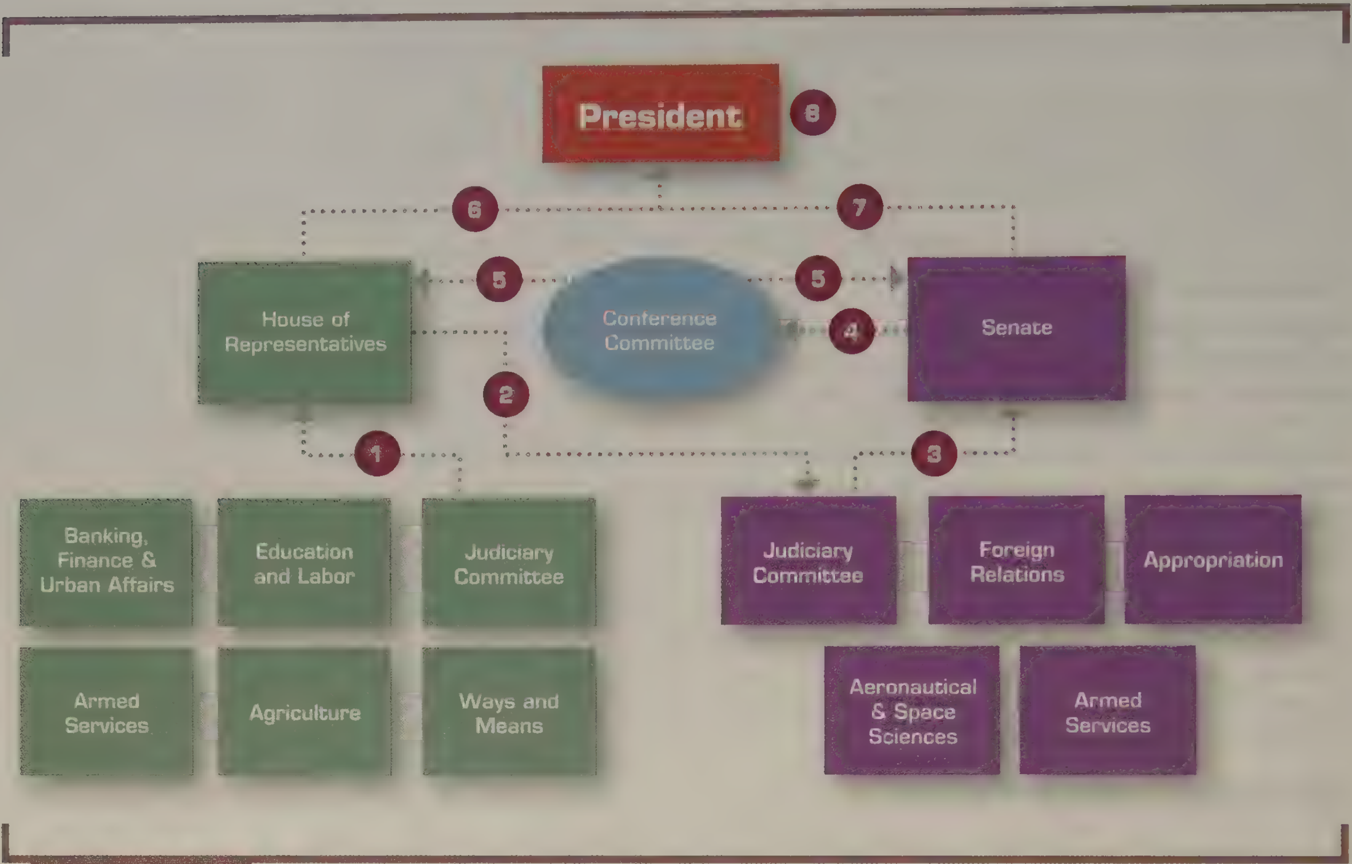

EXHIBIT 4.1 The two houses of Congress are organized into dozens of committees, a few of which are shown here. The path of the 1964 Civil Rights Act (somewhat simplified) was as follows: (1) The House Judiciary Committee approved the bill and sent it to the full House; (2) the full House passed the bill and sent it to the Senate, where it was assigned to the Senate Judiciary Committee; (3) the Senate Judiciary Committee passed an amended version of the bill and sent it to the full Senate; (4) the full Senate passed the bill with additional amendments. Since the Senate version was now different from the bill the House passed, the bill went to a Conference Committee. The Conference Committee (5) reached a compromise and sent the new version of the bill back to both houses. Each house passed the compromise bill (6 and 7) and sent it to the president, who signed it into law (8).

- ***Legislative History and Intent.*** If the language is unclear, the court must look deeper. Section 703(a)(2) prohibits classifying employees in ways that are discriminatory. Does that section prevent an employer from requiring high school diplomas, as Duke Power did? The explicit language of the statute does not answer the question. The court will look at the law's history to determine the intent of the legislature. The court will examine committee hearings, reports, and the floor debates that we have seen.
- ***Public Policy.*** If the legislative history is unclear, courts will rely on general public policies, such as reducing crime, creating equal opportunity, and so forth. They may include in this examination some of their own prior decisions. Courts assume that the legislature is aware of prior judicial decisions, and if the legislature did not change those decisions, the statute will be interpreted to incorporate them.

Here is how the Supreme Court interpreted the 1964 Civil Rights Act.

Landmark Case

Griggs v. Duke Power Co.

401 U.S. 424, 91 S. Ct. 849, 1971 U.S. LEXIS 134
United States Supreme Court, 1971

Facts: See the discussion of the Duke Power Company's job requirements in the "Conference Committee" section above.

Issue: ***Did Title VII of the 1964 Civil Rights Act require that employment tests be job-related?***

Excerpts from Chief Justice Burger's Decision: The objective of Congress in the enactment of Title VII is plain from the language of the statute. It was to achieve equality of employment opportunities and remove barriers that have operated in the past to favor an identifiable group of white employees over other employees. Under the Act, practices, procedures, or tests neutral on their face, and even neutral in terms of intent, cannot be maintained if they operate to "freeze" the status quo of prior discriminatory employment practices.

The Act proscribes not only overt discrimination but also practices that are fair in form, but discriminatory in operation. The touchstone is business necessity. If an employment practice which operates to exclude Negroes cannot be shown to be related to job performance, the practice is prohibited.

On the record before us, neither the high school completion requirement nor the general intelligence test is shown to bear a demonstrable relationship to successful performance of the jobs for which it was used.

Senator Tower offered an amendment which was adopted verbatim and is now the testing provision of section 703(h). Speaking for the supporters of Title VII, Senator Humphrey endorsed the amendment, stating: "Senators on both sides of the aisle who were deeply interested in Title VII have examined the text of this amendment and have found it to be in accord with the intent and purpose of that title." The amendment was then adopted. From the sum of the legislative history relevant in this case, the conclusion is inescapable that the … requirement that employment tests be job related comports with congressional intent.

And so the highest Court ruled that if a job requirement had a discriminatory impact, the employer could use that requirement only if it was related to job performance. Many more cases arose. For almost two decades courts held that, once workers showed that a job requirement had a discriminatory effect, the employer had the burden to prove that the requirement was necessary for the business. The requirement had to be essential to achieve an important goal. If there was any way to achieve that goal without discriminatory impact, the employer had to use it.

Changing Times

But things changed. In 1989, a more conservative Supreme Court decided *Wards Cove Packing Co. v. Atonio.*[9] The plaintiffs were nonwhite workers in salmon canneries in Alaska. The canneries had two types of jobs, skilled and unskilled. Nonwhites (Filipinos and native Alaskans) invariably worked as low-paid, unskilled workers, canning the fish. The higher paid, skilled positions were filled almost entirely with white workers, who were hired during the off-season in Washington and Oregon.

There was no overt discrimination. But plaintiffs claimed that various practices led to the racial imbalances. The practices included failing to promote from within the company, hiring through separate channels (cannery jobs were done through a union hall, skilled positions were

[9]490 U.S. 642, 109 S. Ct. 2115, 1989 U.S. LEXIS 2794 (1989).

filled out of state), nepotism, and an English language requirement. Once again the case reached the Supreme Court, where Justice White wrote the Court's opinion.

If the plaintiffs succeeded in showing that the job requirements led to racial imbalance, said the Court, the employer now only had to demonstrate that the requirement or practice "serves, in a significant way, the legitimate employment goals of the employer .... [T]here is no requirement that the challenged practice be 'essential' or 'indispensable' to the employer's business." In other words, the Court removed the "business necessity" requirement of *Griggs* and replaced it with "legitimate employment goals."

Voters' Role

The response to *Wards Cove* was quick. Liberals decried it; conservatives hailed it. Everyone agreed that it was a major change that would make it substantially harder for plaintiffs to bring successful discrimination cases. Democrats introduced bills to reverse the interpretation of *Wards Cove.* President George H.W. Bush strongly opposed any new bill. He said it would lead to "quotas," that is, that employers would feel obligated to hire a certain percentage of workers from all racial categories to protect themselves from suits. This was the issue that Congressman Johansen had raised in the original House debate in 1964.

Both houses passed bills restoring the "business necessity" holding of *Griggs.* Again there were differences, and a Conference Committee resolved them. After acrimonious debate, both houses passed the compromise bill in October 1990. Was it therefore law? No. President Bush immediately vetoed the bill. He said it would compel employers to adopt quotas.

Congressional Override

When the president vetoes a bill, Congress has one last chance to make it law: an override. If both houses repass the bill, each by a two-thirds margin, it becomes law over the president's veto. Congress attempted to pass the 1990 Civil Rights bill over the Bush veto, but it fell short in the Senate by one vote.

Civil rights advocates tried again, in January 1991, introducing a new bill to reverse the *Wards Cove* rule. Again both houses debated and bargained. The new bill stated that, once an employee proves that a particular employment practice causes a discriminatory impact, the employer must "demonstrate that the challenged practice is job related for the position in question and consistent with business necessity."

Now the two sides fought over the exact meanings of two terms: "job related" and "business necessity." Each side offered definitions, but they could not reach agreement. It appeared that the entire bill would founder over those terms. So Congress did what it often does when faced with a problem of definition: it dropped the issue. Liberals and conservatives agreed not to define the troublesome terms. They would leave that task to courts to perform through statutory interpretation.

With the definitions left out, the new bill passed both houses. In November 1991, President Bush signed the bill into law. The president stated that the new bill had been improved and no longer threatened to create racial quotas. His opponents charged he had reversed course for political reasons, anticipating the 1992 presidential election.

And so, the Congress restored the "business necessity" interpretation to its own 1964 Civil Rights Act. No one would say, however, that it had been a simple process.

EXAM Strategy

Question: Kelly Hackworth took a leave of absence from her job at Progressive Insurance to care for her ailing mother. When she offered to return, Progressive refused to give her the same job or one like it. She sued based on the Family Medical Leave Act, a federal statute that requires firms to give workers returning from family

leave their original job or an equivalent one. However, the statute excludes from its coverage workers whose company employs "fewer than 50 people within 75 miles" of the worker's jobsite. Between Ms. Hackworth's job site in Norman, Oklahoma, and the company's Oklahoma City workplace (less than 75 miles away), Progressive employed 47 people. At its Lawton, Oklahoma facility, Progressive employed three more people – but Lawton was 75.6 miles (wouldn't you know it) away from Norman. Progressive argued that the job was not covered by the statute. Hackworth claimed that this distance should be considered "within 75 miles," thereby rendering her eligible for FMLA leave. Even if it were not, she urged, it would be absurd to disqualify her from important rights based on a disparity of six-tenths of a mile. Please rule.

Strategy: The question asks you to interpret a statute. How do courts do that? There are three steps: the plain meaning rule; legislative history; and public policy. Apply those steps to these facts.

Result: In this real case, the court ruled that the plain meaning of "within 75 miles" was *75 miles or less*. Lawton was not 75 miles or less from Norman. The statute did not apply and Ms. Hackworth lost.[10]

Administrative Law

Before beginning this section, please return your seat to its upright position. Stow the tray firmly in the seatback in front of you. Turn off any laptops, cell phones, or other electronic devices. Sound familiar? Administrative agencies affect each of us every day in hundreds of ways. They have become the fourth branch of government. Supporters believe that they provide unique expertise in complex areas; detractors regard them as unelected government run amok.

Many administrative agencies are familiar. The Federal Aviation Administration, which requires all airlines to ensure that your seats are upright before takeoff and landing, is an administrative agency. The Internal Revenue Service expects to hear from us every April 15. The Environmental Protection Agency regulates the water quality of the river in your town. The Federal Trade Commission oversees the commercials that shout at you from your television set.

Before beginning this section, please return your seat to its upright position. Stow the tray firmly in the seatback in front of you.

Other agencies are less familiar. You may never have heard of the Bureau of Land Management, but if you go into the oil and gas industry, you will learn that this powerful agency has more control over your land than you do. If you develop real estate in Palos Hills, Illinois, you will tremble every time the Appearance Commission of the City of Palos Hills speaks, since you cannot construct a new building without its approval. If your software corporation wants to hire an Argentine expert on databases, you will get to know the complex workings of Immigration and Customs Enforcement: no one lawfully enters this country without its nod of approval.

[10]*Hackworth v. Progressive Casualty Ins. Co.*, 468 F.3d 722, 10th Cir. 2006 (10th Cir. 2006).

Background

By the 1880s, trains crisscrossed America. But this technological miracle became an economic headache. Congress worried that the railroads' economic muscle enabled a few powerful corporations to reap unfair profits. The railroad industry needed closer regulation. Who would do it? Courts decide individual cases, they do not regulate industries. Congress itself passes statutes, but it has no personnel to oversee the day-to-day working of a huge industry. For example, Congress lacks the expertise to establish rates for freight passing from Kansas City to Chicago, and it has no personnel to enforce rates once they are set.

A new entity was needed. Congress passed the Interstate Commerce Act, creating the Interstate Commerce Commission (ICC), the first administrative agency. The ICC began regulating freight and passenger transportation over the growing rail system and continued to do so for over 100 years. Congress gave the ICC power to regulate rates and investigate harmful practices, to hold hearings, issue orders, and punish railroads that did not comply.

The ICC was able to hire and develop a staff that was expert in the issues that Congress wanted controlled. The agency had enough flexibility to deal with the problems in a variety of ways: by regulating, investigating, and punishing. And that is what has made administrative agencies an attractive solution for Congress: one entity, focusing on one industry, can combine expertise and flexibility. However, the ICC also developed great power, which voters could not reach, and thereby started the great and lasting conflict over the role of agencies.

During the Great Depression of the 1930s, the Roosevelt administration and Congress created dozens of new agencies. Many were based on social demands, such as the need of the elderly population for a secure income. Political and social conditions dominated again in the 1960s, as Congress created agencies, such as the Equal Employment Opportunity Commission, to combat discrimination.

Then during the 1980s the Reagan administration made an effort to decrease the number and strength of the agencies. For several years some agencies declined in influence, though others did not. Today, there is still controversy about how much power agencies should have.

Classification of Agencies

Agencies exist at the federal, state, and local level. We will focus on federal agencies because they have national impact and great power. Most of the principles discussed apply to state and local agencies as well. Virtually any business or profession you choose to work in will be regulated by at least one administrative agency, and it may be regulated by several.

Executive-Independent

Some federal agencies are part of the executive branch while others are independent agencies. This is a major distinction. The president has much greater control of executive agencies for the simple reason that he can fire the agency head at any time. An executive agency will seldom diverge far from the president's preferred policies. Some familiar executive agencies are the Internal Revenue Service (part of the Treasury Department); the Federal Bureau of Investigation (Department of Justice); the Food and Drug Administration (Department of Health and Human Services); and the Nuclear Regulatory Commission (Department of Energy).

The president has no such removal power over independent agencies. The Federal Communications Commission (FCC) is an independent agency. For many corporations involved in broadcasting, the FCC has more day-to-day influence on their business than

Congress, the courts, and the president combined. Other powerful independent agencies are the Federal Trade Commission, the Securities and Exchange Commission, the National Labor Relations Board, and the Environmental Protection Agency.

Enabling Legislation

Congress creates a federal agency by passing **enabling legislation**. The Interstate Commerce Act was the enabling legislation that established the ICC. Typically, the enabling legislation describes the problems that Congress believes need regulation, establishes an agency to do it, and defines the agency's powers.

Critics argue that Congress is delegating to another body powers that only the legislature or courts are supposed to exercise. This puts administrative agencies above the voters. But legal attacks on administrative agencies have consistently failed for several decades. Courts acknowledge that agencies have become an integral part of a complex economy, and so long as there are some limits on an agency's discretion, courts will generally uphold its powers

Power of Agencies

Administrative agencies use three kinds of power to do the work assigned to them: they make rules, they investigate, and they adjudicate.

Rulemaking

One of the most important functions of an administrative agency is to make rules. In doing this, the agency attempts, prospectively, to establish fair and uniform behavior for all businesses in the affected area. **To create a new rule is to promulgate it**. Agencies promulgate two types of rules: legislative and interpretive.

Types of Rules: Legislative and Interpretive

Legislative rules are the most important agency rules, and they are much like statutes. Here, an agency creates law by requiring businesses or private citizens to act in a certain way. Suppose you operate a website for young shoppers, aged 10 to 18. Like most online merchants, you consider yourself free to collect as much data as possible about consumers. Wrong. The Federal Trade Commission, a federal agency, has promulgated detailed rules governing any site directed to young children. Before obtaining private data from these immature consumers, you must let them know exactly who you are, how to contact site operators, precisely what you are seeking, and how it will be used. You must also obtain verifiable parental consent before collecting, using, or disclosing any personal information. Failure to follow the rules can result in a substantial civil penalty. This modest legislative rule, in short, will be more important to your business than most statutes passed by Congress.

Interpretive rules do not change the law. They are the agency's interpretation of what the law already requires. But they can still affect all of us. For example, in 1977 Congress amended the Clean Air Act in an attempt to reduce pollution from factories. The act required the Environmental Protection Agency (EPA) to impose emission standards on "stationary sources" of pollution. But what did "stationary source" mean? It was the EPA's job to define that term. Obscure work, to be sure, yet the results could be seen and even smelled, because the EPA's definition would determine the quality of air entering our lungs every time we breathe. Environmentalists wanted the term defined to include every smokestack in a factory so that the EPA could regulate each one. The EPA, however, developed the "bubble concept," ruling that "stationary

An agency's interpretation of an environmental statue may be obscure, but the consequences affect us all.

source" meant an entire factory, but not the individual smokestacks. As a result, polluters could shift emission among smokestacks in a single factory to avoid EPA regulation. Environmentalists howled that this gutted the purpose of the statute, but to no avail. The agency had spoken, merely by interpreting a statute.[11]

How Rules Are Made

Corporations fight many a court battle over whether an agency has the right to issue a particular rule and whether it was promulgated properly. The critical issue is this: how much participation is the public entitled to before an agency issues a rule? There are two basic methods of rulemaking.[12]

Informal Rulemaking. On many issues, agencies may use a simple "notice and comment" method of rulemaking. The agency must publish a proposed rule in advance and permit the public a comment period. During this period, the public may submit any objections and arguments, with supporting data. The agency will make its decision and publish the final rule.

For example, the Department of Transportation may use the informal rulemaking procedure to require safety features for all new automobiles. The agency must listen to objections from interested parties, notably car manufacturers, and it must give a written response to the objections. The agency is required to have rational reasons for the final choices it makes. However, it is not obligated to satisfy all parties or do their bidding.

Formal Rulemaking. In the enabling legislation, Congress may require that an agency hold a hearing before promulgating rules. Congress does this to make the agency more accountable to the public. After the agency publishes its proposed rule, it must hold a public hearing. Opponents of the rule, typically affected businesses, may cross-examine the agency experts about the need for the rule and may testify against it. When the agency makes its final decision about the rule, it must prepare a formal, written response to everything that occurred at the hearing.

When used responsibly, these hearings give the public access to the agency and can help formulate sound policy. When used irresponsibly, hearings can be manipulated to stymie needed regulation. The most famous example concerns peanut butter. The Food and Drug Administration (FDA) began investigating peanut butter content in 1958. It found, for example, that Jif peanut butter, made by Procter & Gamble, had only 75 percent peanuts and 20 percent of a Crisco-type base. P&G fought the investigation, and any changes, for years. Finally, in 1965, the FDA proposed a minimum of 90 percent peanuts in peanut butter; P&G wanted 87 percent. The FDA wanted no more than 3 percent hydrogenated vegetable oil; P&G wanted no limit.

The hearings dragged on for months. One day, the P&G lawyer objected to the hearing going forward because he needed to vote that day. Another time, when an FDA official testified that consumer letters indicated the public wanted to know what was really in peanut butter, the P&G attorney demanded that the official bring in and identify the

---

[11] An agency's interpretation can be challenged in court, and this one was.

[12] Certain rules may be made with no public participation at all. For example, an agency's internal business affairs and procedures can be regulated without public comment, as can its general policy statements. None of these directly affect the public, and the public has no right to participate.

letters—all 20,000 of them. Finally, in 1968, a decade after beginning its investigation, the FDA promulgated final rules requiring 90 percent peanuts but eliminating the 3 percent cap on vegetable oil.[13]

Investigation

Agencies do an wide variety of work, but they all need broad factual knowledge of the field they govern. Some companies cooperate with an agency, furnishing information and even voluntarily accepting agency recommendations. For example, the U.S. Consumer Product Safety Commission investigates hundreds of consumer products every year and frequently urges companies to recall goods that the agency considers defective. Many firms comply.

Other companies, however, jealously guard information, often because corporate officers believe that disclosure would lead to adverse rules. To force disclosure, agencies use *subpoenas* and *searches*.

Subpoenas

A **subpoena** is an order to appear at a particular time and place to provide evidence. A **subpoena *duces tecum*** requires the person to appear and bring specified documents. Businesses and other organizations intensely dislike subpoenas and resent government agents plowing through records and questioning employees. What are the limits on an agency's investigation? The information sought:

Subpoena
An order to appear at a particular place and time. A subpoena *duces tecum* requires the person to produce certain documents or things.

- Must be *relevant* to a lawful agency investigation. The FCC is clearly empowered to investigate the safety of broadcasting towers, and any documents about tower construction are obviously relevant. Documents about employee racial statistics might indicate discrimination, but the FCC lacks jurisdiction on that issue and thus may not demand such documents.
- Must not be *unreasonably burdensome*. A court will compare the agency's need for the information with the intrusion on the corporation.
- Must not be *privileged*. The Fifth Amendment privilege against self-incrimination means that a corporate officer accused of criminal securities violations may not be compelled to testify about his behavior.

Search and Seizure. At times an agency will want to conduct a surprise **search** of an enterprise and **seize** any evidence of wrongdoing. May an agency do that? Yes, although there are limitations. When a particular industry is *comprehensively regulated*, courts will assume that companies know they are subject to periodic, unannounced inspections. In those industries, an administrative agency may conduct a search without a warrant and seize evidence of violations. For example, the mining industry is minutely regulated, with strict rules covering equipment, mining depths, and air quality. Mining executives understand that they are closely watched. Accordingly, the Bureau of Mines may make unannounced, warrantless searches to ensure safety.[14]

The following case established many of the principles just described.

[13]For an excellent account of this high-fat hearing, see Mark J. Green, *The Other Government* (New York: W. W. Norton & Co., 1978), pp. 136–150.
[14]*Donovan v. Dewey*, 452 U.S. 594, 101 S. Ct. 2534, 1980 U.S. LEXIS 58 (1981).

Landmark Case

United States v. Biswell

406 U.S. 311
Supreme Court Of The United States (1972)

Facts: Biswell operated a pawnshop and had a license to sell "sporting weapons." Treasury agents demanded to inspect Biswell's locked storeroom. The officials claimed that the Gun Control Act of 1968 gave them the right to search without a warrant.

That law says, in part, "the Secretary [of the Treasury] may enter during business hours the premises of any firearms dealer for the purpose of inspecting or examining (1) any records or documents required to be kept by such dealer, and (2) any firearms or ammunition kept or stored by such dealer."

Biswell voluntarily opened the storeroom, and the agent found two sawed-off rifles inside. The guns did not remotely meet the definition of "sporting weapons," and Biswell was convicted on firearms charges.

The appellate court found that because the search violated the Fourth Amendment, the rifles could not be admitted as evidence. It reversed the conviction, and the government appealed to the Supreme Court.

Issue: ***Did the agent's warrantless search violate the Constitution?***

Excerpts from Justice White's Decision: When the officers asked to inspect respondent's locked storeroom, they were merely asserting their statutory right, and respondent was on notice as to their identity and the legal basis for their action. Respondent's submission to lawful authority and his decision to step aside and permit the inspection rather than face a criminal prosecution is analogous to a householder's acquiescence in a search pursuant to a warrant when the alternative is a possible criminal prosecution for refusing entry or a forcible entry. In neither case does the lawfulness of the search depend on consent; in both, there is lawful authority independent of the will of the householder who might, other things being equal, prefer no search at all.

In the context of a regulatory inspection system of business premises that is carefully limited in time, place, and scope, the legality of the search depends not on consent but on the authority of a valid statute.

Federal regulation of the interstate traffic in firearms is undeniably of central importance to federal efforts to prevent violent crime. Large interests are at stake, and inspection is a crucial part of the regulatory scheme.

Here, if inspection is to be effective and serve as a credible deterrent, unannounced, even frequent, inspections are essential. In this context, the prerequisite of a warrant could easily frustrate inspection; and if the necessary flexibility as to time, scope, and frequency is to be preserved, the protections afforded by a warrant would be negligible.

It is also plain that inspections for compliance with the Gun Control Act pose only limited threats to the dealer's justifiable expectations of privacy. When a dealer chooses to engage in this pervasively regulated business and to accept a federal license, he does so with the knowledge that his business records, firearms, and ammunition will be subject to effective inspection. Each licensee is annually furnished with a revised compilation of ordinances that describe his obligations. The dealer is not left to wonder about the purposes of the inspector or the limits of his task.

We have little difficulty in concluding that where, as here, regulatory inspections further urgent federal interest, and the possibilities of abuse and the threat to privacy are not of impressive dimensions, the inspection may proceed without a warrant where specifically authorized by statute. The seizure of respondent's sawed-off rifles was not unreasonable under the *Fourth Amendment*, the judgment of the Court of Appeals is reversed, and the case is remanded to that court.

Adjudication

To **adjudicate** a case is to hold a hearing about an issue and then decide it. Agencies adjudicate countless cases. The FCC adjudicates which applicant for a new television license is best qualified. The Occupational Safety and Health Administration (OSHA) holds adversarial hearings to determine whether a manufacturing plant is dangerous.

Adjudicate
To hold a formal hearing about an issue and then decide it.

Most adjudications begin with a hearing before an **administrative law judge** (ALJ). There is no jury. An ALJ is an employee of the agency but is expected to be impartial in her rulings. All parties are represented by counsel. The rules of evidence are informal, and an ALJ may receive any testimony or documents that will help resolve the dispute.

Administrative law judge
An agency employee who acts as an impartial decision maker.

After all evidence is taken, the ALJ makes a decision. The losing party has a right to appeal to an appellate board within the agency. The appellate board may ignore the ALJ's decision. If it does not, an unhappy party may appeal to federal court.

Limits on Agency Power

There are four primary methods of reining in these powerful creatures: statutory, political, judicial, and informational.

Statutory Control

As discussed, the enabling legislation of an agency provides some limits. It may require that the agency use formal rulemaking or investigate only certain issues. The Administrative Procedure Act imposes additional controls by requiring basic fairness in areas not regulated by the enabling legislation.

Political Control

The president's influence is greatest with executive agencies. Congress, though, "controls the purse." No agency, executive or independent, can spend money it does not have. An agency that angers Congress risks having a particular program defunded or its entire budget cut. Further, Congress may decide to defund an agency as a cost-cutting measure. In its effort to balance the budget, Congress abolished the Interstate Commerce Commission, transferring its functions to the Transportation Department.

Congress has additional control because it must approve presidential nominees to head agencies. Before approving a nominee, Congress will attempt to determine her intentions. And, finally, Congress may amend an agency's enabling legislation, limiting its power.

Judicial Review

An individual or corporation directly harmed by an administrative rule, investigation, or adjudication may generally have that action reviewed in federal court.[15] The party seeking review, for example, a corporation, must have suffered direct harm; the courts will not listen

[15] In two narrow groups of cases, a court may not review an agency action. In a few cases, courts hold that a decision is "committed to agency discretion," a formal way of saying that courts will keep hands off. This happens only with politically sensitive issues, such as international air routes. In some cases, the enabling legislation makes it absolutely clear that Congress wanted no court to review certain decisions. Courts will honor that.

to theoretical complaints about an agency action.[16] And that party must first have taken all possible appeals within the agency itself.[17]

Standard on Review

Suppose OSHA promulgates a new rule limiting the noise level within steel mills. Certain mill operators are furious because they will have to retool their mills in order to comply. After exhausting their administrative appeals, they file suit seeking to force OSHA to withdraw the new rule. How does a court decide the case? Or, in legal terms, what standard does a court use in reviewing the case? Does it simply substitute its own opinion for that of the agency? No, it does not. The standard a court uses must take into account:

Facts. Courts generally defer to an agency's fact finding. If OSHA finds that human hearing starts to suffer when decibels reach a particular level, a court will probably accept that as final. The agency is presumed to have expertise on such subjects. As long as there is *substantial evidence* to support the fact decision, it will be respected.

Law. Courts often—but not always—defer to an agency's interpretation of the law. This is due in part to the enormous range of subjects that administrative agencies monitor. Consider the following example. "Chicken catchers" work in large poultry operations, entering coops, manually capturing broilers, loading them into cages, and driving them to a processing plant where they ... well, never mind. On one farm, the catchers wanted to organize a union, but the company objected, pointing out that *agricultural* workers had no right to do so. Were chicken catchers agricultural workers? The National Labor Relations Board, an administrative agency, declared that chicken catchers were in fact *ordinary* workers, entitled to organize. The Supreme Court ruled that courts were obligated to give deference to the agency's decision about chicken catchers. If the agency's interpretation was *reasonable* it was binding, even if the court itself might not have made the same analysis. The workers were permitted to form a union—though the chickens were not.

The following case contains vulgar language, so *please do not read it.*

FOX TELEVISION STATIONS, INC. v. FEDERAL COMMUNICATIONS COMMISSION

613 F.3d 317
Second Circuit Court of Appeals, 2010

Facts: "People have been telling me I'm on the way out every year, right? So f*** 'em," said Cher, on a televised Billboard Music Awards ceremony. A year later, on the same program, Nicole Richie asked, "Have you ever tried to get cow s*** out of a Prada purse? It's not so f****** simple." The FCC, which regulates the broadcast industry, received complaints about this and other profanity on the airwaves.

[16]The law describes this requirement by saying that a party must have standing to bring a case. A college student who has a theoretical belief that the EPA should not interfere with the timber industry has no standing to challenge an EPA rule that prohibits logging in a national forest. A lumber company that was ready to log that area has suffered a direct economic injury: it has standing to sue.

[17]This is the doctrine of exhaustion of remedies. A lumber company may not go into court the day after the EPA publishes a proposed ban on logging. It must first exhaust its administrative remedies by participating in the administrative hearing and then pursuing appeals within the agency before venturing into court.

The FCC declared that these words were *invariably* indecent, explicit, and shocking. Their utterance violated the Commission's decency standards, and the Commission had the right to fine the networks for broadcasting them. The networks protested, arguing that the utterances were fleeting and isolated. They claimed that the Commission had traditionally permitted such sporadic usage, that this new ruling was an arbitrary change of policy, and that it violated the networks' First Amendment free speech rights. The Commission disagreed, declaring that it had the right to prohibit even the *occasional* use of the words. The networks appealed to federal court.

Issue: ***Did the FCC abuse its discretion and violate the First Amendment by prohibiting even the occasional use of profanity?***

Excerpts from Judge Pooler's Decision: In 2001, in an attempt to provide guidance to the broadcast industry regarding enforcement policies, the FCC issued a statement in which it explained that an indecency finding involved the following two determinations: (1) whether the material describe[s] or depict[s] sexual or excretory organs or activities; and (2) whether the broadcast is patently offensive as measured by contemporary community standards for the broadcast medium. The Industry Guidance reiterated that fleeting and isolated expletives were not actionably indecent.

In 2004, however, the FCC's policy on indecency changed. During the 2003 Golden Globe Awards, U2 band member Bono exclaimed, upon receiving an award, "this is really, really, f****** brilliant." In response to complaints filed after the incident, the FCC declared, for the first time, that a single, nonliteral use of an expletive (a so-called "fleeting expletive") could be actionably indecent.

A law or regulation is impermissibly vague if it does not "give the person of ordinary intelligence a reasonable opportunity to know what is prohibited." The First Amendment places a special burden on the government to ensure that restrictions on speech are not impermissibly vague.

The Networks argue that the FCC's indecency test is unconstitutionally vague because it provides no clear guidelines as to what is covered and thus forces broadcasters to steer far wider of the unlawful zone, rather than risk massive fines. The FCC argues that the indecency policy in its Industry Guidance, together with its subsequent decisions, give the broadcasters sufficient notice as to what will be considered indecent.

We agree with the Networks that the indecency policy is impermissibly vague. As we stated in a previous opinion:

> Although the Commission has declared that all variants of "f***" and "s***" are presumptively indecent and profane, repeated use of those words in "Saving Private Ryan," for example, was neither indecent nor profane. And while multiple occurrences of expletives in "Saving Private Ryan" was not gratuitous, a single occurrence in the Golden Globe Awards was shocking and gratuitous.

There is little rhyme or reason to these decisions and broadcasters are left to guess.

The FCC's application of its policy to live broadcasts creates an even more profound chilling effect. In the case of the 2003 Billboard Music Awards broadcasts, Fox had an audio delay system in place to bleep fleeting expletives. It also pre-cleared the scripts of the presenters. Ritchie, however, departed from her script and used three expletives in rapid sequence. While the person employed to monitor and bleep expletives was bleeping the first, the following two slipped through. Even elaborate precautions will not protect a broadcaster against such occurrences. In fact, the only way that Fox can be sure that it won't be sanctioned by the FCC is by refusing to air the broadcast live. The absence of reliable guidance in the FCC's standards chills a vast amount of protected speech.

For the foregoing reasons, we strike down the FCC's indecency policy.

Informational Control and the Public

We started this section describing the pervasiveness of administrative agencies. We should end it by noting one way in which all of us have some direct control over these ubiquitous authorities: information.

> A popular government, without popular information, or the means of acquiring it, is but a Prologue to a Farce or a Tragedy—or perhaps both. Knowledge will forever govern ignorance, and a people who mean to be their own Governors must arm themselves with the power which knowledge gives.
>
> *James Madison, President, 1809–17*

Two federal statutes arm us with the power of knowledge.

Freedom of Information Act

Congress passed the landmark Freedom of Information Act (known as "FOIA") in 1966. It is designed to give all of us, citizens, businesses, and organizations alike, access to the information that federal agencies are using. The idea is to avoid government by secrecy.

Any citizen or executive may make a "FOIA request" to any federal government agency. It is simply a written request that the agency furnish whatever information it has on the subject specified. Two types of data are available under FOIA. Anyone is entitled to information about how the agency operates, how it spends its money, and what statistics and other information it has collected on a given subject. People routinely obtain records about agency policies, environmental hazards, consumer product safety, taxes and spending, purchasing decisions, and agency forays into foreign affairs. A corporation that believes that OSHA is making more inspections of its textile mills than it makes of the competition could demand all relevant information, including OSHA's documents on the mill itself, comparative statistics on different inspections, OSHA's policies on choosing inspection sites, and so forth.

Second, all citizens are entitled to any records the government has *about them*. You are entitled to information that the Internal Revenue Service, or the Federal Bureau of Investigation, has collected about you.

FOIA does not apply to Congress, the federal courts, or the executive staff at the White House. Note also that, since FOIA applies to federal government agencies, you may not use it to obtain information from state or local governments or private businesses.

Exemptions. An agency officially has 10 days to respond to the request. In reality, most agencies are unable to meet the deadline but are obligated to make good faith efforts. FOIA exempts altogether nine categories from disclosure. The most important exemptions permit an agency to keep confidential information that relates to national security, criminal investigations, internal agency matters such as personnel or policy discussions, trade secrets or financial institutions, or an individual's private life.

Privacy Act

This 1974 statute prohibits federal agencies from giving information about an individual to other agencies or organizations without written consent. There are exceptions, but overall this act has reduced the government's exchange of information about us "behind our back."

EXAM Strategy

Question: Builder wants to develop 1,000 acres in rural Montana, land that is home to the Kite Owl. The EPA rules that the Kite Owl is an endangered species, and prohibits development of the property. The developer appeals to court. The EPA based its decision on five statistical studies, and the opinions of three out of seven experts. The court looks at the same evidence and acknowledges that the EPA decision is carefully reasoned and fair. However, the judges believe that the other four experts were right: the owl is *not* endangered. Should the court permit development?

Strategy: What is the legal standard for deciding whether a court should affirm or reverse an agency decision? As long as there is *substantial evidence* to support the factual conclusions, and a *reasonable basis* for the legal conclusion, the court should not impose its judgment. Agencies are presumed to have special expertise in their areas. As the *Fox Television* case tells us, an agency ruling should generally be affirmed unless it is arbitrary and capricious. Apply that standard here.

Result: The EPA made a careful, reasoned decision. The court may disagree, but it should not impose its views. The court must affirm the agency's ruling and prohibit development.

Chapter Conclusion

"Why can't they just fix the law?" They can, and sometimes they do—but it is a difficult and complex task. "They" includes a great many people and forces, from common law courts to members of Congress to campaign donors to administrative agencies. The courts have made the bystander rule slightly more humane, but it has been a long and bumpy road. Congress managed to restore the legal interpretation of its own 1964 Civil Rights Act, but it took months of debate and compromising. The FDA squeezed more peanuts into a jar of Jif, but it took nearly a decade to get the lid on.

A study of law is certain to create some frustrations. This chapter cannot prevent them all. However, an understanding of how law is made is the first step toward controlling that law.

Exam Review

1. **COMMON LAW** The common law evolves in awkward fits and starts because courts attempt to achieve two contradictory purposes: predictability and flexibility. (pp. 77–79)

2. **STARE DECISIS** *Stare decisis* means "let the decision stand," and indicates that once a court has decided a particular issue, it will generally apply the same rule in future cases. (p. 77)

3. **BYSTANDER RULE** The common law bystander rule holds that, generally, no one has a duty to assist someone in peril unless the bystander himself created the danger. Courts have carved some exceptions during the last 100 years, but the basic rule still stands. (pp. 77–79)

4. **LEGISLATION** Bills originate in congressional committees and go from there to the full House of Representatives or Senate. If both houses pass the bill, the legislation normally must go to a Conference Committee to resolve differences between the two versions. The compromise version then goes from the Conference Committee back to both houses, and if passed by both, to the president. If the president signs the bill, it becomes a statute; if he vetoes it, Congress can pass it over his veto with a two-thirds majority in each house. (pp. 80–83)

5. **STATUTORY INTERPRETATION** Courts interpret a statute by using the plain meaning rule; then, if necessary, legislative history and intent; and finally, if necessary, public policy. (p. 83)

EXAM Strategy

Question: Whitfield, who was black, worked for Ohio Edison. Edison fired him, but then later offered to rehire him. Another employee argued that Edison's original termination of Whitfield had been race discrimination. Edison rescinded its offer to rehire Whitfield. Whitfield sued Edison, claiming that the company was retaliating for the other employee's opposition to discrimination. Edison pointed out that Title VII of the 1964 Civil Rights Act did not explicitly apply in such cases. Among other things, Title VII prohibits an employer from retaliating against *an employee* who has opposed illegal discrimination. But it does not say anything about retaliation based on *another employee's* opposition to discrimination. Edison argued that the statute did not protect Whitfield.

Strategy: What three steps does a court use to interpret a statute? First, the plain meaning rule. Does that rule help us here? The statute neither allows nor prohibits Edison's conduct. The law does not mention this situation, and the plain meaning rule is of no help. Second step: Legislative history and intent. What did Congress intend with Title VII generally? With the provision that bars retaliation against a protesting employee? Resolving those issues should give you the answer to this question. (See the "Result" at the end of this section.)

6. **ADMINISTRATIVE AGENCIES** Congress creates federal administrative agencies with enabling legislation. The Administrative Procedure Act controls how agencies do their work. (pp. 87–89)

7. **RULEMAKING** Agencies may promulgate legislative rules, which generally have the effect of statutes, or interpretive rules, which merely interpret existing statutes. (pp. 89–91)

8. **INVESTIGATION** Agencies have broad investigatory powers and may use subpoenas and, in some cases, warrantless searches to obtain information. (pp. 91–93)

EXAM Strategy

Question: When Hiller Systems, Inc., was performing a safety inspection on board the M/V *Cape Diamond*, an ocean-going vessel, an accident killed two men. The Occupational Safety and Health Administration (OSHA), a federal agency, attempted to investigate, but Hiller refused to permit any of its employees to speak to OSHA investigators. What could OSHA do to pursue the investigation? What limits would there have been on OSHA's actions?

Strategy: Agencies make rules, investigate, and adjudicate. Which is involved here? Investigation. During an investigation, what power has an agency to force a company to produce data? What are the limits on that power? (See the "Result" at the end of this section.)

9. **ADJUDICATION** Agencies adjudicate cases, meaning that they hold hearings and decide issues. Adjudication generally begins with a hearing before an administrative law judge and may involve an appeal to the full agency or ultimately to federal court. (p. 93)

10. AGENCY LIMITATIONS The four most important limitations on the power of federal agencies are statutory control in the enabling legislation and the APA; political control by Congress and the president; judicial review; and the informational control created by the FOIA and the Privacy Act. (pp. 93–95)

5. Result: Congress passed Title VII as a bold, aggressive move to end race discrimination in employment. Further, by specifically prohibiting retaliation against an employee, Congress indicated it was aware that companies might punish those who spoke in favor of the very goals of Title VII. Protecting an employee from anti-discrimination statements made by a *co-worker* is a very slight step beyond that, and appears consistent with the goals of Title VII and the anti-retaliation provision. Whitfield should win, and in the real case, he did.[18]

9. Result: OSHA can issue a subpoena *duces tecum*, demanding that those on board the ship, and their supervisors, appear for questioning, and bring with them all relevant documents. OSHA may ask for anything that is (1) relevant to the investigation, (2) not unduly burdensome, and (3) not privileged. Conversations between one of the ship inspectors and his supervisor is clearly relevant; a discussion between the supervisor and the company's lawyer is privileged.

Multiple-Choice Questions

1. A bill is vetoed by ____________.
   (a) the Speaker of the House
   (b) a majority of the voting members of the Senate
   (c) the president
   (d) the Supreme Court

2. If a bill is vetoed, it may still become law if it is approved by ____________.
   (a) two-thirds of the Supreme Court
   (b) two-thirds of registered voters
   (c) two-thirds of the Congress
   (d) the president
   (e) an independent government agency

3. Which of the following presidents was most influential in the passing of the Civil Rights Act?
   (a) Franklin D. Roosevelt
   (b) Ronald Reagan
   (c) Abraham Lincoln
   (d) John F. Kennedy
   (e) George W. Bush

[18] *EEOC v. Ohio Edison*, 7 F.3d 541 (6th Cir. 1993).

4. Under FOIA, any citizen may demand information about ________.
   (a) how an agency operates
   (b) how an agency spends its money
   (c) files that an agency has collected on the citizen herself
   (d) all of the above

5. If information requested under FOIA is not exempt, an agency has ________ to comply with the request.
   (a) 10 days
   (b) 30 days
   (c) 3 months
   (d) 6 months

Essay Questions

1. Until recently, every state had a statute outlawing the burning of American flags. But in *Texas v. Johnson,*[19] the Supreme Court declared such statutes unconstitutional, saying that flag burning is symbolic speech protected by the First Amendment. Does Congress have the power to overrule the Court's decision?

2. In 1988, terrorists bombed Pan Am Flight 103 over Lockerbie, Scotland, killing all passengers on board. Congress sought to remedy security shortcomings by passing the Aviation Security Improvement Act of 1990, which, among other things, ordered the Federal Aviation Authority (FAA) to prescribe minimum training requirements and staffing levels for airport security. The FAA promulgated rules according to the informal rulemaking process. However, the FAA refused to disclose certain rules concerning training at specific airports. A public interest group called Public Citizen, Inc., along with family members of those who had died at Lockerbie, wanted to know the details of airport security. What steps should they take to obtain the information? Are they entitled to obtain it?

3. The Aviation Security Improvement Act (ASIA) states that the FAA can refuse to divulge information about airport security. The FAA interprets this to mean that it can withhold data in spite of the FOIA. Public Citizen and the Lockerbie family members interpret FOIA as being the controlling statute, requiring disclosure. Is the FAA interpretation binding?

4. An off-duty, out-of-uniform police officer and his son purchased some food from a 7-Eleven store and were still in the parking lot when a carload of teenagers became rowdy. The officer went to speak to them, and the teenagers assaulted him. The officer shouted to his son to get the 7-Eleven clerk to call for help. The son entered the store, told the clerk that a police officer needed help, and instructed the clerk to call the police. He returned 30 seconds later and repeated the request, urging the clerk to say it was a Code 13. The son claimed that the clerk laughed at him and refused to do it. The policeman sued the store. **Argument for the Store:** We sympathize with the policeman and his family, but the store has no liability.

[19] 491 U.S. 397, 109 S. Ct. 2533, 1989 U.S. LEXIS 3115 (1989).

A bystander is not obligated to come to the aid of anyone in distress unless the bystander created the peril, and obviously the store did not do so. The policeman should sue those who attacked him. **Argument for the Police Officer:** We agree that in general a bystander has no obligation to come to the aid of one in distress. However, when a business that is open to the public receives an urgent request to call the police, the business should either make the call or permit someone else to do it

5. Federal antitrust statutes are complex, but the basic goal is straightforward: to prevent a major industry from being so dominated by a small group of corporations that they destroy competition and injure consumers. Does Major League Baseball violate the antitrust laws? Many observers say that it does. A small group of owners not only dominate the industry, but actually *own* it, controlling the entry of new owners into the game. This issue went to the United States Supreme Court in 1922. Justice Holmes ruled, perhaps surprisingly, that baseball is exempt from the antitrust laws, holding that baseball is not "trade or commerce." Suppose that members of Congress dislike this ruling and the current condition of baseball. What can they do?

Discussion Questions

1. Courts generally follow precedent, but in the *Tarasoff* and *Soldano* cases discussed earlier in this chapter, they did not. Consider the opening scenario at the Old Abandoned Mill. *Should* the hiker bear any *legal* responsibility for Gary's untimely end; or should a court follow precedent and hold the lazy hiker blameless?

2. Revisit the *Fox Television Stations* case. Do you agree with the opinion? What would a sensible broadcast obscenity policy contain? When (if ever) should a network face fines for airing bad language?

3. In 2010, President Barack Obama signed a major health care reform bill into law. Seventeen state attorneys general filed a lawsuit challenging the constitutionality of the new statute. A key argument in the case will revolve around "interstate commerce." The states will argue that a provision in the law that requires Americans to purchase health insurance or face fines should be struck down because the Constitution allows for the *regulation* of commerce but does not allow the federal government to require people to *participate in* commerce; that is, to buy something.

   Does this argument seem sensible to you? Should the government be able to require those who can afford to purchase health insurance to purchase it?

4. FOIA applies to government agencies, but it exempts Congress. Should top lawmakers be obligated to comply with FOIA requests, or would that create more problems than it would solve?

5. Suppose you were on a state supreme court and faced with a restaurant-choking case. Should you require restaurant employees to know and employ the Heimlich maneuver to assist a choking victim? If they do a bad job, they could cause additional injury. Should you permit them to do nothing at all? Is there a compromise position? What social policies are most important?

CHAPTER 5

Constitutional Law

© r.nagy/Shutterstock.com

The consultant started his presentation to the energy company's board of directors. "So I don't have to tell you that if the Smith-Jones bill ever passes Congress, it will be an utter disaster for your company. The House has already passed it. The president wants it. The only thing that kept it from becoming law this summer is that the Senate was too chicken to bring it up for a vote in an election year.

"Here's the bottom line: to be comfortable, you need three candidates who see things your way to beat current senators who support the bill."

The next slide showed a large map of the United States with three states highlighted in red. "These are your best bets. Attempting wins here would cost $60 million total—not so much for a billion-dollar-a-year operation like yours.

"In state #3, we go negative. Really negative."

"The money would go to saturation advertising from Labor Day to Election Day. I want to buy TV ads during local news programs all day, and during most prime time shows. I want the viewers to see your ads at least a dozen times before they go to the polls.

"In state #1, the challenger—your candidate—is a squeaky-clean state representative, but no one knows much about her outside her own district. She carries herself well, has a nice family. People will like her if they see her. Your money makes sure people will see her.

"In state #2, your guy hasn't really done much. But his grandfather was a hero at Normandy, and his dad was a coal miner. Great-grandparents were immigrants who came through New York with nothing in their pockets—I can see the ad with the Statue of Liberty already. A lot of voters will appreciate his family's story. This strategy will work if we have the funds to tell the story often enough.

"In state #3, we go negative. Really negative. Our opponent has been in the Senate a long time, and he's taken maybe 100,000 photos. We have three of them showing him with world leaders who have become unpopular of late. We're going to use them to tell a story about the senator putting foreign interests above American jobs and national security. People are angry—they think America is losing its place in the world. Our polling shows that this kind of campaign will be highly effective.

"You need to get into this election. All of your stakeholders benefit if the Smith-Jones bill dies—your workers stay on the job, your shareholders make more money, and your customers pay lower prices. Corporations are nothing more or less than the people who work for them, and they have the right to express their political opinions. These ads would simply give your workers the chance to exercise their right to free speech."

The CFO interrupted, "Look, we're all against the Smith-Jones bill. But is this plan *legal*?"

Government Power

One in a Million

The Constitution of the United States is the greatest legal document ever written. No other written constitution has lasted so long, governed so many, or withstood such challenge. This amazing work was drafted in 1787, when two weeks were needed to make the horseback ride from Boston to Philadelphia, a pair of young cities in a weak and disorganized nation. Yet today, when that trip requires less than two hours by jet, the same Constitution successfully governs the most powerful country on earth. This longevity is a tribute to the wisdom and idealism of the Founding Fathers.The Constitution is not perfect, but overall, it has worked astonishingly well and has become the model for many constitutions around the world.

The Constitution sits above everything else in our legal system. No law can conflict with it. The chapter opener raises a constitutional issue: does Congress have the right to prohibit corporations from spending money to affect elections, or are these actions protected as free speech under the First Amendment? We will explore this later in the chapter when we discuss the *Citizens United* case.

The Constitution is short and relatively easy to read. This brevity is potent. The Founding Fathers, or **Framers**, wanted it to last for centuries, and they understood that would happen only if the document permitted interpretation and "fleshing out" by later generations. The Constitution's versatility is striking. In this chapter, the first part provides an overview of the Constitution, discussing how it came to be and how it is organized. The second part describes the power given to the three branches of government. The third part explains the individual rights the Constitution guarantees to citizens.

Overview

Thirteen American colonies declared independence from Great Britain in 1776, and gained it in 1783. The new status was exhilarating. Ours was the first nation in modern history founded on the idea that the people could govern themselves, democratically. The idea was

daring, brilliant, and fraught with difficulties. The states were governing themselves under the Articles of Confederation, but these articles gave the central government no real power. The government could not tax any state or its citizens and had no way to raise money. The national government also lacked the power to regulate commerce between the states or between foreign nations and any state. This was disastrous. States began to impose taxes on goods entering from other states. The young "nation" was a collection of poor relations, threatening to squabble themselves to death.

In 1787, the states sent a group of 55 delegates to Philadelphia. Rather than amend the old articles, the Framers set out to draft a new document and to create a government that had never existed before. It was hard going. What structure should the government have? How much power? Representatives like Alexander Hamilton, a *federalist*, urged a strong central government. The new government must be able to tax and spend, regulate commerce, control the borders, and do all things that national governments routinely do. But Patrick Henry and other *antifederalists* feared a powerful central government. They had fought a bitter war precisely to get rid of autocratic rulers; they had seen the evil that a distant government could inflict. The antifederalists insisted that the states retain maximum authority, keeping political control closer to home.

The debate continues to this day, and periodically it plays a key role in elections. The "tea party" movement, for example, is a modern group of antifederalists with a growing political influence.

Another critical question was how much power the *people* should have. Many of the delegates had little love for the common people and feared that extending this idea of democracy too far would lead to mob rule. Antifederalists again disagreed. The British had been thrown out, they insisted, to guarantee individual liberty and a chance to participate in the government. Power corrupted. It must be dispersed amongst the people to avoid its abuse.

How to settle these basic differences? By compromise, of course. **The Constitution is a series of compromises about power.** We will see many provisions granting power to one branch of the government while at the same time restraining the authority given.

Separation of Powers

The Framers did not want to place too much power in any single place. One method of limiting power was to create a national government divided into three branches, each independent and equal. Each branch would act as a check on the power of the other two. Article I of the Constitution created a Congress, which was to have legislative, or lawmaking, power. Article II created the office of president, defining the scope of executive, or enforcement, power. Article III established judicial, or interpretive, power by creating the Supreme Court and permitting additional federal courts.

Consider how the three separate powers balance one another: Congress was given the power to pass statutes, a major grant of power. But the president was permitted to veto, or block, proposed statutes, a nearly equal grant. Congress, in turn, had the right to override the veto, ensuring that the president would not become a dictator. The president was allowed to appoint federal judges and members of his cabinet, but only with a consenting vote from the Senate.

Individual Rights

The original Constitution was silent about the rights of citizens. This alarmed many who feared that the new federal government would have unlimited power over their lives. So in 1791 the first 10 amendments, known as the **Bill of Rights,** were added to the Constitution, guaranteeing many liberties directly to individual citizens.

In the next two sections, we look in more detail at the two sides of the great series of compromises: power granted and rights protected.

POWER GRANTED

Congressional Power

To recap two key ideas from Chapter 1:

1. Voters in all 50 states elect representatives who go to Washington, D.C., to serve in Congress.
2. The Congress is comprised of the House of Representatives and the Senate. The House has 435 voting members, and states with large populations send more representatives. The Senate has 100 members—two from each state.

Congress wields tremendous power. Its members create statutes that influence our jobs, money, health care, military, communications, and virtually everything else. But can Congress create *any* kind of law that it wishes? No.

Article I, section 8 is a critically important part of the Constitution. It lists the 18 types of statutes that Congress is allowed to pass, such as imposing taxes, declaring war, and coining money. Thus, only the national government may create currency. The state of Texas cannot print $20 bills with George W. Bush's profile.

States like Texas *are* supposed to create all other kinds of laws for themselves because the Tenth Amendment says, "All powers not delegated to the United States by the Constitution … are reserved to the States."

The **Commerce Clause** is the specific item in Article I, Section 8, most important to your future as a businessperson. It calls upon Congress "to regulate commerce … among the several States," and its impact is described in the next section.

Commerce Clause
The part of Article I, Section 8, that gives Congress the power to regulate commerce with foreign nations and among states.

Interstate Commerce

With the Commerce Clause, the Framers sought to accomplish several things in response to the commercial chaos that existed under the Articles of Confederation. They wanted the federal government to speak with one voice when regulating commercial relations with foreign governments.[1] The Framers also wanted to give Congress the power to bring coordination and fairness to trade among the states, and to stop the states from imposing the taxes and regulations that were wrecking the nation's domestic trade.

Virtually all of the numerous statutes that affect businesses are passed under the Commerce Clause. But what does it mean to regulate interstate commerce? Are all business transactions "interstate commerce," or are there exceptions? In the end, the courts must interpret what the Constitution means.

Substantial Effect Rule

An important test of the Commerce Clause came in the Depression years of the 1930s, in *Wickard v. Filburn*.[2] The price of wheat and other grains had fluctuated wildly, severely harming farmers and the national food market. Congress sought to stabilize prices by limiting the bushels per acre that a farmer could grow. Filburn grew more wheat than federal law allowed and was fined. In defense, he claimed that Congress had no right to regulate him because none of his wheat went into *interstate* commerce. He sold some locally and used the rest on his own farm as food for livestock and as seed. The Commerce Clause, Filburn claimed, gave Congress no authority to limit what he could do.

---

[1] *Michelin Tire Corp. v. Wages, Tax Commissioner*, 423 U.S. 276, 96 S. Ct. 535, 1976 U.S. LEXIS 120 (1976).

[2] 317 U.S. 111, 63 S. Ct. 82, 1942 U.S. LEXIS 1046 (1942).

The Supreme Court disagreed and held that **Congress may regulate any activity that has a substantial economic effect on interstate commerce.** Filburn's wheat *affected* interstate commerce because the more he grew for use on his own farm, the less he would need to buy in the open market of interstate commerce. In the end, "interstate commerce" does not require that things travel from one state to another.

In *United States v. Lopez*,[3] however, the Supreme Court ruled that Congress *had* exceeded its power under the Commerce Clause. Congress had passed a criminal statute called the "Gun-Free School Zones Act," which forbade any individual from possessing a firearm in a school zone. The goal of the statute was obvious: to keep schools safe. Lopez was convicted of violating the act and appealed his conviction all the way to the high Court, claiming that Congress had no power to pass such a law. The government argued that the Commerce Clause gave it the power to pass the law, but the Supreme Court was unpersuaded.

> The possession of a gun in a local school zone is in no sense an economic activity that might, through repetition elsewhere, substantially affect any sort of interstate commerce. [Lopez] was a local student at a local school; there is no indication that he had recently moved in interstate commerce, and there is no requirement that his possession of the firearm have any concrete tie to interstate commerce. To uphold the Government's contentions here, we would have to pile inference upon inference in a manner that would bid fair to convert congressional authority under the Commerce Clause to a general police power of the sort retained by the States. [The statute was unconstitutional and void.]

Congress's power is great—but still limited.

Current Application: The Affordable Healthcare Act. In 2010, Congress passed the Affordable Healthcare Act and President Barack Obama signed it into law. The wide-ranging legislation may result in as many as 30 million uninsured Americans gaining health care coverage. Almost immediately after it passed, many states sued and argued that the law violated the Constitution by exceeding Congress's power to regulate interstate commerce.

The challenge centers on a provision (which the press refers to as the "individual mandate") in the Act that requires many people to purchase health insurance or face fines. The states argue that requiring people to buy something is fundamentally different from regulating people who *voluntarily* decided to participate in commerce.

At this writing, the lower courts are divided on whether the healthcare statute is constitutional. The Supreme Court will surely have the final word. In the end, the fate of this law hinges upon how the justices define "commerce."

State Legislative Power

The "dormant" or "negative" aspect of the Commerce Clause governs state efforts to regulate interstate commerce. **The dormant aspect holds that a state statute which discriminates against interstate commerce is almost always unconstitutional.** Here is an example, but please do not read it if you plan to drive later today. Michigan and New York permitted in-state wineries to sell directly to consumers. They both denied this privilege to out-of-state producers, who were forced to sell to wholesalers, who offered the wine to retailers, who sold to consumers. This created an impossible barrier for many small vineyards, which did not produce enough wine to attract wholesalers. Even if they did, the multiple resales drove their prices prohibitively high.

Local residents and out-of-state wineries sued, claiming that the state regulations violated the dormant Commerce Clause. The Supreme Court ruled that these statutes obviously discriminated against out-of-state vineyards; the schemes were illegal unless Michigan and

---

[3] 514 U.S. 549, 115 S. Ct. 1624, 1995 U.S. LEXIS 3039 (1995).

New York could demonstrate an important goal that could not be met any other way. The states' alleged motive was to prevent minors from purchasing wine over the Internet. However, Michigan and New York offered no evidence that such purchases were really a problem. The Court said that minors seldom drink wine, and when they do, they seek instant gratification, not a package in the mail. States that allowed direct shipment to consumers reported no increase in purchases by minors. This discrimination against interstate commerce, like most, was unconstitutional.[4]

Devil's Advocate Underage drinking is a serious problem. The Court should allow states wide leeway in their efforts to limit the harm. Even if the regulations are imperfect, they may help reduce the damage.

Supremacy Clause

What happens when both the federal and state governments pass regulations that are permissible, but conflicting? For example, Congress passed the federal Occupational Safety and Health Act (OSHA) establishing many job safety standards, including those for training workers who handle hazardous waste. Congress had the power to do so under the Commerce Clause. Later, Illinois passed its own hazardous waste statutes, seeking to protect both the general public and workers. The state statute did not violate the Commerce Clause because it imposed no restriction on interstate commerce.

Each statute specified worker training and employer licensing. But the requirements differed. Which statute did Illinois corporations have to obey? Article VI of the Constitution contains the answer. **The Supremacy Clause** states that the Constitution, and federal statutes and treaties, shall be the supreme law of the land.

The Supremacy Clause Makes the Constitution, and federal statutes and treaties, the supreme law of the land.

- If there is a conflict between federal and state statutes, the federal law **preempts** the field, meaning it controls the issue. The state law is void.
- Even in cases where there is no conflict, if Congress demonstrates that it intends to exercise exclusive control over an issue, federal law preempts.

Thus state law controls only when there is no conflicting federal law *and* Congress has not intended to dominate the issue. In the Illinois case, the Supreme Court concluded that Congress intended to regulate the issue exclusively. Federal law therefore preempted the field, and local employers were obligated to obey only the federal regulations.

EXAM Strategy

Question: Dairy farming was more expensive in Massachusetts than in other states. To help its farmers, Massachusetts taxed all milk sales, regardless of where the milk was produced. The revenues went into a fund that was then distributed to in-state dairy farmers. Discuss.

[4] *Granholm v. Heald*, 544 U.S. 460, 1255 S.Ct. 1885 (2005).

Strategy: By giving a subsidy to local farmers, the state is treating them differently than out-of-state dairies. This raises Commerce Clause issues. The dormant aspect applies. What does it state? Apply that standard to theses facts.

Result: The dormant aspect holds that a state statute which discriminates against interstate commerce is almost always invalid. Massachusetts was subsidizing its farmers at the expense of those from other states. The tax violates the Commerce Clause and is void.

Executive Power

Article II of the Constitution defines executive power. The president's most basic job function is to enforce the nation's laws. Three of his key powers concern appointment, legislation, and foreign policy.

Appointment

Administrative agencies play a powerful role in business regulation, and the president nominates the heads of most of them. These choices dramatically influence what issues the agencies choose to pursue and how aggressively they do it. For example, a president who seeks to expand the scope of regulations on air quality may appoint a forceful environmentalist to run the Environmental Protection Agency (EPA), whereas a president who dislikes federal regulations will choose a more passive agency head.[5]

Legislation

The president and his advisers propose bills to Congress. During the last 50 years, a vast number of newly proposed bills have come from the executive branch. Some argue that *too many* proposals come from the president and that Congress has become overly passive. When a president proposes controversial legislation on a major issue, such as Social Security reform, the bill can dominate the news—and Congress—for months or even years. The president, of course, also has the power to veto bills.[6]

Foreign Policy

The president conducts the nation's foreign affairs, coordinating international efforts, negotiating treaties, and so forth. The president is also the commander in chief of the armed forces, meaning that he heads the military. But Article II does not give him the right to declare war—only the Senate may do that. A continuing tension between the president and Congress has resulted from the president's use of troops overseas *without* a formal declaration of war.

Judicial Power

Article III of the Constitution creates the Supreme Court and permits Congress to establish lower courts within the federal court system.[7] Federal courts have two key functions: adjudication and judicial review.

[5]For a discussion of administrative agency power, see Chapter 4, on administrative law.

[6]For a discussion of the president's veto power and Congress's power to override a veto, see Chapter 4, on statutory law.

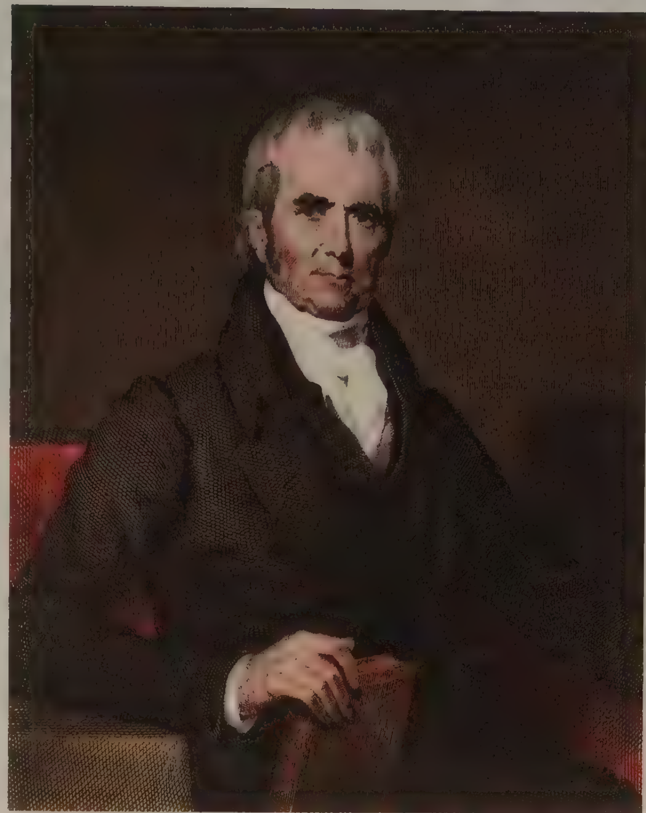
[7]For a discussion of the federal court system, see Chapter 3, on dispute resolution.

Adjudicating Cases

The federal court system hears criminal and civil cases. Generally, prosecutions of federal crimes begin in United States District Court. That same court has limited jurisdiction to hear civil lawsuits, a subject discussed in Chapter 3, on dispute resolution.

Judicial Review

One of the greatest "constitutional" powers appears nowhere in the Constitution. In 1803, the Supreme Court decided *Marbury v. Madison*.[8] Congress had passed a relatively minor statute that gave certain powers to the Supreme Court, and Marbury wanted the Court to use those powers. The Court refused. In an opinion written by Chief Justice John Marshall, the Court held that the statute violated the Constitution because Article III of the Constitution did not grant the Court those powers. The details of the case were insignificant, but the ruling was profound: because the statute violated the Constitution, said the Court, it was void. **Judicial review refers to the power of federal courts to declare a statute or governmental action unconstitutional and void.**



Chief Justice John Marshall

This formidable grab of power has produced two centuries of controversy. The Court was declaring that it alone had the right to evaluate acts of the other two branches of government—the Congress and the executive—and to decide which were valid and which void. The Constitution nowhere grants this power. Undaunted, Marshall declared that "[I]t is emphatically the province and duty of the judicial department to say what the law is." In later cases, the Supreme Court expanded on the idea, holding that it could also nullify state statutes, rulings by state courts, and actions by federal and state officials. In this chapter we have already encountered an example of judicial review in the *Lopez* case, where the justices declared that Congress lacked the power to pass local gun regulations.

Is judicial review good for the nation? Those who oppose it argue that federal court judges are all appointed, not elected, and that we should not permit judges to nullify a statute passed by elected officials because that diminishes the people's role in their government. Those who favor judicial review insist that there must be one cohesive interpretation of the Constitution and the judicial branch is the logical one to provide it. The following example of judicial review shows how immediate and emotional the issue can be. This is a criminal prosecution for a brutal crime. Cases like this force us to examine two

KENNEDY V. LOUISIANA

128 S.Ct. 2641
United States Supreme Court, 2008

Facts: Patrick Kennedy raped his eight-year-old stepdaughter. Her injuries were the most severe that the forensic expert had ever seen. Kennedy was convicted of aggravated rape because the victim was under 12 years of age.

The jury voted to sentence Kennedy to death, which was permitted by the Louisiana statute. The state supreme court affirmed the death sentence, and Kennedy appealed to the United States Supreme Court. He argued

[8] 5 U.S. 137, 1 Cranch 137 (1803).

that the Louisiana statute was unconstitutional. The Eighth Amendment prohibits cruel and unusual punishment, which includes penalties that are out of proportion to the crime. Kennedy claimed that capital punishment was out of proportion to rape and violated the Eighth Amendment.

Issues: ***Did the Louisiana statute violate the Constitution by permitting the death penalty in a case of child rape? Is it proper for the Supreme Court to decide this issue?***

Excerpts from Justice Kennedy's Decision: The constitutional prohibition against excessive or cruel and unusual punishments mandates that the State's power to punish be exercised within the limits of civilized standards. Evolving standards of decency that mark the progress of a maturing society counsel us to be most hesitant before interpreting the Eighth Amendment to allow the extension of the death penalty, a hesitation that has special force where no life was taken in the commission of the crime.

Consistent with evolving standards of decency and the teachings of our precedents we conclude that, in determining whether the death penalty is excessive, there is a distinction between intentional first-degree murder on the one hand and nonhomicide crimes against individual persons, even including child rape, on the other. The latter crimes may be devastating in their harm, as here, but in terms of moral depravity and of the injury to the person and to the public, they cannot be compared to murder in their severity and irrevocability.

Louisiana reintroduced the death penalty for rape of a child in 1995. Five States have since followed Louisiana's lead: Georgia, Montana, Oklahoma, South Carolina, and Texas. By contrast, 44 States have not made child rape a capital offense. As for federal law, Congress in the Federal Death Penalty Act of 1994 expanded the number of federal crimes for which the death penalty is a permissible sentence, including certain nonhomicide offenses; but it did not do the same for child rape or abuse. [The court concludes that there is a national consensus against imposing the death penalty for rape, and strikes down the Louisiana statute.]

Justice Alito, dissenting: If anything can be inferred from state legislative developments, the message is very different from the one that the Court perceives. In just the past few years, five States have enacted targeted capital child-rape laws. Such a development would not be out of step with changes in our society's thinking. During that time, reported instances of child abuse have increased dramatically; and there are many indications of growing alarm about the sexual abuse of children.

---

questions about judicial review. What is the proper punishment for such a horrible crime? Just as important, *who should make that decision*—appointed judges, or elected legislators?

Judicial Activism/Judicial Restraint. The power of judicial review is potentially dictatorial. The Supreme Court nullifies statutes passed by Congress (*Marbury v. Madison*, *United States v. Lopez*) and executive actions. May it strike down any law it dislikes? In theory, no—the Court should nullify only laws that violate the Constitution. But in practice, yes—the Constitution means whatever the majority of the current justices says that it means, since it is the Court that tells us which laws are violative.

Judicial activism
A court's willingness to decide issues on constitutional grounds.

Judicial restraint
A court's attitude that it should leave law making to legislators.

Judicial activism refers to a court's willingness, or even eagerness, to become involved in major issues and to decide cases on constitutional grounds. Activists are sometimes willing to "stretch" laws beyond their most obvious meaning. **Judicial restraint** is the opposite, an attitude that courts should leave lawmaking to legislators and nullify a law only when it unquestionably violates the Constitution. Some justices believe that the Founding Fathers never intended the judicial branch to take a prominent role in sculpting the nation's laws and its social vision.

From the 1950s through the 1970s, the Supreme Court took an activist role, deciding many major social issues on constitutional grounds. The landmark 1954 decision in *Brown v. Board of Education* ordered an end to racial segregation in public schools, not only changing the nation's educational systems but altering forever its expectations about race.[9] The Court also struck down many state laws that denied minorities the right to vote. Beginning with *Miranda v. Arizona*, the Court began a sweeping reappraisal of the police power of the state and the rights of criminal suspects during searches, interrogations, trials, and appeals.[10] And in *Roe v. Wade*, the

[9] 347 U.S. 483, 74 S. Ct. 686, 1954 U.S. LEXIS 2094 (1954).
[10] 384 U.S. 436, 86 S. Ct. 1602, 1966 U.S. LEXIS 2817 (1966).

Supreme Court established certain rights to abortion, most of which remain after nearly 40 years of continuous litigation.[11]

Beginning in the late 1970s, and lasting to the present, the Court has pulled back from its social activism. Exhibit 5.1 illustrates the balance among Congress, the president, and the Court.

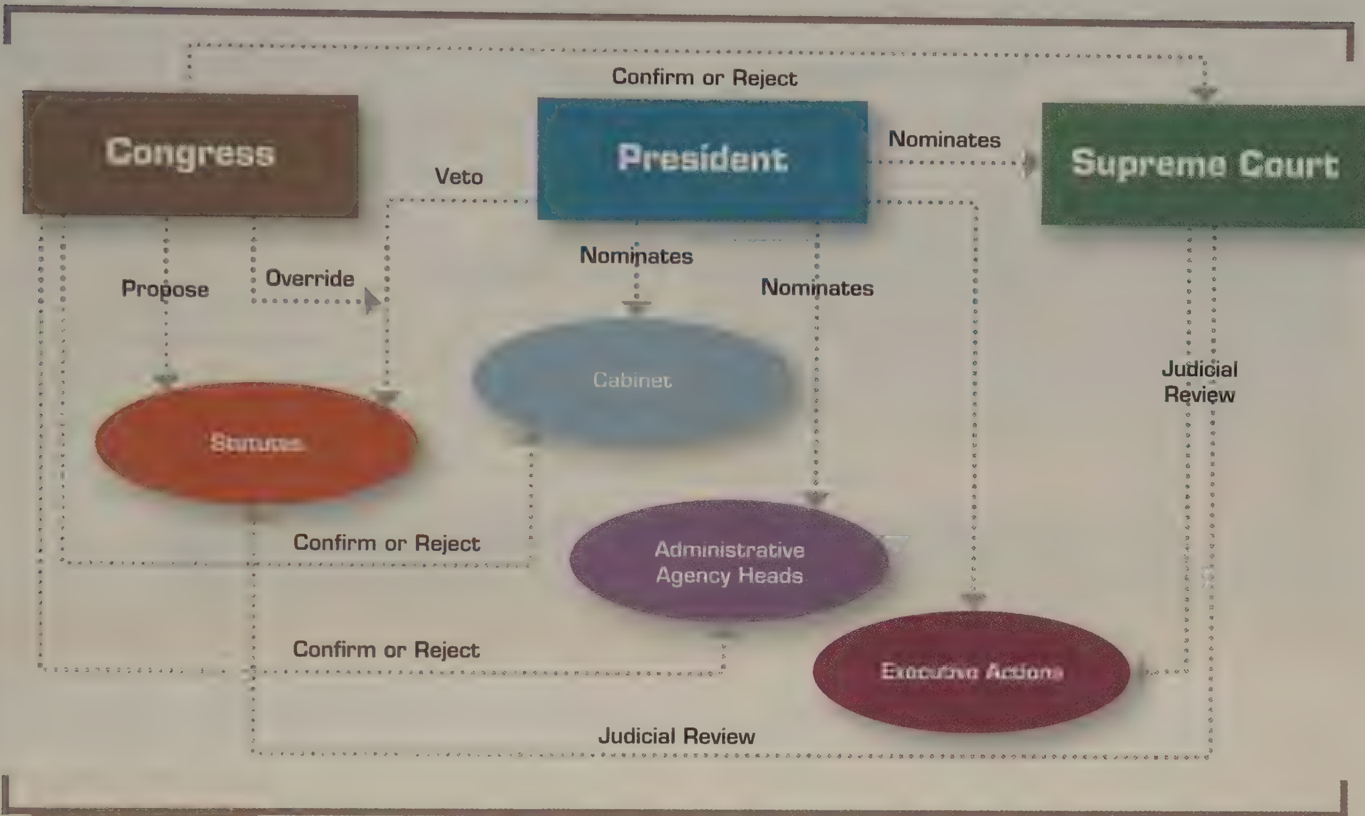


EXHIBIT 5.1 The Constitution established a federal government of checks and balances. Congress may propose statutes; the president may veto them; and Congress may override the veto. The president nominates cabinet officers, administrative heads, and Supreme Court justices, but the Senate must confirm his nominees. Finally, the Supreme Court (and lower federal courts) exercise judicial review over statutes and executive actions. Unlike the other checks and balances, judicial review is not provided for in the Constitution, but is a creation of the Court itself in *Marbury v. Madison*.

PROTECTED RIGHTS

The amendments to the Constitution protect the people of this nation from the power of state and federal government. The First Amendment guarantees rights of free speech, free press, and religion; the Fourth Amendment protects against illegal searches; the Fifth Amendment ensures due process; the Sixth Amendment demands fair treatment for defendants in criminal prosecutions; and the Fourteenth Amendment guarantees equal protection of the law. We consider the First, Fifth, and Fourteenth Amendments in this chapter and the Fourth, Fifth, and Sixth Amendments in Chapter 8, on crime.

---

[11] 410 U.S. 113, 93 S. Ct. 705, 1973 U.S. LEXIS 159 (1973).

The "people" who are protected include citizens and, for most purposes, corporations. Corporations are considered persons and receive most of the same protections. The great majority of these rights also extend to citizens of other countries who are in the United States.

Constitutional rights generally protect only against governmental acts. The Constitution generally does not protect us from the conduct of private parties, such as corporations or other citizens.

Incorporation

A series of Supreme Court cases has extended virtually all of the important constitutional protections to *all levels* of national, state, and local government. This process is called **incorporation** because rights explicitly guaranteed at one level are incorporated into rights that apply at other levels.

First Amendment: Free Speech

The First Amendment states that "Congress shall make no law … abridging the freedom of speech…." In general, we expect our government to let people speak and hear whatever they choose. The Founding Fathers believed democracy would work only if the members of the electorate were free to talk, argue, listen, and exchange viewpoints in any way they wanted. The people could only cast informed ballots if they were informed. "Speech" also includes symbolic conduct, as the following case flamingly illustrates.

Texas v. Johnson

491 U.S. 397, 109 S. Ct. 2533, 1989 U.S. LEXIS 3115
United States Supreme Court, 1989

Facts: Outside the Republican National Convention in Dallas, Gregory Johnson participated in a protest against policies of the Reagan administration. Participants gave speeches and handed out leaflets. Johnson burned an American flag. He was arrested and convicted under a Texas statute that prohibited desecrating the flag, but the Texas Court of Criminal Appeals reversed on the grounds that the conviction violated the First Amendment. Texas appealed to the United States Supreme Court.

Issue: ***Does the First Amendment protect flag burning?***

Excerpts from Justice Brennan's Decision: The First Amendment literally forbids the abridgment only of "speech," but we have long recognized that its protection does not end at the spoken or written word. While we have rejected the view that an apparently limitless variety of conduct can be labeled "speech," we have acknowledged that conduct may be sufficiently imbued with elements of communication to fall within the scope of the First and Fourteenth Amendments.

In deciding whether particular conduct possesses sufficient communicative elements to bring the First Amendment into play, we have asked whether an intent to convey a particularized message was present, and [whether] the likelihood was great that the message would be understood by those who viewed it. Hence, we have recognized the expressive nature of students' wearing of black armbands to protest American military involvement in Vietnam; of a sit-in by blacks in a "whites only" area to protest segregation; of the wearing of American military uniforms in a dramatic presentation criticizing American involvement in Vietnam; and of picketing about a wide variety of causes.

[The Court concluded that burning the flag was in fact symbolic speech.]

It remains to consider whether the State's interest in reserving the flag as a symbol of nationhood and national unity justifies Johnson's conviction. Johnson was prosecuted because he knew that his politically charged expression would cause "serious offense."

If there is a bedrock principle underlying the First Amendment, it is that the Government may not prohibit the expression of an idea simply because society finds the idea itself offensive or disagreeable. Nothing in our precedents suggests that a State may foster its own view of the flag by prohibiting expressive conduct relating to it.

Could the Government, on this theory, prohibit the burning of state flags? Of copies of the Presidential seal? Of the Constitution? In evaluating these choices under the First Amendment, how would we decide which symbols were sufficiently special to warrant this unique status? To do so, we would be forced to consult our own political

preferences, and impose them on the citizenry, in the very way that the First Amendment forbids us to do.

The way to preserve the flag's special role is not to punish those who feel differently about these matters. It is to persuade them that they are wrong. We can imagine no more appropriate response to burning a flag than waving one's own, no better way to counter a flagburner's message than by saluting the flag that burns, no surer means of preserving the dignity even of the flag that burned than by—as one witness here did—according its remains a respectful burial. We do not consecrate the flag by punishing its desecration, for in doing so we dilute the freedom that this cherished emblem represents.

The judgment of the Texas Court of Criminal Appeals is therefore *affirmed.*

Political Speech

Because the Framers were primarily concerned with enabling democracy to function, political speech has been given an especially high degree of protection. Such speech may not be barred even when it is offensive or outrageous. A speaker, for example, could accuse a U.S. senator of being insane and could use crude, violent language to describe him. The speech is still protected. **Political speech is protected unless it is intended and likely to create imminent lawless action.**[12] For example, suppose the speaker said, "The senator is inside that restaurant. Let's get some matches and burn the place down." Speech of this sort is not protected. The speaker could be arrested for attempted arson or attempted murder.

Protected speech?

One of the most important recent developments in constutitional law concerns the ability of *organizations* to engage in political speech. In the case that follows, a sharply divided Supreme Court weighed in on the issue raised in this chapter's opening scenario.

Citizens United v. Federal Election Commission

130 S. Ct. 876
Supreme Court of the United States, 2010

Facts: Citizens United, a nonprofit organization, produced a documentary on presidential candidate Hillary Clinton. The group wanted to run television ads promoting *Hillary: The Movie.* The Bipartisan Campaign Reform Act of 2002 banned "electioneering communication" by corporations and unions for the 30 days before a presidential primary. Citizens United challenged the Act, arguing that it violated the First Amendment.

Issue: ***Did the Bipartisan Campaign Reform Act violate the First Amendment?***

Excerpts from Justice Kennedy's Decision: The First Amendment provides that "Congress shall make no law … abridging the freedom of speech." The law before us makes it a felony for all corporations—including nonprofit advocacy corporations—either to expressly advocate the election

[12] *Brandenburg v. Ohio,* 395 U.S. 444, 89 S. Ct. 1827, 1969 U.S. LEXIS 1367 (1969).

or defeat of candidates or to broadcast electioneering communications within 30 days of a primary election and 60 days of a general election. These prohibitions are classic examples of censorship.

As a restriction on the amount of money a person or group can spend on political communication during a campaign, that statute necessarily reduces the quantity of expression by restricting the number of issues discussed, the depth of their exploration, and the size of the audience reached.

Speech is an essential mechanism of democracy, for it is the means to hold officials accountable to the people. The right of citizens to inquire, to hear, to speak, and to use information to reach consensus is a precondition to enlightened self-government and a necessary means to protect it. For these reasons, political speech must prevail against laws that would suppress it, whether by design or inadvertence.

The Government may not deprive the public of the right and privilege to determine for itself what speech and speakers are worthy of consideration. The First Amendment protects speech and speaker, and the ideas that flow from each.

The Court has recognized that First Amendment protection extends to corporations. This protection has been extended by explicit holdings to the context of political speech. Corporations and other associations, like individuals, contribute to the discussion, debate, and the dissemination of information and ideas that the First Amendment seeks to foster. The Court has thus rejected the argument that political speech of corporations or other associations should be treated differently under the First Amendment simply because such associations are not "natural persons."

The Government falls back on the argument that corporate political speech can be banned in order to prevent corruption or its appearance. We must give weight to attempts by Congress to seek to dispel either the appearance or the reality of these influences. The remedies enacted by law, however, must comply with the First Amendment; and, it is our law and our tradition that more speech, not less, is the governing rule. An outright ban on corporate political speech during the critical preelection period is not a permissible remedy.

Modern-day movies, television comedies, or skits on YouTube might portray public officials or public policies in unflattering ways. Yet if a covered transmission during the blackout period creates the background for candidate endorsement or opposition, a felony occurs solely because a corporation has made the purchase in order to engage in political speech. Speech would be suppressed in the realm where its necessity is most evident: in the public dialogue preceding a real election. Governments are often hostile to speech, but under our law and our tradition it seems stranger than fiction for our Government to make this political speech a crime. Yet this is the statute's purpose and design.

Some members of the public might consider Hillary to be insightful and instructive; some might find it to be neither high art nor a fair discussion on how to set the Nation's course; still others simply might suspend judgment on these points but decide to think more about issues and candidates. Those choices and assessments, however, are not for the Government to make.

The judgment of the District Court is reversed.

It is so ordered.

Time, Place, and Manner

Even when speech is protected, the government may regulate the *time, place,* and *manner* of such speech. A town may require a group to apply for a permit before using a public park for a political demonstration. The town may insist that the demonstration take place during daylight hours and that there be adequate police supervision and sanitation provided. However, the town may not prohibit such demonstrations outright.

Many public universities have designated "free speech zones" located in high-traffic areas of campus which are not immediately adjacent to a large number of classrooms. The zones allow for debates to proceed and reach many students, but they minimize the chances that noisy demonstrations will interfere with lectures.

Morality and Obscenity

The regulation of morality and obscenity presents additional problems. Obscenity has never received constitutional protection. The Supreme Court has consistently held that it does not play a valued role in our society and has refused to give protection to obscene works. That is well and good, but it merely forces the question: what is obscene?

In *Miller v. California*,[13] the Court created a three-part test to determine if a creative work is obscene. The basic guidelines for the factfinder are:

- Whether the average person, applying contemporary community standards, would find that the work, taken as a whole, appeals to the prurient interest;
- Whether the work depicts or describes, in a patently offensive way, sexual conduct specifically defined by the applicable state law; and
- Whether the work, taken as a whole, lacks serious literary, artistic, political, or scientific value.

If the trial court finds that the answer to all three of those questions is "yes," it may judge the material obscene; the state may then prohibit the work. If the state fails to prove any one of the three criteria, though, the work is not obscene.[14] A United States District Court ruled that "As Nasty As They Wanna Be," recorded by 2 Live Crew, was obscene. The appeals court, however, reversed, finding that the state had failed to prove lack of artistic merit.[15]

Commercial Speech

This refers to speech that has a dominant theme to propose a commercial transaction. For example, most advertisements on television and in the newspapers are commercial speech. This sort of speech is protected by the First Amendment, but the government is permitted to regulate it more closely than other forms of speech. Commercial speech that is false or misleading may be outlawed altogether. **The government may regulate other commercial speech, provided that the rules are reasonable, and directed to a legitimate goal.** The following case demonstrates the very different treatment given to this type of speech.

Commercial speech
Communication, such as advertisements, that has the dominant theme of proposing a business transaction.

Salib v. City of Mesa

133 P.3d 756, 212 Ariz. 446
Arizona Court of Appeals, 2006.

Facts: Edward Salib owned a Winchell's Donut House in Mesa, Arizona. To attract customers, he displayed large signs in his store window. The city ordered him to remove the signs, because they violated its Sign Code, which prohibited covering more than 30% of a store's windows with signs. Salib sued, claiming that the Sign Code violated his First Amendment free speech rights. The trial court gave summary judgment for Mesa, and the store owner appealed.

Issue: ***Did Mesa's Sign Code violate the First Amendment?***

Excerpts from Judge Irvine's Decision: Under [a Supreme Court case called] *Central Hudson*, commercial speech that concerns unlawful activity or is misleading is not protected by the First Amendment. Commercial speech that falls into neither of these categories may be regulated if the government satisfies a three-prong test. First, the government must assert a substantial interest in support of the regulation. Mesa argues, and Salib concedes, that the governmental regulation of aesthetics constitutes a substantial interest, so the first prong of *Central Hudson* is not at issue.

Under the second prong of *Central Hudson*, the government must demonstrate that the challenged regulation advances its interest in a direct and material way. Salib argues that this prong has not been met because no

[13] 413 U.S. 15, 93 S. Ct. 2607, 1973 U.S. LEXIS 149 (1973).
[14] *Penthouse Intern Ltd. v. McAuliffe*, 610 F.2d 1353 (5th Cir. 1980).
[15] *Luke Records, Inc. v. Navarro*, 960 F.2d 134, 1992 U.S. App. LEXIS 9592 (11th Cir. 1992).

studies were conducted to determine what aesthetic or safety problems existed and how the Sign Code could solve such problems.

Mesa responds that the Sign Code was enacted because of legitimate concerns among business owners that many businesses in the area had 100% coverage of their storefront windows and that this total coverage was unattractive and detracted from the aesthetics of the city. The First Amendment does not require a formal study before a regulation may be enacted. The record shows that the city council received considerable input on the subject of window coverage and aesthetics before enacting the Sign Code. Although its final adoption of the Sign Code may have rested on anecdote, history, consensus or simple common sense, rather than a formal study or survey addressed specifically to the window coverage provision, the constitution requires no greater proof.

Salib argues the restriction is not narrow enough and therefore violates the third prong of *Central Hudson*. It is clear from the First Amendment cases that narrowly tailored or narrowly drawn does not mean that the least restrictive means must be used. Rather, a "reasonable fit" between the intent and purpose of the regulation and the means chosen to accomplish those goals is required. The regulation does not have to be perfect, but its scope must be in proportion to the interest served.

Mesa argues that 30% is a reasonable compromise between 100% coverage and a total ban of signage. Further, Mesa argues, the Sign Code is narrow because it only addresses signs that are inside the pane, and the Code allows alternative methods of communication, including signs hanging outside of the window sill area. Additionally, Mesa conducted comparisons with other communities and found that the 30% restriction on window coverage was comparable to other cities' restrictions.

We are not in a position to determine what percentage of window coverage is optimal. Rather, we only decide if the 30% figure that was adopted by the Sign Code is a reasonable fit to further the goal of improving aesthetics. We conclude that it is. Reasonable minds can differ as to whether Mesa's interest would best be served by a 15%, 25%, 30% or 40% limitation on window coverage, but under the facts of this case we cannot conclude that these differences of degree are of a constitutional dimension. The exact balance between the size of the signs and the aesthetic benefits attained is ultimately a subjective decision best left to the city council.

We conclude the Sign Code directly advances a substantial governmental interest and is narrowly tailored to directly advance the goal of improved aesthetics. We therefore affirm the trial court's granting of Mesa's Motion for Summary Judgment.

EXAM Strategy

Question: Maria owns a lot next to a freeway that passes through Tidyville. She has rented a billboard to Huge Mart, a nearby retailer, and a second billboard to Green, a political party. However, Tidyville prohibits off-premises signs (those not on the advertiser's property) that are visible from the freeway. Tidyville's rule is designed to make the city more attractive, to increase property values, and to eliminate distractions that may cause freeway accidents. Huge Mart and Green sue, claiming that Tidyville's law violates their First Amendment rights.

A. Huge Mart is likely to win; Green is likely to lose.

B. Green is likely to win; Huge Mart is likely to lose.

C. Huge Mart and Green are both likely to win.

D. Huge Mart and Green are both likely to lose.

Strategy: What is the difference between the two cases? Huge Mart wants the billboard for commercial speech, Green wants it for a political message. What are the legal standards for commercial and political free speech? Apply those standards.

Result: The government may regulate commercial speech, provided that the rules are reasonable and directed to a legitimate goal. Political speech is given much stronger protection, and can be prohibited only if it is intended and likely to create imminent lawless action. The regulation outlawing *advertising* will be upheld, but Tidyville will not be allowed to block political messages.

Fifth Amendment: Due Process and the Takings Clause

You are a senior at a major state university. You feel great about a difficult exam you took in Professor Watson's class. The Dean's Office sends for you, and you enter curiously, wondering if your exam was so good that the dean is awarding you a prize. Not quite. The exam proctor has accused you of cheating. Based on the accusation, Watson has flunked you. You protest that you are innocent and demand to know what the accusation is. The dean says that you will learn the details at a hearing, if you wish to have one. She reminds you that if you lose the hearing, you will be expelled from the university. Four years of work and your entire career are suddenly on the line.

> Four years of work and your entire career are suddenly on the line.

The hearing is run by Professor Holmes, who will make the final decision. Holmes is a junior faculty member in Watson's department. (Next year, Watson will decide Holmes's tenure application.) At the hearing, the proctor accuses you of copying from a student sitting in front of you. Both Watson and Holmes have already compared the two papers and concluded that they are strongly similar. Holmes tells you that you must convince him the charge is wrong. You examine the papers, acknowledge that there are similarities, but plead as best you can that you never copied. Holmes doesn't buy it. The university expels you, placing on your transcript a notation of cheating.

Have you received fair treatment? To answer that, we must look to the Fifth Amendment, which provides several vital protections. We will consider two related provisions, the Due Process Clause and the Takings Clause. Together, they state: "No person shall be . . . deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use, without just compensation." These clauses prevent the government from arbitrarily taking the most valuable possessions of a citizen or corporation. The government has the right to take a person's liberty or property. But there are three important limitations:

- ***Procedural Due Process.*** Before depriving anyone of liberty or property, the government must go through certain steps, or procedures, to ensure that the result is fair.
- ***The Takings Clause.*** When the government takes property for public use, such as to build a new highway, it has to pay a fair price.
- ***Substantive Due Process.*** Some rights are so fundamental that the government may not take them from us at all. The substance of any law or government action may be challenged on fundamental fairness grounds.

Takings Clause
A clause in the Fifth Amendment which ensures that when any governmental unit takes private property for public use, it must compensate the owner.

Procedural Due Process

The government deprives citizens or corporations of their property in a variety of ways. The Internal Revenue Service may fine a corporation for late payment of taxes. The Customs Service may seize goods at the border. As to liberty, the government may take it by confining someone in a mental institution or by taking a child out of the home because of

Procedural due process The doctrine which ensures that before the government takes liberty or property, the affected person has a fair chance to oppose the action.

parental neglect. The purpose of **procedural due process** is to ensure that before the government takes liberty or property, the affected person has a fair chance to oppose the action.

There are two steps in analyzing a procedural due process case:

- Is the government attempting to take liberty or property?
- If so, how much process is due? (If the government is *not* attempting to take liberty or property, there is no due process issue.)

Is the Government Attempting to Take Liberty or Property? Liberty interests are generally easy to spot: confining someone in a mental institution and taking a child from her home are both deprivations of liberty. A property interest may be obvious. Suppose that, during a civil lawsuit, the court **attaches** a defendant's house, meaning it bars the defendant from selling the property at least until the case is decided. This way, if the plaintiff wins, the defendant will have assets to pay the judgment. The court has clearly deprived the defendant of an important interest in his house, and the defendant is entitled to due process. However, a property interest may be subtler than that. A woman holding a job with a government agency has a "property interest" in that job, because her employer has agreed not to fire her without cause, and she can rely on it for income. If the government does fire her, it is taking away that property interest, and she is entitled to due process. A student attending any public school has a property interest in her education. If a public university suspends a student as described above, it is taking her property, and she, too, should receive due process.

How Much Process Is Due? Assuming that a liberty or property interest is affected, a court must decide how much process is due. Does the person get a formal trial, or an informal hearing, or merely a chance to reply in writing to the charges against her? If she gets a hearing, must it be held before the government deprives her of her property, or is it enough that she can be heard shortly thereafter? **What sort of hearing the government must offer depends upon how important the property or liberty interest is and on whether the government has a competing need for efficiency.** The more important the interest, the more formal the procedures must be.

Neutral Factfinder. Regardless of how formal the hearing, one requirement is constant: the factfinder must be neutral. Whether it is a superior court judge deciding a multimillion dollar contract suit or an employment supervisor deciding the fate of a government employee, the factfinder must have no personal interest in the outcome. In *Ward v. Monroeville,*[16] the plaintiff was a motorist who had been stopped for traffic offenses in a small town. He protested his innocence and received a judicial hearing. But the "judge" at the hearing was the town mayor. Traffic fines were a significant part of the town's budget. The motorist argued that the town was depriving him of procedural due process because the mayor had a financial interest in the outcome of the case. The United States Supreme Court agreed and reversed his conviction.

Attachment of Property. As described earlier, a plaintiff in a civil lawsuit often seeks to *attach* the defendant's property. This protects the plaintiff, but it may also harm the defendant if, for example, he is about to close a profitable real estate deal. Attachments used to be routine. In *Connecticut v. Doehr,* the Supreme Court required more caution.[17] Based on *Doehr,* when a plaintiff seeks to attach at the beginning of the trial, a court must look at the plaintiff's likelihood of winning. Generally, the court must grant the defendant a hearing

---

[16]409 U.S. 57, 93 S. Ct. 80, 1972 U.S. LEXIS 11 (1972).
[17]501 U.S. 1, 111 S. Ct. 2105, 1991 U.S. LEXIS 3317 (1991).

before attaching the property. The defendant, represented by a lawyer, may offer evidence as to how attachment would harm him and why it should be denied.

Government Employment. A government employee must receive due process before being fired. Generally, this means some kind of hearing, but not necessarily a formal court hearing. The employee is entitled to know the charges against him, to hear the employer's evidence, and to have an opportunity to tell his side of the story. He is not entitled to have a lawyer present. The hearing "officer" need only be a neutral employee. Further, in an emergency, where the employee is a danger to the public or the organization, the government may suspend with pay, before holding a hearing. It then must provide a hearing before the decision becomes final.

Academic Suspension. There is still a property interest here, but it is the least important of those discussed. When a public school concludes that a student has failed to meet its normal academic standards, such as by failing too many courses, it may dismiss him without a hearing. Due process is served if the student receives notice of the reason and has some opportunity to respond, such as by writing a letter contradicting the school's claims.

In cases of disciplinary suspension or expulsion, courts generally require schools to provide a higher level of due process. In the hypothetical at the beginning of this section, the university has failed to provide adequate due process.[18] The school has accused the student of a serious infraction. The school must promptly provide details of the charge and cannot wait until the hearing to do so. The student should see the two papers and have a chance to rebut the charge. Moreover, Professor Holmes has demonstrated bias. He appears to have made up his mind in advance. He has placed the burden on the student to disprove the charges. And he probably feels obligated to support Watson's original conclusion, since Watson will be deciding his tenure case next year.

The Takings Clause

Florence Dolan ran a plumbing store in Tigard, Oregon. She and her husband wanted to enlarge it on land they already owned. But the city government said that they could expand only if they dedicated some of their own land for use as a public bicycle path and for other public use. Does the city have the right to make them do that? For an answer we must look to a different part of the Fifth Amendment.

The Takings Clause prohibits a state from taking private property for public use without just compensation. A town wishing to build a new football field may boot you out of your house. But the town must compensate you. The government takes your land through the power of **eminent domain**. Officials must notify you of their intentions and give you an opportunity to oppose the project and to challenge the amount the town offers to pay. But when the hearings are done, the town may write you a check and level your house, whether you like it or not.

Eminent domain
The power of the government to take private property for public use.

More controversial issues arise when a local government does not physically take the property but passes regulations that restrict its use. Tigard is a city of 30,000 in Oregon. The city developed a comprehensive land use plan for its downtown area in order to preserve green space, to encourage transportation other than autos, and to reduce its flooding problems. Under the plan, when a property owner sought permission to build in the downtown section, the city could require some of her land to be used for public purposes. This has become a standard method of land use planning throughout the nation. States have used it to preserve coastline, urban green belts, and many environmental features.

When Florence Dolan applied for permission to expand, the city required that she dedicate a 15-foot strip of her property to the city as a bicycle pathway and that she

[18] See, e.g., *University of Texas Medical School at Houston v. Than,* 901 S.W.2d 926, 1995 Tex. LEXIS 105 (Tex. 1995).

preserve, as greenway, a portion of her land within a floodplain. She sued, and though she lost in the Oregon courts, she won in the United States Supreme Court. The Court held that Tigard City's method of routinely forcing all owners to dedicate land to public use violated the Takings Clause. The city was taking the land, even though title never changed hands.[19]

The Court did not outlaw all such requirements. What it required was that, **before a government may require an owner to dedicate land to a public use, it must show that this owner's proposed building requires this dedication of land.** In other words, it is not enough for Tigard to have a general plan, such as a bicycle pathway, and to make all owners participate in it. Tigard must show that it needs *Dolan's* land *specifically for a bike path and greenway.* This will be much harder for local governments to demonstrate than merely showing a city-wide plan. A related issue arose in the following controversial case. A city used eminent domain to take property on behalf of *private developers.* Was this a valid public use?

The Kelo decision was controversial, and in response some states passed statutes prohibiting eminent domain for private development.

Kelo v. City of New London, Connecticut

545 U.S. 469, 125 S.Ct. 2655
United States Supreme Court, 2005

Facts: New London, Connecticut, was declining economically. The city's unemployment rate was double that of the state generally, and the population at its lowest point in 75 years. In response, state and local officials targeted a section of the city, called Fort Trumbull, for revitalization. Located on the Thames River, Fort Trumbull comprised 115 privately owned properties and 32 additional acres of an abandoned naval facility. The development plan included one section for a waterfront conference hotel and stores; a second one for 80 private residences; and one for research facilities.

The state bought most of the properties from willing sellers. However, nine owners of 15 properties refused to sell, and filed suit. The owners claimed that the city was trying to take land for *private* use, not public, in violation of the Takings Clause. The case reached the United States Supreme Court.

Issue: ***Did the city's plan violate the Takings Clause?***

Excerpts from Justice Stevens' Decision: It has long been accepted that the sovereign may not take the property of *A* for the sole purpose of transferring it to another private party *B*, even though *A* is paid just compensation. On the other hand, it is equally clear that a State may transfer property from one private party to another if future "use by the public" is the purpose of the taking; the condemnation of land for a railroad with common-carrier duties is a familiar example.

This is not a case in which the City is planning to open the condemned land—at least not in its entirety—to use by the general public. Nor will the private lessees of the land in any sense be required to operate like common carriers, making their services available to all comers. But this Court long ago rejected any literal requirement that condemned property be put into use for the general public, [embracing] the broader and more natural interpretation of public use as "public purpose." Thus, in a case upholding a mining company's use of an aerial bucket line to transport ore over property it did not own, Justice Holmes' opinion for the Court stressed "the inadequacy of use by the general public as a universal test."

The City has carefully formulated an economic development plan that it believes will provide appreciable benefits to the community, including—but by no means limited to—new jobs and increased tax revenue. As with other exercises in urban planning and development, the City is endeavoring to coordinate a variety of commercial, residential, and recreational uses of land, with the hope that they will form a whole greater than the sum of its parts. Because that plan unquestionably serves a public purpose, the takings challenged here satisfy the public use requirement of the Fifth Amendment.

---

[19] *Dolan v. City of Tigard*, 512 U.S. 374, 114 S. Ct. 2309, 1994 U.S. LEXIS 4826 (1994).

To avoid this result, petitioners urge us to adopt a new bright-line rule that economic development does not qualify as a public use. [However, promoting] economic development is a traditional and long accepted function of government. There is, moreover, no principled way of distinguishing economic development from the other public purposes that we have recognized. In our cases upholding takings that facilitated agriculture and mining, for example, we emphasized the importance of those industries to the welfare of the States in question. Clearly, there is no basis for exempting economic development from our traditionally broad understanding of public purpose.

The judgment of the Supreme Court of Connecticut is affirmed.

Justice O'Connor, dissenting: The Court today significantly expands the meaning of public use. It holds that the sovereign may take private property currently put to ordinary private use, and give it over for new, ordinary private use, so long as the new use is predicted to generate some secondary benefit for the public—such as increased tax revenue, more jobs, maybe even esthetic pleasure. But nearly any lawful use of real private property can be said to generate some incidental benefit to the public. Thus, if predicted (or even guaranteed) positive side-effects are enough to render transfer from one private party to another constitutional, then the words "for public use" do not realistically exclude *any* takings, and thus do not exert any constraint on the eminent domain power.

Any property may now be taken for the benefit of another private party, but the fallout from this decision will not be random. The beneficiaries are likely to be those citizens with disproportionate influence and power in the political process, including large corporations and development firms. As for the victims, the government now has license to transfer property from those with fewer resources to those with more.

Substantive Due Process

This doctrine is part of the Due Process Clause, but it is entirely different from procedural due process and from government taking. During the first third of the twentieth century, the Supreme Court frequently nullified state and federal laws, asserting that they interfered with basic rights. For example, in a famous 1905 case, *Lochner v. New York*,[20] the Supreme Court invalidated a New York statute that had limited the number of hours that bakers could work in a week. New York had passed the law to protect employee health. But the Court declared that private parties had a basic constitutional right to contract. In this case, the statute interfered with the rights of the employer and the baker to make any bargain they wished. Over the next three decades, the Court struck down dozens of state and federal laws that were aimed at working conditions, union rights, and social welfare generally. This was called **substantive due process**[21] because the Court was looking at the underlying rights being affected, such as the right to contract, not at any procedures.

Substantive due process
A form of due process that holds that certain rights are so fundamental that the government may not eliminate them.

Critics complained that the Court was interfering with the desires of the voting public by nullifying laws that the justices personally disliked (judicial activism). During the Great Depression, however, things changed. Beginning in 1934, the Court completely reversed itself and began to uphold the types of laws it earlier had struck down.

The Supreme Court made an important substantive due process ruling in the case of *BMW v. Gore*[22]. A BMW dealership sold Gore a car that had sustained water damage. Instead of telling him of the damage, they simply repainted the car and sold it as new.

In Chapter 6, we will examine two different types of cash awards that juries may make in tort cases. For now, let's call them "ordinary" and "punitive" damages. When plaintiffs win tort cases, juries may always award ordinary damages to offset real, measureable losses. In addition, juries are sometimes allowed to add to an award to further punish a defendant for bad behavior.

[20] 198 U.S. 45, 25 S. Ct. 539, 1905 U.S. LEXIS 1153 (1905).
[21] Be the first on your block to pronounce this word correctly. The accent goes on the first syllable: *sub*stantive.
[22] 517 U.S. 559 (1996).

In the BMW case, the jury awarded Gore $4,000 in ordinary damages as the difference in value between a flawless new car and a water-damaged car. The jury then awarded a delighted Gore $4 *million* in punitive damages. In the end, the Supreme Court decided that the punitive award was so disproportionate to the harm actually caused that it violated substantive due process rights.

Fourteenth Amendment: Equal Protection Clause

Shannon Faulkner wanted to attend The Citadel, a state-supported military college in South Carolina. She was a fine student who met every admission requirement that The Citadel set except one: she was not a man. The Citadel argued that its long and distinguished history demanded that it remain all male. Faulkner responded that she was a citizen of the state and ought to receive the benefits that others got, including the right to a military education. Could the school exclude her on the basis of gender?

Equal Protection Clause
A clause in the Fourteenth Amendment that generally requires the government to treat people equally.

The Fourteenth Amendment provides that "No State shall ... deny to any person within its jurisdiction the equal protection of the laws." This is the **Equal Protection Clause**, and it means that, generally speaking, **governments must treat people equally**. Unfair classifications among people or corporations will not be permitted. A notorious example of unfair classification would be race discrimination: permitting only white children to attend a public school violates the Equal Protection Clause.

Yet clearly, governments do make classifications every day. People with high incomes pay a higher tax rate than those with low incomes; some corporations are permitted to deal in securities, while others are not. To determine which classifications are constitutionally permissible, we need to know what is being classified. There are three major groups of classifications. The outcome of a case can generally be predicted by knowing which group it is in.

- ***Minimal Scrutiny: Economic and Social Relations.*** Government actions that classify people or corporations on these bases are almost always upheld.
- ***Intermediate Scrutiny: Gender.*** Government classifications are sometimes upheld.
- ***Strict Scrutiny: Race, Ethnicity, and Fundamental Rights.*** Classifications based on any of these are almost never upheld.

Minimal Scrutiny: Economic and Social Regulation

Just as with the Due Process Clause, laws that regulate economic or social issues are presumed valid. They will be upheld if they are *rationally related to a legitimate goal.* This means a statute may classify corporations and/or people and the classifications will be upheld if they make any sense at all. The New York City Transit Authority excluded all methadone users from any employment. The United States District Court concluded that this violated the Equal Protection Clause by unfairly excluding all those who were on methadone. The court noted that even those who tested free of any illegal drugs and were seeking non-safety-sensitive jobs, such as clerks, were turned away. That, said the district court, was irrational.

Not so, said the United States Supreme Court. The Court admitted that the policy might not be the wisest. It would probably make more sense to test individually for illegal drugs rather than automatically exclude methadone users. But, said the Court, it was not up to the justices to choose the best policy. They were only to decide if the policy was rational. Excluding methadone users related rationally to the safety of public transport and therefore did not violate the Equal Protection Clause.[23]

Intermediate Scrutiny: Gender

Classifications based on sex must meet a tougher test than those resulting from economic or social regulation. Such laws must *substantially relate to important government objectives.* Courts have increasingly nullified government sex classifications as societal concern with gender equality has grown.

[23] *New York City Transit Authority v. Beazer*, 440 U.S. 568, 99 S. Ct. 1355, 1979 U.S. LEXIS 77 (1979).

At about the same time Shannon Faulkner began her campaign to enter The Citadel, another woman sought admission to the Virginia Military Institute, an all-male state school. The Supreme Court held that Virginia had violated the Equal Protection Clause by excluding women from VMI. The Court ruled that gender-based government discrimination requires an "exceedingly persuasive justification," and that Virginia had failed that standard of proof. The Citadel promptly opened its doors to women as well.[24]

Strict Scrutiny: Race, Ethnicity, and Fundamental Rights

Any government action that intentionally discriminates against racial or ethnic minorities, or interferes with a fundamental right, is presumed invalid. In such cases, courts will look at the statute or policy with *strict scrutiny;* that is, courts will examine it very closely to determine whether there is compelling justification for it. The law will be upheld only if it is *necessary to promote a compelling state interest.* Very few meet that test.

- ***Racial and Ethnic Minorities.*** Any government action that intentionally discriminates on the basis of race, or ethnicity is presumed invalid. For example, in *Palmore v. Sidoti,*[25] the state had refused to give child custody to a mother because her new spouse was racially different from the child. The practice was declared unconstitutional. The state had made a racial classification, it was presumed invalid, and the government had no *compelling need* to make such a ruling.
- ***Fundamental Rights.*** A government action interfering with a fundamental right also receives strict scrutiny and will likely be declared void. For example, New York State gave an employment preference to any veteran who had been a state resident when he entered the military. Newcomers who were veterans were less likely to get jobs, and therefore this statute interfered with the right to travel, a fundamental right. The Supreme Court declared the law invalid.[26]

Fundamental rights
Rights so basic that any governmental interference with them is suspect and likely to be unconstitutional.

EXAM Strategy

Question: Megan is a freshman at her local public high school; her older sister Jenna attends a nearby private high school. Both girls are angry because their schools prohibit them from joining their respective wrestling teams, where only boys are allowed. The two girls sue based on the U.S. Constitution. Discuss the relevant law and predict the outcomes.

Strategy: One girl goes to private and one to public school. Why does that matter? Now ask what provision of the Constitution is involved, and what legal standard it establishes.

Result: The Constitution offers protection from the *government.* A private high school is not part of the government, and Jenna has no constitutional case. Megan's suit is based on the Equal Protection Clause. This is gender discrimination, meaning that Megan's school must convince the court that keeping girls off the team *substantially relates to an important government objective.* The school will probably argue that wrestling with stronger boys will be dangerous for girls. However, courts are increasingly suspicious of any gender discrimination and are unlikely to find the school's argument persuasive.

[24] *United States v. Virginia,* 518 U.S. 515, 116 S. Ct. 2264, 1996 U.S. LEXIS 4259 (1996).
[25] 466 U.S. 429, 104 S. Ct. 1879, 1984 U.S. LEXIS 69 (1984).
[26] *Attorney General of New York v. Soto-Lopez,* 476 U.S. 898, 106 S. Ct. 2317, 1986 U.S. LEXIS 59 (1986).

Chapter Conclusion

The legal battle over power never stops. The obligation of a state to provide equal educational opportunity for both genders relates to whether Tigard, Oregon, may demand some of Ms. Dolan's store lot for public use. Both issues are governed by one amazing document. That same Constitution determines what tax preferences are permissible, and even whether a state may require you to wear clothing. As social mores change in step with broad cultural developments, as the membership of the Supreme Court changes, the balance of power between federal government, state government, and citizens will continue to evolve. There are no easy answers to these constitutional questions because there has never been a democracy so large, so diverse, or so powerful.

EXAM REVIEW

1. **CONSTITUTION** The Constitution is a series of compromises about power. (pp. 103–105)

2. **ARTICLES I, II AND III** Article I of the Constitution creates the Congress and grants all legislative power to it. Article II establishes the office of president and defines executive powers. Article III creates the Supreme Court and permits lower federal courts; the article also outlines the powers of the federal judiciary. (pp. 105–111)

3. **COMMERCE CLAUSE** Under the Commerce Clause, Congress may regulate any activity that has a substantial effect on interstate commerce. (pp. 105–107)

4. **INTERSTATE COMMERCE** A state may not regulate commerce in any way that will interfere with interstate commerce. (p. 105)

EXAM Strategy

Question: Maine exempted many charitable institutions from real estate taxes but denied this benefit to a charity that primarily benefited out-of-state residents. Camp Newfound was a Christian Science organization, and 95 percent of its summer campers came from other states. Camp Newfound sued Maine. Discuss.

Strategy: The state was treating organizations differently depending on what states their campers come from. This raised *Commerce Clause* issues. Did the positive aspect or dormant aspect of that clause apply? The dormant aspect applied. What does it state? Apply that standard to theses facts. (See the "Result" at the end of this section.)

5. **SUPREMACY CLAUSE** Under the Supremacy Clause, if there is a conflict between federal and state statutes, the federal law preempts the field. Even without a conflict, federal law preempts if Congress intended to exercise exclusive control. (p. 107)

6. **PRESIDENTIAL POWERS** The president's key powers include making agency appointments, proposing legislation, conducting foreign policy, and acting as commander in chief of the armed forces. (p. 108)

7. **FEDERAL COURTS** The federal courts adjudicate cases and also exercise judicial review, which is the right to declare a statute or governmental action unconstitutional and void. (pp. 108–111)

8. **FREEDOM OF SPEECH** Freedom of speech includes symbolic acts. Political speech by both people and organizations is protected unless it is intended and likely to create imminent lawless action. (pp. 112–117)

9. **REGULATION OF SPEECH** The government may regulate the time, place, and manner of speech. (p. 114)

10. **COMMERCIAL SPEECH** Commercial speech that is false or misleading may be outlawed; otherwise, regulations on this speech must be reasonable and directed to a legitimate goal. (pp. 115–117)

EXAM Strategy

Question: A federal statute prohibits the broadcasting of lottery advertisements, except by stations that broadcast in states permitting lotteries. The purpose of the statute is to support efforts of states that outlaw lotteries. Truth Broadcasting operates a radio station in State A (a nonlottery state) but broadcasts primarily in State B (a lottery state). Truth wants to advertise State A's lottery but is barred by the statute. Does the federal statute violate Truth's constitutional rights?

Strategy: This case involves a particular kind of speech. What kind? What is the rule about that kind of speech? (See the "Result" at the end of this section.)

11. **PROCEDURAL DUE PROCESS** Procedural due process is required whenever the government attempts to take liberty or property. The amount of process that is due depends upon the importance of the liberty or property threatened. (pp. 117–119)

EXAM Strategy

Question: Fox's Fine Furs claims that Ermine owes $68,000 for a mink coat on which she has stopped making payments. Fox files a complaint and also asks the court clerk to *garnish* Ermine's wages. A garnishment is a court order to an employer to withhold an employee's wages, or a portion of them, and pay the money into court so that there will be money for the plaintiff, if it wins. What constitutional issue does Fox's request for garnishment raise?

Strategy: Ermine is in danger of losing part of her income, which is property. The Due Process Clause prohibits the government (the court) from taking life, liberty or property without due process. What process is Ermine entitled to? (See the "Result" at the end of this section.)

12. **TAKINGS CLAUSE** The Takings Clause prohibits a state from taking private property for public use without just compensation. (pp. 119–121)

13. **SUBSTANTIVE DUE PROCESS** A substantive due process analysis presumes that any economic or social regulation is valid, and presumes invalid any law that infringes upon a fundamental right. (pp. 121–122)

14. **EQUAL PROTECTION CLAUSE** The Equal Protection Clause generally requires the government to treat people equally. Courts apply strict scrutiny in any equal protection case involving race, ethnicity, or fundamental rights; intermediate scrutiny to any case involving gender; and minimal scrutiny to an economic or social regulation. (pp. 122–123)

4. Result: The dormant aspect holds that a state statute which discriminates against interstate commerce is almost always invalid. Maine was subsidizing charities that served in-state residents, and penalizing those that attracted campers from elsewhere. The tax rules violated the Commerce Clause and was void.[27]

10. Result: An advertisement is *commercial* speech. The government may regulate this speech as long as the rules are reasonable and directed to a legitimate goal. The goal of supporting nonlottery states is reasonable, and there is no violation of Truth's free speech rights.[28]

11. Result: Ermine is entitled to notice of Fox's claim and to a hearing *before* the court garnishes her wages.[29]

Multiple-Choice Questions

1. Greenville College, a public community college, has a policy of admitting only male students. If the policy is challenged under the Fourteenth Amendment, ________________ scrutiny will be applied.
   (a) strict
   (b) intermediate
   (c) rational
   (d) none of the above

2. You begin work at Everhappy Corp. at the beginning of November. On your second day at work, you wear a political button on your overcoat, supporting your choice for governor in the upcoming election. Your boss glances at it and says, "Get that stupid thing out of this office or you're history, chump." Your boss ______________ violated your First Amendment rights. After work, you put the button back on and start walking home. You pass a police officer who blocks your path and says, "Take off that stupid button or you're going to jail, chump." The officer _____________ violated your First Amendment rights.

(a) has; has
(b) has; has not
(c) has not; has
(d) has not; has not

3. Which of the following statements accurately describes statutes that Congress and the president may create?

(a) Statutes must be related to a power listed in Article I, section 8 of the Constitution.
(b) Statutes must not infringe on the liberties in the Bill of Rights.
(c) Both A and B
(d) None of the above

4. Which of the following is true of the origin of judicial review?

(a) It was created by Article II of the Constitution.
(b) It was created by Article III of the Constitution.
(c) It was created in the *Marbury v. Madison* case.
(d) It was created by the Fifth Amendment.
(e) It was created by the Fourteenth Amendment.

5. Consider *Kelo v. City of New London*, in which a city with a revitalization plan squared off against property owners who did not wish to sell their property. The key constitutional provision was the Takings Clause in the ________________ Amendment. The Supreme Court decided the city ________________ use eminent domain and take the property from the landowners.

(a) Fifth; could
(b) Fifth; could not
(c) Fourteenth; could
(d) Fourteenth; could not

Essay Questions

1. YOU BE THE JUDGE WRITING PROBLEM Scott Fane was a CPA licensed to practice in New Jersey and Florida. He built his New Jersey practice by making unsolicited phone calls to executives. When he moved to Florida, the Board of Accountancy there prohibited him (and all CPAs) from personally soliciting new business. Fane sued. Does the First Amendment force Florida to forgo foreclosing Fane's phoning? **Argument for Fane:** The Florida regulation violates the First Amendment, which protects commercial speech. Fane was not saying anything false or misleading, but was just trying to secure business. This is an unreasonable regulation, designed to keep newcomers out of the marketplace and maintain steady business and high prices for established CPAs. **Argument for the Florida Board of Accountancy:** Commercial speech deserves—and gets—a lower level of protection than other speech. This regulation is a reasonable method of ensuring that the level of CPA work in our state remains high. CPAs who personally solicit

clients are obviously in need of business. They are more likely to bend legal and ethical rules to obtain clients and keep them happy, and will lower the standards throughout the state.

2. President George H.W. Bush insisted that he had the power to send American troops into combat in the Middle East, without congressional assent. Yet before authorizing force in Operation Desert Storm, he secured congressional authorization. President Bill Clinton stated that he was prepared to invade Haiti without a congressional vote. Yet he bargained hard to avoid an invasion, and ultimately American troops entered without the use of force. Why the seeming doubletalk by both presidents?

3. In the landmark 1965 case of *Griswold v. Connecticut*, the Supreme Court examined a Connecticut statute that made it a crime for any person to use contraception. The majority declared the law an unconstitutional violation of the right of privacy. Justice Black dissented, saying, "I do not to any extent whatever base my view that this Connecticut law is constitutional on a belief that the law is wise or that its policy is a good one. [It] is every bit as offensive to me as it is to the majority. [There is no criticism by the majority of this law] to which I cannot subscribe—except their conclusion that the evil qualities they see in the law make it unconstitutional." What legal doctrines are involved here? Why did Justice Black distinguish between his personal views on the statute and the power of the Court to overturn it?

4. Gilleo opposed American participation in the war in the Persian Gulf. She displayed a large sign on her front lawn that read, "Say No to War in the Persian Gulf, Call Congress Now." The city of Ladue prohibited signs on front lawns and Gilleo sued. The city claimed that it was regulating "time, place, and manner." Explain that statement, and decide who should win.

5. David Lucas paid $975,000 for two residential lots on the Isle of Palms near Charleston, South Carolina. He intended to build houses on them. Two years later, the South Carolina legislature passed a statute that prohibited building seaward of a certain line, and Lucas's property fell in the prohibited zone. Lucas claimed that his land was now useless and that South Carolina owed him its value. Explain his claim. Should he win?

Discussion Questions

1. Return to the opening scenario and the *Citizens United* case. Is political advertising purchased by corporations appropriate? Do you agree with the five members of the Supreme Court who voted to allow it, or with the four who dissented and would have drawn distinctions between free speech by individuals and organizations? Why?

2. **Ethics** Is political advertising by a nonprofit political organization like Citizens United any more or less appropriate than advertising by for-profit corporations like the one described in the opening scenario? If you were a board member in the opening scenario, which (if any) of the three ads would you vote to authorize?

3. Consider the "tea party" movement. Do you believe that the federal government should be able to create whatever laws it deems to be in the country's best interests, or do you believe that individual states, like Florida and California, should have more control over the laws within their own borders?

4. This chapter is filled with examples of statutes that have been struck down by the courts. A Texas law banning flag burning was rejected by the Supreme Court, as was a Louisiana death penalty statute. The Affordable Healthcare Act has been voided by two lower court judges, and the Supreme Court may or may not agree with the action.

   Do you like the fact that courts can void laws that they determine to be in violation of the Constitution? Or is it wrong for appointed judges to overrule "the will of the majority," as expressed by elected members of Congress and state legislatures?

5. Gender discrimination currently receives "intermediate" Fourteenth Amendment scrutiny. Is this right? Should gender receive "strict" scrutiny as does race? Why or why not?

CHAPTER 6

Intentional Torts and Business Torts

In a small Louisiana town, Don Mashburn ran a restaurant called Maison de Mashburn. The *New Orleans States-Item* newspaper reviewed his eatery, and here is what the article said:

> "'Tain't Creole, 'tain't Cajun, 'tain't French, 'tain't country American, 'tain't good. I don't know how much real talent in cooking is hidden under the mélange of hideous sauces which make this food and the menu a travesty of pretentious amateurism, but I find it all quite depressing. Put a yellow flour sauce on top of the duck, flame it for drama, and serve it with some horrible multiflavored rice in hollowed-out fruit and what have you got? A well-cooked duck with an ugly sauce that tastes too sweet and thick and makes you want to scrape off the glop to eat the plain duck. [The stuffed eggplant was prepared by emptying] a shaker full (more or less) of paprika on top of it. [One sauce created] trout à la green plague [while another should have been called] yellow death on duck."

'Tain't Creole, 'tain't Cajun, 'tain't French, 'tain't country American, 'tain't good.

Mashburn sued, claiming that the newspaper had committed libel, damaging his reputation and hurting his business.[1] Trout à la green plague will be the first course on our menu of tort law. Mashburn learned, as you will, why filing such a lawsuit is easier than winning it.

[1] *Mashburn v. Collin*, 355 So.2d 879 (La. 1977).

The odd word "tort" is borrowed from the French, meaning "wrong." And that is what it means in law: a wrong. More precisely, a **tort** is a violation of a duty imposed by the civil law. When a person breaks one of those duties and injures another, it is a tort. The injury could be to a person or her property. Libel, which the restaurant owner in the opening scenario alleged, is one example of a tort. A surgeon who removes the wrong kidney from a patient commits a different kind of tort, called negligence. A business executive who deliberately steals a client away from a competitor, interfering with a valid contract, commits a tort called interference with a contract. A con artist who tricks you out of your money with a phony offer to sell you a boat commits fraud, yet another tort.

Tort
A violation of a duty imposed by the civil law.

Because tort law is so broad, it takes a while—and two chapters—to understand its boundaries. To start with, we must distinguish torts from two other areas of law: criminal law and contract law.

It is a *crime* to steal a car, to embezzle money from a bank, to sell cocaine. As discussed in Chapter 1, society considers such behavior so threatening that the government itself will prosecute the wrongdoer, whether or not the car owner or bank president wants the case to go forward. A district attorney, who is paid by the government, will bring the case to court, seeking to send the defendant to prison, fine him, or both. If there is a fine, the money goes to the state, not to the victim.

In a tort case, it is up to the injured party to seek compensation. She must hire her own lawyer, who will file a lawsuit. Her lawyer must convince the court that the defendant breached some legal duty and ought to pay money damages to the plaintiff. The plaintiff has no power to send the defendant to jail. Bear in mind that a defendant's action might be both a crime and a tort. A man who punches you in the face for no reason commits the tort of battery. You may file a civil suit against him and will collect money damages if you can prove your case. He has also committed a crime, and the state may prosecute, seeking to imprison and fine him.

Differences between Contract, Tort, and Criminal Law

Type of Obligation	Contract	Tort	Criminal Law
How the obligation is created	The parties agree on a contract, which creates duties for both.	The civil law imposes duties of conduct on all persons.	The criminal law prohibits certain conduct.
How the obligation is enforced	Suit by plaintiff.	Suit by plaintiff.	Prosecution by government.
Possible result	Money damages for plaintiff.	Money damages for plaintiff.	Punishment for defendant, including prison and/or fine.
Example	Raul contracts to sell Deirdre 5,000 pairs of sneakers at $50 per pair, but fails to deliver them. Deirdre buys the sneakers elsewhere for $60 per pair and receives $50,000, her extra expense.	A newspaper falsely accuses a private citizen of being an alcoholic. The plaintiff sues and wins money damages to compensate for her injured reputation.	Leo steals Kelly's car. The government prosecutes Leo for grand theft, and the judge sentences him to two years in prison. Kelly gets nothing.

A tort is also different from a contract dispute. A contract case is based on an agreement two people have already made. For example, Deirdre claims that Raul promised to sell her 10,000 pairs of sneakers at a good price but has failed to deliver them. She files a contract lawsuit. In a tort case, there is usually no "deal" between the parties. Don Mashburn had never met the restaurant critic who attacked his restaurant and obviously had never made any kind of contract. The plaintiff in a tort case claims that the law itself creates a duty that the defendant has breached.

Intentional torts
Harm caused by a deliberate action.

Tort law is divided into categories. In this chapter, we consider **intentional torts**, that is, harm caused by a deliberate action. The newspaper columnist who wrongly accuses someone of being a drunk has committed the intentional tort of libel. In the next chapter, we examine negligence and strict liability, which involve injuries and losses caused by neglect and oversight rather than by deliberate conduct.

A final introductory point: when we speak of intentional torts, we do not necessarily mean that the defendant intended to harm the plaintiff. If the defendant does something deliberately and it ends up injuring somebody, she is probably liable even if she meant no harm. For example, intentionally throwing a snowball at a friend is a deliberate act. If the snowball permanently damages his eye, the *harm* is unintended, but the defendant is liable for the intentional tort of battery because the *act* was intentional.

We look first at the most common intentional torts and then at the most important intentional torts that are related to business.

INTENTIONAL TORTS

Defamation

The First Amendment guarantees the right to free speech, a vital freedom that enables us to protect other rights. But that freedom is not absolute.

The law of defamation concerns false statements that harm someone's reputation. Defamatory statements can be written or spoken. Written defamation is called **libel**. Suppose a newspaper accuses a local retail store of programming its cash registers to overcharge customers when the store has never done so. That is libel. Oral defamation is **slander**. If Professor Wisdom, in class, refers to Sally Student as a drug dealer when she has never sold drugs, he has slandered her.

There are four elements to a defamation case. An element is something that a plaintiff must prove to win a lawsuit. The plaintiff in any kind of lawsuit must prove *all* of the elements to prevail. The elements in a defamation case are

- **Defamatory statement.** This is a statement likely to harm another person's reputation. Professor Wisdom's accusation will clearly harm Sally's reputation.
- **Falseness.** The statement must be false. If Sally Student actually sold marijuana to a classmate, then Professor Wisdom has a defense to slander.
- **Communicated.** The statement must be communicated to at least one person *other than the plaintiff.* If Wisdom speaks privately to Sally and accuses her of dealing drugs, there is no slander.
- **Injury.** In many slander cases, the plaintiff generally must show some injury. Sally's injury would be lower reputation in the school, embarrassment, and humiliation. But in slander cases that involve false statements about sexual behavior, crimes, contagious diseases, and professional abilities, the law is willing to assume injury without requiring the plaintiff to prove it. Lies in these four categories amount to **slander per se**.

Libel cases are treated like cases of slander per se, and courts award damages without proof of injury.[2]

Opinion

Thus far, what we have seen is uncontroversial. If a television commentator refers to Frank Landlord as a "vicious slumlord who rents uninhabitable units," and Frank actually maintains his buildings perfectly, Frank will be compensated for the harm. But what if the television commentator states a harsh *opinion* about Frank? Remember that the plaintiff must demonstrate a "false" statement. Opinions generally cannot be proven true or false, and so they do not usually amount to defamation.

Suppose that the television commentator says, "Frank Landlord certainly does less than many rich people do for our community." Is that defamation? Probably not. Who are the "rich people"? How much do they do? How do we define "does less"? These vague assertions indicate the statement is one of opinion. Even if Frank works hard feeding homeless families, he will probably lose a defamation case.

A related defense involves cases where a supposed statement of fact clearly should not be taken literally. Mr. Mashburn, who opened the chapter suing over his restaurant review, lost his case. The court held that a reasonable reader would have understood the statements to be opinion only. "A shaker full of paprika" and "yellow death on duck" were not to be taken literally but were merely the author's expression of his personal dislike.

Public Personalities

The rules of the game change for those who play in the open. Government officials and other types of public figures such as actors and athletes receive less protection from defamation. In the landmark case *New York Times Co. v. Sullivan*,[3] the Supreme Court ruled that the free exchange of information is vital in a democracy and is protected by the First Amendment to the Constitution.

The rule from the *New York Times* case is that a public official or public figure can win a defamation case only by proving **actual malice** by the defendant. Actual malice means that the defendant knew the statement was false or acted with reckless disregard of the truth. If the plaintiff merely shows that the defendant newspaper printed incorrect statements, even

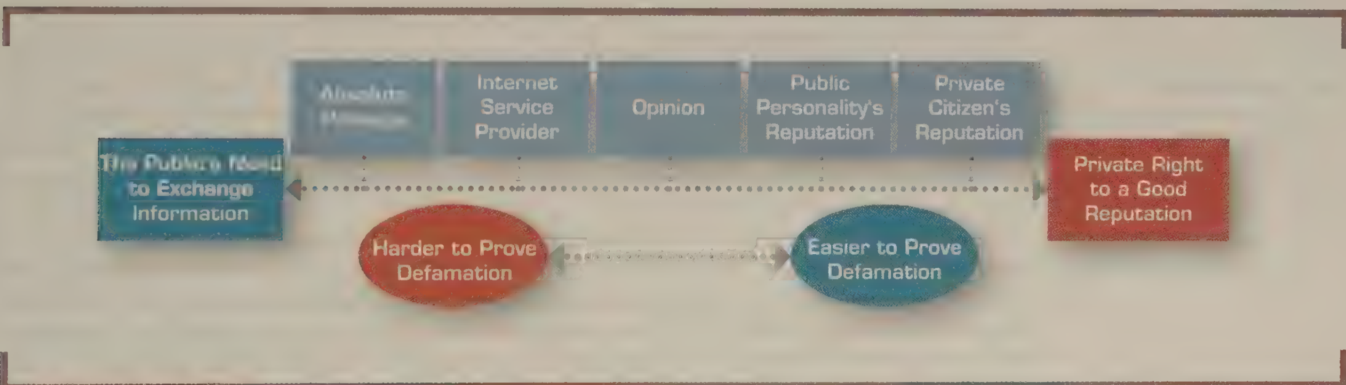

EXHIBIT 6.1 Defamation cases show a tension between the public's need for information and a citizen's right to protect his reputation.

[2]When defamation by radio and television became possible, the courts chose to consider it libel, analogizing it to newspapers because of the vast audience. This means that in broadcasting cases, a plaintiff generally does not have to prove damages.
[3]376 U.S. 254, 84 S.Ct. 710, 1964 U.S. LEXIS 1655 (1964).

very damaging ones, that will not suffice to win the suit. In the *New York Times* case, the police chief of Birmingham, Alabama, claimed that the *Times* falsely accused him of racial violence in his job. He lost because he could not prove that the *Times* had acted with actual malice. If he had shown that the *Times* knew the accusation was false, he would have won.

Online Defamation

Kenneth Zeran awoke one day to learn he had become notorious. An unidentified person had posted a message on an AOL bulletin board advertising "Naughty Oklahoma T-Shirts." The shirts featured deeply offensive slogans relating to the 1995 bombing of a federal building in Oklahoma City, in which hundreds of innocent people died. Those interested in purchasing such a t-shirt were instructed to call "Ken" at Zeran's home telephone number. In fact, Zeran had nothing to do with the posting or the t-shirts. He was quickly inundated with phone messages from furious callers, some of whom made death threats.

Zeran could not conveniently change his number because he ran his business from his home. A radio talk show host in Oklahoma City angrily urged its listeners to call Zeran, which they did. Before long, Zeran was receiving an abusive call every two minutes. He sued AOL for defamation—and lost.

The court held that AOL was immune from a defamation suit based on a third-party posting, based on the Communications Decency Act (CDA). Section 230 of the CDA creates this immunity for any Internet service provider, the court declared, adding:

> It would be impossible for service providers to screen each of their millions of postings for possible problems. Faced with potential liability for each message republished by their services, interactive computer service providers might choose to severely restrict the number and type of messages posted. Congress considered the weight of the speech interests implicated and chose to immunize service providers to avoid any such restrictive effect.[4]

Privilege

Absolute privilege
A witness testifying in a court or legislature may never be sued for defamation.

Defendants receive additional protection from defamation cases when it is important for them to speak freely. **Absolute privilege** exists in courtrooms and legislative hearings. Anyone speaking there, such as a witness in court, can say anything at all and never be sued for defamation. (Deliberately false testimony would be *perjury*, but still not *slander*.)

False Imprisonment

False imprisonment
Is the intentional restraint of another person without reasonable cause and without consent.

False imprisonment is the intentional restraint of another person without reasonable cause and without consent. Suppose that a bank teller becomes seriously ill and wants to go to the doctor, but the bank will not permit her to leave until she makes a final tally of her accounts. Against her wishes, company officials physically bar her from leaving the bank. That is false imprisonment. The restraint was unreasonable because her accounts could have been verified later.[5]

False imprisonment cases most commonly arise in retail stores, which sometimes detain employees or customers for suspected theft. Most states now have statutes governing the detention of suspected shoplifters. **Generally, a store may detain a customer or worker for alleged shoplifting provided there is a reasonable basis for the suspicion and the detention is done reasonably**. To detain a customer in the manager's office for 20 minutes and question him about where he got an item is lawful. To chain that customer to a display counter for three hours and humiliate him in front of other customers is unreasonable and constitutes false imprisonment.

Intentional Infliction of Emotional Distress

What should happen when a defendant's conduct hurts a plaintiff emotionally but not physically? Historically, not much did happen. Courts once refused to allow recovery, assuming that if they awarded damages for mere emotional injury, they would be inviting a floodgate of dubious claims. But gradually judges reexamined their thinking and reversed this tendency. Today, most courts allow a plaintiff to recover for emotional injury that a defendant intentionally caused. As we see in the next chapter, some courts will also permit recovery when a defendant's negligent conduct caused the emotional injury.

The **intentional infliction of emotional distress** results from extreme and outrageous conduct that causes serious emotional harm. A credit officer was struggling vainly to locate Sheehan, who owed money on his car. The officer phoned Sheehan's mother, falsely identified herself as a hospital employee, and said she needed to find Sheehan because his children had been in a serious auto accident. The mother provided Sheehan's whereabouts, which enabled the company to seize his car. But Sheehan spent seven hours frantically trying to locate his supposedly injured children, who in fact were fine. The credit company was liable for the intentional infliction of emotional distress.[6]

Intentional infliction of emotional distress
An intentional tort in which the harm results from extreme and outrageous conduct that causes serious emotional harm.

By contrast, a muffler shop, trying to collect a debt from a customer, made six phone calls over three months, using abusive language. The customer testified that this caused her to be upset, to cry, and to have difficulty sleeping. The court ruled that the muffler shop's conduct was neither extreme nor outrageous.[7]

The following case arose in a setting that guarantees controversy—an abortion clinic.

Jane Doe and Nancy Roe v. Lynn Mills

212 Mich. App. 73, 536 N.W.2d 824, 1995 Mich. App. LEXIS 313
Michigan Court of Appeals, 1995

Facts: Late one night, an anti-abortion protestor named Robert Thomas climbed into a dumpster located behind the Women's Advisory Center, an abortion clinic. He found documents indicating that the plaintiffs were soon to have abortions at the clinic. Thomas gave the information to Lynn Mills. The next day, Mills and Sister Lois Mitoraj created signs, using the women's names, indicating that they were about to undergo abortions, and urging them not to "kill their babies."

Doe and Roe (not their real names) sued, claiming intentional infliction of emotional distress (as well as breach of privacy, discussed later in this chapter). The trial court dismissed the lawsuit, ruling that the defendants' conduct was not extreme and outrageous. The plaintiffs appealed.

Issue: ***Have the plaintiffs made a valid claim of intentional infliction of emotional distress?***

Excerpts from the Court's *Per Curiam* Decision: Liability for the intentional infliction of emotional distress has been found only where the conduct complained of has been so outrageous in character, and so extreme in degree, as to go beyond all possible bounds of decency, and to be regarded as atrocious and utterly intolerable in a civilized community. Liability does not extend to mere insults, indignities, threats, annoyances, petty oppressions, or other trivialities. It has been said that the case is generally one in which the recitation of the facts to an average member of the community would arouse his resentment against the actor, and lead him to exclaim, "Outrageous!"

The conduct in this case involved defendants identifying plaintiffs by name and publicizing the fact of their abortions by displaying such information on large signs that were held up for public view. In ruling that defendants'

---

[6] *Ford Motor Credit Co. v. Sheehan*, 373 So.2d 956, 1979 Fla. App. LEXIS 15416 (Fla. Dist. Ct. App. 1979).
[7] *Midas Muffler Shop v. Ellison*, 133 Ariz. 194, 650 P.2d 496, 1982 Ariz. App. LEXIS 488 (Ariz. Ct. App. 1982).

conduct was not sufficiently extreme and outrageous so as to permit recovery, the trial court was influenced in part by its conclusion that the information disclosed did not concern a private matter, inasmuch as it was obtained from a document that had been discarded into the trash. [But the plaintiffs themselves never placed their names on the discarded papers, and even if they had, such an act would not have indicated consent to such publicity.] The trial court also observed that defendants have a constitutional right to "protest peaceably against abortion." However, the objectionable aspect of defendants' conduct does not relate to their views on abortion or their right to express those views, but, rather, to the fact that defendants gave unreasonable or unnecessary publicity to purely private matters involving plaintiffs. Finally, the trial court observed that there is no statute prohibiting the kind of activity engaged in by defendants. It is not necessary, however, that a defendant's conduct constitute a statutory violation in order for it to be found extreme and outrageous.

We are of the opinion that the trial court erred in granting the defendants' motion for summary disposition of plaintiffs' claim of intentional infliction of emotional distress. Defendants' conduct involved more than mere insults, indignities, threats, annoyances, or petty oppressions. We believe this is the type of case that might cause an average member of the community, upon learning of defendants' conduct, to exclaim, "Outrageous!" Because reasonable men may differ with regard to whether defendants' conduct may be considered sufficiently outrageous and extreme so as to subject them to liability for intentional infliction of emotional distress, this matter should be determined by the trier of fact.

[Summary judgment for the defendants is reversed, and the case is remanded for trial.]

Battery and Assault

Battery
An intentional touching of another person in a way that is harmful or offensive.

Assault and battery are related, but not identical. **Battery** is an intentional touching of another person in a way that is harmful or offensive.

If an irate parent throws a chair at a referee during his daughter's basketball game, breaking the man's jaw, he has committed battery. But a parent who cheerfully slaps the winning coach on the back has not committed battery because a reasonable coach would not be offended.

As mentioned earlier, there need be no intention to hurt the plaintiff. If the defendant intended to do the physical act, and a reasonable plaintiff would be offended by it, battery has occurred. An executive who gives an unwanted sexual caress to a secretary also commits this tort, even if he assumed that any normal female would be ecstatic over his attentions. (This is also sexual harassment, discussed in Chapter 29, on employment law.)

Assault
An act that makes a person reasonably fear an imminent battery.

Assault occurs when a defendant does some act that makes a plaintiff *fear* an imminent battery. This tort is based on apprehension—it does not matter whether a battery ever occurs. Suppose Ms. Wilson shouts "Think fast!" at her husband and hurls a toaster at him. He turns and sees it flying at him. His fear of being struck is enough to win a case of assault, even if the toaster misses. If the toaster happens to strike him, Ms. Wilson has also committed battery.

Recall the shoplifting problem. Assume that a store guard pulls an unloaded pistol on Sandra Shopper, suspecting her of theft. Sandra faints and strikes her head on a counter. When sued for assault, the store defends by claiming the guard never touched her and the gun was unloaded. Obviously, the store did not have the benefit of this law course. A reasonable shopper would have feared imminent battery, and the store is liable for assault.

EXAM Strategy

Question: Mark is furious because his girlfriend, Denise, just told him she is leaving him. He never saw it coming. On the sidewalk, he picks up a rock and hurls it at Denise's head. She *does* see it coming, and she ducks. The rock misses Denise but hits Terrance (who never saw it coming) in the back of his head. Denise and Terrance both sue Mark for assault and for battery. Outcomes?

Strategy: Separate the two plaintiffs. What injury did Denise suffer? She saw a rock flying at her and thought she would be struck. Now recall the elements of the two torts. Battery is an intentional touching that is offensive. Assault is an act that makes another person *fear* an imminent battery.

Result: Was Denise touched? No. Did she fear an imminent battery? Yes. Denise wins a suit for assault but loses one for battery. Now Terrance: Was he touched? Yes. Did he fear an imminent battery? No. Terrance wins a suit for battery but loses one for assault.

Trespass, Conversion, and Fraud

Trespass

Trespass is intentionally entering land that belongs to someone else or remaining on the land after being asked to leave. It is also trespass if you have some object, let's say a car, on someone else's property and refuse to remove it. "Intentionally" means that you deliberately walk onto the land. If you walk through a meadow, believing it to be a public park, and it belongs to a private owner, you have trespassed.

Trespass
Intentionally entering land that belongs to someone else or remaining on the land after being asked to leave.

Conversion

Conversion is taking or using someone's personal property without consent. Personal property is any possession other than land or structures permanently attached to land, such as houses. Priceless jewels, ratty sneakers, and sailboats are all personal property. If Stormy sails away in Jib's sailboat and keeps it all summer, that is conversion. Stormy owes Jib the full value of the boat. This, of course, is similar to the crime of theft. The tort of conversion enables a plaintiff to pursue the case herself, without awaiting a criminal prosecution, and to obtain compensation.

© GSPhotography /Shutterstock.com

When does a trespasser intentionally enter onto another's property?

Fraud

Fraud is injuring another person by deliberate deception. Later in this chapter, a plaintiff claims that for many years a cigarette manufacturer fraudulently suggested its product was safe, knowing its assurances were deadly lies. Fraud is a tort, but it typically occurs during the negotiation or performance of a contract, and it is discussed in detail in Unit 2, on contracts.

Conversion
Taking or using someone's personal property without consent.

Fraud
Injuring another person by deliberate deception.

EXAM Strategy

Question: Raymond, a billionaire businessman widely known in the state, is running for the U.S. Senate. A newspaper reports that Raymond received $150,000 from an organization with "proven links to terrorist groups." The story came from a woman

working in Raymond's own campaign, and two other witnesses, all three of whom had proven reliable in the past. Raymond, leading in the polls by 18%, plummets in popularity and loses the election. Raymond sues the paper. Outcome?

Strategy: First, determine the injury that Raymond has suffered. His reputation has been damaged. Second, ask what tort protects reputation. Defamation. Third, apply the elements to these facts.

Result: The newspaper's story, very likely to harm reputation, was widely communicated and did injure Raymond. But we don't know whether the article was true or false. Do we need to know? Usually we do, because a defendant is only liable for false statements. However, notice that a public personality must also prove *actual malice.* Was Raymond a public figure? Yes, he was a prominent billionaire and Senate candidate. There was no actual malice. The paper acted in good faith, using three credible sources. Raymond loses his lawsuit.

DAMAGES

Compensatory Damages

> Bien becomes frantic, writing a dozen notes, begging to leave, threatening to call the police.

Mitchel Bien, who is deaf and mute, enters the George Grubbs Nissan dealership, where folks sell cars aggressively. Very aggressively. Maturelli, a salesman, and Bien communicate by writing messages back and forth. Maturelli takes Bien's own car keys, and the two then test drive a 300ZX. Bien says he does not want the car, but Maturelli escorts him back inside and fills out a sales sheet. Bien repeatedly asks for his keys, but Maturelli only laughs, pressuring him to buy the new car. Minutes pass. Hours pass. Bien becomes frantic, writing a dozen notes, begging to leave, threatening to call the police. Maturelli mocks Bien and his physical disabilities. Finally, after four hours, the customer escapes.

Bien sues for the intentional infliction of emotional distress. Two former salesmen from Grubbs testify they have witnessed customers cry, yell, and curse as a result of the aggressive tactics. Doctors state that the incident has traumatized Bien, dramatically reducing his confidence and self-esteem and preventing his return to work even three years later.

The jury awards Bien damages. But how does a jury calculate the money? For that matter, why should a jury even try? Money can never erase pain or undo a permanent injury. The answer is simple: money, however inexact, is often the only thing a court has to give.

Compensatory damages
Money intended to restore a plaintiff to the position he was in before the injury.

Single recovery principle
Requires a court to settle the matter once and for all, by awarding a lump sum for past and future expenses.

A successful plaintiff generally receives **compensatory damages**, meaning an amount of money that the court believes will restore him to the position he was in before the defendant's conduct caused injury. Here is how damages are calculated.

First, a plaintiff receives money for medical expenses that he has proven by producing bills from doctors, hospitals, physical therapists, and psychotherapists. Bien receives all the money he has paid. If a doctor testifies that he needs future treatment, Bien will offer evidence of how much that will cost. The **single recovery principle** requires a court to settle the matter once and for all, by awarding a lump sum for past *and future* expenses, if there will be any. A plaintiff may not return in a year and say, "Oh, by the way, there are some new bills."

Second, the defendants are liable for lost wages. The court takes the number of days or months that Bien missed work and multiplies that times his salary. If Bien is currently unable to work, a doctor estimates how many more months he will miss work, and the court adds that to his damages.

Third, a plaintiff is paid for pain and suffering. Bien testifies about how traumatic the four hours were and how the experience has affected his life. He may state that he now fears shopping, suffers nightmares, and seldom socializes. To bolster the case, a plaintiff uses expert testimony, such as the psychiatrists who testified for Bien. Awards for pain and suffering vary enormously, from a few dollars to many millions, depending on the injury and depending on the jury. In some lawsuits, physical and psychological pain are momentary and insignificant; in other cases, the pain is the biggest part of the verdict. In this case, the jury awarded Bien $573,815, calculated as in the following table.[8]

Past medical	$ 70.00
Future medical	6,000.00
Past rehabilitation	3,205.00
Past lost earning capacity	112,910.00
Future lost earning capacity	34,650.00
Past physical symptoms and discomfort	50,000.00
Future physical symptoms and discomfort	50,000.00
Past emotional injury and mental anguish	101,980.00
Future emotional injury and mental anguish	200,000.00
Past loss of society and reduced ability to socially interact with family, former fiancée, and friends, and hearing (i.e., nondeaf) people in general	10,000.00
Future loss of society and reduced ability to socially interact with family, former fiancee, and friends, and hearing people	5,000.00
TOTAL	**$573,815.00**

[8]The compensatory damages are described in *George Grubbs Enterprises v. Bien*, 881 S.W.2d 843, 1994 Tex. App. LEXIS 1870 (Tex. Ct. App. 1994). In addition to the compensatory damages described, the jury awarded $5 million in punitive damages. The Texas Supreme Court reversed the award of punitive damages, but not the compensatory. *Id.*, 900 S.W.2d 337, 1995 Tex. LEXIS 91 (Tex. 1995). The high court did not dispute the appropriateness of punitive damages, but reversed because the trial court failed to instruct the jury properly as to how it should determine the assets actually under the defendants' control, an issue essential to punitive damages but not compensatory.

Awards for future harm (such as future pain and suffering) involve the court making its best estimate of the plaintiff's hardship in the years to come. This is not an exact science. If the judgment is reasonable, it will rarely be overturned. Ethel Flanzraich, aged 78, fell on stairs that had been badly maintained. In addition to her medical expense, the court awarded her $150,000 for future pain and suffering. The day after the court gave its award, Ms. Flanzraich died of other causes. Did that mean her family must forfeit that money? No. The award was reasonable when made and had to be paid.[9]

Punitive Damages

Punitive damages
Damages that are intended to punish the defendant for conduct that is extreme and outrageous.

Here we look at a different kind of award, one that is more controversial and potentially more powerful: punitive damages. The purpose is not to compensate the plaintiff for harm, because compensatory damages will have done that. **Punitive damages** are intended to punish the defendant for conduct that is extreme and outrageous. Courts award these damages in relatively few cases. The idea behind punitive damages is that certain behavior is so unacceptable that society must make an example of it. A large award of money should deter the defendant from repeating the mistake and others from ever making it. Some believe punitive damages represent the law at its most avaricious, while others attribute to them great social benefit.

Although a jury has wide discretion in awarding punitive damages, the Supreme Court has ruled that a verdict must be reasonable. Ira Gore purchased a new BMW automobile from an Alabama dealer and then discovered that the car had been repainted. He sued. At trial, BMW acknowledged a nationwide policy of not informing customers of predelivery repairs when the cost was less than 3% of the retail price. The company had sold about 1,000 repainted cars nationwide. The jury concluded that BMW had engaged in gross, malicious fraud and awarded Gore $4,000 in compensatory damages and $4 million in punitive damages. The Alabama Supreme Court reduced the award to $2 million, but the United States Supreme Court ruled that even that amount was grossly excessive. The Court held that in awarding punitive damages, a court must consider three "guideposts":

- The reprehensibility of the defendant's conduct;
- The ratio between the harm suffered and the award; and
- The difference between the punitive award and any civil penalties used in similar cases.

The Court concluded that BMW had shown no evil intent and that Gore's harm had been purely economic (as opposed to physical). Further, the Court found the ratio of 500 to 1, between punitive and compensatory damages, to be excessive, although it offered no definitive rule about a proper ratio. On remand, the Alabama Supreme Court reduced the punitive damages award to $50,000.[10]

The U.S. Supreme Court gave additional guidance on punitive damages in the following landmark case.

---

[9]We looked at discovery issues from this case in Chapter 3. *Stinton v. Robin's Wood,* 45 A.D.3d 203, 842 N.Y.S.2d 477 (N.Y.App.Div., 2007).

[10]*BMW of North America, Inc. v. Gore,* 517 U.S. 559, 116 S.Ct. 1589, 1996 U.S. LEXIS 3390 (1996).

Landmark Case

State Farm v. Campbell

538 U.S. 408
Supreme Court of the United States (2003)

Facts: While attempting to pass several cars on a two-lane road, Campbell drove into oncoming traffic. An innocent driver swerved to avoid Campbell and died in a collision with a third driver. The family of the deceased driver and the surviving third driver both sued Campbell.

As Campbell's insurer, State Farm represented him in the lawsuit. It turned down an offer to settle the case for $50,000, the limit of Campbell's policy. The company had nothing to gain by settling because even if Campbell lost big at trial, State Farm's liability was capped at $50,000.

A jury returned a judgment against Campbell for $185,000. He was responsible for the $135,000 that exceeded his policy limit. He argued with State Farm, claiming that it should have settled the case. Eventually, State Farm paid the entire $185,000, but Campbell still sued the company, alleging fraud and intentional infliction of emotional distress.

His lawyers presented evidence that State Farm had deliberately acted in its own best interests rather than his. The jury was convinced, and in the end, Campbell won an award of $1 million in compensatory damages and $145 million in punitive damages. State Farm appealed.

Issue: ***What is the limit on punitive damages?***

Excerpts from Justice Kennedy's Opinion: We address whether an award of $145 million in punitive damages, where full compensatory damages are $1 million, is excessive and in violation of the Due Process Clause. The Utah Supreme Court relied upon testimony indicating that State Farm's actions, because of their clandestine nature, will be punished at most in 1 out of every 50,000 cases as a matter of statistical probability, and concluded that the ratio between punitive and compensatory damages was not unwarranted.

Compensatory damages are intended to redress the concrete loss that the plaintiff has suffered by reason of the defendant's wrongful conduct. By contrast, punitive damages serve a broader function; they are aimed at deterrence and retribution.

The Due Process Clause prohibits the imposition of grossly excessive or arbitrary punishments. The reason is that elementary notions of fairness dictate that a person receive fair notice not only of the conduct that will subject him to punishment, but also of the severity of the penalty that a State may impose. To the extent an award is grossly excessive, it furthers no legitimate purpose and constitutes an arbitrary deprivation of property. A defendant should be punished for the conduct that harmed the plaintiff, not for being an unsavory.

We decline to impose a bright-line ratio which a punitive damages award cannot exceed. Our jurisprudence and the principles it has now established demonstrate, however, that, in practice, few awards exceeding a single-digit ratio between punitive and compensatory damages, to a significant degree, will satisfy due process. Single-digit multipliers are more likely to comport with due process, while still achieving the State's goals of deterrence and retribution, than awards with ratios in the range of 145 to 1.

Nonetheless, because there are no rigid benchmarks that a punitive damages award may not surpass, ratios greater than those we have previously upheld may comport with due process where a particularly egregious act has resulted in only a small amount of economic damages. The precise award in any case must be based upon the facts and circumstances of the defendant's conduct and the harm to the plaintiff.

In sum, courts must ensure that the measure of punishment is both reasonable and proportionate to the amount of harm to the plaintiff and to the general damages recovered. In the context of this case, we have no doubt that there is a presumption against an award that has a 145-to-1 ratio. The compensatory award in this case was substantial; the Campbells were awarded $ 1 million for a year and a half of emotional distress. This was complete compensation. The harm arose from a transaction in the economic realm, not from some physical assault or trauma; there were no physical injuries; and State Farm paid the excess verdict before the complaint was filed, so the Campbells suffered only minor economic injuries.

The judgment of the Utah Supreme Court is reversed, and the case is remanded for proceedings not inconsistent with this opinion.

Dramatic cases may *still* lead to very large awards.

And so, the Supreme Court seeks to limit, but not completely prohibit, enormous punitive damages. A California Court of Appeals decided the following case two years after *State Farm v. Campbell*. How should it implement the Supreme Court's guidelines? You be the judge.

You be the Judge

BOEKEN V. PHILIP MORRIS, INCORPORATED

127 Cal. App.4th 1640, 26 CalRptr.3d 638
California Court of Appeals, 2005

Facts: In the mid-1950s, Richard Boeken began smoking Marlboro cigarettes at the age of 10. Countless advertisements, targeted at boys aged 10 to 18, convinced him and his friends that the "Marlboro man" was powerful, healthy, and manly. Eventually Richard changed to "Marlboro Lite" cigarettes but continued smoking into the 1990s, when he was diagnosed with lung cancer. He filed suit against Philip Morris, the cigarette manufacturer, for fraud and other torts. He died of cancer before the case was concluded.

Evidence at trial demonstrated that by the mid-1950s, scientists uniformly accepted that cigarette smoking caused lung cancer. However, at about the same time, Philip Morris and other tobacco companies began a decades-long campaign to convince the public that there was substantial doubt about any link between smoking and illness. The plaintiffs also demonstrated that tobacco was physically addictive, and that Philip Morris added ingredients such as urea to its cigarettes to increase their addictive power. Boeken testified that in the late 1960s he saw the Surgeon General warnings about the risk of smoking but trusted the cigarette company's statements that smoking was safe. By the 1970s he tried many times, and many cures, to stop smoking but always failed. He finally quit just before surgery to remove part of his lung but resumed after the operation.

The jury found Philip Morris liable for fraudulently concealing that cigarettes were addictive and carcinogenic. It awarded Boeken $5.5 million in compensatory damages, and also assessed punitive damages—of $3 *billion*. The trial judge reduced the punitive award to $100 million. Philip Morris appealed.

You Be the Judge: ***Was the punitive damage award too high, too low, or just right?***

Argument for Philip Morris: The court should substantially reduce the $100 million punitive award because it constitutes an "arbitrary deprivation of property." The Supreme Court has indicated that punitive awards should not exceed compensatory damages by more than a factor of nine. The jury awarded Mr. Boeken $5.5 million in compensatory damages, which means that punitive damages should absolutely not exceed $49.5 million. We argue that they should be even lower.

Cigarettes are a legal product, and our packages have displayed the Surgeon General's health warnings for decades. Mr. Boeken's death is tragic, but his cancer was not necessarily caused by Marlboro cigarettes. And even if cigarettes did contribute to his failing health, Mr. Boeken chose to smoke throughout his life, even after major surgery on one of his lungs.

Argument for Boeken: The Supreme Court says that "few" cases may exceed the 9-to-1 ratio, but that "the precise award in any case must be based upon the facts and circumstances of the defendant's conduct and the harm to the plaintiff." Phillip Morris created ads that targeted children, challenged clear scientific data that its products caused cancer, and added substances to its cigarettes to make them more addictive. Does it get worse than that?

As for harm to the plaintiff, he died a terrible death from cancer. Philip Morris cigarettes kill 200,000 American customers each year. The defendant's conduct could not be more reprehensible. Philip Morris's weekly profit is roughly $100 million. At a minimum, the court should keep the punitive award at that figure. But we ask that the court reinstate the jury's original $3 billion award.

Tort Reform and The Exxon Valdez

Some people believe that jury awards are excessive and need statutory reform, while others argue that the evidence demonstrates excessive awards are rare and modest in size. About one-half of the states have passed limits. The laws vary, but many distinguish between **economic damage** and **non-economic damages**. In such a state, a jury is permitted to award any amount for economic damages, meaning lost wages, medical expenses, and other measureable losses. However, noneconomic damages—pain and suffering and other losses that are difficult to measure—are capped at some level, such as $500,000. In some states, punitive awards have similar caps. These restrictions can drastically lower the total verdict.

In the famous *Exxon Valdez* case, the Supreme Court placed a severe limit on a certain type of punitive award. It is unclear how influential the decision will be because the case arises in the isolated area of maritime law, which governs ships at sea. Nonetheless, the justices wrote at length about punitive awards, and the decision may reverberate in future holdings. This is what happened.

Captain Joseph Hazelwood's negligence caused the *Exxon Valdez* to run aground off the coast of Alaska. The ship dumped 11 million gallons of oil into the sea, damaging 3,000 square miles of vulnerable ecosystem. The oil spill forced fishermen into bankruptcy, disrupted entire communities, and killed hundreds of thousands of birds and marine animals. A decade later, many of the damaged species had not recovered. The jury decided that Exxon had been reckless by allowing Hazelwood to pilot the ship when the company knew he was an alcoholic. The jury awarded compensatory damages to the plaintiffs, and punitive damages of $5 *billion*. Exxon appealed.

Almost two decades after the accident, the Supreme Court ruled. The justices discussed punitive damages in general, noting that much of the criticism of punitive awards appeared overstated. The court declared there had been no major increase in how frequently juries gave punitive damages. In the unusual cases where jurors made such awards, the sums were modest. The problem, declared the justices, was the unpredictability of punitive damages.

The court ruled that *in maritime cases,* the ratio should be no higher than 1:1. The court approved the jury's compensatory award of $507 million, and then reduced the punitive award from $5 billion to $507 million. Supporters of the court's decision stated that it would allow businesses to make plans based on predictable outcomes. Opponents said that the justices ignored the jury's finding of reckless behavior and calamitous environmental harm.[11]

EXAM Strategy

Question: Patrick owns a fast food restaurant which is repeatedly painted with graffiti. He is convinced that 15-year-old John, a frequent customer, is the culprit. The next time John comes to the restaurant, Patrick locks the men's room door while John is inside. Patrick calls the police, but because of a misunderstanding, the police are very slow to arrive. John shouts and cries for help, banging on the door, but Patrick does not release him for two hours. John sues. He claims that he has suffered great psychological harm because of the incident; his psychiatrist asserts that John may have unpredictable suffering in the future. John sues for assault, battery, and false imprisonment. Will he win? May John return to court in the future to seek further damages?

[11] *Exxon Shipping Co. v. Baker*, 128 S.Ct. 2605 (2008).

Strategy: The question focuses on two issues: First, the distinction between several intentional torts; second, damages. Analyze one issue at a time. As to the intentional torts, what injury has John suffered? He was locked in the men's room and suffered psychological harm. Recall the elements of the three possible torts. Battery concerns an offensive touching. A defendant commits assault by causing an imminent fear of battery. False imprisonment: a store may detain someone if it does so reasonably.

As to damages, review the *single recovery principle.*

© Sean Gladwell/Shutterstock

Is it reasonable for the owner of this property to detain the suspected vandal?

Result: Locking John up for two hours, based on an unproven suspicion, was clearly unreasonable. Patrick has committed false imprisonment. The single recovery principle forces John to recover now for all past and future harm. He may not return to court later and seek additional damages.

Business Torts

In this section, we look at several intentional torts that occur almost exclusively in a commercial setting: interference with a contract, interference with a prospective advantage, the rights to privacy and publicity, and Lanham Act violations. Note that several business torts are discussed elsewhere in the book:

- Patents, copyrights, and trademarks are discussed in Chapter 42, on intellectual property.
- False advertising, discussed in part under the Lanham Act section (later in this chapter), is considered more broadly in Chapter 39, on consumer law.
- Consumer issues are also covered in Chapter 39. The material in the present chapter focuses not on consumer claims but on disputes between businesses.

Tortious Interference with Business Relations

Competition is the essence of business. Successful corporations compete aggressively, and the law permits and expects them to. But there are times when healthy competition becomes illegal interference. This is called tortious interference with business relations. It can take one of two closely related forms—interference with a contract or interference with a prospective advantage.

Tortious Interference with a Contract

Tortious interference with a contract
An intentional tort in which the defendant improperly induced a third party to breach a contract with the plaintiff.

Tortious interference with a contract exists if the plaintiff can establish the following four elements:

- There was a contract between the plaintiff and a third party;
- The defendant knew of the contract;
- The defendant improperly *induced* the third party to breach the contract or made performance of the contract impossible; and
- There was injury to the plaintiff.

Because businesses routinely compete for customers, employees, and market share, it is not always easy to identify tortious interference. There is nothing wrong with two companies bidding against each other to buy a parcel of land, and nothing wrong with one corporation doing everything possible to convince the seller to ignore all competitors. But once a company has signed a contract to buy the land, it is improper to induce the seller to break the deal. The most commonly disputed issues in these cases concern elements one and three: was there a contract between the plaintiff and another party? Did the defendant improperly induce a party to breach it? Defendants will try to show that the plaintiff had no contract.

A defendant may also rely on the defense of **justification**, that is, a claim that special circumstances made its conduct fair. To establish justification, a defendant must show that:

- It was acting to protect an existing economic interest, such as its own contract with the third party;
- It was acting in the public interest, for example, by reporting to a government agency that a corporation was overbilling for government services; or
- The existing contract could be terminated at will by either party, meaning that although the plaintiff had a contract, the plaintiff had no long-term assurances because the other side could end it at any time.

Texaco v. Pennzoil

The jury returned an enormous verdict in a famous case of contract interference. *Texaco, Inc. v. Pennzoil Co.* illustrates the two key issues: did a contract exist, and was the defendant's behavior improper? Pennzoil made an unsolicited bid to buy 20 percent of Getty Oil at \$100 per share. This offer was too low to satisfy the Getty board of directors, but it got the parties talking. The price increased to \$110 per share, and the two sides began to put together pieces of a complicated deal: Gordon Getty would control four-sevenths of the Getty Oil stock, and Pennzoil would control three-sevenths. The J. Paul Getty Museum, which owned 11.8 percent of Getty stock, agreed to sell its shares provided it was paid immediately. Talks continued, the price moved up to \$112.50 a share, and finally

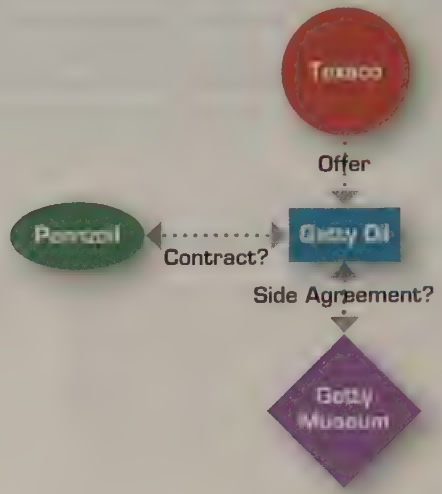

EXHIBIT 6.2 The $10 *billion* question. Texaco offered to pay $125 per share for Getty stock. The key issue was this: when Texaco made the offer, did a contract exist between Pennzoil and Getty? If, as the jury decided, there was a binding agreement, then Texaco committed tortious interference with a contract. If, however, Getty Corp. had a side agreement with the Getty Museum (one of its owners), then arguably there could be no contract between Getty and Pennzoil, and Texaco would have committed no tort at all.

the Getty board voted to approve the deal. A press release announced an agreement in principle between Pennzoil and Getty.

Before the lawyers for both sides could complete the paperwork for the deal, Texaco appeared and offered Getty stockholders $125 per share for the entire company and later upped that offer to $128. Getty turned its attention to Texaco, leaving Pennzoil the jilted lover. This lover, though, decided to sue. In Texas state court, Pennzoil claimed that Texaco had maliciously interfered with a Pennzoil–Getty contract, costing Pennzoil vast amounts of money.

Texaco argued that it had acted in good faith, asserting that there was no binding contract between the other two. But the jury bought Pennzoil's argument, and they bought it big: $7.53 billion in actual damages, plus $3 billion more in punitive damages. Texaco did not happen to have $10 billion it could spare, and the verdict threatened to destroy the oil company. Texaco appealed, but Texas appeals courts require a bond, in this case a $10 billion bond, meaning that the money must be paid into court while the appeal goes forward. Texaco filed for bankruptcy.

At the state supreme court, Texaco based its argument on an obscure rule of the Securities and Exchange Commission (SEC), Rule 10B-13. This rule prevents the parties in a takeover negotiation from arranging a "side deal" while an offer is pending. Texaco's argument thus became: Pennzoil's original $100 per share offer was still pending when the two sides came up with their $112.50 per share, "three-sevenths/four-sevenths" deal. That deal involved a side arrangement with the Getty Museum, which would get its money faster than any other shareholders would. Because it would get about $1 billion, early receipt was a major financial advantage. The deal violated Rule 10B-13 and was therefore invalid. There was no contract, and Texaco could not legally have interfered.

A $10 billion case would be decided on the classic "interference" issue of whether a contract existed. Then the SEC entered the case, filing a brief that appeared strongly to support Texaco's interpretation of the law. Pennzoil could sense that the tide was turning, and the companies settled: Texaco agreed to pay Pennzoil $3 billion as settlement for having wrongfully interfered with Pennzoil's agreement to buy Getty.

Tortious Interference with a Prospective Advantage

Tortious interference with a prospective advantage Malicious interference with a developing economic relationship.

Interference with a prospective advantage is an awkward name for a tort that is simply a variation on interference with a contract. The difference is that, for this tort, there need be no contract; the plaintiff is claiming outside interference with an expected economic relationship. Obviously, the plaintiff must show more than just the hope of a profit. **A plaintiff who has a definite and reasonable expectation of obtaining an economic advantage may sue a corporation that maliciously interferes and prevents the relationship from developing.**

The defense of justification, discussed above, applies here as well. A typical example of justification is that the defendant is simply competing for the same business that the plaintiff seeks. There is nothing wrong with that.

To demonstrate interference with a prospective advantage, most courts require a plaintiff to show that the defendant's conduct was independently unlawful. Suppose Pink manufactures valves used in heart surgery. Pink is about to sign a deal for Rabbit to distribute the products. Zebra then says to Pink, "I want that deal. If you sign with Rabbit, I'll spread false rumors that the valves are unreliable." Pink gives in and signs a contract with Zebra. Zebra has committed interference with a prospective advantage because slander is independently illegal.[12]

The ice cream fight that follows demonstrates why plaintiffs often file but seldom win these cases.

Carvel v. Noonan

3 N.Y.3d 182, 785 N.Y.S.2d 359, 818 N.E.2d 1100
New York Court of Appeals, 2004

Facts: For decades, Carvel sold its ice cream only through franchised stores. However, a decline in revenues caused the company to begin selling its product in supermarkets. That effort expanded quickly, but many of the franchised stores (franchisees) went out of business. Franchisees filed suit, claiming tortious interference with a prospective advantage. In particular, the plaintiffs argued that Carvel undersold them in supermarkets and issued coupons only redeemable there. The case reached New York's highest court.

Issue: ***Had Carvel committed tortious interference with a prospective advantage?***

Excerpts from Justice Smith's Decision: The franchisees' tort claim is that Carvel unlawfully interfered with the relationships between the franchisees and their customers. The franchisees do not claim that the customers had binding contracts that Carvel induced them to breach; they allege only that, by implementing its supermarket program, Carvel induced the customers not to buy Carvel products from the franchisees. The juries have found that Carvel did so induce customers, and the question for us is whether that inducement was tortious interference under New York law.

We have recognized that inducing breach of a binding agreement and interfering with a nonbinding "economic relation" can both be torts, but that the elements of the two torts are not the same. Where there has been no breach of an existing contract, but only interference with prospective contract rights, however, plaintiff must show

[12]For a more detailed explanation, see *Wal-Mart Stores, Inc. v. Sturges*, 52 S.W.3d 711, 2001 Tex. LEXIS 18 (Tex. 2001).

more culpable conduct on the part of the defendant. The implication is that, as a general rule, the defendant's conduct must amount to a crime or an independent tort.

The franchisees claim that Carvel did use wrongful "economic pressure" but that argument is ill-founded for two independent reasons. First, it is ill-founded because the economic pressure that must be shown is not, as the franchisees assume, pressure on the franchisees, but on the franchisees' customers. Conduct constituting tortious interference with business relations is, by definition, conduct directed not at the plaintiff itself, but at the party with which the plaintiff has or seeks to have a relationship.

Here, all Carvel did to the franchisees' customers was to make Carvel goods available in supermarkets at attractive prices; this was not "pressure" on these third parties but legitimate "persuasion," and thus tortious interference with economic relations was not established.

The franchisees' argument is also ill-founded because the Carvel activities they complain of do not amount to the sort of extreme and unfair "economic pressure" that might be "wrongful." The crux of the franchisees' complaint is that Carvel distributed its products through competitive channels, to an extent and in a way that was inconsistent with the franchisor-franchisee relationship. But the relationship between franchisors and franchisees is a complex one; while cooperative, it does not preclude all competition; and the extent to which competition is allowed should be determined by the contracts between the parties, not by courts or juries seeking after the fact to devise a code of conduct.

Apart from attacking the supermarket program in general as excessively and destructively competitive, the franchisees also attack the coupon-redemption element of that program as excessive "economic pressure." The essence of the coupon program was to give customers who used coupons a better price when they shopped in supermarkets. The mere institution of a coupon program was not "economic pressure" rising to the level of "wrongful" or "culpable" conduct.

[Carvel's conduct was not tortious interference with a prospective advantage.]

Privacy and Publicity

We live in a world of dazzling technology, and it is easier than ever—and more profitable—to spy on someone. Does the law protect us? What power do we have to limit the intrusion of others into our lives and to prohibit them from commercially exploiting information about us?

Intrusion

Intrusion
A tort in which a reasonable person would find the invasion of her private life offensive.

Intrusion into someone's private life is a tort if a reasonable person would find it offensive. Peeping through someone's windows or wiretapping his telephone are obvious examples of intrusion. In a famous case involving a "paparazzo" photographer and Jacqueline Kennedy Onassis, the court found that the photographer had invaded her privacy by making a career out of photographing her. He had bribed doormen to gain access to hotels and restaurants she visited, had jumped out of bushes to photograph her young children, and had driven power boats dangerously close to her. The court ordered him to stop.[13] Nine years later the paparazzo was found in contempt of court for again taking photographs too close to Ms. Onassis. He agreed to stop once and for all—in exchange for a suspended contempt sentence.

Commercial Exploitation

The right to commercial exploitation prohibits the use of someone's likeness or voice for commercial purposes without permission. This business tort is the flip side of privacy and covers the right to make money from publicity. For example, it would be illegal to run a

[13] *Galella v. Onassis*, 487 F.2d 986, 1973 U.S. App. LEXIS 7901 (2d Cir. 1973).

magazine ad showing Keira Knightley holding a can of soda without her permission. The ad would imply that she endorses the product. Someone's identity is her own, and it cannot be used for commercial gain unless she permits it.

Ford Motor Co. hired a singer to imitate Bette Midler's version of a popular song. The imitation was so good that most listeners were fooled into believing that Ms. Midler was endorsing the product. That, ruled a court, violated her right to commercial exploitation.[14]

The Lanham Act

The Lanham Act provides broad protection against false statements intended to hurt another business. In order to win a case, a plaintiff must prove three things:

- That the defendants made false or misleading fact statements about the plaintiff's business. This could be a false comparative ad, showing the plaintiff's product to be worse than it is, or it could be a misleading ad, which, though literally accurate, is misleading about the defendant's own product.
- That the defendants used the statements in commercial advertising or promotion. In order to protect First Amendment rights of free speech, particularly political and social commentary, this act covers only commercial speech. A radio ad for beer could violate the Lanham Act; but a radio ad urging that smoking be abolished in public places is not a commercial statement and cannot violate the act.
- That statements created the likelihood of harm to the plaintiff.[15]

"Knock It Off brand food supplement will help you lose weight and gain muscle faster than any competing supplement," shrieks the television commercial, offering an independent study as proof. However, a competitor sues, and demonstrates that during the study, users of Knock It Off received free health club memberships and low-fat gourmet meals, distorting the results. Knock It Off has violated the Lanham Act. The court will order the company to knock it off and stop showing the commercial, and also to pay damages to the injured competitor.

Chapter Conclusion

This chapter has been a potpourri of misdeeds, a bubbling cauldron of conduct best avoided. Although tortious acts and their consequences are diverse, two generalities apply. First, the boundaries of intentional torts are imprecise, the outcome of a particular case depending to a considerable extent upon the factfinder who analyzes it. Second, the thoughtful executive and the careful citizen, aware of the shifting standards and potentially vast liability, will strive to ensure that his or her conduct never provides that factfinder an opportunity to give judgment.

[15] 18 U.S.C. § 2511.

EXAM REVIEW

1. **TORT** A tort is a violation of a duty imposed by the civil law. (pp. 131–132)

EXAM Strategy

Question: Keith is driving while intoxicated. He swerves into the wrong lane and causes an accident, seriously injuring Caroline. Which statement is true?

a. Caroline could sue Keith, who might be found guilty in her suit.

b. Caroline and the state could start separate criminal cases against Keith.

c. Caroline could sue Keith, and the state could prosecute Keith for drunk driving.

d. The state could sue Keith but only with Caroline's consent.

e. The state could prosecute Keith and sue him at the same time, for drunk driving.

Strategy: What party prosecutes a criminal case? The government does, not the injured party. What is the result in a criminal case? Guilt or innocence. What about a tort lawsuit? The injured party brings a tort suit. The defendant may be found liable but never guilty. (See the "Result" at the end of this section.)

2. **DEFAMATION** Defamation involves a defamatory statement that is false, uttered to a third person, and causes an injury. Opinion and privilege are valid defenses. (pp. 132–134)

EXAM Strategy

Question: Benzaquin had a radio talk show. On the program, he complained about an incident in which state trooper Fleming had stopped his car, apparently for lack of a proper license plate and safety sticker. Benzaquin explained that the license plate had been stolen and the sticker fallen onto the dashboard, but Fleming refused to let him drive away. Benzaquin and two young grandsons had to find other transportation. On the show, Benzaquin angrily recounted the incident, then described Fleming and troopers generally: "we're not paying them to be dictators and Nazis"; "this man is an absolute barbarian, a lunkhead, a meathead." Fleming sued Benzaquin for defamation. Comment.

Strategy: Review the elements of defamation. Can these statements be proven true or false? If not, what is the result? Look at the defenses. Does one apply? (See the "Result" at the end of this section.)

3. **MALICE** Public personalities can win a defamation suit only by proving actual malice. (pp. 133–134)

4. **FALSE IMPRISONMENT** False imprisonment is the intentional restraint of another person without reasonable cause and without consent. (p. 134)

5. **EMOTIONAL DISTRESS** The intentional infliction of emotional distress involves extreme and outrageous conduct that causes serious emotional harm. (pp. 135–136)

6. **BATTERY** Battery is an intentional touching of another person in a way that is unwanted or offensive. Assault involves an act that makes the plaintiff fear an imminent battery. (p. 136)

EXAM Strategy

Question: Caudle worked at Betts Lincoln-Mercury dealer. During an office party, many of the employees, including president Betts, were playing with an electric auto condenser, which gave a slight shock when touched. Some employees played catch with it. Betts shocked Caudle on the back of his neck, and chased him around. The shock later caused Caudle to suffer headaches, pass out, feel numbness, and eventually to require nerve surgery. He sued Betts for battery. Betts defended by saying that it was all horseplay and that he had intended no harm. Please rule.

Strategy: Betts argues he intended no harm. Is intent to harm an element? (See the "Result" at the end of this section.)

7. **DAMAGES** Compensatory damages are the normal remedy in a tort case. In unusual cases, the court may award punitive damages, not to compensate the plaintiff but to punish the defendant. (pp. 138–144)

8. **TORTIOUS INTERFERENCE** Tortious interference with business relations involves the defendant harming an existing contract or a prospective relationship that has a definite expectation of success. (pp. 145–148)

9. **PRIVACY AND PUBLICITY** The related torts of privacy and publicity involve unreasonable intrusion into someone's private life and unfair commercial exploitation by using someone's name, likeness, or voice without permission. (p. 148)

10. **LANHAM ACT** The Lanham Act prohibits false statements in commercial advertising or promotion. (p. 149)

1. Result: (a) is wrong because a defendant cannot be found guilty in a civil suit. (b) is wrong because a private party has no power to prosecute a criminal case. (c) is correct. (d) is wrong because the state will prosecute Keith, not sue him. (e) is wrong for the same reason.

2. Result: The court ruled in favor of Benzaquin because a reasonable person would understand the words to be opinion and ridicule. They are not statements of fact because most of them could not be proven true or false. A statement like "dictators and Nazis" is not taken literally by anyone.[16]

[16] *Fleming v. Benzaquin*, 390 Mass. 175, 454 N.E.2d 95 (1983).

6. Result: The court held that it was irrelevant that Betts had shown no malice toward Caudle nor intended to hurt him. Betts *intended the physical contact* with Caudle, and even though he could not foresee everything that would happen, he is liable for all consequences of his intended physical action.[17]

Multiple-Choice Questions

1. Jane writes an article for a newspaper reporting that Ann was arrested for stealing a car. The story is entirely false. Ann is not a public figure. Which of the following torts has Jane committed?

(a) Ordinary slander

(b) Slander per se

(c) Libel

(d) None of the above

2. Refer back to Question 1. If Ann decides to sue, she ________________ have to show evidence that she suffered an injury. If she ultimately wins her case. a jury ________________ have the option to award punitive damages.

(a) will; will

(b) will; will not

(c) will not; will

(d) will not; will not

3. Sam sneaks up on Tom, hits him with a baseball bat, and knocks him unconscious. Tom never saw Sam coming. He wakes up with a horrible headache. Which of the following torts has Sam committed?

(a) Assault

(b) Battery

(c) Both A and B

(d) None of the above

4. Imagine a case in which a jury awards compensatory damages of $1 million. If this is not a maritime case, a jury would rarely be allowed to award more than ___________________ in punitive damages.

(a) $1 million

(b) $3 million

(c) $9 million

(d) $10 million

(e) $25 million

[17] *Caudle v. Betts*, 512 So.2d 389 (La.1987).

5. Al runs a red light and hits Carol's car. She later sues, claiming the following losses:

   $10,000—car repairs

   $10,000—medical expenses

   $10,000—lost wages (she could not work for two months after the accident)

   $10,000—pain and suffering

   If the jury believes all of Carol's evidence and she wins her case, how much will she receive in *compensatory* damages?

   (a) $40,000

   (b) $30,000

   (c) $20,000

   (d) $10,000

   (e) $0

ESSAY QUESTIONS

1. You are a vice president in charge of personnel at a large manufacturing company. In-house detectives inform you that Gates, an employee, was seen stealing valuable computer equipment. Gates denies the theft, but you believe the detectives and fire him. The detectives suggest that you post notices around the company, informing all employees what happened to Gates and why, because it will discourage others from stealing. While you are considering that, a phone call from another company's personnel officer asks for a recommendation for Gates. Should you post the notices? What should you say to the other officer?

2. Caldwell was shopping in a K-Mart store, carrying a large purse. A security guard observed her looking at various small items such as stain, hinges, and antenna wire. On occasion, she bent down out of sight of the guard. The guard thought he saw Caldwell put something in her purse. Caldwell removed her glasses from her purse and returned them a few times. After she left, the guard approached her in the parking lot and said that he believed she had store merchandise in her pocketbook, but he could not say what he thought was put there. Caldwell opened the purse, and the guard testified that he saw no K-Mart merchandise in it. The guard then told Caldwell to return to the store with him. They walked around the store for approximately 15 minutes, while the guard said six or seven times that he saw her put something in her purse. Caldwell left the store after another store employee indicated she could go. Caldwell sued. What kind of suit did she file, and what should the outcome be?

3. Tata Consultancy of Bombay, India, is an international computer consulting firm. It spends considerable time and effort recruiting the best personnel from India's leading technical schools. Tata employees sign an initial three-year employment commitment, often work overseas, and agree to work for a specified additional time when they return to India. Desai worked for Tata, but then he quit and formed a competing company, which he called Syntel. His new company contacted Tata employees by phone, offering higher salaries, bonuses, and assistance in obtaining permanent resident visas in the United States if they would come work for Syntel. At least 16 former Tata employees left their jobs without completing their contractual

obligations and went to work for Syntel. Tata sued. What did it claim, and what should be the result?

4. Pacific Express began operating as an airline in 1982. It had routes connecting western cities with Los Angeles and San Francisco, and by the summer of 1983, it was beginning to show a profit. In 1983, United Airlines tried to enter into a cooperative arrangement with Pacific in which United would provide Pacific with passengers for some routes so that United could concentrate on its longer routes. Negotiations failed. Later that year, United expanded its routes to include cities that only Pacific had served. United also increased its service to cities in which the two airlines were already competing. By early 1984, Pacific Express was unable to compete and sought protection under bankruptcy laws. It also sued United, claiming interference with a prospective advantage. United moved for summary judgment. Comment.

5. **YOU BE THE JUDGE WRITING PROBLEM** Johnny Carson was for many years the star of a well-known television show, *The Tonight Show*. For about 20 years, he was introduced nightly on the show with the phrase, "Here's Johnny!" A large segment of the television watching public associated the phrase with Carson. A Michigan corporation was in the business of renting and selling portable toilets. The company chose the name "Here's Johnny Portable Toilets," and coupled the company name with the marketing phrase, "The World's Foremost Commodian." Carson sued, claiming that the company's name and slogan violated his right to commercial exploitation.

   Argument for Carson: The toilet company is deliberately taking advantage of Johnny Carson's good name. He worked hard for decades to build a brilliant career and earn a reputation as a creative, funny, likable performer. No company has the right to use his name, his picture, or anything else closely identified with him, such as the phrase "Here's Johnny." The pun is personally offensive and commercially unfair.

   Argument for Here's Johnny Portable Toilets: Johnny Carson doesn't own his first name. It is available for anyone to use for any purpose. Further, the popular term "john," meaning toilet, has been around much longer than Carson or even television. We are entitled to make any use of it we want. Our corporate name is amusing to customers who have never heard of Carson, and we are entitled to profit from our brand recognition.

Discussion Questions

1. The Supreme Court limits punitive damages in most cases to nine times the compensatory damages awarded in the same case. Is this a sensible guideline? If not, should it be higher or lower?

2. You have most likely heard of the *Liebeck v. McDonalds* case. Liebeck spilled hot McDonald's coffee in her lap and suffered third-degree burns. At trial, evidence showed that her cup of coffee was brewed at 190 degrees, and that, more typically, a restaurant's "hot coffee" is in the range of 140 to 160 degrees.

A jury awarded Liebeck $160,000 in compensatory damages and $2.7 million in punitive damages. The judge reduced the punitive award to $480,000, or three times the compensatory award.

Comment on the case and whether the result was reasonable.

3. Celebrities often have problems with tabloids and the paparazzi. It is difficult for public figures to win libel lawsuits because they must show actual malice. Intrusion lawsuits are also tricky, and flocks of photographers often stalk celebrities at all hours.

Is this right? Should the law change to offer more privacy to famous people? Or is a loss of privacy just the price of success?

4. With a national debt in the trillions, people are desensitized to "mere" billions. Stop for a moment and consider $1 billion. If you had that sum, invested it conservatively, and got a 5 percent return, you could spend roughly $1 million *a week* for the rest of your life *without reducing your principal.*

This chapter described three lawsuits with jackpot punitive damage awards. The jury award was $10 billion in *Texaco v. Pennzoil,* $5 billion in the *Exxon Valdez* case, and $3 billion in *Boeken v. Philip Morris.* Is there any point at which the raw number of dollars awarded is just too large? Was the original jury award excessive in any of these cases? If so, which one(s)?

5. Many retailers have policies that instruct employees *not* to attempt to stop shoplifters. Some store owners fear false imprisonment lawsuits and possible injuries to workers more than losses related to stolen merchandise.

Are these "don't be a hero" policies reasonable? Would you put one in place if you owned a retail store?

CHAPTER 7

NEGLIGENCE AND STRICT LIABILITY

© r.nagy/Shutterstock.com

If you give a party, should *you* be responsible for any damage caused by intoxicated guests?

Submitted for your consideration: a timeline.

3:25 p.m.—Jake, an 18-year-old freshman, sits in his Calculus I class, bored to tears. He receives a text: "Beta Zeta rush party TONIGHT!!!" He perks up.

9:15 p.m.—Jake drives with his roommate over to the Beta Zeta rush party.

9:32 p.m.—Jake and his roommate arrive at the Beta Zeta house. No one checks for ID.

9:36 p.m.—Jake gets a beer from a keg and drinks it.

9:37 p.m.—Jake pours himself another beer and heads outside.

9:58 p.m.—After listening to the band for awhile, Jake returns to the keg and gets a third beer.

10:24 p.m.—Jake faces off with his roommate. He chugs a beer slightly faster than the roommate, and his skills are praised by the Beta Zetas.

10:48 p.m.—Jake bongs a beer.

10:51 p.m.—Jake bongs another beer.

12:26 p.m.—Jake poses slightly off-balance, and his roommate takes an iPhone photo.

12:27 a.m.—Jake's roommate sends the picture to everyone on his contact list.

12:28 a.m.—Jake receives the first of many texts making fun of him.

12:35 a.m.—Jake finds his roommate, shoves him, and threatens to kick his ***.

12:38 a.m.—Jake tells his roommate, "I love you man," and heads off to find another beer.

1:14 a.m.—Jake drinks a seventh and final beer.

1:48 a.m.—Jake and his roommate leave the Beta Zeta house. Jake drives his car.

1:49 a.m.—Jake's roommate suggests getting some tacos.

1:54 a.m.—Jake tries to park his car at Taco Bell, but he misses the brake pedal. He drives his car through a large plate glass window and does $50,000 damage to the restaurant.

Who should pay for this damage? Jake is clearly at fault, but should the Beta Zetas share legal responsibility for the property damage? The question leads to other, similar issues: should a restaurant that serves alcohol to a minor be liable for harm that the youth might cause? Should the restaurant be responsible for serving an intoxicated adult who causes damage? If you give a party, should *you* be responsible for any damage caused by intoxicated guests?

These are all practical questions—worth considering before you entertain—and moral ones as well. They are also typical issues of negligence law. In this contentious area, courts continually face one question: *when someone is injured, how far should responsibility extend?*

NEGLIGENCE

We might call negligence the "unintentional" tort because it concerns harm that arises by accident. Should a court impose liability? The fraternity members who gave the party were not trying to damage the Taco Bell, but the damage occurred all the same. Is it in society's interest to hold the fraternity responsible?

Things go wrong all the time, and people are hurt in large ways and small. Society needs a means of analyzing negligence cases consistently and fairly. We cannot have each court that hears such a lawsuit extend or limit liability based on an emotional response to the facts. One of America's greatest judges, Benjamin Cardozo, offered an analysis more than 80 years ago. In a case called *Palsgraf v. Long Island Railroad*, he made a decision that still influences negligence thinking today.

Landmark Case

PALSGRAF V. LONG ISLAND RAILROAD

248 N.Y. 339; 162 N.E. 99
Court of Appeals of New York, 1928

Facts: Helen Palsgraf was waiting on a railroad platform. As a train began to leave the station, a man carrying a package ran to catch it. He jumped aboard but looked unsteady, so a guard on the car reached out to help him as another guard, on the platform, pushed from behind. The man dropped the package, which struck the tracks and exploded—since it was packed with fireworks. The shock knocked over some heavy scales at the far end of the platform, and one of them struck Palsgraf, who was injured as a result. She sued the railroad.

Issue: ***Was the railroad liable for Palsgraf's injuries?***

Excerpts from Judge Cardozo's Decision: The conduct of the defendant's guard was not a wrong in its relation to the plaintiff, standing far away. Relatively to her it was not negligence at all. Nothing in the situation gave notice that the falling package had in it the potency of peril to persons thus removed. Negligence is not actionable unless it involves the invasion of a legally protected interest, the violation of a right. Negligence is the absence of care, according to the circumstances.

If no hazard was apparent to the eye of ordinary vigilance, an act innocent and harmless, at least to outward seeming, with reference to her, did not take to itself the quality of a tort because it happened to be a wrong with reference to some one else. "In every instance, before negligence can be predicated of a given act, back of the act must be sought and found a duty to the individual complaining.

What the plaintiff must show is "a wrong" to herself and not merely a wrong to someone else. We are told that one who drives at reckless speed through a crowded city street is guilty of a negligent act because the eye of vigilance perceives the risk of damage. The risk reasonably to be perceived defines the duty to be obeyed.

Here, by concession, there was nothing in the situation to suggest to the most cautious mind that the parcel wrapped in newspaper would spread wreckage through the station.

The law of causation, remote or proximate, is thus foreign to the case before us. If there is no tort to be redressed, there is no occasion to consider what damage might be recovered if there were a finding of a tort. The consequences to be followed must first be rooted in a wrong.

Judge Cardozo ruled that the guard's conduct might have been a wrong as to the passenger, but not as to Ms. Palsgraf, standing far away. Her negligence case failed. "Proof of negligence in the air, so to speak, will not do," declared the judge. Courts are still guided by Judge Cardozo's ruling.

To win a negligence case, a plaintiff must prove five elements. Much of the remainder of the chapter will examine them in detail. They are:

- ***Duty of Due Care.*** The defendant had a legal responsibility *to the plaintiff.* This is the point from the *Palsgraf* case.
- ***Breach.*** The defendant breached her duty of care or failed to meet her legal obligations.
- ***Factual Cause.*** The defendant's conduct actually caused the injury.
- ***Proximate Cause.*** It was *foreseeable* that conduct like the defendant's might cause *this type of harm.*
- ***Damages.*** The plaintiff has actually been hurt or has actually suffered a measureable loss.

To win a case, a plaintiff must prove all the elements listed above. If a defendant eliminates only one item on the list, there is no liability.

Duty of Due Care

Each of us has a duty to behave as a reasonable person would under the circumstances. If you are driving a car, you have a duty to all the other people near you to drive like a reasonable person. If you drive while drunk, or send text messages while behind the wheel, then you fail to live up to your duty of care.

But how *far* does your duty extend? Most courts accept Cardozo's viewpoint in the *Palsgraf* case. Judges draw an imaginary line around the defendant and say that she owes a

duty to the people within the circle, but not to those outside it. The test is generally "foreseeability." If the defendant could have foreseen injury to a particular person, she has a duty to him. Suppose that one of your friends posts a YouTube video of you texting behind the wheel and her father is so upset from watching it that he falls down the stairs. You would not be liable for the father's downfall because it was not foreseeable that he would be harmed by your texting.

Let us apply these principles to a case that, like the opening scenario, involves a fraternity party.

Hernandez v. Arizona Board of Regents

177 Ariz. 244, 866 P.2d 1330, 1994 Ariz. LEXIS 6
Arizona Supreme Court, 1994

Facts: At the University of Arizona, the Epsilon Epsilon chapter of Delta Tau Delta fraternity gave a welcoming party for new members. The fraternity's officers knew that the majority of its members were under the legal drinking age, but they permitted everyone to consume alcohol. John Rayner, who was under 21 years of age, left the party. He drove negligently and caused a collision with an auto driven by Ruben Hernandez. At the time of the accident, Rayner's blood alcohol level was .15, exceeding the legal limit. The crash left Hernandez blind and paralyzed.

Hernandez sued Rayner, who settled the case based on the amount of his insurance coverage. The victim also sued the fraternity, its officers and national organization, all fraternity members who contributed money to buy alcohol, the university, and others. The trial court granted summary judgment for all defendants and the court of appeals affirmed. Hernandez appealed to the Arizona Supreme Court.

Issue: ***Did the fraternity and the other defendants have a duty of due care to Hernandez?***

Excerpts from Justice Feldman's Decision: Before 1983, this court arguably recognized the common-law rule of non-liability for tavern owners and, presumably, for social hosts. Traditional authority held that when "an able-bodied man" caused harm because of his intoxication, the act from which liability arose was the consuming not the furnishing of alcohol.

However, the common law also provides that:

> One who supplies [a thing] for the use of another whom the supplier knows or has reason to know to be likely because of his youth, inexperience, or otherwise to use it in a manner involving unreasonable risk of physical harm to himself and others is subject to liability for physical harm resulting to them.

We perceive little difference in principle between liability for giving a car to an intoxicated youth and liability for giving drinks to a youth with a car. A growing number of cases have recognized that one of the very hazards that makes it negligent to furnish liquor to a minor is the foreseeable prospect that the [youthful] patron will become drunk and injure himself or others. Accordingly, modern authority has increasingly recognized that one who furnishes liquor to a minor breaches a common-law duty owed to innocent third parties who may be injured.

Furnishing alcohol to underaged drinkers violates numerous statutes. The conduct in question violates well-established common-law principles that recognize a duty to avoid furnishing dangerous items to those known to have diminished capacity to use them safely. We join the majority of other states and conclude that as to Plaintiffs and the public in general, Defendants had a duty of care to avoid furnishing alcohol to underage consumers.

Arizona courts, therefore, will entertain an action for damages against [one] who negligently furnishes alcohol to those under the legal drinking age when that act is a cause of injury to a third person. [Reversed and remanded.]

Ethics As the Arizona court notes, its decision agrees with the majority of courts that have considered the issue. In most (but not all) states, anyone serving alcohol to a minor is liable for injuries that result to a third party. The case raises other important issues.

- Should a social host who serves alcohol to an *adult* be liable for resulting harm? New Jersey has answered "Yes" to this question. In the Garden State, if a social host pours drinks for a friend, aware that he is becoming drunk, and the friend injures a third party, the host is fully liable. The majority of states to consider this issue have reached the opposite conclusion, holding that a social host is not liable for harm caused by an adult drinker. Are the majority of states correct to distinguish between adult and underage guests, holding a social host liable only for serving minors? Or is New Jersey correct to scrap this distinction?
- Many states now have some type of **dram act**, making liquor stores, bars, and restaurants liable for serving drinks to intoxicated customers who later cause harm. Dram shop laws force a financial dilemma on such firms. The more a tavern or café encourages its customers to drink, the greater its revenue—but also the larger its risk of a liability lawsuit. Do dram shop laws work? Yes, answer the authors of one economic study. In states with such statutes, bars monitor underage drinking more aggressively, refuse drinks earlier to an intoxicated customer, check the references of their own employees more carefully, and prohibit their workers from drinking on the job. Dram shop laws may be a promising way to reduce drunk driving accidents.[1] But are these laws reasonable? Is holding a bar responsible more reasonable than holding liable a person hosting a party at his house?
- There are many signs that society is fed up with drunk drivers. Some states have considered reducing blood alcohol limits for drunk driving to .05, which would place a typical person "over the limit" after two drinks. Are such proposals reasonable?

Dram act
A law that makes businesses liable for serving drinks to intoxicated customers who later cause harm.

In several circumstances, people have special duties to others. Three of them are outlined below.

Special Duty: Landowners

The common law applies special rules to a landowner for injuries occurring on her property. In most states, the owner's duty depends on the type of person injured.

Trespasser
A person on another's property without consent.

Lowest Liability: Trespassing Adults. A **trespasser** is anyone on the property without consent. A landowner is liable to a trespasser only for intentionally injuring him or for some other gross misconduct. The landowner has no liability to a trespasser for mere negligence. Jake is not liable if a vagrant wanders onto his land and is burned by defective electrical wires.

Mid-level Liability: Trespassing Children. The law makes exceptions when the trespassers are **children**. If there is some manmade thing on the land *that may be reasonably expected to attract children*, the landowner is probably liable for any harm. Daphne lives next door to a day-care center and builds a treehouse on her property. Unless she has fenced off the dangerous area, she is probably liable if a small child wanders onto her property and injures himself when he falls from the rope ladder to the treehouse.

---

[1]Sloan, Liang, Stout, and Whetten-Goldstein, "Liability, Risk Perceptions, and Precautions at Bars," *Journal of Law and Economics*, 2000, vol. 43, p. 473.

Higher Liability: Licensee. A **licensee** is anyone on the land for her own purposes but with the owner's permission. A social guest is a typical licensee. A licensee is entitled to a warning of hidden dangers that the owner knows about. If Juliet invites Romeo for a late supper on the balcony and fails to mention that the wooden railing is rotted, she is liable when her hero plunges to the courtyard.

But Juliet is liable only for injuries caused by *hidden* dangers—she has no duty to warn guests of obvious dangers. She need not say, "Romeo, oh Romeo, don't place thy hand in the toaster, Romeo."

© Sonya Etchison/Shutterstock

Can the owner of this trampoline be liable?

Highest Liability: Invitee. An **invitee** is someone who has a right to be on the property because it is a public place or a business open to the public. The owner has a duty of reasonable care to an invitee. Perry is an invitee when he goes to the town beach. If riptides have existed for years and the town fails to post a warning, it is liable if Perry drowns. Perry is also an invitee when he goes to Dana's coffee shop. Dana is liable if she ignores spilled coffee that causes Perry to slip.

Licensee
A person on another's land for her own purposes but with the owner's permission.

Invitee
A person who has a right to enter another's property because it is a public place or a business open to the public.

With social guests, you must have *actual knowledge* of some specific hidden danger to be liable. Not so with invitees. You are liable even if you had *no idea* that something on your property posed a hidden danger. Therefore, if you own a business, you must conduct inspections of your property on a regular basis to make sure that nothing is becoming dangerous.

The courts of some states have modified these distinctions, and a few have eliminated them altogether. California, for example, requires "reasonable care" as to all people on the owner's property, regardless of how or why they got there. But most states still use the classifications outlined above.

Special Duty: Professionals

A person at work has a heightened duty of care. While on the job, she must act as a reasonable person *in her profession*. A taxi driver must drive as a reasonable taxi driver would. A heart surgeon must perform bypass surgery with the care of a trained specialist in that field.

Two medical cases illustrate the reasonable person standard. A doctor prescribes a powerful drug without asking his patient about other medicines she is currently taking. The patient suffers a serious drug reaction from the combined medications. The physician is liable for the harm. A reasonable doctor *always* checks current medicines before prescribing new ones.

On the other hand, assume that a patient dies on the operating table in an emergency room. The physician followed normal medical procedures at every step of the procedure and acted with reasonable speed. In fact, the man had a fatal stroke. The surgeon is not liable. A doctor must do a reasonable professional job, but she cannot guarantee a happy outcome.

Special Duty: Hiring and Retention

Employers also have special responsibilities.

In a recent one-year period, more than 1,000 homicides and 2 million attacks occurred in the workplace. Companies must beware because they can be liable for hiring or retaining violent employees. A mailroom clerk with a previous rape and robbery conviction followed a secretary home after work and killed her. Even though the murder took place off the company premises, the court held that the defendant would be liable if it knew or should

have known of the mail clerk's criminal history.[2] In other cases, companies have been found liable for failing to check an applicant's driving record, contact personal references, or search criminal records.

Courts have also found companies negligent for *retaining* dangerous workers. If an employee threatens a coworker, the organization is not free to ignore the menacing conduct. If the employee acts on his threats, the company may be liable.[3]

What can an employer do to diminish the likelihood of workplace violence? Many things

- Install adequate lighting in parking lots and common areas, hire security guards if necessary, and use closed-circuit television and identification cards. The judicial trend is toward greater liability. Two decades ago, the victim of a parking lot assault could rarely recover from the store; today, such lawsuits are common and frequently successful. The financial liability can be enormous.
- Ensure that the company uses thorough pre-hire screening, contacts all former employers, and checks all references and criminal records. Nursing homes have been among the most delinquent at this, too often hiring applicants with a violent past who have later attacked elderly residents.
- Respond quickly to dangerous behavior. In many cases of workplace violence, the perpetrator had demonstrated repeated bizarre, threatening, or obsessive behavior on the job, but his supervisors had not taken it seriously. Offer counseling where appropriate and fire employees when necessary.

Breach of Duty

The second element of a plaintiff's negligence case is **breach of duty**. If a legal duty of care exists, then a plaintiff must show that the defendant did not meet it. Did the defendant act as a reasonable person, or as a reasonable professional? Did he warn social guests of hidden dangers he knew to exist in her apartment?

Normally, a plaintiff proves this part of a negligence case by convincing a jury that they would not have behaved as the defendant did—indeed, that no reasonable person would.

Negligence Per Se

In certain areas of life, courts are not free to decide what a "reasonable" person would have done because the state legislature has made the decision for them. **When a legislature sets a minimum standard of care for a particular activity, in order to protect a certain group of people, and a violation of the statute injures a member of that group, the defendant has committed negligence per se.** A plaintiff who can show negligence per se need not prove breach of duty.

In Minnesota, the state legislature became alarmed about children sniffing glue, which they could easily purchase in stores. The legislature passed a statute prohibiting the sale to a minor of any glue containing toluene or benzene. About one month later, 14-year-old Steven Zerby purchased Weldwood Contact Cement from the Coast-to-Coast Store in his hometown. The glue contained toluene. Steven inhaled the glue and died from injury to his central nervous system.

The store clerk had not realized that the glue was dangerous. Irrelevant: he was negligent per se because he violated the statute. Perhaps a reasonable person would have made the same error. Irrelevant. The legislature had passed the statute to protect children,

[3] *Yunker v. Honeywell*, 496 N.W.2d 419, 1993 Minn. App. LEXIS 230 (Minn. Ct. App. 1993).

the sale of the glue violated the law, and a child was injured. The store was automatically liable.

Causation

We have seen that a plaintiff must show that the defendant owed him a duty of care and that the defendant breached the duty. To win, the plaintiff must also show that the defendant's breach of duty *caused* the plaintiff's harm. Courts look at two separate causation issues: Was the defendant's behavior the *factual cause* of the harm? Was it the *proximate cause?*

Factual Cause

If the defendant's breach led to the ultimate harm, it is the factual cause. Suppose that Dom's Brake Shop tells a customer his brakes are now working fine, even though Dom knows that is false. The customer drives out of the shop, cannot stop at a red light, and hits a bicyclist crossing the intersection. Dom is liable to to the cyclist. Dom's unreasonable behavior was the factual cause of the harm. Think of it as a row of dominoes. The first domino (Dom's behavior) knocked over the next one (failing brakes), which toppled the last one (the cyclist's injury).

Suppose, alternatively, that just as the customer is exiting the repair shop, the cyclist hits a pothole and tumbles off her cycle. Dom has breached his duty to his customer, but he is not liable to the cyclist—she would have been hurt anyway. This is a row of dominoes that veers off to the side, leaving the last domino (the cyclist's injury) untouched. No factual causation.

Proximate Cause

For the defendant to be liable, the *type of harm* must have been reasonably *foreseeable*. In the first example just discussed, Dom could easily foresee that bad brakes would cause an automobile accident. He need not have foreseen *exactly* what happened. He did not know there would be a cyclist nearby. What he could foresee was this *general type* of harm involving defective brakes. Because the accident that occurred was of the type he could foresee, he is liable.

By contrast, assume the collision of car and bicycle produces a loud crash. Two blocks away, a pet pig, asleep on the window ledge of a twelfth-story apartment, is startled by the noise, awakens with a start, and plunges to the sidewalk, killing a veterinarian who was making a house call. If the vet's family sues Dom, should it win? Dom's negligence was the factual cause: it led to the collision, which startled the pig, which flattened the vet. Most courts would rule, though, that Dom is not liable. The type of harm is too bizarre. Dom could not reasonably foresee such an extraordinary chain of events, and it would be unfair to make him pay for it. See Exhibit 7.1. Another way of stating that Dom is not liable to the vet's family is by calling the falling pig a *superseding cause*. When one of the "dominoes" in the row is entirely unforeseeable, courts will call that event a superseding cause, letting the defendant off the hook.

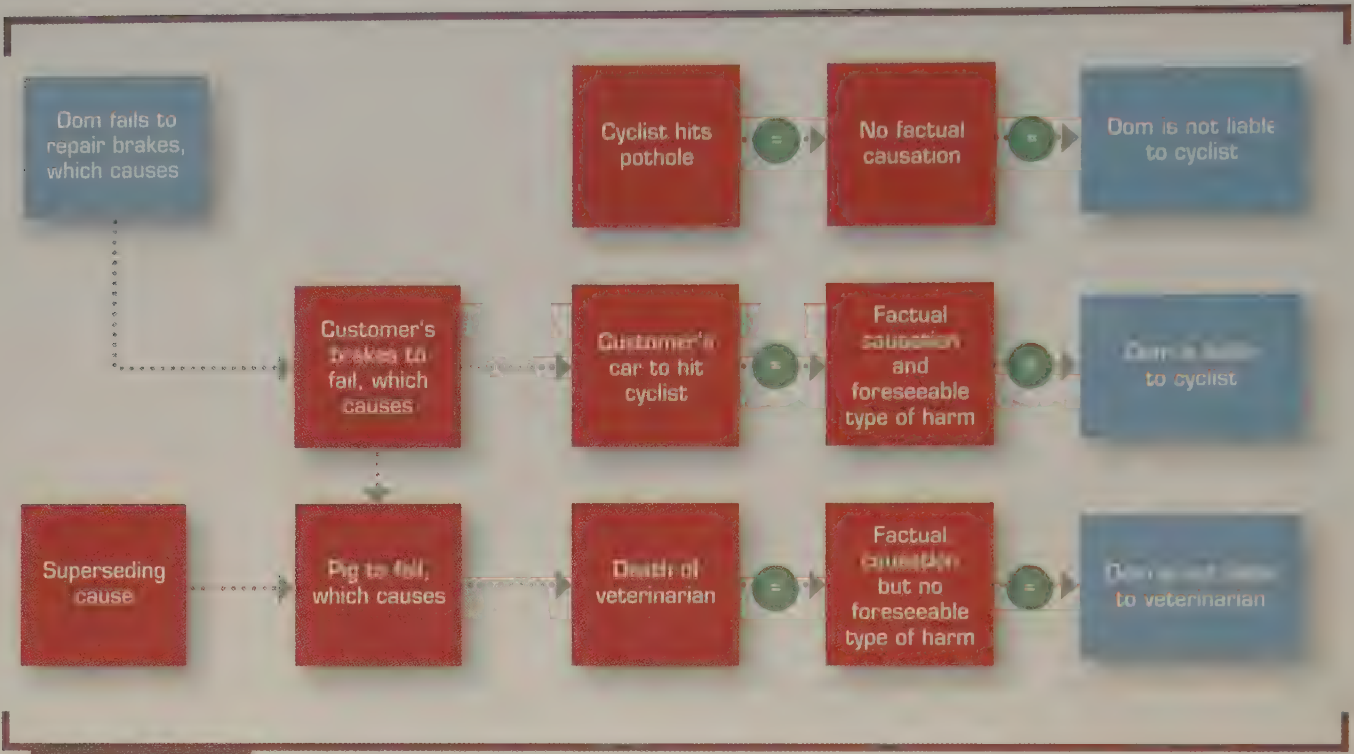

EXHIBIT 7.1

EXAM Strategy

Question: Jenny asked a neighbor, Tom, to water her flowers while she was on vacation. For three days, Tom did this without incident, but on the fourth day, when he touched the outside faucet, he received a violent electric shock that shot him through the air, melted his sneakers and glasses, set his clothes on fire, and seriously burned him. Tom sued, claiming that Jenny had caused his injuries by negligently repairing a second-floor toilet. Water from the steady leak had flooded through the walls, soaking wires and eventually causing the faucet to become electrified. You are Jenny's lawyer. Use one (and only one) element of negligence law to move for summary judgment.

Strategy: The four elements of negligence we have examined thus far are: duty to this plaintiff, breach, factual cause, and proximate cause. Which element seems to be most helpful to Jenny's defense? Why?

Result: Jenny is entitled to summary judgment because this was not a foreseeable type of injury. Even if she did a bad job of fixing the toilet, she could not reasonably have anticipated that her poor workmanship could cause *electrical* injuries to anyone.[4]

---

[4]Based on *Hebert v. Enos*, 60 Mass. App. Ct. 817, 806 N.E.2d 452 (Mass. Ct. App. 2004).

Res Ipsa Loquitur

Normally, a plaintiff must prove factual cause and foreseeable type of harm in order to establish negligence. But in a few cases, a court may be willing to *infer* that the defendant caused the harm under the doctrine of **res ipsa loquitur** ("the thing speaks for itself"). Suppose a pedestrian is walking along a sidewalk when an air conditioning unit falls on his head from a third-story window. The defendant, who owns the third-story apartment, denies any wrongdoing, and it may be difficult or impossible for the plaintiff to prove why the air conditioner fell. In such cases, many courts will apply *res ipsa loquitur* and declare that **the facts imply that the defendant's negligence caused the accident**. If a court uses this doctrine, then the defendant must come forward with evidence establishing that it did *not* cause the harm.

Res ipsa loquitur
The facts *imply* that the defendant's negligence caused the accident.

Because res ipsa loquitur dramatically shifts the burden of proof from plaintiff to defendant, it applies only when (1) the defendant had exclusive control of the thing that caused the harm, (2) the harm normally would not have occurred without negligence, and (3) the plaintiff had no role in causing the harm. In the air conditioner example, most states would apply the doctrine and force the defendant to prove she did nothing wrong.

The following case illustrates several of the elements of negligence that we have examined so far.

You be the Judge

GRIFFITH V. VALLEY OF SUN RECOVERY, INC.

126 Ariz. 227, 613 P.2d 1283
Arizona Court of Appeals, 1980

Facts: Don Gorney was a "repo man"—someone authorized to find and take cars whose owners are behind on payments. A repossessor is allowed to drive away in such a car, provided he can do it peacefully. Gorney worked for Valley of Sun Recovery. He sought a car belonging to Linda Marsalek and Bob Williams. Gorney knew that there had been other, failed efforts to repossess the Marsalek car, including a violent confrontation involving attack dogs. He thought he could do better.

Gorney went to the car at 4:00 in the morning. He unscrewed the bulb in an overhead street lamp. He unlocked the car, setting off its alarm, and quickly hid. The alarm aroused the neighborhood. Williams and a neighbor, Griffith, investigated and concluded it was an attempted theft. They called the police. Gorney watched all of this from his hiding place. When everyone had gone, Gorney entered the car, again setting off the alarm and arousing the neighborhood. Williams and Griffith again emerged, as did another neighbor, dressed in his underwear and carrying a shotgun. They all believed they had caught a thief. Williams shouted for the gun and the neighbor passed it to him, but it went off accidentally and severely injured Griffith.

Griffith sued Valley of Sun. The trial court granted summary judgment for Valley of Sun, and Griffith appealed.

You Be the Judge:

- *Did Valley of Sun have a duty to Griffith?*
- *If so, did the company breach its duty?*
- *If so, was the breach the factual cause of the injury?*
- *If so, was this type of injury foreseeable?*

Argument for Griffith: Your honors, Mr. Griffith should be allowed to make his case to a jury and let it decide whether Valley of Sun's repossession led to his injury. Mr. Griffith has demonstrated every element of negligence. Valley of Sun had a duty to everyone in the area when it attempted to repossess a car. It could easily have foreseen injury. Car repossessions always involve antagonism between the car owner and the repo company.

Obviously, Gorney breached his duty. He was caught up in some fantasy, dreaming that he was Harrison Ford in an adventure film. He knew from previous repossession attempts that trouble was certain. But rather than minimi-

zing the danger, he exacerbated it. He unscrewed a lightbulb, guaranteeing poor visibility and confusion. He set off the car alarm twice, making the whole neighborhood jittery.

Factual causation is indisputable. Had it not been for his preposterous game playing, no neighbors would have been outside, no guns present—and no accidental shooting. And this type of harm is easily foreseeable. We should have a chance to take our case to a jury.

Argument for Valley of Sun Recovery: Your honors, there are three good reasons to end this case today: no duty, no breach, no causation.

It is preposterous to suggest that Valley of Sun has a legal duty to an entire neighborhood. Car owners who are behind on their payments live in all parts of all communities. Is a repossession company to become an insurer of the entire city?

Yes, some danger is involved because delinquent owners are irresponsible and sometimes dangerous. Should we therefore allow them to keep their cars? Of course not. We must act, and that is what Valley of Sun does.

They do it safely, your honors. Even if there had been a duty, there was no breach. Mr. Gorney attempted to repossess when it was least likely anyone would see him. What should Mr. Gorney have done, asked for permission to take the car? *That* is a recipe for violence. If the owner were reasonable, there would be no repossession in the first place.

Factual causation? Valley of Sun did not create this situation. The car owners did. They bought the car and failed to pay for it. Even if there were factual causation, Valley of Sun is not liable because there is a superseding cause: the negligent use of a firearm by one of Mr. Griffith's neighbors. No jury should hear this case, your honors, because there is no case.

Damages

Finally, a plaintiff must prove that he has been injured, or that he has had some kind of measureable losses. In some cases, injury is obvious. For example, Ruben Hernandez suffered grievous harm when struck by the drunk driver. But in other cases, injury is unclear. **The plaintiff must persuade the court that he has suffered harm that is genuine, not speculative.**

Some cases raise tough questions. Among the most vexing are suits involving *future* harm. Exposure to toxins or trauma may lead to serious medical problems down the road—or it may not. A woman's knee is damaged in an auto accident, causing severe pain for two years. She is clearly entitled to compensation for her suffering. After two years, all pain may cease for a decade—or forever. Yet there is also a chance that in 15 or 20 years, the trauma will lead to painful arthritis. A court must decide today the full extent of present *and future* damages; the single recovery principle, discussed in Chapter 6, prevents a plaintiff from returning to court years later and demanding compensation for newly arisen ailments. The challenge to our courts is to weigh the possibilities and percentages of future suffering and decide whether to compensate a plaintiff for something that might never happen.

The following case examines a different issue: May a plaintiff recover damages because of the emotional injury suffered when a relative is harmed *if she does not see the accident that led to the harm*?

Ra v. Superior Court

154 Cal. App. 4th 142, 64 Ca. Rptr. 3d 539
California Court of Appeals, 2007

Facts: Michelle Ra and her husband, Phil Ra, were shopping in an Armani Exchange in Old Town, Pasadena. Michelle was looking at merchandise in the women's section while Phil examined men's sweaters about 10 or 15 feet away. Michelle was not facing her husband when she heard a loud bang. A large, overhead

store sign had fallen, striking Phil and seriously injuring him. Michelle turned, saw her husband bent over in pain, and hurried to him.

The Ras sued Armani for negligence in permitting the sign to fall, and also for the emotional distress suffered by Michelle. This case concerns only Michelle's claim. The trial court granted summary judgment to the store, declaring that Michelle had not made out a valid claim of bystander recovery because she had not seen the accident occur. She appealed.

Issue: ***May a bystander recover for emotional distress caused by an accident that she did not see?***

Excerpts from Judge Perluss's Decision: [In a pretrial deposition, Michelle was asked:] At that moment you heard the sound, did you know your husband had been involved in any kind of accident; this is before you looked anywhere else?" Ra testified, "I was not sure if he was involved, but I knew the sound came from the direction—the part of the store he was in." [Later, she added that] "although I had some doubt, I believed more likely than not when I heard the loud bang in the Armani store that my husband was involved in an accident. I believed this because when I heard the loud bang, I knew the sound came from where I knew my husband was located. I then immediately turned to look at my husband."

[The state Supreme Court has held that] to recover for negligent infliction of emotional distress as a bystander the plaintiff must prove she (1) is closely related to the injury victim; (2) is present at the scene of the injury-producing event at the time it occurs and is then aware that it is causing injury to the victim; and (3) as a result suffers serious emotional distress—a reaction beyond that which would be anticipated in a disinterested witness and which is not an abnormal response to the circumstances. The [Supreme Court] expressly disapproved suggestions that a negligent actor is liable to all those "who may have suffered emotional distress on viewing or learning about the injurious consequences of his conduct," rather than on viewing the injury-producing event itself.

Although a plaintiff may establish presence at the scene through non-visual sensory perception, "someone who hears an accident but does not then know it is causing injury to a relative does not have a viable bystander claim for emotional distress, even if the missing knowledge is acquired moments later."

In restricting bystander claims to "closely related percipient witnesses," the Supreme Court explained [that it] is the traumatic effect of the perception of the infliction of injury on a closely related person that is actionable, not the observation of the consequences. Absent a reasonable certainty her husband was being injured by whatever caused the loud bang she heard, what Ra experienced at that time was simply fear. Although the emotional distress caused by that fear was no doubt real and substantial (as was the distress resulting from the subsequently acquired knowledge her husband had in fact been injured by the falling sign), it is not compensable in a bystander claim.

In sum, Ra's fear for her husband's safety at the time she heard the loud bang emanating from the part of the store where she knew he was shopping and her belief the possibility of his injury was more likely than not are insufficient as a matter of law to establish contemporaneous awareness of her husband's injuries at the time of the injury-producing accident.

[Affirmed.]

Defenses

Contributory and Comparative Negligence

Sixteen-year-old Michelle Wightman was out driving at night, with her friend Karrie Wieber in the passenger seat. They came to a railroad crossing, where the mechanical arm had descended and warning bells were sounding. They had been sounding for a long time. A Conrail train had suffered mechanical problems and was stopped 200 feet from the crossing, where it had stalled for roughly an hour. Michelle and Karrie saw several cars ahead of them go around the barrier and cross the tracks. Michelle had to decide whether she would do the same.

> **... the mechanical arm had descended and warning bells were sounding. They had been sounding for a long time.**

Long before Michelle made her decision, the train's engineer had seen the heavy Saturday night traffic crossing the tracks and realized the danger. The conductor and brakeman also understood the peril, but rather than posting a flagman, who could have stopped traffic when a train approached, they walked to the far end of their train to repair the mechanical problem. A police officer had come upon the scene, told his dispatcher to notify the train's parent company Conrail of the danger, and left.

Michelle decided to cross the tracks. She slowly followed the cars ahead of her. Seconds later, both girls were dead. A freight train traveling at 60 miles per hour struck the car broadside, killing both girls instantly.

Michelle's mother sued Conrail for negligence. The company claimed that it was Michelle's foolish risk that led to her death. Who wins when both parties are partly responsible? It depends on whether the state uses a legal theory called contributory negligence. **Under contributory negligence, if the plaintiff is even slightly negligent, she recovers nothing.** If Michelle's death occurred in a contributory negligence state, and the jury considered her even minimally responsible, her estate would receive no money.

Critics attacked this rule as unreasonable. A plaintiff who was 1 percent negligent could not recover from a defendant who was 99 percent responsible. So most states threw out the contributory negligence rule, replacing it with comparative negligence. **In a comparative negligence state, a plaintiff may generally recover even if she is partially responsible.** The jury will be asked to assess the relative negligence of the two parties.

Michelle died in Ohio, which is a comparative negligence state. The jury concluded that reasonable compensatory damages were $1 million. It also concluded that Conrail was 60 percent responsible for the tragedy and Michelle 40 percent. See Exhibit 7.2. The girl's mother received $600,000 in compensatory damages.

Today, most but not all states have adopted some form of comparative negligence. Critics claim that this principle rewards a careless plaintiff. If Michelle had obeyed the law,

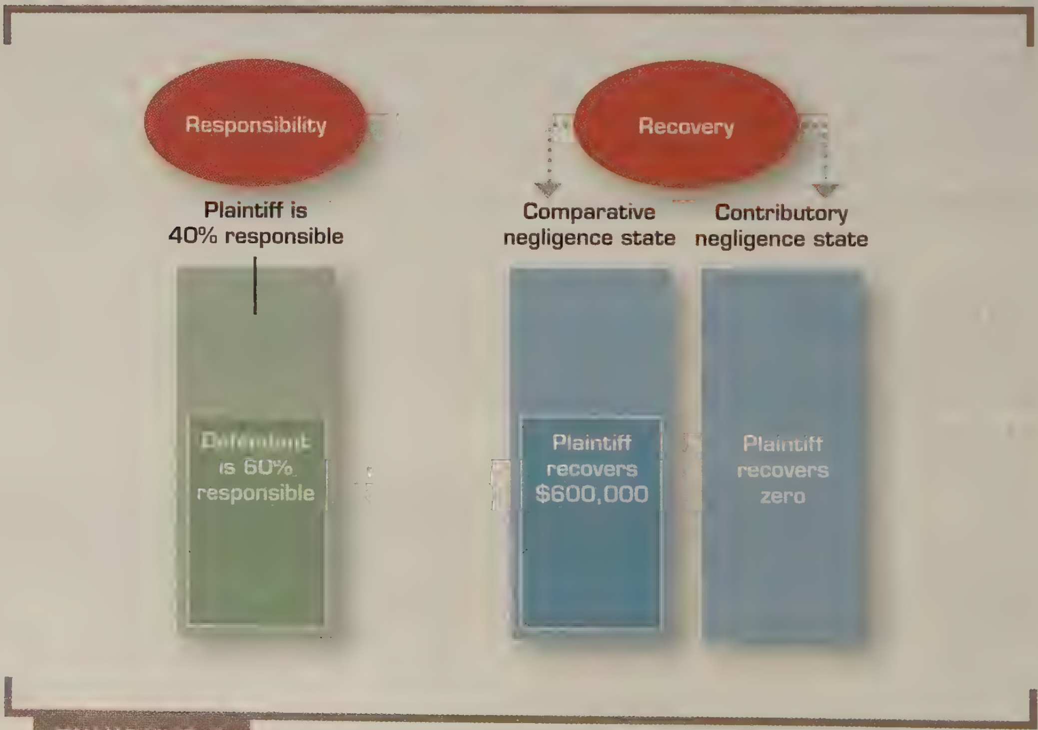

EXHIBIT 7.2 Defendant's negligence injures plaintiff, who suffers $1 million in damages.

she would still be alive. In response to this complaint, many comparative negligence states do *not* permit a plaintiff to recover anything if he was more than 50 percent responsible for his own injury.

In the Conrail case, the jury decided that the rail company was extraordinarily negligent. Expert witnesses testified that similar tragedies occurred every year around the nation and the company knew it. Conrail could easily have prevented the loss of life by posting a flagman on the road. The jury awarded the estate $25 million in punitive damages. The trial judge reduced the verdict by 40 percent to $15 million. The state supreme court affirmed the award.[5]

Assumption of the Risk

Good Guys, a restaurant, holds an ice-fishing contest on a frozen lake to raise money for accident victims. Margie grabs a can full of worms and strolls to the middle of the lake to try her luck, but slips on the ice and suffers a concussion. If she sues Good Guys, how will she fare? She will fall a second time. Wherever there is an obvious hazard, a special rule applies. **Assumption of the risk: a person who voluntarily enters a situation that has an obvious danger cannot complain if she is injured.** Ice is slippery and we all know it. If you venture onto a frozen lake, any falls are your own tough luck.

© REUTERS/Matt Sullivan

Do NFL players assume the risk of all on-field injuries?

However, the doctrine does not apply if someone is injured in a way that is not an inherent part of the dangerous activity. NFL players assume substantial risks each time they take the field, but some injuries fall outside the rule. In a game between the Jets and the Dolphins, Jets assistant coach Sal Alosi, standing on the sideline, tripped Dolphins player Nolan Carroll during a punt return. The trip was not a "normal" part of a football game, and the "assumption of the risk" doctrine would not prevent Carroll from recovering damages.

The following case involves a lake, jet skis—and a great tragedy.

Truong v. Nguyen

67 Cal. Rptr.3d 675, 156 Cal.App.4th 865
California Court of Appeals, 2007

Facts: On a warm California day, there were about 30 personal watercraft (jet skis) operating on Coyote Lake. The weather was fair and visibility good. Anthony Nguyen and Rachael Truong went for a ride on Anthony's Polaris watercraft. Cu Van Nguyen and Chuong Nguyen (neither of whom were related to Anthony) were both riding a Yamaha Waverunner. Both jet skis permitted a driver and passenger, each seated. The two watercraft collided near the middle of the lake. Rachael was killed, and the others all injured.

---

[5] *Wightman v. Consolidated Rail Corporation*, 86 Ohio St. 3d 431, 715 N.E.2d 546, 1999 Ohio LEXIS 2924 (Ohio 1999).

Rachael's parents sued Anthony, Cu Van, and Chuong, alleging that negligent operation of their watercraft caused their daughter's death. The defendants moved for summary judgment, claiming that assumption of the risk applies to jet skiing. The parents appealed, arguing that jet skiing was not a sport and Rachael never assumed any risk.

Issue: ***Does assumption of the risk apply to jet skiing?***

Excerpts from Judge McAdams's Decision: In a sports context, [assumption of the risk] bars liability because the plaintiff is said to have assumed the particular risks inherent in a sport by choosing to participate. Thus, a court need not ask what risks a particular plaintiff subjectively knew of and chose to encounter, but instead must evaluate the fundamental nature of the sport and the defendant's role in or relationship to that sport.

In baseball, a batter is not supposed to carelessly throw the bat after getting a hit and starting to run to first base. However, assumption of risk recognizes that vigorous bat deployment is an integral part of the sport and a risk players assume when they choose to participate. A batter does not have a duty to another player to avoid carelessly throwing the bat after getting a hit.

Even when a participant's conduct violates a rule of the game and may subject the violator to internal sanctions prescribed by the sport itself, imposition of legal liability for such conduct might well alter fundamentally the nature of the sport by deterring participants from vigorously engaging in activity. Coparticipants' limited duty of care is to refrain from intentionally injuring one another or engaging in conduct that is so reckless as to be totally outside the range of the ordinary activity involved in the sport.

It appears that an activity falls within the meaning of 'sport' if the activity is done for enjoyment or thrill, requires physical exertion as well as elements of skill, and involves a challenge containing a potential risk of injury.

As a matter of common knowledge, jet skiing is an active sport involving physical skill and challenges that pose a significant risk of injury, particularly when it is done—as it often is—together with other jet skiers in order to add to the exhilaration of the sport by racing, jumping the wakes of the other jet skis or nearby boats, or in other respects making the sporting activity more challenging and entertaining. In response to the plaintiff's complaint that the trial court erroneously assumed that the litigants were contestants in some sort of consensual competition event and/or spectator sport, [we conclude] that the doctrine applies equally to competitive and non-competitive but active sports.

Plaintiffs urge [that] Rachael was merely a passenger on the Polaris and was not actively involved in the sport. The record supports the conclusion that riding as a passenger on a personal watercraft [is participating in a sport], because it is done for enjoyment or thrill, requires physical exertion as well as elements of skill, and involves a challenge containing a potential risk of injury. The vessel is open to the elements, with no hull or cabin. It is designed for high performance, speed, and quick turning maneuvers. The thrill of riding the vessel is shared by both the operator and the passenger. Obstacles in the environment such as spraying water, wakes to be crossed, and other watercraft are part of the thrill of the sport, both for the operator and the passenger.

The summary judgment is affirmed.

Strict Liability

Strict liability
A branch of tort law that imposes a much higher level of liability when harm results from ultrahazardous acts or defective products.

Some activities are so naturally dangerous that the law places an especially high burden on anyone who engages in them. A corporation that produces toxic waste can foresee dire consequences from its business that a stationery store cannot. This higher burden is **strict liability**. There are two main areas of business that incur strict liability: *ultrahazardous activity* and *defective products*. Defective products are discussed in Chapter 22, on product liability.

Ultrahazardous Activity

Ultrahazardous activities include using harmful chemicals, operating explosives, keeping wild animals, bringing dangerous substances onto property, and a few similar activities where the danger to the general public is especially great. **A defendant engaging in an ultrahazardous activity is almost always liable for any harm that results.** Plaintiffs do not have to prove duty or breach or foreseeable harm. Recall the deliberately bizarre case we posed earlier of the pig falling from a window ledge and killing a veterinarian. Dom, the

mechanic whose negligence caused the car crash, could not be liable for the veterinarian's death because the plunging pig was a superseding cause.

But now imagine that the pig is jolted off the window ledge by a company engaged in an ultrahazardous activity. Sam's Blasting Co. sets off a perfectly lawful blast to clear ground for a new building down the street. When the pig is startled and falls, the blasting company is liable. Even if Sam took extraordinary care, it will do him no good at trial. The "reasonable person" rule is irrelevant in a strict liability case.

Because "strict liability" translates into "defendant is liable," parties in tort cases often fight over whether the defendant was engaged in an ultrahazardous activity. If the court rules that the activity was ultrahazardous, the plaintiff is assured of winning. If the court rules that it was not ultrahazardous, the plaintiff must prove all elements of negligence.

The line is often hazy. A lawful fireworks display does not incur strict liability, but crop dusting does. Cutting timber is generally not abnormally dangerous, but hauling logs might be. The enormous diversity of business activities in our nation ensures continual disputes over this important principle.

New Jersey Department of Environmental Protection v. Alden Leeds, Inc.

153 N.J. 272, 708 A.2d 1161, 1998 N.J. LEXIS 212
Supreme Court of New Jersey, 1998

Facts: The Alden Leeds Company packages, stores, and ships swimming pool chemicals. The firm does most of its work at its facility in Kearns, New Jersey. At any given time, about 21 different hazardous chemicals are present.

The day before Easter, a fire of unknown origin broke out in "Building One" of the company's site, releasing chlorine gas and other potentially dangerous by-products into the air. There were no guards or other personnel on duty. The fire caused $9 million in damage to company property. Because of the potentially dangerous gas, the Department of Environmental Protection (DEP) closed the New Jersey Turnpike along with half a dozen other major highways, halted all commuter rail and train service in the area, and urged residents to stay indoors with windows closed. An unspecified number of residents went to local hospitals with respiratory problems.

Based on New Jersey's Air Pollution Control Act (APCA), the DEP imposed a civil fine on Alden Leeds for releasing the toxic chemicals. The appellate court reversed, finding that there was no evidence the company had caused the fire or the harm, and the case reached the state's high court.

Issue: ***Did the company cause the harm?***

Excerpts from Justice Coleman's Decision: In 1962, this Court adopted the proposition that "an ultrahazardous activity which introduces an unusual danger into the community should pay its own way in the event it actually causes damage to others." In 1983, the Court expressly recognized "that the law of liability has evolved so that a landowner is strictly liable to others for harm caused by toxic wastes that are stored on his property and flow onto the property of others." The Court explained "that those who use, or permit others to use, land for the conduct of abnormally dangerous activities are strictly liable for resultant damages." The same rationale applies to pollution that is released into the air from chemicals stored at a chemical facility.

An actor who chooses to store dangerous chemicals should be responsible for the release of those chemicals into the air. That Alden Leeds lawfully and properly stored chemicals does not alter that conclusion. The risks attendant to the storage of dangerous substances counsel in favor of precautions to prevent their release. Alden Leeds took no such precautions. On the day of the fire, there was no one stationed at the plant to alert the authorities as soon as a fire or other unforeseen calamity erupted. Nor was there any other early warning system in place. A burglar or smoke alarm sounded, but there was no response to that alarm. The law imposes a duty upon those who store hazardous substances to ensure that the substances on their property do not escape in a manner harmful to the public. Alden Leeds failed to meet that burden.

Although Alden Leeds was not found responsible for the fire, the company's facility caused a release of air pollutants. The required nexus is satisfied by the knowing storage of hazardous chemicals. Regardless of what started the fire, it was the knowing storage of chemicals by Alden

Leeds that caused the release of air contaminants once the fire reached the chemicals.

[Affirmed that the APCA is a strict liability statute and that there must be a causal nexus between the defendant and the harm. Reversed that the storing of hazardous chemicals by Alden Leeds does not satisfy that nexus. The DEP does *not* have to prove that the chemical operator started the fire.]

EXAM Strategy

Facts: Ahmed plans to transport a 25-foot boa constrictor from one zoo to another. The snake is locked in a special cage in Ahmed's truck, approved by the American Zoo Society. Experts check the cage to be sure it is locked and entirely secure. Then Ahmed himself checks the cage. During the transport, his engine begins to fail. He pulls into the breakdown lane and sets up four flares, warning motorists of the stalled vehicle. Katy drives off the road and slams into Ahmed's truck. She is badly injured. Somehow the snake escapes and eats a champion show dog, worth $35,000. Katy and the dog's owner both sue Ahmed. What will be the result in each case?

Strategy: Ahmed's behavior seems reasonable throughout this incident. However, the two suits against him are governed by different rules: negligence in one case, strict liability in the other. Apply each rule to the correct case.

Result: The dog was killed by a dangerous snake. Transporting wild animals is an ultrahazardous activity, and Ahmed is strictly liable. His reasonable behavior will not save him. However, when he parked his truck in the breakdown lane, he did a reasonable job. Katy cannot prove that he breached his duty to her, and she loses.

Chapter Conclusion

Tort issues necessarily remain in flux, based on changing social values and concerns. There is no final word on what is an ultrahazardous activity, or how thoroughly an employer must conduct background checks, or whether a social host can be liable for the destruction caused by a guest. What is clear is that a working knowledge of these issues and pitfalls can help everyone—business executive and ordinary citizen alike.

EXAM REVIEW

1. **ELEMENTS** The five elements of negligence are duty of due care, breach, factual causation, proximate causation, and damage. (p. 158)

2. **DUTY** If the defendant could foresee that misconduct would injure a particular person, he probably has a duty to her. Special duties exist for people on the job, landowners, and employers. (pp. 158–162)

EXAM Strategy

Question: A supervisor reprimanded an employee for eating in a restaurant when he should have been at work. Later, the employee showed up at the supervisor's office and shot him. Although the employee previously had been violent, management withheld this information from supervisory personnel. Is the company liable for the supervisor's injury?

Strategy: An employer must do a *reasonable* job of hiring and retaining employees. (See the "Result" at the end of this section.)

3. **BREACH OF DUTY** A defendant breaches his duty of due care by failing to meet his duty of care. (p. 162)

4. **NEGLIGENCE PER SE** If a legislature sets a minimum standard of care for a particular activity in order to protect a certain group of people, and a violation of the statute injures a member of that group, the defendant has committed negligence per se. (pp. 162–163)

5. **FACTUAL CAUSE** If one event directly led to the ultimate harm, it is the factual cause. (p. 163)

6. **PROXIMATE CAUSE** For the defendant to be liable, the type of harm must have been reasonably foreseeable. (p. 163)

7. **DAMAGE** The plaintiff must persuade the court that he has suffered a harm that is genuine, not speculative. Damages for emotional distress, without a physical injury, are awarded only in select cases. (pp. 163–164)

8. **CONTRIBUTORY AND COMPARATIVE NEGLIGENCE** In a contributory negligence state, a plaintiff who is even slightly responsible for his own injury recovers nothing; in a comparative negligence state, the jury may apportion liability between plaintiff and defendant. (pp. 167–169)

EXAM Strategy

Question: There is a collision between cars driven by Candy and Zeke. The evidence is that Candy is about 25 percent responsible, for failing to stop quickly enough, and Zeke about 75 percent responsible, for making a dangerous turn. Candy is most likely to win:

(a) A lawsuit for battery

(b) A lawsuit for negligence in a comparative negligence state

(c) A lawsuit for negligence in a contributory negligence state

(d) A lawsuit for strict liability

(e) A lawsuit for assault

Strategy: Battery and assault are intentional torts, irrelevant in a typical car accident. Are such collisions strict liability cases? No; therefore, the answer must

be either (b) or (c). Apply the distinction between comparative and contributory negligence to the evidence here. (See the "Result" at the end of this section.)

9. **STRICT LIABILITY** A defendant is strictly liable for harm caused by an ultrahazardous activity or a defective product. Ultrahazardous activities include using harmful chemicals, blasting, and keeping wild animals. Strict liability means that if the defendant's conduct led to the harm, the defendant is liable, even if she exercises extraordinary care. (pp. 170–172)

EXAM Strategy

Question: Marko owned a cat and allowed it to roam freely outside. In the three years he had owned the pet, the animal had never bitten anyone. The cat entered Romi's garage. When Romi attempted to move it outside, the cat bit her. Romi underwent four surgeries, was fitted with a plastic finger joint, and spent more than $39,000 in medical bills. She sued Marko, claiming both strict liability and ordinary negligence. Assume that state law allows a domestic cat to roam freely. Evaluate both of Romi's claims.

Strategy: Negligence requires proof that the defendant breached a duty to the plaintiff by behaving unreasonably, and that the resulting harm was foreseeable. Was it? When would harm by a domestic cat be foreseeable? A defendant can be strictly liable for keeping a wild animal. Apply that rule as well. (See the "Result" at the end of this section.)

2. Result: This employer *may* have been liable for negligently hiring a previously violent employee, and it *certainly* did an unreasonable job in retaining him without advising his supervisor of the earlier violence. The assault was easily foreseeable, and the employer is liable.[6]

8. Result. In a contributory negligence state, a plaintiff even 1 percent responsible for the harm loses. Candy was 25 percent responsible. She can win *only* in a comparative negligence state.

9. Result: If Marko's cat had bitten or attacked people in the past, this harm was foreseeable and Marko is liable. If the cat had never done so, and state law allows domestic animals to roam, Romi probably loses her suit for negligence. Her strict liability case definitely fails: a housecat is not a wild animal.

Multiple-Choice Questions

1. Two cars, driven by Fred and Barney, collide. At trial, the jury determines that the accident was 90 percent Fred's fault and 10 percent Barney's fault. Barney's losses total $100,000. If he lives in a state that uses contributory negligence, Barney will recover ________________.

[6] Based on *Smith v. National R.R. Passenger Corp.*, 856 F.2d 467 (2d Cir. 1988).

(a) $0
(b) $10,000
(c) $50,000
(d) $90,000
(e) $100,000

2. Assume the same facts as in Question 1, except now Barney lives in a state that follows comparative negligence. Now Barney will recover ____________________.
   (a) $0
   (b) $10,000
   (c) $50,000
   (d) $90,000
   (e) $100,000

3. Zack lives in a state that prohibits factory laborers from working more than 12 hours in any 24-hour period. The state legislature passed the law to cut down on accidents caused by fatigued workers.

   Ignoring the law, Zack makes his factory employees put in 14-hour days. Eventually, a worker at the end of a long shift makes a mistake and severely injures a coworker. The injured worker sues Zack.

   Which of the following terms will be most relevant to the case?
   (a) *Res ipsa loquitur*
   (b) Assumption of the risk
   (c) Negligence per se
   (d) Strict liability

4. Randy works for a vending machine company. One morning, he fills up an empty vending machine that is on the third floor of an office building. Later that day, Mark buys a can of PepsiCo from that machine. He takes the full can to a nearby balcony and drops it three floors onto Carl, a coworker who recently started dating Mark's ex-girlfriend. Carl falls unconscious. Which of the following can be considered a factual cause of Carl's injuries?
   (a) Randy
   (b) Mark
   (c) Both Randy and Mark
   (d) None of the above

5. For this question, assume the same facts as in Question 4. Now determine which of the following can be considered a proximate cause of Carl's injuries?
   (a) Randy
   (b) Mark
   (c) Both Randy and Mark
   (d) None of the above

Essay Questions

1. At approximately 7:50 p.m, bells at the train station rang and red lights flashed, signaling an express train's approach. David Harris walked onto the tracks, ignoring a yellow line painted on the platform instructing people to stand back. Two men shouted to Harris, warning him to get off the tracks. The train's engineer saw him too late to stop the train, which was traveling at approximately 55 mph. The train struck and killed Harris as it passed through the station. Harris's widow sued the railroad, arguing that the railroad's negligence caused her husband's death. Evaluate her argument.

2. Ryder leased a truck to Florida Food Service; Powers, an employee, drove it to make deliveries. He noticed that the strap used to close the rear door was frayed, and he asked Ryder to fix it. Ryder failed to do so in spite of numerous requests. The strap broke, and Powers replaced it with a nylon rope. Later, when Powers was attempting to close the rear door, the nylon rope broke and he fell, sustaining severe injuries to his neck and back. He sued Ryder. The trial court found that Powers's attachment of the replacement rope was a superseding cause, relieving Ryder of any liability, and granted summary judgment for Ryder. Powers appealed. How should the appellate court rule?

3. A new truck, manufactured by General Motors Corp. (GMC), stalled in rush hour traffic on a busy interstate highway because of a defective alternator, which caused a complete failure of the truck's electrical system. The driver stood nearby and waved traffic around his stalled truck. A panel truck approached the GMC truck, and immediately behind the panel truck, Davis was driving a Volkswagen fastback. Because of the panel truck, Davis was unable to see the stalled GMC truck. The panel truck swerved out of the way of the GMC truck, and Davis drove straight into it. The accident killed him. Davis's widow sued GMC. GMC moved for summary judgment, alleging (1) no duty to Davis, (2) no factual causation, and (3) no foreseeable harm. Comment.

4. ***YOU BE THE JUDGE* WRITING PROBLEM** When Thomas and Susan Tamplin were shopping at Star Lumber with their six-year-old daughter Ann Marie, a 150-pound roll of vinyl flooring fell on the girl, seriously injuring her head and pituitary gland. Ann was clearly entitled to recover for the physical harm, such as her fractured skull. The plaintiffs also sought recovery for potential future harm. Their medical expert was prepared to testify that although Ann would probably develop normally, he could not rule out the slight possibility that her pituitary injury might prevent her from sexually maturing. Is Ann entitled to damages for future harm? **Argument for Ann:** This was a major trauma, and it is impossible to know the full extent of the future harm. Sexual maturation is a fundamental part of life; if there is a possibility that Ann will not develop normally, she is entitled to present her case to a jury and receive damages. **Argument for Star Lumber:** A plaintiff may not recover for speculative harm. The "slight possibility" that Ann could fail to develop is not enough for her to take her case to the jury.

5. Irving was a lawyer who prepared income tax returns for Maroevich. Irving agreed to draft a will for Maroevich, leaving all of the property to Maroevich's sister, Biakanja. When Maroevich died, the probate court refused to accept the will because Irving had failed to have the signatures properly witnessed. As a result, Biakanja inherited only

one-eighth of the estate. She sued Irving, who defended by saying that he had no duty of due care to Biakanja because all his dealings were with Maroevich and none were with her. Do you agree?

Discussion Questions

1. Imagine an undefeated high school football team on which the average lineman weighs 300 pounds. Also, imagine an 0–10 team on which the average lineman weighs 170 pounds. The undefeated team sets out to hit as hard as they can on every play and to run up the score as much as possible. Before the game is over, 11 players from the lesser team have been carried off the field with significant injuries. All injuries were the result of "clean hits"—none of the plays resulted in a penalty. Even late in the game, when the score is 70–0, the undefeated team continues to deliver devastating hits that are far beyond what would be required to tackle and block. The assumption of the risk doctrine exempts the undefeated team from liability. Is this reasonable?

2. Should the law hold landowners to different standards of care for trespassers, social guests, and invitees? Or do the few states that say, "Just always be reasonable," have a better rule?

3. Are strict liability rules fair? Someone has to dispose of chemicals. Someone has to use dynamite if road projects are to be completed. Is it fair to say to those companies, "You are responsible for all harm caused by your activities, even if you are as careful as you can possibly be?"

4. Steve is making copies. Lonnie, his coworker, politely asks, "When will you be done with the copier?" Steve punches Lonnie in the face. Later, Lonnie learns that Steve's last two employers fired him for punching coworkers. He also finds out that his company did not do a background check of any kind on Steve before hiring him. Would it be fair to hold Lonnie's company liable for the attack, or should Lonnie's only action be against Steve?

5. People who serve alcohol to others take a risk. In some circumstances, they can be held legally responsible for the actions of the people they serve. Is this fair? Should an intoxicated person be the only one liable if harm results? If not, in what specific circumstances is it fair to stretch liablility to other people?

CHAPTER 8

CRIME

© r.nagy/Shutterstock.com

Crime can take us by surprise. Stacey tucks her nine-year-old daughter, Beth, into bed. Promising her husband, Mark, that she will be home by 11:00 PM, she jumps into her car and heads back to Be Patient, Inc. She plugs her iPhone into the player of her $85,000 sedan and tries to relax by listening to music. Be Patient is a health care organization that owns five geriatric hospitals. Most of its patients use Medicare, and Stacey supervises all billing to their largest client, the federal government.

She parks in a well-lighted spot on the street and walks to her building, failing to notice two men, collars turned up, watching from a parked truck. Once in her office, she goes straight to her computer and works on billing issues. Tonight's work goes more quickly than she expected, thanks to new software she helped develop. At 10:30 she emerges from the building with a quick step and a light heart, walks to her car—and finds it missing.

A major crime has occurred during the 90 minutes Stacey was at her desk, but she will never report it to the police. It is a crime that costs Americans countless dollars each year, yet Stacey will not even mention it to friends or family. Stacey is the criminal.

A major crime has occurred during the 90 minutes Stacey was at her desk, but she will never report it to the police.

When we think of crime, we imagine the drug dealers and bank robbers endlessly portrayed on television. We do not picture corporate executives sitting at polished desks. "Street crimes" are indeed serious threats to our security and happiness. They deservedly receive the attention of the public and the law. But when measured only in dollars, street crime takes second place to white-collar crime, which costs society *tens of billions* of dollars annually.

The hypothetical about Stacey is based on many real cases and is used to illustrate that crime does not always dress the way we expect. Her car was never stolen; it was simply towed. Two parking bureau employees, watching from their truck, saw Stacey park illegally and did their job. It is Stacey who committed a crime—Medicare fraud. Every month, she has billed the government about $10 million for work that her company has not performed. Stacey's scheme was quick and profitable—and a distressingly common crime.

Crime, whether violent or white-collar, is detrimental to all society. It imposes a huge cost on everyone. Just the *fear* of crime is expensive—homeowners buy alarm systems and businesses hire security guards. But the anger and fear that crime engenders sometimes tempt us to forget that not all accused people are guilty. Everyone suspected of a crime should have the protections that you yourself would want in that situation. As the English jurist William Blackstone said, "Better that ten guilty persons escape than that one innocent suffer."

Thus, criminal law is a balancing act—between making society safe and protecting us all from false accusations and unfair punishment.

This chapter has four parts:

- The differences between a civil and criminal case;
- **Criminal procedure**—the *process* by which criminals are accused, tried, and sentenced;
- Crimes that *harm* businesses;
- Crimes committed *by* businesses.

Criminal procedure
The process by which criminals are accused, tried, and sentenced.

The Differences between a Civil and Criminal Case

Most of this book focuses on civil law, so we begin with a discussion of the differences between a civil and criminal case.

Civil law involves the rights and liabilities that exist between private parties. As we have seen, if one person claims that another has caused her a civil injury, she must file a lawsuit and convince a court of her damages.

Criminal law is different. Conduct is criminal when society outlaws it. When a state legislature or Congress concludes that certain behavior threatens public safety and welfare, it passes a statute forbidding that behavior; in other words, declaring it criminal. Medicare fraud, which Stacey committed, is a crime because Congress has outlawed it. Money laundering is a crime because Congress concluded that it was a fundamental part of the drug trade and prohibited it.

Criminal law
Prohibits and punishes conduct that threatens public safety and welfare.

Prosecution

Suppose the police arrest Roger and accuse him of breaking into a store and stealing 50 computers. The owner of the store is the one harmed, and he has the right to sue the thief in civil court to recover money damages. But **only the government can prosecute a crime and punish Roger by sending him to prison.** The government may also impose a fine on Roger, but it keeps the fine and does not share it with the victim. (However, the court will sometimes order **restitution**, meaning that the defendant must reimburse the victim for

Restitution
A court order that a guilty defendant reimburse the victim for the harm suffered.

harm suffered.) The local prosecutor has total discretion in deciding whether to bring Roger to trial on criminal charges.

Burden of Proof

Beyond a reasonable doubt
The very high burden of proof in a criminal trial, demanding much more certainty than required in a civil trial.

In a civil case, the plaintiff must prove her case only by a preponderance of the evidence.[1] But because the penalties for conviction in a criminal case are so serious, the government must prove its case **beyond a reasonable doubt**. Also, the stigma of a criminal conviction would stay with Roger forever, making it more difficult to obtain work and housing. Therefore, in all criminal cases, if the jury has any significant doubt at all that Roger stole the computers, it *must* acquit him.

Right to a Jury

The facts of a case are decided by a judge or jury. A criminal defendant has a right to a trial by jury for any charge that could result in a sentence of six months or longer. The defendant may demand a jury trial or may waive that right, in which case the judge will be the factfinder.

Felony/Misdemeanor

Felony
A serious crime, for which a defendant can be sentenced to one year or more in prison.

Misdemeanor
A less serious crime, often punishable by less than a year in a county jail.

A **felony** is a serious crime, for which a defendant can be sentenced to one year or more in prison. Murder, robbery, rape, drug dealing, money laundering, wire fraud, and embezzlement are felonies. A **misdemeanor** is a less serious crime, often punishable by a year or less in a county jail. Public drunkenness, driving without a license, and simple possession of a single marijuana cigarette are considered misdemeanors in most states.

Criminal Procedure

The title of a criminal case is usually the government versus someone: *The United States of America v. Simpson* or *The State of Texas v. Simpson*, for example. This name illustrates a daunting thought—if you are Simpson, the vast power of the government is against you. Because of the government's great power and the severe penalties it can impose, criminal procedure is designed to protect the accused and ensure that the trial is fair. Moreover, a criminal defendant is often engaged in an uphill climb from the beginning because people often assume that anyone accused of a crime must be guilty. Many of the protections for those accused of a crime are found in the first 10 amendments to the United States Constitution, known as the Bill of Rights.

Conduct Outlawed

Crimes are created by statute. The prosecution must demonstrate to the court that the defendant's conduct is indeed outlawed by a statute. Returning to Roger, the alleged computer thief, the state charges that he stole computer equipment from a store, a crime clearly defined by statute as larceny.

The Fifth and Fourteenth Amendments to the Constitution require that the language of criminal statutes be clear and definite enough that (1) ordinary people can understand what conduct is prohibited and (2) the police are discouraged from arbitrary and discriminatory enforcement. Thus, for example, the Supreme Court ruled that a statute that prohibited loitering was unconstitutionally vague because it did not clarify exactly what behavior was prohibited and it tended to be enforced arbitrarily.[2]

---

[1] See the earlier discussion in Chapter 3, on dispute resolution.

State of Mind

Voluntary Act

Guilty
A judge or jury's finding that a defendant has committed a crime.

A defendant is not guilty of a crime if she was forced to commit it. In other words, she is not guilty if she acted under duress. However, the defendant bears the burden of proving by a preponderance of the evidence that she did act under duress. In 1974, a terrorist group kidnapped heiress Patricia Hearst from her apartment near the University of California at Berkeley. After being tortured for two months, she participated in a bank robbery with the group. Despite opportunities to escape, she stayed with the criminals until her capture by the police a year later. The State of California put on her on trial for bank robbery. One question for the jury was whether she had voluntarily participated in the crime. This was an issue on which many people had strong opinions. Ultimately Hearst was convicted, sent to prison, and then later pardoned.

© Bettmann/CORBIS

Patty Hearst, before she was kidnapped.

Entrapment

When the government induces the defendant to break the law, the prosecution must prove beyond a reasonable doubt that the defendant was predisposed to commit the crime. The goal is to separate the cases where the defendant was innocent before the government tempted him from those where the defendant was only too eager to break the law.

Kalchinian and Sherman met in the waiting room of a doctor's office where they were both being treated for drug addiction. After several more meetings, Kalchinian told Sherman that the treatment was not working for him and he was desperate to buy drugs. Could Sherman help him? Sherman repeatedly refused, but ultimately agreed to help end Kalchinian's suffering by providing him with drugs. Little did Sherman know that Kalchinian was a police informant. Sherman sold drugs to Kalchinian a number of times. Kalchinian rewarded this act of friendship by getting Sherman hooked again and then turning him in to the police. A jury convicted Sherman of drug dealing, but the Supreme Court overturned the conviction on the grounds that Sherman had been entrapped.[3] The court felt there was no evidence that Sherman was predisposed to commit the crime.

Gathering Evidence: The Fourth Amendment

If the police suspect that a crime has been committed, they will need to obtain evidence. **The Fourth Amendment to the Constitution prohibits the government from making illegal searches and seizures of individuals, corporations, partnerships, and other organizations.** The goal of the Fourth Amendment is to protect the individual from the powerful state.

Warrant

As a general rule, the police must obtain a warrant before conducting a search. A warrant is written permission from a neutral official, such as a judge or magistrate, to conduct a search.[4] **The warrant must specify with reasonable certainty the place to be searched and the items to be seized.** Thus, if the police say they have reason to believe that they will find bloody clothes in the suspect's car in his garage, they cannot also look through his house and confiscate file folders.

---

[3] *Sherman v. United States*, 356 U.S. 369 (S. Ct., 1958).

[4] A magistrate is a judge who tries minor criminal cases or undertakes primarily administrative responsibilities.

If the police search without a warrant, they have violated the Fourth Amendment. **But even a search conducted with a warrant violates the Fourth Amendment if:**

- There was no probable cause to issue the warrant;
- The warrant does not specify the place to be searched and the things sought; or
- The search extends beyond what is specified in the warrant.

Probable Cause

Probable cause
It is likely that evidence of crime will be found in the place to be searched.

The magistrate will issue a warrant only if there is probable cause. **Probable cause** means that based on all the information presented, **it is likely that evidence of a crime will be found in the place to be searched**. Often, the police base their applications for a warrant on data provided by an informant. The magistrate will want evidence to support the informant's reliability. If it turns out that this informant has been wrong the last three times he gave evidence to the police, the magistrate will probably refuse the request for a warrant.

Searches Without a Warrant

There are seven circumstances under which police may **search without a warrant**:

- **Plain View.** Police may search if they see a machine gun, for example, sticking out from under the front seat of a parked car.
- **Stop and Frisk.** None of us wants to live in a world in which police can randomly stop and frisk us on the street anytime they feel like it. The police do have the right to stop and frisk, but *only if* they have a clear and specific reason to suspect that criminal activity may be afoot and that the person may be armed and dangerous.[5]
- **Emergencies.** If, for example, the police believe that evidence is about to be destroyed, they can search.
- **Automobiles.** If police have lawfully stopped a car and observe evidence of other crimes in the car, such as burglary tools, they may search.
- **Lawful Arrest.** Police may always search a suspect they have arrested. The point of this exception is to protect the officers and preserve evidence.
- **Consent.** Anyone lawfully living in a house can allow the police in to search without a warrant. If your roommate gives the police permission to search your house, that search is legal.
- **No Expectation of Privacy.** The police have a right to search any area in which the defendant does not have a reasonable expectation of privacy. For example, Rolando Crowder was staying at his friend Bobo's apartment. Hearing the police in the hallway, he ran down to the basement. The police found Crowder in the basement with drugs nearby. Crowder argued that the police should have obtained a warrant, but the court ruled that Crowder had no expectation of privacy in Bobo's basement.[6]

Apart from these seven exceptions, a warrant is required.

Exclusionary Rule

Under the exclusionary rule, evidence obtained illegally may not be used at trial. The Supreme Court created the exclusionary rule to ensure that police conduct legal searches. The theory is simple: if police know in advance that illegally obtained evidence cannot be

[5] *Terry v. Ohio*, 392 U.S. 1 (S. Ct., 1968).
[6] *Ohio v. Crowder*, 2010 Ohio 3766; 2010 Ohio App. LEXIS 3210 (2010).

used in court, they will not be tempted to make improper searches. Is the exclusionary rule a good idea?

Opponents of the rule argue that a guilty person may go free because one police officer bungled. They are outraged by cases like *Coolidge v. New Hampshire.*[7] Pamela Mason, a 14-year-old babysitter, was brutally murdered. Citizens of New Hampshire were furious, and the state's attorney general personally led the investigation. Police found strong evidence that Edward Coolidge had done it. They took the evidence to the attorney general, who personally issued a search warrant. A search of Coolidge's car uncovered incriminating evidence, and he was found guilty of murder and sentenced to life in prison. But the United States Supreme Court reversed the conviction. The warrant had not been issued by a neutral magistrate. A law officer may not lead an investigation and simultaneously decide what searches are permissible.

After the Supreme Court reversed Coolidge's conviction, New Hampshire scheduled a new trial, attempting to convict him with evidence lawfully obtained. Before the trial began, Coolidge pleaded guilty to second degree murder. He was sentenced and remained in prison until his release years later.

In fact, very few people do go free because of the exclusionary rule. One study showed that evidence is actually excluded in only 1.3 percent of all prosecutions; and in about one-half of *those* cases, the court convicted the defendant on other evidence. Only in 0.7 percent of all prosecutions did the defendant go free after the evidence was suppressed.[8]

There are two exceptions to the exclusionary rule:

- **Inevitable Discovery.** The inevitable discovery exception permits the use of evidence that would inevitably have been discovered even without the illegal search. If an informant was about to tell the police about Coolidge's car, then the evidence found there would have been admissible, so long as the court believed the testimony was true.
- **Good Faith Exception.** Suppose the police use a search warrant believing it to be proper, but it later proves to have been defective. Is the search therefore illegal? No, so long as the police reasonably believed the warrant was valid, the search is legal.[9]

Should the exclusionary rule apply in the following case? You be the judge.

Ohio v. Smith

2009 Ohio 6426; 920 N.E.2d 949; 2009 Ohio Lexis 3496
Supreme Court of Ohio, 2009

Facts: Wendy Northern was hospitalized for a drug overdose. When police questioned her in the hospital, she identified her drug dealer as Antwaun Smith. She then called him to arrange for the purchase of crack cocaine at her house that evening. When Smith arrived at her house, the police arrested him, searched him, and confiscated his cell phone. When the police looked at the phone some time later, they discovered call records and phone numbers confirming that this phone had been used to speak with Northern.

The police had neither a warrant nor Smith's consent to search the phone. Smith filed a motion requesting that the evidence from his cell phone be excluded because it had been obtained without a warrant. After the judge denied this motion, Smith was found guilty and sentenced to 12

years in prison. The appeals court upheld his conviction. He appealed to the Ohio Supreme Court.

You Be the Judge: ***Was the search of Smith's cell phone legal? Should the evidence found on the phone be excluded?***

Argument for the Police: The police have the right to search anyone they arrest. During a perfectly legal search, they discovered Smith's cell phone. Prior courts have ruled that defendants have a low expectation of privacy in address books and that police can search them without a warrant. A cell phone is an electronic address book. Therefore, the search of Smith and the subsequent search of the contents of the phone were both legal. The evidence was properly admitted in court.

Argument for Smith: Police have the right to search someone they have arrested so that they can protect themselves and prevent evidence from being destroyed. A search of the cell phone's contents was not necessary to ensure officer safety, and there was no evidence that the call records and phone numbers were in danger of being destroyed. Once the police had the phone, they had plenty of time to ensure that the data were preserved. In addition, they might have been able to obtain Smith's phone records from his service provider.

The police were entitled to search Smith and discover his cell phone. But they did not have the right to search the phone without a warrant. Modern cell phones are much more similar to a laptop than to an old-fashioned address book—they have the ability to transmit large amounts of personal data in various forms. Courts have ruled that defendants have a high expectation of privacy in laptop computers and that the police must obtain a warrant before searching one. It would be a terrible precedent to declare that the police could search cell phones without a warrant.

The Patriot Act

In response to the devastating attacks of September 11, 2001, Congress passed a sweeping antiterrorist law known as the Patriot Act. The statute was designed to give law enforcement officials greater power to investigate and prevent potential terrorist assaults. The bill raced through Congress nearly unopposed. Proponents hailed it as a vital weapon for use against continuing lethal threats. Opponents argued that the hastily passed law would not provide serious benefits but did threaten the liberties of the very people it purported to shield.

In an early legal test, a federal judge permitted the government to use secret evidence in its effort to freeze the assets of Global Relief Foundation, a religious organization suspected of terrorist activity. The group, which claimed to be purely humanitarian, asserted that it could hardly defend itself against unseen evidence. Finding "acute national security concerns," the judge allowed the government to introduce the evidence in private, without the foundation ever seeing it.[10]

The law also permitted the FBI to issue a **national security letter** (NSL) to communications firms such as Internet service providers (ISPs) and telephone companies. An NSL typically demanded that the recipient furnish to the government its customer records, *without ever divulging* to anyone what it had done. NSLs could be used to obtain access to subscriber billing records, phone, financial, credit, and other information—even records of books taken from libraries. However, an appeals court ruled that a secret NSL could be issued only if the government first demonstrated to a court's satisfaction that disclosure of the NSL would risk serious harm.[11]

EXAM Strategy

Question: Police bang down the door of Mary Beth's apartment, enter without her permission, and search the apartment. They had no warrant. When the officers discover that she is smoking marijuana, they arrest her. What motion will the defense lawyer make before trial? Please rule on the defendant's motion. Are there any facts that would make you change your ruling?

Strategy: The defendant's motion is based on the police conduct. What was wrong with that conduct, and what are the consequences?

Result: The defense lawyer will argue that the police violated the Fourth Amendment because they lacked a warrant for the search. He will ask that the court suppress the drug evidence. Ordinarily, the court would grant that motion unless there was other evidence—for example, the police smelled marijuana from the hallway and Mary Beth would have smoked it all if the police had taken the time to obtain a warrant.

The Case Begins

The trial is now ready to begin. But, the government may not be able to use all the evidence it has gathered.

The Fifth Amendment

The Fifth Amendment to the Constitution protects criminal defendants—both the innocent and the guilty—in several ways.

Due Process **Due process** requires fundamental fairness at all stages of the case. The basic elements of due process are discussed in Chapter 5, on constitutional law. In the context of criminal law, due process sets additional limits. The requirement that the prosecution disclose evidence favorable to the defendant is a due process rule. Similarly, if a witness says that a tall white male robbed the liquor store, it would violate due process for the police to place the male suspect in a lineup with four short women.

Due process
Requires fundamental fairness at all stages of the case.

Self-Incrimination The Fifth Amendment bars the government from forcing any person to provide evidence against himself. In other words, the police may not use mental or physical coercion to force a confession or any other information out of someone. Society does not want a government that engages in torture. Such abuse might occasionally catch a criminal, but it would grievously injure innocent people and make all citizens fearful of the government that is supposed to represent them. Also, coerced confessions are inherently unreliable. The defendant may confess simply to end the torture. (The protection against self-incrimination applies only to people; corporations and other organizations are not protected and may be required to provide incriminating information.)

Exclusionary Rule (Again) If the police do force a confession, the exclusionary rule prohibits the prosecution from using it or any information they obtain as a result of what the defendant has said. (This secondary information is referred to as "the fruit of the poisonous tree.") For example, when the police illegally arrest Alice, she tells them that she has bought drugs from Beau. The police go to Beau's house, where they find drugs. He tells them that Caitlyn is his dealer and, indeed, the police find drugs in Caitlyn's bedroom. None of this evidence—neither the confessions nor the drugs—is admissible in court because it all stemmed from Alice's illegal arrest.

The rationale is the same as for Fourth Amendment searches: suppressing the evidence means that police will not attempt to get it illegally. But remember that the confession is void only if it results from custodial questioning. Suppose a policeman, investigating a bank robbery, asks a pedestrian if he noticed anything peculiar. The pedestrian says, "You mean after I robbed the bank?" Result? There was no custodial questioning, and the confession *may* be used against him.

Miranda Rights The police cannot legally force a suspect to provide evidence against himself. But sometimes, under forceful interrogation, he might forget his constitutional rights. In the following landmark case, the Supreme Court established the requirement that police remind suspects of their rights—with the very same warning that we have all heard so many times on television shows.

Landmark Case

MIRANDA V. ARIZONA

384 U.S. 436; 1966 U.S. Lexis 2817
Supreme Court of the United States, 1966

Facts: Ernesto Miranda was a mentally ill, indigent citizen of Mexico. The Phoenix police arrested him at his home and brought him to a police station, where a rape victim identified him as her assailant. Two police officers took him to an interrogation room but did not tell him that he had a right to have a lawyer present during the questioning. Two hours later, the officers emerged with a written confession signed by Miranda. At the top of the statement was a typed paragraph stating that the confession was made voluntarily "with full knowledge of my legal rights, understanding any statement I make may be used against me."

At Miranda's trial, the judge admitted this written confession into evidence over the objection of defense counsel. The officers testified that Miranda had also made an oral confession during the interrogation. The jury found Miranda guilty of kidnapping and rape. He was sentenced to 20 to 30 years imprisonment. On appeal, the Supreme Court of Arizona affirmed the conviction. In reaching its decision, the court relied heavily on the fact that Miranda did not specifically request a lawyer. The Supreme Court of the United States granted *certiorari*.

Issues: ***Was Miranda's confession admissible at trial? Should his conviction be upheld?***

Excerpts from Chief Justice Warren's Decision: Our holding briefly stated is this: the prosecution may not use statements, whether exculpatory or inculpatory, stemming from custodial interrogation of the defendant unless it demonstrates the use of procedural safeguards effective to secure the privilege against self-incrimination. By custodial interrogation, we mean questioning initiated by law enforcement officers after a person has been taken into custody or otherwise deprived of his freedom of action in any significant way. As for the procedural safeguards to be employed, the following measures are required. Prior to any questioning, the person must be warned that he has a right to remain silent, that any statement he does make may be used as evidence against him, and that he has a right to the presence of an attorney, either retained or appointed.

The defendant may waive these rights, provided the waiver is made voluntarily, knowingly, and intelligently. If, however, he indicates in any manner and at any stage of the process that he wishes to consult with an attorney before speaking, there can be no questioning. Likewise, if the individual is alone and indicates in any manner that he does not wish to be interrogated, the police may not question him. The mere fact that he may have answered some questions or volunteered some statements on his own does not deprive him of the right to refrain from answering any further inquiries until he has

consulted with an attorney and thereafter consents to be questioned.

In a series of cases decided by this Court, the police resorted to physical brutality—beating, hanging, whipping—and to sustained and protracted questioning incommunicado in order to extort confessions. Only recently in Kings County, New York, the police brutally beat, kicked, and placed lighted cigarette butts on the back of a potential witness under interrogation for the purpose of securing a statement incriminating a third party.

Unless a proper limitation upon custodial interrogation is achieved, there can be no assurance that practices of this nature will be eradicated in the foreseeable future. Not only does the use of the third degree involve a flagrant violation of law by the officers of the law, but it involves also the dangers of false confessions, and it tends to make police and prosecutors less zealous in the search for objective evidence. As [an official] remarked: "If you use your fists, you are not so likely to use your wits."

[C]oercion can be mental as well as physical, and the blood of the accused is not the only hallmark of an unconstitutional inquisition. In a serious case, the interrogation may continue for days, with the required intervals for food and sleep, but with no respite from the atmosphere of domination. It is possible in this way to induce the subject to talk without resorting to duress or coercion.

Even without employing brutality, the very fact of custodial interrogation exacts a heavy toll on individual liberty and trades on the weakness of individuals. In [this case before the Court], the defendant was thrust into an unfamiliar atmosphere and run through menacing police interrogation procedures. It is obvious that such an interrogation environment is created for no purpose other than to subjugate the individual to the will of his examiner. This atmosphere carries its own badge of intimidation. To be sure, this is not physical intimidation, but it is equally destructive of human dignity. The current practice of incommunicado interrogation is at odds with one of our Nation's most cherished principles—that the individual may not be compelled to incriminate himself.

All these policies point to one overriding thought: the constitutional foundation underlying the privilege is the respect a government—state or federal—must accord to the dignity and integrity of its citizens. To maintain a fair state-individual balance, to respect the inviolability of the human personality, our accusatory system of criminal justice demands that the government seeking to punish an individual produce the evidence against him by its own independent labors, rather than by the cruel, simple expedient of compelling it from his own mouth.

From the testimony of the officers and by the admission of [the defendant], it is clear that Miranda was not in any way apprised of his right to consult with an attorney and to have one present during the interrogation, nor was his right not to be compelled to incriminate himself effectively protected in any other manner. Without these warnings, the statements were inadmissible. The mere fact that he signed a statement which contained a typed-in clause stating that he had "full knowledge" of his "legal rights" does not approach the knowing and intelligent waiver required to relinquish constitutional rights.

Right to a Lawyer

As *Miranda* made clear, a criminal defendant has the right to a lawyer before being interrogated by the police. The Sixth Amendment guarantees the **right to a lawyer** at all important stages of the criminal process. Because of this right, the government must **appoint a lawyer** to represent, free of charge, any defendant who cannot afford one.

After Arrest

Indictment

Once the police provide the local prosecutor with evidence, he presents this evidence to a **grand jury** and asks its members to indict the defendant. The grand jury is a group of ordinary citizens, like a trial jury, but the grand jury holds hearings for several weeks at a time, on many different cases. It is the grand jury's job to determine whether there is

Grand jury
A group of ordinary citizens that decides whether there is probable cause the defendant committed the crime with which she is charged.

probable cause that this defendant committed the crime with which she is charged. At the hearing in front of the grand jury, only the prosecutor presents evidence, not the defense attorney because it is better for the defendant to save her evidence for the trial jury. After all, the defense attorney may want to see what evidence the prosecution has before deciding how to present the case.

Indictment
The government's formal charge that the defendant has committed a crime and must stand trial.

If the grand jury determines that there is probably cause, an **indictment** is issued. An indictment is the government's formal charge that the defendant has committed a crime and must stand trial.

Arraignment

At an arraignment, a clerk reads the formal charges of the indictment. The judge asks whether the defendant has a lawyer. If she does not, the judge urges her to get one quickly. If a defendant cannot afford a lawyer, the court will appoint one to represent her free of charge. The judge now asks the lawyer how the defendant pleads to the charges. At this stage, most defendants plead not guilty.

Discovery

During the months before trial, both prosecution and defense will prepare the most effective case possible. There is less formal discovery than in civil trials. The prosecution is obligated to hand over any evidence favorable to the defense that the defense attorney requests. The defense has a more limited obligation to inform the prosecution of its evidence. In most states, for example, if the defense will be based on an alibi, counsel must reveal the alibi to the government before trial.

Plea Bargaining

Plea bargain
An agreement in which the defendant pleads guilty to a reduced charge, and the prosecution recommends to the judge a relatively lenient sentence.

Sometime before trial, the two attorneys will meet to try to negotiate a plea bargain. A **plea bargain** is an agreement between prosecution and defense that the defendant will plead guilty to a reduced charge, and the prosecution will recommend to the judge a relatively lenient sentence. In the federal court system, about 75 percent of all prosecutions end in a plea bargain. In state court systems, the number is often higher. A judge need not accept the bargain but usually does.

For example, astronaut Lisa Nowak drove across country dressed in a wig and trench-coat to attack fellow astronaut Colleen Shipman, whom she viewed as a romantic rival. After Nowak's arrest, police found in her car a BB gun, a knife, and surgical tubing, which was thought to be evidence of her violent intent. Nowak was charged with attempted murder and attempted kidnapping, but much of the evidence was thrown out of court under the exclusionary rule because of police misconduct. Nowak ultimately pleaded guilty to battery and burglary of a car. At that point, she had served two days in jail. She did not receive further jail time, but she was required to complete 50 hours of community service and to attend anger-management classes.

Trial and Appeal

When there is no plea bargain, the case must go to trial. The mechanics of a criminal trial are similar to those for a civil trial, described in Chapter 3, on dispute resolution. It is the prosecution's job to convince the jury beyond a reasonable doubt that the defendant committed every element of the crime charged. The defense counsel will do everything possible to win an acquittal. In federal courts, prosecutors obtain a conviction in about 80 percent of cases; in state courts, the percentage is slightly lower. Convicted defendants have a right to appeal, and again, the appellate process is similar to that described in Chapter 3.

Double Jeopardy

The prohibition against **double jeopardy** means that a defendant may be prosecuted only once for a particular criminal offense. The purpose is to prevent the government from destroying the lives of innocent citizens with repetitive prosecutions. Imagine that Rod and Lucy are accused of murdering a taxi driver. Rod is tried first and wins an acquittal. At Lucy's trial, Rod testifies that he is, indeed, the murderer. The jury acquits Lucy. The Double Jeopardy Clause prohibits the state from retrying Rod again for the same offense, even though he has now confessed to it.

Double jeopardy
A criminal defendant may be prosecuted only once for a particular criminal offense.

Punishment

The Eighth Amendment prohibits cruel and unusual punishment. The most dramatic issue litigated under this clause is the death penalty. The Supreme Court has ruled that capital punishment is not inherently unconstitutional. Most state statutes divide a capital case into two parts, so that the jury first considers only guilt or innocence, and then, if the defendant is found guilty, deliberates on the death penalty. As part of that final decision, the jury must consider aggravating and mitigating circumstances that may make the ultimate penalty more or less appropriate.[12]

As you might expect from the term "cruel and unusual," courts are generally unsympathetic to such claims unless the punishment is truly outrageous. For example, Mickle pleaded guilty to rape. The judge sentenced him to prison for five years and also ordered that he undergo a vasectomy. The appeals court ruled that this sentence was cruel and unusual. Although the operation in itself is not cruel (indeed, many men voluntarily undergo it), when imposed as punishment, it is degrading and in that sense cruel. It is also an unusual punishment.[13]

In the following case, the Supreme Court was not moved to overturn a harsh punishment.

Ewing v. California

538 U.S. 11, 123 S. Ct. 1179, 155 L. Ed. 2d 108
United States Supreme Court, 2003

Facts: California passed a "three strikes" law, dramatically increasing sentences for repeat offenders. A defendant with two or more serious convictions, who was convicted of a third felony, had to receive a sentence of life imprisonment. Such a sentence required the defendant to serve a minimum of 25 years, and in some cases much more.

Gary Ewing, on parole from a nine-year prison term, stole three golf clubs worth $399 each, and was prosecuted. Because he had prior convictions, the crime, normally a misdemeanor, was treated as a felony. Ewing was convicted and sentenced to 25 years to life. He appealed, claiming that the sentence violated the Eighth Amendment.

Issue: ***Did Ewing's sentence violate the Eighth Amendment?***

Excerpts from Justice O'Connor's Decision: When the California Legislature enacted the three strikes law, it made a judgment that protecting the public safety requires incapacitating criminals who have already been convicted of at least one serious or violent crime. Nothing in the Eighth Amendment prohibits California from making that choice. To the contrary, our cases establish that States have a valid interest in deterring and segregating habitual criminals.

California's justification is no pretext. Recidivism is a serious public safety concern in California and throughout the Nation. According to a recent report, approximately 67 percent of former inmates released from state prisons were charged with at least one "serious" new crime within

[12] *Gregg v. Georgia*, 428 U.S. 153, 96 S. Ct. 2909, 1976 U.S. LEXIS 82 (S. Ct., 1976).
[13] *Mickle v. Henrichs*, 262 F. 687 (1918).

three years of their release. In particular, released property offenders like Ewing had higher recidivism rates than those released after committing violent, drug, or public-order offenses.

To be sure, California's three strikes law has sparked controversy. Critics have doubted the law's wisdom, cost-efficiency, and effectiveness in reaching its goals. This criticism is appropriately directed at the legislature, which has primary responsibility for making the difficult policy choices that underlie any criminal sentencing scheme. We do not sit as a "superlegislature" to second-guess these policy choices.

Ewing's sentence is justified by the State's public-safety interest in incapacitating and deterring recidivist felons, and amply supported by his own long, serious criminal record. Ewing has been convicted of numerous misdemeanor and felony offenses, served nine separate terms of incarceration, and committed most of his crimes while on probation or parole. His prior "strikes" were serious felonies, including robbery and three residential burglaries. To be sure, Ewing's sentence is a long one. But it reflects a rational legislative judgment, entitled to deference, that offenders who have committed serious or violent felonies and who continue to commit felonies must be incapacitated. The State of California was entitled to place upon Ewing the onus of one who is simply unable to bring his conduct within the social norms prescribed by the criminal law of the State.

We hold that Ewing's sentence of 25 years to life in prison, imposed for the offense of felony grand theft under the three strikes law, is not grossly disproportionate and therefore does not violate the Eighth Amendment's prohibition on cruel and unusual punishments.

Devil's Advocate Are we really going to send Ewing to prison for a minimum of 25 years—for *shoplifting?* It is true that Ewing is a recidivist, and undoubtedly a state is entitled to punish chronic troublemakers more harshly than first-time offenders. However, this still seems excessive. In California, a first-time offense of "arson causing *great bodily injury*" incurs a maximum nine-year sentence. A first-time offender convicted of voluntary manslaughter receives a sentence of no more than 11 years. Only a first-time murderer receives a penalty equal to Ewing's—25 years to life. It is unfair to Ewing to equate his property crimes with a homicide, and foolish for society to spend this much money locking him up.

The Eighth Amendment also outlaws excessive fines. Forfeiture is the most controversial topic under this clause. **Forfeiture** is a *civil* law proceeding that is permitted by many different *criminal* statutes. Once a court has convicted a defendant under certain criminal statutes—such as a controlled substance law—the government may seek forfeiture of property associated with the criminal act. *How much* property can the government take? To determine if forfeiture is fair, courts generally look at three factors: whether the property was used in committing the crime, whether it was purchased with proceeds from illegal acts, and whether the punishment is disproportionate to the defendant's wrongdoing. Neal Brunk pleaded guilty to selling 2.5 ounces of marijuana, and the government promptly sought forfeiture of his house on 90 acres, worth about $99,000. The court found that forfeiture was legitimate because Brunk had used drug money to buy the land and then sold narcotics from the property.[14] By contrast, Hosep Bajakajian attempted to leave the United States without reporting $375,000 cash to customs officials as the law requires. The government demanded forfeiture of the full sum, but the Supreme Court ruled that seizure of the entire amount was grossly disproportionate to the minor crime of failing to report cash movement.[15]

---

[14] *U.S. v. Brunk*, 2001 U.S. App. LEXIS 7566 (4th Cir., 2001).
[15] *U.S. v. Bajakajian*, 524 U.S. 321, 118 S. Ct. 2028, 1998 U.S. LEXIS 4172 (S. Ct., 1998).

Crimes that Harm Business

Businesses must deal with four major crimes: larceny, fraud, arson, and embezzlement.

Larceny

It is holiday season at the mall, the period of greatest profits—and the most crime. At the Foot Forum, a teenager limps in wearing ragged sneakers and sneaks out wearing Super Sneakers, valued at $145. Down the aisle at a home furnishing store, a man is so taken by a $375 power saw that he takes it. Sweethearts swipe sweaters, pensioners pocket produce. All are committing larceny.

Larceny is the trespassory taking of personal property with the intent to steal it. "Trespassory taking" means that someone else originally has the property. The Super Sneakers are personal property (not real estate), they were in the possession of the Foot Forum, and the teenager deliberately left without paying, intending never to return the goods. That is larceny. By contrast, suppose Fast Eddie leaves Bloomingdale's in New York, descends to the subway system, and jumps over a turnstile without paying. Larceny? No. He has "taken" a service—the train ride—but not personal property.

Economists estimate that *12 cents out of every dollar* spent in retail stores covers the cost of shoplifting.

Each year, about $10 billion in merchandise is stolen from retail stores in the United States. Economists estimate that *12 cents out of every dollar* spent in retail stores covers the cost of shoplifting. Some criminal experts believe that drug addicts commit over half of all shoplifting to support their habits. Stores have added electronic surveillance, security patrols, and magnetic antitheft devices, but the problem will not disappear.

Fraud

Robert Dorsey owned Bob's Chrysler in Highland, Illinois. When he bought cars, the First National Bank of Highland paid Chrysler, and Dorsey—supposedly—repaid the bank as he sold the autos. Dorsey, though, began to suffer financial problems, and the bank suspected he was selling cars without repaying his loans. A state investigator notified Dorsey that he planned to review all dealership records. One week later, a fire engulfed the dealership. An arson investigator discovered that an electric iron, connected to a timer, had been placed on a pile of financial papers doused with accelerant.

The saddest part of this true story is that it is only too common. Some experts suggest that 1 percent of corporate revenues are wasted on fraud alone. Dorsey was convicted and imprisoned for committing two crimes that cost business billions of dollars annually—fraud (for failing to repay the loans) and arson (for burning down the dealership).[16]

Fraud refers to various crimes, all of which have a common element: **the deception of another person for the purpose of obtaining money or property from him**. Robert Dorsey's precise violation was bank fraud, a federal crime.[17] It is bank fraud to use deceit to obtain money, assets, securities, or other property under the control of any financial institution.

Fraud
Deception for the purpose of obtaining money or property.

[16] *United States v. Dorsey*, 27 F.3d 285, 1994 U.S. App. LEXIS 15010 (7th Cir., 1994).
[17] 18 U.S.C. §1344.

Wire Fraud and Mail Fraud

Wire and mail fraud are additional federal crimes, involving the use of interstate mail, telegram, telephone, radio, or television to obtain property by deceit.[18] For example, if Marsha makes an interstate phone call to sell land that she does not own, that is wire fraud.

Theft of Honest Services

Under traditional standards, a culprit could only be convicted of fraud if he had deceived the victim to get something of value from *her*. But what if a CEO manipulates the financial results of his company and otherwise misleads investors to keep the stock price high? He has not committed fraud under this traditional definition because he did not personally obtain money from the investors—they bought their stock either from other shareholders or from the company.

To find a way to punish these wrongdoers, prosecutors looked to a statute that prohibits the **theft of honest services.**[19] Originally, this law was used to prosecute public officials who took bribes or kickbacks. But then prosecutors began to apply it to employees in the private sector as well. Prosecutors took the view that an employee violated this law if she did not fully perform the job for which she was paid. Thus, the CEO could be charged for not having done his job properly. But under this standard, the scope of the statute became enormous. In theory, an employee who called in sick so that he could watch his son's play has violated this statute. The scope of the statute permitted enormous discretion on the part of prosecutors.

The Supreme Court recently stepped in to limit its scope. As the following case reveals, **the theft of honest services statute prohibits public and private employees from taking bribes or kickbacks**.

Skilling v. United States

130 S. Ct. 2896, 2010 U.S. LEXIS 5259
Supreme Court of the United States, 2010

Facts: The Enron Corporation was founded as an energy company in Houston, Texas, Five years later, it hired Jeffrey Skilling, a young Harvard Business School graduate, to run one of its subsidiaries. He was promoted to president and chief operating officer 11 years later. At that time, only six companies in the United States had higher revenues than Enron. Six months after Skilling's promotion, he resigned. Four months after that, Enron filed for bankruptcy protection.

The company's stock, which had been trading at $90 per share, became virtually worthless. A government investigation uncovered an elaborate conspiracy to prop up Enron's stock prices by overstating the company's financial well-being. The government prosecuted dozens of Enron employees who participated in the scheme. Skilling's indictment charged that he had violated the honest services statute. He was convicted and sentenced to 292 months imprisonment, 3 years supervised release, and $45 million in restitution. Skilling appealed, arguing that he had not violated the honest services statute because it only applied to bribery and kickback schemes. The Fifth Circuit affirmed his conviction. The Supreme Court granted *certiorari*.

Issue: ***Did Skilling violate the honest services statute?***

Excerpts from Justice Ginsburg's Opinion: Unlike fraud, in which the victim's loss of money or property supplied the defendant's gain, with one the mirror image of the other, the honest-services theory targeted corruption that lacked similar symmetry. While the offender profited, the betrayed party suffered no deprivation of money or

---

[18] 18 U.S.C. §§1341–1346.
[19] 18 U.S.C. § 1346.

property; instead, a third party, who had not been deceived, provided the enrichment. For example, if a city mayor (the offender) accepted a bribe from a third party in exchange for awarding that party a city contract, yet the contract terms were the same as any that could have been negotiated at arm's length, the city (the betrayed party) would suffer no tangible loss. Even if the scheme occasioned a money or property *gain* for the betrayed party, courts reasoned, actionable harm lay in the denial of that party's right to the offender's "honest services." Over time, an increasing number of courts recognized that a recreant employee—public or private—could be prosecuted under this statute if he breached his allegiance to his employer by accepting bribes or kickbacks in the course of his employment.

Skilling asserts that [the honest services statute] is unconstitutionally vague. To satisfy due process, a penal statute must define the criminal offense [1] with sufficient definiteness that ordinary people can understand what conduct is prohibited and [2] in a manner that does not encourage arbitrary and discriminatory enforcement. According to Skilling, [the honest services statute] meets neither of the two due process essentials. First, the phrase "the right of honest services," he contends, does not adequately define what behavior it bars. Second, he alleges, [the honest services statute's] standardless sweep allows policemen, prosecutors, and juries to pursue their personal predilections, thereby facilitating opportunistic and arbitrary prosecutions.

In the main, prosecutions under this statute involved fraudulent schemes to deprive another of honest services through bribes or kickbacks supplied by a third party who had not been deceived. Confined to these paramount applications, [the honest services statute] presents no vagueness problem. Reading the statute to proscribe a wider range of offensive conduct, we acknowledge, would raise the due process concerns underlying the vagueness doctrine. To preserve the statute without transgressing constitutional limitations, we now hold that [the honest services statute] criminalizes only the bribe-and-kickback core.

The Government did not, at any time, allege that Skilling solicited or accepted side payments from a third party in exchange for making these misrepresentations. It is therefore clear that Skilling did not commit honest-services fraud.

Skilling had been found guilty of three crimes: honest services fraud, wire fraud, and securities fraud. Although the Supreme Court ruled that Skilling had not violated the honest services statute, they remanded the case to the appeals court to determine if the other two convictions were independent enough to stand on their own without the honest services element. If not, he would have to be retried. The appeals court did uphold Skilling's two other convictions.

Insurance Fraud

Insurance fraud is another common crime. A Ford suddenly swerves in front of a Toyota, causing it to brake hard. A Mercedes, unable to stop, slams into the Toyota, as the Ford races away. Regrettable accident? No: a "swoop and squat" fraud scheme. The Ford and Toyota drivers were working together, hoping to cause an accident with someone else. The "injured" Toyota driver now goes to a third member of the fraud team—a dishonest doctor—who diagnoses serious back and neck injuries and predicts long-term pain and disability. The driver files a claim against the Mercedes's driver, whose insurer may be forced to pay tens or even hundreds of thousands of dollars for an accident that was no accident. Insurance companies investigate countless cases like this each year, trying to distinguish the honest victim from the criminal.

EXAM Strategy

Question: Eric mails glossy brochures to 25,000 people, offering to sell them a one-month time-share in a stylish apartment in Las Vegas. The brochure depicts an imposing building, an opulent apartment, and spectacular pools. To reserve a space, customers need only send in a $2,000 deposit. Three hundred people respond, sending in the money. In fact, there is no such building. Eric, planning to flee with the cash, is arrested and prosecuted. His sentence could be as long as 20 years. (1) With what crime

is he charged? (2) Is this a felony or misdemeanor prosecution? (3) Does Eric have a right to a jury trial? (4) What is the government's burden of proof?

Strategy: (1) Eric is deceiving people, and that should tell you the *type* of crime. (2, 3) The potential 20-year sentence determines whether Eric's crime is a misdemeanor or felony, and whether or not he is entitled to a jury trial. (4) We know that the government has the burden of proof in criminal prosecutions—but *how much* evidence must it offer?

Result: Eric has committed fraud. A felony is one in which the sentence could be a year or more. The potential penalty here is 20 years, so the crime is a felony. Eric has a right to a jury, as does any defendant whose sentence could be six months or longer. The prosecution must prove its case beyond a reasonable doubt, a much higher burden than that in a civil case.

Tragic accident…or felony?

Arson

Robert Dorsey, the Chrysler dealer, committed a second serious crime. **Arson** is the malicious use of fire or explosives to damage or destroy any real estate or personal property. It is both a federal and a state crime. Dorsey used arson to conceal his bank fraud. Most arsonists hope to collect on insurance policies. Every year thousands of buildings burn, particularly in economically depressed neighborhoods, as owners try to make a quick kill or extricate themselves from financial difficulties. Everyone who purchases insurance ends up paying higher premiums because of this immorality.

Embezzlement

This crime also involves illegally obtaining property, but with one big difference: the culprit begins with legal possession. **Embezzlement** is the fraudulent conversion of property already in the defendant's possession.

This is a story without romance: for 15 years, Kristy Watts worked part-time as a bookkeeper for romance writer Danielle Steele, handling payroll and accounting. During that time, Watts stole $768,000 despite earning a salary of $200,000 a year. Watts said that she had been motivated by envy and jealousy. She was sentenced to three years in prison and agreed to pay her former boss almost $1 million.

Arson
The malicious use of fire or explosives to damage or destroy real estate or personal property.

Embezzlement
The fraudulent conversion of property already in the defendant's possession.

Crimes Committed by Business

A corporation can be found guilty of a crime based on the conduct of any of its **agents**, who include anyone undertaking work on behalf of the corporation. An agent can be a corporate officer, an accountant hired to audit a statement, a sales clerk, or almost any other person performing a job at the company's request.

If an agent commits a criminal act within the scope of his employment and with the intent to benefit the corporation, the company is liable.[20] This means that the agent himself must first be guilty. If the agent is guilty, the corporation is, too.

[20] *New York Central & Hudson River R.R. Co. v. United States*, 212 U.S. 481, 29 S. Ct. 304, 1909 U.S. LEXIS 1832 (S. Ct., 1909). Note that what counts is the intention to benefit, not actual benefit. A corporation will not escape liability by showing that the scheme failed.

Critics believe that the criminal law has gone too far. It is unfair, they argue, to impose *criminal* liability on a corporation, and thus penalize the shareholders, unless high-ranking officers were directly involved in the illegal conduct. The following case concerns a corporation's responsibility for a death caused by its employee.

Commonwealth v. Angelo Todesca Corp.

446 Mass. 128, 842 N.E. 2d 930
Supreme Judicial Court of Massachusetts, 2006

Facts: Brian Gauthier, an experienced truck driver, worked for Todesca, a paving company. After about a year driving a particular 10-wheel tri-axle dump truck, Gauthier noticed that the back-up alarm had stopped working. When he reported this, the company mechanic realized that the old alarm needed replacement. The mechanic had none in stock, so the company instructed Gauthier to drive the truck without the alarm.

About a month later, Gauthier and other Todesca drivers were delivering asphalt to the work site on a highway at the entrance to a shopping mall. A police officer directed the construction vehicles and the routine mall traffic. A different driver asked the officer to "watch our backs" as the trucks backed through the intersection. All of the other trucks were equipped with back-up alarms. When it was Gauthier's turn to back up, he struck the police officer, killing him.

The state charged the Todesca corporation with motor vehicle homicide, and the jury found the company guilty. The trial judge imposed a fine—of $2,500. The court of appeals reversed the conviction, and the prosecution appealed to the state's highest court.

Issue: ***Could the company be found guilty of motor vehicle homicide?***

Excerpts from Justice Spina's Decision: Before criminal liability may be imposed on a corporate defendant, the Commonwealth must prove that the individual for whose conduct it seeks to charge the corporation criminally was placed in a position by the corporation where he had enough responsibility to act for the corporation, and that he was acting in behalf of the corporation [when] he committed a criminal act.

The defendant maintains that a corporation never can be criminally liable for motor vehicle homicide because the language of a criminal statute must be construed strictly, and a "corporation" cannot "operate" a vehicle. We agree with the Commonwealth. Because a corporation is not a living person, it can act only through its agents. By the defendant's reasoning, a corporation never could be liable for any crime. A "corporation" can no more serve alcohol to minors, or bribe government officials, or falsify data on loan applications, than operate a vehicle negligently: only human agents, acting for the corporation, are capable of these actions. Nevertheless, we consistently have held that a corporation may be criminally liable for such acts when performed by corporate employees, acting within the scope of their employment and on behalf of the corporation.

It was undisputed that Gauthier's truck was not equipped with a functioning back-up alarm at the time of the collision, and that he knew the alarm was missing. Although a back-up alarm was not required by statute, the defendant had a written safety policy mandating that all its trucks be equipped with such alarms. An employee's violation of his employer's rules, intended to protect the safety of third persons, is evidence of the employee's negligence, for which the employer may be held liable.

Other drivers at the work site had functioning back-up alarms, and although they spoke moments before the collision, Gauthier never informed the victim that his truck did not have an alarm. The jury could have inferred that the victim, a veteran police officer, was aware that the defendant's custom was to equip its trucks with back-up alarms, and that the victim expected to hear a back-up alarm when a driver operated a truck in reverse.

The jury also could have inferred that an alarm on Gauthier's truck would have sounded practically in the victim's ear, alerting him to the truck's movement in time to get out of its way. The back-up alarm makes a distinctive beeping sound, intended to warn people behind the vehicle that it is operating in reverse, and the victim did not realize Gauthier's truck was backing up because he did not hear that sound.

Affirmed.

Selected Crimes Committed by Business

Workplace Crimes

The workplace can be dangerous. Working on an assembly line exposes factory employees to fast-moving machinery. For a roofer, the first slip may be the last. The invisible radiation in a nuclear power plant can be deadlier than a bullet. The most important statute regulating the workplace is the federal **Occupational Safety and Health Act of 1970 (OSHA)**,[21] which sets safety standards for many industries.[22] May a state government go beyond standards set by OSHA and use the criminal law to punish dangerous conditions? In *People v. O'Neill*,[23] the courts of Illinois answered that question with a potent "yes," permitting a *murder prosecution* against corporate executives themselves.

Film Recovery Systems was an Illinois corporation in business to extract silver from used X-ray film and then resell it. Steven O'Neill was president of Film Recovery, Charles Kirschbaum was its plant manager, and Daniel Rodriguez the foreman. To extract the silver, workers at Film Recovery soaked the X-ray film in large, open, bubbling vats that contained sodium cyanide.

A worker named Stefan Golab became faint. He left the production area and walked to the lunchroom, where workers found him trembling and foaming at the mouth. He lost consciousness. Rushed to a hospital, he was pronounced dead on arrival. The Cook County medical examiner determined that Golab died from acute cyanide poisoning caused by inhalation of cyanide fumes in the plant.

Illinois indicted Film Recovery and several of its managers for murder. The indictment charged that O'Neill and Kirschbaum committed murder by failing to disclose to Golab that he was working with cyanide and other potentially lethal substances and by failing to provide him with appropriate and necessary safety equipment.

The case was tried to a judge without a jury. Workers testified that O'Neill, Kirschbaum, and other managers never told them they were using cyanide or that the fumes they inhaled could be harmful; that management made no effort to ventilate the factory; that Film Recovery gave the workers no goggles or protective clothing; that the chemicals they worked with burned their skin; that breathing was difficult in the plant because of strong, foul orders; and that workers suffered frequent dizziness, nausea, and vomiting.

The trial judge found O'Neill, Kirschbaum, and others guilty of murder. Illinois defines murder as performing an act that the defendant *knows will create a strong probability of death* in the victim, and the judge found they had done that. He found Film Recovery guilty of involuntary manslaughter. Involuntary manslaughter is *recklessly* performing an act that causes death. He sentenced O'Neill, Kirschbaum, and Rodriguez to 25 years in prison.

The defendants appealed, contending that the verdicts were inconsistent. They argued, and the Illinois Court of Appeals agreed, that the judge had made contradictory findings. Murder required the specific intent of *knowing there was a strong probability of death*, whereas the manslaughter conviction required *reckless* conduct. The appeals court reversed the convictions and remanded for a new trial.

Moments before the new trial was to start, O'Neill, Kirschbaum, and Rodriguez all pleaded guilty to involuntary manslaughter. They received sentences of three years, two years, and four months, respectively.

[21] 29 U.S.C. §§651 et seq. (1982).

[22] See Chapter 29 on employment law.

[23] 194 Ill. App. 3d 79, 550 N.E.2d 1090, 1990 Ill. App. LEXIS 65 (Ill. App. Ct. 1990).

Hiring Illegal Workers

Employers are required to verify their workers' eligibility for employment in the United States. It is illegal to knowingly employ unauthorized workers. Within three days of hiring a worker, the employer must complete an I-9 form, which lists the items that can be used as documentation of eligibility. The government has the right to arrest illegal employees, and it can also bring charges against the business that hired them.

RICO

The **Racketeer Influenced and Corrupt Organizations Act** (RICO) is one of the most powerful and controversial statutes ever written.[24] Congress passed the law primarily to prevent gangsters from taking money they earned illegally and investing it in legitimate businesses. But RICO has expanded far beyond the original intentions of Congress and is now used more often against ordinary businesses than against organized criminals. Some regard this wide application as a tremendous advance in law enforcement, but others view it as an oppressive weapon used to club ethical companies into settlements they should never have to make.

Racketeer Influenced and Corrupt Organizations Act (RICO)
A powerful Federal statute, originally aimed at organized crime, now used in many criminal prosecutions and civil lawsuits.

What is a violation of this law? **RICO prohibits using two or more racketeering acts to accomplish any of these goals: (1) investing in or acquiring legitimate businesses with criminal money; (2) maintaining or acquiring businesses through criminal activity; or (3) operating businesses through criminal activity.**

What does that mean in English? It is a two-step process to prove that a person or an organization has violated RICO.

- The prosecutor must show that the defendant committed two or more **racketeering acts**, which are any of a long list of specified crimes: embezzlement, arson, mail fraud, wire fraud, and so forth. Thus, if a gangster ordered a building torched in January and then burned a second building in October, that would be two racketeering acts. If a stockbroker told two customers that Bronx Gold Mines was a promising stock, when she knew that it was worthless, that would be two racketeering acts.

Racketeering acts
Any of a long list of specified crimes, such as embezzlement, arson, mail fraud, wire fraud, and so forth.

- The prosecutor must then show that the defendant used these racketeering acts to accomplish one of the three *purposes* listed above. If the gangster committed two arsons and then used the insurance payments to buy a dry cleaning business, that would violate RICO. If the stockbroker gave fraudulent advice and used the commissions to buy advertising for her firm, that would violate RICO.

The government may prosecute both individuals and organizations for violating RICO. For example, the government prosecuted financier Michael Milken for manipulating stock prices. It also threatened to prosecute his employer, Drexel Burnham Lambert. If the government proves its case, the defendant can be hit with large fines and a prison sentence of up to 20 years. RICO also permits the government to seek forfeiture of the defendant's property. A court may order a convicted defendant to hand over any property or money used in the criminal acts or derived from them. Courts often freeze a defendant's assets once charges are brought to ensure that he will not hide the assets. If all his assets are frozen, he will have a hard time paying his defense lawyer, so a freeze often encourages a defendant to plea bargain on a lesser charge. Both Milken and Drexel entered into plea agreements with the government, rather than face a freeze on their assets, or in Milken's case, a long prison sentence.

[24] 18 U.S.C. §§1961–1968.

In addition to criminal penalties, RICO also creates civil law liabilities. The government, organizations, and individuals all have the right to file civil lawsuits, seeking damages and, if necessary, injunctions. For example, a physician sued State Farm Insurance, alleging that the company had hired doctors to produce false medical reports that the company used to cut off claims by injured policy holders. As a result of these fake reports, the company refused to pay the plaintiff for legitimate services he performed on the policy holders. RICO is powerful (and for defendants, frightening) in part because a civil plaintiff can recover **treble damages**, that is, a judgment for three times the harm actually suffered, as well as attorney's fees.

Money Laundering

Money laundering
Using the proceeds of criminal acts either to promote crime or conceal the source of the money.

Money laundering consists of taking the proceeds of certain criminal acts and either (1) using the money to promote crime, or (2) attempting to conceal the source of the money.[25]

Money laundering is an important part of major criminal enterprises. Successful criminals earn enormous sums, which they must filter back into the flow of commerce so that their crimes go undetected. Laundering is an essential part of the corrosive traffic in drugs. Profits, all in cash, may mount so swiftly that dealers struggle to use the money without attracting the government's attention. For example, Colombian drug cartels set up a sophisticated system in which they shipped money to countries such as Dubai that do not keep records on cash transactions. This money was then transferred to the U.S. disguised as offshore loans. Prosecution by the U.S. government led to the demise of some of the banks involved.

But drug money is not the only or even major component of so-called flight capital. Criminals also try to hide the vast sums they earn from arms dealing and tax evasion. Some of this money is used to support terrorist organizations.

EXAM Strategy

Question: Explain the difference between embezzlement and money laundering. Give an example of each.

Strategy: Both crimes involve money illegally obtained, but they are very different. As to embezzlement, how did the criminal obtain the funds? In a laundering case, to what use is the criminal trying to put the cash?

Result: Embezzlement refers to fraudulently taking money that is already in the defendant's possession. For example, if a financial advisor, *lawfully entrusted* with his client's funds for investing, uses some of the cash to buy himself a luxurious yacht, he has embezzled the client's money. Money laundering consists of taking *illegally obtained* money and either using the funds to promote additional crimes or attempting to *conceal* the source of the cash. Thus, an arms dealer might launder money so that he can use it to finance a terrorist organization.

[25] 18 U.S.C. §§1956 et seq.

Other Crimes

Additional crimes that affect business appear elsewhere in the text. An increasing number of federal and state statutes are designed to punish those who harm the environment. (See Chapter 40, on environmental law.) Antitrust violations, in which a corporation fixes prices, can lead to criminal prosecutions. (See Chapter 38, on antitrust law.) Finally, securities fraud is a crime and can lead to severe prison sentences. (See Chapter 36, on securities regulation.)

Punishing a Corporation

Fines

The most common punishment for a corporation is a fine, as demonstrated in the Todesca case. This makes sense in that the purpose of a business is to earn a profit, and a fine, theoretically, hurts. But most fines are modest by the present standards of corporate wealth. In the Todesca prosecution, does a $2,500 fine force corporate leaders to be more cautious, or does it teach them that cutting corners makes economic sense, because the penalties will be a tolerable cost of doing business?

Sometimes the fines are stiffer. British Petroleum was found guilty of two serious environmental violations. In Alaska, the company's failure to inspect and clean pipelines caused 200,000 gallons of crude oil to spill onto the tundra. In Texas, the company's failure to follow standard procedures for ensuring safe refineries caused a catastrophic explosion that killed 15 people and injured 170 more. The total fine for both criminal violations was $62 million.[26] Is that enough to change BP's practices? Evidently not. In the spring of 2010, a BP well called Deepwater Horizon exploded, killing 11 workers and releasing into the Gulf of Mexico the largest marine oil spill ever. The Deepwater rig had violated many safety requirements.

Compliance Programs

The **Federal Sentencing Guidelines** are the detailed rules that judges must follow when sentencing defendants convicted of crimes in federal court. The guidelines instruct judges to determine whether, at the time of the crime, the corporation had in place a serious **compliance program**, that is, a plan to prevent and detect criminal conduct at all levels of the company. A company that can point to a detailed, functioning compliance program may benefit from a dramatic reduction in the fine or other punishment meted out. Indeed, a tough compliance program may even convince federal investigators to curtail an investigation and to limit any prosecution to those directly involved, rather than attempting to get a conviction against high-ranking officers or the company itself.

Federal Sentencing Guidelines
The detailed rules that judges must follow when sentencing defendants convicted of crimes in federal court.

Compliance program
A plan to prevent and detect criminal conduct at all levels of the company.

For a compliance plan to be deemed effective:

- The program must be reasonably capable of reducing the prospect of criminal conduct.
- Specific, high-level officers must be responsible for overseeing the program.
- The company must not place in charge any officers it knows or should have known, from past experience, are likely to engage in illegal conduct.
- The company must effectively communicate the program to all employees and agents.
- The company must ensure compliance by monitoring employees in a position to cheat and by promptly disciplining any who break the law.

[26] Source: **http://epa.gov/**.

Chapter Conclusion

Crime has an enormous impact on business. Companies are victims of crimes, and sometimes they also commit criminal actions. Successful business leaders are ever-vigilant to protect their company from those who wish to harm it, whether from the inside or the outside.

EXAM REVIEW

1. **BURDEN OF PROOF** In all prosecutions, the government must prove its case beyond a reasonable doubt. (p. 180)

EXAM Strategy

Question: Arnie owns a two-family house in a poor section of the city. A fire breaks out, destroying the building and causing $150,000 damage to an adjacent store. The state charges Arnie with arson. Simultaneously, Vickie, the store owner, sues Arnie for the damage to her property. Both cases are tried to juries, and the two juries hear identical evidence of Arnie's actions. But the criminal jury acquits Arnie, while the civil jury awards Vickie $150,000. How did that happen?

Strategy: The opposite outcomes are probably due to the different burdens of proof in a civil and criminal case. Make sure you know that distinction. (See the "Result" at the end of this section.)

2. **RIGHT TO A JURY.** A criminal defendant has a right to a trial by jury for any charge that could result in a sentence of six months or longer. (p. 180)

3. **DURESS** A defendant is not guilty of a crime if she committed it under duress. However, the defendant bears the burden of proving by a preponderance of the evidence that she acted under duress. (p. 181)

4. **ENTRAPMENT.** When the government induces the defendant to break the law, the prosecution must prove beyond a reasonable doubt that the defendant was predisposed to commit the crime. (p. 181)

5. **FOURTH AMENDMENT.** The Fourth Amendment to the Constitution prohibits the government from making illegal searches and seizures of individuals, corporations, partnerships, and other organizations. (pp. 181–185)

6. **WARRANT.** As a general rule, the police must obtain a warrant before conducting a search but there are seven circumstances under which the police may search without a warrant. (pp. 181–182)

7. **THE EXCLUSIONARY RULE.** Under the exclusionary rule, a prosecutor may not use evidence obtained illegally. (pp. 182–183)

8. **FIFTH AMENDMENT** The Fifth Amendment requires due process in all criminal procedures and prohibits double jeopardy and self-incrimination. (pp. 185–187)

9. **SIXTH AMENDMENT** The Sixth Amendment guarantees criminal defendants the right to a lawyer. (p. 187)

10. **EIGHTH AMENDMENT** The Eighth Amendment prohibits excessive fines and cruel and unusual punishments. (pp. 189–190)

11. **LARCENY** Larceny is the trespassory taking of personal property with the intent to steal. (p. 191)

12. **FRAUD** Fraud refers to a variety of crimes, all of which involve the deception of another person for the purpose of obtaining money or property. (pp. 191–193)

EXAM Strategy

Question: Chuck is a DJ on a radio station. A music company offers to pay him every time he plays one of its songs. Soon enough, Chuck is earning $10,000 a week in these extra payments, and his listeners love the music. In Chuck's view, this is a win-win situation. Is Chuck right?

Strategy: This is not traditional fraud because Chuck is not getting money from the people he is cheating—his listeners. Indeed, they are happy. Is there another type of fraud that applies in this situation? (See the "Result" at the end of this section.)

13. **ARSON** Arson is the malicious use of fire or explosives to damage or destroy real estate or personal property. (p. 193)

14. **EMBEZZLEMENT** Embezzlement is the fraudulent conversion of property already in the defendant's possession. (p. 193)

15. **CORPORATE LIABILITY** If a company's agent commits a criminal act within the scope of her employment and with the intent to benefit the corporation, the company is liable. (pp. 196–197)

16. **RICO** RICO prohibits using two or more racketeering acts to invest in legitimate business or carry on certain other criminal acts. RICO permits civil lawsuits as well as criminal prosecutions. (pp. 197–198)

EXAM Strategy

Question: Cheryl is a bank teller. She figures out a way to steal $99.99 per day in cash without getting caught. She takes the money daily for eight months and invests it in a catering business she is starting with Floyd, another teller. When Floyd learns what she is doing, he tries it, but is caught in his first attempt. He and Cheryl are both prosecuted.

(a) Both are guilty only of larceny.

(b) Both are guilty of larceny and violating RICO.

(c) Both are guilty of embezzlement; Cheryl is also guilty of violating RICO.

(d) Both are guilty of embezzlement and violating RICO.

Strategy: You need to know the difference between larceny and embezzlement. What is it? Once you have that figured out, focus on RICO. The government must prove two things: First, that the defendant committed crimes more than once—how many times? Second, that the defendant used the criminal proceeds for a specific purpose—what? (See the "Result" at the end of this section.)

17. MONEY LAUNDERING Money laundering consists of taking profits from a criminal act and either using them to promote crime or attempting to conceal their source. (p. 198)

1. Result: The plaintiff offered enough proof to convince a jury by a preponderance of the evidence that Arnie had damaged her store. However that same evidence, offered in a criminal prosecution, was not enough to persuade the jury beyond a reasonable doubt that Arnie had lit the fire.

12. Result: Chuck has committed a theft of honest services because he has taken a bribe.

16. Result: Cheryl and Floyd both committed embezzlement, which refers to fraudulently taking money that was properly in their possession. Floyd did it once, but a RICO conviction requires two or more racketeering acts—Floyd has not violated RICO. Cheryl embezzled dozens of times and invested the money in a legitimate business. She is guilty of embezzlement and RICO; the correct answer is C.

Multiple-Choice Questions

1. In a criminal case, which statement is true?

(a) The prosecution must prove the government's case by a preponderance of the evidence.

(b) The criminal defendant is entitled to a lawyer even if she cannot afford to pay for it herself.

(c) The police are never allowed to question the accused without a lawyer present.

(d) All federal crimes are felonies.

2. The police are not required to obtain a warrant before conducting a search if:

(a) a reliable informant has told them they will find evidence of a crime in a particular location.

(b) they have a warrant for part of a property and another section of the property is in plain view.

(c) they see someone on the street who could possibly have committed a criminal act.

(d) someone living on the property has consented to the search.

3. Under the exclusionary rule, which statement is true?

(a) Evidence must be excluded from trial if the search warrant is defective, even if the police believed at the time of the search that it was valid.

(b) The prosecution cannot use any evidence the police found at the site of the illegal search, but it can use any evidence the police discover elsewhere as a result of the illegal search.

(c) Any statements a defendant makes after arrest are inadmissible if the police do not read him his Miranda rights.

(d) If a conviction is overturned because of the exclusionary rule, the prosecution is not allowed to retry the defendant.

4. Benry asks his girlfriend, Alina, to drive his car to the repair shop. She drives his car all right—to Las Vegas, where she hits the slots. Alina has committed

(a) fraud.

(b) embezzlement.

(c) larceny.

(d) a RICO violation.

5. Which of the following elements is required for a RICO conviction?

(a) Investment in a legitimate business.

(b) Two or more criminal acts.

(c) Maintaining or acquiring businesses through criminal activity.

(d) Operating a business through criminal activity.

Essay Questions

1. **YOU BE THE JUDGE WRITING PROBLEM** An undercover drug informant learned from a mutual friend that Philip Friedman "knew where to get marijuana." The informant asked Friedman three times to get him some marijuana, and Friedman agreed after the third request. Shortly thereafter, Friedman sold the informant a small amount of the drug. The informant later offered to sell Friedman three pounds of marijuana. They negotiated the price and then made the sale. Friedman was tried for trafficking in drugs. He argued entrapment. Was Friedman entrapped? **Argument for Friedman**: The undercover agent had to ask three times before Friedman sold him a small amount of drugs. A real drug dealer, predisposed to commit the crime, leaps at an opportunity to sell. If the government spends time and money luring innocent people into the commission of crimes, all of us are the losers. **Argument for the Government**: Government officials suspected Friedman of being a sophisticated drug dealer, and they were right. When he had a chance to buy three pounds, a quantity only a dealer would purchase, he not only did so, but he bargained with skill, showing a working knowledge of the business. Friedman was not entrapped—he was caught.

2. Conley owned video poker machines. Although they are outlawed in Pennsylvania, he placed them in bars and clubs. He used profits from the machines to buy more machines. Is he guilty of money laundering?

3. Karin made illegal firearm purchases at a gun show. At her trial, she alleged that she had committed this crime because her boyfriend had threatened to harm her and her two daughters if she did not. Her lawyer asked the judge to instruct the jury that the prosecution had an obligation to prove beyond a reasonable doubt that Karin had acted freely. Instead, the judge told the jury that Karin had the burden of proving duress by a preponderance of the evidence. Who is correct?

4. An informant bought drugs from Dorian. The police obtained a search warrant to search Dorian's house. But before they acted on the warrant, they sent the informant back to try again. This time, Dorian said he did not have any drugs. The police then acted on the warrant and searched his house. Did the police have probable cause?

5. Shawn was caught stealing letters from mailboxes. After pleading guilty, he was sentenced to two months in prison and three years supervised release. One of the supervised release conditions required him to stand outside a post office for eight hours wearing a signboard stating, "I stole mail. This is my punishment." He appealed this requirement on the grounds that it constituted cruel and unusual punishment. Do you agree?

Discussion Questions

1. Under British law, a police officer must now say the following to a suspect placed under arrest: "You do not have to say anything. But if you do not mention now something which you later use in your defense, the court may decide that your failure to mention it now strengthens the case against you. A record will be made of anything you say and it may be given in evidence if you are brought to trial." What is the goal of this British law? What does a police officer in the United States have to say, and what difference does it make at the time of an arrest? Which approach is better?

2. **ETHICS** You are a prosecutor who think it is possible that Naonka, in her role as CEO of a brokerage firm, has stolen money from her customers, many of whom are not well off. If you charge her and her company with RICO violations, you know that she is likely to plea bargain because otherwise her assets and those of the company may be frozen by the court. As part of the plea bargain, you might be able to get her to disclose evidence about other people who might have taken part in this criminal activity. But you do not have any hard evidence at this point. Would such an indictment be ethical? Do the ends justify the means? Is it worth it to harm Naonka for the chance of protecting thousands of innocent investors?

3. Van is brought to the police station for questioning about a shooting at a mall. The police read him his Miranda rights. For the rest of the three-hour interrogation, he remains silent except for a few one-word responses. Has he waived his right to remain silent? Can those few words be used against him in court?

4. Police arrested Bennie on a warrant issued in a neighboring county. When they searched him, the police found drugs and a gun. Only later did the police discover that when they had used the warrant, it was not valid because it had been recalled months earlier. The notice of recall had not been entered into the database. Should the evidence of drugs and a gun be suppressed under the exclusionary rule?

5. Andy was arrested for driving under the influence of alcohol (DUI). He had already been convicted of another driving offense. The court in the *first* offense was notified of this later DUI charge and took that information into consideration when determining Andy's sentence. Did the state violate Andy's protection against double jeopardy when it subsequently tried and convicted him for the DUI offense?

CHAPTER 9

INTERNATIONAL LAW

The month after Anfernee graduates from business school, he opens a clothing store. Sales are brisk, but Anfernee is making little profit because his American-made clothes are expensive. Then an Asian company offers to sell him identical merchandise for 45 percent less than the American suppliers charge. Anfernee is elated, but quickly begins to wonder: Why is the new price so low? The sales representative expects Anfernee to sell no clothes except his. Is that legal? He also requests a $50,000 cash "commission" to smooth the export process in his country. That sounds suspicious, too. The questions multiply. Will the contract be written in English or a foreign language? Must Anfernee pay in dollars or some other currency? The foreign company wants a letter of credit. What does that mean? What law will govern the agreement? If the clothes are defective, how will disputes be resolved—and where?

The world is now one vast economy, and deals can cross borders quickly.

Transnational business grows with breathtaking speed. The United States now exports more than $1 trillion worth of goods and services. Leading exports include industrial machinery, computers, aircraft, agricultural products, electronic equipment, and chemicals. Anfernee should put this lesson under his cap: the world is now one vast economy, and deals can cross borders quickly.

Trade Regulation: The Big Picture

Nations regulate international trade in many ways. In this section we look at export and import controls that affect trade out of and into the United States. **Exporting** is shipping goods or services out of a country. The United States, with its huge farms, is the world's largest exporter of agricultural products. **Importing** is shipping goods and services into a country. The United States suffers trade deficits every year because the value of its imports exceeds that of its exports, as the following table demonstrates.

Exporting
Shipping goods or services out of a country.

Importing
Shipping goods or services into a country.

Rank	Country	Exports (in billions of U.S. dollars)	Imports (in billions of U.S. dollars)
	Total, All Countries	1,278	1,912
1	Canada	249	277
2	China	92	365
3	Mexico	163	230

Export Controls

You and a friend open an electronics business, intending to purchase goods in this country for sale abroad. A representative of Interlex stops in to see you. Interlex is a Latin American electronics company, and the firm wants you to help it acquire a certain kind of infrared dome which helps helicopters identify nearby aircraft. You find a Pennsylvania company that manufactures the domes, and you realize that you can buy and sell them to Interlex for a handsome profit. Any reason not to? As a matter of fact, there is.

All nations limit what may be exported. In the United States, several statutes do this. The **Export Administration Act of 1985**[1] is one. This statute balances the need for free trade, which is essential in a capitalist society, with important requirements of national security. The statute permits the federal government to restrict exports if they endanger national security, harm foreign policy goals, or drain scarce materials.

The Secretary of Commerce makes a **Controlled Commodities List** of those items that meet any of these criteria. No one may export any commodity on the list without a license.

A second major limitation comes from the **Arms Export Control Act.**[2] This statute permits the President to create a second list of controlled goods, all related to military weaponry. Again, no person may export any listed item without a license.

The AECA will prohibit you from exporting the infrared domes. They are used in the guidance system of one of the most sophisticated weapons in the American defense arsenal. Foreign governments have attempted to obtain the equipment through official channels, but the federal government has placed the domes on the list of restricted military items. When a U.S. citizen did send such goods overseas, he was convicted and imprisoned.[3]

Import Controls

Tariffs

Tariff
A tax imposed on goods when they enter a country.

Tariffs are the most widespread method of limiting what may be imported into a nation. **A tariff is a tax imposed on goods when they enter a country.** Tariffs are also called *duties*. Nations use tariffs primarily to protect their domestic industries. Because the company importing the goods must pay this duty, the importer's costs increase, making the merchandise more expensive for consumers. This renders domestic products more attractive. High tariffs unquestionably help local industry, but they may harm local buyers. Consumers often benefit from zero tariffs because the unfettered competition drives down prices.

Tariffs change frequently and vary widely from one country to another. For manufactured goods, the United States imposes an average tariff of less than 4 percent, about the same as that in the European Union. However, some major trading partners around the world set tariffs of 10 to 30 percent for identical items, with those duties generally being highest in developing countries. Foodstuffs show even greater diversity. For agricultural products, average tariffs are about 25 percent in North America, but over 100 percent in South Asia. As we will see later in the chapter, regional trade treaties have changed the tariff landscape. The majority of all U.S. products entering Mexico are duty free. Almost all trade between Canada and the United States is done with zero tariffs, which is partly why the two nations do more bilateral commerce than any others in the world.

Classification. The U.S. Customs Service[4] imposes tariffs at the point of entry into the United States. A customs official inspects the merchandise as it arrives and classifies it, in other words, decides precisely what the goods are. This decision is critical because tariffs can vary greatly depending on the classification. Disputes at this stage typically involve an importer claiming that the Customs Service has imposed the wrong classification. Companies will often go to great lengths to convince a court to lower tariffs on their products.

In the following case, Isotoner claimed that a tariff violated the Constitution.

Did the company make a sensible argument? You be the judge.

[4]The Customs Service is part of the United States Customs and Border Protection, which is itself a division of the Department of Homeland Security.

You be the Judge

TOTES-ISOTONER CO. V. UNITED STATES

594 F.3d 1346

United States Court of Appeals for the Federal Circuit, 2010

Facts: Isotoner imports gloves for sale in the United States. The U.S. imposes a higher tariff on "men's" leather gloves than it does on gloves manufactured "for other persons." Isotoner argued that this difference violated the Constitution's Equal Protection Clause and amounted to illegal gender discrimination. The lower court dismissed the complaint, and Isotoner appealed.

Issue: *Do differing tariff rates for men's and women's gloves amount to illegal gender discrimination?*

Argument for Isotoner: Because the Constitution requires equal protection under the law, the government must treat people the same. In this instance, the government treats men worse than women—with the result that men will have to pay more for gloves. This

© Dubravko Grakalic/Shutterstock.com

Is it acceptable for the government to set differing tariff rates on men's and women's gloves?

is unacceptable. Surely this court would not allow a special tax on yarmulkes, or higher tariffs linked to race. Distinctions that disfavor an entire group of people cannot stand.

Argument for the United States: To be in violation of the Equal Protection Clause, the government must intend to discriminate. That is not the case here. Tariff rates are set for a variety of reasons. Men's and women's gloves may be made by different companies, in different countries, with different impacts on American industry. Surely the government has the discretion to set different tariff rates for gloves or any other kind of imported goods.

Valuation. After classifying the imported goods, customs officials impose the appropriate duty ***ad valorem***, meaning "according to the value of the goods." In other words, the service must determine the value of the merchandise before it can tax a percentage of that value. This step can be equally contentious, since goods will have different prices at each stage of manufacturing and delivery. The question is supposed to be settled by the **transaction value** of the goods, meaning the price actually paid for the merchandise when sold for export to the United States (plus shipping and other minor costs). But there is often room for debate, so importers use customs agents to help negotiate the most favorable valuation.

Ad valorem
Customs officials impose duties "according to the value of the goods."

Duties for Dumping and Subsidizing

Dumping means selling merchandise at one price in the domestic market and at a cheaper, unfair price in an international market. Suppose a Singapore company, CelMaker, makes cellular telephones for $20 per unit and sells them in the United States for $12 each, vastly undercutting domestic American competitors. CelMaker may be willing to suffer short-term losses in order to bankrupt competitors. Once it has gained control of that market, it will raise its prices, more than compensating for its initial losses. And CelMaker may get help from its home government. Suppose the Singapore government prohibits foreign cellular phones from entering Singapore. CelMaker may sell its phones for $75 at home, earning such high profits that it can afford the temporary losses in America.

In the United States, the Commerce Department investigates suspected dumping. If the department concludes that the foreign company is selling items at **less than fair value**, and that this harms an American industry, it will impose a **dumping duty** that is sufficiently high to put the foreign goods back on fair footing with domestic products.

Dumping
Selling merchandise at one price in the domestic market and at a cheaper, unfair price in an international market.

Subsidized goods are also unfair. Suppose the Singapore government permits CelMaker to pay no taxes for 10 years. This enormous benefit will enable the company to produce cheap phones and undersell competitors. Again, the United States imposes a tariff on subsidized goods, called **countervailing duties**. If CelMaker sells phones for $15 that would cost an unsubsidized competitor $21 to make, it will pay a $6 countervailing duty on every phone entering the United States.

Treaties

Recall from Chapter 1 that the President makes treaties with foreign nations. To take effect, treaties must then be approved by at least two-thirds of the United States Senate. This section will examine three significant trade agreements.

General Agreement on Tariffs and Trade (GATT)

What is GATT? The greatest boon to American commerce in a century—or perhaps it is the worst assault on the American economy in 200 years. It depends on whom you ask. Let's start where everyone agrees.

GATT
The General Agreement on Tariffs and Trade.

GATT is the General Agreement on Tariffs and Trade. This massive international treaty has been negotiated on and off since the 1940s as nations have sought to eliminate trade barriers and bolster commerce. GATT has already had a considerable effect. In 1947, the worldwide average tariff on industrial goods was about 40 percent. Now it is about 4 percent. The world's economies have exploded over the past six decades. Leading supporters of GATT suggest that its lower tariffs vastly increase world trade. The United States is one of the biggest beneficiaries because for decades, this country has imposed lower duties than most other nations. A typical American family's annual income has increased due to the more vigorous domestic economy, and at the same time, many goods are less expensive because they enter with low duties.

But opponents claim that the United States now competes against nations with unlimited pools of exploited labor. These countries dominate labor-intensive industries such as textiles, clothing, and manufacturing, and are steadily taking jobs from millions of American workers. Because domestic job losses come in low-end employment, those put out of work are precisely those least able to find a new job.

World Trade Organization (WTO)
Organization created by GATT to stimulate international commerce and resolve trade disputes.

GATT created the **World Trade Organization** (WTO) to stimulate international commerce and resolve trade disputes. The WTO is empowered to hear arguments from any signatory nation about tariff violations or nontariff barriers. This international "court" may order compliance from any nation violating GATT and may penalize countries by imposing trade sanctions.

Here is how the WTO decides a trade dispute. Suppose that the United States believes that Brazil is unfairly restricting trade. The United States uses the WTO offices to request a consultation with Brazil's trade representative. In the majority of cases, these discussions lead to a satisfactory settlement. If the consultation does not resolve the problem, the United States asks the WTO's Dispute Settlement Body (DSB) to form a panel, which consists of three nations uninvolved in the dispute. After the panel hears testimony and arguments from both countries, it releases its report. The DSB generally approves the report, unless either nation appeals. If there is an appeal, the WTO Appellate Body hears the dispute and generally makes the final decision, subject to approval by the entire WTO. No single nation has the power to block final decisions. If a country refuses to comply with the WTO's ruling, affected nations may retaliate by imposing punitive tariffs. The following case forced the WTO to weigh the merits of two important, competing goals: environmental protection and trade growth.

United States—Import Prohibition of Certain Shrimp and Shrimp Products

AB-1998-4
WTO Appellate Body, 1998

Facts: Sea turtles are migratory animals that live throughout the world. The United States recognizes the animals as an endangered species. Studies showed that the greatest threat to the turtles, around the world, came from shrimp fishermen inadvertently catching the animals in their nets. The federal government responded by

requiring any importers to certify that shrimp had been caught using Turtle Excluder Devices (TEDs), which keep the animals out of the nets.

India, Pakistan, Malaysia, and Thailand filed complaints with the WTO, claiming that the United States had no right to impose its environmental concerns on world trade. The United States argued that Article XX of the WTO Agreement permitted trade restrictions based on environmental concerns. Article XX states in part:

> Nothing in this Agreement shall be construed to prevent the adoption or enforcement by any Member of measures:
> (b) necessary to protect human, animal or plant life or health;
> (g) relating to the conservation of exhaustible natural resources if such measures are made effective in conjunction with restrictions on domestic production or consumption;

The Dispute Settlement Body declared that the United States had no right to impose its policies on shrimp importers, and the United States appealed.

Issue: ***Did Article XX permit the United States to impose environmental restrictions on shrimp importers?***

Excerpts from the Appellate Body's Report: The [shrimp policy] requires other WTO Members to adopt a regulatory program that is not merely comparable, but rather essentially the same, as that applied to the United States shrimp trawl vessels. The effect is to establish a rigid and unbending standard by which United States officials determine whether or not countries will be certified, thus granting or refusing other countries the right to export shrimp to the United States.

The United States requires the use of approved TEDs at all times by domestic, commercial shrimp trawl vessels. It may be quite acceptable for a government to adopt a single standard applicable to all its citizens throughout that country. However, it is not acceptable, in international trade relations, for one WTO Member to use an economic embargo to require other Members to adopt essentially the same comprehensive regulatory program, without taking into consideration different conditions which may occur in the territories of those other Members.

The United States [failed] to engage other Members exporting shrimp to the United States, in serious, across-the-board negotiations with the objective of concluding bilateral or multilateral agreements for the protection and conservation of sea turtles.

We have not decided that the protection and preservation of the environment is of no significance to the Members of the WTO. Clearly, it is. We have not decided that the sovereign nations that are Members of the WTO cannot adopt effective measures to protect endangered species, such as sea turtles. Clearly, they can and should.

What we have decided in this appeal is simply this: although the measure of the United States in dispute in this appeal serves an environmental objective that is recognized as legitimate, this measure has been applied by the United States in a manner which constitutes arbitrary and unjustifiable discrimination between Members of the WTO.

Environmental groups attacked the ruling, declaring that the WTO paid lip service to the environment but ensured further killing of an important endangered species. Trade supporters applauded it. In addition to the trade versus environment tension, there is a second conflict: rich versus poor. Critics of the shrimp regulations claim that it is unseemly for a wealthy nation to punish subsistence fishermen because of environmental concerns. Their opponents argue that we all share this planet, and long term growth for each of us depends upon living in harmony with limited resources and fragile ecosystems. Which of the competing goals is more important to you?

Ethics **Child labor** is a wrenching issue. The practice exists to some degree in all countries and is common throughout the developing world. The International Labor Organization estimates that more than 250 million children under the age of 14 work full or part time. As the world generally becomes more prosperous, this ugly problem has

actually increased. Children in developing countries typically work in agriculture and domestic work, but many toil in mines and factories.

The rug industry illustrates the international nature of this tragedy. In the 1970s, the Shah of Iran banned child labor in rug factories, but many manufacturers simply packed up and moved to southern Asia. Today, tens of millions of children, some as young as four, toil in rug workrooms, seven days a week, 12 hours a day.Child labor raises compelling moral questions—and economic ones as well. In 1997, Congress passed a statute prohibiting the import of goods created by forced or indentured child labor. The first suit under the new law targeted the carpet factories of southern Asia and sought an outright ban on most rugs from that area. Is this statute humane legislation or cultural imperialism dressed as a nontariff barrier? Should the voters of this country or the WTO decide the issue? In answering such difficult questions, we must bear in mind that child labor is truly universal. The United Farm Workers union estimates that 800,000 underage children help their migrant parents harvest U.S. crops.

Our response to such a troubling moral issue need not take the form of a statute or lawsuit. Duke University is one of the most popular names in sports apparel, and the school sells millions worth of T-shirts, sweatshirts, jackets, caps, and other sportswear bearing its logo. In response to the troubling issue of child labor, Duke adopted a code of conduct that prohibits its manufacturers from using forced or child labor and requires all of the firms to pay a minimum wage, permit union organizing, and maintain a safe workplace. The university plans to monitor the companies producing its apparel and terminate the contract for any firm that violates its rules.

Is this right? Who should decide?

Regional Agreements: NAFTA and The European Union

In 1993, the United States, Canada, and Mexico signed the **North American Free Trade Agreement** (NAFTA). The principal goal was to eliminate almost all trade barriers between the three nations. Like GATT, this treaty has been controversial. Unquestionably, trade between the three nations has increased enormously. Mexico now exports more goods to the United States than do Germany, Britain, and Korea combined. Opponents of the treaty argue that NAFTA costs the United States jobs and lowers the living standards of American workers by forcing them to compete with low-paid labor. For example, Swingline Staplers closed a factory in Queens, New York, after 75 years of operation and moved to Mexico. Instead of paying its American workers $11.58 per hour, Swingline decided to pay Mexican workers 50 cents an hour to do the same job.

Proponents contend that although some jobs are lost, many others are gained, especially in fields with a bright future, such as high technology. They claim that as new jobs invigorate the Mexican economy, consumers there will be able to afford American goods for the first time, providing an enormous new market.

EXAM Strategy

Question: California producers of sea salt protest to the American government that they cannot compete with the same product imported from China. How do the California producers want the United States government to respond? May the U.S. government legally oblige?

Strategy: Domestic producers who cannot compete with foreign competition typically ask their government to impose higher tariffs on the imported goods. However, the whole point of GATT, and the WTO, is to avoid trade wars. There are two instances in which the U.S. government is free to levy increased duties on the Chinese goods. What are they?

Result: When a company *dumps* goods, it sells them overseas at an artificially low price, generally to destroy competition and gain a foothold. That is illegal, and the domestic (U.S.) government may impose dumping duties to protect local producers. Subsidized goods—those supported by the foreign company's government—are also illegal. If the United States government can demonstrate illegal subsidies, it will impose countervailing duties designed to give all producers an equal chance.

Twenty-seven countries belong to the **European Union (EU),** including Great Britain, Germany, France, Italy, and Spain, as well as Latvia and Slovakia.

The EU is one of the world's most powerful associations, with a population of nearly half a billion people. Its sophisticated legal system sets EU-wide standards for tariffs, dumping, subsidies, antitrust, transportation, and many other issues. The first goals of the EU were to eliminate trade barriers between member nations, establish common tariffs with respect to external countries, permit the free movement of citizens across its borders, and coordinate its agricultural and fishing policies for the collective good. The EU has largely achieved these goals. Most, but not all, of the EU countries have adopted a common currency, the euro. During the next decade the union will focus on further economic integration and effective coordination of foreign policy.

The EU (European Union Countries)

International Sales Agreements

Overseas markets offer tremendous growth potential. Foreign customers have an astonishing desire for some kinds of American goods and services.

Cowboy boots are hot in France. Imagine that you own and operate Big Heel, Inc., a small Texas company that makes superb boots. You realize that France could be a bonanza. What should you consider as you proceed? Several things.

The Sales Contract

Le Pied D'Or, a new, fast-growing French chain of shoe stores, is interested in buying 10,000 pairs of your boots at about $300 per pair. You are wise enough to know that you must have a written contract—$3 million is a lot of money for Big Heel.

What Law Governs?

Potentially, three conflicting laws could govern your boot contract: Texas law, French law, and an international treaty. Each is different, and it is therefore essential to negotiate which law will control.

Texas lawyers are familiar with the Texas law and will generally prefer that it govern. French law is obviously different, and French lawyers and business executives are naturally partial to it. How to compromise? Perhaps by using a neutral law.

The **United Nations Convention on Contracts for the International Sale of Goods (CISG)** is the result of 50 years of work by various international groups, all seeking to create a uniform, international law on this important subject. The United States and most of its principal trading partners have adopted this important treaty.

Signatory
A nation that signs a treaty.

The CISG applies automatically to any contract for the sale of goods between two parties from different countries if each operates in a country that is a signatory. (Goods are moveable objects like boots.) France and the United States have both signed. Thus, the CISG automatically applies to the Big Heel–Pied D'Or deal unless the parties *specifically opt out*. If the parties want to be governed by other law, their contract must state very clearly that they exclude the CISG and elect, for example, French law.

Choice of Forum

The parties must decide not only what law governs, but where disagreements will be resolved. This can be a significant part of a contract, because the French and American legal systems are dramatically different. In a French civil lawsuit, generally neither side is entitled to depose the other or to obtain interrogatories or even documents. This is in sharp contrast to the American system, where such discovery methods dominate litigation. American lawyers, accustomed to discovery to prepare a case and advance settlement talks, are sometimes frankly unnerved by the French system. Similarly, French lawyers are dismayed at the idea of spending two years taking depositions, exchanging paper, and arguing motions, all at great expense. At trial, the contrasts grow. In a French civil trial, there is generally no right to a jury. The rules of evidence are more flexible (and unpredictable), neither side employs its own expert witnesses, and the parties themselves never appear as witnesses.

Choice of Language and Currency

The parties must select a language for the contract and a currency for payment. Language counts because legal terms seldom translate literally. Currency is vital because the exchange rate may alter between the signing and payment. Suppose the Argentine peso falls 30 percent against the dollar in one week. An Argentine company that contracted on Monday to pay $1 million for U.S. aircraft engines will suddenly have to pay 30 percent more in pesos to meet its contractual obligations. To avoid such calamities, companies engaged in international commerce often purchase from currency dealers a guarantee to obtain the needed currency at a future date for a guaranteed price. Assuming that Big Heel insists on being paid in U.S. dollars, Pied D'Or could obtain a quote from a currency dealer as to the present cost of obtaining $3 million at the time the boots are to be delivered. Pied D'Or might pay a 5 percent premium for this guarantee, but it will have insured itself against disastrous currency swings.

Choices Made. The parties agree that the contract price will be paid in U.S. dollars. Pied D'Or is unfamiliar with U.S. law and absolutely refuses to make a deal unless either French law or the CISG governs. Your lawyer, Susan Fisher, recommends accepting the CISG, provided

that the contract is written in English and that any disputes will be resolved in Texas courts. Pied D'Or balks at this, but Fisher presses hard, and ultimately those are the terms agreed upon. Fisher is delighted with the arrangement, pointing out that the CISG provisions can all be taken into account as the contract is written, and that by using Texas courts to settle any dispute, Big Heel has an advantage in terms of familiarity and location.

Letter of Credit

Because Pied D'Or is new and fast growing, you are not sure it will be able to foot the bill. Pied D'Or provides a letter of reference from its bank, La Banque Bouffon, but this is a small bank and it is unfamiliar to you. You need greater assurance of payment, and your lawyer recommends that payment be made by **letter of credit**. Here is how the letter will work.

Letter of credit
A commercial device used to guarantee payment in international trade.

Big Heel demands that the contract include a provision requiring payment by confirmed, irrevocable letter of credit. Le Pied D'Or agrees. The French company now contacts its bank, La Banque Bouffon, and instructs Bouffon to issue a letter of credit to Big Heel. The letter of credit is a promise *by the bank itself* to pay Big Heel if Big Heel presents certain documents. Banque Bouffon, of course, expects to be repaid by Pied D'Or. The bank is in a good position to assess Pied D'Or's creditworthiness since it is local and can do any investigating it wants before issuing the credit. It may also insist that Pied D'Or give Bouffon a mortgage on property, or that Pied D'Or deposit money in a separate Bouffon account. Pied D'Or is the **account party** on the letter of credit, and Big Heel is the **beneficiary**.

But at Big Heel, you are still not entirely satisfied. You feel that a bank is unlikely to default on its promises, but still, you don't know anything about Bouffon. That is why you have required a *confirmed* letter of credit. Bouffon will forward its letter of credit to Big Heel's own bank, Wells Fargo. Wells Fargo examines the letter and then *confirms* the letter. This is *Wells Fargo's own legal guarantee* that it will pay Big Heel. Wells Fargo will do this only if it knows, through international banking contacts, that Bouffon is a sound and trustworthy bank. The risk has now been spread to two banks, and at Big Heel, you are finally confident of payment.

You get busy, make excellent boots, and pack them. When they are ready, you truck them to Galveston, where they are taken alongside a ship, *Le Fond de la Mer*. Your agent presents the goods to the ship's officials, along with customs documents that describe the goods. *Le Fond de la Mer*'s officer in turn issues your agent a **negotiable bill of lading**. This document describes *exactly* the goods received—their quantity, color, quality, and anything else important.

You now take the negotiable bill of lading to Wells Fargo. You also present to Wells Fargo a **draft**, which is simply a formal order to Wells Fargo to pay, based on the letter of credit. Wells Fargo will look closely at the bill of lading, which must specify *precisely* the goods described in the letter of credit. Why so cautious? Because the bank is dealing only in paper. It never sees the boots. Wells Fargo is exchanging $3 million of its own money based on instructions in the letter of credit. The bank should pay only if the bill of lading indicates that *Le Fond de la Mer* received exactly what is described in the letter of credit. Wells Fargo will decide whether the bill of lading is *conforming* or *nonconforming*. If the terms of both documents are identical, the bill of lading is conforming and Wells Fargo must pay. If the terms vary, the bill of lading is nonconforming and Wells Fargo will deny payment. Thus, if the bill of lading indicated 9,000 pairs of boots and 1,000 pairs of sneakers, it is nonconforming and Big Heel would get no money.

Wells Fargo concludes that the documents are conforming, so it issues a check to Big Heel for $3 million. In return, you endorse the bill of lading and other documents over to Wells Fargo, which endorses the same documents and sends them to Banque Bouffon. Bouffon makes the same minute inspection and then writes a check to Wells Fargo. Bouffon then demands payment from Le Pied D'Or. Pied D'Or pays its bank, receiving in exchange the bill of lading and customs documents. Note that payment in all stages is now complete, though the boots are still rolling on the high seas. Finally, when the boots arrive in Le Havre, Pied D'Or trucks roll up to the wharf and, using the bill of lading and customs documents, collect the boots. See Exhibit 9.1.

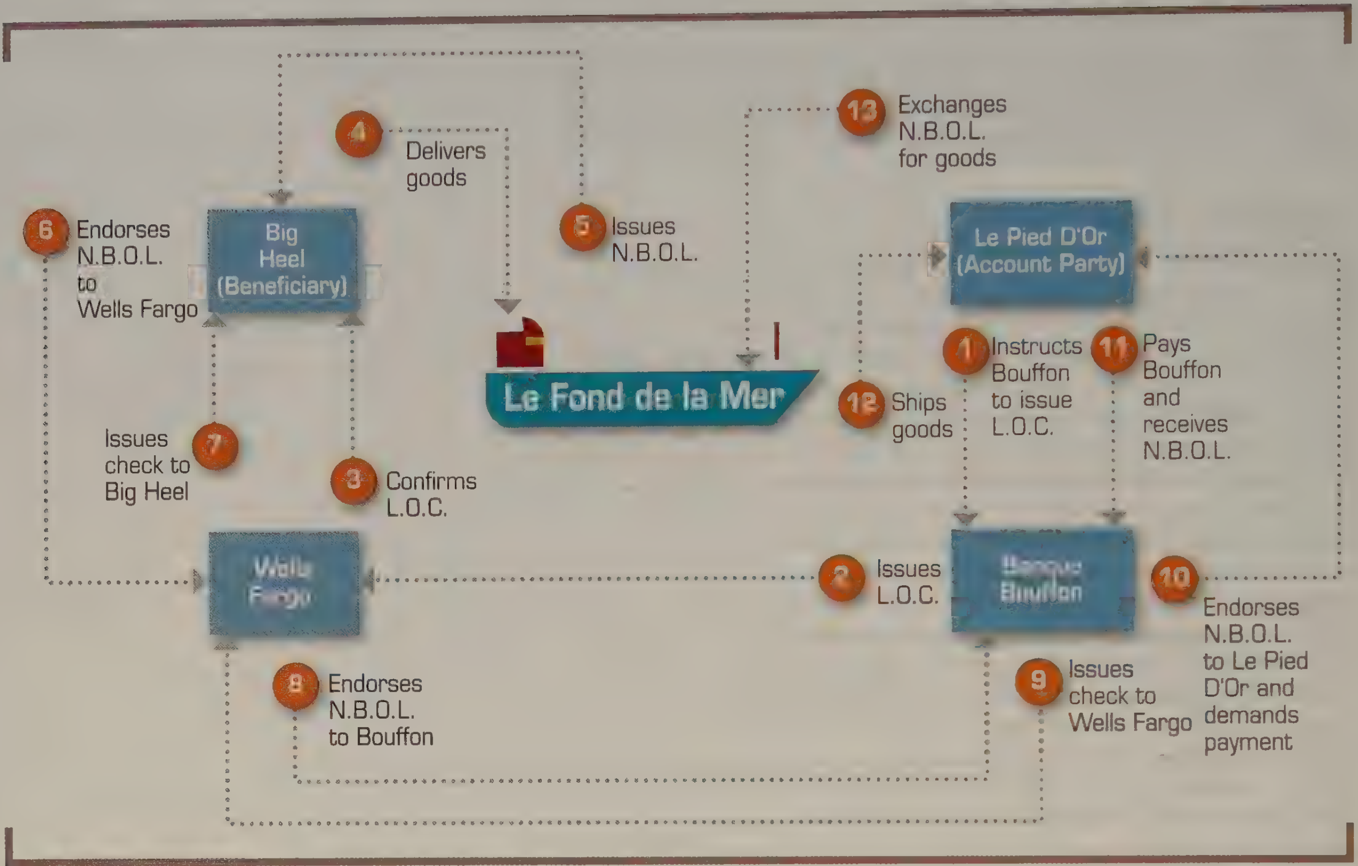

EXHIBIT 9.1

Good news: They fit! Not all customers walk away in such comfort, as the following case indicates.

Centrifugal Casting Machine Co., Inc. v. American Bank & Trust Co.

966 F.2d 1348, 1992 U.S. App. LEXIS 13089
Tenth Circuit Court of Appeals, 1992

Facts: Centrifugal Casting Machine Co. (CCM) entered into a contract with the State Machinery Trading Co. (SMTC), an agency of the Iraqi government. CCM agreed to manufacture cast iron pipe plant equipment for a total price of $27 million. The contract specified payment of the full amount by confirmed irrevocable letter of credit. The Central Bank of Iraq then issued the letter, on behalf of SMTC (the "account party") to be paid to CCM (the "beneficiary"). The Banca Nazionale del Lavorov (BNL) confirmed the letter.

Following Iraq's invasion of Kuwait on August 2, 1990, President George H.W. Bush issued two executive orders blocking the transfer of property in the United States in which Iraq held any interest. In other words, no one could use, buy, or sell any Iraqi property or cash. When CCM attempted to draw upon the letter of credit,

the United States government intervened. The government claimed that like all Iraqi money in the United States, this money was frozen by the executive order. The United States District Court rejected the government's claim, and the government appealed.

Issue: ***Is CCM entitled to be paid pursuant to the letter of credit?***

Excerpts from Judge Sentelle's Decision: The United States contends on appeal that the freeze of Iraq's assets furthers national policy to punish Iraq by preventing it from obtaining economic benefits from transactions with American citizens, and by preserving such assets both for use as a bargaining chip in resolving this country's differences with Iraq and as a source of compensation for claims Americans may have against Iraq. We agree that these policy considerations are compelling and that we are therefore required to construe Iraqi property interests broadly. However, we are not persuaded these policies would be furthered by [creating] a property interest on behalf of Iraq that would not otherwise be cognizable under governing legal principles.

Two interrelated features of the letter of credit provide it with its unique value in the marketplace and are of critical importance in our consideration of the United States' claim here. First, the simple result [of a letter of credit] is that the issuer [i.e., the bank] substitutes its credit, preferred by the beneficiary, for that of the account party. Second, the issuer's obligation to pay on a letter of credit is completely independent from the underlying commercial transaction between the beneficiary and the account party. Significantly, the issuer must honor a proper demand even though the beneficiary has breached the underlying contract; even though the insolvency of the account party renders reimbursement impossible; and notwithstanding supervening illegality, impossibility, war or insurrection. This principle of independence is universally viewed as essential to the proper functioning of a letter of credit and to its particular value, i.e., its certainty of payment.

This assurance of payment gives letters of credit a central role in commercial dealings, and gives them a particular value in international transactions, in which sophisticated investors knowingly undertake such risks as political upheaval or contractual breach in return for the benefits to be reaped from international trade. Law affecting such an essential instrument of the economy must be shaped with sensitivity to its special characteristics. Accordingly, courts have concluded that the whole purpose of a letter of credit would be defeated by examining the merits of the underlying contract dispute to determine whether the letter should be paid.

Because of the nature of a letter of credit, we conclude that Iraq does not have a property interest in the money CCM received under the letter. The United States contends in essence that Iraq has a property interest in this money because it was allegedly a contract payment made by Iraq, which Iraq should recover because CCM breached the contract. In so arguing, the United States makes a breach of contract claim on behalf of Iraq that Iraq has never made, creates a remedy for the contracting parties in derogation of the remedy they themselves provided and, most importantly, disregards the controlling legal principles with respect to letters of credit.

Affirmed.

EXAM Strategy

Question: In an international contract for the sale of goods, Seller is to be paid by a confirmed irrevocable letter of credit. Buyer claims that the goods are defective and threatens to sue. If the parties are going to end up in court anyway, why bother with a letter of credit?

Strategy: A confirmed letter of credit is unique because the seller is assured of payment as soon as it presents a proper bill of lading to the appropriate local bank—regardless of the quality of the goods. Seller would much rather defend this lawsuit against Buyer than sue for its money in foreign courts.

Result: There *may* be a lawsuit, but Seller is not worried. It is Buyer who must sue, probably in Seller's home country. Buyer now risks substantial time and cash for an uncertain outcome. When the parties discuss a settlement, as surely they will, Seller is holding a big advantage—the cash.

Many countries impose a much higher tax on repatriated profits than on normal income in order to keep the money in domestic commerce.

International Trade Issues

Assume that Ambux is an American communications corporation that decides to invest in a growing overseas market. The president of Ambux is particularly interested in building telephone systems in the former republics of the Soviet Union, reasoning that these economies offer great opportunity for growth. She hires a consultant to advise her on the most important issues concerning possible investment in Uzbekistan and other former Soviet republics. The consultant presents several related issues:

- Repatriation of profits
- Expropriation
- Sovereign immunity
- Act of State doctrine
- The Foreign Corrupt Practices Act (FCPA)
- Extraterritoriality

Repatriation of Profits

Repatriation of profits occurs when an investing company pulls its earnings out of a foreign country and takes them back home. If Ambux builds a telephone system in Uzbekistan, it will plan to make money and then repatriate the profit to its headquarters in the United States. But Ambux must not assume an automatic right to do so. Many countries impose a much higher tax on repatriated profits than on normal income in order to keep the money in domestic commerce. Others bar repatriation altogether. Developing countries in particular want the money to "stay home." Thus, before Ambux invests anywhere, it must ensure that it can repatriate profits or live with any limitations the foreign country might impose.

Fortunately, investing in Uzbekistan is relatively secure. Uzbekistan and the United States have signed a trade treaty guaranteeing unlimited repatriation for American investors. This treaty should suffice. But Ambux might still feel cautious. Uzbekistan is a relatively new nation, and the mechanisms for actually getting the money out of Uzbekistan banks may be slow or faulty. The solution is to get a written agreement from the Minister of Commerce explicitly permitting Ambux to repatriate all profits and providing a clear mechanism to do it through the local banks.

Expropriation

Nationalize
Action in which a government assumes ownership of property.

Many nations, both developed and developing, **nationalize** property, meaning that they declare the national government to be the new owner. For example, during the 1940s and 1950s, Great Britain nationalized its coal, steel, and other heavy industries. The state assumed ownership and paid compensation to the previous owners. In the United States, nationalization is rare, but local governments often take land by eminent domain, to be used for roads or other public works. As we have seen, the United States Constitution requires that the owners be fairly compensated.

When a government takes property owned by *foreign* investors, it is called **expropriation**. The U.S. government historically has acknowledged that the expropriation of American

interests is legal, provided the host government pays the owners *promptly and fully, in dollars.* But if compensation is inadequate or long delayed, or made in a local currency that is hard to exchange, the taking is a **confiscation**.

The courts of almost all nations agree that confiscation is illegal. But it can be difficult or impossible to prevent because courts of a host country may be partial to their own government.

Sovereign Immunity

Sovereign immunity holds that the courts of one nation lack the jurisdiction (power) to hear suits against foreign governments. Most nations respect this principle. In the United States, the **Foreign Sovereign Immunities Act** (FSIA) states that American courts generally cannot entertain suits against foreign governments. This is a difficult hurdle for a company to overcome when seeking compensation for foreign expropriation, but there are three possible exceptions.

Foreign Sovereign Immunities Act (FSIA)
A statute which states that American courts generally cannot entertain suits against foreign governments.

Waiver. A lawsuit is permitted against a foreign country that waives its immunity, that is, voluntarily gives up this protection. Suppose the Czech government wishes to buy fighter planes from an American manufacturer. The manufacturer might insist on a waiver in the sales contract, and the Czech Republic might be willing to grant one to get the weapons it desires. If the planes land safely but the checks bounce, the manufacturer may sue.

Commercial Activity. A plaintiff in the United States can sue a foreign country engaged in commercial, but not political, activity. Suppose the government of Iceland hires an American ecology-consulting firm to help its fishermen replenish depleted fishing grounds. Since fishing is a for-profit activity, the contract is commercial, and if Iceland refuses to pay, the company may sue in American courts.

Violation of International Law. A plaintiff in this country may sue a foreign government that has confiscated property in violation of international law, provided that the property either ends up in the United States or is involved in commercial activity that affects someone in the United States. Suppose a foreign government confiscates a visiting American ship, with no claim of right, and begins to use it for shipping goods for profit. Later, the ship carries some American produce. The taking was illegal, and it now affects American commerce. The original owner may sue.

Investment Insurance

Companies eager to do business abroad but anxious about expropriation should consider publicly funded insurance. In 1971, Congress established the **Overseas Private Investment Corporation (OPIC)** to insure U.S. investors against overseas losses due to political violence and expropriation. OPIC insurance is available to investors at relatively low rates for investment in almost any country.

Should Ambux investigate OPIC insurance before investing in Uzbekistan? Absolutely. While the Uzbekistan government has the best of intentions with respect to foreign investment, the nation is young and the government has no track record. A government can change course quickly. Why take unnecessary risks?

Foreign Corrupt Practices Act

The Foreign Corrupt Practices Act (FCPA)[5] makes it illegal for an American businessperson to give "anything of value" to any foreign official in order to influence an official decision. It is sad but true that in many countries, bribery is routine and widely accepted. When Congress investigated foreign bribes to see how common they were, more than 450 U.S. companies

[5] 15 U.S.C. §§78 et seq.

admitted paying hundreds of millions of dollars in bribes to foreign officials. Legislators concluded that such massive payments distorted competition among American companies for foreign contracts, interfered with the free market system, and undermined confidence everywhere in our way of doing business. In response, Congress passed the FCPA.

American executives have long complained that the FCPA puts their companies at a competitive disadvantage. Of the more than 200 nations in the world, very few aggressively prevent their nationals from bribing foreign officials. (In some countries, a bribe paid to a foreign official may even be treated as a tax deduction!) Others argue that the United States should not try to affect the way other countries do business by creating laws that apply outside its own borders.

The FCPA has two principal requirements:

- ***Bribes.*** The statute makes it illegal for U.S. companies and citizens to bribe foreign officials to influence a governmental decision. The statute prohibits giving anything of value and also bars using third parties as a conduit for such payments. Interestingly, the bribe need not be actually paid. A *promise* to pay bribes violates the Act. Also, the bribe need not be successful. If an American company makes an unauthorized payment but never gains any benefit, the company has still violated the law.
- ***Recordkeeping.*** All publicly traded companies—whether they engage in international trade or not—must keep detailed records that prevent hiding or disguising bribes. These records must be available for inspection by U.S. officials.

Not all payments violate the FCPA. A **grease or facilitating payment is legal.** Grease payments are common in many foreign countries to obtain a permit, process governmental papers, or obtain utility service. For example, the cost of a permit to occupy an office building might be $100, but the government clerk suggests that you will receive the permit faster (within this lifetime) if you pay $150, one-third of which he will pocket. Such small payments are legal. You cannot bribe the high-level decision makers who award contracts in the first place. But, once a contract has been secured, you may often bribe lower-level government workers to encourage them to speed things along.

Further, a payment **does not violate the FCPA if it was legal under the written laws of the country in which it was made.** Since few countries establish written codes *permitting* officials to receive bribes, this defense is unlikely to help many Americans who hand out gifts.

Punishments can be severe. A company may face large fines and the loss of profits earned as a result of illegal bribes. In 2011, Johnson & Johnson agreed to pay $77 million to settle an FCPA action. In addition to financial penalties, individuals who violate the FCPA can face up to five years in prison.

The following case is a classic example of bribery. Not much loyalty within Owl Securities. Why is that? What does it teach us?

United States v. King

354 F.3d 859
Eighth Circuit Court of Appeals, 2004

Facts: Owl Securities and Investments, Ltd., hoped to develop a large port in Limon, Costa Rica. The project included docks, housing, recreational facilities, an airport, and more. Richard King was one of Owl's largest investors, and Stephen Kingsley its CEO. The government charged King with attempting to bribe Costa Rican officials to obtain land and other concessions needed for their project. At trial, several of Owl's officers, including Kingsley, Richard Halford, and Albert Reitz, testified against King. A jury convicted King of violating the FCPA. He received a 30-month sentence and a fine of $60,000. He appealed.

Issue: ***Was there sufficient evidence that King had violated the FCPA?***

Excerpts from Judge Beam's Decision: Viewing the evidence in the light most favorable to the verdict, there was ample evidence in the record to support the jury's convictions. The tape recordings, alone, support the jury's verdict. There was sufficient evidence to prove King's knowledge of the proposed payment long before Kingsley became an informant for the government.

For example, the following exchanges are just a small sample of what the jury heard:

> Kingsley: Well you've always known about the closing cost fees and that.
> King: I've known what?
> Kingsley: You've known about the closing costs.
> King: The one million dollars?
> Kingsley: Yeah.
> King: I've known about that for five years, yeah, . . .
> [A later tape recording:]
> Kingsley: Yeah, what, um, what Pablo had said, was why just pay, pay off the current politicians. Pay off the future ones.
> King: That's right. Because we're gonna have to work with them anyway.
> Kingsley: And so what he was saying was double, you know, give them more money. Buy the opposition. If you buy the current party and the opposition, then it doesn't matter who's in because there's only two parties.
> King: The thing that really worries me is that, uh, if the Justice Department gets a hold of. Finds out how many people we've been paying off down there. Uh, or even if they don't. Are we gonna have to spend the rest of our lives paying off these petty politicians to keep them out of our hair? I can just see us, every, every day some politician on our doorstep down there wanting a hand out for this or that . . . . Think we could pay the top people enough, that the rest of the people won't bother us any. That's what I'm hoping this million and a half dollars does. I'm hoping it pays enough top people . . .
> [A later recording:]
> Kingsley: Now Pablo's continued to talk to the politicians. They know about the toll, closing costs call it what you will.
> King: Does everybody agree to what we talked about recently?
> Kingsley: Yeah, a million into escrow for the toll.
> King: And then we get the property and then we do the (unintelligible)?
> Kingsley: Um hum. Yeah now let me I'll, I'll, I'll come on to that because I'll explain how we work through that. Uh, essentially once the politicians see the money in escrow, they'll move. That's what it comes down to [clears throat]. Pablo's gonna send a list, an e-mail with a list of politicians already paid off and the ones he's gonna pay off.
> King: Isn't that awfully dangerous?
> Kingsley: No, e-mail's probably the most secure form of communication.
> King: From what I read it's not, number one and number two, there's got to be a better way.

We affirm the judgment of the district court.

Ethics What's wrong with bribery, anyway? Many businesspeople think it is relatively harmless—just a cost of doing business, like New York City's high taxes or Germany's high labor costs. Corruption is not a victimless crime. Poor people in poor countries are the losers when officials are on the take; corruption means that good projects are squeezed out by bad ones. And corruption can reduce a country's entire administration to a state of decay. Honest officials give up. Bribes grow ever bigger and more ubiquitous. The trough becomes less well stocked; the snouts plunge deeper. Worldwide about $400 billion is lost each year to corruption in government procurement. The anticorruption czar in Mexico estimated that bribes reduce Mexico's gross domestic product annually by 9.5 percent. This sum is twice the country's education budget.[6]

[6] "Who Will Listen to Mr. Clean?" *The Economist,* August 2, 1997, p. 52.

EXAM Strategy

Question: Splash is a California corporation that develops resorts. Lawrence, a Splash executive, is hoping to land a $700 million contract with a developing country in Southeast Asia. He seeks your advice. "I own a beach house in Australia, worth about $2 million. If I give it to a certain government official in the Asian country, I know that will close the resort deal. If I don't, someone else will, and my company loses out. Do you think that's wrong? Should I do it?" Please advise him.

Strategy: Lawrence has phrased his question in terms of ethics, but there is more involved. What law governs his proposed conduct? Is Lawrence legally safe, given that the land is foreign and the contract will be signed overseas?

Result: If Lawrence gives anything of value (such as a house) to secure a government contract, he has violated the FCPA. It makes no difference where the property is located or the deal signed. He could go to jail, and his company could be harshly penalized. Ethically, his gift would exacerbate corruption in a developing nation and mean that the agreement was determined by a bribe, not the merits of Splash. Other companies might do a superior job employing local workers, constructing an enduring resort, and protecting the environment, all for less money.

Extraterritoriality

The United States has many statutes designed to protect employees, such as those that prohibit discrimination on race, religion, gender, and so forth. Do these laws apply overseas? This is an issue of **extraterritoriality—the power of one nation to impose its laws in other countries.**[7] Many American companies do business through international **subsidiaries**—foreign companies that they control. The subsidiary may be incorporated in a nation that denies workers the protection they would receive in the United States. What should happen when an employee of a foreign subsidiary argues that his rights under an American statute have been violated? You make the call.

[7]Extraterritoriality can also refer to exemption from local laws. For example, ambassadors are generally exempt from the law of the nation in which they serve.

You be the Judge

Carnero v. Boston Scientific Corporation

433 F.3d 1
First Circuit Court of Appeals, 2006

Facts: Boston Scientific (BSC) was an American company that manufactured medical equipment. The company had its headquarters in Massachusetts but did business around the world through foreign subsidiaries. One of the company's subsidiaries was Boston Scientific Argentina (BSA), and it was there that Ruben Carnero began working. His employment contract stated he would work at BSA's headquarters in Buenos Aires and be paid in pesos. Argentine law was to govern the contract. Four years later, Carnero took an assignment to work as country manager for a different BSC subsidiary, Boston Scientific Do Brasil (BSB). Carnero frequently traveled to Massachusetts to meet with com-

pany executives, but he did most of his work in South America.

About a year later, BSB fired Carnero, and BSA soon did the same. Carnero claimed that the companies terminated him in retaliation for his reporting to BSC executives that the Argentine and Brazilian subsidiaries inflated sales figures and engaged in other accounting fraud. Carnero filed suit in Massachusetts, alleging that his firing violated an American statute, the Sarbanes-Oxley Act of 2002 (SOX).

Congress passed that law in response to the massive fraud cases involving Enron, Arthur Andersen, and others. The law was passed primarily to protect investors, but included a "whistleblower" provision. That section was designed to guard employees who informed superiors or investigating officials of fraud within the company. The law allows injured employees reinstatement and back pay.

BSC argued that SOX did not apply overseas and the District Court agreed, dismissing the case. Carnero appealed.

Issue: ***Does SOX protect a whistleblower employed overseas by a subsidiary of an American company?***

Argument for Carnero: Congress passed SOX because the American people were appalled by the massive fraud in major corporations, and the resulting harm to employees, investors, the community, and the economy. The whistleblower protection is designed to encourage honest employees to come forward and report wrongdoing—an act that no employee wants to do, and one which has historically led to termination. Mr. Carnero knew his report would be poorly received, but believed he had an ethical obligation to protect his company. For that effort, he was fired, and now Boston Scientific attempts to avoid liability using the technicality of corporate hierarchy.

Yes, Mr. Carnero was employed by BSB and BSA. But both of those companies are owned and operated by Boston Scientific. It is the larger company, with headquarters in the United States, which calls the shots. That is why executives in Massachusetts frequently asked Mr. Carnero to report to them—and why he brought them his unhappy news.

A whistleblower deserves gratitude and a pay raise. Mr. Carnero may well have saved his employer from massive losses and public disgrace. Would Boston Scientific like to wind up as Enron did—the company in bankruptcy court, its executives in prison? If Boston Scientific is too petty to acknowledge Mr. Carnero's contribution, the company should at least honor the purpose and intent of SOX by protecting his job.

Argument for Boston Scientific: First, we do not know whether there have been any accounting irregularities or not. Second, the fact that Mr. Carnero is employed by companies incorporated in Argentina and Brazil is more than a technicality. He is asking an American court to go into two foreign countries—sovereign nations with good ties to the United States—and investigate accounting and employment practices of companies incorporated and operating there. The very idea is offensive. No nation can afford to treat its allies and trading partners with such contempt.

If the United States can impose its whistleblowing law in foreign countries, may those nations impose their rules and values here? Suppose that a country forbids women to do certain work. May companies in those nations direct American subsidiaries to reject all female job applicants? Neither the citizens nor courts of this country would tolerate such interference for a moment.

Mr. Carnero's idea is also impractical. How would an American court determine why he was fired? Must the trial judge here subpoena Brazilian witnesses and demand documentary evidence from that country?

Finally, the SOX law does not apply overseas because Congress never said it did. The legislators—well aware that American corporations operate subsidiaries abroad—made no mention of those companies when they passed this statute.

Chapter Conclusion

Overseas investment, like sales abroad, offers potentially great rewards but significant pitfalls. A working knowledge of international law is essential to any entrepreneur or executive seriously considering foreign commerce. Issues such as choice of law, repatriation of profits, and expropriation can mean the difference between profit and loss. As the WTO lowers barriers, international trade will only increase, and your awareness of these principles will grow still more valuable.

Exam Review

1. **EXPORT RESTRICTIONS** Several statutes restrict exports from the United States that would harm national security, foreign policy, or certain other goals. (p. 207)

2. **TARIFFS** A tariff is a tax imposed on goods entering a country. The Customs Service classifies goods when they enter the United States and imposes appropriate tariffs. (pp. 208–209)

EXAM Strategy

Question: Sports Graphics, Inc. imports "Chill" brand coolers from Taiwan. Chill coolers have an outer shell of vinyl, with handles and pockets, and an inner layer of insulation. In a recent lawsuit, the issue was whether "Chill" coolers were "luggage" or "articles used for preparing, serving, or storing food or beverages," as Sports Graphics claimed. Who was the other party to the dispute, why did the two sides care about this, and what arguments did they make?

Strategy: The Customs Service (the other party) classifies goods and then imposes an appropriate *ad valorem* tax. What is at stake, of course, is money. (See the "Result" at the end of this section.)

3. **DUMPED AND SUBSIDIZED IMPORTS** Most countries, including the United States, impose duties for goods that have been dumped (sold at an unfairly low price in the international market) and for subsidized goods (those benefiting from government financial assistance in the country of origin). (p. 210)

4. **GATT** The General Agreement on Tariffs and Trade (GATT) is lowering the average duties worldwide. Proponents see it as a boon to trade; opponents see it as a threat to workers. (pp. 210–212)

5. **WTO** GATT created the WTO, which resolves disputes between signatories to the treaty. (pp. 210–212)

EXAM Strategy

Question: In a recent WTO case, several nations claimed that American laws concerning shrimp fishing were unfair and illegal. The case demonstrated a conflict between two important values. What were the values? In your view, which is more important? Who won and why?

Strategy: Make sure you understand the *Shrimp Products* case in the text. (See the "Result" at the end of this section.)

6. **CISG** A sales agreement between an American company and a foreign company may be governed by American law, by the law of the foreign country, or by the CISG. (p. 214)

7. **LETTERS OF CREDIT** A confirmed, irrevocable letter of credit is an important means of facilitating international sales contracts, because the seller is assured of payment by a local bank so long as it delivers the specified goods. (pp. 215–216)

EXAM Strategy

Question: Flyby Knight (FK) contracts to sell 12 helicopters to Air Nigeria for $8 million each. Payment is to be made by letter of credit, issued by the Bank of Nigeria, confirmed by Citibank in New York, and due when the confirming bank receives a bill of lading indicating all helicopters are on board ship, ready for sailing to Nigeria. FK loads the aircraft on board ship, and the next day delivers the bill of lading to Citibank. The same day, Air Nigeria informs FK that its inspectors onboard ship have discovered serious flaws in the rotator blades and the fuel lines. Air Nigeria states it will neither accept nor pay for the helicopters. Is FK entitled to its $96 million?

a. FK is entitled to no money.

b. FK is entitled to no money *provided* Air Nigeria can prove the helicopters are defective.

c. Air Nigeria is obligated to pay FK the full price.

d. Bank of Nigeria is obligated to pay FK the full price.

e. Citibank is obligated to pay FK the full price.

Strategy: Payment is to be made by confirmed letter of credit. Ask yourself what that means. In such a case, the confirming bank is obligated to pay the seller when the bank receives a bill of lading indicating that conforming goods have been delivered. What about the fact that the goods seem defective? That is irrelevant. It is precisely to avoid long-distance arguments over such problems that sellers insist on these letters. (See the "Result" at the end of this section.)

8. **REPATRIATION** A foreign government may restrict repatriation of profits. (p. 218)

9. **EXPROPRIATION** Expropriation refers to a government taking property owned by foreign investors. U.S. courts regard this as lawful, provided the country pays the American owner promptly and fully in dollars. (pp. 218–219)

10. **SOVEREIGN IMMUNITY** Sovereign immunity means that, in general, American courts lack jurisdiction to hear suits against foreign governments unless the foreign nation has waived immunity, is engaging in commercial activity, or has violated international law. (p. 219)

11. **FOREIGN CORRUPT PRACTICES ACT (FCPA)** The FCPA makes it illegal for an American businessperson to bribe foreign officials. (pp. 219–221)

12. **EXTRATERRITORIALITY** The principle that refers to the power of one nation to impose its laws in other countries. (pp. 222–223)

2. Result: Customs evidently claimed the goods were luggage, with a higher tariff than food storage articles. Customs argued that the handles and portability made the articles luggage. But Sports Graphics prevailed, convincing the court that the primary purpose of the containers was the storage of food. The lawsuit reduced the company's tariff from 20 percent to 3.4 percent.

5. Result: Small nations sued, claiming that American regulations made it difficult or impossible for them to fish, devastating their economic growth. The United States argued that vital environmental concerns mandated such rules. The WTO found in favor of the small nations, ruling that before the United States imposed its environmental standards on other countries, it must engage in multinational negotiations, seeking an acceptable compromise. Environmentalists argued that the decision was short-sighted, and contributed to the destruction of an endangered species. Supporters of the decision responded that long-term environmental concerns sound patronizing and hollow to people with empty stomachs.

7. Result: When Citibank receives the bill of lading, indicating delivery of the helicopters, it is obligated to pay. The correct answer is (E).

Multiple-Choice Questions

1. A letter of credit is issued by a ________________.

(a) buyer

(b) seller

(c) shipping company

(d) bank

2. Tariffs are a tax on ________________. Treaties like NAFTA seek to ________________ tariffs.

(a) imports; increase

(b) imports; decrease

(c) exports; increase

(d) exports; decrease

3. The President negotiates a defense agreement with a foreign government. To take effect, the agreement must be ratified by which of the following?

(a) Two-thirds of the House of Representatives

(b) Two-thirds of the Senate

(c) The Supreme Court

(d) A and B

(e) A, B, and C

4. Lynn owns a small printing company in Nevada. She makes a contract with a company in France to print custom children's books and ship them to France. The contract does not say anything about which body of law will be used to resolve any

disputes that arise. If there is a conflict, which body of law will actually be applied to the case?

(a) Nevada law
(b) French law
(c) The CISG
(d) None of the above

5. Countervailing duties are imposed when ______________.
(a) dumping occurs
(b) goods are unreasonably subsidized
(c) Both A and B
(d) None of the above

Essay Questions

1. Arnold Mandel exported certain high-technology electronic equipment. Later, he was in court arguing that the equipment he shipped should not have been on the Department of Commerce's Commodity Control List. What items may be on that list, and why does Mandel care?

2. ***YOU BE THE JUDGE* WRITING PROBLEM** Continental Illinois National Bank issued an irrevocable letter of credit on behalf of Bill's Coal Co. for $805,000, with the Allied Fidelity Insurance Co. as beneficiary. Bill's Coal Co. then went bankrupt. Allied then presented to Continental documents that were complete and conformed to the letter of credit. Continental refused to pay. Since Bill's Coal was bankrupt, there was no way Continental would collect once it had paid on the letter. Allied filed suit. Who should win? **Argument for Allied Fidelity:** An irrevocable letter of credit serves one purpose: to assure the seller that it will be paid if it performs the contract. Allied has met its obligation. The company furnished documents demonstrating compliance with the agreement. Continental *must* pay. Continental's duty to pay is an independent obligation, unrelated to the status of Bill's Coal. The bank issued this letter knowing the rules of the game and expecting to make a profit. It is time for Continental to honor its word. **Argument for Continental Bank:** In this transaction, the bank was merely a middleman, helping to facilitate payment of a contract. Allied has fulfilled its obligations under the contract, and we understand the company's desire to be paid. Regrettably, Bill's Coal is bankrupt. No one is going to be paid on this deal. Allied should have researched Bill's financial status more thoroughly before entering into the agreement. While we sympathize with Allied's dilemma, it has only itself to blame and cannot expect the bank to act as some sort of insurance company for a deal gone awry.

3. Jean-François, a French wine exporter, sues Bobby Joe, a Texas importer, claiming that Bobby Joe owes him $2 million for wine. Jean-François takes the witness stand to describe how the contract was created. Where is the trial taking place?

4. The Kyrgyz Republic is one of the new nations that broke away from the old Soviet Union. In September 1994, the government of Kyrgyzstan made two independent

announcements: (1) it was abolishing all taxes on repatriation; and (2) the government was resigning and would shortly be replaced. Explain the significance of these announcements for an American company considering a major investment in Kyrgyzstan.

5. The Instituto de Auxilios y Viviendas is a government agency of the Dominican Republic. Dr. Marion Fernandez, the general administrator of the Instituto and Secretary of the Republic, sought a loan for the Instituto. She requested that Charles Meadows, an American citizen, secure the Instituto a bank loan of $12 million. If he obtained a loan on favorable terms, he would receive a fee of $240,000. Meadows secured a loan on satisfactory terms, which the Instituto accepted. He then sought his fee, but the Instituto and the Dominican government refused to pay. He sued the government in United States District Court. The Dominican government claimed immunity. Comment.

Discussion Questions

1. The United States consistently imports much more than it exports. The annual gap is consistently several hundred billion dollars. Does this concern you? If so, what should be done about it? If not, why not?

2. Does the FCPA seem sensible? Is fighting corruption the right thing to do, or does the statute place American companies at an unacceptable competitive disadvantage?

3. Generally speaking, should the United States pass laws that seek to control behavior outside its borders? Or, when in Rome, should our companies and subsidiaries be allowed to do as the Romans do?

4. Do you favor free trade agreements like NAFTA? Do you believe that free trade benefits everyone in the long run, or are you more concerned that American jobs may be lost?

5. Imagine that you read an article that reports the maker of your favorite brand of clothing uses child labor in its overseas factories. Being realistic, would you avoid buying that kind of clothing in the future? Why or why not?

Contracts

CHAPTER 10

INTRODUCTION TO CONTRACTS

© picsbyst/Shutterstock.com

Austin Electronics had a terrible year. John, the store's owner, decided to get out of the electronics business. Before closing his doors, he hung a sign reading "Everything Must Go!" and held a going-out-of-business sale.

Customer #1—Fran

"Nice TV," Fran commented. "Price says $400. I'll give you $250 for it."

"Sorry, but I need at least $400," John replied.

"Hmm. Nope, that's just too much."

"OK, OK, I'll let it go for $250."

"Well…no. No, I've changed my mind. No deal."

Customer #2—Ricky

"How much for that iPod, mister?" said Ricky, a 10-year-old boy.

"Twenty bucks, kid," John said.

"Wow! I'll take it! Keep it for me while I ride home to get my money."

"Sure thing, kid."

> "Well, how's about you sell them to me for $50 or I'll beat your face in for you."

Customer #3—Carla

"That's a good-looking home theater projector," Carla said. "I don't see a price tag. How much?"

"Well," John replied, "how much are you offering?"

"Hmm … I could give you $700 for it."

John was pleasantly surprised. "You've got yourself a deal." The two shook hands.

"I'll be back with my checkbook later today," Carla said.

Customer #4—Dave

As the sun set and the shadows lengthened, John waited patiently for his last customer to finish looking around. Truth be told, the guy looked kind of creepy.

"I'll give you $50 for these speakers," Dave said in a raspy voice.

"Sorry, man, but I can't let them go for less than $100," John replied.

"Well," Dave said, leaning closer, "how's about you sell them to me for $50 or I'll beat your face in for you."

"O … kay," John said, startled. "$50 it is, then."

Dave smiled. He slid a fifty-dollar bill across the counter, picked up the speakers, and left without a word.

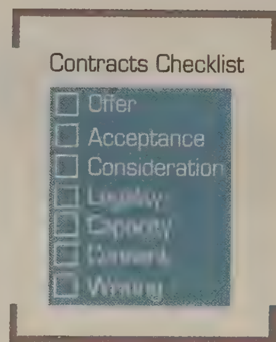
John has made four agreements, but are they contracts? Can he require Fran to buy the TV for $250? If Ricky and Carla never return to buy the iPod and the projector, can John take them to court and force them to follow through on the deals? Can John undo his transaction with the disreputable Dave?

Throughout this unit on contracts, we will consider issues like these. It is vital for a businessperson to understand the difference between an ordinary promise and a legally enforceable contract.

Most contracts work out precisely as intended because the parties fulfill their obligations. Most—but not all. In this unit, we will study contracts that have gone wrong. We look at these errant deals so that you can learn how to avoid problems.

CONTRACTS

Elements of a Contract



A contract is merely a legally enforceable agreement. People regularly make promises, but only some of them are enforceable. For a contract to be enforceable, seven key characteristics *must* be present. We will study this "checklist" at length in the next several chapters.

- Offer. All contracts begin when a person or a company proposes a deal. It might involve buying something, selling something, doing a job, or anything else. But only proposals made in certain ways amount to a legally recognized offer.
- Acceptance. Once a party receives an offer, he must respond to it in a certain way. We will examine the requirements of both offers and acceptances in the next chapter.
- Consideration. There has to be bargaining that leads to an *exchange* between the parties. Contracts cannot be a one-way street; both sides must receive some measureable benefit.
- Legality. The contract must be for a lawful purpose. Courts will not enforce agreements to sell cocaine, for example.
- Capacity. The parties must be adults of sound mind.
- Consent. Certain kinds of trickery and force can prevent the formation of a contract.
- Writing. While verbal agreements often amount to contracts, some types of contracts must be in writing to be enforceable.

Other Important Issues

Once we have examined the essential parts of contracts, the unit will turn to other important issues:

- Third-Party Interests. If Jerome and Tara have a contract, and if the deal falls apart, can Kevin sue to enforce the agreement? It depends.
- Performance and Discharge. If a party fully accomplishes what the contract requires, his duties are discharged. But what if his obligations are performed poorly, or not at all?
- Remedies. A court will award money or other relief to a party injured by a breach of contract.

Let's apply these principles to the opening scenario.

Fran is not obligated to buy the TV for $250 because John did not accept her offer. Ricky does not have to buy the iPod because he is under 18. If he changes his mind, there is nothing John can do about it. Nor is Carla required to buy the projector. Agreements concerning a sale of goods valued at more than $500 must be in writing. John can successfully sue Dave. He accepted Dave's offer to buy the speakers for $50, but he did so under duress. Agreements made under threats of violence are not enforceable contracts.

All Shapes and Sizes

Some contracts—like those in the opener—are small. But contracts can also be large. Lockheed Martin and Boeing spent years of work and millions of dollars competing for a U.S. Defense Department aircraft contract. Why the fierce effort? The deal was potentially good for 25 years and *$200 billion*. Lockheed won. The company earned the right to build the next generation of fighter jets—3,000 planes, with different varieties of the aircraft to be used by each of the American defense services and some allied forces as well.

Many contracts involve public issues. The Lockheed agreement concerns government agencies deciding how to spend taxpayer money for national defense. Other contracts concern intensely private matters. Mary Beth Whitehead signed a contract with William and Elizabeth Stern, of New Jersey. For a fee of $10,000, Whitehead agreed to act as a surrogate mother, and then deliver the baby to the Sterns for adoption after she carried it to term. But when little Melissa was born, Whitehead changed her mind and fled to Florida with the baby. The Sterns sued for breach of contract. Surrogacy contracts now lead to hundreds of births per year. Are the contracts immoral? Should they be illegal? Are there limits to what one person may pay another to do? The New Jersey Supreme Court, the first to rule on the issue, declared the contract illegal and void. The court nonetheless awarded Melissa to the Sterns, saying that it was in the child's best interest to live with them. Inevitably, legislators disagree about this emotional issue. Some states have passed statutes permitting surrogacy, while others prohibit it.

At times, we even enter contracts without knowing it. Suppose you try to book a flight using your frequent-flyer miles, but the airline tells you the terms of the frequent-flyer program have changed and you must earn more mileage. According to the Supreme Court, you may well have an enforceable agreement based on the terms the airline quoted when you earned the miles.[1]

Contracts Defined

Contract
A legally enforceable agreement.

We have seen that a **contract** is a promise that the law will enforce. As we look more closely at the elements of contract law, we will encounter some intricate issues. This is partly because we live in a complex society, which conducts its business in a wide variety of ways. Remember, though, that we are usually interested in answering three basic questions, all relating to promises:

[1] *American Airlines, Inc. v. Wolens*, 513 U.S. 219, 115 S. Ct. 817, 1995 U.S. LEXIS 690 (1995).

- Is it certain that the defendant promised to do something?
- If she did promise, is it fair to make her honor her word?
- If she did not promise, are there unusual reasons to hold her liable anyway?

Development of Contract Law

Courts have not always assumed that promises are legally significant. In the twelfth and thirteenth centuries, promises were not binding unless a person made them *in writing and affixed a seal* to the document. This was seldom done, and therefore most promises were unenforceable.

The common law changed very slowly, but by the fifteenth century, courts began to allow some suits based on a broken promise. There were still major limitations. Suppose a merchant hired a carpenter to build a new shop, and the carpenter failed to start the job on time. Now courts would permit the suit, but only if the merchant had paid some money to the carpenter. If the merchant made a 10 percent down payment, the contract would be enforceable. But if the merchant merely *promised* to pay when the building was done, and the carpenter never began work, the merchant could recover nothing.

In 1602, English courts began to enforce mutual *promises;* that is, deals in which neither party gave anything to the other but both promised to do something in the future. Thus, if a farmer promised to deliver a certain quantity of wheat to a merchant and the merchant agreed on the price, both parties were now bound by their promise, even though there had been no down payment. This was a huge step forward in the development of contract law, but many issues remained. Consider the following employment case from 1792, which raises issues of public policy that still challenge courts today.

DAVIS V. MASON

Court of King's Bench
Michaelmas Term, 33d George III, p. 118 (1792)

Facts: Mason was a surgeon/apothecary in the English town of Thetford. Davis wished to apprentice himself to Mason. The two agreed that Davis would work for Mason and learn his profession. They further agreed that if Davis left Mason's practice, he would not set up a competing establishment within 10 miles of Thetford at any time within 14 years. Davis promised to pay £200 if he violated the agreement not to compete.

Davis began working for Mason in July 1789. In August 1791, Mason dismissed Davis, claiming misconduct, though Davis denied it. Davis then established his own practice within 10 miles of Thetford. Mason sued for the £200.

Davis admitted promising to pay the money. But he claimed that the agreement should be declared illegal and unenforceable. He argued that 14 years was unreasonably long to restrict him from the town of Thetford, and that 10 miles was too great a distance. (In those days, 10 miles might take the better part of a day to travel.) He added an additional policy argument, saying that it was harmful to the public health to restrict a doctor from practicing his profession: if the people needed his service, they should have it. Finally, he said that his "consideration" was too great for this deal. In other words, it was unfair that he should pay £200 because he did not receive anything of that value from Mason.

Issue: ***Was the contract too unreasonable to enforce?***

Excerpts from Lord Kenyon's Decision: Here, the plaintiff being established in business as a surgeon at Thetford, the defendant wished to act as his assistant with a view of deriving a degree of credit from that situation; on which the former stipulated that the defendant should not come to live there under his auspices and steal away his patients: this seems to be a fair consideration. Then it was objected that the limits within which the defendant engaged not to practise are unreasonable: but I do not see that they are necessarily unreasonable, nor do I know how to draw the line. Neither are the public likely to be injured by an agreement of this kind, since every other person is at liberty to practise as a surgeon in this town.

Judgment for the Plaintiff.

Noncompetition agreement
A contract in which one party agrees not to compete with another.

The contract between Davis and Mason is called a **noncompetition agreement**. Today they are more common than ever, and frequently litigated. The policy issues that Davis raised have never gone away. You may well be asked to sign a noncompetition agreement sometime in your professional life. We look at the issue in detail in Chapter 12, on consideration. That outcome was typical of contract cases for the next 100 years. Courts took a *laissez-faire* approach, declaring that parties had *freedom to contract* and would have to live with the consequences. Lord Kenyon saw Davis and Mason as equals, entering a bargain that made basic sense, and he had no intention of rewriting it. After 500 years of evolution, courts had come to regard promises as almost sacred. The law had gone from ignoring most promises to enforcing nearly all.

By the early twentieth century, bargaining power in business deals had changed dramatically. Farms and small businesses were yielding place to huge corporations in a trend that accelerated throughout the century. In the twenty-first century, multinational corporations span many continents, wielding larger budgets and more power than many of the nations in which they do business. When such a corporation contracts with a small company or an individual consumer, the latter may have little or no leverage. Courts increasingly looked at the basic fairness of contracts. Noncompetition agreements are no longer automatically enforced. Courts may alter them or ignore them entirely because the parties have such unequal power and because the public may have an interest in letting the employee go on to compete. Davis's argument—that the public is entitled to as many doctors as it needs—is frequently more successful in court today than it was in the days of Lord Kenyon.

Legislatures and the courts limit the effect of promises in other ways. Suppose you purchase a lawn mower with an attached tag, warning you that the manufacturer is not responsible in the event of any malfunction or injury. You are required to sign a form acknowledging that the manufacturer has no liability of any kind. That agreement is clear enough—but a court will not enforce it. The law holds that the manufacturer *has* warranted the product to be good for normal purposes, regardless of any language included in the sales agreement. If the blade flies off and injures a child, the manufacturer is liable. This is socially responsible, even though it interferes with a private agreement.

The law has not come full circle back to the early days of the common law. Courts still enforce the great majority of contracts. But the possibility that a court will ignore an agreement means that any contract is a little less certain than it would have been a century ago.

Types of Contracts

Before undertaking a study of contracts, you need to familiarize yourself with some important vocabulary. This section will present five sets of terms.

Bilateral and Unilateral Contracts

Bilateral contract
A promise made in exchange for another promise.

In a **bilateral contract**, both parties make a promise. A producer says to Gloria, "I'll pay you $2 million to star in my new romantic comedy, which we are shooting three months from now in Santa Fe." Gloria says, "It's a deal." That is a bilateral contract. Each party has made a promise to do something. The producer is now bound to pay Gloria $2 million, and Gloria is obligated to show up on time and act in the movie. The vast majority of contracts are bilateral contracts. They can be for services, such as this acting contract; they can be for the sale of goods, such as 1,000 tons of steel, or for almost any other purpose. When the bargain is a promise for a promise, it is a bilateral agreement.

In a unilateral contract, one party makes a promise that the other party can accept only by *actually doing* something. These contracts are less common. Suppose the movie producer tacks a sign to a community bulletin board. It has a picture of a dog with a

phone number, and it reads, "I'll pay $100 to anyone who returns my lost dog." If Leo sees the sign, finds the producer, and merely promises to find the dog, he has not created a contract. Because of the terms on the sign, Leo must actually find and return the dog to stake a claim to the $100.

Executory and Executed Contracts

A contract is **executory** when it has been made, but one or more parties has not yet fulfilled its obligations. Recall Gloria, who agrees to act in the producer's film beginning in three months. The moment Gloria and the producer strike their bargain, they have an executory bilateral express contract.

Executory contract
An agreement in which one or more parties has not yet fulfilled its obligations.

A contract is **executed** when all parties have fulfilled their obligations. When Gloria finishes acting in the movie and the producer pays her final fee, their contract will be fully executed.

Executed contract
An agreement in which all parties have fulfilled their obligations.

EXAM Strategy

Question: Abby has long coveted Nicola's designer handbag because she saw one of them in a movie. Finally, Nicola offers to sell her friend the bag for $350 in cash. "I don't have the money right now," Abby replies, "but I'll have it a week from Friday. Is it a deal?" Nicola agrees to sell the bag. Use two terms to describe the contract.

Strategy: In a bilateral contract, both parties make a promise, but in a unilateral agreement, only one side does so. An executory contract is one with unfulfilled obligations, while an executed agreement is one with nothing left to be done.

Result: Nicola promised to sell the bag for $350 cash, and Abby agreed to pay. Because both parties made a promise, this a bilateral agreement. The deal is not yet completed, meaning that they have an executory contract.

Valid, Unenforceable, Voidable, and Void Agreements

A **valid contract** is one that satisfies all of the law's requirements. It has no problems in any of the seven areas listed at the beginning of this chapter, and a court will enforce it. The contract between Gloria and the producer is a valid contract, and if the producer fails to pay Gloria, she will win a lawsuit to collect the unpaid fee.

An **unenforceable agreement** occurs when the parties intend to form a valid bargain, but a court declares that some rule of law prevents enforcing it. Suppose Gloria and the producer orally agree that she will star in his movie, which he will start filming in 18 months. The law, as we will see in Chapter 15, requires that this contract be in writing because it cannot be completed within one year. If the producer signs up another actress two months later, Gloria has no claim against him.

A **voidable contract** occurs when the law permits one party to terminate the agreement. This happens, for example, when the other party has committed fraud, or when an agreement has been signed under duress. In the opening scenario, Dave threatened John when he would not sell the speakers for $50. The agreement is voidable at John's option. If John later decides that the $50 is acceptable, he may keep it. But if he decides that he wants to cancel the agreement and sue for the return of his speakers, he can do that as well.

Voidable contract
An agreement that may be terminated by one of the parties.

A **void agreement** is one that neither party can enforce, usually because the purpose of the deal is illegal or because one of the parties had no legal authority to make a contract.

Void agreement
A contract that neither party can enforce, because the bargain is illegal or one of the parties had no legal authority to make it.

The following case illustrates the difference between voidable and void agreements.

MR. W FIREWORKS, INC. v. OZUNA

2009 Tex. App. LEXIS 8237
Court of Appeals of Texas, Fourth District, San Antonio, 2009

Facts: Mr. W sells fireworks. Under Texas law, retailers may sell fireworks to the public only during the two weeks immediately before the Fourth of July and during two weeks immediately before New Year's Day. And so, fireworks sellers like Mr. W tend to lease property.

Mr. W leased a portion of Ozuna's land. The lease contract contained two key terms:

> "In the event the sale of fireworks on the aforementioned property is or shall become unlawful during the period of this lease and the term granted, this lease shall become void.
>
> "Lessor(s) agree not to sell or lease any part of said property, including any adjoining, adjacent, or contiguous property, to any person(s) or corporation for the purpose of selling fireworks in competition to the Lessee during the term of this lease, *and for a period of ten years after lease is terminated*." (Emphasis added.)

A longstanding San Antonio city ordinance bans the sale of fireworks inside city limits, and also within 5,000 feet of city limits. Like all growing cities, San Antonio sometimes annexes new land, and its city limits change. One annexation caused the Ozuna property to fall within 5,000 feet of the new city limits, and it became illegal to sell fireworks from the property. Mr. W stopped selling fireworks and paying rent on Ozuna's land.

Two years later, San Antonio's border shifted again. This time, the city *disannexed* some property and *shrank*. The new city limits placed Ozuna's property just beyond the 5,000-foot no-fireworks zone. Ozuna then leased a part of his land to Alamo Fireworks, a competitor of Mr. W.

Mr. W sued for breach of contract, arguing that Ozuna had no right to lease to a competitor for a period of 10 years. The trial court granted Ozuna's motion for summary judgment. Mr. W appealed.

Issue: ***Did Ozuna breach his contract with Mr. W by leasing his land to a competitor?***

Excerpts from Judge Angelini's Decision: The property owners [argue] that when the city ordinance made the sale of fireworks illegal on the subject properties, the leases became void, resulting in the property owners and Mr. W no longer having an enforceable agreement. Mr. W's argues that the provision restricting the property owners from leasing to competitors survived the agreement. This is inconsistent with the meaning of "voidable" contracts. For example, when a minor enters into a contract, that contract is not void, but is voidable at the election of the minor. This means that the minor may set aside the entire contract at his option, but he *is not entitled to enforce portions that are favorable to him and at the same time disaffirm other provisions that he finds burdensome.* He is not permitted to retain the benefits of a contract while repudiating its obligations.

© Tom Grundy/Shutterstock.com

Could Ozuna declare independence from contractual obligations?

Here, while Mr. W is arguing that the illegalization of the sale of fireworks made the contract "voidable," it is still seeking to enforce the provision of the contract prohibiting the property owners from leasing to competitors. We decline to adopt such an interpretation.

Further, contracts requiring an illegal act are void. We therefore hold that the illegalization of the sale of the fireworks on the respective properties did not trigger the provision in the leases prohibiting the property owners from leasing to competitors of Mr. W.

We affirm the judgment of the trial court.

Express and Implied Contracts

In an **express contract**, the two parties explicitly state all the important terms of their agreement. The vast majority of contracts are express contracts. The contract between the producer and Gloria is an express contract because the parties explicitly state what Gloria will do, where and when she will do it, and how much she will be paid. Some express contracts are oral, as that one was, and some are written. They might be bilateral express contracts, as Gloria's was, or unilateral express contracts, as Leo's was. Obviously, it is wise to make express contracts, and to put them in writing. We emphasize, however, that many oral contracts are fully enforceable.

Express contract
An agreement with all the important terms explicitly stated.

In an implied contract, the words and conduct of the parties indicate that they intended an agreement. Suppose every Friday, for two months, the producer asks Lance to mow his lawn, and loyal Lance does so each weekend. Then, for three more weekends, Lance simply shows up without the producer asking, and the producer continues to pay for the work done. But on the 12th weekend, when Lance rings the doorbell to collect, the producer suddenly says, "I never asked you to mow it. Scram." The producer is correct that there was no express contract because the parties had not spoken for several weeks. But a court will probably rule that the conduct of the parties has *implied* a contract. Not only did Lance mow the lawn every weekend, but the producer even paid on three weekends when they had not spoken. It was reasonable for Lance to assume that he had a weekly deal to mow and be paid.

Today, the hottest disputes about implied contracts continue to arise in the employment setting. Many corporate employees have at-will relationships with their companies. This means that the employees are free to quit at any time and the company has the right to fire them, for virtually any reason. But often a company provides its workers with personnel manuals that lay out certain rights. Does a handbook create a contract guaranteeing those rights? What is your opinion?

ou be the **Judge**

DeMasse v. ITT Corporation
194 Ariz. 500, 984 P.2d 1138
Supreme Court of Arizona, 1999

ts: Roger DeMasse and five ers were employees-at-will at ' Corporation, where they ted working at various times veen 1960 and 1979. Each paid an hourly wage.

ITT issued an employee dbook, which it revised four s over two decades.

The first four editions of the handbook stated that in each job classification, any layoffs would be made everse order of seniority. The fifth handbook made important changes. First, the document stated that hing contained herein shall be construed as a guaran- of continued employment. ITT does not guarantee inued employment to employees and retains the right rminate or lay off employees."

Second, the handbook stated that "ITT reserves the to amend, modify, or cancel this handbook, as well as or all of the various policies [or rules] outlined in it." years later, ITT notified its hourly employees that layoff guidelines for hourly employees would be based not on seniority, but on ability and performance. About 10 days later, the six employees were laid off, though less-senior employees kept their jobs. The six employees sued.

You Be The Judge: ***Did ITT have the right to unilaterally change the layoff policy?***

Argument for the workers: It is true that all of the plaintiffs were originally employees-at-will, subject to termination at the company's whim. However, things changed when the company issued the first handbook. ITT chose to include a promise that layoffs would be based on seniority. Long-term workers and new employees all understood the promise and relied on it. The company put it there to attract and retain good workers. The policy worked. Responsible employees understood that the longer they

remained at ITT, the safer their job was. Company and employees worked together for many years with a common understanding, and that is a textbook definition of an implied contract.

Once a contract is formed, whether express or implied, it is binding on both sides. That is the whole point of a contract. If one side could simply change the terms of an agreement on its own, what value would any contract have? The company's legal argument is a perfect symbol of its arrogance: It believes that because these workers are mere hourly workers, they have no rights, even under contract law. The company is mistaken. Implied contracts are binding, and ITT should not make promises it does not intend to keep.

Argument for ITT: Once an at-will employee, always one. ITT had the right to fire any of its employees at any time—just as the workers had the right to quit whenever they wished. That never changed, and in case any workers forgot it, the company reiterated the point in its most recent handbook. If the plaintiffs thought layoffs would happen in any particular order, that is their error, not ours.

All workers were bound by the terms of whichever handbook was then in place. For many years, the company had made a seniority-layoff promise. Had we fired a senior worker during that period, he or she would have had a legitimate complaint—and that is why we did not do it. Instead, we gave everyone four years' notice that things would change. Any workers unhappy with the new policies should have left to find more congenial work.

Why should an employee be allowed to say, "I prefer to rely on the old, outdated handbooks, not the new one"? The plaintiffs' position would mean that no company is ever free to change its general work policies and rules. Since when does an at-will employee have the right to dictate company policy? That would be disastrous for the whole economy—but fortunately it is not the law.

Promissory Estoppel and Quasi-Contracts

Now we turn away from "true" contracts and consider two unusual circumstances. Sometimes, courts will enforce agreements even if they fail to meet the usual requirement of a contract. We emphasize that these remedies are uncommon exceptions to the general rules. Most of the agreements that courts enforce are the express contracts that we have already studied. Nonetheless, the next two remedies are still pivotal in some lawsuits. In each case, a sympathetic plaintiff can demonstrate an injury but *there is no contract.* The plaintiff cannot claim that the defendant breached a contract, because none ever existed. The plaintiff must hope for more "creative" relief.

The two remedies can be confusingly similar. The best way to distinguish them is this:

- In promissory estoppel cases, the defendant made a promise that the plaintiff relied on.
- In quasi-contract cases, the defendant received a *benefit* from the plaintiff.

Promissory Estoppel

A fierce fire swept through Dana and Derek Andreason's house in Utah, seriously damaging it. The good news was that agents for Aetna Casualty promptly visited the Andreasons and helped them through the crisis. The agents reassured the couple that all of the damage was covered by their insurance, instructed them on which things to throw out and replace, and helped them choose materials for repairing other items. The bad news was that the agents were wrong: the Andreasons' policy had expired six weeks before the fire. When Derek Andreason presented a bill for $41,957 worth of meticulously itemized work that he had done under the agents' supervision, Aetna refused to pay.

Promissory estoppel
A *possible* remedy for an injured plaintiff in a case with no valid contract, where the plaintiff can show a promise, reasonable reliance, and injustice.

The Andreasons sued—but not for breach of contract. There *was* no contract—they allowed their policy to expire. They sued Aetna under the legal theory of promissory estoppel: even when there is no contract, a plaintiff may use **promissory estoppel** to enforce the defendant's promise if he can show that:

- The defendant made a promise knowing that the plaintiff would likely rely on it;
- The plaintiff did rely on the promise; and
- The only way to avoid injustice is to enforce the promise.

Aetna made a promise to the Andreasons—namely, its assurance that all of the damage was covered by insurance. The company knew that the Andreasons would rely on that promise, which they did by ripping up a floor that might have been salvaged, throwing out some furniture, and buying materials to repair the house. Is enforcing the promise the only way to avoid injustice? Yes, ruled the Utah Court of Appeals.[2] The Andreasons' conduct was reasonable and based entirely on what the Aetna agents told them. Under promissory estoppel, the Andreasons received virtually the same amount they would have obtained had the insurance contract been valid.

Is enforcing the promise the only way to avoid injustice?

There was plenty of romance in the following case. Was there an enforceable promise?

Norton v. Hoyt

278 F. Supp. 2d 214
United States District Court for the District of Rhode Island, 2003

Facts: Gail Norton sued Russell Hoyt, and this is what she alleged. The two met when Norton, who was single, worked as an elementary school teacher. Hoyt told her he was also single, and they began an affair. She later learned that he was married, but he assured her he was getting a divorce, and they continued their relationship.

Six years later, Hoyt, who was rich, convinced Norton to quit her job so that they could travel together. The couple lived lavishly, spending time in Newport, Rhode Island, where Hoyt was part of the yachting crowd, in London, the Bahamas, and other agreeable places. Hoyt rented Norton an apartment, bought her cars, and repeated his promises to divorce his wife and marry his lover. He never did either.

After 23 years, Hoyt ended the relationship. Norton became ill, and saw various doctors for anxiety, depression, headaches, stomach maladies, and weight loss. During one joint therapy session, Hoyt told Norton and the psychiatrist that he would continue to support her with $80,000 a year. But he did not.

Norton sued, claiming promissory estoppel. Hoyt moved for summary judgment. In ruling on the motion, the court assumed that Norton's allegations were true.

Issue: ***Was Norton entitled to support, based on promissory estoppel?***

Excerpts from Judge Lageux's Decision: Even viewed most favorably to the Plaintiff, the record fails to reveal a clear, unconditional, and unambiguous promise. Plaintiff's vacillations have not helped her cause. First, she claimed that Hoyt promised to divorce his wife, marry her, and provide lifetime support to her. Then she changed her mind and the promise became one to provide lifetime support to her regardless of whether Hoyt divorced his wife or not. Finally at the hearing on this motion, counsel argued that Hoyt had simply promised to take care of Norton for life. However, there can be many interpretations of the phrase "take care of for life." It could refer to care in a social, emotional, or financial context. As other courts have recognized, this is certainly not a clear and unambiguous promise.

Even assuming, *arguendo,* that there was a clear and unambiguous promise, Norton's reliance upon that promise was unreasonable. Though the couple had discussions about their life together and even discussed potential wedding plans, Plaintiff knew that Hoyt was married, and that he spent time at the marital domicile with his wife and children. Norton and Hoyt never openly associated as husband and wife, their friends and family knew that they were not married, and they did not exclusively cohabitate. Furthermore, Norton knew that Hoyt had lied in the past,

---

[2] *Andreason v. Aetna Casualty & Surety Co.*, 848 P.2d 171, 1993 Utah App. LEXIS 26 (Utah App. 1993).

was in an adulterous relationship, and apparently had made little effort to fulfill the terms of the promise. Reliance upon an unclear and ambiguous promise made by an apparently unreliable man was imprudent.

In any event, whatever form her reliance took, it is insufficient to overcome the other fatal flaws in her claim. Any promise for support that Hoyt made prior to the breakup is ambiguous at best, and, considering the source, was not a reasonable basis upon which to ground reliance. Sometime between year one and year 23 of the affair, it should have become clear to Norton that her reliance on Hoyt's promise to divorce his wife and marry her was misplaced.

[The defendant's motion for summary judgment is granted.]

Devil's Advocate Why should one person be able to make repeated promises over two decades and escape all responsibility? Even if Hoyt's precise words varied, each of his promises involved long-term emotional and financial security for Norton. Norton was naïve, but Hoyt was dishonest. The law should be a tool for teaching people like him a lesson.

Why have we chosen to illustrate an important point of law—promissory estoppel—with a case that fails? Because that is the typical outcome. Plaintiffs allege promissory estoppel very frequently, but seldom succeed. They do occasionally win, as the Andreasons demonstrated earlier, but courts are skeptical of these claims. The lesson is clear: Before you rely on a promise, negotiate a binding contract.

© Photodisc/Getty Images

Quasi-contract may require compensation even when no contract exists.

Quasi-Contract

Don Easterwood leased over 5,000 acres of farmland in Jackson County, Texas, from PIC Realty for one year. The next year, he obtained a second one-year lease. During each year, Easterwood farmed the land, harvested the crops, and prepared the land for the following year's planting. Toward the end of the second lease, after Easterwood had harvested his crop, he and PIC began discussing the terms of another lease. While they negotiated, Easterwood prepared the land for the following year, cutting and plowing the soil. But the negotiations for a new lease failed, and Easterwood moved off the land. He sued PIC Realty for the value of his work preparing the soil.

Easterwood had neither an express nor an implied contract for the value of his work. How could he make any legal claim? By relying on the legal theory of a quasi-contract: Even when there is no contract, a court may use **quasi-contract** to compensate a plaintiff who can show that:

- The plaintiff gave some benefit to the defendant;
- The plaintiff reasonably expected to be paid for the benefit and the defendant knew this; and
- The defendant would be unjustly enriched if he did not pay.

Quasi-contract

A *possible* remedy for an injured plaintiff in a case with no valid contract, where the plaintiff can show benefit to the defendant, reasonable expectation of payment, and unjust enrichment.

If a court finds all of these elements present, it will generally award the value of the goods or services that the plaintiff has conferred. The damages awarded are called ***quantum meruit***, meaning that the plaintiff gets "as much as he deserves." The court is awarding money that it believes the plaintiff *morally ought to have*, even though there was no valid contract entitling her to it. This again is judicial activism, with the courts

inventing a "quasi" contract where no true contract exists. The purpose is justice, the term is contradictory.

Don Easterwood testified that in Jackson County, it was quite common for a tenant farmer to prepare the soil for the following year but then be unable to farm the land. In those cases, he claimed, the landowner compensated the farmer for the work done. Other witnesses agreed that this was the local custom. The court ruled that indeed there was no contract, but that all elements of quasi-contract had been satisfied. Easterwood gave a benefit to PIC because the land was ready for planting. Jackson County custom caused Easterwood to assume he would be paid, and PIC Realty knew it. Finally, said the court, it would be unjust to let PIC benefit without paying anything. The court ordered PIC to pay the fair market value of Easterwood's labors.

Quantum meruit
"As much as he deserves"—the damages awarded in a quasi-contract case.

FOUR THEORIES OF RECOVERY

Theory	Did the Defendant Make a Promise?	Is There a Contract?	Description
Express Contract	Yes	Yes	The parties intend to contract and agree on explicit terms.
Implied Contract	Not explicitly	Yes	The parties do not formally agree, but their words and conduct indicate an intention to create a contract.
Promissory Estoppel	Yes	No	There is no contract, but the defendant makes a promise that she can foresee will induce reliance; the plaintiff relies on it; and it would be unjust not to enforce the promise.
Quasi-Contract	No	No	There is no intention to contract, but the plaintiff gives some benefit to the defendant, who knows that the plaintiff expects compensation; it would be unjust not to award the plaintiff damages.

EXAM Strategy

Question: The table above lists the different theories a plaintiff may use to recover damages in a contract dispute. In the following examples, which one will each plaintiff use in trying to win the case?

1. Company pays all employees 10 percent commission on new business they develop. Company compensates each employee when the new customer pays its first bill. After Leandro obtains three new clients, Company fires him. When

the new customers pay their bill, Company refuses to pay Leandro a commission because he is no longer an employee. Leandro sues.

2. Burt agrees in writing to sell Red 100 lobsters for $15 each, payable by credit card, in exactly 30 days. When the lobsters fail to arrive, Red sues.
3. Company handbook, given to all new hires, states that no employee will be fired without a hearing and an appeal. Company fires Delores without a hearing or appeal. She sues.

Strategy: In (1), the Company never promised to pay a commission to nonemployees, so there is no contract. However, the Company *benefited* from Leandro's work. In (2), the parties have *clearly stated all terms* to a simple sales agreement. In (3), the Company and Delores never negotiated termination, but *the handbook suggests* that all employees have certain rights.

Result: (1) is a case of quasi-contract because the company benefited and should reasonably expect to pay. (2) is an express contract because all terms are clearly stated. (3) is an implied contract, similar to the *DeMasse* case, based on the handbook.

Sources of Contract Law

Common Law

We have seen the evolution of contract law from the twelfth century to the present. Express and implied contracts, promissory estoppel, and quasi-contract were all crafted, over centuries, by courts deciding one contract lawsuit at a time. Many contract lawsuits continue to be decided using common-law principles developed by courts.

Uniform Commercial Code

Business methods changed quickly during the first half of the last century. Transportation speeded up. Corporations routinely conducted business across state borders and around the world. These developments presented a problem. Common-law principles, whether related to contracts, torts, or anything else, sometimes vary from one state to another. New York and California courts often reach similar conclusions when presented with similar cases, but they are under no obligation to do so. Business leaders became frustrated that, to do business across the country, their companies had to deal with many different sets of common-law rules.

Executives, lawyers, and judges wanted a body of law for business transactions that reflected modern commercial methods and provided uniformity throughout the United States. It would be much easier, they thought, if some parts of contract law were the same in every state. That desire gave birth to the Uniform Commercial Code (UCC), created in 1952. The drafters intended the UCC to facilitate the easy formation and enforcement of contracts in a fast-paced world. The Code governs many aspects of commerce, including the sale and leasing of goods, negotiable instruments, bank deposits, letters of credit, investment securities, secured transactions, and other commercial matters. Every state has adopted at least part of the UCC to govern commercial transactions within that state. For our purposes in studying contracts, the most important part of the Code is Article 2, which governs the sale of goods. **"Goods" means anything movable, except for money, securities, and certain legal rights.** Goods include pencils, commercial aircraft, books, and Christmas trees. Goods do not include land or a house because neither is movable, nor do they include a stock

certificate. A contract for the sale of 10,000 sneakers is governed by the UCC; a contract for the sale of a condominium in Marina del Rey is governed by the California common law.

When analyzing any contract problem as a student or businessperson, you must note whether the agreement concerns the sale of goods. For many issues, the common law and the UCC are reasonably similar. But sometimes, the law is quite different under the two sets of rules.

And so, the UCC governs contracts for a sale of goods, while common-law principles govern contracts for sales of services and everything else. Most of the time, it will be clear whether the UCC or the common law applies. But what if a contract involves both goods and services? When you get your oil changed, you are paying in part for the new oil and oil filter (goods) and in part for the labor required to do the job (services). In a mixed contract, Article 2 governs only if the *primary purpose* was the sale of goods. In the following case, the court had to decide the primary purpose.

Fallsview Glatt Kosher Caterers, Inc. v. Rosenfeld

2005 WL 53623
Civil Court, City of New York, 2005

Facts: During the Jewish holidays, Fallsview Glatt Kosher Caterers organized programs at Kutcher's Country Club, where it provided all accommodations, food, and entertainment.

Fallsview sued Willie Rosenfeld, alleging that he had requested accommodations for 15 members of his family, agreeing to pay $24,050, and then failed to appear or pay.

Rosenfeld moved to dismiss, claiming that even if there had been an agreement, it was never put in writing. Under UCC §2-201, any contract for the sale of goods worth $500 or more can be enforced only if it is in writing and signed. Fallsview argued that the agreement was not for the sale of goods, but for services. The company claimed that because the contract was not governed by the UCC, it should be enforced even with no writing.

Issue: ***Was the agreement one for the sale of goods, requiring a writing, or for services, enforceable with no writing?***

Excerpts from Judge Battaglia's Decision: Mr. Rosenfeld contends that the "predominant purpose" and "main objective" of the agreement alleged by Fallsview was the "service of Kosher food," while the hotel accommodations and entertainment were merely "incidental or collateral" services.

Defendant's contention that the "predominant purpose" of the alleged agreement is the sale of food is said to be compelled by the very nature of the Passover holiday. [He argues that] "the essential religious obligation during this eight-day period and the principal reason why people attend events similar to the Program sponsored by plaintiff is in order to facilitate their fulfillment of the requirement to eat only food which is prepared in strict accordance with the mandate of Jewish law for Passover, i.e., food which is 'Kosher for Passover.' It is the desire to obtain these 'goods' and not the urge for 'entertainment' or 'accommodations' that motivates customers to subscribe to such 'Programs.' "

[Fallsview submitted] ten sheets, designated "Kutcher's Country Club Daily Activities" for Sunday, April 4, through Tuesday, April 13, 2004. The activities possible include tennis, racquetball, swimming, Swedish massage, "make over face lift show," "trivia time," aerobics, bingo, ice skating, dancing, "showtime," "power walk," arts and crafts, day camp, ping-pong, Yiddish theater, board games, horse racing, horseback riding, wine tasting, and indoor baci and that is only through Wednesday. These activities are provided, together with accommodations and food, for an "all inclusive" price that is apparently determined by the size and location of the room(s) and the numbers and ages of the persons in each party.

A review of the characteristics of the "program," which is the subject matter of the alleged agreement, leads the Court to conclude that the "essence" of the family and communal "experience" is defined primarily by "services" and not by "goods."

The intended scope of UCC section 2-201 is also indicated by its provision that "[a] writing is not insufficient because it omits or incorrectly states a term agreed upon but the contract is not enforceable under this paragraph beyond the quantity of goods shown in the writing." For the Code, quantity is even more important than price. A contract of the type involved here would rarely, if

ever, specify the "quantity" of the "goods" to be provided. Nor would, for example, a contract for a week's stay at a weight-loss spa, or a zen-vegetarian retreat, or a cruise of the islands.

Plaintiff argues that "Defendant's proposition that a hotel reservation is a sale of goods would render all reservations made via telephone or the Internet unenforceable and would leave hotels in a precarious economic position." That may or may not be true, but the argument does highlight the importance of ensuring that a Statute of Frauds structured and outfitted by the Legislature for a particular transactional context not be casually applied to a very different commercial segment and model. The structure and terms of section 2-201 tell us that it was not intended to cover the agreement alleged in this Complaint.

Defendant's motion to dismiss is denied.

EXAM Strategy

Question: Leila agrees to pay Kendrick $35,000 to repair windmills. Confident of this cash, Kendrick contracts to buy Derrick's used Porsche for $33,000. Then Leila informs Kendrick she does not need his help and will not pay him. Kendrick tells Derrick that he no longer wants the Porsche. Derrick sues Kendrick, and Kendrick files suit against Leila. What law or laws govern these lawsuits?

Strategy: Always be conscious of whether a contract is for services or the sale of goods. Different laws govern. To make that distinction, you must understand the term "goods." If you are clear about that, the question is answered easily.

Result: *Goods* means anything movable, and a Porsche is movable—one might say "super-movable." The UCC will control Derrick's suit. Repairing windmills is primarily a service. Kendrick's lawsuit is governed by the common law of contracts.

Chapter Conclusion

Contracts govern countless areas of our lives, from intimate family issues to multibillion-dollar corporate deals. Understanding contract principles is essential for a successful business or professional career and is invaluable in private life. This knowledge is especially important because courts no longer rubber-stamp any agreement that two parties have made. If we know the issues that courts scrutinize, the agreement we draft is likelier to be enforced. We thus achieve greater control over our affairs—the very purpose of a contract.

Exam Review

1. **CONTRACTS: DEFINITION AND ELEMENTS** A contract is a legally enforceable promise. Analyzing whether a contract exists involves inquiring into these issues: offer, acceptance, consideration, capacity, legal purpose, consent, and sometimes, whether the deal is in writing. (pp. 232–233)

2. **DEVELOPMENT** The development of contract law stretches into the distant past. Before the fifteenth century, courts rarely enforced promises at all. By the 1600s, courts enforced many mutual promises, and by 1900, most promises containing the seven elements of a contract were strictly enforced. (pp. 233–235)

3. **UNILATERAL AND BILATERAL CONTRACTS** In bilateral contracts, the parties exchange promises. In a unilateral contract, only one party makes a promise, and the other must take some action—his return promise is insufficient to form a contract. (p. 235)

4. **EXECUTORY AND EXECUTED CONTRACTS** In an executory contract, one or both of the parties have not yet have not done everything that they promised to do. In an executed contract, all parties have fully performed. (pp. 235–236)

5. **ENFORCEABILITY**

- Valid contracts are fully enforceable.
- An unenforceable agreement is one with a legal defect.
- A voidable contract occurs when one party has an option to cancel the agreement.
- A void agreement means that the law will ignore the deal regardless of what the parties want. (pp. 236–237)

EXAM Strategy

Question: Yasmine is negotiating to buy Stewart's house. She asks him what condition the roof is in.

"Excellent," he replies. "It is only 2 years old, and should last 25 more." In fact, Stewart knows that the roof is 26 years old and has had a series of leaks. The parties sign a sales contract for $600,000. A week before Yasmine is to pay for the house and take possession, she discovers the leaks and learns that the mandatory new roof will cost $35,000. At the same time, she learns that the house has increased in value by $60,000 since she signed the agreement. What options does Yasmine have?

Strategy: You know intuitively that Stewart's conduct is as shabby as his roof. What is the legal term for his deception? Fraud. Does fraud make an agreement void or voidable? Does it matter? (See the "Result" at the end of this section.)

6. **EXPRESS AND IMPLIED CONTRACTS** If the parties formally agreed and stated explicit terms, there is probably an express contract. If the parties did not formally agree but their conduct, words, or past dealings indicate they intended a binding agreement, there may be an implied contract. (pp. 237–238)

7. **OTHER REMEDIES** If there is no contract, are there other reasons to give the plaintiff damages?

- A claim of promissory estoppel requires that the defendant made a promise knowing that the plaintiff would likely *rely*, and the plaintiff did so. It would be wrong to deny recovery.

- A claim of quasi-contract requires that the defendant received a benefit, knowing that the plaintiff would expect compensation, and it would be unjust not to grant it. (pp. 239–242)

EXAM Strategy

Question: The Hoffmans owned and operated a successful small bakery and grocery store. They spoke with Lukowitz, an agent of Red Owl Stores, who told them that for $18,000, Red Owl would build a store and fully stock it for them. The Hoffmans sold their bakery and grocery store and purchased a lot on which Red Owl was to build the store. Lukowitz then told Hoffman that the price had gone up to $26,000. The Hoffmans borrowed the extra money from relatives, but then Lukowitz informed them that the cost would be $34,000. Negotiations broke off, and the Hoffmans sued. The court determined that there was no contract because too many details had not been worked out—the size of the store, its design, and the cost of constructing it. Can the Hoffmans recover any money?

Strategy: Because there is no contract, the Hoffmans must rely on either promissory estoppel or quasi-contract. Promissory estoppel focuses on the defendant's promise and the plaintiff's reliance. Those suing in quasi-contract must show that the defendant received a benefit for which it should reasonably expect to pay. Does either fit here? (See the "Result" at the end of this section.)

8. **SOURCES OF CONTRACT LAW** If a contract is for the sale of goods, the UCC is the relevant body of law. For anything else, the common law governs. If a contract involves both goods and services, a court will determine the agreement's primary purpose. (pp. 243–244)

EXAM Strategy

Question: Honeywell, Inc., and Minolta Camera Co. had a contract providing that Honeywell would give to Minolta various technical information on the design of a specialized camera lens. Minolta would have the right to use the information in its cameras, provided that Minolta also used certain Honeywell parts in its cameras. Honeywell delivered to Minolta numerous technical documents, computer software, and test equipment, and Honeywell engineers met with Minolta engineers at least 20 times to discuss the equipment. Several years later, Honeywell sued, claiming that Minolta had taken the design information but failed to use Honeywell parts in its cameras. Minolta moved to dismiss, claiming that the UCC required lawsuits concerning the sale of goods to be filed within four years of the breach and that this lawsuit was too late. Honeywell answered that the UCC did not apply, and that therefore, Minnesota's six-year statute of limitations governed. Who is right?

Strategy: Like many contracts, this one involves both goods, which are governed by the UCC, and services, controlled by the common law. We decide which of those two laws governs by using the predominant purpose test. Was this contract primarily about selling goods or about providing services? (See the "Result" at the end of this section.)

5. Result: Indeed, it does matter. Stewart's fraud makes the contract voidable by Yasmine. She has the right to terminate the agreement and pay nothing. However, she may go through with the contract if she prefers. The choice is hers—but not Stewart's.

7. Result: Red Owl received no benefit from the Hoffmans' sale of their store or purchase of the lot. However, Red Owl did make a promise and expected the Hoffmans to rely on it, which they did. The Hoffmans won their claim of promissory estoppel.

8. Result: The primary purpose of this agreement was not the sale of goods, but rather the exchange of technical data, ideas, designs, and so forth. The common law governs the contract, and Honeywell's suit may go forward.

Multiple-Choice Questions

1. A sitcom actor, exhausted after his 10-hour workweek, agrees to buy a briefcase full of cocaine from Lewis for $12,000. Lewis and the actor have a ____________ contract.

(a) valid

(b) unenforceable

(c) voidable

(d) void

2. Carol says, "Pam, you're my best friend in the world. I just inherited a million bucks, and I want you to have some of it. Come with me to the bank tomorrow, and I'll give you $10,000." "Sweet!" Pam replies. Later that day, Carol has a change of heart. She is allowed to do so. Examine the list of the elements of a contract, and cite the correct reason.

(a) The agreement was not put into writing.

(b) The agreement lacks a legal purpose.

(c) Pam did not give consideration.

(d) Pam does not have the capacity to make a contract.

3. On the first day of the baseball season, Dean orders a new Cardinals hat from Amazon. At the moment he submits his order, Dean and Amazon have an ____________ contract. Two days later, Amazon delivers the hat to Dean's house. At this point, Dean and Amazon have an ____________ contract.

(a) executory; executory

(b) executory; executed

(c) executed; executory

(d) executed; executed

4. Linda goes to an electronics store and buys a high-definition TV. Lauren hires a company to clean her swimming pool once a week. The ____________ governs Linda's contract with the store, and the ____________ governs Lauren's contract with the cleaning company.

(a) common law; common law

(b) common law; UCC

(c) UCC; common law

(d) UCC; UCC

5. Consider the following scenarios:

I. Madison says to a group of students, "I'll pay $35 to the first one of you who shows up at my house and mows my lawn."

II. Lea posts a flyer around town that reads, "Reward: $500 for information about the person who keyed my truck last Saturday night in the Wag-a-Bag parking lot. Call Lea at 555-5309."

Which of these proposes a *unilateral* contract?

(a) I only

(b) II only

(c) Both I and II

(d) None of the above

Essay Questions

1. Pennsylvania contracted with Envirotest Systems, Inc., an Arizona company, to build 86 automobile emissions inspection stations in 25 counties and operate them for seven years. This contract is worth hundreds of millions of dollars to Envirotest. But Pennsylvania legislators suddenly opposed the entire system, claiming that it would lead to long delays and high expenses for motorists. These lawmakers urged that Pennsylvania simply stop construction of the new system. Was Pennsylvania allowed to get out of the contract because its legislators concluded the whole system is unwise?

2. Central Maine Power Co. made a promotional offer in which it promised to pay a substantial sum to any homeowner or builder who constructed new housing heated with electricity. Motel Services, Inc., which was building a small housing project for the city of Waterville, Maine, decided to install electrical heat in the units in order to qualify for the offer. It built the units and requested payment for the full amount of the promotional offer. Is Central Maine obligated to pay? Why or why not?

3. Interactive Data Corp. hired Daniel Foley as an assistant product manager at a starting salary of $18,500. Over the next six years, Interactive steadily promoted Foley until he became Los Angeles branch manager at a salary of $56,116. Interactive's officers repeatedly told Foley that he would have his job as long as his performance was adequate. In addition, Interactive distributed an employee handbook that specified "termination guidelines," including a mandatory seven-step pre-termination procedure. Two years later, Foley learned that his recently hired supervisor, Robert Kuhne, was under investigation by the FBI for embezzlement at his previous job. Foley reported this to Interactive officers. Shortly thereafter, Interactive fired Foley. He sued, claiming that Interactive could fire him only for good

cause, after the seven-step procedure. What kind of a claim is he making? Should he succeed?

4. **ETHICS** You want to lease your automobile to a friend for the summer but do not want to pay a lawyer to draw up the lease. Joanna, a neighbor, is in law school. She is not licensed to practice law. She offers to draft a lease for you for $100, and you unwisely accept. Later, you refuse to pay her fee, and she sues to collect. Who will win the lawsuit, and why? Apart from the law, was it morally right for the law student to try to help you by drafting the lease? Was she acting helpfully, or foolishly, or fraudulently? Is it just for you to agree to her fee and then refuse to pay it? What is society's interest in this dispute? Should a court be more concerned with the ethical issue raised by the conduct of the two parties or with the social consequences of this agreement?

5. ***YOU BE THE JUDGE* WRITING PROBLEM** John Stevens owned a dilapidated apartment that he rented to James and Cora Chesney for a low rent. The Chesneys began to remodel and rehabilitate the unit. Over a four-year period, they installed two new bathrooms, carpeted the floors, installed new septic and heating systems, and rewired, replumbed, and painted. Stevens periodically stopped by and saw the work in progress. The Chesneys transformed the unit into a respectable apartment. Three years after their work was done, Stevens served the Chesneys with an eviction notice. The Chesneys counterclaimed, seeking the value of the work they had done. Are they entitled to it? **Argument for Stevens:** Mr. Stevens is willing to pay the Chesneys exactly the amount he agreed to pay: nothing. The parties never contracted for the Chesneys to fix up the apartment. In fact, they never even discussed such an agreement. The Chesneys are making the absurd argument that anyone who chooses to perform certain work, without ever discussing it with another party, can finish the job and then charge it to the other person. If the Chesneys expected to get paid, obviously they should have said so. If the court were to allow this claim, it would be inviting other tenants to make improvements and then bill the landlord. The law has never been so foolish. **Argument for the Chesneys:** The law of quasi-contract was crafted for cases exactly like this. The Chesneys have given an enormous benefit to Stevens by transforming the apartment and enabling him to rent it at greater profit for many years to come. Stevens saw the work being done and understood that the Chesneys expected some compensation for these major renovations. If Stevens never intended to pay the fair value of the work, he should have stopped the couple from doing the work or notified them that there would be no compensation. It would be unjust to allow the landlord to seize the value of the work, evict the tenants who did it, and pay nothing.

Discussion Questions

1. Have you ever made an agreement that mattered to you, only to have the other person refuse to follow through on the deal? Looking at the list of elements in the chapter, did your agreement amount to a contract? If not, which element did it lack?

2. Consider promissory estoppel and quasi-contracts. Do you like the fact that these doctrines exist? Should courts have "wiggle room" to enforce deals that fail to meet

formal contract requirements? Or, should the rule be "If it's not an actual contract, too bad. No deal."

3. Is it sensible to have two different sets of contract rules—one for sales of goods and another for everything else? Would it be better to have a single set of rules for all contracts?

4. In the case *Davis v. Mason*, a court considered an early non-compete agreement. Did the court in that case reach a proper conclusion? What should courts say in similar cases in modern times?

5. Return to the opening scenario. Fran, Ricky, Carla, and Dave each made an agreement with John. None is valid under contract law. For the sake of fairness, *should* any of them be legally enforceable? If so, which?

CHAPTER 11

The Agreement: Offers and Acceptances

> **I should talk with my agent. I'd need something in writing about the nude scene …**

Interior. A glitzy café, New York. Evening. Bob, a famous director, and Katrina, a glamorous actress, sit at a table, near a wall of glass looking onto a New York sidewalk that is filled with life and motion. Bob sips a margarita while carefully eyeing Katrina. Katrina stares at her wine glass.

BOB *(smiling confidently)*: *Body Work* is going to be huge—for the right actress. I know a film that's gonna gross a hundred million when I'm holding one. I'm holding one.

KATRINA *(perking up at the mention of money)*: It is quirky. It's fun. And she's very strong, very real.

BOB: She's you. That's why we're sitting here. We start shooting in seven months.

KATRINA *(edging away from the table)*: I have a few questions. That nude scene.

BOB: The one on the toboggan run?

KATRINA: *That* one was O.K. But the one in the poultry factory—very explicit. I don't work nude.

BOB: It's not really nude. Think of all those feathers fluttering around.

KATRINA: It's nude.

BOB: We'll work it out. This is a romantic comedy, not tawdry exploitation. Katrina, we're talking $2.5 million. A little accommodation, please. We'll give you $600,000 up front, and the rest deferred, the usual percentages.

KATRINA: Bob, my fee is $3 million. As you know. That hasn't changed.

Katrina picks up her drink, doesn't sip it, places it on the coaster, using both hands to center it perfectly. He waits, as she stares silently at her glass.

BOB: We're shooting in Santa Fe, the weather will be perfect. You have a suite at the Excelsior, plus a trailer on location.

KATRINA: I should talk with my agent. I'd need something in writing about the nude scene, the fee, percentages—all the business stuff. I never sign without talking to her.

Bob shrugs and sits back.

KATRINA *(made anxious by the silence)*: I love the character, I really do.

BOB: You and several others love her. *(That jolts her.)* Agents can wait. I have to put this together fast. We can get you the details you want in writing. *Body Work* is going to be bigger than *Sex in the City*.

That one hooks her. She looks at Bob. He nods reassuringly. Bob sticks out his hand, smiling. Katrina hesitates, lets go of her drink, and SHAKES HANDS, looking unsure. Bob signals for the check.

Do Bob and Katrina have a deal? *They* seem to think so. But is her fee $2.5 million or $3 million? What if Katrina demands that all nude scenes be taken out, and Bob refuses? Must she still act in the film? Or suppose her agent convinces her that *Body Work* is no good even with changes. Has Katrina committed herself? What if Bob auditions another actress the next day, likes her, and signs her? Does he owe Katrina her fee? Or suppose Bob learns that the funding has fallen apart and there will be no film. Is Katrina entitled to her money?

Bob and Katrina have acted out a classic problem in *agreement*, one of the basic issues in contract law. Their lack of clarity means that disputes are likely and lawsuits possible. Similar bargaining goes on every day around the country and around the world, and the problems created are too frequently resolved in court. Some negotiating is done in person; more is done over the phone, by fax, by email—or all of them combined. This chapter highlights the most common sources of misunderstanding and litigation so that you can avoid making contracts you never intended—or deals that you cannot enforce.

There almost certainly is no contract between Bob and Katrina. Bob's offer was unclear. Even if it was valid, Katrina counteroffered. When they shook hands, it is impossible to know what terms each had in mind.

Contracts Checklist

- [x] Offer
- [x] Acceptance
- [ ] Consideration
- [ ] Legality
- [ ] Capacity
- [ ] Consent
- [ ] Writing

MEETING OF THE MINDS

Remember from the last chapter that contracts have seven key characteristics. Agreements that have a problem in any of the areas do not amount to valid contracts. In this chapter, we examine the first two items on the checklist.

Parties form a contract only if they have a meeting of the minds. For this to happen, one side must make an **offer** and the other must make an **acceptance**. An offer proposes definite terms, and an acceptance unconditionally agrees to them.

Offer
An act or statement that proposes definite terms and permits the other party to create a contract by accepting those terms.

Throughout the chapter, keep in mind that courts make *objective* assessments when evaluating offers and acceptances. A court will not try to get inside Katrina's head and decide what she was thinking as she shook hands. It will look at the handshake *objectively*, deciding how a reasonable person would interpret her words and conduct. Katrina may honestly have meant to conclude a deal for $3 million with no nude scenes, while Bob might in good faith have believed he was committing himself to $2.5 million and absolute control of the script. Neither belief will control the outcome.

Offer

Bargaining begins with an offer. The person who makes an offer is the **offeror**. The person to whom he makes that offer is the **offeree**. The terms are annoying but inescapable because, like handcuffs, all courts use them.

Offeror
The person who makes an offer.

Offeree
The person to whom an offer is made.

Two questions determine whether a statement is an offer:

- Do the offeror's words and actions indicate an *intention* to make a bargain?
- Are the terms of the offer reasonably definite?

Zachary says to Sharon, "Come work in my English language center as a teacher. I'll pay you $800 per week for a 35-hour week, for six months starting Monday." This is a valid offer. Zachary's words seem to indicate that he intends to make a bargain and his offer is definite. If Sharon accepts, the parties have a contract that either one can enforce.

In the section below, we present several categories of statements that are generally *not* valid offers.

Statements that Usually do not Amount to Offers

Invitations to Bargain

An invitation to bargain is not an offer. Suppose Martha telephones Joe and leaves a message on his answering machine, asking if Joe would consider selling his vacation condo on Lake Michigan. Joe faxes a signed letter to Martha saying, "There is no way I could sell the condo for less than $150,000." Martha promptly sends Joe a cashier's check for that amount. Does she own the condo? No. Joe's fax was not an offer. It is merely an invitation to negotiate. Joe is indicating that he might well be happy to receive an offer from Martha, but he is not promising to sell the condo for $150,000 or for any amount.

Price Quotes

A price quote is generally not an offer. If Imperial Textile sends a list of fabric prices for the new year to its regular customers, the list is not an offer. Once again, the law regards it merely as a solicitation of offers. Suppose Ralph orders 1,000 yards of fabric, quoted in the list at $40 per yard. *Ralph* is making the offer, and Imperial may decline to sell at $40, or at any price, for that matter.

This can be an expensive point to learn. Leviton Manufacturing makes electrical fixtures and switches. Litton Microwave manufactures ovens. Leviton sent a price list to Litton, stating what it would charge for specially modified switches for use in Litton's microwaves. The price letter included a statement greatly limiting Leviton's liability in the event of any problem with the switches. Litton purchased thousands of the switches and used them in manufacturing its microwaves. But consumers reported fires due to defects in the switches. Leviton claimed that under the contract it had no liability. But the court held that the price letter was not an offer. It was a request to receive an offer. Thus the contract ultimately formed did not include Leviton's liability exclusion. Litton won over $4 million.[1] See Exhibit 11.1

Letters of Intent

In complex business negotiations, the parties may spend months bargaining over dozens of interrelated issues. Because each party wants to protect itself during the discussions, ensuring that the other side is serious without binding itself to premature commitments,

---

[1]*Litton Microwave Cooking Products v. Leviton Manufacturing Co., Inc.*, 15 F.3d 790, 1994 U.S. App. LEXIS 1876 (8th Cir. 1994).

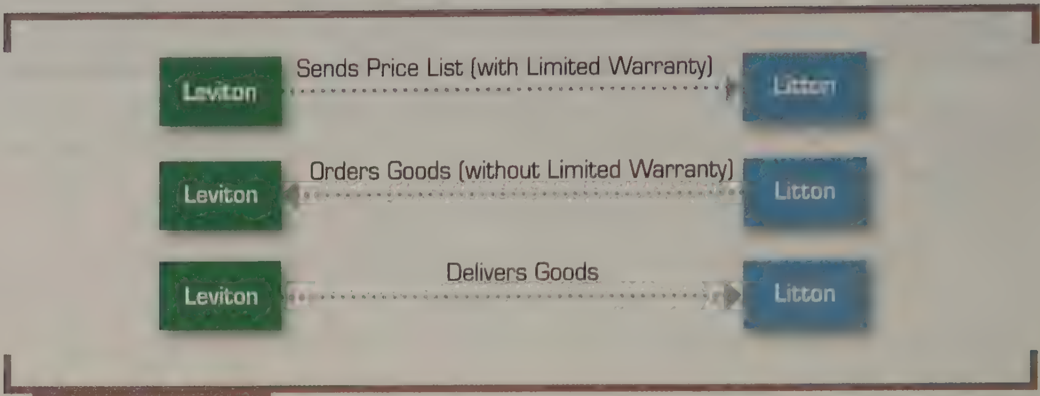

EXHIBIT 11.1 The Litton case demonstrates why it is important to distinguish a valid offer from a mere price quote. Leviton's price list (including a limited warranty) was *not* an offer. When Litton ordered goods (with no limit to the warranty), it was making an offer, which Leviton accepted by delivering the goods. The resulting contract did not contain the limited warranty that Leviton wanted, costing that company a $4 million judgment.

Letter of intent
A letter that summarizes negotiating progress.

it may be tempting during the negotiations to draft a **letter of intent**. The letter *might* help distinguish a serious party from one with a casual interest, summarize the progress made thus far, and assist the parties in securing necessary financing. Usually, letters of intent do not create any legal obligation. They merely state what the parties are considering, not what they have actually agreed to. But note that is possible for a letter of intent to bind the parties if its language indicates that the parties *intended* to be bound.

Advertisements

Mary Mesaros received a notice from the United States Bureau of the Mint, announcing a new $5 gold coin to commemorate the Statue of Liberty. The notice contained an order form stating:

> VERY IMPORTANT—PLEASE READ: YES, Please accept my order for the U.S. Liberty Coins I have indicated. I understand that all sales are final and not subject to refund. Verification of my order will be made by the Department of the Treasury, U.S. Mint. If my order is received by December 31, I will be entitled to purchase the coins at the Pre-Issue Discount price shown.

Mesaros ordered almost $2,000 worth of the coins. But the Mint was inundated with so many requests for the coin that the supply was soon exhausted. Mesaros and thousands of others never got their coins. This was particularly disappointing because the market value of the coins doubled shortly after their issue. Mesaros sued on behalf of the entire class of disappointed purchasers. Like most who sue based on an advertisement, she lost.[2] **An advertisement is generally not an offer.** An advertisement is merely a request for offers. The consumer makes the offer, whether by mail, as above, or by arriving at a merchant's store ready to buy. The seller is free to reject the offer.

Advertisers should be careful, however, not to be too specific in their ads. Some ads do count as offers, as the following case illustrates.

---

[2] *Mesaros v. United States*, 845 F.2d 1576, 1988 U.S. App. LEXIS 6055 (Fed. Cir. 1988).

Landmark Case

CARLILL V. CARBOLIC SMOKE BALL COMPANY

1 QB 256
Court of Appeal, 1892

Facts: In the early 1890s, English citizens greatly feared the Russian flu. The Carbolic Smoke Ball Company ran a newspaper ad that contained two key passages:

> "£100 reward will be paid by the Carbolic Smoke Ball Company to any person who contracts the influenza after having used the ball three times daily for two weeks according to the printed directions supplied with each ball.
>
> "£1000 is deposited with the Alliance Bank, shewing our sincerity in the matter."

The product was a ball that contained carbolic acid. Users would inhale vapors from the ball through a long tube.

Carlill purchased a smoke ball and used it as directed for two months. She then caught the flu. She sued, arguing that because her response to the ad had created a contract with the company, she was entitled to £100.

The trial court agreed, awarding Carlill the money. The company appealed.

Issues: ***Did the advertisement amount to an offer? If so, was the offer accepted?***

Excerpts from Lord Justice Lindley's Decision: The first observation I will make is that we are dealing with an express promise to pay £100 in certain events. Read the advertisement how you will, and twist it about as you will, here is a distinct promise expressed in language which is perfectly unmistakable.

We must first consider whether this was intended to be a promise at all. The deposit is called by the advertiser as proof of his sincerity in the matter—that is, the sincerity of his promise to pay this £100 in the event which he has specified. I say there is the promise, as plain as words can make it.

Then it is contended that it is not binding. In the first place, the performance of the conditions is the acceptance of the offer. Unquestionably, as a general proposition, when an offer is made, it is necessary that the acceptance should be notified. But is that so in cases of this kind? I think that in a case of this kind that the person who makes the [offer] shews by his language and from the nature of the transaction that he does not expect and does not require notice of the acceptance apart from notice of the performance.

We, therefore, find here all the elements which are necessary to form a binding contract enforceable in point of law.

It appears to me, therefore, that the defendants must perform their promise, and, if they have been so unwary as to expose themselves to a great many actions, so much the worse for them. Appeal dismissed.

Carlill lived 50 years more, dying at the age of 96—of the flu.

This case serves as a cautionary tale. Running a "normal" ad which describes a product, its features, and its price does not amount to an offer. But, if a company proposes to take an action—like pay $100 to customers who take certain, specific actions—then it may find itself contractually obligated to follow through on its promises. The acceptance of the offer makes a unilateral contract.

Note also that, regardless of whether an ad counts as an offer, consumers have protection from those shopkeepers who are intent upon deceit. Almost every state has some form of **consumer protection statute,** which outlaws false advertising. For example, an automobile dealer who advertises a remarkably low price but then has only one automobile at that price has probably violated a consumer protection statute because the ad was published in bad faith, to trick consumers into coming to the dealership. In the *Mesaros* case, the United States Mint did not violate any consumer protection statute because it acted in good faith and simply ran out of coins.

You have the high bid—but you may not have the property.

Auctions

It is the property you have always dreamed of owning—and it is up for auction! You arrive bright and early, stand in front, bid early, bid often, bid higher, bid highest of all—it's yours! For five seconds. Then, to your horror, the auctioneer announces that none of the bids were juicy enough and he is withdrawing the property. Robbery! Surely he cannot do that? But he can. Auctions are exciting and useful, but you must understand the rules.

Every day, auctions are used to sell exquisite works of art, real estate, and many other things. **Placing an item up for auction is *not* an offer—it is merely a request for an offer.** The *bids* are the offers. If and when the hammer falls, the auctioneer has accepted the offer.

The important thing to know about a particular auction is whether it is conducted with or without reserve. Most auctions are *with reserve*, meaning that the items for sale have a minimum price. The law assumes that an auction is with reserve unless the auctioneer clearly states otherwise. The auctioneer will not sell anything for less than its reserve (minimum price). So when the bidding for your property failed to reach the reserve, the auctioneer was free to withdraw it.

The rules are different in an auction *without reserve*. Here, there is no minimum. Once the first bid is received, the auctioneer *must* sell the merchandise to the highest bidder.

EXAM Strategy

Question: Ahn and Chet are both unhappy. (1) Ahn, an interior designer, is working on a hotel project. In the annual catalog of a furniture wholesaler, she sees that sofa beds cost $3,000. Based on the catalog, she sends an order for 100 sofa beds to the wholesaler. The wholesaler notifies Ahn that the price has gone up to $4,000. (2) At an estate auction, held without reserve, Chet is high bidder on a rare violin. The seller considers Chet's bid too low and refuses to sell. Both Ahn and Chet sue, but only one will win. Which plaintiff will win, and why?

Strategy: (1) A contract requires an offer and an acceptance. When the furniture wholesaler sent out its catalog, did it make an offer that Ahn could accept? (2) Chet was high bidder. At some auctions, the high bidder is merely making an offer, but at others, he wins the item. Which kind of auction was this?

Result: (1) A price quote is generally not an offer. Ahn's order for 100 sofas was the offer, and the company was free to reject it. Ahn loses. (2) Most auctions are with reserve, meaning that the high bidder is merely making an offer. However, this one was without reserve. Chet gets the violin.

Problems with Definiteness

It is not enough that the offeror indicates that she intends to enter into an agreement. **The terms of the offer must also be definite.** If they are vague, then even if the offeree agrees to the deal, a court does not have enough information to enforce it and there is no contract.

You want a friend to work in your store for the holiday season. This is a definite offer: "I offer you a job as a sales clerk in the store from November 1 through December 29, 40 hours per week at $10 per hour." But suppose, by contrast, you say: "I offer you a job as a sales clerk in the store during the holiday season. We will work out a fair wage once we see how busy things get." Your friend replies, "That's fine with me." This offer is indefinite, and there is no contract. What is a fair wage? $15 per hour? Or $20 per hour? What is the "holiday season"? How will the determinations be made? There is no binding agreement.

The following case, which concerns a famous television show, presents a problem with definiteness.

Baer v. Chase

392 F.3d 609
Third Circuit Court of Appeals, 2004

Facts: David Chase was a television writer-producer with many credits, including a detective series called *The Rockford Files*. He became interested in a new program, set in New Jersey, about a "mob boss in therapy," a concept he eventually developed into *The Sopranos*. Robert Baer was a prosecutor in New Jersey who wanted to write for television. He submitted a *Rockford Files* script to Chase, who agreed to meet with Baer.

When they met, Baer pitched a different idea, concerning "a film or television series about the New Jersey Mafia." He did not realize Chase was already working on such an idea. Later that year, Chase visited New Jersey. Baer arranged meetings for Chase with local detectives and prosecutors, who provided the producer with information, material, and personal stories about their experiences with organized crime. Detective Thomas Koczur drove Chase and Baer to various New Jersey locations and introduced Chase to Tony Spirito. Spirito shared stories about loan sharking, power struggles between family members connected with the mob, and two colorful individuals known as Big Pussy and Little Pussy, both of whom later became characters on the show.

Back in Los Angeles, Chase wrote and sent to Baer a draft of the first *Sopranos* teleplay. Baer called Chase and commented on the script. The two spoke at least four times that year, and Baer sent Chase a letter about the script.

When *The Sopranos* became a hit television show, Baer sued Chase. He alleged that on three separate occasions Chase had agreed that if the program succeeded, Chase would "take care of" Baer, and would "remunerate Baer in a manner commensurate to the true value of his services." This happened twice on the phone, Baer claimed, and once during Chase's visit to New Jersey. The understanding was that if the show failed, Chase would owe nothing. Chase never paid Baer anything.

The district court dismissed the case, holding that the alleged promises were too vague to be enforced. Baer appealed.

Issue: ***Was Chase's promise definite enough to be enforced?***

Excerpts from Judge Greenberg's Decision: A contract arises from offer and acceptance, and must be sufficiently definite so that the performance to be rendered by each party can be ascertained with reasonable certainty. Therefore parties create an enforceable contract when they agree on its essential terms and manifest an intent that the terms bind them. If parties to an agreement do not agree on one or more essential terms of the purported agreement courts generally hold it to be unenforceable.

New Jersey law deems the price term, that is, the amount of compensation, an essential term of any contract.

An agreement lacking definiteness of price, however, is not unenforceable if the parties specify a practicable method by which they can determine the amount. However, in the absence of an agreement as to the manner or method of determining compensation the purported agreement is invalid. Additionally, the duration of the contract is deemed an essential term and therefore any agreement must be sufficiently definitive to allow a court to determine the agreed upon length of the contractual relationship.

Baer premises his argument on his view that New Jersey should disregard the well-established requirement of definiteness in its contract law when the subject-matter of the contract is an "idea submission." [However,] New Jersey precedent does not support Baer's attempt to carve out an exception to traditional principles of contract law for submission-of-idea cases. The New Jersey courts have not provided even the slightest indication that they intend to depart from their well-established requirement that enforceability of a contract requires definiteness with respect to the essential terms of that contract.

Nothing in the record indicates that the parties agreed on how, how much, where, or for what period Chase would compensate Baer. The parties did not discuss who would determine the "true value" of Baer's services, when the "true value" would be calculated, or what variables would go into such a calculation. There was no discussion or agreement as to the meaning of "success" of *The Sopranos*. There was no discussion how "profits" were to be defined. There was no contemplation of dates of commencement or termination of the contract. And again, nothing in Baer's or Chase's conduct, or the surrounding circumstances of the relationship, shed light on, or answers, any of these questions.

Affirmed.

Ethics Was it fair for Chase to use Baer's services without compensation? Did Baer really *expect* to get paid, or was he simply hoping that his work would land him a job?

EXAM Strategy

Question: Niels owned three adjoining parcels of land in Arizona ranging from 60 to 120 acres. Hannah wanted to buy one. The two had dinner in Chicago and then sketched this agreement: "Binding Contract: Niels agrees to sell one of his three Arizona lots to Hannah. Within 14 days, the parties will meet on the land, decide which lot Hannah is buying, and settle on a price. If they cannot agree on a price, they will decide a fair method of doing so. Both parties agree to be bound by this contract." Each signed. When they meet in Arizona, Niels refuses to sell any land, and Hannah sues. What will happen?

Strategy: Do not be fooled by wording such as "Binding Contract." Focus on the legal issues: Was there a meeting of the minds? Niels and Hannah *thought* they had a contract—but courts make an objective assessment, not subjective. Did Niels make an offer? Were the terms definite?

Result: Both parties believed they had a binding deal, and both parties were wrong. There are two primary issues—which lot is being sold and how much will it cost—and neither is specified. How are they to select a lot? What is a "fair method" of determining price? Other issues are not touched upon: When will the deal close, how will payment be made, what happens if Hannah cannot finance the purchase? The terms are too vague. The parties never reached a meeting of the minds, and Hannah will lose her suit.

The UCC and Open Terms

In the last chapter, we introduced the Uniform Commercial Code (UCC). Article 2 of the UCC governs contracts when the primary purpose is a sale of goods. Remember that goods are moveable, tangible objects. Usually, UCC provisions are not significantly different from common-law rules. But on occasion, the UCC modifies the common-law rule in some major way. In such cases, we will present a separate description of the key UCC provision. The UCC as a whole is covered in Unit 3. Depending on the class time available, some instructors prefer to discuss the UCC separately, while others like to include it in the general discussion of contracts. This book is designed to work with either approach.

We have just seen that, under the common law, the terms of an offer must be definite. But under the UCC, many indefinite contracts are allowed to stand. Throughout this unit, we witness how the Uniform Commercial Code makes the law of sales more flexible. There are several areas of contract law where imperfect negotiations may still create a binding agreement under the Code, even though the same negotiations under the common law would have yielded no contract. "Open terms" is one such area.

Yuma County Corp. produced natural gas. Yuma wanted a long-term contract to sell its gas so that it could be certain of recouping the expenses of exploration and drilling. Northwest Central Pipeline, which operated an interstate pipeline, also wanted a deal for 10 or more years so it could make its own distribution contracts, knowing it would have a steady supply of natural gas in a competitive market. But neither Yuma nor Northwest wanted to make a long-term *price* commitment, because over a period of years the price of natural gas could double—or crash. Each party wanted a binding agreement without a definitive price. If their negotiations had been governed by the common law, they would have run smack into the requirement of definiteness—no price, no contract. But because this was a sale of goods, it was governed by the UCC.

Under UCC §2-204(3), even though one or more terms are left open, a contract does not fail for indefiniteness if the parties have intended to make a contract and there is a reasonably certain basis for giving an appropriate remedy. Thus, a contract for the sale of goods may be enforced when a key term is missing. Business executives may have many reasons to leave open a delivery date, a price, or some other term. But note that the parties must still have *intended* to create a contract. The UCC will not create a contract where the parties never intended one.

In some cases, the contract will state how the missing term is to be determined. Yuma County and Northwest drafted a contract with alternative methods of determining the price. In the event that the price of natural gas was regulated by the Federal Energy Regulatory Commission (FERC), the price would be the highest allowed by the FERC. If the FERC deregulated the price (as it ultimately did), the contract price would be the average of the two highest prices paid by different gas producers in a specified geographic area.

Gap Filler Provisions

Even if a UCC contract lacks a specific method for determining missing terms, the Code itself contains **gap-filler provisions**, which are rules for *supplying* missing terms. Some of the most important gap-filler provisions of the Code follow.

Gap-filler provisions
UCC rules for supplying missing terms.

Open Price. In general, if the parties do not settle on a price, the Code establishes that the goods will be sold for a reasonable price. This will usually be the market value or a price established by a neutral expert or agency. (UCC §2-305.)

Output and Requirements Provisions. An **output contract** obligates the seller to sell all of his output to the buyer, who agrees to accept it. For example, a cotton grower might agree to sell all of his next crop to a textile firm. A **requirements contract** obligates a buyer to obtain all of his needed goods from the seller. A vineyard might agree to buy all of its wine bottles from one supplier. Output and requirements contracts are by definition

Output contract
Obligates the seller to sell all of his output to the buyer, who agrees to accept it.

Requirements contract
Obligates a buyer to obtain all of his needed goods from the seller.

incomplete, since the exact quantity of the goods is unspecified. The Code requires that in carrying out such contracts, both parties act in good faith. Neither party may suddenly demand a quantity of goods (or offer a quantity of goods) that is disproportionate to their past dealings or their reasonable estimates. (UCC §2-306.)

Termination of Offers

Once an offer has been made, it faces only two possible fates—it can be terminated or accepted. If an offer is terminated, it can never be accepted. If it is accepted, and if there are no problems with any of the five remaining elements on the Contracts Checklist, then a valid contract is created. Offers can be terminated in four ways: revocation, rejection, expiration, and by operation of law.

Termination by Revocation

An offer is **revoked** when the offeror "takes it back" before the offeree accepts. In general, the offeror may revoke the offer any time before it has been accepted. Imagine that I call you and say, "I'm going out of town this weekend. I'll sell you my ticket to this weekend's football game for $75." You tell me that you'll think it over and call me back. An hour later, my plans change. I call you a second time and say, "Sorry, but the deal's off—I'm going to the game after all." I have revoked my offer, and you can no longer accept it.

In the next case, this rule was worth $100,000 to one of the parties.

NADEL v. TOM CAT BAKERY

2009 N.Y. Misc. Lexis 5105
Supreme Court of New York, New York County, 2009

Facts: A Tom Cat Bakery delivery van struck Elizabeth Nadel as she crossed a street. Having suffered significant injuries, Nadel filed suit. Before the trial began, the attorney representing the bakery's owner offered a $100,000 settlement, which Nadel refused.

While the jury was deliberating, the bakery's lawyer again offered Nadel the $100,000 settlement. She decided to think about it during lunch. Later that day, the jury sent a note to the judge. The bakery owner told her lawyer that if the note indicated the jury had reached a verdict, that he should revoke the settlement offer.

Back in the courtroom, the bakery's lawyer said, "My understanding is that there's a note.... I was given an instruction that if the note is a verdict, my client wants to take the verdict."

Nadel's lawyer then said, "My client will take the settlement. My client will take the settlement."

The trial court judge allowed the forewoman to read the verdict, which awarded Nadel—nothing. She appealed, claiming that a $100,000 settlement had been reached.

Issue: ***Did Nadel's lawyer accept the settlement offer in time?***

Excerpts from Judge Figueroa's Decision: Plaintiff's motion to enforce "the settlement" has generated considerable debate between the parties. Plaintiff asserts that the defendant is bound to a settlement. Plaintiff's problem is that there was no "agreement" to speak of. To be sure, there was an offer from defendant. During the above-quoted colloquy, clearly there were also words of acceptance from plaintiff. But when the words, "my client will take the settlement" were uttered, it was too late for them to be effective. By that time, defense counsel had made it clear that if the jury had already come to a verdict, the offer was off the table. That condition could not be ignored, as the verdict that would mean all bets were off had already been reached. For the foregoing reasons, plaintiff's motion is denied.

Making Contracts Temporarily Irrevocable

Some offers cannot be revoked, at least for a time. Often, people and businesses need time to evaluate offers. If a car dealer offers you a green sedan for $25,000, you may want to shop around for a few days to try to find a better price. In the meantime, you may want to make sure that the green sedan is still available if you decide to return. Can you legally prevent the car dealer from selling the car to anyone else while you ponder the offer? In some circumstances, yes.

Option Contract (All types of contracts). With an option contract, an interested purchaser *buys* the right to have the offer held open. **The offeror may not revoke an offer during the option period.** Suppose you pay the car dealer $250 to hold open its offer until February 2. Later that day, the dealership notifies you that it is selling to someone else. Result? You can enforce *your* contract. The car dealer had no power to revoke because you purchased an option.

Firm Offers (UCC contracts only). Once again, the UCC has changed the law on the sale of goods. If a promise made in writing is signed by a *merchant*, and if it agrees to hold open an offer for a stated period, then an offer may not be revoked. The open period may not exceed three months. So, if the car dealer gives you a piece of paper that reads, "The offer on the green sedan is open at $25,000 until Friday at noon," he cannot revoke the offer before Friday at noon, even though you have not paid him anything. (UCC §2-205.)

Termination by Rejection

If an offeree clearly indicates that he does not want to take the offer, then he has **rejected** it. **If an offeree rejects an offer, the rejection immediately terminates the offer.** Suppose a major accounting firm telephones you and offers a job, starting at $80,000. You respond, "Nah. I'm gonna work on my surfing for a year or two." The next day, you come to your senses and write the firm, accepting its offer. No contract. Your rejection terminated the offer and ended your power to accept it.

Counteroffer. A party makes a **counteroffer** when it responds to an offer with a new and different proposal. Frederick faxes Kim, offering to sell a 50 percent interest in the Fab Hotel in New York for only $135 million. Kim faxes back and says, "That's too much, but I'll pay $115 million." Moments later, Kim's business partner convinces her that Frederick's offer was a bargain, and she faxes an acceptance of his $135 million offer. Does Kim have a binding deal? No. **A counteroffer is a rejection.** When Kim offered $115 million, she rejected Frederick's offer. Her original fax created a new offer, for $115 million, which Frederick never accepted. The parties have no contract at any price.

Termination by Expiration

An offeror may set a time limit. Quentin calls you and offers you a job in his next motion picture. He tells you, "I've got to know by tomorrow night." If you call him in three days to accept, you are out of the picture. **When an offer specifies a time limit for acceptance, that period is binding.**

If the offer specifies no time limit, the offeree has a *reasonable* period in which to accept. A reasonable period varies, depending upon the type of offer, previous dealings between the parties, and any normal trade usage or customary practices in a particular industry.

Termination by Operation of Law

In some circumstances, the law itself terminates an offer. **If an offeror dies or becomes mentally incapacitated, the offer terminates automatically and immediately.** Arnie offers you a job as an assistant in his hot-air balloon business. Before you can even accept, Arnie tumbles out of a balloon at 3,000 feet. The offer terminates along with Arnie.

Destruction of the subject matter terminates the offer. A car dealer offers to sell you a rare 1938 Bugatti for $7,500,000 if you bring cash the next day. You arrive, suitcase stuffed with cash, just in time to see Arnie drop 3,000 feet through the air and crush the Bugatti. The dealer's offer is terminated.

ACCEPTANCE

As we have seen, when there is a valid offer outstanding, it remains effective until it is terminated or accepted. An offeree accepts by saying or doing something that a reasonable person would understand to mean that he definitely wants to take the offer. Assume that Ellie offers to sell Gene her old iPod for $50. If Gene says, "I accept your offer," then he has indeed accepted, but there is no need to be so formal. He can accept the offer by saying, "It's a deal," or, "I'll take it," or any number of things. He need not even speak. If he hands her a $50 bill, he also accepts the offer.

It is worth noting that **the offeree must say or do *something* to accept.** Marge telephones Vick and leaves a message on his answering machine: "I'll pay $75 for your business law textbook from last semester. I'm desperate to get a copy, so I will assume you agree unless I hear from you by 6:00 tonight." Marge hears nothing by the deadline and assumes she has a deal. She is mistaken. Vick neither said nor did anything to indicate that he accepted.

Mirror Image Rule

If only he had known! A splendid university, an excellent position as department chair—gone. And all because of the mirror image rule.

Was it sensible to deny the professor a job over a mere 14-day difference? Sensible or not, that is the law.

Ohio State University wrote to Philip Foster offering him an appointment as a professor and chair of the art history department. His position was to begin July 1, and he had until June 2 to accept the job. On June 2, Foster telephoned the dean and left a message accepting the position, *effective July 15*. Later, Foster thought better of it and wrote the university, accepting the school's starting date of July 1. Too late! Professor Foster never did occupy that chair at Ohio State. The court held that since his acceptance varied the starting date, it was a counteroffer. And a counteroffer, as we know, is a rejection.[3]

Was it sensible to deny the professor a job over a mere 14-day difference? Sensible or not, that is the law. The common-law **mirror image rule** requires that acceptance be on *precisely* the same terms as the offer. If the acceptance contains terms that add or contradict the offer, even in minor ways, courts generally consider it a counteroffer. The rule worked reasonably well in the 19th century, when parties would write an original contract and exchange it, penciling in any changes. But now that businesses use standardized forms to purchase most goods and services, the rule creates enormous difficulties. Sellers use forms they have prepared, with all conditions stated to their advantage, and buyers employ their own forms, with terms they prefer. The forms are exchanged in the mail or electronically, with neither side clearly agreeing to the other party's terms.

Mirror image rule
Requires that acceptance be on precisely the same terms as the offer.

The problem is known as the "battle of forms." Once again, the UCC has entered the fray, attempting to provide flexibility and common sense for those contracts involving the

[3] *Foster v. Ohio State University*, 41 Ohio App. 3d 86, 534 N.E.2d 1220, 1987 Ohio App. LEXIS 10761 (Ohio Ct. App. 1987).

sale of goods. But for contracts governed by the common law, such as Professor Foster's, the mirror image rule is still the law.

UCC and the Battle of Forms

UCC §2-207 dramatically modifies the mirror image rule for the sale of goods. Under this provision, an acceptance that adds additional or different terms often will create a contract.

Additional or Different Terms

One basic principle of the common law of contracts remains unchanged: the key to creation of a contract is a valid offer that the offeree *intends* to accept. If there is no intent to accept, there is no contract. The big change brought about by UCC §2-207 is this: **an offeree who accepts may include in the acceptance terms that are additional to or different from those in the offer.** Thus, even with additional or different terms, the acceptance may well create a contract.

Example A. Wholesaler writes to Manufacturer, offering to buy "10,000 wheelbarrows at $50 per unit. Payable on delivery, 30 days from today's date." Manufacturer writes back, "We accept your offer of 10,000 wheelbarrows at $50 per unit, payable on delivery. *Interest at normal trade rates for unpaid balances.*" Manufacturer clearly intends to form a contract. The company has added a new term, but there is still a valid contract.

However, if the offeree states that her acceptance is *conditioned on the offeror's assent* to the new terms, there is no contract.

Example B. Same offer as above. Manufacturer adds the interest rate clause and states, "Our acceptance is conditional upon your agreement to this interest rate." Manufacturer has made a counteroffer. There is no contract, yet. If Wholesaler accepts the counteroffer, there is a contract; if Wholesaler does not accept it, there is no contract.

Additional terms are those that bring up *new* issues, such as interest rates, not contained in the original offer. Additional terms in the acceptance are considered proposals to add to the contract. Assuming that both parties are merchants, the additional terms *will generally become part of the contract.* Thus, in Example A, the interest rate will become a part of the binding deal. If Wholesaler is late in paying, it must pay whatever interest rate is current.

In three circumstances, the additional terms in the acceptance *do not* become part of the contract:

- If the original offer *insisted on its own terms.* In other words, if Wholesaler wrote, "I offer to buy them on the following terms and *no other terms,*" then the Manufacturer is not free to make additions.
- If the additional terms *materially alter* the original offer. Suppose Manufacturer wrote back, "We accept your offer for 10,000 wheelbarrows. Delivery will be made within 180 days, unless we notify you of late delivery." Manufacturer has changed the time from 30 days to 180 days, with a possible extension beyond that. That is a material alteration, and it will not become part of the contract. By contrast, Manufacturer's new language concerning "interest at normal trade rates" was not a material alteration, and therefore that interest rate becomes part of the contract.
- If the offeror receives the additional terms and *promptly objects* to them.

Different terms are those that contradict terms in the offer. For example, if the seller's form clearly states that no warranty is included, and the buyer's form says the seller warrants all goods for three years, the acceptance contains different terms. An acceptance may contain different terms and still create a contract. But in these cases, courts have struggled to decide what the terms of the contract are. **The majority of states hold that different**

(contradictory) terms cancel each other out. Neither term is included in the contract. Instead, the neutral terms from the Code itself are "read into" the contract. These are the gap-filler terms discussed above. If, for example, the forms had contradictory warranty clauses (as they almost always do), the different terms would cancel each other out, and the warranty clauses from the UCC would be substituted.[4]

EXAM Strategy

Question: Elaine faxes an offer to Raoul. Raoul writes, "I accept. Please note, I will charge 2 percent interest per month for any unpaid money." He signs the document and faxes it back to Elaine. Do the two have a binding contract?

Strategy: Slow down, this is trickier than it seems. Raoul has added a term to Elaine's offer. We must take two steps to decide whether there is a contract. In a contract for services, acceptance must mirror the offer, but not so in an agreement for the sale of goods.

Result: If this is an agreement for services, there is no contract. However, if this agreement is for goods, the additional term *may* become part of an enforceable contract.

Question: Assume that Elaine's offer concerns goods. Is there an agreement?

Strategy: Under UCC §2-207, an additional term will become part of a binding agreement for goods except in three instances. What are the three exceptions?

Result: Raoul's extra term will be incorporated in a binding contract unless (1) Elaine's offer made clear she would accept no other terms; (2) Raoul's interest rate is a material alteration of the offer (almost never the case for interest rates); or (3) Elaine promptly rejects the interest rate.

Clickwraps And Shrinkwraps

You want to purchase Attila brand software and download it to your computer. You type in your credit card number and other information, agreeing to pay $99. Attila also requires that you "read and agree to" all of the company's terms. You click "I agree," without having read one word of the terms. Three frustrating weeks later, tired of trying to operate defective Attilaware, you demand a refund and threaten to sue. The company replies that you are barred from suing because the terms you agreed to included an arbitration clause. To resolve any disputes, you must travel to Attila's hometown, halfway across the nation, use an arbitrator that the company chooses, pay one-half the arbitrator's fee, and also pay Attila's legal bills if you should lose. The agreement makes it financially impossible for you to get your money back. Is that contract enforceable?

You have entered into a "clickwrap" agreement. Similar agreements, called "shrinkwraps," are packaged inside many electronic products. A shrinkwrap notice might require that before inserting a purchased CD into your computer, you must read and agree to all terms in the brochure. Clickwraps and shrinkwraps often include arbitration clauses. They

[4]Not all states follow this rule, however. Some courts have held that when the acceptance contains terms that contradict those in the offer, the language in the offer should be final. A few courts have ruled that the terms in the acceptance should control.

frequently limit the seller's liability if anything goes wrong, saying that the manufacturer's maximum responsibility is to refund the purchase price (even if the software destroys your hard drive).

Many courts that have analyzed these issues have ruled that clickwrap and shrinkwrap agreements are indeed binding, even against consumers. The courts have emphasized that sellers are entitled to offer a product on any terms they wish, and that shrinkwrap and clickwrap are the most efficient methods of including complicated terms in a small space. Think before you click![5]

However, some courts have *refused* to enforce such contracts against a consumer, stating that the buyer never understood or agreed to the shrinkwrapped terms. The court in the following case works hard to balance the competing interests, and in the process demonstrates that this new area of law is very much in flux.

SPECHT V. NETSCAPE COMMUNICATIONS CORPORATION

306 F.3d 17
Second Circuit Court of Appeals, 2002

Facts: A group of plaintiffs sued Netscape, claiming that two of the company's products illegally captured private information about files that they downloaded from the Internet. The plaintiffs alleged that this was electronic eavesdropping, in violation of two federal statutes.

From Netscape's Web page, the plaintiffs had downloaded SmartDownload, a software plug-in that enabled them to download the company's Communicator software. The Web page advertised the benefits of SmartDownload, and near the bottom of the screen was a tinted button labeled "Download." The plaintiffs clicked to download. If, instead of downloading, they had scrolled further down, they would have seen an invitation to "review and agree to the terms of the Netscape SmartDownload software license agreement." By clicking the appropriate button, they would have been sent to a series of linked pages, and finally arrived at a license agreement. Among the terms was an agreement to arbitrate any dispute. In other words, a consumer downloading SmartDownload was in theory giving up the right to file suit if anything went wrong, and agreeing to settle the dispute by arbitration. However, the plaintiffs never reviewed the license terms.

In the district court, Netscape moved to dismiss the case and compel arbitration. Netscape claimed that the plaintiffs had forfeited any right to sue based on the license agreement. The district court denied the company's motion, ruling that the plaintiffs had not agreed to the terms of the license. Netscape appealed.

Issue: ***Had the plaintiffs agreed to arbitrate their claims?***

Excerpts from Judge Sotomayor's Decision: Defendants argue that plaintiffs must be held to a standard of reasonable prudence and that, because notice of the existence of SmartDownload license terms was on the next scrollable screen, plaintiffs were on "inquiry notice" of those terms. We disagree with the proposition that a reasonably prudent offeree in plaintiffs' position would necessarily have known or learned of the existence of the SmartDownload license agreement prior to acting, so that plaintiffs may be held to have assented to that agreement with constructive notice of its terms.

Receipt of a physical document containing contract terms or notice thereof is frequently deemed, in the world of paper transactions, a sufficient circumstance to place the offeree on inquiry notice of those terms. These principles apply equally to the emergent world of online product delivery, pop-up screens, hyperlinked pages, clickwrap licensing, scrollable documents, and urgent admonitions

---

[5] *ProCD, Inc. v. Zeidenberg,* 86 F.3d 1447 (7th Cir. 1996), is the leading case to enforce shrinkwrap agreements (and, by extension, clickwraps). *Klocek v. Gateway*, 104 F. Supp. 1332 (D. Kan. 2000), is one of the few cases to reject such contracts. *Klocek*, however, was dismissed for failure to reach the federal court $75,000 jurisdictional level.

to "Download Now!" What plaintiffs saw when they were being invited by defendants to download this fast, free plug-in called SmartDownload was a screen containing praise for the product and, at the very bottom of the screen, a "Download" button. Defendants argue that a fair and prudent person using ordinary care would have been on inquiry notice of SmartDownload's license terms.

We are not persuaded that a reasonably prudent offeree in these circumstances would have known of the existence of license terms. Plaintiffs were responding to an offer that did not carry an immediately visible notice of the existence of license terms or require unambiguous manifestation of assent to those terms. Thus, plaintiffs' apparent manifestation of consent was to terms contained in a document whose contractual nature was not obvious. Moreover, the fact that, given the position of the scroll bar on their computer screens, plaintiffs may have been aware that an unexplored portion of the Netscape Web page remained below the download button does not mean that they reasonably should have concluded that this portion contained a notice of license terms.

We conclude that in circumstances such as these, where consumers are urged to download free software at the immediate click of a button, a reference to the existence of license terms on a submerged screen is not sufficient to place consumers on inquiry or constructive notice of those terms. There is no reason to assume that viewers will scroll down to subsequent screens simply because screens are there.

For the foregoing reasons, we affirm the district court's denial of defendants' motion to compel arbitration and to stay court proceedings.

The plaintiffs in *Specht* won because they knew nothing about the arbitration clause and were unlikely to discover it on the company's website. Notice what happens when a user *does* know about terms posted online. Register.com was a registrar of Internet domain names, meaning that it issued domain names to people and companies establishing a new website. The company was legally obligated to make available to the public, for free, the names and contact information of its customers. Register was also in the business of assisting owners, for a fee, to develop their websites.

Verio, Inc. competed in the site development business. Verio's automated software program (robot) would search Register.com daily, seeking information about new sites. *After* Verio obtained contact information, a notice would appear on the Register site, stating:

> By submitting a query, you agree that under no circumstances will you use this data to support the transmission of mass unsolicited, commercial advertising or solicitation via email.

In fact, though, Verio used the contact information for exactly that purpose, sending mass emailings to owners of new websites, soliciting their development business. Register sued. Verio defended by stating it was not bound by the notice because the notice did not appear until after it had obtained the information. Verio argued that when it sent the queries, it was unaware of any restrictions on use of the data. The court was unpersuaded, and explained its reasoning with a simple but telling metaphor:

> The situation might be compared to one in which plaintiff P maintains a roadside fruit stand displaying bins of apples. A visitor, defendant D, takes an apple and bites into it. As D turns to leave, D sees a sign, visible only as one turns to exit, which says "Apples—50 cents apiece." D does not pay for the apple. D believes he has no obligation to pay because he had no notice when he bit into the apple that 50 cents was expected in return. D's view is that he never agreed to pay for the apple. Thereafter, each day, several times a day, D revisits the stand, takes an apple, and eats it. D never leaves money.
>
> P sues D in contract for the price of the apples taken. D defends on the ground that on no occasion did he see P's price notice until after he had bitten into the apples. D may well prevail as to the first apple taken. D had no reason to understand upon taking it that P was demanding the payment. In our view, however, D cannot continue on a daily basis to take apples for free, knowing full well that P is offering them only in exchange for 50 cents in compensation, merely because the sign demanding payment is so placed that on each occasion D does not see it until he has bitten into the apple.

Register.com won its case. Verio was prohibited from using the contact information for mass emailings because it had actual knowledge of the restrictions placed on its use.[6]

Communication of Acceptance

The offeree must communicate his acceptance for it to be effective. The questions that typically arise concern the method, the manner, and the time of acceptance.

Method and Manner of Acceptance

The term "method" refers to whether acceptance is done in person or by mail, telephone, email, or fax. The term "manner" refers to whether the offeree accepts by promising, by making a down payment, by performing, and so forth. **If an offer demands acceptance in a particular method or manner, the offeree must follow those requirements.** An offer might specify that it be accepted in writing, or in person, or before midnight on June 23. An offeror can set any requirements she wishes. Omri might say to Oliver, "I'll sell you my bike for $200. You must accept my offer by standing on a chair in the lunchroom tomorrow and reciting a poem about a cow." Oliver can only accept the offer in the exact manner specified if he wants to form a contract.

If the offer does not specify a type of acceptance, the offeree may accept in any reasonable manner and method. An offer generally may be accepted by performance or by a promise, unless it specifies a particular method. The same freedom applies to the method. If Masako faxes Eric an offer to sell 1,000 acres in Montana for $800,000, Eric may accept by mail or fax. Both are routinely used in real estate transactions, and either is reasonable.

© Stocklite/Shutterstock.com

If the offer does not specify a type of acceptance, the offeree may accept in any reasonable manner and medium.

Time of Acceptance: The Mailbox Rule

An acceptance is generally effective upon dispatch, meaning the moment it is out of the offeree's control. Terminations, on the other hand, are effective when received. When Masako faxes her offer to sell land to Eric, and he mails his acceptance, the contract is binding the moment he puts the letter into the mail. In most cases, this **mailbox rule** is just a detail. But it becomes important when the offeror revokes her offer at about the same time the offeree accepts. Who wins? Suppose Masako's offer has one twist:

Mailbox rule
Acceptance is generally effective upon dispatch. Terminations are effective when received.

- On Monday morning, Masako faxes her offer to Eric.
- On Monday afternoon, Eric writes, "I accept" on the fax, and Masako mails a revocation of her offer.
- On Tuesday morning, Eric mails his acceptance.
- On Thursday morning, Masako's revocation arrives at Eric's office.
- On Friday morning, Eric's acceptance arrives at Masako's office.

[6]*Register.Com v. Verio, Inc.*, 353 F.3d 393 (2d Cir. 2004).

Outcome? Eric has an enforceable contract. Masako's offer was effective when it reached Eric. His acceptance was effective on Tuesday morning, when he mailed it. Nothing that happens later can "undo" the contract.

Soldau v. Organon, Inc.

860 F.2d 355, 1988 U.S. App. LEXIS 14757
United States Court of Appeals for the Ninth Circuit, 1988

Facts: Organon fired John Soldau. Then the company sent to him a letter offering to pay him double the normal severance pay, provided Soldau would sign a full release, that is, a document giving up any and all claims he might have against Organon. The release was included with the letter. Soldau signed it, dated it, and took it to the nearest post office, where he deposited it in the mailbox. When he returned home, Soldau discovered in the mail a check from Organon for the double severance pay. He hustled back to the post office, where he persuaded a postal clerk to open the mailbox and retrieve the release he had posted. He then cashed Organon's check and finally filed a suit against the company, alleging that his firing was age discrimination.

The federal district court gave summary judgment for Organon, ruling that Soldau's acceptance of the proposed release was effective when he mailed it, creating a contract. He appealed.

Issue: ***Did Soldau create a contract by mailing the release?***

Excerpts from the *Per Curiam* Decision: The district court was clearly correct under California law. Soldau does not argue to the contrary. Instead, he contends that the formation and validity of the release are governed by federal law, and would not have been effective unless and until it had been received by Organon. We need not decide which body of law controls. Under federal as well as California law, Soldau's acceptance was effective when it was mailed.

The so-called mailbox or effective when mailed rule was adopted and followed as federal common law by the Supreme Court [at the beginning of the 20th century]. We could not change the rule, and there is no reason to believe the Supreme Court would be inclined to do so. It is almost universally accepted in the common law world. It is enshrined in the Restatement (Second) of Contracts and endorsed by the major contract treatises.

Commentators are also virtually unanimous in [supporting the "effective upon dispatch" rule,] pointing to the long history of the rule; its importance in creating certainty for contracting parties; its essential soundness, on balance, as a means of allocating the risk during the period between the making of the offer and the communication of the acceptance or rejection to the offeror; and the inadequacy of the rationale offered by the Court of Claims for the change.

Since Soldau's contractual obligation to release Organon in return for Organon's obligation to make the enhanced severance payment arose when Soldau deposited his acceptance in the post office mailbox, his subsequent withdrawal of the acceptance was ineffectual.

Affirmed.

Chapter Conclusion

The law of offer and acceptance can be complex. Yet for all its faults, the law is not the principal source of dispute between parties unhappy with negotiations. Most litigation concerning offer and acceptance comes from *lack of clarity* on the part of the people negotiating. The many examples discussed are all understandable given the speed and fluidity of the real world of business. But the executive who insists on clarity is likelier in the long run to spend more time doing business and less time in court.

Exam Review

1. **MEETING OF THE MINDS** The parties can form a contract only if they have a meeting of the minds, which requires that they understand each other and show that they intend to reach an agreement. (p. 252)

EXAM Strategy

Question: Norv owned a Ford dealership and wanted to expand by obtaining a BMW outlet. He spoke with Jackson and other BMW executives on several occasions. Norv now claims that those discussions resulted in an oral contract that requires BMW to grant him a franchise, but the company disagrees. Norv's strongest evidence of a contract is the fact that Jackson gave him forms on which to order BMWs. Jackson answered that it was his standard practice to give such forms to prospective dealers, so that if the franchise were approved, car orders could be processed quickly. Norv states that he was "shocked" when BMW refused to go through with the deal. Is there a contract?

Strategy: A court makes an *objective* assessment of what the parties did and said to determine whether they had a meeting of the minds and intended to form a contract. Norv's "shock" is irrelevant. Do the order forms indicate a meeting of the minds? Was there additional evidence that the parties had reached an agreement? (See the "Result" at the end of this section.)

2. **OFFER** An offer is an act or statement that proposes definite terms and permits the other party to create a contract by accepting those terms. (p. 253)

3. **OTHER STATEMENTS** Invitations to bargain, price quotes, letters of intent, and advertisements are generally not offers. However, an ad in which a company proposes to take a specific action when a customer takes a specific action can amount to an offer. And letters of intent that indicate the parties intended to be bound can also count as offers. (pp. 253–255)

EXAM Strategy

Question: "Huge selection of Guernsey sweaters," reads a newspaper ad from Stuffed Shirt, a clothing retailer. "Regularly $135, today only $65." Waldo arrives at Stuffed Shirt at 4:00 that afternoon, but the shop clerk says there are no more sweaters. He shows Waldo a newly arrived Shetland sweater that sells for $145. Waldo sues, claiming breach of contract and violation of a consumer protection statute. Who will prevail?

(a) Waldo will win the breach of contract suit and the consumer protection suit.

(b) Waldo will lose the breach of contract suit but might win the consumer protection suit.

(c) Waldo will lose the consumer protection suit but should win the breach of contract suit.

(d) Waldo will win the consumer protection suit only if he wins the contract case.

(e) Waldo will lose both the breach of contract suit and the consumer protection suit.

Strategy: Waldo assumes that he is accepting the store's offer. But did Stuffed Shirt make an offer? If not, there cannot be a contract. Does the consumer protection statute help him? (See the "Result" at the end of this section.)

4. **DEFINITENESS** The terms of the offer must be definite, although under the UCC the parties may create a contract that has open terms. (pp. 257–258)

5. **TERMINATION** An offer may be terminated by revocation, rejection, expiration, or operation of law. (pp. 260–262)

EXAM Strategy

Question: Rick is selling his Espresso Coffee Maker. He sends Tamara an email, offering to sell the machine for $350. Tamara promptly emails back, offering to buy the item for $300. She hears nothing from Rick, so an hour later Tamara stops by his apartment, where she learns that he just sold the machine to his roommate for $250. She sues Rick. Outcome?

(a) Tamara will win because her offer was higher than the roommate's.

(b) Tamara will win because Rick never responded to her offer.

(c) Tamara will win because both parties made clear offers, in writing.

(d) Tamara will lose because she rejected Rick's offer.

(e) Tamara will lose because her offer was not definite.

Strategy: A valid contract requires a definite offer and acceptance. Rick made a valid offer. When Tamara said she would buy the machine for a lower amount, was that acceptance? If not, what was it? (See the "Result" at the end of this section.)

6. **MIRROR IMAGE RULE AND UCC §2-207** The common-law mirror image rule requires acceptance on precisely the same terms as the offer. Under the UCC, an offeree may often create a contract even when the acceptance includes terms that are additional to or different from those in the offer. (pp. 262–264)

7. **CLICKWRAPS** Clickwrap and shrinkwrap agreements are generally enforceable. (pp. 264–267)

8. **MANNER OF ACCEPTANCE** If an offer demands acceptance in a particular method or manner, the offeree must follow those requirements. If the offer does not specify a type of acceptance, the offeree may accept in any reasonable manner and medium. (p. 267)

9. MAILBOX RULE An acceptance is generally effective upon dispatch, meaning from the moment it is out of the offeree's control. Terminations usually are not effective until received. (pp. 267–268)

1. Result: The order forms are neither an offer nor an acceptance. Norv has offered no evidence that the parties agreed on price, date of performance, or any other key terms. There is no contract. Norv allowed eagerness and optimism to replace common sense.[7]

3. Result: An advertisement is usually not an offer, but merely a solicitation of one. It is Waldo who is making the offer, which the store may reject. Waldo loses his contract case, but he may win under the consumer protection statute. The correct answer is B. If Stuffed Shirt proclaimed "Huge selection" when there were only five sweaters, the store was deliberately misleading consumers, and Waldo wins. However, if there was indeed a large selection, and Waldo arrived too late, he is out of luck.

5. Result: Tamara made a counteroffer of $300. A counteroffer is a rejection. Tamara rejected Rick's offer and simultaneously offered to buy the coffee maker at a lower price. Rick was under no obligation to sell to Tamara at any price. He will win Tamara's suit.

MULTIPLE-CHOICE QUESTIONS

1. Rebecca, in Honolulu, faxes a job offer to Spike, in Pittsburgh, saying, "We can pay you $55,000 per year, starting June 1." Spike faxes a reply, saying, "Thank you! I accept your generous offer, though I will also need $3,000 in relocation money. See you June 1. Can't wait!" On June 1, Spike arrives, to find that his position is filled by Gus. He sues Rebecca.

(a) Spike wins $55,000.
(b) Spike wins $58,000.
(c) Spike wins $3,000.
(d) Spike wins restitution.
(e) Spike wins nothing.

2. Arturo hires Kate to work in his new sporting goods store. "Look," he explains, "I can only pay you $9.00 an hour. But if business is good a year from now, and you're still here, I'm sure I can pay you a healthy bonus." Four months later, Arturo terminates Kate. She sues.

(a) Kate will win her job back, plus the year's pay and the bonus.
(b) Kate will win the year's pay and the bonus.
(c) Kate will win only the bonus.
(d) Kate will win only her job back.
(e) Kate will win nothing.

[7]Based on *Arnold Pontiac-GMC, Inc. v. General Motors Co.*, 786 F.2d 564 (3d Cir. 1986).

3. Manny offers to sell Gina his TV for $100 on January 1. On January 2, Gina writes out a letter of acceptance. On January 3, Gina drops the letter in a mailbox. On January 4, a postal worker gets the letter out of the mailbox and takes it to the post office. On January 5, the letter arrives in Manny's mailbox. When (if ever) was a contract formed?

(a) January 2
(b) January 3
(c) January 4
(d) January 5
(e) None of the above—a contract has not been formed.

4. Frank, an accountant, says to Missy, "I'll sell you my laptop for $100." Missy asks, "Will you give me until tomorrow to make up my mind?" "Sure," Frank replies. Which of the following is true?

(a) Frank cannot revoke his offer, no matter what.
(b) Frank cannot revoke his offer, but only if Missy pays him to keep the offer open until tomorrow.
(c) Frank can revoke his offer no matter what, because he is not a merchant.
(d) Frank can revoke his offer no matter what, because he did not promise Missy anything in writing.

5. Which of the following amounts to an offer?

(a) Ed says to Carmen, "I offer to sell you my pen for $1."
(b) Ed says to Carmen, "I'll sell you my pen for $1."
(c) Ed writes, "I'll sell you my pen for $1," and gives the note to Carmen.
(d) All of the above.
(e) A and C only.

Essay Questions

1. The town of Sanford, Maine, decided to auction off a lot it owned. The town advertised that it would accept bids through the mail, up to a specified date. Arthur and Arline Chevalier mailed in a bid that turned out to be the highest. When the town refused to sell them the lot, they sued. Result?

2. The Tufte family leased a 260-acre farm from the Travelers Insurance Co. Toward the end of the lease, Travelers mailed the Tuftes an option to renew the lease. The option arrived at the Tuftes' house on March 30, and gave them until April 14 to accept. On April 13, the Tuftes signed and mailed their acceptance, which Travelers received on April 19. Travelers claimed there was no lease and attempted to evict the Tuftes from the farm. May they stay?

3. Consolidated Edison Co. of New York (Con Ed) sought bids from General Electric Co. (GE) and others to supply it with two huge transformers. Con Ed required that the bids be held open for 90 days. GE submitted a written bid and included a clause

holding the bid open for 90 days. During that period, Con Ed accepted GE's bid, but GE refused to honor it. Is there a contract?

4. The Dukes leased land from Lillian Whatley. Toward the end of their lease, they sent Ms. Whatley a new contract, renewing the lease for three years and giving themselves the option to buy the land at any time during the lease for $50,000. Ms. Whatley crossed out the clause giving them an option to buy. She added a sentence at the bottom, saying, "Should I, Lillian Whatley, decide to sell at end [sic] of three years, I will give the Dukes the first chance to buy." Then she signed the lease, which the Dukes accepted in the changed form. They continued to pay the rent until Ms. Whatley sold the land to another couple for $35,000. The Dukes sued. Are the Dukes entitled to the land at $50,000? At $35,000?

5. ***YOU BE THE JUDGE* WRITING PROBLEM** Academy Chicago Publishers (Academy) approached the widow of author John Cheever about printing some of his unpublished stories. She signed a contract, which stated:

   The Author will deliver to the Publisher on a mutually agreeable date one copy of the manuscript of the Work as finally arranged by the editor and satisfactory to the Publisher in form and content.... Within a reasonable time and a mutually agreeable date after delivery of the final revised manuscript, the Publisher will publish the Work at its own expense, in such style and manner and at such price as it deems best, and will keep the Work in print as long as it deems it expedient.

   Within a year, Academy had located and delivered to Mrs. Cheever more than 60 unpublished stories. But she refused to go ahead with the project. Academy sued for the right to publish the book. The trial court ruled that the agreement was valid; the appeals court affirmed; and the case went to the Illinois Supreme Court. Was Academy's offer valid, and was the contract enforceable? **Argument for Mrs. Cheever:** The agreement is too vague to be enforceable. None of the essential terms are specified: the number of stories, their length, who selects them, the date of publication, the size or cost of the book, or anything else. There is no contract. **Argument for Academy:** Mrs. Cheever wanted to publish this book and agreed in writing to help Academy do so. Both parties understood the essential nature of the book and were willing to permit some flexibility, to ensure a good edition. She has no right to back out now.

Discussion Questions

1. Advertisements usually do not amount to offers. Is this fair? Should businesses have legal obligations to sell items at an advertised price?

2. Most auctions are held "with reserve." If you place the highest bid at such an auction, and if your bid is below the reserve, then you do not get the item. Is this fair? Should the law award you the item at the price you bid?

3. Someone offers to sell you a concert ticket for $50, and you reply, "I'll give you $40," The seller refuses to sell at the lower price, and you say, "OK, OK, I'll pay you $50." Clearly, no contract has been formed, because you made a counteroffer. If the seller has changed her mind and no longer wants to sell for

$50, she doesn't have to. But is this fair? If it is all part of the same conversation, should you be able to accept the $50 offer and get the ticket?

4. If you click an "I agree" box, odds are that its terms are binding on you, even if the box contains dozens or even hundreds of lines of dense text. Is this fair? Should the law change to limit the enforceability of clickwraps?

5. Courts stick to objective (reasonable person) standards when evaluating offers and acceptances. Juries are not asked to "get inside someone's head," they are instructed to determine what a reasonable person would think of offerors' and offereees' statements. Is this practice reasonable? Would it be better if the law directly considered whether people *wanted* to make contracts?

CHAPTER 12

CONSIDERATION

© picsbyst/Shutterstock.com

Have you ever rented a movie that you did not want every one of your friends to know about? Cathryn Harris did. Imagine her shock when she rented a movie online from Blockbuster, only to find out that this news was automatically transmitted to her Facebook page and then broadcast to all her "friends." Just think how bad that could be.

Harris sued Blockbuster for this violation of her privacy, only to find out she had clicked away her right to sue. To rent the movie, she had had to click that little box saying she agreed to all the terms and conditions. And one of those terms and conditions was an agreement to arbitrate, not litigate. Can Blockbuster get away with this?

It turns out that this movie has a happy ending. The court ruled that the contract between Harris and Blockbuster was unenforceable because there was no *consideration*.

To rent the movie, she had to click that little box saying she agreed to all the terms and conditions.

Consideration is our next step on the road to understanding contracts. In the last chapter, we learned what it takes to create an agreement. But an agreement is not necessarily a legally enforceable contract.

This is the first of four chapters that will examine problems that can prevent an agreement from becoming a contract. A lack of consideration is one of them. Without it, a promise is "just a promise" and nothing more.

WHAT IS CONSIDERATION?

Contracts Checklist

- [ ] Offer
- [ ] Acceptance
- [x] Consideration
- [ ] Legality
- [ ] Capacity
- [ ] Consent
- [ ] Writing

The central idea of consideration is simple: contracts must be a two-way street. If one side gets all the benefit and the other side gets nothing, then an agreement lacks consideration and is not an enforceable contract.

There are three rules of consideration:

1. Both parties must get something of *measureable value* from the contract. That thing can be money, boots, an agreement not to sue, or anything else that has real value.
2. A *promise* to give something of value counts as consideration. A *promise* to mow someone's lawn next week is the equivalent of actually *doing* the yardwork when evaluating whether consideration exists.
3. The two parties must have *bargained for* whatever was exchanged and struck a deal: "If you do this, I'll do that." If you just decide to deliver a cake to your neighbor's house without her knowing, that may be something of value, but since you two did not bargain for it, there is no contract and she does not owe you the price of the cake.

Let's take an example: Sally's Shoe Store and Baker Boots agree that she will pay $20,000 for 100 pairs of boots. They both get something of value—Sally gets the boots, Baker gets the money. A contract is formed when the promises are made because a promise to give something of value counts. The two have bargained for this deal, so there is valid consideration.

Now for an example where there is no consideration. Marvin works at Sally's. At 9 a.m., he is in a good mood and promises to buy his coworker a Starbucks during the lunch hour. The delighted coworker agrees. Later that morning, the coworker is rude to Marvin, who then changes his mind about buying the coffee. He is free to do so. His promise created a one-way street: the coworker stood to receive all the benefit of the agreement, while Marvin got nothing. Because Marvin received no value, there is no contract.

What Is Value?

As we have seen, an essential part of consideration is that both parties must get something of value. That item of value can be either an "act" or a "forbearance."

Act

Act
Any action that a party was not legally required to take in the first place.

A party commits an **act** when she does something she was not legally required to do in the first place. She might do a job, deliver an item, or pay money, for example. An act does not count if the party was simply complying with the law or fulfilling her obligations under an existing contract. Thus, for example, suppose that your professor tells the university that she will not post final grades unless she is paid an extra $5,000. Even if the university agrees to this outrageous demand, that agreement is not a valid contract because the professor is already under an obligation to post final grades.

Forbearance

Forbearance
Refraining from doing something that one has a legal right to do.

A **forbearance** is, in essence, the opposite of an act. A plaintiff forbears if he agrees *not* to do something he had a legal right to do. An entrepreneur might promise a competitor not to open a competing business, or an elderly driver (with a valid driver's license) might promise concerned family members that he will not drive at night.

Let's apply these ideas to the most famous of all consideration lawsuits. Our story begins in 1869, when a well-meaning uncle makes a promise to his nephew. Ever since *Hamer v. Sidway* appeared, generations of American law students have dutifully inhaled the facts and sworn by its wisdom; now you, too, may drink it in.

Landmark Case

Hamer v. Sidway

124 N.Y. 538, 27 N.E. 256, 1891 N.Y. LEXIS 1396
New York Court of Appeals, 1891

Facts: This is a story with two Stories. William Story wanted his nephew to grow up healthy and prosperous. In 1869, he promised the 15-year-old boy (who was also named William Story) $5,000 if the lad would refrain from drinking liquor, using tobacco, swearing, and playing cards or billiards for money until his twenty-first birthday. (In that wild era—can you believe it?—the nephew had a legal right to do all those things.) The nephew agreed and, what is more, he kept his word. When he reached his twenty-first birthday, the nephew notified his uncle that he had honored the agreement. The uncle congratulated the young man and promised to give him the money, but said he would wait a few more years before handing over the cash, until the nephew was mature enough to handle such a large sum. The uncle died in 1887 without having paid, and his estate refused to honor the promise. Because the nephew had transferred his rights in the money, it was a man named Hamer who eventually sought to collect from the uncle's estate. The estate argued that since the nephew had given no consideration for the uncle's promise, there was no enforceable contract. The trial court found for the plaintiff, and the uncle's estate appealed.

Issue: ***Did the nephew give consideration for the uncle's promise?***

Excerpts from Justice Parker's Decision: The defendant contends that the contract was without consideration to support it, and therefore invalid. He asserts that the promisee, by refraining from the use of liquor and tobacco, was not harmed, but benefited; that that which he did was best for him to do, independently of his uncle's promise, and insists that it follows that, unless the promisor was benefited, the contract was without consideration, a contention which, if well founded, would seem to leave open for controversy in many cases whether that which the promisee did or omitted to do was in fact of such benefit to him as to leave no consideration to support the enforcement of the promisor's agreement. Such a rule could not be tolerated, and is without foundation in the law. Courts will not ask whether the thing which forms the consideration does in fact benefit the promisee or a third party, or is of any substantial value to anyone. It is enough that something is promised, done, forborne, or suffered by the party to whom the promise is made as consideration for the promise made to him.

Now applying this rule to the facts before us, the promisee used tobacco, occasionally drank liquor, and he had a legal right to do so. That right he abandoned for a period of years upon the strength of the promise of the testator [that is, the uncle] that for such forbearance he would give him $5,000. We need not speculate on the effort which may have been required to give up the use of those stimulants. It is sufficient that he restricted his lawful freedom of action within certain prescribed limits upon the faith of his uncle's agreement, and now, having fully performed the conditions imposed, it is of no moment whether such performance actually proved a benefit to the promisor, and the court will not inquire into it.

The issue of value in a contract is an important one, so let's look at another case. In the movies, when a character wants to get serious about keeping a promise—*really* serious—he sometimes signs an agreement in blood. As it turns out, this kind of thing actually happens

in real life. In the following case, did the promise of forbearance have value? Did a contract signed in blood count? You be the judge.

You be the Judge

Kim v. Son

2009 Cal. App. LEXIS 2011
Court of Appeal of California, 2009

Facts: Stephen Son was a part owner and operator of two corporations. Because the businesses were corporations, Son was not personally liable for the debts of either one.

Jinsoo Kim invested a total of about $170,000 in the companies. Eventually, both of them failed, and Kim lost his investment. Son felt guilty over Kim's losses.

Later, Son and Kim met in a sushi restaurant and drank heroic quantities of alcohol. At one point, Son pricked his finger with a safety pin and wrote the following in his own blood: "Sir, please forgive me. Because of my deeds, you have suffered financially. I will repay you to the best of my ability." In return, Kim agreed not to sue him for the money owed.

Son later refused to honor the bloody document and pay Kim the money. Kim filed suit to enforce their contract.

The judge determined that the promise did not create a contract because there had been no consideration.

You Be The Judge: ***Was there consideration?***

Argument for Kim: As a part of the deal made at the sushi restaurant, Kim agreed not to sue Son. What could be more of a forbearance than that? Kim had a right to sue at any time, and he gave the right up. Even if Kim was unlikely to win, Son would still prefer not to be sued.

Besides, the fact that Son signed the agreement in blood indicates how seriously he took the obligation to repay his loyal investor. At a minimum, Son eased his guilty conscience by making the agreement, and surely that is worth something.

Argument for Son: Who among you has not at one point or another become intoxicated, experienced emotions more powerful than usual, and regretted them the next morning? Whether calling an ex-girlfriend and professing endless love or writing out an agreement in your own blood, it is all the same.

A promise not to file a meritless lawsuit has no value at all. It did not matter to Son whether or not Kim filed suit because Kim could not possibly win. If this promise counts as value, then the concept of consideration is meaningless because anyone can promise not to sue anytime. Son had no obligation to pay Kim. And the bloody napkin does not change that fact because it was made without consideration of any kind. It is an ordinary promise, not a contract that creates any legal obligation.

Adequacy of Consideration

Gold can make people crazy. At the turn of the 20th century, John Tuppela joined the gold rush to Alaska. He bought a mine and worked it hard, a disciplined man in an unforgiving enterprise. Sadly, his prospecting proved futile and mental problems overwhelmed him. In 1914, a court declared him insane and locked him in an institution in Portland, Oregon. Four years later, Tuppela emerged and learned to his ecstasy that gold had been discovered in his mine, now valued at over half a million dollars. Then the bad news hit: a court-appointed guardian had sold the mine for pennies while Tuppela was institutionalized. Destitute and forlorn, Tuppela turned to his lifelong friend, Embola, saying, "If you will give me $50 so I can go to Alaska and get my property back, I will pay you $10,000 when I win my property." Embola accepted the offer, advancing the $50.

After a long and bitter fight, Tuppela won back his mine, though a guardian would still supervise his assets. Tuppela asked the guardian to pay the full $10,000 to Embola, but the

guardian refused. Embola sued, and the issue was whether his $50 was *adequate consideration* to support Tuppela's promise of $10,000. A happy ending: Embola won and recovered his money.

Courts seldom inquire into the *adequacy* of consideration. Although the difference between Embola's $50 and Tuppela's $10,000 was huge, it was not for a court to decide whether the parties had made an intelligent bargain. Embola undertook a risk, and his $50 was valid consideration. The question of adequacy is for the parties as they bargain, not for the courts.

Law professors often call this the "peppercorn rule," a reference to a Civil War–era case in which a judge mused, "What is a valuable consideration? A peppercorn."[1] Even the tiniest benefit to a plaintiff counts, so long as it has a measureable value.

REUTERS/Mario Anzuoni

How does the peppercorn rule apply in this situation?

EXAM Strategy

Question: 50 Cent has been rapping all day, and he is very thirsty. He pulls his Ferrari into the parking lot of a convenience store. The store turns out to be closed, but luckily for him, a PepsiCo machine sits outside. While walking over to it, he realizes that he has left his wallet at home. Frustrated, he whistles to a 10-year-old kid who is walking by. "Hey kid!" he shouts. "I need to borrow fifty cents!" "I know you are!" the kid replies. Fiddy tries again. "No, no, I need to *borrow* fifty cents!" The kid walks over. "Well, I'm not going to just give you my last fifty cents. But maybe you can sell me something." 50 Cent cannot believe it, but he really is very thirsty. He takes off a Rolex, which is his least expensive bling. "How about this?" "Deal," the kid says, handing over two quarters. Is the kid entitled to keep the watch?

Strategy: Even in extreme cases, courts rarely take an interest in *how much* consideration is given, or whether everyone got a "good deal." Even though the Rolex is worth thousands of times more than the quarters, the quarters still count under the peppercorn rule.

Result: After this transaction, 50 Cent may have second thoughts, but they will be too late. The kid committed an act by handing over his money—he was under no legal obligation to do so. And 50 Cent received something of small but measureable value. So there is consideration to support this deal, and 50 Cent would not get his watch back.

[1] *Hobbs v. Duff*, 23 Cal. 596 (1863).

Illusory Promises

Annabel calls Jim and says, "I'll sell you my bicycle for 325 bucks. Interested?" Jim says, "I'll look at it tonight in the bike rack. If I like what I see, I'll pay you in the morning." At sunrise, Jim shows up with the $325, but Annabel refuses to sell. Can Jim enforce their deal? No. He said he would buy the bicycle *if he liked it,* keeping for himself the power to get out of the agreement for any reason at all. He is not *committing* himself to do anything, and the law considers his promise illusory—that is, not really a promise at all. **An illusory promise is not consideration.** Because he has given no consideration, there is no contract, and *neither party* can enforce the deal.

Let's revisit the Blockbuster case from the opening scenario. Blockbuster's clickwrap box read, in part:

> "Blockbuster may at any time, and at its sole discretion, modify these Terms and Conditions of Use, including without limitation the Privacy Policy, with or without notice. Such modifications will be effective immediately upon posting."

Because Blockbuster had the ability to change the rules at any time for any reason, the court determined that the contract was illusory and that Harris was not bound by Blockbuster's arbitration clause.[2]

Applications Of Consideration

We will spend the remainder of the chapter looking at specific situations in which consideration plays a central role.

The UCC: Consideration in Requirements and Output Contracts

In a requirements contract, the buyer agrees to purchase 100 percent of her goods from one seller. The seller agrees to sell the buyer whatever quantity she reasonably needs. The quantity is not stated in the contract, though it may be estimated based on previous years or best calculations. The common law regarded requirements contracts as void because the buyer held all the power. She could purchase a vast quantity or none at all. She was making no commitment, and hence was giving no consideration. Common-law courts refused to enforce requirements contracts, as well as their counterpart, output contracts.

In an output contract, the seller guarantees to sell 100 percent of its output to one buyer, and the buyer agrees to accept the entire quantity. For example, a timber company might agree to sell all of its wood products to a lumber wholesaler. The common law frowned on this because now it was the seller who was making no real commitment.

The problem with the common-law rule was that many merchants valued these contracts. Consider the utility of requirements contracts. From the buyer's viewpoint, a requirements contract provides flexibility. The buyer can adjust purchases based on consumer demands. The agreement also guarantees her a source of goods in a competitive market. For a seller, the requirements agreement will ensure him at least this one outlet and will prevent competitors from selling to this buyer. The contract should enable the seller to spend less on marketing and may enable him to predict sales more accurately. Output contracts have similar value.

---

[2] *Harris v. Blockbuster Inc.*, 622 F. Supp. 2d 396 (N.D. Tex. 2009).

The UCC responded in a forthright fashion: **Section 2-306 expressly allows output and requirements contracts in the sale of goods.**[3] However, the Code places one limitation on how much the buyer may demand (or the seller may offer):

> A term which measures the quantity by the output of the seller or the requirements of the buyer means such actual output or requirements as may occur *in good faith*, ...

The "good faith" phrase is critical. In requirements contracts, courts have ruled that it is the "good faith" that a buyer brings to the deal that represents her consideration.[4] In other words, by agreeing to act in good faith, she actually is limiting her options. Because she is obligating herself, the deal becomes binding. Beware that this is not just wordplay. A buyer *must make its requirement demands in good faith*, based on the expectations the parties had when they signed the deal.

Suppose that you operate a T-shirt business. You and a wholesaler agree on a two-year requirements contract with a fixed price of $3 per T-shirt and an estimate of 150 T-shirts per week. If business is slow the first two months, you are permitted to purchase only 25 T-shirts per week if that is all you are selling. Should sales suddenly boom and you need 200 per week, you may also require that many. Both of those demands are made in good faith. But suppose the price of cotton skyrockets and the wholesale cost of T-shirts everywhere suddenly doubles. You have a two-year guaranteed price of $3 per T-shirt. Could you demand 2,000 T-shirts per week, knowing that you will be able to resell the shirts to other retailers for a big profit? No. That is not acting in good faith based on the original expectations of the parties. The wholesaler is free to ignore your exorbitant demand. The legal requirement has come full circle: your good faith is valid consideration and makes the deal enforceable—but it is binding on you, too.

EXAM Strategy

Question: Will bought simple wood furniture and custom-painted it for sale to interior designers. He entered into a written agreement to buy all the furniture he needed, for two years, from Wood Knot, Inc. Wood Knot agreed to supply Will with all the furniture he requested. During the second year, Will's business grew, and he requested 28 percent more furniture than in the first year. Wood Knot would not deliver unless Will would pay a higher price per unit, which Will would not. Will sued. What kind of a contract was this? Will Will win? Why or why not?

Strategy: Because this agreement did not specify the quantity of goods being sold, we know that it was either a requirements contract or an output contract. Review the difference between the two. Which was this agreement? These contracts are now legal, with one major limitation. What is that limitation? Apply it here.

Result: This was a requirements contract because Will agreed to purchase all his furniture from Wood Knot. Under the UCC, requirements contracts are enforceable, provided the buyer makes his demands in good faith. Will's increased order was a result of his booming business. Indeed, he entered into this agreement to protect his ability to grow his company. He made the request in good faith, the contract is enforceable, and yes—Will will win.

---

[3]UCC §2-306(2) permits a related type of contract, the exclusive dealing agreement. Here, either a buyer or a seller of goods agrees to deal exclusively with the other party. The results are similar to an output or requirements agreement. Once again, one party is receiving a guarantee in exchange for a promise that the common law would have considered illusory. Under the Code, such a deal is enforceable.

[4]*Famous Brands, Inc. v. David Sherman Corp.*, 814 F.2d 517, 1987 U.S. App. LEXIS 3634 (8th Cir. 1987).

Of course, exceptions are the spice of law ...

Preexisting Duty

As we have seen, **a promise to do something that a party is already obligated to do is not consideration.** Of course, exceptions are the spice of law, and the preexisting duty rule provides us with a rackful. Courts have created these exceptions because a rigid application of the rule might interfere with legitimate business goals.

Exception: Additional Work

When a party agrees to do something above and beyond what he is obligated to do, his promise is generally valid consideration. Cecil has promised to build a fabulous swimming pool/cabana for Nathalie for $250,000. When the work is half complete, he offers to build the cabana out of seashells rather than pine wood. If Nathalie agrees to a new price of $300,000 for the pool complex, she is obligated to pay because Cecil's extra work is valid consideration for her promise.

Exception: Modification

If both parties agree that a modification is necessary, the surest way to accomplish that is to rescind the original contract and draft a new one. **To rescind means to cancel.** Thus, if neither party has completed its obligations, the agreement to rescind will terminate each party's rights and obligations under the old contract. This should be done in writing. Then the parties sign the new agreement. Courts will *generally* enforce a rescission and modification provided both parties voluntarily entered into it, in good faith. If one side, determined to earn greater profits, unfairly coerces the other into the changes, the modification is invalid.

Once again, the UCC has changed the common law, making it easier for merchants to modify agreements for the sale of goods. UCC §2-209 provides:

- An agreement modifying a contract within this Article needs no consideration to be binding.
- A signed agreement which excludes modification or rescission except by a signed writing cannot be otherwise modified or rescinded.

Here is how these two provisions work together. Mike's Magic Mania (MMM) agrees to deliver 500 rabbits and 500 top hats to State University for the school's Sleight of Hand 101 course. The goods, including 100 cages and 1,000 pounds of rabbit food, are to arrive no later than September 1, in time for the new semester, with payment on delivery. By September 20, no rabbits have appeared, in or out of hats. The university buys similar products from another supply house at a 25 percent steeper price and sues MMM for the difference. Mike claims that in early September, the dean had orally agreed to permit delivery in October. The dean is on sabbatical in Tahiti and cannot be reached for comment. Is the alleged modification valid?

Under the common law, the modification would have been void because MMM gave no consideration for the extended delivery date. However, this is a sale of goods, and under UCC §2-209, an oral modification may be valid even without consideration. Unfortunately for Mike, though, the original agreement included a clause forbidding oral modification. Any changes had to be in writing, signed by both parties. Mike never obtained such a document. Even if the dean did make the oral agreement, the university wins.

The following case arose in a setting that is traumatic and lamentably common: a homeowner could not make his mortgage payments. Foreclosure loomed. Did the parties agree to save the home?

You be the Judge

Citizens Trust Bank v. White

274 Ga.App.508, 618 S.E.2d 9
Georgia Court of Appeals, 2005

Facts: Herbert White owned a house in Atlanta. He refinanced his home through Citizens Trust Bank, but fell behind on his loan payments. He owed about $43,000. The Bank notified White that it intended to foreclose. After some delays, the Bank sent White a formal notice that it would sell his house at a foreclosure sale on the courthouse steps, on May 7. The finance agreement provided that if the Bank foreclosed, White owed the full amount.

On that date, White arrived and offered the Bank $35,000 to stop the foreclosure. The Bank's collection manager, D.J. Hughlett, accepted the money and drafted a letter, which he and White signed:

> Citizens Trust Bank agrees to postpone the foreclosure [based on] a payment of $33,000.00 in certified funds and a possible $2,000.00 from the account of Cora White Cummings on the above-referenced property. Our Attorney, William A. Broughman, will forward to you a written agreement, for your signature, to consummate this transaction. The payoff balance as of 11:05 AM is $7,986.43. If his sister pays the $2,000.00, the balance will be $5,986.43.

White did pay the extra $2,000. Hughlett decided that the signed letter was a forbearance agreement with White, so he did not bother to send an additional document. Hughlett believed that White would pay the balance within 30 days, but White never did so. The Bank sent a new foreclosure notice and did in fact sell the house.

White sued the Bank, claiming that it had breached its agreement not to foreclose. The jury agreed, awarding White $250,000 in compensatory damages. The Bank appealed, arguing that White gave no consideration for the agreement because he was already obligated to pay the full balance.

You Be The Judge: ***Was the signed letter an enforceable contract?***

Argument for the Bank: Mr. White fell behind on his mortgage payments. As soon as the Bank notified him that it was foreclosing, his full debt became due. When he offered to pay a percentage of that debt, he was fulfilling a preexisting duty. He was *legally obligated* to pay the $35,000 that he "offered," along with the full balance due. A promise to do what a party is required to do is never consideration. Without consideration, there is no contract.

The jury made an emotional decision based on sympathy for the debtor. That leads to bad policy and bad law. The policy is poor because if everyone were allowed to default without suffering a loss, no bank would lend money and most citizens could never buy a house. The law is even worse because the case should not have gone to a jury. The trial judge should have dismissed the suit based on the preexisting duty rule.

Argument for Mr. White: There were two parties to this agreement, and both believed they had a binding agreement. The Bank's officer agreed to postpone foreclosure. He also promised to forward a formal document confirming the understanding but did not do so. And why did he send no other document? Because he believed the Bank had already agreed to halt any foreclosure effort. He was right.

Mr. White paid 80 percent of the balance due. It is wrong for the Bank to take the money and then break its promise. Furthermore, it is absurd to foreclose based on such a modest debt. The legal argument about consideration is nonsense. Mr. White's consideration was a check for $35,000.

The jury award indicates a group of average citizens who were angry about what the Bank did. The verdict should be affirmed.

EXAM Strategy

Question: Star Struck, a Hollywood talent agency, employs Puneet as one of its young agents and Max as a part-time delivery boy. Puneet's contract is for one year. She earns $5,000 per month, payable on the last day of each month. After she has worked at the firm for four months, a Star Struck executive says to her, "We are having cash flow problems. We cannot pay you this month, and will probably fall about two months behind. However, if you will agree to do Max's job for the next few months, we can pay you on time." Puneet cheerfully agrees to the deal. However, after a few weeks of the extra labor, Puneet confesses that she is overwhelmed and can no longer do Max's job. Star Struck fires her. Puneet sues. Was there a binding agreement for Puneet to do Max's work?

Strategy: Star Struck made an offer to Puneet and she accepted it. But a contract needs more than offer and acceptance. Both parties must give consideration. Had they done more than they were required to do under their preexisting duty?

Result: A promise to do what a party is already obligated to do is not consideration. Star Struck was required to pay Puneet every month, so its "offer" included no consideration. Without consideration, there can be no agreement. Puneet was not obligated to do Max's job, and she will win this lawsuit.

Exception: Unforeseen Circumstances

Hugo has a deal to repair major highways. Hugo hires Hal's Hauling to cart soil and debris. Hal's trucks begin work, but after crossing the work site several times, they sink to their axles in sinister, sucking slime. Hal demands an additional 35 percent payment from Hugo to complete the job, pointing out that the surface was dry and cracked and that neither Hal nor Hugo was aware of the subsurface water. Hal howls that he must use different trucks with different tires and work more slowly to permit the soil to dry. Hugo hems and haws and finally agrees. But when the hauling is finished, Hugo refuses to pay the extra money. Is Hugo liable?

Yes. When unforeseen circumstances cause a party to make a promise regarding an unfinished project, that promise is generally valid consideration. Even though Hal is only promising to finish what he was already obligated to do, his promise is valid consideration because neither party knew of the subsoil mud. Hal was facing a situation quite different from what the parties anticipated. It is almost as though he were undertaking a new project. Hal has given consideration, and Hugo is bound by his promise to pay extra money.

Settlement of Debts

You claim that your friend Felicity owes you $90,000, but she refuses to pay. Finally, when you are desperate, Felicity offers you a cashier's check for $60,000—provided you accept it as full settlement. To get your hands on some money, you agree and cash the check. The next day, you sue Felicity for $30,000. Who wins? It will depend principally upon one major issue: was Felicity's debt liquidated or unliquidated?

Liquidated Debt

A **liquidated debt** is one in which there is no dispute about the amount owed. A loan is a typical example. If a bank lends you $10,000, and the note obligates you to repay that amount on June 1 of the following year, you clearly owe that sum. The debt is liquidated.

Liquidated debt
A debt in which there is no dispute about the amount owed.

In cases of liquidated debt, if the creditor agrees to take less than the full amount as full payment, her agreement is not binding. The debtor has given no consideration to support the creditor's promise to accept a reduced payment, and therefore the creditor is not bound by her word. The reasoning is simply that the debtor is already obligated to pay the full amount, so no bargaining could reasonably cause the creditor to accept less. If Felicity's debt to you is liquidated, your agreement to accept $60,000 is not binding, and you will successfully sue for the balance.

Exception: Different Performance

There is one important exception to this rule. If the debtor offers a *different performance* to settle the liquidated debt, and the creditor agrees to take it as full settlement, the agreement is binding. Suppose that Felicity, instead of paying $60,000, offers you five acres in Alaska, and you accept. When you accept the deed to the land, you have given up your entire claim, regardless of the land's precise value.

Unliquidated Debt: Accord and Satisfaction

A debt is **unliquidated** for either of two reasons: (1) the parties dispute whether any money is owed, or (2) the parties agree that some money is owed but dispute how much. When a debt is unliquidated for either reason, the parties may enter into a binding agreement to settle for less than what the creditor demands.

Unliquidated debt
A debt that is disputed because the parties disagree over its existence or amount.

Such a compromise will be enforced if:

- The debt is unliquidated;
- The parties agree that the creditor will accept as full payment a sum less than she has claimed; and
- The debtor pays the amount agreed upon.

This agreement is called an **accord and satisfaction**. The accord is the agreement to settle for less than the creditor claims. The satisfaction is the actual payment of that compromised sum. An accord and satisfaction is valid consideration to support the creditor's agreement to drop all claims. Each party is giving up something: the creditor gives up her full claim, and the debtor gives up his assertion that he owed little or nothing.

Accord and satisfaction
A completed agreement to settle a debt for less than the sum claimed.

Accord and Satisfaction by Check

Most accord and satisfaction agreements involve payment by check. UCC §3-311 governs these agreements, using the same common-law rules described above.[5] The Code specifies that when the debtor writes "full settlement" on the check, a creditor who cashes the check generally has entered into an accord and satisfaction. If Felicity's debt is unliquidated, and she gives you a check with "full payment of all debts" written on the face in bold letters, the moment you deposit the check, you lose any claim to more money. What happens if the debtor makes such a notation but the creditor changes it? A massage therapist learned the answer and felt sore for days.

---

[5] A check is legally an instrument, which is why this section comes from Article 3 of the Code. For a full discussion of instruments, see Chapters 23–36.

Henches v. Taylor

138 Wash. App. 1026, 2007 WL 1241525
Washington Court of Appeals, 2007

Facts: Jim Henches, a licensed massage therapist, treated Benjamin Taylor after he was injured in a car accident. When all treatments were finished, Henches billed Taylor for more than $7,000. Taylor's insurance company claimed the bill was exorbitant and paid only $2,625, for 24 massage treatments.

Henches continued to send bills to Taylor, not only for the balance due but for additional time spent consulting with Taylor's other health care providers, preparing to testify in Taylor's personal injury lawsuit, and attempting to collect his debts. In response to a bill for $11,945.86, Taylor's lawyer, James Harris, sent Henches a letter, stating:

> I have reviewed your billing statements and am having a difficult time understanding a number of charges you included. By my calculations, the amount owed to you is approximately $5,243.45. I have enclosed a check for that amount as payment in full to settle Mr. Taylor's account with you.

The letter was accompanied by a check with "final payment" written on the notation line. Henches filed suit, seeking the full balance. Then he wrote "attorney/fee" on the check, over the word "final," and deposited the check.

The trial court gave summary judgment to Taylor, ruling that deposit of the check constituted accord and satisfaction. Henches appealed.

© Jack Hollingsworth/Corbis

The massage feels great, but how much is it really worth?

Issue: ***Was there an accord and satisfaction, discharging the debt?***

Excerpts from Judge Ellington's Decision: A debt is discharged by accord and satisfaction when the debtor and creditor agree to settle a claim by some performance other than that which is claimed due, and the creditor accepts the substituted performance as full satisfaction of the claim. Accord and satisfaction requires a bona fide dispute, an agreement to settle the dispute for a certain sum, and performance of the agreement.

Taylor easily satisfied the first element of accord and satisfaction. The parties' contracts did not establish a liquidated amount for the services provided, and the letter that accompanied Taylor's check to Henches demonstrates a good faith dispute over the amount owed.

As with any contract, an accord and satisfaction cannot be formed without a meeting of the minds. But the required intent is shown when payment is offered in full satisfaction and is accompanied by conduct from which the creditor cannot fail to understand that payment is tendered on condition its acceptance constitutes satisfaction.

Given the undisputed facts here, Henches could not fail to understand that the check was offered on condition of full settlement. Henches' alteration of the "final payment" language is further demonstration that he read and understood the notation. Taylor tendered a check in final payment and Henches deposited the check, thereby accepting that payment.

A creditor can accept payment and avoid formation of an accord only where both parties understand before payment is accepted that the payment will not settle the claim. Henches contends his alteration of the check prevents accord and satisfaction. But a creditor cannot prevent formation of an accord by making a unilateral change to a draft tendered in full payment, even if the creditor endorses the check with the words accepted as partial payment and not as payment in full and not as an accord and satisfaction of the known full amount legally due and owing.

Where the amount due is in dispute, and the debtor sends cash or check for less than the amount claimed, clearly expressing his intention that it is sent as a settlement in full, and not on account or in part payment, the retention and use of the money or the cashing of the check is almost always held to be an acceptance of the offer operating as full satisfaction, even though the creditor may assert or send word to the debtor that the sum is received only in part payment.

Henches' alteration of the check was a unilateral act not communicated to Taylor. Accord and satisfaction discharged Taylor's debts to Henches. We affirm the trial court's summary judgment dismissal of Henches' suit.

UCC Exceptions

The Code creates two exceptions for accord and satisfaction cases involving checks. The first exception concerns "organizations," which typically are businesses. The general rule of §3-311 is potentially calamitous to them because a company that receives thousands of checks every day is unlikely to inspect all notations. A consumer who owes $12,000 on a credit card might write "full settlement" on a $200 check, potentially extinguishing the entire debt through accord and satisfaction. Under the exception, if an organization notifies a debtor that any offers to settle for less than the debt claimed must be made to a particular official, and the check is sent to anyone else in the organization, depositing the check generally does *not* create an accord and satisfaction. Thus a clerk who deposits 900 checks daily for payment of MasterCard debts will not have inadvertently entered into dozens of accord and satisfaction agreements.

The second exception allows a way out to most creditors who have inadvertently created an accord and satisfaction. If, within 90 days of cashing a "full payment" check, the creditor offers repayment of the same amount to the debtor, there is no accord and satisfaction. Homer claims that Virgil owes him $7 million but foolishly cashes Virgil's check for $3 million, without understanding that "paid in full" means just what it says. Homer has created an accord and satisfaction. But if he promptly sends Virgil a check for $3 million, he has undone the agreement and may sue for the full amount.

Consideration: Trends

Employment Agreements

In a noncompete agreement, an employee promises not to work for a competitor for some time after leaving the company. It used to be that these covenants were rare and reserved for top officers, but they have now become commonplace throughout many organizations. We will talk about them more in the next chapter, but often these covenants raise an issue of consideration: what consideration does the employee receive for signing a covenant not to compete? After all, the company is already under an obligation to pay the employee for working. What additional value does the employee receive in return for signing the agreement?

Although this area of law is developing and is a bit murky, the following case reflects the current majority view. Sometimes consideration issues can drive you nuts.

Snider Bolt & Screw v. Quality Screw & Nut

2009 U.S. Dist. LEXIS 50797
United States District Court for the Western District of Kentucky, 2009

Facts: James Scott signed a covenant not to compete when he went to work for Snider Bolt & Screw. The agreement prohibited him from taking a job with a competitor for one year after leaving Snider. Three years later, Scott quit his job at Snider and immediately went to work for Quality Screw & Nut (QSN).

Snider obtained a temporary restraining order that banned Scott from working at his new job. QSN argued that the covenant not to compete was void for lack of consideration. It asked the court to lift the temporary restraining order.

Issue: ***Did the covenant not to compete lack consideration?***

Excerpt from Judge Heyburn's Decision: Snider says that when Scott signed his covenant not to compete, he did so based upon an implied promise that Snider would continue his employment. Indeed, Snider did maintain Scott's employment until Scott himself left his job. Kentucky courts have found quite specifically that "where an employer has fulfilled an implied promise to continue the employee's employment, that promise is sufficient consideration

[to] support enforcement of the employee's promise not to compete." The Kentucky Supreme Court subsequently held that even continued at-will employment would be sufficient consideration. Here, Scott worked for another three years and left on his own accord to join QSN. These circumstances fit within the rule and the Court finds that the Covenant is supported by adequate consideration.

Consequently, the Court has no basis for sustaining QSN's motion.

Promissory Estoppel and "Moral Consideration"

Judges have a tool by which they can enforce agreements even if there is no consideration. Under the doctrine of promissory estoppel, a judge has the discretion to "ignore" the fact that consideration does not exist if a promise causes foreseeable reliance by a plaintiff and a great injustice would be done if the promise were broken. Some courts will use the phrase "moral consideration" to describe this basic idea.

For example, consider a pledge to charity. If Dave promises to give money to charity and then fails to make the donation, there is no consideration because he has received nothing in return. If the charity sues to enforce the promise, it cannot show that it has committed an act or forbearance.[6]

Nevertheless, some courts will force donors to make good on their donations anyway. Especially in the case of large donations, courts will often cite the "grave injustices" that can follow from this kind of promise breaking. "If you don't give the 'Coats for Kids' program the $100,000 you've pledged, then thousands of children will go without a coat this winter," a judge might say. Also, it may be that the charity has relied on the pledge to open another storefront or undertake a new program. Courts are likely to enforce the pledge in these circumstances.

It is unwise to make charitable pledges, especially large pledges, if you might change your mind.

EXAM Strategy

Question: In an Alabama case, Webb saved McGowin's life by preventing a giant block of wood from falling on his head.[7] Webb was permanently disabled in the accident and was never able to work again. Later, McGowin promised to give Webb money every two weeks for the rest of his life. McGowin made the payments for awhile but then stopped. Webb sued.

Strategy: No consideration exists here. McGowin made the promise to pay the money *after* Webb's heroic act. Webb did not give McGowin anything of value *in return for* the promise to pay money. But what about promissory estoppel?

[6]An exception to this, of course, would be if the charity agreed to give Dave something at the time he made the pledge. As a "fix" for consideration problems, many charities send donors something of trivial value when pledges are made—maybe a water bottle or a tote bag. Under the peppercorn rule, even something of small value counts as a legal act, and it converts a mere promise of a donation into an enforceable contract.

[7]*Webb v. McGowin*, 168 So. 196 (Ala.1935).

Result: In the case, the court found that "moral consideration" was present, and that Webb was entitled to the payments to prevent substantial injustice.

It is important to note that applications of promissory estoppel and similar doctrines are rare. Ordinarily, if there is no consideration, then there is no contract. However, in extreme cases, it is possible for a court to enforce a deal even without consideration. But this is not something you can count on.

Chapter Conclusion

This ancient doctrine of consideration is simple to state but subtle to apply. The parties must bargain and enter into an exchange of promises or actions. If they do not, there is no consideration and the courts are unlikely to enforce any promise made. A variety of exceptions modify the law, but a party wishing to render its future more predictable—the purpose of a contract—will rely on a solid bargain and exchange.

Exam Review

1. **CONSIDERATION** There are three rules of consideration:
   - Both parties must get something of *measureable value* from the contract.
   - A *promise* to give something of value counts as consideration.
   - The two parties must have *bargained for* whatever was exchanged. (pp. 276–278)

2. **ACT OR FORBEARANCE** The item of value can be either an act or a forbearance. (pp. 276–277)

EXAM Strategy

Question: An aunt saw her eight-year-old nephew enter the room, remarked what a nice boy he was, and said, "I would like to take care of him now." She promptly wrote a note, promising to pay the boy $3,000 upon her death. Her estate refused to pay. Is it obligated to do so?

Strategy: A contract is enforceable only if the parties have given consideration. The consideration might be an act or a forbearance. Did the nephew give consideration? (See the "Result" at the end of this section.)

3. **ADEQUACY** The courts will seldom inquire into the adequacy of consideration. This is the "peppercorn rule." (pp. 278–279)

4. **ILLUSORY PROMISES** An illusory promise is not consideration. (pp. 278–280)

EXAM Strategy

Question: Eagle ran convenience stores. He entered into an agreement with Commercial Movie in which Commercial would provide Eagle with DVDs for rental. Eagle would pay Commercial 50 percent of the rental revenues. If Eagle stopped using Commercial's service, Eagle could not use a competitor's services for 18 months. The agreement also provided: "Commercial shall not be liable for compensation or damages of any kind, whether on account of the loss by Eagle of profits, sales or expenditures, or on account of any other event or cause whatsoever." Eagle complied with the agreement for two years but then began using a competitor's service, and Commercial sued. Eagle claimed that the agreement was unenforceable for lack of consideration. Please rule.

Strategy: In this case, both parties seem to have given consideration. But there is a flaw in the "promise" that Commercial made. Commercial can never be liable to Eagle—no matter what happens. (See the "Result" at the end of this section.)

5. **REQUIREMENT AND OUTPUT CONTRACTS** Under sales law, requirement and output contracts are valid. Although one side controls the quantity, its agreement to make demands *in good faith* is consideration. (pp. 280–283)

6. **PREEXISTING DUTY** Under the doctrine of preexisting duty, a promise to do something that the party is already legally obligated to perform is generally not consideration. (p. 282)

7. **LIQUIDATED DEBT** A liquidated debt is one in which there is no dispute about the amount owed. For a liquidated debt, a creditor's promise to accept less than the full amount is not binding. (pp. 285–287)

8. **UNLIQUIDATED DEBT** For an unliquidated debt, if the parties agree that the creditor will accept less than the full amount claimed and the debtor performs, there is an accord and satisfaction and the creditor may not claim any balance. (pp. 285–287)

9. **"FULL PAYMENT" NOTATIONS** In most states, payment by a check that has a "full payment" notation will create an accord and satisfaction unless the creditor is an organization that has notified the debtor that full payment offers must go to a certain officer. (pp. 285–287)

EXAM Strategy

Question: When White's wife died, he filed a claim with Boston Mutual for $10,000 death benefits under her insurance policy. The insurer rejected the claim, saying that his wife had misrepresented her medical condition in the application form. The company sent White a check for $478.75, which it said represented "a full refund of all applicable premiums paid" for the coverage. White deposited the check. Had the parties reached an accord and satisfaction?

Strategy: The UCC permits parties to enter into an accord and satisfaction by check. The debtor must make clear that the check is offered in full payment of a disputed debt. Debtors generally do that by writing "Final Settlement," "Accepted as Full Payment of All Debts," or some similar notation on the check. Had the insurance company complied with that requirement? (See the "Result" at the end of this section.)

10. **PROMISSORY ESTOPPEL** Sometimes, to prevent injustice, courts will enforce agreements even if no consideration is present. These deals are still not formal contracts, but the courts will enforce a promise nonetheless. (pp. 288–289)

EXAM Strategy

Question: Phil Philanthropist called PBS during a fund drive and pledged to donate $100,000. PBS then planned and began to produce a Fourth of July *Sesame Street* special, counting on the large donation to fund it. Later, Phil changed his mind and said he had decided not to donate the money after all. PBS sued because without the money, it would not be able to complete the show. Will PBS win the lawsuit?

Strategy: Analyze the promise to donate the $100,000. Does it contain consideration? If not, is there any other legal possibility? (See the "Result" at the end of this section.)

2. Result: The nephew gave no consideration. He did not promise to do anything. He committed no act or forbearance. Without consideration, there is no enforceable contract. The estate wins.

4. Result: Commercial's promise was illusory. The company was free to walk away from the deal at any time. Commercial could never be held liable. Commercial gave no consideration, and there was no binding contract for either party to enforce.

9. Result: The insurer merely stated that its check was a refund of premiums. Nowhere did the company indicate that the check was full payment of its disputed obligation. The company should have made it clear that it would not pay any benefits and that this payment was all that it would offer. There was no accord and satisfaction.

10. Result: There is no "regular" consideration here because Phil received no measureable benefit and PBS did not act or forbear. But PBS can likely make a strong case that a great injustice will be done if the money is not paid. A judge might well decide to apply the doctrine of promissory estoppel and require Phil to make the donation.

MULTIPLE-CHOICE QUESTIONS

1. For consideration to exist, there must be:
   (a) A bargained-for exchange
   (b) A manifestation of mutual assent
   (c) Genuineness of assent
   (d) Substantially equal economic benefits to both parties

2. Which of the following requires consideration in order to be binding on the parties?
   (a) Modification of a contract involving the sale of real estate
   (b) Modification of a sale of goods contract under the UCC
   (c) Both A and B
   (d) None of the above

3. Ted's wallet is as empty as his bank account, and he needs $3,500 immmediately. Fortunately, he has three gold coins that he inherited from his grandfather. Each is worth $2,500, but it is Sunday, and the local rare coins store is closed. When approached, Ted's neighbor Andrea agrees to buy the first coin for $2,300. Another neighbor, Cami, agrees to buy the second for $1,100. A final neighbor, Lorne, offers "all the money I have on me"—$100—for the last coin. Desperate, Ted agrees to the proposal. Which of the deals is supported by consideration?
   (a) Ted's agreement with Andrea only
   (b) Ted's agreements with Andrea and Cami only
   (c) All three of the agreements
   (d) None of the agreements

4. In a(n) ____________ contract, the seller guarantees to sell 100 percent of its output to one buyer, and the buyer agrees to accept the entire quantity. This kind of arrangement ____________ acceptable under the UCC.
   (a) output; is
   (b) output; is not
   (c) requirements; is
   (d) requirements; is not

5. Noncompete agreements are common features of employment contracts. Currently, courts ____________ enforce these clauses.
   (a) always
   (b) usually
   (c) rarely
   (d) never

Essay Questions

1. American Bakeries had a fleet of over 3,000 delivery trucks. Because of the increasing cost of gasoline, the company was interested in converting the trucks to propane fuel. It signed a requirements contract with Empire Gas, in which Empire would convert "approximately 3,000" trucks to propane fuel, as American Bakeries requested, and would then sell all the required propane fuel to run the trucks. But American Bakeries changed its mind and never requested a single conversion. Empire sued for lost profits. Who won?

2. CeCe Hylton and Edward Meztista, partners in a small advertising firm, agreed to terminate the business and split assets evenly. Meztista gave Hylton a two-page document showing assets, liabilities, and a bottom line of $35,235.67, with half due to each partner. Hylton questioned the accounting and asked to see the books. Meztista did not permit Hylton to see any records and refused to answer her phone calls. Instead, he gave her a check in the amount of $17,617.83, on which he wrote "Final payment/payment in full." Hylton cashed the check, but she wrote on it, "Under protest—cashing this check does not constitute my acceptance of this amount as payment in full." Hylton then filed suit, demanding additional monies. Meztista claimed that the parties had made an accord and satisfaction. What is the best argument for each party? Who should win?

3. ***ETHICS*** Melnick built a house for Gintzler, but the foundation was defective. Gintzler agreed to accept the foundation if Melnick guaranteed to make future repairs caused by the defects. Melnick agreed but later refused to make any repairs. Melnick argued that his promise to make future repairs was unsupported by consideration. Who will win the suit? Is either party acting unethically? Which one, and why?

4. Sami walks into a restaurant. She is given a menu, which indicates that lobster is $30. Sami orders the lobster. It arrives, and Sami thinks it is very tasty. When the bill arrives, Sami tries to execute a clever ploy she learned about in her business law class. She writes a check to the restaurant for $20 and writes "full settlement" across the top. The waiter accepts the check without looking at it, and the restaurant manager later deposits it in the restaurant's bank account. Is this a liquidated or an unliquidated debt? Is Sami off the hook for the last $10?

5. In the bleachers…

   "You're a prince, George!" Mike exclaimed. "Who else would give me a ticket to the big game?"

   "No one, Mike, no one."

   "Let me offer my thanks. I'll buy you a beer!"

   "Ah," George said. "A large beer would hit the spot right now."

   "Small. Let me buy you a small beer."

   "Ah, well, good enough."

   Mike stood and took his wallet from his pocket. He was distressed to find a very small number of bills inside. "There's bad news, George!" he said.

   "What's that?"

   "I can't buy you the beer, George."

   George considered that for a moment. "I'll tell you what, Mike," he said. "If you march to the concession stand right this minute and get me my beer, I won't punch you in the face."

   "It's a deal!" Mike said.

   Discuss the consideration issues raised by this exchange.

6. Jack Tallas came to the United States from Greece in 1914. He lived in Salt Lake City for nearly 70 years, achieving great success in insurance and real estate. During the last 14 years of his life, his friend Peter Dementas helped him with numerous personal and business chores. Two months before his death, Tallas dictated a memorandum to Dementas, in Greek, stating:

   > PETER K. DEMENTAS is my best friend I have in this country, and since he came to the United States, he treats me like a father and I think of him as my own son. He takes me in his car grocery shopping. He drives me to the doctor and also takes me every week to Bingham to pick up my mail, collect the rents, and manage my properties. For all the services Peter has given me all these years, I owe to him the amount of $50,000 (Fifty Thousand Dollars). I will shortly change my will to include him as my heir.

   Tallas signed the memorandum, but he did not in fact alter his will to include Dementas. The estate refused to pay, and Dementas sued. Was there consideration? Please rule.

Discussion Questions

Apply the following material to the next three questions.

Some view consideration as a technicality that allows people to make promises and then back out of them. Perhaps all promises should be enforced. In Japan, for example, promises to give gifts are enforceable without consideration.[8]

In the United States, if I promise to give you a gift merely because I feel like being nice, I can freely change my mind as far as contract law is concerned. A court will not make me follow through because there is no consideration.

In Japan, I would be obligated to buy the gift if all other elements of a contract were present—an offer, an acceptance, and so forth.

Some argue that consideration in U.S. law is a doctrine left over from centuries long past, that it lacks any reasonable modern purpose, and that it should be abolished.

1. Do you agree with this statement: "A person should always keep his or her word."

2. When it comes to giving gifts, which is better—the Japanese or American rule?

3. Are there any specific types of agreements (perhaps high-value, long-term, extremely time-consuming ones) that should definitely require consideration?

4. In the gold rush example, Embola gave Tuppela $50 in exchange for a promise of $10,000 later. Under the peppercorn rule, the deal was a contract. Is the peppercorn rule sensible? Should courts require a more *even* exchange of value?

5. In the last two chapters, we have examined clickwrap boxes. Sometimes courts refuse to enforce clickwrap terms because of problems with acceptance or consideration, but usually the terms are enforced. Is there a way to make clickwraps fair to both sides? Would it be better to ban clickwrap boxes altogether?

[8] See Japan's Civil Code, Article 549.

CHAPTER 13

© picsbyst/Shutterstock.com

LEGALITY

Soheil Sadri, a California resident, did some serious gambling at Caesar's Tahoe casino in Nevada. And lost. To keep gambling, he wrote checks to Caesar's and then signed two memoranda pledging to repay all money advanced. After two days, with his losses totaling more than $22,000, he went home. Back in California, Sadri stopped payment on the checks and refused to pay any of the money he owed Caesar's. The casino sued. In defense, Sadri claimed that California law considered his agreements illegal and unenforceable. He was unquestionably correct about one thing: a contract that is illegal is void and unenforceable.

A contract that is illegal is void and unenforceable.

CONTRACTS THAT VIOLATE A STATUTE

In this chapter, we examine a variety of contracts that may be void, or unenforceable. Illegal agreements fall into two groups: those that violate a statute, and those that violate public policy.

Wagers

Gambling is big business. Almost all states now permit some form of wagering, from casinos to racetracks to lotteries, and they eagerly collect the billions of dollars in revenue generated. Supporters urge that casinos create jobs and steady income, boost state coffers, and take business away from organized crime. Critics argue that naive citizens inevitably lose money they can ill afford to forfeit, and that addicted gamblers destroy their families and weaken the fabric of communities. With citizens and states divided over the ethics of gambling, it is inevitable that we have conflicts such as the dispute between Sadri and Caesar's. The basic rule, however, is clear: **a gambling contract is illegal unless it is a type of wagering *specifically authorized* by state statute.**

In California, as in many states, gambling on credit is not allowed. In other words, it is illegal to lend money to help someone wager. But in Nevada, gambling on credit is legal, and debt memoranda such as Sadri's are enforceable contracts. Caesar's sued Sadri in California (where he lived). The result? The court admitted that California's attitude toward gambling had changed, and that bingo, poker clubs, and lotteries were common. Nonetheless, the court denied that the new tolerance extended to wagering on credit:

> There is a special reason for treating gambling on credit differently from gambling itself. Having lost his or her cash, the pathological gambler will continue to play on credit, if extended, in an attempt to win back the losses. This is why enforcement of gambling debts has always been against public policy in California and should remain so, regardless of shifting public attitudes about gambling itself. If Californians want to play, so be it. But the law should not invite them to play themselves into debt. The judiciary cannot protect pathological gamblers from themselves, but we can refuse to participate in their financial ruin.[1]

Caesar's lost and Sadri kept his money. However, do not become too excited at the prospect of risk-free wagering. Casinos responded to cases like *Sadri* by changing their practices. Most now extend credit only to a gambler who agrees that disputes about repayment will be settled in *Nevada* courts. Because such contracts are legal in that state, the casino is able to obtain a judgment against a defaulting debtor and—yes—enforce that judgment in the gambler's home state.

Despite these more restrictive casino practices, Sadri's dispute is a useful starting place from which to examine contract legality because it illustrates two important themes.

First, morality is a significant part of contract legality. In refusing to enforce an obligation that Sadri undeniably had made, the California court relied on the human and social consequences of gambling and on the ethics of judicial enforcement of gambling debts. Second, "void" really means just that: a court will not

© Elena Ray/Shutterstock

The gambling is legal—but what about a gambling contract?

[1] *Metropolitan Creditors Service of Sacramento v. Sadri*, 15 Cal. App. 4th 1821, 1993 Cal. App. LEXIS 559, 19 Cal. Rptr. 2d 646 (Cal. Ct. App. 1993).

intercede to assist either party to an illegal agreement, even if its refusal leaves one party shortchanged.

Insurance

Another market in which "wagering" unexpectedly pops up is that of insurance. You may certainly insure your own life for any sum you choose. But may you insure someone else's life? **Anyone taking out a policy on the life of another must have an insurable interest in that person.** The most common insurable interest is family connection, such as spouses or parents. Other valid interests include creditor-debtor status (the creditor wants payment if the debtor dies) and business association (an executive in the company is so valuable that the firm will need compensation if something happens to him). If there is no insurable interest, there is generally no contract.

EXAM Strategy

Question: Jimenez sold Breton a used motorcycle for $5,500, payable in weekly installments. Jimenez then purchased an insurance policy on Breton's life, worth $320,000 if Breton died in an accident. Breton promptly died in a collision with an automobile. The insurance company offered only $5,500, representing the balance due on the motorcycle. Jimenez sued, demanding $320,000. Make an argument that the insurance company should win.

Strategy: The issue is whether Jimenez had an insurable interest in Breton's life. If he had no interest, he cannot collect on an insurance policy. If he had an interest, what was it? For how much money?

Result: Jimenez's had an interest in Breton's life to insure payment of the motorcycle debt—$5,500. Beyond that, this policy represented a wager by Jimenez that Breton was going to die. Contracts for such wagers are unenforceable. Jimenez is entitled only to $5,500.[2]

Licensing Statutes

You sue your next-door neighbor in small claims court, charging that he keeps a kangaroo in his backyard and that the beast has disrupted your family barbecues by leaping over the fence, demanding salad, and even kicking your cousin in the ear. Your friend Foster, a graduate student from Melbourne, offers to help you prepare the case, and you agree to pay him 10 percent of anything you recover. Foster proves surprisingly adept at organizing documents and arguments. You win $1,200, and Foster demands $120. Must you pay? The answer is determined by the law of licensing.

States require licenses for anyone who practices a profession, such as law or medicine, works as a contractor or plumber, and for many other kinds of work. These licenses are required in order to protect the public. States demand that an electrician be licensed because the work is potentially dangerous to a homeowner: the person doing the work must know an amp from a watt. **When a licensing requirement is designed to protect the public, any contract made by an unlicensed worker is unenforceable.** Your friend Foster is

[2] *Jimenez v. Protective Life Insurance Co.*, 8 Cal. App. 4th 528 (Cal. App. 1992).

unlicensed to practice law. Even though Foster did a fine job with your small claims case, he cannot enforce his contract for $120.

States use other licenses simply to raise money. For example, most states require a license to open certain kinds of retail stores. This requirement does not protect the public because the state will not investigate the store owner the way it will examine a prospective lawyer or electrician. The state is simply raising money. **When a licensing requirement is designed merely to raise revenue, a contract made by an unlicensed person is generally enforceable.** Thus, if you open a stationery store and forget to pay the state's licensing fee, you can still enforce a contract to buy 10,000 envelopes from a wholesaler at a bargain price.

Many cases, such as the following one, involve contractors seeking to recover money for work they did without a license.

Authentic Home Improvements v. Mayo

2006 WL 2687533
District of Columbia Superior Court, 2006

Facts: Authentic Home Improvements (Authentic) performed work on Diane Mayo's home, but she sued for return of the money she had paid. In court, Authentic's owner acknowledged that he had no contractor's license when it began the work, but he expected to obtain it soon. The court ordered Authentic to refund Mayo the entire sum she had paid, and the company agreed. Later, however, Authentic returned to court, stating that things had changed. The license had in fact been issued soon after work began. Authentic argued that it should not be obligated to return Mayo's money and was in fact entitled to its full fee for the work accomplished.

Issue: ***Did the new license entitle Authentic to its home improvement fee?***

Excerpts from Judge Goodbread's Decision: This is not a matter of a trial judge doggedly cleaving to his original ruling—one that he frankly wishes he could modify under these circumstances. To use the words of Proteus, "My duty pricks me on to utter that which else no worldly good should draw from me." Shakespeare, "The Two Gentlemen of Verona." Not that it makes any difference to anyone, but the undersigned, a carpenter's son dwelling at this end of the Judicial Food Chain, disagrees with the harsh general rule in these cases and [believes that exceptions to the licensing requirement should be made in deserving cases]. Nevertheless, the undersigned is bound by the repeated rulings of the Court of Appeals.

As early as 1974, our Court of Appeals noted the high incidence of complaints emanating from the home improvement industry, noting that, even then, it was estimated that fraudulent practices in the industry cost consumers from 500 million to 1 billion dollars annually (this would amount to over $4.3 billion in today's dollars). A simple search of the Internet for the term "home improvement fraud" brings up over two million sites.

Not only is it immaterial that the parties may be in equal fault in the home improvement contract matter, but it has also been held that the unlicensed contractor may not recover even in instances wherein the homeowner *already knew* at all times relevant that the contractor was not licensed and impliedly or expressly "waived" that requirement in return for the work being done promptly. Moreover—turning the purpose of the rule inside out—even where it was the contractor who was the "victim" and the home owner herself who knew in advance that the contract would be invalid and unenforceable, yet still benefitted unfairly from the contractor's good work, the homeowner was allowed to prevail, despite what might be termed "malice aforethought."

The unique defense of a "retroactive" license presented in this case does not vitiate the rule. [Authentic's owner argues that he] had every reasonable *expectation* of receiving a license and that, in fact, he *did* receive the license within a reasonable time of beginning work. Yet the requirement to have *already* had issued, and in hand, a license or permit to conduct or perform the act at issue is not a difficult concept to grasp and one need go no further than the common driver's permit or license tags to understand it. No one could legally drive a vehicle in *anticipation* of the license and the plates that had already been approved, on the premise that they would eventually arrive in the mail in due course, and that it would be all right to drive until they do.

The Court's original ruling in this case must stand.

Usury

It pays to understand usury.

Henry Paper and Anthony Pugliese were real estate developers. They bought property in Florida, intending to erect an office building. Walter Gross, another developer, agreed to lend them $200,000 at 15 percent interest. Gross knew the partners were desperate for the money, so at the loan closing, he demanded 15 percent equity (ownership) in the partnership, in addition to the interest. Paper and Pugliese had no choice but to sign the agreement. The two partners never repaid the loan, and when Gross sued, the court ruled that they need never pay a cent.

Usury laws prohibit charging excess interest on loans. Some states, such as New York, set very strict limits. Others, like Utah, allow for virtually any rate. A lender who charges a usurious rate of interest may forfeit the illegal interest, all interest, or, in some states, the entire loan.

Florida law requires a lender who exceeds 25 percent interest to forfeit the entire debt. Where was the usury in Gross's case? Just here: when Gross insisted on a 15 percent share of the partnership, he was simply extracting additional interest and disguising it as partnership equity. The Paper-Pugliese partnership had equity assets of $600,000. A 15 percent equity, plus interest payments of 15 percent over 18 months, was the equivalent of a per annum interest rate of 45 percent. Gross probably thought he had made a deal that was too good to be true. And in the state of Florida, it was. He lost the entire debt.[3]

Credit Card Debt

Many consumers are desperate to obtain credit cards on any terms. When First Premier Bank launched a credit card with a 79.9 percent rate of interest, 700,000 people applied for it within the next two years.

How can such a rate exist?

Even if a state's usury statute applies to credit cards, savvy lenders can often avoid limits on interest rates. The Supreme Court has ruled that when national banks issue a credit card, they can use the rate of their own state or of that of the consumer, whichever is higher. Also, many card issuers require borrowers to sign contracts that say the laws of a lender-friendly state will be applied to all future disputes. New York customers might agree to live by Utah laws, for example.

Most courts continue to enforce these contracts that impose high out-of-state rates. But since the financial meltdown of 2008, some courts have started to express distaste for this practice. In the following case, a New York court addressed the issue.

American Express Travel Related Services Company, Inc. v. Assih

893 N.Y.S.2d 438
Civil Court of the City of New York, Richmond County, 2009

Facts: American Express Travel Related Services (American Express) alleged that New York resident Titus Assih missed a credit card payment. His interest rate ballooned from 12.24 percent to 21 percent, and eventually to 27.99 percent. Assih made small payments for a time, but soon he stopped paying altogether.

American Express sued Assih. The company sought to enforce this provision of its agreement: "This Agreement

[3]*Jersey Palm-Gross, Inc. v. Paper*, 639 So.2d 664, 1994 Fla. App. LEXIS 6597 (Fla. Ct. App. 1994).

is governed by Utah law and applicable federal law." The agreement's only connection to Utah was that American Express assigned its interest to a one-branch bank in Utah.

Assih argued that New York law, which sets strict limits on maximum rates of credit card interest, should apply instead.

Issues: ***Should New York or Utah law apply? Did the increased rates violate usury statutes?***

Excerpts from Judge Straniere's Opinion: Having dealt with thousands of consumer credit cases over the years, the court is sometimes caused to wonder if the regulations governing this industry originated in the Wonderful Land of Oz. For example, the scene where Dorothy and friends approach the gates of the Emerald City and ring the bell seeking entrance seems to present a number of the issues arising in debt collection litigation.

> Guardian: Well, that's more like it! Now state your business!
> Dorothy and Friends: We want to see the Wizard!
> Guardian: The Wizard? But nobody can see the Great Oz! Nobody's ever seen the Great Oz! Even I've never seen him!
> Dorothy: Well, then how do you know there is one?

Like the Land of Oz, run by a Wizard who no one has ever seen, the Land of Credit Cards permits consumers to be bound by agreements they never sign, agreements they may have never received, subject to change without notice and the laws of a state other than those existing where they reside.

The Utah usury statute provides: The parties to a lawful contract may agree upon any rate of interest for the loan that is the subject of their contract.

Is it any wonder that credit card issuers, such as plaintiff, make their agreements subject to Utah law? An interest rate is not usurious so long as the parties "agree upon any rate of interest." If Nathan Detroit had known he could make loans charging 100% interest a day by reducing them to writing, signed and subject to Utah law, he would not have had to seek a living running the "oldest, established, permanent floating crap game in New York." Incredibly courts are expected to enforce these agreements against unsophisticated, unrepresented consumers who reside in states such as New York which do not have similar statutes and who have no idea that their agreement is subject to Utah law.

Is New York required to apply the Utah usury statute to credit card interest charges which far exceed the legal rate in New York? New York follows the "substantial relationship" approach that provides:

> The law of the state chosen by the parties to govern their contractual rights and duties will be applied.... unless the chosen state has no substantial relationship to the parties.

The corporate plaintiff is incorporated in New York and its principal place of business is in New York. Defendant resides in New York. Most of the transactions charged to the credit card took place in New York. Payments on the credit card are mailed to a New York address. Utah has no substantial relationship to the parties.

Taking all of the above into account, it is clear that New York has the most significant contacts to the parties and New York law will apply to the Agreement.

The legal rate of interest in New York in general obligations [is] sixteen per cent. New York still retains a criminal usury statute for interest rates which exceed twenty-five per cent. Except for the initial interest rate charged on defendant's account by plaintiff of 12.24%, all other interest charges assessed by plaintiff violated the New York civil usury statutes. The last billings on this account in fact exceeded the criminal usury rate of 25% when they reached 27.99%.

Under New York law, all usurious contracts are void and the lender forfeits both principal and interest.

The Wizard in the "Wizard of Oz" warned Dorothy and friends, "Do not arouse the wrath of the great and powerful Oz." I am sure the court will likewise be arousing the wrath of the plaintiff.

Plaintiff's cause of action is dismissed.

Contracts that Violate Public Policy

In the preceding section, we saw that courts refuse to enforce contracts that violate a *statute*. However, a judge may declare a contract illegal even if it does not violate a statute. In this section, we examine cases in which a *public policy* prohibits certain contracts. In other words, we focus primarily on common law rules.

Restraint of Trade: Noncompete Agreements

Free trade is the basis of the U.S. economy, and any bargain that restricts it is suspect. Most restraint of free trade is barred by antitrust law. But it is the common law that still regulates one restriction on trade: agreements to refrain from competition. Some of these agreements are legal, and some are void.

Recall that a noncompete agreement is a contract in which one party agrees not to compete with another in a stated type of business. For example, an anchorwoman for an NBC news affiliate in Miami might agree that she will not anchor any other Miami station's news for one year after she leaves her present employer. Noncompetes are often valid, but the common law places some restrictions on them.

To be valid, an agreement not to compete must be ancillary to a legitimate bargain. "Ancillary" means that the noncompetition agreement must be part of a larger agreement. Suppose Cliff sells his gasoline station to Mina, and the two agree that Cliff will not open a competing gas station within 5 miles anytime during the next two years. Cliff's agreement not to compete is ancillary to the sale of his service station. His noncompetition promise is enforceable. But suppose that Cliff and Mina already had the only two gas stations within 35 miles. They agree between themselves not to hire each other's workers. Their agreement might be profitable to them because each could now keep wages artificially low. But their deal is ancillary to no legitimate bargain, and it is therefore void. Mina is free to hire Cliff's mechanic despite her agreement with Cliff.

The two most common settings for legitimate noncompetition agreements are the sale of a business and an employment relationship.

Sale of a Business

Kory has operated a real estate office, Hearth Attack, in a small city for 35 years, building an excellent reputation and many ties with the community. She offers to sell you the business and its goodwill for $300,000. But you need assurance that Kory will not take your money and promptly open a competing office across the street. With her reputation and connections, she would ruin your chances of success. You insist on a noncompete clause in the sale contract. In this clause, Kory promises that for one year, she will not open a new real estate office or go to work for a competing company within a 10-mile radius of Hearth Attack. Suppose, six months after selling you the business, Kory goes to work for a competing real estate agency two blocks away. You seek an injunction to prevent her from working. Who wins?

When a noncompete agreement is ancillary to the sale of a business, it is enforceable if reasonable in time, geographic area, and scope of activity. In other words, a court will not enforce a noncompete agreement that lasts an unreasonably long time, covers an unfairly large area, or prohibits the seller of the business from doing a type of work that she never had done before. Measured by this test, Kory is almost certainly bound by her agreement. One year is a reasonable time to allow you to get your new business started. A 10-mile radius is probably about the area that Hearth Attack covers, and realty is obviously a fair business from which to prohibit Kory. A court will probably grant the injunction, barring Kory from her new job.

With her reputation and connections, she would ruin your chances of success.

If, on the other hand, the noncompetition agreement had prevented Kory from working anywhere within 200 miles of Hearth Attack, and she started working 50 miles away, a court would refuse to enforce the contract. That geographic restriction would be unreasonable since Kory never previously did business 50 miles away, and Hearth Attack is unlikely to be affected if she works there now. An overly broad restriction would make for bad public policy, and it would lack a legal purpose.

Employment

When you sign an employment contract, the document may well contain a noncompete clause. Employers have legitimate worries that employees might go to a competitor and take with them trade secrets or other proprietary information. Some employers, though, attempt to place harsh restrictions on their employees, perhaps demanding a blanket agreement that the employee will never go to work for a competitor. Once again, courts look at the reasonableness of restrictions placed on an employee's future work. Because the agreement now involves the very livelihood of the worker, a court scrutinizes the agreement more closely.

A noncompete clause in an employment contract is generally enforceable only if it is essential to the employer, fair to the employee, and harmless to the general public. Judges usually enforce these agreements to protect trade secrets and confidential information. They may protect customer lists that have been expensive to produce. Courts rarely restrain an employee simply because he wants to work for a competitor, and they disfavor agreements that last too long or apply in a very wide area. The following chart summarizes the factors that courts look at in all types of noncompetition agreements.

THE LEGALITY OF NONCOMPETITION CLAUSES (NONCOMPETES)

Type of Noncompetition Agreement	When Enforceable	
Not ancillary to a sale of business or employment	Never	
Ancillary to a sale of business	If reasonable in time, geography, and scope of activity	
Ancillary to employment	Contract is *more* likely to be enforced when it involves: • Trade secrets or confidential information: these are almost always protected • Customer lists developed over extended period of time and carefully protected • Limited time and geographical scope • Terms essential to protect the employer's business	Contract is *less* likely to be enforced when it involves: • Employee who already had the skills when he arrived, or merely developed general skills on the job • Customer lists that can be derived from public sources • Excessive time or geographical scope • Terms that are unduly harsh on the employee or contrary to public interest

Suppose that Gina, an engineer, goes to work for Fission Chips, a silicon chip manufacturer that specializes in defense work. She signs a noncompete agreement promising

never to work for a competitor. Over a period of three years, Gina learns some of Fission's proprietary methods of etching information onto the chips. She acquires a great deal of new expertise about chips generally. And she periodically deals with Fission Chip's customers, all of whom are well-known software and hardware manufacturers. Gina accepts an offer from WriteSmall, a competitor. Fission Chips races to court, seeking an injunction that would prevent Gina from (1) working for WriteSmall; (2) working for any other competitor; (3) revealing any of Fission's trade secrets; (4) using any of the general expertise she acquired at Fission Chips; and (5) contacting any of Fission's customers.

This injunction threatens Gina's career. If she cannot work for a competitor, or use her general engineering skills, what *will* she do? And for exactly that reason, no court will grant such a broad order. The court will allow Gina to work for competitors, including WriteSmall. It will order her not to use or reveal any trade secrets belonging to Fission. She will, however, be permitted to use the general expertise she has acquired, and she may contact former customers since anyone could get their names from the yellow pages.

Was the noncompete in the following case styled fairly, or was the employee clipped?

King v. Head Start Family Hair Salons, Inc.

886 So.2d 769
Supreme Court of Alabama, 2004

Facts: Kathy King was a single mother supporting a college-age daughter. For 25 years, she had worked as a hair stylist. For the most recent 16 years, she had worked at Head Start, which provided haircuts, coloring, and styling for men and women. King was primarily a stylist, though she had also managed one of the Head Start facilities.

King quit Head Start and began working as manager of a Sport Clips shop, located in the same mall as the store she just left. Sport Clips offered only haircuts and primarily served men and boys. Head Start filed suit, claiming that King was violating the noncompetition agreement that she had signed. The agreement prohibited King from working at a competing business within a two-mile radius of any Head Start facility for 12 months after leaving the company. The trial court issued an injunction enforcing the noncompete. King appealed.

Issue: ***Was the noncompetition agreement valid?***

Excerpts from Justice Lyons's Decision: King's most persuasive argument is that the geographic restriction contained in the noncompetition agreement imposes an undue hardship on her. King has been in the hair-care industry for 25 years, and it is the only industry in which she is skilled and the only industry in which she can find employment. Head Start has 30 locations throughout the Jefferson County and Shelby County area, making it virtually impossible for her to find employment in the hair-care industry at a facility that does not violate the terms of the noncompetition agreement. According to King, the geographic restriction constitutes a blanket prohibition on practicing her trade.

It cannot reasonably be argued that King, at the age of 40 and having spent more than half of her life as a hair stylist, can learn a new job skill that would allow her to be gainfully employed and meet her needs and the needs of her daughter. Under the circumstances presented here, enforcement of the noncompetition agreement works an undue hardship upon King. The noncompetition agreement cannot so burden King that it would result in her impoverishment.

Head Start is nevertheless entitled to some of the protection it sought in the noncompetition agreement. Head Start has a valid concern that King would be able to attract many of her former Head Start customers if she is allowed to provide hair-care services unencumbered by any limitations. To prevent an undue burden on King and to afford some protection to Head Start, the trial court should enforce a more reasonable geographic restriction—such as one prohibiting King from providing hair-care services within a two-mile radius of the location of the Head Start facility at which she was formerly employed or imposing some other limitation that does not unreasonably interfere with King's right to gainful employment while, at the same time, protecting Head Start's interest in preventing King from unreasonably competing with it during the one-year period following her resignation.

Reversed and remanded.

EXAM Strategy

Question: Caf-Fiend is an expanding chain of coffeehouses. The company offers to buy Bessie's Coffee Shop, in St. Louis, on these terms: Bessie will manage the store, as Caf-Fiend's employee, for one year after the sale. For four years after the sale, Bessie will not open a competing restaurant anywhere within 12 miles. For the same four years, she will not work anywhere in the United States for a competing coffee retailer. Are the last two terms enforceable against Bessie?

Strategy: This contract includes two noncompete clauses. In the first, Bessie agrees not to open a competing business. Courts generally enforce such clauses if they are reasonable in time, geography, and scope of activity. Is this clause reasonable? The second clause involves employment. Courts take a dimmer view of these agreements. Is this clause essential to protect the company's business? Is it unduly harsh for Bessie?

Result: The first restriction is reasonable. Caf-Fiend is entitled to prevent Bessie from opening her own coffeehouse around the corner and drawing her old customers. The second clause is unfair to Bessie. If she wants to move from St. Louis to San Diego and work as a store manager, she is prohibited. It is impossible to see how such employment would harm Caf-Fiend—but it certainly takes away Bessie's career options. The first restriction is valid, the second one unenforceable.

Exculpatory Clauses

You decide to capitalize on your expert ability as a skier and open a ski school in Colorado, "Pike's Pique." But you realize that skiing sometimes causes injuries, so you require anyone signing up for lessons to sign this form:

> I agree to hold Pike's Pique and its employees entirely harmless in the event that I am injured in any way or for any reason or cause, including but not limited to any acts, whether negligent or otherwise, of Pike's Pique or any employee or agent thereof.

The day your school opens, Sara Beth, an instructor, deliberately pushes Toby over a cliff because Toby criticized her clothes. Eddie, a beginning student, "blows out" his knee attempting an advanced racing turn. And Maureen, another student, reaches the bottom of a steep run and slams into a snowmobile that Sara Beth parked there. Maureen, Eddie, and Toby's families all sue Pike's Pique. You defend based on the form you had them sign. Does it save the day?

Exculpatory clause
A contract provision that attempts to release one party from liability in the event the other is injured.

The form on which you are relying is an **exculpatory clause**, that is, one that attempts to release you from liability in the event of injury to another party. Exculpatory clauses are common. Ski schools use them, and so do parking lots, landlords, warehouses, sports franchises, and day-care centers. All manner of businesses hope to avoid large tort judgments by requiring their customers to give up any right to recover. Is such a clause valid? Sometimes. Courts frequently—but do not always—ignore exculpatory clauses, finding that one party was forcing the other party to give up legal rights that no one should be forced to surrender.

An exculpatory clause is generally unenforceable when it attempts to exclude an intentional tort or gross negligence. When Sara Beth pushes Toby over a cliff, that is the intentional tort of battery. A court will not enforce the exculpatory clause. Sara Beth is clearly liable.[4] As to the snowmobile at the bottom of the run, if a court determines that was gross negligence

[4]Note that Pike's Pique is probably not liable under agency law principles that preclude an employer's liability for an employee's intentional tort.

(carelessness far greater than ordinary negligence), then the exculpatory clause will again be ignored. If, however, it was ordinary negligence, then we must continue the analysis.

An exculpatory clause is usually unenforceable when the affected activity is in the public interest, such as medical care, public transportation, or some essential service. Suppose Eddie goes to a doctor for surgery on his damaged knee, and the doctor requires him to sign an exculpatory clause. The doctor negligently performs the surgery, accidentally leaving his cuff links in Eddie's left knee. The exculpatory clause will not protect the doctor. Medical care is an essential service, and the public cannot give up its right to demand reasonable work.

Exculpatory clauses are important to the operators of businesses that involve some risk, such as ski resorts.

But what about Eddie's suit against Pike's Pique? Eddie claims that he should never have been allowed to attempt an advanced maneuver. His suit is for ordinary negligence, and the exculpatory clause probably *does* bar him from recovery. Skiing is a recreational activity. No one is obligated to do it, and there is no strong public interest in ensuring that we have access to ski slopes.

An exculpatory clause is generally unenforceable when the parties have greatly unequal bargaining power. When Maureen flies to Colorado, suppose that the airline requires her to sign a form contract with an exculpatory clause. Because the airline almost certainly has much greater bargaining power, it can afford to offer a "take it or leave it" contract. The bargaining power is so unequal, though, that the clause is probably unenforceable. Does Pike's Pique have a similar advantage? Probably not. Ski schools are not essential and are much smaller enterprises. A dissatisfied customer might refuse to sign such an agreement and take her business elsewhere. A court probably will not see the parties as *grossly* unequal.

An exculpatory clause is generally unenforceable unless the clause is clearly written and readily visible. If Pike's Pique gave all ski students an eight-page contract, and the exculpatory clause was at the bottom of page seven in small print, the average customer would never notice it. The clause would be void.

In the following case, the court focused on the public policy concerns of exculpatory clauses used in a very common setting. Should the exculpatory clause stop the tenant from suing the landlord? You be the judge.

You be the Judge

Ransburg v. Richards

770 N.E.2d 393
Indiana Court of Appeals, 2002

Facts: Barbara Richards leased an apartment at Twin Lakes, a complex owned by Lenna Ransburg. The written lease declared that:

- Twin Lakes would "gratuitously" maintain the common areas.
- Richards's use of the facilities would be "at her own risk."
- Twin Lakes was not responsible for any harm to the tenant or her guests, anywhere on the property (including the parking lot), even if the damage was caused by Twin Lakes' negligence.

It snowed. As Richards walked across the parking lot to her car, she slipped and fell on snow-covered ice. Richards sued Ransburg, who moved for summary judgment based on the exculpatory clause. The trial court denied Ransburg's motion, and she appealed.

You Be the Judge: ***Was the exculpatory clause valid?***

Argument for Tenant: An exculpatory clause in a contract for an essential service violates public policy. When an ill person seeks medical care, his doctor cannot require him to sign an exculpatory clause. In the same way, a person has to live somewhere. Her landlord cannot force her to sign a waiver.

Landlords tend to be wealthy and powerful. There is generally no equality of bargaining power between them. The tenants are not freely agreeing to the exculpatory language.

Moreover, if a landlord fails to maintain property, not just the tenant is at risk. Visitors, the mail carrier, and the general public could all walk through the Twin Lakes parking lot. The public's interest is served when landlords maintain their properties. They must be held liable when they negligently fail to maintain common areas and injuries result.

Argument for Landlord: Ms. Richards does indeed have to live somewhere, but she does not have to live on the plaintiff's property. Surely there are many dozens of properties nearby. If Richards had been dissatisfied with any part of the proposed lease—excessive rent, strict rules, or an exculpatory clause—she was free to take her business to another landlord.

Landlords may generally be wealthier than their tenants, but that fact alone does not mean that a landlord is so powerful that leases are offered on a "take it or leave it" basis. Here, the landlord stated the exculpatory clause plainly. This is a clear contract between adults, and it should stand in its entirety.

Bailment Cases

Bailment
Giving possession and control of personal property to another person.

Bailor
One who creates a bailment by delivering goods to another.

Bailee
A person who rightfully possesses goods belonging to another.

Exculpatory clauses are very common in bailment cases. **Bailment** means giving possession and control of personal property to another person. The person giving up possession is the **bailor**, and the one accepting possession is the **bailee**. When you leave your laptop computer with a dealer to be repaired, you create a bailment. The same is true when you check your coat at a restaurant or lend your Matisse to a museum. Bailees often try to limit their liability for damage to property by using an exculpatory clause.

Judges are slightly more apt to enforce an exculpatory clause in a bailment case because any harm is to *property* and not persons. But courts will still look at many of the same criteria we have just examined to decide whether a bailment contract is enforceable. In particular, when the bailee is engaged in an important public service, a court is once again likely to ignore the exculpatory clause. The following contrasting cases illustrate this.

In *Weiss v. Freeman*,[5] Weiss stored personal goods in Freeman's self-storage facility. Freeman's contract included an exculpatory clause relieving it of any and all liability. Weiss's goods were damaged by mildew, and she sued. The court held the exculpatory clause valid. The court considered self-storage to be a significant business, but not as vital as medical care or housing. It pointed out that a storage facility would not know what each customer stored and therefore could not anticipate the harm that might occur. Freedom of contract should prevail, the clause was enforceable, and Weiss got no money.

But in *Gardner v. Downtown Porsche Audi*,[6] Gardner left his Porsche 911 at Downtown for repairs. He signed an exculpatory clause saying that Downtown was "Not Responsible for Loss or Damage to Cars or Articles Left in Cars in Case of Fire, Theft, or Any Other Cause Beyond Our Control." Due to Downtown's negligence, Gardner's Porsche was stolen. The court held the exculpatory clause void. It ruled that contemporary society is utterly dependent upon automobile transportation and Downtown was therefore in a business of great

[5] 1994 Tenn. App. LEXIS 393 (Tenn. Ct. App. 1993).

public importance. No repair shop should be able to contract away liability, and Gardner won. (This case also illustrates that using 17 uppercase letters in one sentence does not guarantee legal victory.)

EXAM Strategy

Facts: Shauna flew a World War II fighter aircraft as a member of an exhibition flight team. While the team was performing in a delta formation, another plane collided with Shauna's aircraft, causing her to crash-land and leaving her permanently disabled. Shauna sued the other pilot and the team. The defendants moved to dismiss based on an exculpatory clause that Shauna had signed. The clause was one paragraph long, and it stated that Shauna knew team flying was inherently dangerous and could result in injury or death. She agreed not to hold the team or any members liable in case of an accident. Shauna argued that the clause should not be enforced against her if she could prove the other pilot was negligent. Please rule.

Strategy: The issue is whether the exculpatory clause is valid. Courts are likely to declare such clauses void if they concern vital activities like medical care, exclude an intentional tort or gross negligence, or if the parties had unequal bargaining power.

Result: This is a clear, short clause, between parties with equal bargaining power, and does not exclude an intentional tort or gross negligence. The activity is unimportant to the public welfare. The clause is valid. Even if the other pilot was negligent, Shauna will lose, meaning the court should dismiss her lawsuit.

Unconscionable Contracts

Gail Waters was young, naive, and insecure. A serious injury when she was 12 years old left her with an annuity, that is, a guaranteed annual payment for many years. When Gail was 21, she became involved with Thomas Beauchemin, an ex-convict, who introduced her to drugs. Beauchemin suggested that Gail sell her annuity to some friends of his, and she agreed. Beauchemin arranged for a lawyer to draw up a contract, and Gail signed it. She received $50,000 for her annuity, which at that time had a cash value of $189,000 and was worth, over its remaining 25 years, $694,000. Gail later decided this was not a wise bargain. Was the contract enforceable? That depends on the law of unconscionability.

An unconscionable contract is one that a court refuses to enforce because of fundamental unfairness. Even if a contract does not violate any specific statute or public policy, it may still be void if it "shocks the conscience" of the court.

Historically, a contract was considered unconscionable if it was "such as no man in his senses and not under delusion would make on the one hand, and as no honest and fair man would accept on the other."[7] The two factors that most often led a court to find unconscionability were (1) **oppression**, meaning that one party used its superior power to force a

Oppression
One party uses its superior power to force a contract on the weaker party.

[7] *Hume v. United States*, 132 U.S. 406, 411, 10 S.Ct. 134, 1889 U.S. LEXIS 1888 (1889), quoting *Earl of Chesterfield v. Janssen*, 38 Eng. Rep. 82, 100 (Ch. 1750).

contract on the weaker party, and (2) **surprise**, meaning that the weaker party did not fully understand the consequences of its agreement.

These cases have always been controversial because it is not easy to define oppression and unfair surprise. Further, anytime a court rejects a contract as unconscionable, it diminishes freedom of contract. If one party can escape a deal based on something as hard to define as unconscionability, then no one can rely as confidently on any agreement. As an English jurist said in 1824, "public policy is a very unruly horse, and when once you get astride it, you never know where it will carry you."[8]

Gail Waters won her case. The Massachusetts high court ruled:

> Beauchemin introduced the plaintiff to drugs, exhausted her credit card accounts to the sum of $6,000, unduly influenced her, suggested that the plaintiff sell her annuity contract, initiated the contract negotiations, was the agent of the defendants, and benefited from the contract between the plaintiff and the defendants. The defendants were represented by legal counsel; the plaintiff was not. The cash value of the annuity policy at the time the contract was executed was approximately four times greater than the price to be paid by the defendants. For payment of not more than $50,000 the defendants were to receive an asset that could be immediately exchanged for $189,000, or they could elect to hold it for its guaranteed term and receive $694,000.
>
> The defendants assumed no risk and the plaintiff gained no advantage. We are satisfied that the disparity of interests in this contract is so gross that the court cannot resist the inference that it was improperly obtained and is unconscionable.[9]

Adhesion Contracts

Adhesion contracts
Standard form contracts prepared by one party and presented to the other on a "take it or leave it" basis.

A related issue concerns **adhesion contracts**, which are standard form contracts prepared by one party and given to the other on a "take it or leave it" basis. We have all encountered them many times when purchasing goods or services. When a form contract is vigorously negotiated between equally powerful corporations, the resulting bargain is generally enforced. However, when the contract is simply presented to a consumer who has no ability to bargain, it is an adhesion contract and subject to an unconscionability challenge.

WORLDWIDE INSURANCE v. KLOPP

603 A.2d 788, 1992 Del. LEXIS 13
Supreme Court of Delaware, 1992

Facts: Ruth Klopp had auto insurance with Worldwide. She was injured in a serious accident that left her with permanent neck and back injuries. The other driver was uninsured, so Klopp filed a claim with Worldwide under her "uninsured motorist" coverage. Her policy required arbitration of such a claim, and the arbitrators awarded Klopp $90,000. But the policy also stated that if the arbitrators awarded more than the statutory minimum amount of insurance ($15,000), either side could appeal the award and request a full trial. Worldwide appealed and demanded a trial.

In the trial court, Klopp claimed that the appeal provision was unconscionable and void. The trial court agreed and entered judgment for the full $90,000. Worldwide appealed.

Issue: ***Is the provision that requires arbitration and then permits appeal by either party void as unconscionable?***

---

[8] *Richardson v. Mellish*, 2 Bing. 229, 103 Eng. Rep. 294, 303 (1824).
[9] *Waters v. Min Ltd.*, 412 Mass. 64, 587 N.E.2d 231, 1992 Mass. LEXIS 66 (1992).

Excerpts from Justice Walsh's Decision: The parties' views of the arbitration provision are polar opposites. Worldwide contends that the provision is a clear and unambiguous contractual undertaking granting both the insured and the insurer the right to appeal any award in excess of financial responsibility limits. Klopp argues that this provision is unconscionable and void as against public policy because it affords an advantage to one of the parties under a contract of adhesion.

The public policy of this State favors the resolution of disputes through arbitration. An insurance policy which provides for arbitration as its primary mechanism for dispute resolution is thus enforceable against the wishes of either contractual party. [But] our approval of the arbitration concept does not extend to any feature of a contract of adhesion, which, in whole or in part, is unconscionable.

Under the present policy language, both parties are bound by a low award which an insurance company is unlikely to appeal. While high awards may be appealed by either party, common experience suggests that it is unlikely that an insured would appeal such an award. It is the insurer who, generally, would be dissatisfied with a high award. The policy provision thus presents an "escape hatch" to the insurer for avoidance of high arbitration awards, whether or not the award was fair and reasonable. However, the insured, who would tend to be dissatisfied with a low award, is barred from appealing such an award, i.e., an award under [$15,000].

In our view, the policy provision at issue here promotes litigation, circumvents the arbitration process, and provides an arbitration escape device in favor of an insurance company. So viewed, the provision is contrary to the public policy of this State. Accordingly, we hold that a provision in an insurance policy which allows either party to demand a trial de novo, if the amount of an arbitrators' award exceeds a stated minimum amount but denies review for lesser awards, is void as against public policy and unenforceable. The Chancery Court was correct in striking this unconscionable clause.

The judgment of the Court of Chancery is *affirmed.*

The UCC: Unconscionability and Sales Law

With the creation of the Uniform Commercial Code (UCC), the law of unconscionability got a boost. The Code explicitly adopts unconscionability as a reason to reject a contract.[10] Although the Code directly applies only to the sale of goods, its unconscionability section has proven to be influential in other cases as well, and courts today are more receptive than they were 100 years ago to a contract defense of fundamental unfairness.

The drafters of the UCC reinforced the principle of unconscionability by including it in §2-302:

> If the court as a matter of law finds the contract or any clause of the contract to have been unconscionable at the time it was made the court may refuse to enforce the contract, or it may enforce the remainder of the contract without the unconscionable clause, or it may so limit the application of any unconscionable clause as to avoid any unconscionable result.

In Code cases, the issue of unconscionability often arises when a company attempts to limit the normal contract law remedies. Yet the Code itself allows such limitations, provided they are reasonable.

Section 2-719 provides in part:

> [A contract] may provide for remedies in addition to or in substitution for those provided [by the Code itself] *and may limit or alter the measure of damages recoverable* ... as by limiting the buyer's remedies to return of the goods and repayment of the price ...

In other words, the Code includes two potentially competing sections: §2-719 permits a seller to insist that the buyer's only remedy for defective goods is return of the purchase

[10] UCC §2-302.

price, but §2-302 says that *any unconscionable* provision is unenforceable. In lawsuits concerning defective goods, the seller often argues that the buyer's only remedies are those stated in the agreement, and the buyer responds that the contract limitation is unconscionable.

Electronic Data Systems (EDS) agreed to create complex software for Chubb Life America at a cost of $21 million. Chubb agreed to make staggered payments over many months as the work proceeded. The contract included a limitation on remedies, stating that if EDS became liable to Chubb, its maximum liability would be equal to two monthly payments.

EDS's work was woefully late and unusable, forcing Chubb to obtain its software elsewhere. Chubb sued, claiming $40 million in damages based on the money paid to EDS and additional funds spent purchasing alternative goods. EDS argued that the contract limited its liability to two monthly payments, a fraction of Chubb's damage. Chubb, of course, responded that the limitation was unconscionable.

The court noted that both parties were large, sophisticated corporations. As they negotiated the agreement, the companies both used experienced attorneys and independent consultants. This was no contract of adhesion presented to a meek consumer, but an allocation of risk resulting from hard bargaining. The court declared that the clause was valid, and EDS owed no more than two monthly payments.[11]

Chapter Conclusion

It is not enough to bargain effectively and obtain a contract that gives you exactly what you want. You must also be sure that the contract is legal. What appears to be an insurance contract might legally be an invalid wager. Unintentionally forgetting to obtain a state license to perform a certain job could mean you will never be paid for it. Bargaining a contract with a noncompete or exculpatory clause that is too one-sided may lead a court to ignore it. Legality is multifaceted, sometimes subtle, and always important.

Exam Review

Illegal contracts are void and unenforceable. Illegality most often arises in these settings:

1. **WAGERING** A purely speculative contract—whether for gambling or insurance—is likely to be unenforceable. (pp. 296–297)

2. **LICENSING** When the licensing statute is designed to protect the public, a contract by an unlicensed plaintiff is generally unenforceable. When such a statute is designed merely to raise revenue, a contract by an unlicensed plaintiff is generally enforceable. (pp. 297–298)

[11] *Colonial Life Insurance Co. v. Electronic Data Systems Corp.*, 817 F. Supp. 235, 1993 U.S. Dist. LEXIS 4123 (D.N.H. 1993).

EXAM Strategy

Question: James Wagner agreed to build a house for Nancy Graham. Wagner was not licensed as a contractor, and Graham knew it. When the house was finished, Graham refused to pay the final $23,000, and Wagner sued. Who will prevail?

Strategy: A licensing statute designed to protect the public is strictly enforced, but that is not true for one intended only to raise revenue. What was the purpose of this statute? (See the "Result" at the end of this section.)

3. USURY Excessive interest is generally unenforceable and may be fatal to the entire debt. Credit card debt is often exempt from usury laws. (pp. 299–300)

EXAM Strategy

Question: McElroy owned 104 acres worth about $230,000. He got into financial difficulties and approached Grisham, asking to borrow $100,000. Grisham refused, but ultimately the two reached this agreement: McElroy would sell Grisham his property for $80,000, and the contract would include a clause allowing McElroy to repurchase the land within two years for $120,000. McElroy later claimed the contract was void. Is he right?

Strategy: Loans involving usury do not always include a clearly visible interest rate. You may have to do some simple math to see the interest being charged. McElroy wanted to borrow $100,000, but instead sold his property, with the right to repurchase. If he did repurchase, how much interest would he have effectively paid? (See the "Result" at the end of this section.)

4. NONCOMPETE A noncompete clause in the sale of a business must be limited to a reasonable time, geographic area, and scope of activity. In an employment contract, such a clause is considered reasonable—and enforceable—only to protect trade secrets, confidential information, and customer lists. (pp. 301–304)

EXAM Strategy

Question: The purchaser of a business insisted on putting this clause in the sales contract: The seller would not compete, for five years, "anywhere in the United States, the continent of North America, or anywhere else on earth." What danger does that contract represent *to the purchaser?*

Strategy: This is a noncompete clause based on the sale of a business. Such clauses are valid if reasonable. Is this clause reasonable? If it is unreasonable, what might a court do? (See the "Result" at the end of this section.)

5. EXCULPATORY CLAUSES These clauses are generally void if the activity involved is in the public interest, the parties are greatly unequal in bargaining power, or the clause is unclear. In other cases, they are generally enforced. (pp. 304–307)

6. **UNCONSCIONABILITY** Oppression and surprise may create an unconscionable bargain. An adhesion contract is especially suspect when it is imposed by a corporation on a consumer or small company. Under the UCC, a limitation of liability is less likely to be unconscionable when both parties are sophisticated corporations. (pp. 307–310)

2. Result: This statute was designed to protect the public. Wagner was unlicensed and cannot enforce the contract. Graham wins.

3. Result: By selling at $80,000 and repurchasing at $120,000, McElroy would be paying $40,000 in interest on an $80,000 loan. The 50 percent rate is usurious. The court prohibited Graham from collecting the interest.

4. Result: "Anywhere else on earth"? This is almost certainly unreasonable. It is hard to imagine a purchaser who would legitimately need such wide-ranging protection. In some states, a court might rewrite the clause, limiting the effect to the seller's state, or some reasonable area. However, in other states, a court finding a clause unreasonable will declare it void in its entirety—enabling the seller to open a competing business next door.

Multiple-Choice Questions

1. At a fraternity party, George mentions that he is going to learn to hang-glide during spring break. Vicki, a casual friend, overhears him, and the next day she purchases a $100,000 life insurance policy on George's life. George has a happy week of hang-gliding. But on the way home, he is bitten by a parrot and dies of a rare tropical illness. Vicki files a claim for $100,000. The insurance company refuses to pay.
   (a) Vicki will win $100,000, but only if she mentioned animal bites to the insurance agent.
   (b) Vicki will win $100,000 regardless of whether she mentioned animal bites to the insurance agent.
   (c) Vicki will win $50,000.
   (d) Vicki will win nothing.

2. Now assume that Vicky has loaned George $50,000. George again mentions that he is going to learn to hang-glide during spring break, so Vicki purchases the $100,000 life insurance policy on George's life. If George dies and the insurance company refuses to pay…
   (a) Vicki will win $100,000, but only if she mentioned animal bites to the insurance agent.
   (b) Vicki will win $100,000 regardless of whether she mentioned animal bites to the insurance agent.
   (c) Vicki will win $50,000.
   (d) Vicki will win nothing.

3. KwikFix, a Fortune 500 company, contracts with Allied Rocket, another huge company, to provide the software for Allied's new Jupiter Probe rocket for

$14 million. The software is negligently designed, and when the rocket blasts off from Cape Kennedy, it travels only as far as Fort Lauderdale before crashing to Earth. Allied Rocket sues for $200 million and proves that as a result of the disaster, it lost a huge government contract, worth at least that much, which KwikFix was aware of. KwikFix responds that its contract with Allied included a clause limiting its liability to the value of the contract. Is the contract clause valid?

(a) The clause is unenforceable because it is unconscionable.

(b) The clause is unenforceable because it is exculpatory.

(c) The clause is enforceable because both parties are sophisticated corporations.

(d) The clause is enforceable because $200 million is an unconscionable claim.

4. Ricki goes to a baseball game. The back of her ticket clearly reads: "Fan agrees to hold team blameless for all injuries—pay attention to the game at all times for your own safety!" In the first inning, a foul ball hits Ricki in the elbow. She ____________ sue the team over the foul ball. Ricki spends the next several innings riding the opposing team's first baseman. The *nicest* thing she says to him is, "You suck, Franklin!" In the eighth inning, Franklin has had enough. He grabs the ballboy's chair and throws it into the stands, injuring Ricki's other elbow. Ricki ____________ sue the team over the thrown chair.

(a) can; can

(b) can; cannot

(c) cannot; can

(d) cannot; cannot

5. Jim, about to start a pickup soccer game, asks Desiree if she will hold his wallet while he plays. Desiree, a law student, says, "Sure, if you'll sign this exculpatory clause holding me blameless for negligence." Jim is very surprised, but he signs the paper that Desiree holds out for him. A bailment ____________ been created. If Desiree is careless and loses the wallet, she ____________ be liable to Jim.

(a) has; will

(b) has; will not

(c) has not; will

(d) has not; will not

ESSAY QUESTIONS

1. For 20 years, Art's Flower Shop relied almost exclusively on advertising in the yellow pages to bring business to its shop in a small West Virginia town. One year, the yellow pages printer accidentally did not print Art's ad, and Art's suffered an enormous drop in business. Art's sued for negligence and won a judgment of $50,000 from the jury, but the printing company appealed, claiming that under an exculpatory clause in the contract, the company could not be liable to Art's for more than the cost of the ad, about $910. Art's claimed that the exculpatory clause was unconscionable. Please rule.

2. Brockwell left his boat to be repaired at Lake Gaston Sales. The boat contained electronic equipment and other personal items. Brockwell signed a form stating that Lake Gaston had no responsibility for any loss to any property in or on the boat. Brockwell's electronic equipment was stolen and other personal items were damaged, and he sued. Is the exculpatory clause enforceable?

3. Guyan Machinery, a West Virginia manufacturing corporation, hired Albert Voorhees as a salesman and required him to sign a contract stating that if he left Guyan, he would not work for a competing corporation anywhere within 250 miles of West Virginia for a two-year period. Later, Voorhees left Guyan and began working at Polydeck Corp., another West Virginia manufacturer. The only product Polydeck made was urethane screens, which comprised half of 1 percent of Guyan's business. Is Guyan entitled to enforce its noncompete clause?

4. 810 Associates owned a 42-story skyscraper in midtown Manhattan. The building had a central station fire alarm system, which was monitored by Holmes Protection. A fire broke out and Holmes received the signal. But Holmes's inexperienced dispatcher misunderstood the signal and failed to summon the fire department for about nine minutes, permitting tremendous damage. 810 sued Holmes, which defended based on an exculpatory clause that relieved Holmes of any liability caused in any way. Holmes's dispatcher was negligent. Does it matter *how* negligent he was?

5. ***YOU BE THE JUDGE* WRITING PROBLEM** Oasis Waterpark, located in Palm Springs, California, sought out Hydrotech Systems, Inc., a New York corporation, to design and construct a surfing pool. Hydrotech replied that it could design the pool and sell all the necessary equipment to Oasis, but it could not build the pool because it was not licensed in California. Oasis insisted that Hydrotech do the construction work because Hydrotech had unique expertise in these pools. Oasis promised to arrange for a licensed California contractor to "work with" Hydrotech on the construction; Oasis also assured Hydrotech that it would pay the full contract price of $850,000, regardless of any licensing issues. Hydrotech designed and installed the pool as ordered. But Oasis failed to make the final payment of $110,000. Hydrotech sued. Can Hydrotech sue for either breach of contract or fraud (trickery)? **Argument for Oasis:** The licensing law protects the public from incompetence and dishonesty. The legislature made the section strict: no license, no payment. If the court were to start picking and choosing which unlicensed contractors could win a suit, it would be inviting incompetent workers to endanger the public and then come into court and try their luck. That is precisely the danger the legislature seeks to avoid. **Argument for Hydrotech:** This is not the kind of case the legislature was worried about. Hydrotech has never solicited work in California. Hydrotech went out of its way to avoid doing any contracting work, informing Oasis that it was unlicensed in the state. Oasis insisted on bringing Hydrotech into the state to do work. If Oasis has its way, word will go out that any owner can get free work done by hiring an *unlicensed* builder. Make any promises you want, get the work done to your satisfaction, and then stiff the contractor—you'll never have to pay.

Discussion Questions

1. ***ETHICS:*** Richard and Michelle Kommit traveled to New Jersey to have fun in the casinos. While in Atlantic City, they used their MasterCard to withdraw cash from an ATM conveniently located in the "pit"—the gambling area of a casino. They ran up debts of $5,500 on the credit card and did not pay. The Connecticut National Bank sued for the money. Law aside, who has the moral high ground? Is it acceptable for the *casino* to offer ATM services in the gambling pit? If a *credit card* company allows customers to withdraw cash in a casino, is it encouraging them to lose money? Do *the Kommits* have any ethical right to use the ATM, attempt to win money by gambling, and then seek to avoid liability?

2. The Justice Department recently shut down three of the most popular online poker websites (Poker Stars, Absolute Poker, and Full Tilt Poker). State agencies take countless actions each year to stop illegal gaming operations. Do you believe that gambling by adults *should* be regulated? If so, which types? Rate the following types of gambling from most acceptable to least acceptable:

– online poker	– state lotteries	– horse racing
– casino gambling	– bets on pro sports	– bets on college sports

3. Van hires Terri to add an electrical outlet to his living room for his new HDTV. Terri does an excellent job, and the new outlet works perfectly. She presents Van with a bill for $200. But Terri is not a licensed electrician. Her state sets licensing standards in the profession to protect the public. And so, Van can refuse to pay Terri's bill. Is this reasonable? *Should* he be able to avoid payment?

4. Should noncompete agreements in employment contracts be illegal altogether? Is there equality of bargaining power between the company and the employee? Should non-competes be limited to top officers of a company? Would you be upset if a prospective employer asked *you* to agree to a one year covenant not to compete?

5. Revisit the Gail Waters example on page **[307]**. Imagine now that Beauchemin was not her boyfriend, and that he had not introduced her to the drugs to which she became addicted. If all other facts in the case remain the same, would the purchase of the annuity for $50,000 still be unconscionable, in your opinion?

CHAPTER 14

Voidable Contracts: Capacity and Consent

© picsbyst/Shutterstock.com

Katie, age 17, visits her local electronics store to buy a new laptop. At the register, she pays $400 in cash for the machine. No one is with her, and the cashier does not ask her to show her ID.

Out in the parking lot, Katie's cell phone rings. As she fumbles for it, she loses her grip on the new laptop. It falls to the pavement—crack!—bounces once, and comes to rest a few feet away from her.

Just then, an H2 Hummer rounds the corner. It runs over Katie's new laptop. "Ugg ..." she says, feeling nauseous. The SUV stops, and the reverse lights come on. It backs slowly over the laptop again. The driver, oblivious, rolls down his window and asks Katie, "Say, is there a gas station around here?"

> Just then, an H2 Hummer rounds the corner. It runs over Katie's new laptop.

"Ah ... that way," a shocked Katie says, pointing to a sign in the distance. "But you just ..."

"Oh, I see it! Thanks a million!" The driver puts the Hummer in gear and drives over the laptop a third time. The small jolt loosens the one lug nut securing the spare tire to the back of the SUV. The heavy spare falls directly on top of what remains of Katie's new laptop.

Scooping up wires, bits of plastic, and pieces of metal, she goes back inside the store. Dumping the pieces on the customer service desk, she says, "I've changed my mind about this computer."

The clerk looks at the collection of laptop parts, shakes his head, and points to a sign behind him. "Look, I can't take merchandise back if it's damaged. And this laptop is, ah, damaged."

"Too bad," Katie says. " I want my money back. Now."

Is Katie entitled to a full refund? In most states, *yes*.

This chapter examines **voidable contracts**. When a contract is voidable, one party has the option either to enforce or terminate the agreement. Two specific issues are presented.

Capacity concerns the legal ability of a party to enter a contract in the first place. Someone may lack capacity because of his young age or mental infirmity. **Consent** refers to whether a contracting party truly understood what she was getting into and whether she made the agreement voluntarily. Consent issues arise in cases of fraud, mistake, duress, and undue influence.

CAPACITY

Capacity is the legal ability to enter into a contract. An adult of sound mind has capacity. Generally, any deal she enters into will be enforced if all elements on the Contracts Checklist—agreement, consideration, and so forth—are present. But two groups of people usually lack legal capacity: minors and those with a mental impairment.

Contracts Checklist

- [ ] Offer
- [ ] Acceptance
- [ ] Consideration
- [ ] Legality
- [x] Capacity
- [ ] Consent
- [ ] Writing

Minors

In contract law, a minor is someone under the age of 18. Because a minor lacks legal capacity, she normally can create only a voidable contract. **A voidable contract may be canceled by the party who lacks capacity.** Notice that *only the party lacking capacity* may cancel the agreement. So a minor who enters into a contract generally may choose between enforcing the agreement or negating it. The other party—an adult, or perhaps a store—has no such right. Voidable contracts are very different from those that are void, which we examined in Chapter 13, on legality. A *void* contract is illegal from the beginning and may not be enforced by either party. A *voidable* contract is legal but permits one party to escape, if she so wishes.

Disaffirmance

A minor who wishes to escape from a contract generally may **disaffirm** it; that is, he may notify the other party that he refuses to be bound by the agreement. There are several ways a minor may disaffirm a contract. He may simply tell the other party, orally or in writing, that he will not honor the deal. Or he may disaffirm a contract by refusing to perform his obligations under it. A minor may go further—he can undo a contract that has already been completed by filing a suit to **rescind** the contract; that is, to have a court formally cancel it.

Disaffirm
To give notice of refusal to be bound by an agreement.

Rescind
To cancel a contract.

Kevin Green was 16 when he signed a contract with Star Chevrolet to buy a used Camaro. Because he was a minor, the deal was voidable. When the Camaro blew a gasket and Kevin informed Star Chevrolet that he wanted his money back, he was disaffirming the contract. He happened to do it because the car suddenly seemed a poor buy, but he could have disaffirmed for any reason at all, such as deciding that he no longer liked Camaros. When Kevin disaffirmed, he was entitled to his money back.

Restitution

A minor who disaffirms a contract must return the consideration he has received, to the extent he is able. Restoring the other party to its original position is called **restitution**. The consideration that Kevin Green received in the contract was, of course, the Camaro.

Restitution
Restoring an injured party to its original position.

What happens if the minor is not able to return the consideration because he no longer has it or it has been destroyed? Most states hold that the minor is *still* entitled to his money back. A minority of states follow the **status quo rule**, which provides that, if a

minor cannot return the consideration, the adult or store is only required to return its *profit margin* to the minor.

In the opening scenario, Katie attempted to return a destroyed laptop for the full purchase price of $400. Assume that the store paid a computer manufacturer $350 for the laptop and then marked it up $50.

In most states, Katie would be entitled to the full $400 purchase price, even though the laptop is now worthless. The sign at the customer service desk would have no effect, and the store would have to absorb the loss. But, if Katie lives in a state with the status quo rule, then the store will have to refund only $50 to Katie. It is permitted to keep the other $350 so that it breaks even on the transaction, or is "returned to the status quo."

Ethics The rule permitting a minor to disaffirm a contract is designed to discourage adults from making deals with innocent children, and it is centuries old. Is this rule still workable in our modern consumer society? There are entire industries devoted to (and dependent upon) minors. Think of children's films, music, sneakers, and toys. Does this rule imperil retailers? Is it *right* to give a 17-year-old high school senior so much power to cancel agreements? In the opening scenario, is it reasonable for Katie to seek a full refund, or is she taking advantage of the system?

Timing of Disaffirmance/Ratification

Ratification
Words or actions indicating an intention to be bound by a contract.

A minor may disaffirm a contract anytime before she reaches age 18. She also may disaffirm within a reasonable time *after* turning 18. Suppose that 17-year-old Betsy signs a contract to buy a $3,000 stereo. The following week, she picks up the system and pays for it in full. Four months later, she turns 18, and two months after that, she disaffirms the contract. Her disaffirmance is effective. In most states, she gets 100 percent of her money back. In some cases, minors have been entitled to disaffirm a contract several *years* after turning 18. But the minor's right to disaffirm ends if she ratifies the contract. **Ratification** is made by any words or action indicating an intention to be bound by the contract. Suppose Betsy, age 17, buys her stereo on credit, promising to pay $150 per month. She has made only four payments by the time she turns 18, but after reaching her majority, she continues to pay every month for six more months. Then she attempts to disaffirm. Too late. Her actions—payment of the monthly bill for six months as an adult—ratified the contract she entered into as a minor. She is now fully obligated to pay the entire $3,000, on the agreed-upon schedule.

Exception: Necessaries

A necessary is something essential to the minor's life and welfare. **On a contract for necessaries, a minor must pay for the value of the benefit received.** In other words, the minor may still disaffirm the contract and return whatever is unused. But he is liable to pay for whatever benefit he obtained from the goods while he had them. Food, clothing, housing, and medical care are necessaries. Thus a 16-year-old who buys and eats a 99-cent cheeseburger cannot later seek his 99 cents from the fast food restaurant.

Exception: Misrepresentation of Age

The rules change somewhat if a minor lies about his age. Sixteen-year-old Dan is delighted to learn from his friend Betsy that a minor can buy a fancy stereo system, use it for a year or so, and then get his money back. Dan drops into SoundBlast and asks to buy a $4,000 surround-sound

system. The store clerk says that the store no longer sells expensive systems to underage customers. Dan produces a fake driver's license indicating that he is 18, and the clerk sells him the system. A year later, Dan drives up to SoundBlast and unloads the system, now in shambles. He asks for his $4,000 back. Is he still permitted to disaffirm?

States have been troubled by this problem, and there is no clear rule. A few states will still permit Dan to disaffirm the contract entirely. The theory is that a minor must be saved from his own poor judgment, including his foolish lie. Many states, though, will prohibit Dan from disaffirming the contract. They take the reasonable position that the law was intended to protect childhood innocence, not calculated deceit.

Mentally Impaired Persons

You are a trial court judge. Don wants you to rule that his father, Cedric, is mentally incompetent and, on behalf of Cedric, to terminate a contract he signed. Here is the evidence:

Cedric is a 75-year-old millionaire who keeps $300,000 stuffed in pillow cases in the attic. He lives in a filthy house with a parrot whom he calls the Bishop, an iguana named Orlando, and a tortoise known as Mrs. Sedgely. All of the pets have small beds in Cedric's grungy bedroom, and each one eats at the dining table with its master. Cedric pays college students $50 an hour to read poetry to the animals, but he forbids the reading of sonnets, which he regards as "the devil's handiwork."

Don has been worried about Cedric's bizarre behavior for several years and has urged his father to enter a nursing home. Last week, when Don stopped in to visit, Cedric became angry at him, accusing his son of disrespecting the Bishop and Mrs. Sedgely, who were enjoying a 15th-century Castilian poem that Jane, a college student, was reading. Don then blurted out that Cedric was no longer able to take care of himself. Cedric snapped back, "I'll show you how capable I am." On the back of a 40-year-old menu, he scratched out a contract promising to give Jane "$100,000 today and $200,000 one year from today if she agrees to feed, house, and care for the Bishop, Orlando, and Mrs. Sedgely for the rest of their long lives." Jane *quickly* signed the agreement. Don urges that the court, on Cedric's behalf, declare the contract void. How will you rule? Courts often struggle when deciding cases of mental competence.

A person suffers from a mental impairment if, by reason of mental illness or defect, he is unable to understand the nature and consequences of the transaction.[1] The mental impairment can be due to some mental illness, such as schizophrenia, or to mental retardation, brain injury, senility, or any other cause that renders the person unable to understand the nature and consequences of the contract.

A party suffering a mental impairment usually creates only a voidable contract. The impaired person has the right to disaffirm the contract just as a minor does. But again, the contract is voidable, not void. The mentally impaired party generally has the right to full performance if she wishes.

The law creates an exception: if a person has been adjudicated insane, then all of his future agreements are void. "Adjudicated insane" means that a judge has made a formal finding that a person is mentally incompetent and has assigned the person a guardian.

How will a court evaluate Cedric's mental status? Of course, if there had already been a judicial determination that he was insane, any contract he signed would be void. Since no judge has issued such a ruling about Cedric, the court will listen to doctors or therapists who have evaluated him and to anyone else who can testify about Cedric's recent conduct. The court may also choose to look at the contract itself, to see if it is so lopsided that no competent person would agree to it.

---

[1]Restatement (Second) of Contracts §15.

How will Don fare in seeking to preserve Cedric's wealth? Poorly. Unless Don has more evidence than we have heard thus far, he is destined to eat canned tuna while Jane and the Bishop dine on caviar. Cedric is decidedly eccentric, and perhaps unwise. But those characteristics do not prove mental impairment. Neither does leaving a fortune to a poetry reader. If Don could produce evidence from a psychiatrist that Cedric, for example, was generally delusional or could not distinguish a parrot from a religious leader, that would persuade a court of mental impairment. But on the evidence presented thus far, Mrs. Sedgely and friends will be living well.[2]

Intoxication

Similar rules apply in cases of drug or alcohol intoxication. When one party is so intoxicated that he cannot understand the nature and consequences of the transaction, the contract is voidable.

We wish to stress that courts are *highly* skeptical of intoxication arguments. If you go out drinking and make a foolish agreement, you are probably stuck with it. Even if you are too drunk to drive, you are probably not nearly too drunk to make a contract. If your blood alcohol level is, say, .08, your coordination and judgment are poor. Driving in such a condition is dangerous. But you probably have a fairly clear awareness of what is going on around you.

Upon the question of his intoxication, he was corroborated abundantly.

To back out of a contract on the grounds of intoxication, you must be able to provide evidence that you did not understand the "nature of the agreement," or the basic deal that you made.

The following landmark case is a rare exception, and the defendant was able to escape the deal. The defendant had lots of witnesses who testified that he had no idea what he was doing.

[2]For a similar case, see *Harwell v. Garrett*, 239 Ark. 551, 393 S.W.2d 256, 1965 Ark. LEXIS 1033 (1965).

Landmark Case

Babcock v. Engel

58 Mont. 597; 194 P. 137
Supreme Court of Montana, 1920

Facts: While Charles Engel's wife was out of town, he sat home alone, drinking mightily. During this period, he made an agreement with G. M. Babcock to trade a 320-acre farm and $2,000 worth of personal property for a hotel. Engel's property was worth approximately twice the value of the hotel. Engel later refused to honor the deal on the grounds that he had been intoxicated when he made the agreement. Babcock sued, but the jury sided with Engel and dismissed the complaint. Babcock appealed.

Issue: ***Was Engel so intoxicated that his agreement with Babcock became voidable?***

Excerpts from Justice Holloway's Decision: If, as a matter of fact, Engel was so far under the influence of intoxicating liquor when he signed the contract that he was incapable of giving his assent, it would be voidable at the election of Engel when he became sober.

[T]he jury answered that on November 22, Engel was "so under the influence of intoxicating liquors as to deprive him of his powers of reasoning and render him unable to comprehend the consequences of his act in executing said agreement."

Engel himself testified to the effect that, availing himself of his wife's absence from home, he had been indulging greatly to excess and had been drunk on November 21; that he drank heavily of whisky which he had at his home on the morning of November 22; that immediately upon his arrival in the town, he had four or five drinks of whisky and blackberry before he entered upon the negotiations with Babcock.

Four other witnesses, each apparently disinterested, testified that at the time in question, Engel was intoxicated, could not comprehend the nature of his acts, in other words, that he was not qualified to transact business. The jury determined upon the credibility of the witnesses.

Intoxication is not made a defense by the Codes, and there was a time in the history of our jurisprudence when courts refused to lend their aid to relieve one from the consequences of his own voluntary intemperance, but the doctrine has long since been abandoned. The courts do not now concern themselves so much with the question of intoxication as with the question of contractual capacity, and if in fact either party is not mentally capable of giving his free consent to the terms disclosed by the writing, it is altogether immaterial by what cause his incapacity was produced. The courts have simply recognized the fact that intoxication, among other things, may render a person incapable of making a binding contract.

The test approved by the great majority of the decisions is the same which is applied in other forms of mental derangement, namely, that the deed or contract will be voidable if the person, at the time of its execution, was so far under the influence of intoxicants as to be unable to understand the nature and consequences of his act, and unable to bring to bear upon the business in hand any degree of intelligent choice and purpose.

Affirmed.

Restitution

A mentally infirm party who seeks to void a contract must make restitution. If a party succeeds with a claim of mental impairment, the court will normally void the contract but will require the impaired party to give back whatever she got. Suppose Danielle buys a Rolls-Royce and promises in writing to pay $4,000 per month for five years. Three weeks later, she seeks to void the contract on the grounds of mental impairment. She must return the Rolls. If the car has depreciated, Danielle normally will have to pay for the decrease in value. What happens if restitution is impossible? Generally, courts require a mentally infirm person to make full restitution if the contract is to be rescinded. If restitution is impossible, the court will not rescind the agreement unless the infirm party can show bad faith by the other. This is because, unlike minority, which is generally easy to establish, mental competence may not be so apparent to the other person negotiating.

Reality of Consent

Smiley offers to sell you his house for $300,000, and you agree in writing to buy it. After you move in, you discover that the house is sinking into the earth at the rate of six inches per week. In twelve months, your only access to the house may be through the chimney. You sue, seeking to rescind. You argue that when you signed the contract, you did not truly consent because you lacked essential information. In this section we look at four claims that parties make in an effort to rescind a contract based on lack of valid consent: (1) fraud, (2) mistake, (3) duress, and (4) undue influence.

Contracts Checklist

- [ ] Offer
- [ ] Acceptance
- [ ] Consideration
- [ ] Legality
- [ ] Capacity
- [x] Consent
- [ ] Writing

Fraud

Fraud begins when a party to a contract says something that is factually wrong. "This house has no termites," says a homeowner to a prospective buyer. If the house is swarming with the nasty pests, the statement is a misrepresentation. But does it amount to fraud? An injured person must show the following:

1. The defendant knew that his statement was false, or that he made the statement recklessly and without knowledge of whether it was false.
2. The false statement was material.
3. The injured party justifiably relied on the statement.

Element One: Intentional or Reckless Misrepresentation of Fact

The injured party must show a false statement of fact. Notice that this does not mean the statement was a necessarily a "lie." If a homeowner says that the famous architect Stanford White designed her house, but Bozo Loco actually did the work, it is a false statement.

Now, if the owner knows that Loco designed the house, she has committed the first element of fraud. And, if she has no idea who designed the house, her assertion that it was "Stanford White" also meets the first element.

But the owner might have a good reason for the error. Perhaps a local history book identifies the house as a Stanford White. If she makes the statement with a reasonable belief that she is telling the truth, she has made an innocent misrepresentation (discussed in the next section) and not fraud.

Opinions and "puffery" do not amount to fraud. An opinion is not a statement of fact. A seller says, "I think land values around here will be going up 20 or 30 percent for the foreseeable future." That statement is pretty enticing to a buyer, but it is not a false statement of fact. The maker is clearly stating her own opinion, and the buyer who relies on it does so at his peril. A close relative of opinion is something called "puffery."

Get ready for one of the most astonishing experiences you've ever had! This section on puffery is going to be the finest section of any textbook you have ever read! You're going to find the issue intriguing, the writing dazzling, and the legal summary unforgettable!

"But what happens," you might wonder, "if this section fails to astonish? What if I find the issue dull, the writing mediocre, and the legal summary incomprehensible? Can I sue for fraud?" No. The promises we made were mere puffery. A statement is puffery when a reasonable person would realize that it is a sales pitch, representing the exaggerated opinion of the seller. Puffery is not a statement of fact. Because puffery is not factual, it is never a basis for rescission.

Consumers filed a class action against Intel Corporation, claiming fraud. They asserted that Intel advertised its "Pentium 4" computer chip as the "best" in the market when in fact it was no faster than the Pentium III chip. The Illinois Supreme Court dismissed the claims, asserting that no reasonable consumer would make a purchase relying solely on the name "Pentium 4." Even if the consumers could show that Intel plotted to persuade the market that the Pentium 4 was the finest processor, they are demonstrating nothing but puffery.

[Saying that the Pentium 4 is "better" or "best"] could mean that the Pentium 4 is cheaper, smaller, more reliable, of higher quality, better for resale, more durable, creates less heat, uses less electricity, is more compatible with some versions of software, or is simply the latest in a temporal line of processors. Because the term "better" as a mere suggestion in the name "Pentium 4" is not capable of precise measuring, it is mere puffery and therefore not actionable. That is true even if Intel specifically set out to show the market that the Pentium 4 was the best processor to date.[3]

[3] *Barbara's Sales, Inc. v. Intel Corp.*, 879 N.E.2d 910 (Ill. 2007).

Courts have found many similar phrases to be puffery, including "high-quality," "expert workmanship," and "you're in good hands with us."

Element Two: Materiality

The injured party must demonstrate that the statement was material, or important. A minor misstatement does not meet this second element of fraud. Was the misstatement likely to influence the decision of the misled party significantly? If so, it was material.

Imagine a farmer selling a piece of his land. He measures the acres himself, and calculates a total of 200. If the actual acreage is 199, he has almost certainly not made a *material* misstatement. But if the actual acreage is 150, he has.

Element Three: Justifiable Reliance

The injured party also must show that she actually did rely on the false statement and that her reliance was reasonable. Suppose the seller of a gas station lies through his teeth about the structural soundness of the building. The buyer believes what he hears but does not much care because he plans to demolish the building and construct a day-care center. There was a material misstatement but no reliance, and the buyer may not rescind.

The reliance must be justifiable—that is, reasonable. If the seller of wilderness land tells Lewis that the area is untouched by pollution, but Lewis can see a large lake on the property covered with six inches of oily red scum, Lewis is not justified in relying on the seller's statements. If he goes forward with the purchase, he may not rescind.

No Duty to Investigate In the previous example, Lewis must act reasonably and keep his eyes open if he walks around the "wilderness" property. But he has no duty to undertake an investigation of what he is told. In other words, if the seller states that the countryside is pure and the lake looks crystal clear, Lewis is not obligated to take water samples and have them tested by a laboratory. A party to a contract has no obligation to investigate the other party's factual statements.

Plaintiff's Remedies for Fraud

In the case of fraud, the injured party generally has a choice of rescinding the contract or suing for damages or, in some cases, doing both. The contract is voidable, which meant that injured party is not *forced* to rescind the deal but may if he wants. Fraud *permits* the injured party to cancel. Alternatively, the injured party can sue for damages—the difference between what the contract promised and what it delivered.

Nancy learns that the building she bought has a terrible heating system. A new one will cost $12,000. If the seller told her the system was "like new," Nancy may rescind the deal. But it may be economically harmful for her to do so. She might have sold her old house, hired a mover, taken a new job, and so forth. What are her other remedies? She could move into the new house and sue for the difference between what she got and what was promised, which is $12,000, the cost of replacing the heating system.

In some states, a party injured by fraud may both rescind *and* sue for damages. In these states, Nancy could rescind her contract, get her deposit back, and then sue the seller for any damages she has suffered. Her damages might be, for example, a lost opportunity to buy another house or wasted moving expenses.

In fact, this last option—rescinding and still suing for damages—is available in all states when a contract is for the sale of goods. **UCC §2-721 permits a party to rescind a contract and then sue for damages when fraud is committed.**

Innocent Misrepresentation

If all elements of fraud are present except the misrepresentation of fact was not made intentionally or recklessly, then **innocent misrepresentation** has occurred. So, if a person misstates a material fact and induces reliance, but he had good reason to believe that his statement was true, then he has not committed fraud. Most states allow recission of a contract, but not damages, in such a case.

Special Problem: Silence

We know that a party negotiating a contract may not misrepresent a material fact. The house seller may not say that "the roof is in great shape" when she sleeps under an umbrella to avoid rain. But what about silence? Suppose the seller knows the roof is in dreadful condition but the buyer never asks. Does the seller have an affirmative obligation to disclose what she knows?

This is perhaps the hottest topic today in the law of misrepresentation. In 1817, the United States Supreme Court laid down the general rule that a party had no duty to disclose, even when he knew that the other person was negotiating under a mistake.[4] In other words, the Court was reinforcing the old rule of *caveat emptor*, "let the buyer beware." But social attitudes about fairness have changed. Today, a seller who knows something that the buyer does not know is often required to divulge it.

Nondisclosure of a fact amounts to misrepresentation in these four cases: (1) where disclosure is necessary to *correct a previous assertion;* (2) where disclosure would correct a *basic mistaken assumption* that the other party is relying on; (3) where disclosure would correct the other party's *mistaken understanding about a writing;* or (4) where there is *a relationship of trust* between the two parties.[5]

To Correct a Previous Assertion. During the course of negotiations, one party's perception of the facts may change. When an earlier statement later appears inaccurate, the change generally must be reported.

> She also knew that a reasonable buyer might avoid a haunted house, fearing grisly events ...

W. R. Grace & Co. wanted to buy a natural-gas field in Mississippi. An engineer's report indicated the presence of large gas reserves. On the basis of the engineering report, the Continental Illinois National Bank committed to a $75 million nonrecourse production loan. A "nonrecourse loan" meant that Continental would be repaid only with revenues from the gas field. After Continental committed, but before it had closed on the loan, Grace had an exploratory well drilled and struck it rich—with water. The land would never produce any gas. Without informing Continental of the news, Grace closed the $75 million loan. When Grace failed to repay, Continental sued and won. A party who learns new information indicating that a previous statement is inaccurate must disclose the bad news.[6]

To Correct a Basic Mistaken Assumption. When one party knows that the other is negotiating with a mistaken assumption about an important fact, the party who knows of the error must correct it. Jeffrey Stambovsky agreed to buy Helen Ackley's house in Nyack, New York, for $650,000. Stambovsky signed a contract and made a $32,500 down payment.

---

[4]*Laidlaw v. Organ*, 15 U.S. 178, 1817 U.S. LEXIS 396 (1817).

[5]Restatement (Second) of Contracts §161.

[6]*FDIC v. W.R. Grace & Co.*, 877 F.2d 614, 1989 U.S. App. LEXIS 8905 (7th Cir. 1989).

Before completing the deal, he learned that in several newspaper articles, Ackley had publicized the house as being haunted. Ackley had also permitted the house to be featured in a walking tour of the neighborhood as "a riverfront Victorian (*with ghost*)." Stambovsky refused to go through with the deal and sued to rescind. He won. The court ruled that Ackley sold the house knowing Stambovsky was ignorant of the alleged ghosts. She also knew that a reasonable buyer might avoid a haunted house, fearing grisly events—or diminished resale value. Stambovsky could not have discovered the apparitions himself, and Ackley's failure to warn permitted him to rescind the deal.[7]

A seller generally must report any latent defect he knows about that the buyer should not be expected to discover himself. As social awareness of the environment increases, a buyer potentially worries about more and more problems. We now know that underground toxic waste, carelessly dumped in earlier decades, can be dangerous or even lethal. Accordingly, any property seller who realizes that there is toxic waste underground, or any other hidden hazard, must reveal that fact.

© Galina Barskaya/Shutterstock

What if the defect is…a ghost?

To Correct a Mistaken Understanding about a Writing. Suppose the potential buyer of a vacation property has a town map showing that the land he wants to buy has a legal right of way to a beautiful lake. If the seller of the land knows that the town map is out of date and that there is no such right of way, she must disclose her information.

A Relationship of Trust. Maria is planning to sell her restaurant to her brother Ricardo. Maria has a greater duty to reveal problems in the business because Ricardo assumes she will be honest. **When one party naturally expects openness and honesty, based on a close relationship, the other party must act accordingly.** If the building's owner has told Maria he will not renew her lease, she must pass that information on to Ricardo.

What happens if an owner, rather than disclosing hidden defects, sells the property "as is"? The following case provides insight.

Hess v. Chase Manhattan Bank, USA, N.A.

220 S.W.3d 758
Missouri Supreme Court, 2007

Facts: Billy Stevens owned a paint company. On several occasions, he ordered employees to load a trailer with 55-gallon paint drums and pallets of old paint cans and then dump them on property he owned. This illegal dumping saved Stevens the cost of proper disposal. Later, employees notified the Environmental Protection Agency (EPA) of what Stevens had done, and the EPA began an investigation. (Stevens later served time for environmental crimes.)

Stevens defaulted on his mortgage to the land. While Chase Manhattan Bank was in the process of foreclosing, it learned that the EPA was investigating the property for contamination. Chase foreclosed and put the property up for sale "as is." Several buyers expressed interest. The bank did not inform any of them of the ongoing EPA investigation. Dennis Hess bought the property for $52,000.

---

[7] *Stambovsky v. Ackley*, 169 A.D.2d 254, 572 N.Y.S.2d 672, 1991 N.Y. App. Div. LEXIS 9873 (N.Y. App. Div. 1991).

After Hess bought the land, he discovered the illegal waste and sued Chase for failing to disclose the EPA's investigation. The jury awarded Hess $52,000 and Chase appealed.

Issue: ***Did Chase have a duty to disclose to Hess the ongoing investigation?***

Excerpts from Judge Stith's Decision: The buyer has a right to rely on the seller to disclose where the undisclosed material information would not be discoverable through ordinary diligence. Chase learned that the EPA was investigating the property before Chase completed its foreclosure of the mortgage. Even with superior knowledge, a duty to disclose will be imposed only if the material facts would not be discovered through the exercise of ordinary diligence. Chase asserts that a reasonable inspection of the property by Hess would have disclosed the presence of the paint cans near the old barn foundation. Chase's argument misapprehends the factual basis of Hess's fraudulent nondisclosure claim. It is the *EPA investigation* into hazardous waste dumping on the property that is the material fact that Hess asserts Chase had a duty to disclose, not the presence (or absence) of paint cans.

Hess presented evidence that two potential buyers who did discover the paint cans each still made an offer to purchase the property. Both testified that the presence of paint cans did not give them notice that the EPA was investigating and that, had they known of its investigation, they would not have made offers for the property. From this evidence, the jury could have found that even had Hess further inspected the property and discovered the paint cans, this would not have put him on notice that the EPA had an ongoing investigation into hazardous waste dumping on the property.

Chase asserts that in spite of the evidence of its knowledge and Hess's inability to discover the EPA investigation, a duty to disclose should not be imposed because the contract specified that Chase was making "no representations, guaranties, or warranties, either written or implied, regarding the property" and that "the property is being sold in AS-IS condition with no express or implied representations or warranties by the seller or its agents." It claims that through these provisions, it bargained for the right to remain silent and no duty to speak ever arose.

What Chase misapprehends is that Hess alleges *fraud in the inducement* to contract, not fraud in the terms of the contract. Missouri law holds that a party may not, by disclaimer or otherwise, contractually exclude liability for fraud in inducing that contract. Each of the individuals who made an offer to purchase this property did so without knowledge that it was under EPA investigation. They all testified that, had they known, they would not have made an offer to purchase this property and would not, therefore, have "bargained for" Chase's silence. Chase's duty to speak arose from its superior knowledge prior to the execution of this contract. The presence of a clause disclaiming warranties in a contract does not negate a precontractual duty to speak.

Affirmed.

EXAM Strategy

Question: Mako is selling his country house for $400,000. Guppy, an interested buyer, asks whether there is sufficient water from the property's well. Mako replies, "Are you kidding? Watch this." He turns on the tap, and the water flows bountifully. Mako then shows Guppy the well, which is full. Guppy buys the property, but two weeks later, the well runs dry. In fact, Mako knew the water supply was inadequate, and he had the well filled by a tanker truck while the property was being sold. A hydrologist tells Guppy it will cost $100,000 to dig a better well, with no guarantee of success. Guppy sues Mako. What remedy should Guppy seek? Who will win?

Strategy: Is this a case of innocent misrepresentation or fraud? Fraud. Therefore, Guppy may seek two remedies: damages or rescission. Make sure that you understand the difference. To win, Guppy must show he relied on a fact that was both false and material.

Result: When Mako responded to Guppy's question by demonstrating the apparent abundance of water, he made a false statement. This was fraud (not innocent misrepresentation), because Mako knew the well was inadequate. That was a material fact. Guppy reasonably relied on the demonstration. Guppy will win. He can elect to rescind the contract (return the property to Mako and get his money back) or choose damages (the cost of digging a proper well). Given the uncertain nature of well digging, he would be wise to rescind.

Mistake

Contract law principles come from many sources, and in the area of "legal mistake," a cow significantly influenced the law. The cow was named Rose. She was a gentle animal that lived in Michigan in 1886. Rose's owner, Hiram Walker & Sons, bought her for $850. After a few years, the company concluded that Rose could have no calves. As a barren cow, she was worth much less than $850, so Walker contracted to sell her to T. C. Sherwood for a mere $80. But when Sherwood came to collect Rose, the parties realized that (surprise!) she was pregnant. Walker refused to part with the happy mother, and Sherwood sued. Walker defended, claiming that both parties had made a *mistake* and that the contract was voidable.

A mistake can take many forms. It may be a basic error about an essential characteristic of the thing being sold, as in Rose's case. It could be an erroneous prediction about future prices, such as an expectation that oil prices will rise. It might be a mechanical error, such as a builder offering to build a new home for $300 when he clearly meant to bid $300,000. Some mistakes lead to voidable contracts, others create enforceable deals. The first distinction is between bilateral and unilateral mistakes.

Bilateral Mistake

A **bilateral mistake** occurs when both parties negotiate based on the same factual error. Sherwood and Walker both thought Rose was barren, both negotiated accordingly, and both were wrong. The Michigan Supreme Court gave judgment for Walker, the seller, permitting him to rescind the contract because the parties were *both* wrong about the essence of what they were bargaining for.

Bilateral mistake
Occurs when both parties negotiate based on the same factual error.

If the parties contract based on an important factual error, the contract is voidable by the injured party. Sherwood and Walker were both wrong about Rose's reproductive ability, and the error was basic enough to cause a tenfold difference in price. Walker, the injured party, was entitled to rescind the contract. Note that the error must be *factual*. Suppose Walker sold Rose thinking that the price of beef was going to drop, when in fact the price rose 60 percent in five months. That would be simply a *prediction* that proved wrong, and Walker would have no right to rescind.

Conscious Uncertainty. No rescission is permitted where one of the parties knows he is taking on a risk; that is, he realizes there is uncertainty about the quality of the thing being exchanged. Rufus offers 10 acres of mountainous land to Priscilla. "I can't promise you anything about this land," he says, "but they've found gold on every adjoining parcel." Priscilla, eager for gold, buys the land, digs long and hard, and discovers—mud. She may not rescind the contract. She understood the risk she was assuming, and there was no mutual mistake.

Unilateral Mistake

Sometimes only one party enters a contract under a mistaken assumption, a situation called **unilateral mistake**. In these cases, it is more difficult for the injured party to rescind a contract. This makes sense since in a bilateral error, neither side really knew what it was

Unilateral mistake
Occurs when only one party enters a contract under a mistaken assumption.

getting into, and rescission seems a natural remedy. But with unilateral mistakes, one side may simply have made a better bargain than the other. As we have seen throughout this unit on contracts, courts are unwilling to undo an agreement merely because someone made a foolish deal. Nonetheless, if her proof is strong, the injured party in a case of unilateral mistakes still may sometimes rescind a contract.

To rescind for unilateral mistake, a party must demonstrate that she entered the contract because of a basic factual error and that *either* (1) enforcing the contract would be *unconscionable* or (2) the nonmistaken party *knew* of the error.[8]

A town obtains five bids for construction of a new municipal swimming pool. Four are between $100,000 and $111,000. Fred's bid is for $82,000. His offer includes a figure of $2,000 for excavation work, while the others have allotted about $20,000 for that work. Fred has inadvertently dropped a zero, resulting in a bid that is $18,000 too low. Town officials accept Fred's offer. When he sues to rescind, Fred wins. Town officials knew that the work could not be done that cheaply, and it would be unfair to hold Fred to a mathematical error that the other side perceived.[9]

In contrast, suppose that Rebecca sues Pierce, whose bad driving caused an accident, and Amy, who owned the car that Pierce was driving. While the case is pending, Amy's insurance company, Risknaught, pays Rebecca a $70,000 settlement. Later, the state supreme court rules that Pierce was an unauthorized driver, and an owner's insurer is never liable in such a case. Risknaught seeks to rescind its settlement, claiming unilateral mistake as to its liability. The company loses. Risknaught was aware that an appellate ruling might establish new precedent. The insurer settled based on a decision calculated to minimize its risk.[10]

In the following case an automobile dealer made a mistake—how often does *this* happen?—in the customer's favor.

DONOVAN V. RRL CORPORATION

26 Cal.4th 261, 27 P.3d 702, 109 Ca. Rptr.2d 807
Supreme Court of California, 2001

Facts: Brian Donovan was in the market for a used car. As he scanned the Costa Mesa *Daily Pilot*, he came upon a "Pre-Owned Coup-A-Rama Sale!" at Lexus of Westminster. Of the 16 cars listed in the ad (with vehicle identification numbers), one was a sapphire-blue Jaguar XJ6 Vanden Plas, priced at $25,995.

Brian drove to a Jaguar dealership to do some comparison shopping. Jaguars of the same year and mileage cost about $8,000 to $10,000 more than the auto at the Lexus agency. The next day, Brian and his wife hurried over to the Coup-A-Rama event, spotted the Jaguar (which had the correct VIN) and asked a salesperson if they might test-drive it. Pleased with the ride, Brian said to the salesman, "O.K. We will take it at your price, $26,000." This figure startled the sales representative, who glanced at the newspaper ad Brian showed him, and responded, "That's a mistake."

As indeed it was. The Lexus agency had paid $35,000 for the Jaguar and intended to sell it for about $37,000. Brian was adamant. "No, I want to buy it at your advertised price, and I will write you a check right now." The sales manager was called in, and he refused to sell the car for less than $37,000.

It turned out that the *Daily Pilot*'s typographical and proofreading errors had caused the mistake, although the Lexus dealership had failed to review the proof sheet, which would have revealed the error before the ad went to press.

Brian sued. The trial court found that unilateral mistake prevented enforcement of the contract. The appel-

[8] Restatement (Second) of Contracts §153.
[9] See examples provided in Restatement (Second) of Contracts §153.
[10] See, e.g., *AID Hawai'i Ins. Co. v. Bateman*, 82 Haw. 453, 923 P.2d 395 (Haw. 1996).

late court reversed, and Donovan appealed to the state's highest court.

The state supreme court first ruled that there *was* in fact a contract between the parties. (Generally, a newspaper advertisement is merely a solicitation for an offer, but a California statute generally holds *automobile dealers* to the terms of their offers.) The court then went on to examine the mistake.

Issue: ***Did the Lexus dealer's mistake entitle it to rescind the contract?***

Excerpts from Justice George's Decision: A significant error in the price term of a contract constitutes a mistake regarding a basic assumption upon which the contract is made, and such a mistake ordinarily has a material effect adverse to the mistaken party. The defendant must show that the resulting imbalance in the agreed exchange is so severe that it would be unfair to require the defendant to perform.

Measured against this standard, defendant's mistake in the contract for the sale of the Jaguar automobile constitutes a material mistake regarding a basic assumption upon which it made the contract. Enforcing the contract with the mistaken price of $25,995 would require defendant to sell the vehicle to plaintiff for $12,000 less than the intended advertised price of $37,995—an error amounting to 32 percent of the price defendant intended. The exchange of performances would be substantially less desirable for defendant and more desirable for plaintiff.

The mere fact that a mistaken party could have avoided the mistake by the exercise of reasonable care does not preclude avoidance on the ground of mistake. Indeed, since a party can often avoid a mistake by the exercise of such care, the availability of relief would be severely circumscribed if he were to be barred by his negligence. Nevertheless, in *extreme cases*, the mistaken party's fault is a proper ground for denying him relief for a mistake that he otherwise could have avoided.

If we were to accept plaintiff's position that that the dealer always must be held to the strict terms of a contract arising from an advertisement, we would be holding that the dealer intended to assume the risk of all typographical errors in advertisements, no matter how serious the error and regardless of the circumstances in which the error was made. For example, if an automobile dealer proofread an advertisement but, through carelessness, failed to detect a typographical error listing a $75,000 automobile for sale at $75, the defense of mistake would be unavailable to the dealer.

No evidence presented at trial suggested that defendant knew of the mistake before plaintiff attempted to purchase the automobile, that defendant intended to mislead customers, or that it had adopted a practice of deliberate indifference regarding errors in advertisements. The uncontradicted evidence established that the *Daily Pilot* made the proofreading error resulting in defendant's mistake.

We conclude that the municipal court correctly entered judgment in defendant's favor.

EXAM Strategy

Question: Joe buys an Otterhound named Barky, from Purity Dog Shop. He pays $2,500 for the puppy. The high cost is a result of the certificate Purity gives him, indicating that the puppy's parents were both AKC champions (elite dogs). Two months later, Joe sells the hound to Emily for $2,800. Joe and Emily both believe that Barky is descended from champions. Then a state investigation reveals that Purity has been cheating and its certificates are fakes. Barky is just a regular dog, worth about $100. Emily sues Joe. Who wins?

Strategy: Both parties are mistaken about the kind of dog Joe is selling, so this is an instance of bilateral mistake. What is the rule in such cases?

Result: If the two sides agree based on an important factual error, the contract is voidable by the injured party. A mutt is entirely different from a dog that might become a champion. The parties erred about the essence of their deal. Joe's good faith does not save him, and Emily is entitled to rescind.

Duress

Duress
An improper threat made to force another party to enter into a contract.

True consent is also lacking when one party agrees to a contract under **duress**. If kindly Uncle Hugo signs over the deed to the ranch because Niece Nelly is holding a gun to his head, Hugo has not consented in any real sense, and he will have the right to rescind the contract. **If one party makes an improper threat that causes the victim to enter into a contract, and the victim had no reasonable alternative, the contract is voidable.**[11]

On a Sunday morning, Bancroft Hall drove to pick up his daughter Sandra, who had slept at a friend's house. The Halls are black and the neighborhood was white. A suspicious neighbor called the police, who arrived, aggressively prevented the Halls from getting into their own car, and arrested the father. The Halls had not violated any law or done anything wrong whatsoever. Later an officer told Hall that he could leave immediately if he signed a full release (stating that he had no claims of any kind against the police), but that if he refused to sign it, he would be detained for a bail hearing. Hall signed the release but later filed suit. The police defended based on the release.

The court held that the release was voidable because Hall had signed it under duress. The threat to detain Hall for a bail hearing was clearly improper because he had committed no crime. He also had no reasonable alternative to signing. A jury awarded the Halls over half a million dollars.[12]

Can "improper threats" take other forms? Does *economic* intimidation count? Many plaintiffs have posed that question over the last half century, and courts have grudgingly yielded.

Today, in most states, economic duress *can* also be used to void a contract. But economic duress sounds perilously close to hard bargaining—in other words, business. The free market system is expected to produce tough competition. A smart, aggressive executive may bargain fiercely. How do we distinguish economic duress from legal, successful business tactics? Courts have created no single rule to answer the question, but they do focus on certain issues.

In analyzing a claim of economic duress, courts look at these factors:

- Acts that have no legitimate business purpose
- Greatly unequal bargaining power
- An unnaturally large gain for one party
- Financial distress to one party

Is the following case one of duress or hard bargaining?

How do we distinguish hard bargaining from economic duress?

[11] Restatement (Second) of Contracts §175(1).
[12] *Halls v. Ochs*, 817 F.2d 920, U. S. App. LEXIS 5822 (1st Cir. 1987).

You be the Judge

In Re RLS Legal Solutions, L.L.C.

2005 WL 171381
Texas Court of Appeals, 2005

Facts: Amy Maida sued her employer, RLS Legal Solutions, for various claims relating to her job. RLS asked that the case be dismissed because Maida had signed an arbitration agreement. Maida had in fact signed the contract while already working at RLS. However, she responded that the agreement should not be enforced because she had signed it under economic duress. At trial, she was asked whether she had found the agreement acceptable:

> I did not. The arbitration clause was going to allow me not to be able to be in a position that I needed to be in now, and that is, to have someone represent me to help me where I feel like the company did me wrong.
>
> After I refused to agree to this arbitration clause, I was told that my payroll checks would not be direct deposited into my account until I signed the agreement and that I would not be paid until I signed the agreement. I had received my paychecks by direct deposit for three years. [RLS did in fact stop the direct deposit payment of Maida's salary.]
>
> I needed my paycheck to meet my financial responsibilities since I am a single family income household provider. I had no way to pay my mortgage, vehicle note, car and homeowner's insurance as well as any household bills.

Maida testified that after signing and returning the agreement, she received a manual check. Maida said that when she asked why she had not been paid by direct deposit as usual, she was told her paycheck would be held until she signed the agreement.

RLS argued that Maida had eventually received every paycheck to which she was entitled, had suffered no losses, and was free to leave RLS at any time if she found her employment terms unacceptable.

The trial court refused to dismiss the case or order arbitration, and RLS appealed.

You Be the Judge: ***Did Maida sign the arbitration under economic duress?***

Argument for RLS: Your honors, it is hard to take seriously a claim of economic duress when the plaintiff has not lost one cent and was never forced to sign anything. RLS runs a business, not a community center. To stay competitive, we constantly revise our commercial practices, and this was one such change. We did not ask for a bizarre or inappropriate change: arbitration is a widely favored method of settling disputes, quicker and cheaper *for all parties.* Maida signed. Yes, we stopped direct deposit of her check, but in the end, we paid her all she was due. We were not obligated to pay her in any particular fashion, or even to continue her employment. If she wanted to stay with us, she had to play by our rules.

Argument for Maida: The company could offer an arbitration contract to all workers. But that is distinct from forcing such agreements down employee throats, which is what they did here. RLS knows that its workers depend on prompt payment of payroll checks to avoid falling quickly into debt. The company offered Maida the arbitration agreement, she rejected it, and they responded by stopping direct deposit of her check. Knowing that she was the sole provider for her family, the firm intended to subject her to intolerable economic pressure. It worked. However, the court should have no part of this coercion. The two sides had hugely differing bargaining power, and RLS attempted to use financial distress to obtain what it could not by persuasion.

Undue Influence

She was single and pregnant. A shy young woman in a large city with no family nearby, she needed help and support. She went to the Methodist Mission Home of Texas where she found room and board, support—and a lot of counseling. Her discussions with a minister and a private counselor stressed one point: that she should give up her baby for adoption. She signed the adoption papers, but days later, she decided she wanted the baby after all. Was there any ground to rescind? She claimed *undue influence,* in other words, that the Mission Home so dominated her thinking that she never truly consented. Where one party has used undue

influence, the contract is voidable at the option of the injured party. There are two elements to the plaintiff's case. **To prove undue influence, the injured party must demonstrate:**

- A relationship between the two parties either of trust or of domination, and
- Improper persuasion by the stronger party.[13]

In the Methodist Mission case, the court held that the plaintiff had been young and extremely vulnerable during the days following the birth of her child. The mission's counselor, to whom she turned for support, had spent day after day forcefully insisting that the young woman had no moral or legal right to keep her child. This amounted to undue influence. The court voided the adoption agreement.[14] In the following case, the age difference is reversed.

Sepulveda v. Aviles

762 N.Y.S.2d 358, 308 A.D.2d 1
New York Supreme Court, Appellate Division, 2003

Facts: Agnes Seals owned and lived in a 10-unit apartment building on East 119th Street in New York City. When she was 80 years old, a fire damaged much of the building's interior, leaving Seals physically and mentally unable to care for the property. Shortly after the fire, she met David Aviles, a 35-year-old neighbor. Aviles convinced Seals to sell him the building, promising to care for her for the rest of her life. She sold him the building for $50,000, taking a down payment of $10,000, with the rest to be paid over time. At the closing, Seals was represented by an attorney, Martin Freedman, whom she had never met before, and who had been referred to her by Aviles's lawyer (with whom he shared office space).

Three years later, Seals died. Her will left her entire estate to Elba and Victor Sepulveda, but the building had been Seals's principal asset. The Sepulvedas sued Aviles, asking the court to set aside the sale of the building, claiming that Aviles had used undue influence to trick Seals into a sale that was not in her interest. The jury found that Aviles had not used undue influence, and the Sepulvedas appealed.

Issue: ***Did Aviles use undue influence to obtain the apartment building?***

Excerpts from Judge Gonzalez's Decision: The jury's verdict here was completely at odds with any fair interpretation of the evidence. The trial testimony established that at the time of the transfer, Seals was an 80-year-old woman in declining health who had recently suffered a traumatic crisis resulting from [the fire], requiring her to vacate the premises for two months. The testimony of social worker Blair established that only 16 months after the conveyance, Seals was totally homebound and dependent on others, especially Aviles, to do her banking and shopping and to provide her with transportation to medical appointments. She also was suffering from significant memory impairment by that time. This evidence of Seals's mental condition was corroborated by the medical testimony of Dr. Forster, who provided his expert opinion that Seals was suffering from severe Alzheimer's dementia [at the time of the sale]. In our view, the evidence of Seals's severe mental impairment far outweighed the self-serving, lay opinions of Aviles and Freedman that Seals appeared coherent and lucid at the closing.

Seals's dependence on Aviles was further confirmed by the testimony of two disinterested witnesses, Blair and Sister Lachapelle, who testified that Aviles told Seals shortly before the sale that if she transferred the building to him, he would take care of her for the rest of her life. In addition, that Seals was represented at the closing by an attorney she had never met before and who was referred by the buyer, Mr. Aviles, is a circumstance noted in many prior cases as raising a serious question of improper influence.

---

[13]Restatement (Second) of Contracts §177.

[14]*Methodist Mission Home of Texas v. N A B*, 451 S.W.2d 539, 1970 Tex. App. LEXIS 2055 (Tex. Civ. App. 1970).

Additional clear and convincing evidence adduced by plaintiffs reveal a series of transactions permeated by undue influence. Aviles's unfettered use of Seals's funds and credit cards, which Aviles admitted at trial, provides convincing evidence that he was exploiting Seals's impaired condition for his own financial gain. Finally, his brazen conduct in writing out mortgage checks to Seals, having her endorse them, and then depositing them back into his own account raises the strongest inference that the mortgage agreement was a sham, and his intent was to obtain Seals's building through improper means. In light of the trial evidence, we find that the jury's verdict that Aviles did not obtain Seals's property by undue influence could not have been reached on any fair interpretation of the evidence.

[Reversed and remanded for new trial.]

Chapter Conclusion

An agreement between two parties may not be enough to make a contract enforceable. A minor or a mentally impaired person may generally disaffirm contracts. Even if both parties are adults of sound mind, courts will insist that consent be genuine. Misrepresentation, mistake, duress, and undue influence all indicate that at least one party did not truly consent. As the law evolves, it imposes an increasingly greater burden of *good faith negotiating* on the party in the stronger position.

EXAM REVIEW

1. **VOIDABLE CONTRACT** Capacity and consent are different contract issues that can lead to the same result: a voidable contract. A voidable agreement is one that can be canceled by a party who lacks legal capacity or who did not give true consent. (p. 317)

2. **MINORS** A minor (someone under the age of 18) generally may disaffirm any contract while she is still a minor or within a reasonable time after reaching age18. (pp. 317–319)

EXAM Strategy

Question: John Marshall and Kirsten Fletcher decided to live together. They leased an apartment, each agreeing to pay one-half of the rent. When he signed the lease, Marshall was 17. Shortly after signing the lease, Marshall turned 18, and two weeks later, he moved into the apartment. He paid his half of the rent for two months and then moved out because he and Fletcher were not getting along. Fletcher sued Marshall for one-half of the monthly rent for the remainder of the lease. Who wins?

Strategy: Marshall was clearly a minor when he signed the lease, and he could have rescinded the agreement at that time. However, after he turned 18, he moved in and began to pay rent. What effect did that have on his contract obligation? (See the "Result" at the end of this section.)

3. **MENTAL IMPAIRMENT** A mentally impaired person may generally disaffirm a contract. In such a case, though, he generally must make restitution. (pp. 319–320)

4. **INTOXICATION** A person who is so intoxicated that he fails to understand the nature of an agreement may disaffirm a contract. (pp. 320–321)

5. **FRAUD** Fraud is grounds for rescinding a contract. The injured party must prove all of the following:

   a. A false statement of fact made intentionally or recklessly

   b. Materiality

   c. Justifiable reliance (pp. 322–324)

6. **INNOCENT MISREPRESENTATION** Innocent misrepresentation also allows an injured party to rescind a contract, but it does not allow a plaintiff to sue for damages. It has the same elements as fraud, but it does not require intent or recklessness. (p. 324)

EXAM Strategy

Question: Ron buys 1,000 "Smudgy Dolls" for his toy store. Karen, the seller, tells him the dolls are in perfect condition, even though she knows their heads are defectively attached. Ron sells all of the products, but then he has to face 1,000 angry customers with headless dolls. Ron sues Karen seeking recission. What is the likely outcome?

a. This is fraud, and Ron will be able to rescind.

b. This is an innocent misrepresentation, and Ron will be able to rescind.

c. This is fraud, but Ron will not be able to rescind.

d. This is an innocent misrepresentation, but Ron will not be able to rescind.

e. This is neither fraud nor an innocent misrepresentation.

Strategy: Karen knew her statement was false, so this is a case of fraud if all elements can be met. Ron must prove a false statement of fact, materiality, and reliance. Can he do so? (See the "Result" at the end of this section.)

7. **SILENCE** Silence amounts to misrepresentation only in four instances:

- Where disclosure is necessary to *correct a previous assertion*
- Where disclosure would correct a *basic mistaken assumption* on which the other party is relying
- Where disclosure would correct the other party's *mistaken understanding about a writing;* or
- Where there is a *relationship of trust* between the two parties. (pp. 324–327)

8. **MISTAKE** In a case of bilateral mistake, either party may rescind the contract. In a case of unilateral mistake, the injured party may rescind only upon a showing that enforcement would be unconscionable or that the other party knew of her mistake. (pp. 327–330)

9. **DURESS** If one party makes an improper threat that causes the victim to enter into a contract, and the victim had no reasonable alternative, the contract is voidable. (pp. 330–332)

EXAM Strategy

Question: Andreini's nerve problem diminished the use of his hands. Dr. Beck operated, but the problem grew worse. A nurse told the patient that Beck might have committed a serious error that exacerbated the problem. Andreini returned for a second operation, which Beck assured him would correct the problem. But after Andreini had been placed in a surgical gown, shaved, and prepared for surgery, the doctor insisted that he sign a release relieving Beck of liability for the first operation. Andreini did not want to sign it, but Beck refused to operate until he did. Later, Andreini sued Beck for malpractice. A trial court dismissed Andreini's suit based on the release. You are on the appeals court. Will you affirm the dismissal or reverse?

Strategy: Adreini is claiming physical duress. Did Beck act *improperly* in demanding a release? Did Adreini have a *realistic alternative?* (See the "Result" at the end of this section.)

10. **UNDUE INFLUENCE** Once again the injured party may rescind a contract, but only upon a showing of a special relationship and improper persuasion. (pp. 332–333)

2. Result: A minor can disaffirm a contract. However, if he turns 18 and then ratifies the agreement, he is fully liable. When he paid the rent, Marshall ratified the contract, and thus he is fully liable.

5. Result: Karen made a false statement of fact, knowing it was wrong. It was material, and Ron reasonably relied on her. Karen has committed fraud. Ron is entitled to rescind the agreement. The correct answer is "a."

8. Result: The Utah Supreme Court reversed the trial court, so you probably should as well. Beck forced Adreini to sign under duress. The threat to withhold surgery was improper, and Adreini had no reasonable alternative.

Multiple-Choice Questions

1. Kerry finds a big green ring in the street. She shows it to Leroy, who says, "Wow. That could be valuable." Neither Kerry nor Leroy knows what the ring is made of or whether it is valuable. Kerry sells the ring to Leroy for $100, saying, "Don't come

griping if it turns out to be worth two dollars." Leroy takes the ring to a jeweler who tells him it is an unusually perfect emerald, worth at least $75,000. Kerry sues to rescind.

(a) Kerry will win based on fraud.

(b) Kerry will win based on mutual mistake.

(c) Kerry will win based on unilateral mistake.

(d) Kerry will lose.

2. Veronica has a beer and then makes a contract. She continues drinking, and her blood alcohol level eventually rises to .09, which is just above her state's threshold for drunk driving. She makes a second contract while in this condition. Veronica's first contract is ________________, and her second contract is ________________.

(a) valid; valid

(b) valid; voidable

(c) voidable; voidable

(d) voidable; void

3. Jerry is so mentally ill that he is unable to understand the nature and consequences of his transactions, but he has not been adjudicated insane. Penny has been adjudicated insane, and a court has appointed a guardian to handle her affairs. Jerry's contracts are ____________, and Penny's contracts are ____________.

(a) valid; valid

(b) valid; voidable

(c) valid; void

(d) voidable; voidable

(e) voidable; void

4. Angela makes a material misstatement of fact to Lance, which he relies on when he signs Angela's contract. Fraud exists if Angela made the misstatement …

(a) intentionally

(b) recklessly

(c) carelessly

(d) A and B only

(e) A, B, and C

5. Scarborough's Department Store opens for business on a busy shopping day just before Christmas. A hurried clerk places a sign in the middle of a table piled high with red cashmere sweaters. The sign reads, "SALE—100% Cashmere—$0.99 Each." The sign, of course, was supposed to read "$99 each."

This is a __________ mistake, and customers ____________ be able to demand that Scarborough's sell the sweaters for 99 cents.

(a) unilateral; will

(b) unilateral; will not

(c) bilateral; will

(d) bilateral; will not

Essay Questions

1. Raymond Barrows owned a 17-acre parcel of undeveloped land in Seaford, Delaware. For most of his life, Mr. Barrows had been an astute and successful businessman, but by the time he was 85 years old, he had been diagnosed as "very senile and confused 90 percent of the time." Glenn Bowen offered to buy the land. Barrows had no idea of its value, so Bowen had it appraised by a friend, who said it was worth $50,000. Bowen drew up a contract, which Barrows signed. In the contract, Barrows agreed to sell the land for $45,000, of which Bowen would pay $100 at the time of closing; the remaining $44,900 was due whenever Bowen developed the land and sold it. There was no time limit on Bowen's right to develop the land nor any interest due on the second payment. Comment.

2. On television and in magazines, Maurine and Mamie Mason saw numerous advertisements for Chrysler Fifth Avenue automobiles. The ads described the car as "luxurious," "quality-engineered," and "reliable." When they went to inspect the car, the salesman told them the warranty was "the best ... comparable to Cadillacs and Lincolns." After the Masons bought a Fifth Avenue, they began to have many problems with it. Even after numerous repairs, the car was unsatisfactory and required more work. The Masons sued, seeking to rescind the contract based on the ads and the dealer's statement. Will they win?

3. The McAllisters had several serious problems with their house, including leaks in the ceiling, a buckling wall, and dampness throughout. They repaired the buckling wall by installing I-beams to support it. They never resolved the leaks and the dampness. When they decided to sell the house, they said nothing to prospective buyers about the problems. They stated that the I-beam had been added for reinforcement. The Silvas bought the house for $60,000. Soon afterwards, they began to have problems with leaks, mildew, and dampness. Are the Silvas entitled to any money damages? Why or why not?

4. Roy Newburn borrowed money and bought a $49,000 truck from Treadwell Ford. A few months later, the truck developed transmission problems. Newburn learned that the truck had 170,000 more miles on it than the odometer indicated. The company admitted the mileage error and promised to install a new transmission for free. Treadwell did install the new transmission, but when Newburn came to pick up the truck, Treadwell demanded that he sign a general release absolving the dealership of any claims based on the inaccurate mileage. Treadwell refused to turn over the truck until Newburn finally signed. The truck broke down again, and delays cost Newburn so much income that he fell behind on his loan payments and lost the truck. He sued Treadwell, which defended based on the release. Is the release valid?

5. Morell bought a security guard business from Conley, including the property on which the business was located. Neither party knew that underground storage tanks were leaking and contaminating the property. After the sale, Morell discovered the tanks and sought to rescind the contract. Should he be allowed to do so?

Discussion Questions

1. Sixteen-year-old Travis Mitchell brought his Pontiac GTO into M&M Precision Body and Paint for body work and a paint job. M&M did the work and charged $1,900, which Travis paid. When Travis later complained about the quality of the work, M&M did some touching up, but Travis was still dissatisfied. He demanded his $1,900 back, but M&M refused to refund it because all of the work was "in" the car and Travis could not return it to the shop. The state of Nebraska, where this occurred, follows the majority rule on this issue. Does Travis get his money? Is this a *fair* result?

2. Contract law gives minors substantial legal protection. But does a modern high school student *need* so much protection? Older teens may have been naive in the 1700s, but today, they are quite savvy. Should the law change so that only younger children—perhaps those aged 14 and under—have the ability to undo agreements? Or is the law reasonable the way it currently exists?

3. In the old Michigan case featuring Rose the Cow, the court refused to enforce the agreement. Was this a fair result? Should bilateral mistakes create voidable contracts, or should Walker have been required to sell the cow for $80?

4. Susan drops by Dean's garage sale. She buys a painting for $10. Both she and Dean think that the painting is a copy of a Matisse. Later, Susan is delighted to discover that the painting is actually a Matisse and is worth $50,000,000. Dean hears the news, and wants the painting back. Will he get it? Why or why not?

5. Do you have sympathy for intoxicated people who make agreements? Should the law ever let them back out of deals when they sober up? After all, no one forced them to get drunk. Should the law be more lenient, or is is it reasonable as it currently exists?

CHAPTER 15

WRITTEN CONTRACTS

© picsbyst/Shutterstock.com

Oliver and Perry were college roommates, two sophomores with contrasting personalities. They were sitting in the cafeteria with some friends, Oliver chatting away, Perry slumped on a plastic bench. Oliver suggested that they buy a lottery ticket, as the prize for that week's drawing was $13 million. Perry muttered, "Nah. You never win if you buy just one ticket." Oliver bubbled up, "O.K., we'll buy a ticket every week. We'll keep buying them from now until we graduate. Come on, it'll be fun. This month, I'll buy the tickets. Next month, you will, and so on." Other students urged Perry to do it and, finally, he agreed.

Perry moved out of their dorm room into a suite at the Ritz and refused to give Oliver one red cent.

The two friends carefully reviewed their deal. Each party was providing consideration—namely, the responsibility for purchasing tickets during his month. The amount of each purchase was clearly defined at one dollar. They would start that week and continue until graduation day, two and a half years down the road. Finally, they would share equally any money won. As three witnesses looked on, they shook hands on the bargain. That month, Oliver bought a ticket every week, randomly choosing numbers, and won nothing. The next month, Perry bought a ticket with equally random numbers—and won $52 million. Perry moved out of their dorm room into a suite at the Ritz and refused to give Oliver one red cent. Oliver sued, seeking $26 million, and the return of an Eric Clapton compact disc. If the former friends had understood the Statute of Frauds, they would never have gotten into this mess.[1]

[1]Based loosely on *Lydon v. Beauregard* (Middlesex Sup. Ct., Mass., Dec. 22, 1989), reported in Paul Langher, "Couple Lose Suit to Share $2.8M Prize," *Boston Globe*, December 23, 1989, p. 21.

The rule we examine in this chapter is not exactly news. Originally passed by the British Parliament in 1677, the Statute of Frauds has changed little over the centuries. The purpose was to prevent lying (fraud) in civil lawsuits. Jury trials of that era invited perjury. Neither the plaintiff nor the defendant was permitted to testify, meaning that the jury never heard from the people who really knew what had happened. Instead, the court heard testimony from people who claimed to have witnessed the contract being created. Knowing that he would never be subjected to aggressive cross-examination, a plaintiff might easily allege that a fake contract was real, and then bribe witnesses to support his case. A powerful earl, seeking to acquire 300 acres of valuable land owned by a neighboring commoner, might claim that the neighbor had orally promised to sell his land. Although the claim was utterly false, the earl would win if he could bribe enough "reputable" witnesses to persuade the jury.

To provide juries with more reliable evidence that a contract did or did not exist, Parliament passed the Statute of Frauds. It required that in several types of cases, a contract would be enforced only if it were in writing. Contracts involving interests in land were first on the list.

In the days before the Revolutionary War, when Pennsylvania was still a British possession, the colony's supreme court heard the following case, which centered on the Statute of Frauds. Notice the case citation. This is very nearly the first case reported in United States history. Back then, rulings were expressed quite differently (and everything was capitalized), but you will be able to see Judge Coleman's point.

Landmark Case

The Lessee of Richardson v. Campbell

1 U.S. 10
Supreme Court of Pennsylvania, 1764

Facts: A tenant had rented land from Richardson. However, Campbell claimed the property was really his. Unless the tenant could prove that Richardson owned the land, he would have no right to stay there.

Richardson's tenant offered a deed (which was then called a *patent*) to support his claim; Campbell provided receipts as evidence that he had bought the property.

To prove that the receipts were for the disputed property, Campbell wanted to introduce statements from an important person—Thomas Penn, whose father, William, had founded the Pennsylvania colony. Obviously, the tenant did not want that evidence admitted in court.

Issue: ***Was oral evidence about the ownership of land admissible in court?***

Excerpts from Justice Coleman's Decision: PLAINTIFF supported his Title by a Patent. The Defendant produced Receipts several Years prior to Plaintiff's Patent; but the Plaintiff contend[ed] that the Receipts were only for Money paid on an adjacent Tract; the Defendant produced a Witness to prove a parol Declaration of Mr. Thomas Penn that the Land in dispute was sold to Defendant.

This piece of Evidence was opposed by the Plaintiff, and refused BY THE COURT.

Almost all states of this country have passed their own version of the Statute of Frauds. It is important to remember, as we examine the rules and exceptions, that Parliament and the state legislatures all had a commendable, straightforward purpose in passing their respective statutes of fraud: *to provide a court with the best possible evidence of whether the parties intended to make a contract.* Ironically, the British government

has repealed the writing requirement for most contracts. Parliament concluded that the old statute, far from preventing wrongdoing, was *helping* people commit fraud. A wily negotiator could orally agree to terms and then, if the deal turned unprofitable, walk away from the contract, knowing it was unenforceable without written evidence.

Thus far, no state in this country has entirely repealed its Statute of Frauds. Instead, courts have carved exceptions into the original statute to prevent unfairness. Some scholars have urged state legislatures to go further and repeal the law altogether. Other commentators defend the Statute of Frauds as a valuable tool for justice. They argue that, among other benefits, the requirement of a writing cautions people to be careful before making—or relying on—a promise. For now, the Statute of Frauds is a vital part of law. Sadly, Oliver from the opening scenario will learn this the hard way.

The Statute of Frauds: A plaintiff may not enforce any of the following agreements unless the agreement, or some memorandum of it, is in writing and signed by the defendant. The agreements that must be in writing are those:

- For any interest in **land**
- That **cannot be performed within one year**
- To pay the **debt of another**
- Made by an **executor of an estate**
- Made **in consideration of marriage**; and
- For the sale of goods worth $500 or more.

In other words, when two parties make an agreement covered by any one of these six topics, it must be in writing to be enforceable. Oliver and Perry made a definite agreement to purchase lottery tickets during alternate months and share the proceeds of any winning ticket. But their agreement was to last two and a half years. As the second item on the list indicates, a contract must be in writing if it cannot be performed within one year. The good news is that Oliver gets back his Eric Clapton CD. The bad news is he gets none of the lottery money. Even though three witnesses saw the deal made, it is unlikely to be enforced in any state. Perry will walk away with all $52 million.

Note that although the Oliver-Perry agreement is unenforceable, it is not void. Suppose that Perry does the right thing, agreeing to share the winnings with Oliver. Over the next 20 years, as he receives the winnings, Perry gives one-half to his friend. But then, having squandered his own fortune, Perry demands the money back from Oliver, claiming that the original contract violated the Statute of Frauds. Perry loses. **Once a contract is fully executed, it makes no difference that it was unwritten.** The Statute of Frauds prevents the enforcement of an executory contract; that is, one in which the parties have not fulfilled their obligations. But the contract is not *illegal*. Once both parties have fully performed, neither party may demand rescission. The Statute of Frauds allows a party to cancel future obligations but not undo past actions.

Ethics The *law* permits Perry to keep all of the lottery money. But does Perry have a *moral* right to deny Oliver his half-share? Is the Statute of Frauds serving a useful purpose here? Remember that Parliament passed the original Statute of Frauds believing that a written document would be more reliable than the testimony of alleged witnesses. If we permitted Oliver to enforce the oral contract, based on his testimony and that of the witnesses, would we simply be inviting other plaintiffs to invent lottery "contracts" that had never been made?

Common Law Statute of Frauds: Contracts That Must Be in Writing

Agreements for an Interest in Land

A contract for the sale of any interest in land must be in writing to be enforceable. Notice the phrase "interest in land." This means *any legal right* regarding land. A house on a lot is an interest in land. A mortgage, an easement, and a leased apartment are all interests in land. As a general rule, leases must therefore be in writing, although most states have created an exception for short-term leases. A short-term lease is often one for a year or less, although the length varies from state to state.

© oksana.perkins/Shutterstock

"Any interest in land" may sound obscure, but those who understand it are better off than those who do not.

Kary Presten and Ken Sailer were roommates in a rental apartment in New Jersey that had a view of the Manhattan skyline. The lease was in Sailer's name, but the two split all expenses. Then the building became a "cooperative," meaning that each tenant would have the option of buying the apartment.[2] Sailer learned he could buy his unit for only $55,800 if he promptly paid a $1,000 fee to maintain his rights. He mentioned to Presten that he planned to buy the unit, and Presten asked if he could become half-owner. Sailer agreed and borrowed the $1,000 from Presten to pay his initial fee. But as the time for closing on the purchase came nearer, Sailer realized that he could sell the apartment for a substantial profit. He placed an ad in a paper and promptly received a firm offer for $125,000. Sailer then told Presten that their deal was off, and that he, Sailer, would be buying the unit alone. He did exactly that, and Presten filed suit. Regrettably, the outcome of Presten's suit was only too easy to predict.

A cooperative apartment is an interest in land, said the court. This agreement could be enforced only if put in writing and signed by Sailer. The parties had put nothing in writing, and therefore Presten was out of luck. He was entitled to his $1,000 back, but nothing more. The apartment belonged to Sailer, who could live in it or sell it for a large, quick profit.[3]

Suppose that you are interested in buying five expensive acres in a fast-growing rural area. There is no water on the property, and the only way to bring public water to it is through land owned by the neighbor, Joanne, who agrees to sell you an easement through her property. An *easement* is a legal right that an owner gives to another person to make some use of the owner's land. In other words, Joanne will permit you to dig a 200-foot trench through her land and lay a water pipe there in exchange for $15,000. May you now safely purchase the five acres? Not until Joanne has signed the written easement. You might ignore this "technicality," since Joanne seems friendly and honest. But

[2]Technically, the residents of a "co-op" do not own their apartments. They own a share of the corporation that owns the building. Along with their ownership shares, residents have a right to lease their unit for a modest fee.

[3]*Presten v. Sailer*, 225 N.J. Super. 178, 542 A.2d 7, 1988 N.J. Super. LEXIS 151 (N.J. Super. Ct. App. Div. 1988).

you could then spend $300,000 buying your property only to learn that Joanne has changed her mind. She might refuse to go through with the deal unless you pay $150,000 for the easement. Without her permission to lay the pipe, your new land is worthless. Avoid such nightmares: get it in writing.

Exception: Full Performance by the Seller

If the seller completely performs her side of a contract for an interest in land, a court is likely to enforce the agreement even if it was oral. Adam orally agrees to sell his condominium to Maggie for $150,000. Adam delivers the deed to Maggie and expects his money a week later, but Maggie fails to pay. Most courts will allow Adam to enforce the oral contract and collect the full purchase price from Maggie.

Exception: Part Performance by the Buyer

The buyer of land may be able to enforce an oral contract if she paid part of the purchase price *and either* entered upon the land *or* made improvements to it. Suppose that Eloise sues Grover to enforce an alleged oral contract to sell a lot in Happydale. She claims they struck a bargain in January. Grover defends based on the Statute of Frauds, saying that even if the two did reach an oral agreement, it is unenforceable. Eloise proves that she paid 10 percent of the purchase price, that she began excavating on the lot in February to build a house, and that Grover knew of the work. Eloise has established part performance and will be allowed to enforce her contract.

This exception makes sense if we recall the purpose of the Statute of Frauds: to provide the best possible evidence of the parties' intentions. The fact that Grover permitted Eloise to enter upon the land and begin building on it is compelling evidence that the two parties had reached an agreement. But be aware that most claims of part performance fail. Merely paying a deposit on a house is not part performance. A plaintiff seeking to rely on part performance must show partial payment *and* either entrance onto the land *or* physical improvements to it.

Exception: Promissory Estoppel

The other exception to the writing requirement is our old friend promissory estoppel. **If a promisor makes an oral promise that should reasonably cause the promisee to rely on it, and the promisee does rely, the promisee may be able to enforce the promise,** despite the Statute of Frauds, if that is the only way to avoid injustice. This exception potentially applies to any contract that must be written, such as those for land, those that cannot be performed within one year, and so forth.

Maureen Sullivan and James Rooney lived together for seven years, although they never married. They decided to buy a house. The two agreed that they would be equal owners, but Rooney told Sullivan that in order to obtain Veterans Administration financing, he would have to be the sole owner on the deed. They each contributed to the purchase and maintenance of the house, and Rooney repeatedly told Sullivan that he would change the deed to joint ownership. He never did. When the couple split up, Sullivan sued, seeking a 50 percent interest in the house. She won. The agreement was for an interest in land and should have been in writing, said the court. But Rooney had clearly promised Sullivan that she would be a half-owner, and she had relied by contributing to the purchase and maintenance. The Statute of Frauds was passed to *prevent* fraud, not to enable one person to mislead another and benefit at her expense.[4]

---

[4]*Sullivan v. Rooney,* 404 Mass. 160, 533 N.E.2d 1372, 1989 Mass. LEXIS 49 (1989).

EXAM Strategy

Question: Aditi and Danielle, MBA students, need an apartment for next September. They find a lovely two-bedroom unit that the owner is rehabbing. The students can see that the owner is honest, his workmanship excellent. The owner agrees to rent them the apartment beginning September 1, for $1,200 per month for one year. "Come back at the end of August. By then, my work will be done and I'll have the papers to sign." Aditi asks, "Should we sign something now, to be sure?" The landlord laughs and replies, "I trust you. You don't trust me?" They both trust him, and they shake hands on the deal. When the students return in August, the landlord has rented it to Danielle's former boyfriend for $1,400 per month. Aditi and Danielle sue. Who wins?

Strategy: Under the statute of frauds, a contract for the sale of any interest in land must be in writing to be enforceable. What does "any interest" mean? Does the Statute of Frauds apply to this case?

Result: An "interest" means any legal right. A lease is an interest in land, meaning that the students cannot enforce this agreement unless it is in writing, signed by the owner—and it is not. The students need to look for a new apartment.

Agreements That Cannot Be Performed within One Year

Contracts that cannot be performed within one year are unenforceable unless they are in writing. This one-year period begins on the date the parties make the agreement. The critical word here is "cannot." If a contract *could possibly* be completed within one year, it need not be in writing. Betty gets a job at Burger Brain, throwing fries in oil. Her boss tells her she can have Fridays off for as long as she works there. That oral contract is enforceable whether Betty stays one week or twenty years. "As long as she works there" *could* last for less than one year. Betty might quit the job after six months. Therefore, it does not need to be in writing.[5]

If an agreement will *necessarily* take longer than one year to finish, it must be in writing to be enforceable. If Betty is hired for a term of three years as manager of Burger Brain, the agreement is unenforceable unless put in writing. She cannot perform three years of work in one year.

Or, if you hire a band to play at your wedding 15 months from today, the agreement must be in writing. The gig may take only a single day, but that day will definitely not fall in the next 12 months.

The following case starts with a notorious diet pill and ends with a paralegal suing her boss. Which argument carries greater weight?

---

[5]This is the majority rule. In most states, for example, if a company hires an employee "for life," the contract need not be in writing because the employee could die within one year. "Contracts of uncertain duration are simply excluded [from the Statute of Frauds]; the provision covers only those contracts whose performance cannot possibly be completed within a year." Restatement (Second) of Contracts §130, Comment a, at 328 (1981). See, e.g., *Mackay v. Four Rivers Packing Co.*, 2008 WL 427789 (Id. 2008). However, a few states disagree. The Illinois Supreme Court ruled that a contract for lifetime employment is enforceable only if written. *McInerney v. Charter Golf, Inc.*, 176 Ill. 2d 482, 680 N.E.2d 1347, 1997 Ill. LEXIS 56 (Ill. 1997).

You be the Judge

Sawyer v. Mills

2007 WL 1113038
Kentucky Court of Appeals, 2007

Facts: Barbara Sawyer, a paralegal, worked for attorney Melbourne Mills, assisting him in a class action lawsuit against the makers of a popular diet drug called Fen-Phen. Mills promised Sawyer a large bonus "when the ship comes in," but he never specified how much he would pay her. Mills successfully settled the Fen-Phen case for millions of dollars, and he later met with Sawyer and her husband to discuss her bonus. The Sawyers secretly recorded the conversation.

The Sawyers asked Mills for a $1 million bonus, to be paid as a lump sum. Mills refused. However, the parties kept talking and Mills eventually agreed to pay Sawyer $1 million, plus $65,000 for a luxury automobile. Payments were to be made in monthly installments of $10,000, for 10 years. Mills also agreed to sign a document confirming his promise. Sawyer's lawyer drafted the writing, but Mills never signed it. He did pay nine monthly installments, along with an extra payment of $100,000.

At trial, jurors heard the tape recording, which confirmed the oral agreement. The jury concluded that the parties had reached a binding agreement and awarded Sawyer $900,000. However, the court granted a judgment notwithstanding the verdict for Mills. He ruled that the agreement was barred by the Statute of Frauds. Sawyer appealed.

You Be the Judge: ***Does the Statute of Frauds prevent enforcement of Mills's promise?***

Argument for Sawyer: The Statute of Frauds exists to make sure that a plaintiff does not come into court and allege an oral promise that never existed. The fear of fraudulent claims is legitimate, but obviously it does not apply in this case. We *know* that Mills agreed to pay a million dollars because we can *hear* him make the promise. We know the exact terms of the agreement, and we know it was a reasonable arrangement based on years of work and a massive settlement. We even hear Mills agree to sign a document confirming his promise.

The Statute of Frauds was designed to prevent fraud—not encourage it. Mills's tiresome, technical arguments did not fool the jurors. After hearing—literally—the evidence, the jury knew there had been a deal and awarded Sawyer her fair share. Let's stop playing legal games, start doing justice, and restore the verdict.

Argument for Mills: This is a simple case. The plaintiffs allege an oral contract for 10 years' worth of installment payments. In other words, *if* there was an agreement, it was for 10 years' duration. Sawyer's own lawyer drafted a contract—never signed—for compensation lasting a full decade. Under the Statute of Frauds, an agreement that cannot be performed within one year is unenforceable unless written and signed. End of case.

If our legislature wanted to encourage secret tape recordings and deception, it could have included an exception to the Statute of Frauds, giving tricky plaintiffs a reward for bad-faith negotiating. However, the legislators wisely have made no such exception. The alleged oral contract is worthless.

Promise to Pay the Debt of Another

When one person agrees to pay the debt of another as a favor to that debtor, it is called a collateral promise, and it must be in writing to be enforceable. D. R. Kemp was a young entrepreneur who wanted to build housing in Tuscaloosa, Alabama. He needed $25,000 to complete a project he was working on, so he went to his old college professor, Jim Hanks, for help. The professor said he would see what he could do about getting Kemp a loan. Professor Hanks spoke with his good friend Travis Chandler, telling him that Kemp was highly responsible and would be certain to repay any money loaned. Chandler trusted Professor Hanks but wanted to be sure of his money. Professor Hanks assured Chandler that if for any reason Kemp did not repay the loan, he, Hanks, would pay Chandler in full.

With that assurance, Chandler wrote out a check for $25,000, payable to Kemp, never having met the young man.

Kemp, of course, never repaid the loan. (Thank goodness he did not; this textbook has no use for people who do what they are supposed to.) Kemp exhausted the cash trying to sustain his business, which failed anyway, so he had nothing to give his creditor. Chandler approached Professor Hanks, who refused to pay, and Chandler sued. The outcome was easy to predict. Professor Hanks had agreed to repay Kemp's debt *as a favor to Kemp*, making it a collateral promise. Chandler had nothing in writing, and that is exactly what he got from his lawsuit—nothing.

Exception: The Leading Object Rule

There is one major exception to the collateral promise rule. When the promisor guarantees to pay the debt of another and *the leading object of the promise is some benefit to the promisor himself*, then the contract will be enforceable even if unwritten. In other words, if the promisor makes the guarantee not as a favor to the debtor, but primarily out of *self-interest*, the Statute of Frauds does not apply.

Robert Perry was a hog farmer in Ohio. He owed $26,000 to Sunrise Cooperative, a supplier of feed. Because Perry was in debt, Sunrise stopped giving him feed on credit and began selling him feed on a cash-only basis. Perry also owed money to Farm Credit Services, a loan agency. Perry promised Farm Credit he would repay his loans as soon as his hogs were big enough to sell. But Perry couldn't raise hogs without feed, which he lacked the money to purchase. Farm Credit was determined to bring home the bacon, so it asked Sunrise Cooperative to give Perry the feed on credit. Farm Credit orally promised to pay any debt that Perry did not take care of. When Perry defaulted on his payments to Sunrise, the feed supplier sued Farm Credit based on its oral guarantee. Farm Credit claimed the promise was unenforceable, based on the Statute of Frauds. But the court found in favor of Sunrise. The *leading object* of Farm Credit's promise to Sunrise was self-interest, and the oral promise was fully enforceable.[6]

Promise Made by an Executor of an Estate

This rule is merely a special application of the previous one, concerning the debt of another person. An executor is the person who is in charge of an estate after someone dies. The executor's job is to pay debts of the deceased, obtain money owed to him, and disburse the assets according to the will. In most cases, the executor will use only the estate's assets to pay those debts. The Statute of Frauds comes into play when an executor promises to pay an estate's debts with her own funds. An executor's promise to use her own funds to pay a debt of the deceased must be in writing to be enforceable.

Suppose Esmeralda dies penniless, owing Tina $35,000. Esmeralda's daughter, Sapphire, is the executor of her estate. Tina comes to Sapphire and demands her $35,000. Sapphire responds, "There is no money in mamma's estate, but don't worry, I'll make it up to you with my own money." Sapphire's oral promise is unenforceable. Tina should get it in writing while Sapphire is feeling generous.

Promise Made in Consideration of Marriage

Barney is a multimillionaire with the integrity of a gangster and the charm of a tax collector. He proposes to Li-Tsing, who promptly rejects him. Barney then pleads that if Li-Tsing will be his bride, he will give her an island he owns off the coast of California. Li-Tsing begins to see his good qualities and accepts. After they are married, Barney refuses to

[6] *Sunrise Cooperative v. Robert Perry*, 1992 Ohio App. LEXIS 3913 (Ohio Ct. App. 1992).

deliver the deed. Li-Tsing will get nothing from a court either, because **a promise made in consideration of marriage must be in writing to be enforceable**.

The Common Law Statute of Frauds: What the Writing Must Contain

Each of the types of contract described above must be in writing in order to be enforceable. What must the writing contain? It may be a carefully typed contract, using precise legal terminology, or an informal memo scrawled on the back of a paper napkin at a business lunch. The writing may consist of more than one document, written at different times, with each document making a piece of the puzzle. But there are some general requirements: the writing

- **Must be signed by the defendant, and**
- **Must state with reasonable certainty the name of each party, the subject matter of the agreement, and all of the essential terms and promises.**[7]

Signature

A state's Statute of Frauds typically requires that the writing be "signed by the party to be charged therewith"; that is, the party who is resisting enforcement of the contract. Throughout this chapter, we refer to that person as the defendant because when these cases go to court, it is the defendant who is disputing the existence of a contract.

Judges define "signature" very broadly. Using a pen to write one's name certainly counts, but it is not required. A secretary who stamps an executive's signature on a letter fulfills this requirement. In fact, any mark or logo placed on a document to indicate acceptance, even an "X," will generally satisfy the Statute of Frauds. And electronic commerce, as we discuss below, creates new methods of signing.

Reasonable Certainty

Suppose Garfield and Hayes are having lunch, discussing the sale of Garfield's vacation condominium. They agree on a price and want to make some notation of the agreement even before their lawyers work out a detailed purchase and sales agreement. A perfectly adequate memorandum might say, "Garfield agrees to sell Hayes his condominium at 234 Baron Boulevard, Apartment 18, for $350,000 cash, payable on June 18, 2015, and Hayes promises to pay the sum on that day." They should make two copies of their agreement and sign both. Notice that although Garfield's memo is short, it is *certain* and *complete*. This is critical because problems of vagueness and incompleteness often doom informal memoranda.

Vagueness

Ella Hayden owned valuable commercial property on a highway called Route 9. She wrote a series of letters to her stepson Mark, promising that several of the children, including Mark, would share the property. One letter said: "We four shall fairly divide on the Route 9 property. [sic]" Other letters said: "When the Route 9 Plaza is sold, you can take a long vacation," and

[7]Restatement (Second) of Contracts §131.

"The property will be sold. You and Dennis shall receive the same amount." Ella Hayden died without leaving Mark anything. He sued, but got nothing. The court ruled:

> The above passages written by Ms. Hayden do not recite the essential elements of the alleged contract with reasonable certainty. The writings do not state unequivocally or with sufficient particularity the subject matter to which the writings relate, nor do they provide the terms and conditions of alleged promises made which constitute a contract. The alleged oral contract between Ms. Hayden and Mr. Hayden cannot be identified from the passages from Ms. Hayden's letters quoted above when applied to existing facts. In sum, Mr. Hayden's cause of action seeking an interest in the Route 9 property is foreclosed by the Statute of Frauds.[8]

Incompleteness

During Ronald McCoy's second interview with Spelman Memorial Hospital, the board of directors orally offered him a three-year job as assistant hospital administrator. McCoy accepted. Spelman's CEO, Gene Meyer, sent a letter confirming the offer, which said:

> To reconfirm the offer, it is as follows: 1. We will pay for your moving expenses. 2. I would like you to pursue your Master's Degree at an area program. We will pay 100 percent tuition reimbursement. 3. Effective September 26, you will be eligible for all benefits. 4. A starting salary of $48,000 annually with reviews and eligibility for increases at 6 months, 12 months, and annually thereafter. 5. We will pay for the expenses of 3 trips, if necessary, in order for you to find housing. 6. Vacation will be for 3 weeks a year after one year; however, we do allow for this to be taken earlier. [Signed] Gene Meyer.

Spelman Hospital fired McCoy less than a year after he started work, and McCoy sued. The hospital's letter seems clear, and it is signed by an authorized official. The problem is, it is incomplete. Can you spot the fatal omission? The court did.

McCoy wanted to hold the hospital's board to its spoken promise that he would have a job for a term of three years. To be enforceable, a contract for a term of over one year must be in writing under the Statute of Frauds.

To satisfy the Statute of Frauds, an employment contract—[or] its memorandum or note—must contain *all* essential terms, including *duration of the employment relationship*. Without a statement of duration, an employment-at-will arrangement is created, which is terminable at any time by either party with no liability for breach of contract. McCoy's argument that the letter constituted a memorandum of an oral contract fails because the letter does not state an essential element: duration. The letter did not state that Spelman was granting McCoy employment for any term—only that his salary would be reviewed at 6 months, 12 months, and "annually thereafter."[9]

The lawsuits in this section demonstrate the continuing force of the Statute of Frauds. If the promisor had truly wanted to make a binding commitment, he or she could have written the appropriate contract or memorandum in a matter of minutes. Great formality and expense are unnecessary. But the written document *must be clear and complete*, or it will fail.

EXAM Strategy

Question: Major Retailer and Owner negotiated a lease of a strip mall, the tenancy to begin August 1. Retailer's lawyer then drafted a lease accurately reflecting all terms agreed to, including the parties, exact premises, condition of the store, dates of the

[8] *Hayden v. Hayden*, Mass. Lawyers Weekly No. 12-299-93 (Middlesex Sup. Ct. 1994).
[9] *McCoy v. Spelman Memorial Hospital*, 845 S.W.2d 727, 1993 Mo. App. LEXIS 105 (Mo. Ct. App. 1993).

lease, and monthly rent of $18,000. Retailer signed the lease and delivered it to Owner on July 1. On July 20, Owner leased the same space to a different tenant for $23,000 per month. Retailer sued, claiming that the parties had a binding deal, and the Owner had breached his agreement in order to obtain higher rent. Who will win?

Strategy: To comply with the Statute of Frauds, a writing must state all essential terms. This lease appears to do that. However, the writing must contain one other thing. What is it?

Result: The writing must be *signed* by the party claiming that there is no contract; that is, by the defendant. Owner never signed the lease. This lease does not comply with the Statute of Frauds, and the Retailer will lose his case.

Electronic Contracts and Signatures

E-commerce has grown at a dazzling rate—each year, U.S. enterprises buy and sell tens of billions of dollars worth of goods and services over the Internet. What happens to the writing requirement, though, when there is no paper? The present Statute of Frauds requires some sort of "signature" to ensure that the defendant committed to the deal. Today, an "electronic signature" could mean a name typed (or automatically included) at the bottom of an e-mail message, a retinal or vocal scan, or a name signed by electronic pen on a writing tablet, among others.

E-signatures are valid in all 50 states. Almost all states have adopted the Uniform Electronic Transactions Act[10]. UETA declares that *electronic* contracts and signatures are as enforceable as those on paper. In other words, the normal rules of contract law apply, and neither party can avoid such a deal merely because it originated in cyberspace. A federal statute, the **Electronic Signatures in Global and National Commerce Act (E-SIGN),** also declares that contracts cannot be denied enforcement simply because they are in electronic form, or signed electronically. It applies in states that have not adopted UETA.

Note that, in many states, certain documents still require a traditional (non-electronic) signature. Wills, adoptions, court orders, and notice of foreclosure are common exceptions. If in doubt, get a hard copy, signed in ink.

The UCC's Statute of Frauds

We have reached another section dedicated to the Uniform Commercial Code. Remember that UCC rules govern only contracts involving a sale of goods. Because some merchants make dozens or even hundreds of oral contracts every year, the drafters of the UCC wanted to make the writing requirement less onerous for the sale of goods.

The UCC requires a writing for the sale of goods worth $500 or more. The Code's requirements are easier to meet than those of the common law. **UCC §2-201,** the Statute of Frauds section, has three important elements:

1. The basic rule
2. The merchants' exception
3. Special circumstances

[10]The states that have not adopted the Uniform Electronic Transactions Act, at the time of this writing, are Illinois, New York, and Washington.

The key difference between the common-law rule and the UCC rule is that the Code does *not* require *all* of the terms of the agreement to be in writing.

UCC §2-201(1)—The Basic Rule

A contract for the sale of goods worth $500 or more is not enforceable unless there is some writing, signed by the defendant, indicating that the parties reached an agreement. The key difference between the common-law rule and the UCC rule is that the Code does *not* require *all* of the terms of the agreement to be in writing. The Code looks for something simpler: *an indication that the parties reached an agreement.* Only two things are required: the signature of the defendant and the quantity of goods being sold. Suppose a short memorandum between textile dealers indicates that Seller will sell to Buyer "grade AA 100 percent cotton, white athletic socks." If the writing does not state the price, the parties can testify at court about what the market price was at the time of the deal. If the writing says nothing about the delivery date, the court will assume a reasonable delivery date, say, 60 days. But how many socks were to be delivered? 100 pairs or 100,000? The court will have no objective evidence, and so, the quantity must be written.

Writing	Result
"Confirming phone conversation today, I will send you 1,000 reams of paper for laser printing, usual quality & price. [Signed,] Seller."	This memorandum satisfies UCC §2-201 (1), and the contract may be enforced against the seller. The buyer may testify as to the "usual" quality and price between the two parties, and both sides may rely on normal trade usage.
"Confirming phone conversation today, I will send you best quality paper for laser printing, $3.25 per ream, delivery date next Thursday. [Signed,] Seller."	This memorandum is not enforceable because it states no quantity.

UCC §2-201(2)—The Merchants' Exception

When both parties are "merchants," that is, businesspeople who routinely deal in the goods being sold, the Code will accept an even more informal writing. **Within a reasonable time of making an oral contract, if a merchant sends a written confirmation to another, and if the confirmation is definite enough to bind the *sender herself,* then the merchant who receives the confirmation will *also* be bound by it unless he objects in writing within 10 days.** This exception dramatically changes the rules from the common law, but it applies only between two merchants. The drafters of the Code assumed that experienced merchants are able to take care of themselves in fast-moving negotiations. The critical difference is this: a writing may create a binding contract *even when it is not signed by the defendant.*

Madge manufactures "beanies," that is, silly caps with plastic propellers on top. Rachel, a retailer, telephones her, and they discuss the price of the beanies, shipping time, and other details. Madge then faxes Rachel a memo: "This confirms your order for 2,500 beanies at $12.25 per beanie. Colors: blue, green, black, orange, red. Delivery date: 10 days. [Signed] Madge." Rachel receives the fax, reads it while negotiating with another manufacturer, and throws it in the wastebasket. Rachel buys her beanies elsewhere, and Madge sues. Rachel defends, claiming there is no written contract because she, Rachel, never signed anything. Madge wins under UCC §2-201(2). Both parties were merchants because they routinely

dealt in these goods. Madge signed and sent a confirming memo that could have been used to hold her, Madge, to the deal. When Rachel read it, she was not free to disregard it. Obviously, the intelligent business practice would have been to promptly fax a reply saying, "I disagree. We do not have any deal for beanies." Since Rachel failed to respond within 10 days, Madge has an enforceable contract.

For a confirming memo to count, a merchant must send it within a *reasonable* time. But how long is that? A few days certainly qualifies. Could 13 months be quick enough?

Seton Co. v. Lear Corp.

198 Fed. Appx. 496, 2006 WL 2860774
Sixth Circuit Court of Appeals, 2006

Facts: General Motors hired Lear Corporation to supply all of the leather seats for its trucks and SUVs. In October 1998, Lear reached an agreement with Seton Company to provide Lear with the actual cut-to-pattern leather, which Lear would then assemble. Seton agreed to give Lear certain rebates based on the size of the orders. Despite the great value of this contract, the parties initially put nothing in writing. (Note to students: Later in life, if you negotiate a multimillion dollar deal and fail to put it in writing, your grade in this course will be *retroactively lowered!*)

Both parties performed the contract satisfactorily for about a year. Then they agreed to a slight modification in the rebates. All was still well. In the fall of 1999, Lear asked Seton to send a written summary of the agreement, including the modified rebates. In November 1999, Seton sent a one-page memorandum to Lear, summarizing the agreement. It stated: "Lear is to award Seton the entire [truck and SUV program] cut-to-pattern business for the life of the program." The letter ended with a request that Lear "kindly return with acknowledgment signature," but Lear did not do so.

For two more years, the parties worked together amicably. Then Seton became anxious that Lear was planning to take its business elsewhere. In January 2002, Seton sent a letter requesting that Lear affirm its commitment to deal exclusively with Seton for the life of the GMC program. Lear responded that there had never been any such agreement. Seton filed suit.

At trial, Lear claimed that no contract had ever been signed. Seton replied that its memo summarizing the agreement created a valid contract under the "merchant exception" rule. The jury agreed with Seton and awarded the company $34 million. Lear appealed.

Issue: ***Did Seton's memorandum create a contract under the merchant exception?***

Excerpts from the Court's Per Curiam Decision: The attention of the jurors was focused upon two inquiries: first, whether Seton actually produced a "writing in confirmation of the contract"; and second, whether any such writing was sent to Lear "within a reasonable time." The defendant argues that the November 23, 1999, letter from Seton to Lear was not a confirmation of a contract but, rather, an offer to contract. To bolster that argument, Lear now emphasizes language in the letter stating, "We hope that the above meets with your understanding of this agreement." The jury, however, obviously gave more credence to the opening sentence of the letter directing Lear to "please find below the agreement reached by Messrs. M. Duross, Director of Purchasing for Lear Corporation and N. Showich, Vice President of Sales and Marketing for Seton Company."

Similarly, a closer look at the language of the entire November 23 letter reveals the falsity of the defendant's claim that the fact that the correspondence asked for an acknowledgment signature necessarily means that the letter was merely an offer that has not yet been accepted by Lear. As explained by the district judge, "Seton's November 23, 1999 letter did not *require* Lear to take an additional step in order to indicate its acceptance of the letter's terms. Therefore, the Court does not conclude as a matter of law that the letter merely was an offer."

The defendant also contests the timeliness of the letter. Although recognizing that the concept of a "reasonable time" for sending a written confirmation of the agreement depends on the nature, purpose, and circumstances of such action, Lear argues that the 13-month period between the making of the alleged contract and the letter is far too lengthy a period to be considered "reasonable." Again, the jury came to a contrary conclusion, possibly because the parties had engaged in congenial business relations with each other without incident for a lengthy

period of time after negotiation of the 1998 agreement. Furthermore, a short time prior to issuance of the letter, Lear and Seton modified the terms of their agreement to extend the rebates that the plaintiff paid to the defendant. Even Lear does not argue that the period of time between that subsequent modification and the November 23 letter should be considered unreasonably long as a matter of law.

Affirmed.

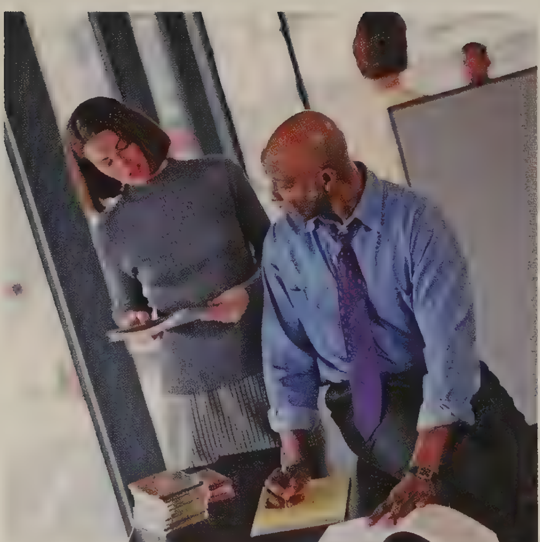
UCC §2-201(3)—Special Circumstances

An oral contract *may* be enforceable, even without a written memorandum, if:

- **The seller is specially manufacturing the goods for the buyer, *or***
- **The defendant admits in court proceedings that there was a contract, *or***
- **The goods have been delivered or they have been paid for.**

Specially Manufactured Goods

If a seller, specially manufacturing goods for the buyer, begins work on them before the buyer cancels, and the goods cannot be sold elsewhere, the oral contract is binding. Bernice manufactures solar heating systems. She phones Jason and orders 75 special electrical converter units designed for her heating system, at $150 per unit. Jason begins manufacturing the units, but then Bernice phones again and says she no longer needs them. Bernice is bound by the contract. The goods are being manufactured for her and cannot be sold elsewhere. Jason had already begun work when she attempted to cancel. If the case goes to court, Jason will win.



© Photodisc/Getty Images

The UCC gives merchants special leeway—and important responsibilities.

Admissions in Court

When the defendant admits in court proceedings that the parties made an oral contract, the agreement is binding. Rex sues Sophie, alleging that she orally agreed to sell him five boa constrictors that have been trained to stand in a line and pass a full wine glass from one snake to the next. Sophie defends the lawsuit, but during a deposition, she says, "OK, we agreed verbally, but nothing was ever put in writing, and I knew I didn't have to go through with it. When I went home, the snakes made me feel really guilty, and I decided not to sell." Sophie's admission under oath dooms her defense.

Goods Delivered or Paid For

If the seller has delivered the goods, or the buyer has paid for them, the contract may be enforced even with nothing in writing. Malik orally agrees to sell 500 plastic chairs to a university for use in its cafeteria. Malik delivers 300 of the chairs, but then the university notifies him that it will not honor the deal. Malik is entitled to payment for the 300 chairs, though not for the other 200. Conversely, if the university had sent a check for one-half of the chairs, it would be entitled to 250 chairs.

EXAM Strategy

Question: Beasley is a commercial honey farmer. He orally agrees to sell 500,000 pounds of honey to Grizzly at $1 per pound. Grizzly immediately faxes Beasley a signed confirmation, summarizing the deal. Beasley receives the fax but ignores it, and he never responds to Grizzly. Five days later, Beasley sells his honey to Brown for $1.15 per pound. Grizzly sues Beasley for breach of contract. Beasley claims that he signed nothing and was free to sell his honey anywhere he wanted. Who will win?

Strategy: Honey is a moveable thing, meaning that this contract is governed by the UCC. Under the Code, contracts for the sale of goods worth $500 or more must be in writing. However, the merchant exception changes things when both parties are merchants. Beasley and Grizzly are both merchants. Apply the merchant exception.

Result: Beasley breached the contract. Within a reasonable time after making the agreement, Grizzly sent a memo to Beasley confirming it. Beasley had 10 days either to object in writing or be held to the agreement. Beasley will lose this lawsuit because he ignored the faxed confirmation.

Parol Evidence

Tyrone agrees to buy Martha's house for $800,000. The contract obligates Tyrone to make a 10 percent down payment immediately and pay the remaining $720,000 in 45 days. As the two parties sign the deal, Tyrone discusses his need for financing. Unfortunately, at the end of 45 days, he has been unable to get a mortgage for the full amount. He claims that the parties orally agreed that he would get his deposit back if he could not obtain financing. But the written agreement says no such thing, and Martha disputes the claim. Who will win? Probably Martha, because of the parol evidence rule.

Parol evidence refers to anything (apart from the written contract itself) that was said, done, or written *before* the parties signed the agreement or *as they signed it*. Martha's conversation with Tyrone about financing the house was parol evidence because it occurred as they were signing the contract. Another important term is **integrated contract**, which means a writing that the parties intend as the final, complete expression of their agreement. Now for the rule.

Integrated contract
A writing that the parties intend as the final, complete expression of their agreement.

The parol evidence rule: When two parties make an integrated contract, neither one may use parol evidence to contradict, vary, or add to its terms. Negotiations may last for hours, weeks, or even months. Almost no contract includes everything that the parties said. When parties consider their agreement integrated, any statements they made before or while signing are irrelevant. If a court determines that Martha and Tyrone intended their agreement to be integrated, it will prohibit testimony about Martha's oral promises. One way to avoid parol evidence disputes is to include an *integration clause*. That is a statement clearly proclaiming that this writing is the "full and final expression" of the parties' agreement, and that anything said before signing or while signing is irrelevant. In the following case, learned people learned about parol evidence the hard way.

Mayo v. North Carolina State University

2005 WL 350567
North Carolina Court of Appeals, 2005

Facts: Dr. Robert Mayo was a tenured faculty member of the engineering department at North Carolina State University (NCSU), and director of the school's nuclear engineering program. In July, he informed his department chair, Dr. Paul Turinsky, that he was leaving NCSU effective September 1. Turinsky accepted the resignation.

In October, after Mayo had departed, Phyllis Jennette, the university's payroll coordinator, informed him that he had been overpaid. She explained that for employees who worked 9 months but were paid over 12 months, the salary checks for July and August were in fact prepayments for the period beginning that September. Because Mayo had not worked after September 1, the checks for July and August were overpayment. When he refused to refund the money, NCSU sought to claim it in legal proceedings. The first step was a hearing before an administrative agency.

At the hearing, Turinsky and Brian Simet, the university's payroll director, explained that the "prepayment" rule was a basic part of every employee's contract. However, both acknowledged that the prepayment rule was not included in any of the documents that formed Mayo's contract, including his appointment letter, annual salary letter, and policies adopted by the university's trustees. The university officials used other evidence, outside the written documents, to establish the prepayment policy.

Based on the additional evidence, the agency ruled that NCSU was entitled to its money. However, Mayo appealed to court, and the trial judge declared that he owed nothing, ruling that the university was not permitted to rely on parol evidence to establish its policy. NCSU appealed.

Issue: ***May NCSU rely on parol evidence to establish its prepayment rule?***

Excerpts from Judge Bryant's Decision: Here, the language of the employment agreement is clear and unambiguous—petitioner is to be paid in twelve monthly installments for his service as a nine-month, academic year, tenured faculty member.

The terms relied upon by NCSU were not expressly included in the employment agreement. Dr. Turinsky testified that petitioner's written employment agreement is comprised of terms found in petitioner's appointment letter, annual salary letter, and written policies adopted and amended by the UNC Board of Governors and the NCSU Board of Trustees. However, none of these documents forming the employment agreement set forth the compensation policies upon which NCSU bases its claim. Simet, Director of NCSU's Payroll Department, admitted at the agency hearing that the policies were "not stated anywhere specifically." Further, Dr. Turinsky testified he did not know of the existence of the terms until September, after petitioner left his employment with NCSU. NCSU, however, attempts to offer parol evidence to explain that payments made in July and August were prepayments for the following academic year.

The parol evidence rule prohibits the admission of parol evidence to vary, add to, or contradict a written instrument intended to be the final integration of the transaction. The rule is otherwise where it is shown that the writing is not a full integration of the terms of the contract, or when a contract is ambiguous, parol evidence is admissible to show and make certain the intention behind the contract.

Here Dr. Turinsky testified that petitioner's employment agreement consisted only of petitioner's appointment letter, his annual salary letter, and the policies adopted and amended by the UNC Board of Governors and by the NCSU Board of Trustees. It therefore appears the parties intended the above documents to be the final integration of the employment agreement. Additionally, we have already noted the language contained in the documents are unambiguous; thus, parol evidence may not be introduced to explain the terms of the agreement.

We hold petitioner does not owe a debt to NCSU as result of an alleged overpayment of salary.

[Affirmed.]

Exception: An Incomplete or Ambiguous Contract

If a court determines that a written contract is incomplete or ambiguous, it will permit parol evidence. Suppose that an employment contract states that the company will provide "full health coverage for Robert Watson and his family," but does not define *family*. Three years

later, Watson divorces and remarries, acquiring three stepchildren, and a year later, his second wife has a baby. Watson now has two children by his first marriage and four by the second. The company refuses to insure Watson's first wife or his stepchildren. A court will probably find a key clause in his health care contract—"coverage for ... *his family*"—is ambiguous. A judge cannot determine exactly what the clause means from the contract itself, so the parties will be permitted to introduce parol evidence to prove whether or not the company must insure Watson's extended family.[11]

Fraud, Misrepresentation, or Duress

A court will permit parol evidence of fraud, misrepresentation, or duress. To encourage Annette to buy his house, Will assures her that no floodwaters from the nearby river have ever come within two miles of the house. Annette signs a contract that is silent about flooding and includes an integration clause stating that neither party is relying on any oral statements made during negotiations. When Annette moves in, she discovers that the foundation is collapsing due to earlier flooding and that Will knew of the flooding and the damage. Despite the integration clause, a court will probably allow Annette to testify about Will's misrepresentations.[12]

Chapter Conclusion

Some contracts must be in writing to be enforceable, and the writing must be clear and unambiguous. Drafting the contract need not be arduous. The disputes illustrated in this chapter could all have been prevented with a few carefully crafted sentences. It is worth the time and effort to write them.

Exam Review

1. **THE STATUTE OF FRAUDS** Several types of contract are enforceable only if written:
   - **LAND** The sale of any interest in land (pp. 342–344)
   - **ONE YEAR** An agreement that *cannot* be performed within one year (pp. 344–345)

EXAM Strategy

CPA Question: Able hired Carr to restore Able's antique car for $800. The terms of their oral agreement provided that Carr had 18 months to complete the work. Actually, the work could be completed within one year. The agreement is:

(a) Unenforceable because it covers services with a value in excess of $500

(b) Unenforceable because it covers a time period in excess of one year

[11]See, e.g., *Eure v. Norfolk Shipbuilding & Drydock Corp., Inc.*, 561 S.E.2d 663 (Va. 2002).
[12]*Lindberg v. Roseth*, 137 Idaho 222, 46 P.3d 518 (Idaho 2002).

(c) Enforceable because personal service contracts are exempt from the Statute of Frauds

(d) Enforceable because the work could be completed within one year

Strategy: This is a subtle question. Notice that the contract is for a sum greater than $500. But that is a red herring. Why? The contract also might take 18 months to perform. But it *could* be finished in less than a year. (See the "Result" at the end of this section.)

- **DEBT OF ANOTHER** A promise to pay the debt of another, including promises made by executors to pay an estate's debts. (pp. 345–346)

EXAM Strategy

Question: Donald Waide had a contracting business. He bought most of his supplies from Paul Bingham's supply center. Waide fell behind on his bills, and Bingham told Waide that he would extend no more credit to him. That same day, Donald's father, Elmer Waide, came to Bingham's store, and said to Bingham that he would "stand good" for any sales to Donald made on credit. Based on Elmer's statement, Bingham again gave Donald credit, and Donald ran up $10,000 in goods before Bingham sued Donald and Elmer. What defense did Elmer make, and what was the outcome?

Strategy: This was an oral agreement, so the issue is whether the promise had to be in writing to be enforceable. Review the list of six contracts that must be in writing. Is this agreement there? (See the "Result" at the end of this section.)

- **EXECUTORS** A promise made by an executor of an estate (p. 346)
- **MARRIAGE** A promise made in consideration of marriage; and (pp. 346–347)
- **GOODS** The sale of goods worth $500 or more (p. 350)

EXAM Strategy

Question: James River-Norwalk, Inc., was a paper and textile company that needed a constant supply of wood. James River orally contracted with Gary Futch to supply wood for the company, and Futch did so for several years. The deal was worth many thousands of dollars, but nothing was put in writing. Futch actually purchased the wood for his own account and then resold it to James River. After a few years, James River refused to do more business with Futch. Did the parties have a binding contract?

Strategy: If this is a contract for services, it is enforceable without anything in writing. However, if it is one for the sale of goods, it must be in writing. Clearly what James River wanted was the wood, and it did not care where Futch found it. (See the "Result" at the end of this section.)

2. **CONTENTS** The writing must be signed by the defendant and must state the name of all parties, the subject matter of the agreement, and all essential terms and promises. Electronic signatures usually are valid. (pp. 347–349)

3. **UNIFORM COMMERCIAL CODE (UCC)** A contract or memorandum for the sale of goods may be less complete than those required by the common law.

   - The basic UCC rule requires only a memorandum signed by the defendant, indicating that the parties reached an agreement and specifying the quantity of goods.
   - Between merchants, even less is required. If one merchant sends written confirmation of a contract, the merchant who receives the document must object within 10 days or be bound by the writing.
   - In the following special circumstances, no writing may be required: the goods are specially manufactured, one party admits in litigation that there was a contract, or one party pays for part of the goods or delivers some of the goods. (pp. 349–353)

4. **PAROL EVIDENCE** When an integrated contract exists, neither party may generally use parol evidence to contradict, vary, or add to its terms. Parol evidence refers to anything (apart from the written contract itself) that was said, done, or written before the parties signed the agreement or as they signed it. (pp. 353–355)

1. "One Year" Result: (d) A contract for the sale of goods worth $500 or more must be in writing—but this is a contract for *services*, not the sale of goods, so the $800 price is irrelevant. The contract *can* be completed within one year, and thus it falls outside the Statute of Frauds. This is an enforceable agreement.

1. "Debt of Another" Result: Elmer made a promise to pay the debt of another. He did so as a favor to his son. This is a collateral promise. Elmer never signed any such promise, and the agreement cannot be enforced against him.

1. "Goods" Result: James River was buying wood, and this is a contract for the sale of goods. With nothing in writing, signed by James River, Futch has no enforceable agreement.

MULTIPLE-CHOICE QUESTIONS

1. **CPA QUESTION** Two individuals signed a contract that was intended to be their entire agreement. The parol evidence rule will prevent the admission of evidence offered to:

   (a) Explain the meaning of an ambiguity in the written contract
   (b) Establish that fraud had been committed in the formation of the contract
   (c) Prove the existence of a contemporaneous oral agreement modifying the contract
   (d) Prove the existence of a subsequent oral agreement modifying the contract

2. Raul wants to plant a garden, and he agrees to buy a small piece of land for $300. Later, he agrees to buy a table for $300. Neither agreement is put in writing. The

agreement to buy the land ____________ enforceable, and the agreement to buy the table ____________ enforceable.

(a) is; is

(b) is; is not

(c) is not; is

(d) is not; is not

3. The common-law Statute of Frauds requires that to be "in writing," an agreement must be signed by ...

(a) the plaintiff

(b) the defendant

(c) both A and B

(d) none of the above

4. Mandy verbally tells a motorcycle dealer that she will make her son's motorcycle payments if he falls behind on them. Will Mandy be legally required to live up to this agreement?

(a) Yes, absolutely

(b) Yes, if her son is under 18

(c) Yes, if Mandy will be the primary driver of the motorcycle

(d) Yes, if the motorcycle is worth less than $500

(e) No, absolutely not

5. In December 2012, Eric hires a band to play at a huge graduation party he is planning to hold in May, 2014. The deal is never put into writing. In January 2014, if he wanted to cancel the job, Eric ____________ be able to do so. If he does not cancel, and if the band shows up and plays at the party in May 2014, Eric ____________ have to pay them.

(a) will; will

(b) will; will not

(c) will not; will

(d) will not; will not

Essay Questions

1. Richard Griffin and three other men owned a grain company called Bearhouse, Inc., which needed to borrow money. First National Bank was willing to loan $490,000, but it insisted that the four men sign personal guaranties on the loan, committing themselves to repaying up to 25 percent of the loan each if Bearhouse defaulted. Bearhouse went bankrupt. The bank was able to collect some of its money from Bearhouse's assets, but it sued Griffin for the balance. At trial, Griffin wanted to testify that before he signed his guaranty, a bank officer assured him that he would only owe 25 percent of *whatever balance was unpaid*, not 25 percent of the total loan. How will the court decide whether Griffin is entitled to testify about the conversation?

2. When Deana Byers married Steven Byers, she was pregnant with another man's child. Shortly after the marriage, Deana gave birth. The marriage lasted only two months, and the couple separated. In divorce proceedings, Deana sought child support. She claimed that Steven had orally promised to support the child if Deana would marry him. Steven claims he never made the promise. Comment on the outcome.

3. Lonnie Hippen moved to Long Island, Kansas, to work in an insurance company owned by Griffiths. After he moved there, Griffiths offered to sell Hippen a house he owned, and Hippen agreed in writing to buy it. He did buy the house and moved in, but two years later, Hippen left the insurance company. He then claimed that at the time of the sale, Griffiths had orally promised to buy back his house at the selling price if Hippen should happen to leave the company. Griffiths defended based on the Statute of Frauds. Hippen argued that the Statute of Frauds did not apply because the repurchase of the house was essentially part of his employment with Griffiths. Comment.

4. Landlord owned a clothing store and agreed in writing to lease the store's basement to another retailer. The written lease, which both parties signed, (1) described the premises exactly, (2) identified the parties, and (3) stated the monthly rent clearly. But an appeals court held that the lease did not satisfy the Statute of Frauds. Why not?

5. **YOU BE THE JUDGE WRITING PROBLEM** Harrison Epperly operated United Brake Systems in Indianapolis, Indiana, and wanted to open a similar store in Nashville. He offered Kenneth Jarrett a job as manager, promising six months' severance pay if the store was not profitable in six months, and 49 percent ownership if he managed the new store for 10 years. Jarrett agreed, but the two men never put the deal in writing. Under Jarrett's management, the Nashville branch grew dramatically. After four years of renting space, the company purchased the land and buildings it used. Epperly periodically acknowledged his promise to make Jarrett 49 percent owner of the Nashville branch, and from time to time, he mentioned the arrangement to other workers. But after 10 years, Epperly sold United Brake, which had grown to 23 branches, to another company for $11 million. Jarrett sued Epperly for 49 percent of the Nashville branch. The trial court awarded Jarrett $812,000. Epperly appealed. Is Jarrett's contract with Epperly barred by the Statute of Frauds? **Argument for Epperly:** This alleged contract is unenforceable for two reasons. First, the agreement includes real estate; namely, the valuable land and buildings the company uses. A contract for the sale of any interest in land is unenforceable unless written. Second, the contract could not have been performed within 1 year. If there was a deal, then by Jarrett's own words, the parties intended it to last 10 years. And 10 years' work cannot be performed in 1 year. **Argument for Jarrett:** The agreement had nothing to do with land. Jarrett and Epperly agreed that Mr. Jarrett would obtain a 49 percent ownership of the *Nashville branch*. At the time they made that agreement, the Nashville branch had no real estate. There is no rule saying that a valid contract becomes invalid because a corporation acquires some land. The "not in one year" argument also misses the point. The primary obligation was to open the branch and manage it for six months. If it was not profitable, Mr. Jarrett would immediately receive six months' severance pay, and the contract would be fully performed by both parties in less than a year. Finally, Epperly made a binding commitment, and Mr. Jarrett relied. Promissory estoppel prohibits Mr. Epperly from using deceit to profit.

Discussion Questions

1. **ETHICS** Jacob Deutsch owned commercial property. He orally agreed to rent it for six years to Budget Rent-A-Car. Budget took possession, began paying monthly rent, and, over a period of several months, expended about $6,000 in upgrading the property. Deutsch was aware of the repairs. After a year, Deutsch attempted to evict Budget. Budget claimed it had a six-year oral lease, but Deutsch claimed that such a lease was worthless. Please rule. Is it ethical for Deutsch to use the Statute of Frauds in attempting to defeat the lease? Assume that, as landlord, you had orally agreed to rent premises to a tenant, but then for business reasons, you preferred not to carry out the deal. Would you evict a tenant if you thought the Statute of Frauds would enable you to do so? How should you analyze the problem? What values are most important to you?

2. Mast Industries and Bazak International were two textile firms. Mast orally offered to sell certain textiles to Bazak for $103,000. Mast promised to send documents confirming the agreement, but it never did. Finally, Bazak sent a memorandum to Mast confirming the agreement, describing the goods, and specifying their quantity and the price. Bazak's officer signed the memo. Mast received the memo but never agreed to it in writing. When Mast failed to deliver the goods, Bazak sued. Who will win? Why?

3. Is the Statute of Frauds reasonable, or does it unacceptably allow people to escape their obligations on a mere technicality?

4. Does the coverage of the Statute of Frauds make sense as it currently stands? Would it be better to expand the law and require that all contracts be in writing? Or should the law be done away with altogether?

5. Compare the common-law Statute of Frauds to the UCC version. What are the specific differences? Which is more reasonable? Why?

CHAPTER 16

Third Parties

© picsbyst/Shutterstock.com

Morty is 80, and a back injury makes it impossible for him to keep up with his yardwork. The weeds in his front yard are knee-high by the Fourth of July, when his son John comes to visit for a week.

Surprised at the condition of the lawn, John gets the old mower out of the garage and mows it himself. Later in the visit, John calls a local landscaping company. He agrees to pay $500 for the company to send workers to mow Morty's lawn every two weeks for the rest of the year.

The company bills John's credit card, but it never sends anyone to cut the grass. As the summer wears on, John and Morty make several angry phone calls to the landscaper, without result. The owner of the company seems not to care, and it may take a lawsuit to motivate him to refund John's money so that he can hire someone else to do the job.

If John is too busy to take legal action, can *Morty* do so?

But if John is too busy to take legal action, can *Morty* do so?

The last four chapters examined the Contracts Checklist, so you now know all the elements that must be present for a valid contract to exist. In this chapter and the next two, we turn our attention to other contracts issues.

THIRD PARTY BENEFICIARY

The two parties who make a contract always intend to gain some benefit for themselves. Often, though, their bargain will also benefit *someone else*. **A third party beneficiary is someone who was not a party to the contract but stands to benefit from it.** Many contracts create third party beneficiaries. In the opening scenario, Morty is a third party beneficiary of John's agreement with the landscaping company. As another example, suppose a major league baseball team contracts to purchase from Seller 20 acres of an abandoned industrial site to be used for a new stadium. The owner of a pizza parlor on the edge of Seller's land might benefit enormously, since 40,000 hungry fans in the neighborhood for 81 home games every season could turn her once-marginal operation into a gold mine of cheese and pepperoni.

But what if the contract falls apart? What if the team backs out of the deal to buy the land? Seller can certainly sue because it is a party to the contract. But what about the pizza parlor owner? Can she sue to enforce the deal and recover lost profits for unsold sausage and green pepper?

The outcome in cases like these depends upon the intentions of the two contracting parties. If they *intended* to benefit the third party, she will probably be permitted to enforce their contract. If they did not intend to benefit her, she probably has no power to enforce the agreement.

Intended Beneficiaries

Intended beneficiary
Someone who may enforce a contract made between two other parties.

Promisor
Makes the promise that a third party seeks to enforce.

Promisee
The contract party *to whom* a promise is made.

A person is an **intended beneficiary** and may enforce a contract if the parties intended her to benefit and if either (a) enforcing the promise will satisfy a *duty* of the promisee to the beneficiary, or (b) the promisee intended to make a *gift* to the beneficiary. (The **promisor** is the one who makes the promise that the third party beneficiary is seeking to enforce. The **promisee** is the other party to the contract.)

In other words, a third party beneficiary must show two things in order to enforce a contract that two other people created. First, she must show that the two contracting parties were aware of her situation and knew that she would receive something of value from their deal. Second, she must show that the promisee wanted to benefit her for one of two reasons: either to satisfy some duty owed or to make her a gift.

If the promisee is fulfilling some duty, the third party beneficiary is called a **creditor beneficiary**. Most often, the duty that a promisee will be fulfilling is a debt already owed to the beneficiary. If the promisee is making a gift, the third party is a **donee beneficiary**.[1] So long as the third party is either a creditor or a donee beneficiary, she may enforce the contract. If she is only an incidental beneficiary, she may not.

We will apply this rule to the dispute over Morty's lawn. Like most contracts, the deal between John and the landscaping company had two promises: the company's promise to mow the lawn every two weeks and John's agreement to pay $500. The one that interests us is the promise to mow the lawn. The company is the promisor and John is the promisee.

Did the two parties intend to benefit Morty? Yes, they did. John wanted his father's property maintained. Did John owe Morty a legal duty? No. Did John intend to make a gift to Morty? Yes. So, Morty is an intended, donee beneficiary, and he can sue the landscaping company to enforce the contract himself.

[1] "Donee" comes from the word "donate".

By contrast, the pizza parlor owner will surely lose. A stadium is a multimillion-dollar investment, and it is most unlikely that the baseball team and the seller of the land were even aware of the owner's existence, let alone that they intended to benefit her. She probably cannot prove either the first element or the second element, and certainly not both.

In the following case, a dazzling diamond loses its luster. Who is entitled to sue?

SCHAUER V. MANDARIN GEMS OF CALIFORNIA, INC.

2005 WL 5730
Court of Appeal of California, 2005

Facts: Sarah Schauer and her fiance, Darin Erstad, went shopping for an engagement ring at Mandarin Gems, where they were captivated by a 3-carat diamond with a high clarity rating. Erstad bought the ring for $43,121. Later, Mandarin supplied Erstad with a written appraisal valuing the ring at $45,500. A certified gemologist signed the appraisal.

Diamonds may last forever, but this marriage was short-lived. The divorce decree gave each party the right to keep whatever personal property they currently held, meaning that Schauer could keep the ring. She had the ring appraised by the Gem Trade Laboratory, which gave it a poor clarity rating and a value of only $20,000.

Schauer sued Mandarin for misrepresentation and breach of contract, but the jeweler defended by saying that it had never made a contract with her. The trial court dismissed Schauer's suit, and she appealed.

Issue: ***Does Schauer have any right to sue for breach of contract as a third party beneficiary?***

Excerpts from Judge Ikola's Decision: Plaintiff has standing in her own right to sue for breach of contract as a third party beneficiary. [D]efendant entered into a written contract with Plaintiff's fiance to purchase the subject engagement ring for the sole and stated purpose of giving it to Plaintiff.

A contract, made expressly for the benefit of a third person, may be enforced by him or her at any time before the parties rescind it. Because third party beneficiary status is a matter of contract interpretation, a person seeking to enforce a contract as a third party beneficiary must plead a contract which was made expressly for his or her benefit and one in which it clearly appears that he or she was a beneficiary.

An intent to make the obligation inure to the benefit of the third party must have been clearly manifested by the contracting parties. Although this means persons only incidentally or remotely benefited by the contract are not entitled to enforce it, it does not mean both of the contracting parties must intend to benefit the third party: Rather, it means the promisor—in this case, defendant jeweler—must have understood that the promisee (Erstad) had such intent. No specific manifestation by the promisor of an intent to benefit the third person is required.

We conclude the pleading here meets the test of demonstrating plaintiff's standing as a third party beneficiary to enforce the contract between Erstad and defendant. Erstad allegedly bought the ring for the sole and *stated* purpose of giving the ring to plaintiff. Under the alleged facts, the jeweler *must* have understood Erstad's intent to enter the sales contract for plaintiff's benefit. Thus, plaintiff has adequately pleaded her status as a third party beneficiary, and she is entitled to proceed with her contract claim against defendant.

EXAM Strategy

Question: Mr. Inspector examines houses and gives its reports to potential buyers. Mr. Inspector contracts with Greenlawn, a real estate agent, to furnish reports on houses that Greenlawn is selling. The agreement allows the agent to give the reports to potential buyers. Greenlawn gives Molly one of Mr. Inspector's reports and, relying

upon it, she buys a house. Although the report states that the house is structurally sound, it turns out that chronic roof leaks have caused water to seep into the walls. Molly sues Mr. Inspector. The inspector requests summary judgment, claiming that he had no contract with Molly.

Strategy: Mr. Inspector is right in saying he had no agreement with Molly. To prevail, Molly must demonstrate she is a third party beneficiary of the contract between the other two. A third party beneficiary may enforce a contract if the parties intended to benefit her and either (a) enforcing the promise will satisfy a duty of the promisee to the beneficiary or (b) the promisee intended to make a gift to the beneficiary.

Result: Greenlawn used the inspection summaries as sales tools. When Greenlawn assured a potential buyer that she could rely upon a report, the real estate agent took on a duty to deliver reliable information. Mr. Inspector understood that. The two parties intended to benefit Greenlawn's buyers. Molly may sue Mr. Inspector for breach of his contract with the agent. Mr. Inspector's motion for summary judgment is denied.

Incidental Beneficiaries

Incidental beneficiary
Someone who might have benefited from a contract between two others but has no right to enforce that agreement.

A person who fails to qualify as a donee beneficiary or a creditor beneficiary is merely an **incidental beneficiary** and may not enforce the contract. The pizza parlor owner is an incidental beneficiary.

In an effort to persuade courts, many plaintiffs make creative arguments that they are intended beneficiaries with enforcement rights. Is every taxpayer an intended beneficiary of a government contract? Do labor unions have rights if a contract refers to them in general terms? Or are these plaintiffs incidental beneficiaries? The following case answers these questions.

UNITE HERE LOCAL 30 V. CALIFORNIA DEPARTMENT OF PARKS AND RECREATION

2011 Cal. App. LEXIS 510
Court of Appeal of California, 2011

Facts: The California Department of Parks and Recreation (DPR) and Delaware North Companies (DNC) entered into a contract giving DNC the right to operate a concession stand at a state park in San Diego for 10 years. Four years into the contract, DNC assigned its rights to operate the stand to another company.

DNC fired many of its employees, and the new operator did not rehire them. Some of these workers were members of the union Unite Here Local 30. Local 30 sued to block the assignment. It was joined in the suit by Bridgette Browning, who lived in the area and seemed to care who provided her hot dogs.

The trial court rejected the plaintiff's claims, and the plaintiffs appealed.

Issue: *Were the plaintiffs incidental or donee beneficiaries?*

Excerpts from Judge Hull's Decision: Paragraph 37(a) of the contract limits assignments and reads: "No assignment shall be made unless first consented to in writing by State." Before State considers such assignment, the proposed assignment must comply with applicable law. DPR reviewed the evidence submitted by Delaware North and determined that the proposed assignment met the requirements under paragraph 37(a).

Plaintiffs contend a third party who is within the class of those for whose benefit a contract is made have standing to sue for breach of that contract. They further argue, Local 30 and the employees it represents are clearly intended beneficiaries of the original contract.

The test for determining whether a contract was made for the benefit of a third person is whether an intent to benefit a third person appears from the terms of the contract. Under the intent test, it is not enough that the third party would incidentally have benefited from performance. On the other hand, the third person need not be named or identified individually. A third party may enforce a contract where he shows that he is a member of a class of persons for whose benefit it was made.

Plaintiffs contend Bridgette Browning has a right to sue as a taxpayer of California. They point out that paragraph 37 procedures are intended to eliminate favoritism, fraud, corruption, and misuse of public funds. Thus, plaintiffs argue, can be said to have the intent to benefit the general public and the taxpayer. Of course, any contract entered into by the state would presumably be for the benefit of the state's residents and taxpayers, just as a contract entered into by a corporation would presumably be for the benefit of the corporation's shareholders. However, the fact that members of the public derive a benefit from the contract does not make them intended beneficiaries. A person is a donee beneficiary only if the promisee's contractual intent is to make a gift to him. Browning is no more than an incidental beneficiary who benefits merely because the state as a whole benefits.

Likewise, Local 30 is no more than an incidental beneficiary. Plaintiffs argue that because the Concession Contract contains a neutrality agreement regarding union organizing, Local 30 and the employees it represents are clearly intended beneficiaries of the original contract. The neutrality agreement states, in part, "Concessionaire shall not use the Premises to hold a meeting if the purpose is to promote or deter union organizing." This provision hardly reveals an intent to confer a benefit on Local 30, or any union for that matter. At best, it shows an intent not to provide either a benefit or a detriment to union organizing.

We conclude the trial court correctly determined plaintiffs are not third party beneficiaries and therefore lack standing to sue on that basis.

The judgment is affirmed.

Assignment and Delegation

After a contract is made, one or both parties may wish to substitute someone else for themselves. Six months before Maria's lease expires, an out-of-town company offers her a new job at a substantial increase in pay. After taking the job, she wants to sublease her apartment to her friend Sarah.

A contracting party may transfer his rights under the contract, which is called an **assignment** of rights. Or a party may transfer her obligations under the contract, which is a **delegation** of duties. Frequently, a party will make an assignment and delegation simultaneously, transferring both rights (such as the right to inhabit an apartment) and duties (like the obligation to pay monthly rent) to a third party.

Assignment
Transferring contract *rights*.

Delegation
Transferring contract *duties*.

Assignment

Lydia needs 500 bottles of champagne. Bruno agrees to sell them to her for $10,000, payable 30 days after delivery. He transports the wine to her.

Bruno owes Doug $8,000 from a previous deal. He says to Doug, "I don't have your money, but I'll give you my claim to Lydia's $10,000." Doug agrees. Bruno then *assigns* to Doug his rights to Lydia's money, and in exchange Doug gives up his claim against Bruno for $8,000. Bruno is the **assignor, the one making an assignment**, and Doug is the **assignee, the one receiving an assignment**.

Why would Bruno offer $10,000 when he owed Doug only $8,000? Because all he has is a *claim* to Lydia's money. Cash in hand is often more valuable. Doug, however, is willing to assume some risk for a potential $2,000 gain.

Obligor
The party obligated to do something.

Bruno notifies Lydia of the assignment. Lydia, who owes the money, is called the **obligor;** that is, the one obligated to do something. At the end of 30 days, Doug arrives at

Lydia's doorstep, asks for his money, and gets it, since Lydia is obligated to him. Bruno has no claim to any payment. See Exhibit 16.1.

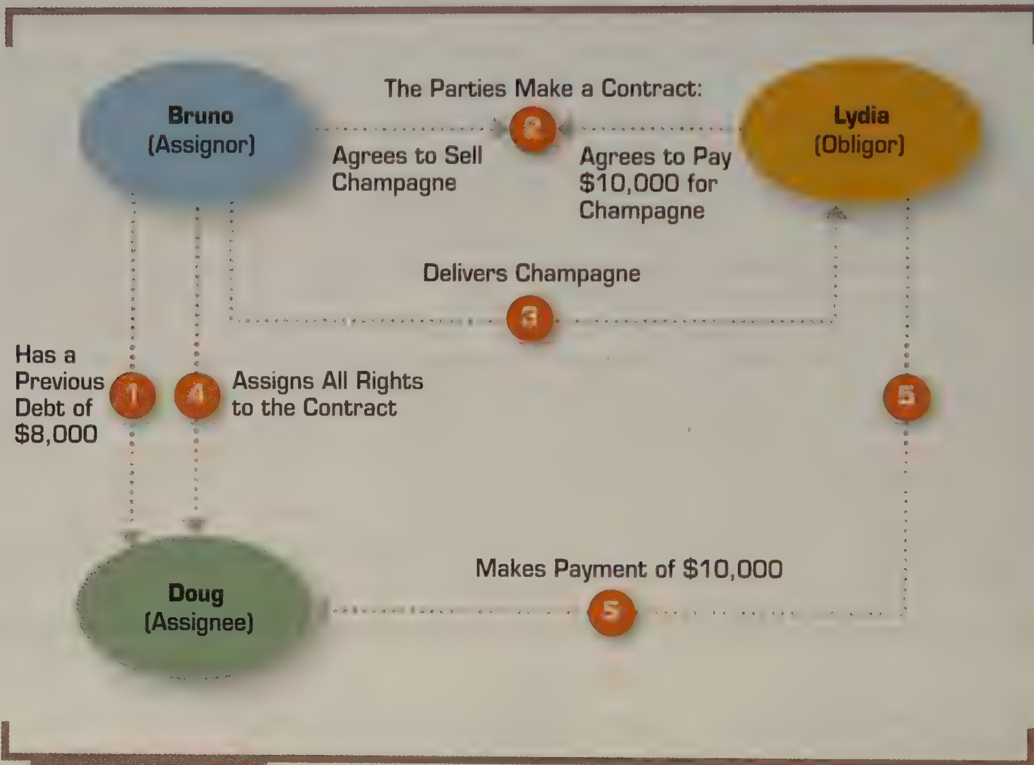


EXHIBIT 16.1

EXAM Strategy

Question: Hasannah, an art dealer, signs a contract with Jason. Hasannah will deliver a David Hockney painting to Jason's house. Jason may keep it for 30 days and then either return it or pay Hasannah $2 million. Hasannah delivers the painting. Hasannah finds a better building to house her gallery and agrees to buy it from Shannon. She and Shannon sign a contract allowing Shannon to receive Jason's payment if he keeps the picture. Hasannah then notifies Jason to pay Shannon the $2 million. Identify the obligor, the assignor, and the assignee.

Strategy: The obligor is the one obligated to do something. The assignor makes an assignment and the assignee receives it.

Result: Jason is obligated either to return the picture or pay $2 million for it. He is the obligor. Hasannah is entitled to the money, but she assigns her right to Shannon. Hasannah is the assignor and Shannon the assignee.

What Rights Are Assignable?

Most contract rights are assignable, but not all. Disputes sometimes arise between the two contracting parties about whether one of the parties could legally assign her rights to a third party. Any **contractual right may be assigned unless assignment**

(a) would substantially change the obligor's rights or duties under the contract;

(b) is forbidden by law or public policy; or

(c) is validly precluded by the contract itself.[2]

Substantial Change. An assignment is prohibited if it would substantially change the obligor's situation. For example, Bruno is permitted to assign to Doug his rights to payment from Lydia because it makes no difference to Lydia whether she writes a check to one person or another. But suppose that, before delivery, Lydia had wanted to assign her rights to the shipment of 500 bottles of champagne to a business in another country. In this example, Bruno would be the obligor, and his duties would substantially change. Shipping heavy items over long distances adds substantial costs, so Lydia would not be able to make the assignment.

Assignment is also prohibited when the obligor is agreeing to perform **personal services.** The close working relationship in such agreements makes it unfair to expect the obligor to work with a stranger. Warner, a feature film director, hires Mayer to be his assistant on a film to be shot over the next 10 weeks. Warner may not assign his right to Mayer's work to another director.

Public Policy. Some assignments are prohibited by public policy. For example, someone who has suffered a personal injury may not assign her claim to a third person. Vladimir is playing the piano on his roof deck when the instrument rolls over the balustrade and drops 35 stories before smashing Wanda's foot. Wanda has a valid tort claim against Vladimir, but she may not assign the claim to anyone else. As a matter of public policy, all states have decided that the sale of personal injury claims could create an unseemly and unethical marketplace.

Contract Prohibition. Finally, one of the contracting parties may try to prohibit assignment in the agreement itself. For example, most landlords include in the written lease a clause prohibiting the tenant from assigning the tenancy without the landlord's written permission.

Subleasing disputes between landlord and tenant are common. How much leeway does a landlord have in rejecting a proposed assignment? The following case provides the answer.

Tenet Healthsystem Surgical, L.L.C. v. Jefferson Parish Hospital Service District No. 1

426 F.3d 738
Fifth Circuit Court of Appeals, 2005

Facts: MSC, Inc. owned the Marrero Shopping Center, and leased space to Tenet Healthsystem for use in outpatient surgery and general medical practice. The lease allowed Tenet to assign the lease with MSC's consent, and stated that consent would not be unreasonably withheld.

Two years later, MSC sold the shopping center to West Jefferson Medical Center, which owned an adjacent hospital and wanted the space for expansion. A few months after that, Tenet requested permission from West Jefferson to assign its lease to Pelican Medical, which intended to use the space for an occupational medical

[2]Restatement (Second) of Contracts §317(2). And note that UCC §2-210 is, for our purposes, nearly identical.

clinic. West Jefferson denied permission, stating that Pelican would be performing work not permitted under the original lease, and also because Pelican would compete with West Jefferson.

Tenet sued, claiming that West Jefferson was unreasonably withholding permission to assign. The trial court granted summary judgment for West Jefferson. Tenet appealed.

Issue: ***Did West Jefferson unreasonably withhold permission to assign the lease?***

Excerpts from Judge Davis's Decision: West Jefferson asserts that Pelican's contemplated uses of the facility exceed those permitted under the lease [and also argues] that its refusal was reasonable because the proposed use of the facility poses more competition to its adjacent hospital.

Tenet used the facility for an outpatient surgery center. Pelican planned to use the facility for an occupational medical clinic. The services offered by an occupational medicine practice are quite comprehensive, from physical examinations and drug screening to low acuity emergencies. The clinic can treat patients with depression, lacerations, broken bones [and] pneumonia, and provides related lab and x-ray services. Nothing in this description takes the proposed practice outside the limits of a "general medical and physician's offices, including related uses," a permitted use under the lease.

West Jefferson also opposes the lease assignment from Tenet to Pelican on the basis that Pelican's broadened scope of operations would include new areas of competition with its hospital. When determining the reasonableness of a landlord's refusal to consent to an assignment of a lease, the standard is that of a reasonable prudent man.

In determining whether a landlord's refusal to consent was reasonable in a commercial context, only factors that relate to the landlord's interest in preserving the leased property or in having the terms of prime lease performed should be considered. Among factors a landlord can consider are the financial responsibility of the proposed subtenant, the legality and suitability of proposed use and nature of the occupancy. A landlord's personal taste or convenience is not properly considered. Rather the landlord's objection must relate to ownership and operation of leased property, not lessor's general economic interest. Under this standard, West Jefferson's refusal to consent to the assignment of the Tenet lease because Pelican would be a new competitor relates not to the ownership and operation of the leased property, but to West Jefferson's general economic interest.

West Jefferson's reason for denying consent to the assignment to Pelican based on increased competition is wholly personal to West Jefferson and does not relate in any way to an objective evaluation of Pelican as a tenant. Further, allowing West Jefferson to deny consent on a basis personal to it, a successor owner who took subject to the existing lease, would expand West Jefferson's rights under the lease to the detriment of the lessee in a manner not bargained for in the lease itself. Accordingly, we conclude that West Jefferson's refusal of consent to the assignment of the lease on the basis of increased competition was unreasonable.

Reversed and remanded.

How Rights Are Assigned

Writing. In general, an assignment may be written or oral, and no particular formalities are required. However, when someone wants to assign rights governed by the statute of frauds, she must do it in writing. Suppose City contracts with Seller to buy Seller's land and then brings in Investor to complete the project. If City wants to assign to Investor its rights to the land, it must do so in writing.

Consideration. An assignment can be valid with or without consideration, but the lack of consideration may have consequences. Two examples should clarify this. Recall Bruno, who sells champagne to Lydia and then assigns to Doug his right to payment. In that case, there *is* consideration for the assignment. Bruno assigns his rights only because Doug cancels the old debt, and his agreement to do that is valid consideration. **An assignment for consideration is irrevocable.** Once the two men agree, Bruno may not telephone Doug and say, "I've changed my mind, I want Lydia to pay me after all." Lydia's $10,000 now belongs to Doug.

Gratuitous assignment
One made as a gift, for no consideration.

But suppose that Bruno assigns his contract rights to his sister Brunhilde as a birthday present. This is a **gratuitous assignment;** that is, one made as a gift, for no consideration. A

gratuitous assignment is generally revocable if it is oral and generally irrevocable if it is written. If Bruno verbally assigns his rights to Brunhilde, but then changes his mind, telephones Lydia, and says, "I want you to pay me after all," that revocation is effective and Brunhilde gets nothing. But if Bruno puts his assignment in writing and Brunhilde receives it, Bruno has given up his right to receive Lydia's payment.

© Joel Blit/Shutterstock

If you assign your rights under a contract, inform the obligor immediately.

Notice to Obligor. The assignment is valid from the moment it is made, regardless of whether the assignor notifies the obligor. But an assignor with common sense will immediately inform the obligor of the assignment. Suppose Maude has a contract with Nelson, who is obligated to deliver 700 live frogs to her shop. If Maude (assignor) assigns her rights to Obie (assignee), Maude should notify Nelson (obligor) the same day. If she fails to inform Nelson, he may deliver the frogs to Maude. Nelson will have no further obligations under the contract, and Maude will owe Obie 700 frogs.

Rights of the Parties after Assignment

Once the assignment is made and the obligor notified, the assignee may enforce her contractual rights against the obligor. If Lydia fails to pay Doug for the champagne she gets from Bruno, Doug may sue to enforce the agreement. The law will treat Doug as though he had entered into the contract with Lydia.

But if a lawsuit arises, the reverse is also true. **The obligor may generally raise all defenses against the assignee that she could have raised against the assignor.** Suppose Lydia opens the first bottle of champagne—silently. "Where's the pop?" she wonders. There is no pop because all 500 bottles have gone flat. Bruno has failed to perform his part of the contract, and Lydia may use Bruno's nonperformance as a defense against Doug. If the champagne was indeed worthless, Lydia owes Doug nothing.

Assignor's Warranty. The law implies certain warranties, or assurances, on the part of the assignor. Unless the parties expressly agree to exclude them, the assignor warrants that (1) the rights he is assigning actually do exist, and (2) there are no defenses to the rights other than those that would be obvious, like nonperformance. But the assignor *does not* warrant that the obligor is solvent. Bruno is impliedly warranting to Doug that Lydia has no defenses to the contract, but he is not guaranteeing Doug that she has the money to pay, or that she will pay.

Special Issue: The Uniform Commercial Code and Assignments of Security Interests

The provisions of the Uniform Commercial Code regarding assignments in contracts for the sale of goods are very similar to common-law rules.[3] However, Article 9 of the Code has special rules about the assignment of **security interests**, which are the legal rights in personal

Security interests
Rights in personal property that assure payment or the performace of some obligation.

[3]UCC §2-210.

property that assure payment. When an automobile dealer sells you a new car on credit, the dealer will keep a security interest in your car. If you do not make your monthly payments, the dealer retains a right to repossess the vehicle. That authority is called a *security interest.* (See Chapter 24 for a full discussion.)

Companies that sell goods often prefer to assign their security interests to some other firm, such as a bank or finance company. The bank is the assignee. Just as we saw with the common law, the assignee of a security interest generally has all of the rights that the assignor had. And the obligor (the buyer) may also raise all of the defenses against the assignee that she could have raised against the assignor.

Under UCC §9-404, the obligor on a sales contract may generally assert any defenses against the assignee that arise from the contract, and any other defenses that arose before notice of assignment. The Code's reference to any defenses that arise from the contract means that if the assignor breached his part of the deal, the obligor may raise that as a defense. Suppose a dealer sells you a new Porsche on credit, retaining a security interest. He assigns the security interest to the bank. The car is great for the first few weeks, but then the roof slides onto the street and both doors fall off. You refuse to make any more monthly payments. When the bank sues you, you may raise the automobile's defects as a defense, just as you could have raised them against the dealer itself. Where the Code talks about other defenses that arose before notice of assignment, it refers, for example, to fraud. Suppose the dealer knew that before you bought the Porsche, it had been smashed up and rebuilt. If the dealer told you it was brand new, that was fraud, and you could raise the defense against the bank.

A contract may prohibit an obligor from raising certain defenses against an assignee. Sometimes a seller of goods will require the buyer to sign a contract that permits the seller to assign *and* prohibits the buyer from raising defenses against the assignee that he could have raised against the seller. University wants to buy a computer system on credit from Leland for $85,000. Leland agrees to the deal but insists that the contract permit him to assign his rights to anyone he chooses. He also wants this clause: "University agrees that it will not raise against an assignee any defenses that it may have had against Leland." This clause is sometimes called a *waiver clause* because the obligor is waiving (giving up) rights. Courts may also refer to it as an *exclusion clause* since the parties are excluding potential defenses. Leland wants a waiver clause because it makes his contract more valuable. As soon as University signs the agreement, Leland can take his contract to Krushem Collections, a finance company. Krushem might offer Leland $70,000 cash for the contract. Leland can argue, "You have to pay $85,000 for this. You are guaranteed payment by University since they cannot raise any defenses against you, even if the computer system collapses in the first half-hour." Leland gets cash and need not worry about collecting payments. Krushem receives the full value of the contract, with interest, spread out over several years.

Under UCC §9-403, an agreement by a buyer (or lessee) that he will not assert against an assignee any claim or defense that he may have against the seller (or lessor) is generally enforceable by the assignee if he took the assignment in good faith, for value, without notice of the potential defenses. In other words, Leland's waiver clause with University is enforceable. If Leland assigns the contract to Krushem Collections and the system proves worthless, Krushem is still entitled to its monthly payments from University. The school must seek its damages against Leland—a far more arduous step than simply withholding payment.

These waiver clauses are generally *not* valid in consumer contracts. If Leland sold a computer system to a consumer (an individual purchasing it for her personal use), the waiver would generally be unenforceable.

In the following case, one side pushes the waiver rule to its extreme. Can an assignee recover for money advanced . . . when the money was never advanced? You be the judge.

You be the Judge

Wells Fargo Bank Minnesota v. BrooksAmerica Mortgage Corporation

419 F.3d 107
Second Circuit Court of Appeals, 2005

Facts: Michael Brooks desperately needed financing for his company, BrooksAmerica, so he agreed to a sale-leaseback agreement with Terminal Marketing Company. Terminal would pay BrooksAmerica $250,000, and in exchange it would obtain title to BrooksAmerica's computers and office equipment. BrooksAmerica would then lease the equipment for three years, for $353,000. The equipment would never leave BrooksAmerica's offices.

The contract included a "hell or high water clause" stating that BrooksAmerica's obligation to pay was "absolute and unconditional." Another clause permitted Terminal to assign its rights without notice to BrooksAmerica and stated that the assignee took its rights "free from all defenses, setoffs, or counterclaims."

Brooks also signed a "Delivery and Acceptance Certificate" stating that BrooksAmerica had received the $250,000 (even though no money had yet changed hands) and reaffirming BrooksAmerica's absolute obligation to pay an assignee, despite any defenses BrooksAmerica might have.

Terminal assigned its rights to Wells Fargo, which had taken about 2,000 other equipment leases from Terminal. Terminal never paid any portion of the promised $250,000. Brooks refused to make the required payments (about $10,000 per month) and Wells Fargo sued. Brooks acknowledged that Wells Fargo paid Terminal for the assignment.

Both parties moved for summary judgment. The trial court ruled in favor of Wells Fargo, and Brooks appealed.

You Be the Judge: ***Is Wells Fargo entitled to its monthly lease payments despite the fact that BrooksAmerica never received financing?***

Argument for BrooksAmerica: We acknowledge the general validity of UCC §9-403. However, in this case, Wells Fargo makes an absurd argument. Neither Terminal nor any assignee has a right to enforce a financing contract when Terminal failed to deliver the financing. There is no valid contract to enforce here because Terminal never paid the $250,000 owed to BrooksAmerica. "Good faith" required Wells Fargo to make sure that Terminal had performed. A simple inquiry would have informed Wells Fargo that Terminal was entitled to no money. This entire transaction is a sham, and §9-403 was never drafted to encourage financial swindles.

The trial court *penalized* BrooksAmerica for acting in good faith. Mr. Brooks signed the Delivery Certificate assuming that any reasonable company would promptly deliver the money it had promised. Unfortunately, Terminal does not operate at the same ethical level—a fact that Wells Fargo should know from its earlier assignments.

Argument for Wells Fargo: Under UCC §9-403, an assignee such as Wells Fargo may enforce a waiver of defenses clause if the assignment was taken in good faith, for value, and free of knowledge of any claims or defenses. Wells Fargo meets that test.

The "simple inquiry" argument has two flaws. First, §9-403 does not require one. The UCC requires good faith, not an investigation. Second, Wells Fargo *did* investigate by checking the contract and the Delivery Certificate. We have done more than required. We have taken thousands of equipment leases as assignees. In this case, we examined the contract and the Delivery Certificate, and assumed that BrooksAmerica had received its money. If Terminal had not paid, why did Mr. Brooks sign a certificate stating he had received his cash? We are entitled to payment. Any dispute between BrooksAmerica and Terminal is for those parties to resolve.

Delegation of Duties

Garret has always dreamed of racing stock cars. He borrows $250,000 from his sister, Maybelle, in order to buy a car and begin racing. He signs a promissory note, which is a document guaranteeing that he will repay Maybelle the full amount, plus interest, on a monthly basis over 10 years. Regrettably, during his first race, Garret discovers that he has a

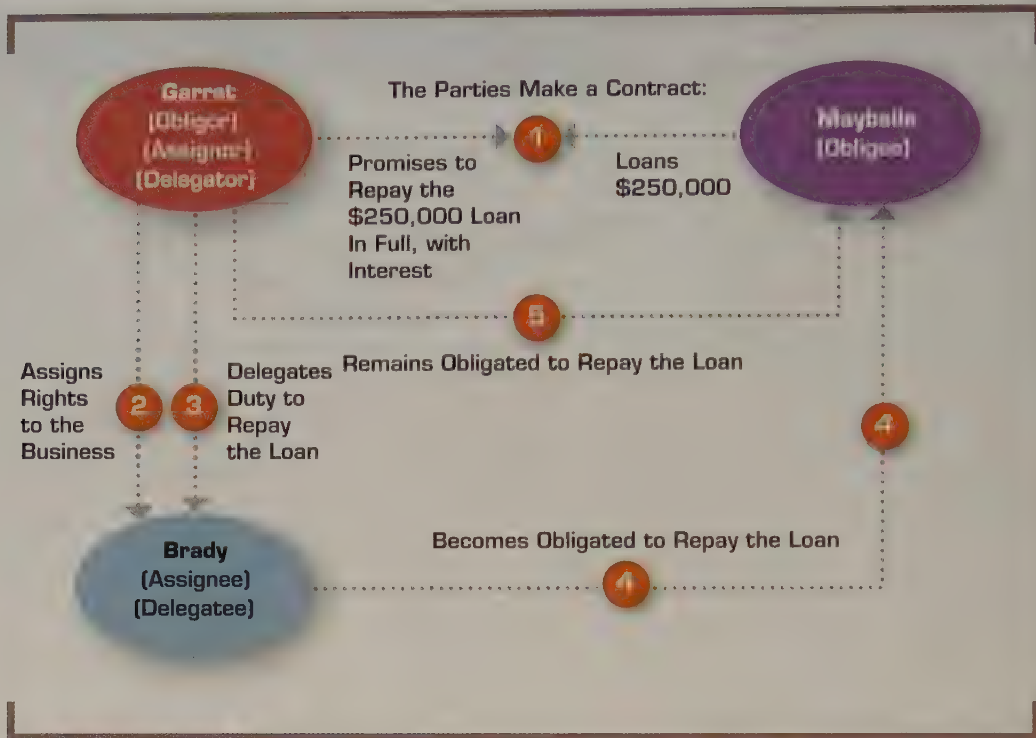

EXHIBIT 16.2

speed phobia and quits the business. Garret transfers the car and all of his equipment to Brady, who agrees in writing to pay all money owed to Maybelle. Brady sends a check for a few months, but then the payments stop. Maybelle sues Garret, who defends based on the transfer to Brady. Will his defense work?

Garret has assigned his rights in the car and business to Brady, and that is entirely legal. But more important, he has *delegated his duties* to Brady. Garret was the **delegator** and Brady was the **delegatee**. In other words, the promissory note he signed was a contract, and the agreement imposed certain *duties* on Garret, primarily the obligation to pay Maybelle $250,000 plus interest. Garret had a right to delegate his duties to Brady, but delegating those duties did not relieve Garret of *his own* obligation to perform them. When Maybelle sues, she will win. Garret, like many debtors, would have preferred to wash his hands of his debt, but the law is not so obliging.

Most duties are delegable. But delegation does not by itself relieve the delegator of his own liability to perform the contract.

Garret's delegation to Brady was typical in that it included an assignment at the same time. If he had merely transferred ownership, that would have been only an assignment. If he had convinced Brady to pay off the loan without getting the car, that would have been merely a delegation. He did both at once. See Exhibit 16.2.

What Duties Are Delegable?

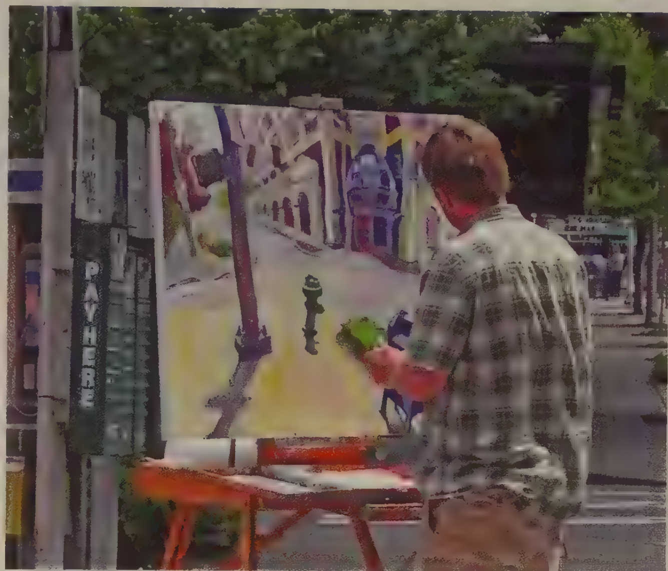
The rules concerning what duties may be delegated mirror those about the assignment of rights. And once again, the common law agrees with the UCC. An obligor may delegate his duties unless:

1. delegation would violate public policy, or
2. the original contract prohibits delegation, or
3. the obligee has a substantial interest in personal performance by the obligor.[4]

Public Policy. Delegation may violate public policy, such as in a public works contract. If City hires Builder to construct a subway system, state law may prohibit Builder from delegating his duties to Beginner. The theory is that a public agency should not have to work with parties that it never agreed to hire.

Contract Prohibition. It is very common for a contract to prohibit delegation. We saw in the "Assignment" section that courts may refuse to enforce a clause that limits one party's ability to assign its contract rights. That does not hold true with delegation. The parties may forbid almost any delegation, and the courts will enforce the agreement. Hammer, a contractor, is building a house and hires Spot as his painter, including in his contract a clause prohibiting delegation. Just before the house is ready for painting, Spot gets a better job elsewhere and wants to delegate his duties to Brush. Hammer may refuse the delegation, even if Brush is equally qualified.

© Photodisc/Getty Images



© Dhannte/Shutterstock

One may delegate and one may not.

Substantial Interest in Personal Performance. Suppose Hammer had omitted the "nondelegation" clause from his contract with Spot. Could Hammer still refuse the delegation on the grounds that he has a substantial interest in having Spot do the work? No. Most duties are delegable, so long as they do not violate public policy or a clause in a contract. There is nothing so special about painting a house that one particular painter is required to do it. But some kinds of work do require personal performance, and obligors may not delegate these tasks. The services of lawyers, doctors, dentists, artists, and performers are considered too personal to be delegated. There is no single test that will perfectly define this group, but generally when the work will test the *character, skill, discretion, and good faith of the obligor*, she may *not* delegate her job.

EXAM STRATEGY

Question: Parker is a well-known actress. She agrees to act in Will's play for four weeks, for $30,000 per week. A week before rehearsals are to begin, Parker notifies Will that she cannot appear because a film producer has offered her over $1 million to start shooting immediately. She has arranged for Claire, another well-known actress,

[4] Restatement (Second) of Contracts §318. And see UCC §2-210, establishing similar limits.

to appear in her place. Will objects. Parker claims, correctly, that their agreement does not prohibit her from making this substitution. Is Parker allowed to do this?

Strategy: Parker is attempting to delegate her duties. Under the Restatement, delegation is allowed unless (1) it would violate public policy, (2) it is prohibited by the contract, or (3) the obligee has a substantial interest in the obligor's personal performance.

Result: This is hardly a matter of public concern, and the contract does not speak to the issue. However, acting is a very personal kind of work. The actor must be right for the part, interact smoothly with other cast members, work well with the director, and help draw the audience. Will is entitled to have Parker perform the work, and she may not delegate her role.

Improper Delegation and Repudiation. Sometimes parties delegate duties they should not. Suppose Spot, having agreed not to delegate his painting job, is so tempted by the higher offer from another contractor that he delegates the work anyway. Hammer informs Spot he will not allow Brush on the job site. If Spot still refuses to work, he has **repudiated** the agreement; in other words, he has formally notified the other side that he will not perform his side of the contract. Hammer will probably sue him. On the other hand, if Hammer allows Brush up the ladder and Brush completes the job, Hammer has no claim against anybody.

Novation

Novation
A three-way agreement in which the obligor transfers all rights and duties to a third party.

As we have seen, a delegator does not automatically get rid of his duties merely by delegating them. But there is one way a delegator *can* do so. A **novation** is a three-way agreement in which the obligor transfers all rights and duties to a third party. The obligee agrees to look only to that third party for performance.

Recall Garret, the forlorn race car driver. When he wanted to get out of his obligations to Maybelle, he should have proposed a novation. Were one created, he would assign all rights and delegate all duties to Brady, and Maybelle would agree that *only Brady* was obligated by the promissory note, releasing Garret from his responsibility to repay. Why would Maybelle do this? She might conclude that Brady was a better bet than Garret and that this was the best way to get her money. Maybelle would prefer to have both people liable. But Garret might refuse to bring Brady into the deal until Maybelle permits a novation. In the example given, Garret failed to obtain a novation, and hence he and Brady were *both* liable on the promissory note.

Since a novation has the critical effect of releasing the obligor from liability, you will not be surprised to learn that two parties to a contract sometimes fight over whether some event was a simple delegation of duties or a novation. Here is one such contest.

Rosenberg v. Son, Inc.

491 N.W.2d 71, 1992 N.D. LEXIS 202
Supreme Court of North Dakota, 1992

Facts: The Rosenbergs owned a Dairy Queen in Grand Forks, North Dakota. They agreed in writing to sell the Dairy Queen to Mary Pratt. The contract required her to pay $10,000 down and $52,000 over 15 years, at 10 percent interest. Two years later, Pratt assigned her rights and delegated her duties under the sales contract to Son, Inc. The

agreement between Pratt and Son contained a "Consent to Assignment" clause, which the Rosenbergs signed. Pratt then moved to Arizona and had nothing further to do with the Dairy Queen. The Rosenbergs never received full payment for the Dairy Queen. They sued Mary Pratt.

The trial court gave summary judgment for Pratt, finding that she was no longer obligated on the original contract. The Rosenbergs appealed.

Issue: ***Did Pratt obtain a novation relieving her of her duties under the original sales contract?***

Excerpts from Chief Justice Erickstad's Decision: It is a well-established principle in the law of contracts that a contracting party cannot escape its liability on the contract by merely assigning its duties and rights under the contract to a third party.

It is evident from the express language of the assignment agreement between Pratt and Son, Inc., that only an assignment was intended, not a novation. The agreement made no mention of discharging Pratt from any further liability on the contract.

Furthermore, the agreement was between Pratt and Son, Inc.; they were the parties signing the agreement, not the Rosenbergs. An agreement between Pratt and Son, Inc., cannot unilaterally affect the Rosenbergs' rights under the contract. As mentioned earlier, the Rosenbergs did sign a consent to the assignment at the bottom of the agreement. However, by merely consenting to the assignment, the Rosenbergs did not consent to a discharge of the principal obligor—Pratt. Nothing in the language of the consent clause supports such an allegation. A creditor is free to consent to an assignment without releasing the original obligor.

We *reverse* the summary judgment and *remand* for further proceedings.

It appears that Mary Pratt, moving to Arizona, honestly thought she was not only out of the ice cream business but relieved of any debt to the Rosenbergs. This lawsuit undoubtedly came as a cold shock. What should she have done to avoid the dispute?

Chapter Conclusion

A moment's caution! It is important to remember that the parties to a contract may not have the right to substitute someone else into the contract. The parties to a contract always have legal rights themselves, but when outsiders enter the picture, subtle differences in key areas determine whether additional rights exist.

Exam Review

1. **THIRD PARTY BENEFICIARY** A third party beneficiary is an intended beneficiary and may enforce a contract if the parties intended her to benefit from the agreement and if either (1) enforcing the promise will satisfy a debt of the promisee to the beneficiary, or (2) the promisee intended to make a gift to the beneficiary. The intended beneficiary described in (1) is a *creditor beneficiary*, while (2) describes a *donee beneficiary*. Any beneficiary who meets neither description is an *incidental beneficiary* and has no right to enforce the contract. (pp. 362–365)

2. **ASSIGNMENT AND DELEGATION** An assignment transfers the assignor's contract rights to the assignee. A delegation transfers the delegator's duties to the delegatee. (pp. 365–366)

3. **RIGHTS ASSIGNABLE** A party generally may assign contract rights unless doing so would substantially change the obligor's rights or duties, is forbidden by law, or is validly precluded by the contract. (pp. 367–369)

EXAM Strategy

Question: Angelo Zavarella and Yvette Rodrigues were injured in an automobile accident allegedly caused by a vehicle belonging to Truck Equipment of Boston. Travelers Insurance Co. paid insurance benefits to Zavarella and Rodrigues, who then assigned to Travelers their claims against Truck Equipment. Travelers sued Truck Equipment, which moved to dismiss. What is Truck Equipment's claim that the case should be dismissed, and how would you rule?

Strategy: Travelers is claiming to be the assignee of the plaintiffs' claims. Any contractual right may be assigned except in the three instances listed above. Does one of those prohibitions apply? (See the "Result" at the end of this section.)

4. **ENFORCEMENT** Once the assignment is made and the obligor notified, the assignee may enforce her contractual rights against the obligor. The obligor, in turn, may generally raise all defenses against the assignee that she could have raised against the assignor. (p. 369)

5. **THE UCC AND SECURITY INTERESTS:** Article 9 of the UCC governs security interests, which are the legal rights to personal property that assure payment of a debt. Under Article 9, obligors may assert defenses against assignees that arise from contracts, and agreements not to enforce such defenses are generally valid. (pp. 369–371)

6. **DUTIES DELEGABLE** Duties are delegable unless delegation would violate public policy, the contract prohibits delegation, or the obligee has a substantial interest in personal performance by the obligor. (pp. 371–375)

EXAM Strategy

Question: Pizza of Gaithersburg, Maryland, owned five pizza shops. Pizza arranged with Virginia Coffee Service to install soft drink machines in each of its stores and maintain them. The contract made no mention of the rights of either party to delegate. Virginia Coffee delegated its duties to the Macke Co., leading to litigation between Pizza and Macke. Pizza claimed that Virginia Coffee was barred from delegating because Pizza had a close working relationship with the president of Virginia Coffee, who personally kept the machines in working order. Was the delegation legal?

Strategy: Any contractual duty may be delegated except in the three instances listed above. Does one of those prohibitions apply? (See the "Result" at the end of this section.)

7. **DISCHARGE** Unless the obligee agrees otherwise, delegation does not discharge the delegator's duty to perform. (pp. 371–372)

8. NOVATION A *novation* is a three-way agreement in which the obligor delegates all duties to the delegatee and the obligee agrees to hold only the delegatee responsible. (pp. 374–375)

EXAM Strategy

Question: Mardy, a general contractor, is building a house. He contracts with Plumbco to do all plumbing work for $120,000. Before Plumbco begins the work, it notifies Mardy in writing that Leo will be doing the work instead. Mardy does not respond. When Leo fails to perform, Mardy sues Plumbco. Plumbco is

(a) Liable

(b) Liable only if Plumbco agreed to remain responsible for the job

(c) Not liable because Mardy failed to repudiate the delegation

(d) Not liable because Plumbco validly delegated its duties

(e) Not liable because the parties entered into a novation

Strategy: Delegation does not by itself relieve the delegator of his own liability to perform the contract. In a novation, the obligee agrees to look only to the third party for performance. Was this a delegation or a novation? (See the "Result" at the end of this section.)

3. Result: Truck Equipment's winning argument was one sentence long: Claims for personal injury may not be assigned. Such assignments would transform accident claims into commercial commodities and encourage assignees to exaggerate the gravity of the harm.

6. Result: There is no public policy issue involved. The contract is silent as to delegation. And Pizza's only legitimate interest was in seeing that installation and maintenance were adequate. There is no reason to believe that Virginia Coffee would perform the work better than others. The duty was delegable, and Virginia Coffee wins.

8. Result: When Plumbco announced that Leo would do the work, Mardy did not respond. Mardy certainly did not agree to look exclusively to Leo for performance. There has not been a novation, and Plumbco remains liable on the contract. The correct answer is (a).

Multiple-Choice Questions

1. **CPA QUESTION** Yost contracted with Egan for Yost to buy certain real property. If the contract is otherwise silent, Yost's rights under the contract are:
   (a) Assignable only with Egan's consent
   (b) Nonassignable because they are personal to Yost
   (c) Nonassignable as a matter of law
   (d) Generally assignable

2. **CPA QUESTION** One of the criteria for a valid assignment of a sales contract to a third party is that the assignment must:
   (a) Not materially increase the other party's risk or duty
   (b) Not be revocable by the assignor
   (c) Be supported by adequate consideration from the assignee
   (d) Be in writing and signed by the assignor

3. Amanda agrees to pay Jennifer $300 for a pair of tickets to see Jerry Seinfeld. "Seinfeld is my boyfriend Octavio's favorite comedian, and the tickets will be a great birthday present for him," she tells Jennifer. Amanda pays up and tells a delighted Octavio about the tickets, but Jennifer never delivers them. Octavio is a(n) ____________ beneficiary of the agreement, and as such, he ____________ have a right to enforce the contract himself.
   (a) donee; does
   (b) donee; does not
   (c) incidental; does
   (d) incidental; does not

4. A novation completely releases an ____________ from any further liability. To be effective, it ____________ require the agreement of both the obligor and obligee.
   (a) obligor; does
   (b) obligor; does not
   (c) obligee; does
   (d) obligee; does not

5. Will misses three straight payments on his SUV, and his bank repossesses it. The right to repossess ____________ a security interest. Security interests are governed by Article ____________ of the Uniform Commercial Code.
   (a) is; 2
   (b) is; 9
   (c) is not; 2
   (d) is not; 9

Essay Questions

1. Intercontinental Metals Corp. (IMC) contracted with the accounting firm of Cherry, Bekaert, & Holland to perform an audit. Cherry issued its opinion about IMC, giving all copies of its report directly to the company. IMC later permitted Dun & Bradstreet to examine the statements, and Raritan River Steel Co. saw a report published by Dun & Bradstreet. Relying on the audit, Raritan sold IMC $2.2 million worth of steel on credit, but IMC promptly went bankrupt. Raritan sued Cherry, claiming that IMC was not as sound as Cherry had reported and that the accounting firm had breached its contract with IMC. Comment on Raritan's suit.

2. Woodson Walker and Associates leased computer equipment from Park Ryan Leasing. The lease said nothing about assignment. Park Ryan then assigned the lease to TCB as security for a loan. Park Ryan defaulted on its loan, and Walker failed to make several payments on the lease. TCB sued Walker for the lease payments. Was the assignment valid, given the fact that the original lease made no mention of it? If the assignment was valid, may Walker raise defenses against TCB that it could have raised against Park Ryan?

3. C. Gaston Whiddon owned Gaston's LP Gas Co., Inc. Curtis Dufour purchased the company. Since Whiddon had personally operated the company for many years, Dufour was worried about competition from him and insisted on a noncompetition clause in the sales contract. The clause stated that Whiddon would not "compete with Gaston's LP Gas Co. anywhere south of Interstate Highway 20 for nine years." Three years later, the Herring Gas Co. offered to buy all of Dufour's gas business, assuming that Whiddon would not be a competitor for six more years. Dufour sold all of the assets to Herring, keeping the actual corporation "Gaston's LP Gas Co." for himself. What mistake in drafting have Dufour and Herring made?

4. **YOU BE THE JUDGE WRITING PROBLEM** David Ricupero suspected his wife Polly of having an affair, so he taped her phone conversations and, based on what he heard, sued for divorce. David's lawyer, William Wuliger, had the recorded conversations transcribed for use at trial. The parties settled the divorce out of court and signed an agreement that included this clause:

> Except as herein otherwise provided, each party hereto completely and forever releases the other and his attorneys from any and all rights each has or may have ... to any property, privileges, or benefits accruing to either by virtue of their marriage, or conferred by the Statutory or Common Law of Ohio or the United States of America.

After the divorce was final, Polly sued William Wuliger for invasion of privacy and violation of federal wiretapping law. Wuliger moved to dismiss the case based on the clause quoted. Polly argued that Wuliger was not a party to the divorce settlement and had no right to enforce it. May Wuliger enforce the waiver clause from the Ricuperos' divorce settlement? **Argument for Wuliger:** The contract language demonstrates that the parties intended to release one another and their attorneys from any claims. That makes Wuliger an intended third party beneficiary, and he is entitled to enforce the agreement. If Polly did not want to release Wuliger from such claims, she was free not to sign the agreement. **Argument for Polly Ricupero:** A divorce agreement settles the affairs between the couple. That is all it is ever intended to do, and the parties here never intended to benefit a lawyer. Wuliger is only an incidental beneficiary and cannot use this contract to paper over his violation of federal wiretapping law.

5. Judith and John Brooks hired Wayne Hayes to build a house. The contract required Hayes to "provide all necessary labor and materials and perform all work of every nature whatsoever to be done in the erection of the residence." Hayes hired subcontractors to do all of the work. One of Hayes's employees checked on the work site daily, but neither Hayes nor any of his employees actively supervised the building. The Brookses were aware of this working arrangement and consented to it. The mason negligently installed the fireplace, ultimately leading to a serious fire. The Brookses sued Hayes for breach of contract. Hayes contended that when the Brookses approved of his hiring of subcontractors to do all work, that created a novation relieving him of any liability. Discuss.

Discussion Questions

1. A century and a half ago, an English judge stated: "All painters do not paint portraits like Sir Joshua Reynolds, nor landscapes like Claude Lorraine, nor do all writers write dramas like Shakespeare or fiction like Dickens. Rare genius and extraordinary skill are not transferable." What legal doctrine is the judge describing? What is the ethical basis of this rule?

2. Nationwide Discount Furniture hired Rampart Security to install an alarm in its warehouse. A fire would set off an alarm in Rampart's office, and the security company was then supposed to notify Nationwide immediately. A fire did break out, but Rampart allegedly failed to notify Nationwide, causing the fire to spread next door and damage a building owned by Gasket Materials Corp. Gasket sued Rampart for breach of contract, and Rampart moved for summary judgment. Comment.

3. If a person promises to give you a gift, there is usually no consideration. The person can change his mind and decide not to give you the present, and there is nothing you can do about it. But if a person makes a contract with *someone else* and intends that you will receive a gift under the agreement, you are a donee beneficiary and you *do* have rights to enforce the deal. Are these rules unacceptably inconsistent? If so, which rule should change?

4. Imagine that you hire your trusted friend, Fran, to paint your house, and that you do not include a nondelegation clause in the agreement. Fran delegates the job to Sam, who is a stranger to you. The delegation is legal, but should it be? Is it reasonable that you must accept the substitute painter?

5. In our society, a person can buy and sell almost anything. But as this chapter describes, you cannot sell personal injury claims. Should you be able to? Imagine that you are injured in a car wreck. You are told that you might win $100,000 in a lawsuit eventually, but that you might not receive payment for years, and you might also lose the case and recover nothing. If someone is willing to pay you $20,000 cash-on-the-barrelhead today for the rights to your claim, is it fair that public policy concerns prohibit you from taking the money?

CHAPTER 17

Performance and Discharge

© picsbyst/Shutterstock.com

Polly disliked a veal dish and gagged on one of Caesar's soups. She fired her chef.

Polly was elated. It was the grand opening of her new restaurant, Polly's Folly, and everything was bubbling. The wait staff hustled, and Caesar, the chef, churned out succulent dishes. Polly had signed a contract promising him \$1,500 per week for one year, "provided Polly is personally satisfied with his cooking." Polly was determined that her restaurant would be glorious. Her three-year lease would cost \$6,000 per month, and she had signed an advertising deal with Billboard Bonanza for the same period. Polly had also promised Eddie, a publicity agent, a substantial monthly fee, to begin as soon as the restaurant was 80 percent booked for one month. Tonight, with candles flickering at packed tables, Polly beamed.

After a week, Polly's smiles were a bit forced. Some of Caesar's new dishes had been failures, including a grilled swordfish that was hard to pierce and shrimp jambalaya that was too spicy. The restaurant was only 60 percent full, and the publicity agent yelled at Caesar for costing him money. Later that month, Polly disliked a veal dish and gagged on one of Caesar's soups. She fired her chef.

Then troubles gushed forth—literally. A water main burst in front of Polly's restaurant, flooding the street. The city embarked on a two-month repair job that ultimately took four times that long. The street was closed to traffic, and no one could park within blocks of Polly's restaurant. Patronage dropped steadily as hungry customers refused to deal with the bad parking and construction noise. After several months, behind on the rent and in debt to everyone, Polly closed her doors for good.

Shortly, the court doors swung open, offering a full menu of litigation. Polly's landlord sued for three years' rent, and Billboard Bonanza demanded its money for the same period. Caesar claimed his year's pay. Eddie, the agent, insisted on some money for his hard work. Polly defended vigorously, seeking to be *discharged* from her various contracts.

Discharge
A party is discharged when she has no more duties under the contract.

If a party is **discharged,** she is "finished," and has no more duties under a contract. In each lawsuit, Polly asked a court to declare that her obligations were terminated and that she owed no money.

Most contracts are discharged by full performance. In other words, the parties generally do what they promise. Suppose, before the restaurant opened, Walter had promised to deliver 100 sets of cutlery to Polly and she had promised to pay $20 per set. Walter delivered the goods on time, and Polly paid $2000 on delivery. The parties got what they expected, and that contract was fully discharged.

Rescind
To terminate a contract by mutual agreement.

Sometimes the parties discharge a contract by agreement. For example, the parties may agree to **rescind** their contract, meaning that they terminate it by mutual agreement.[1] If Polly's landlord believed he could get more rent from a new tenant, he might agree to rescind her lease. But he was dubious about the rental market and refused to rescind.

At times, a court may discharge a party who has not performed. When things have gone amiss, a judge must interpret the contract and issues of public policy to determine who in fairness should suffer the loss. In the lawsuits brought by the landlord and Billboard Bonanza, Polly argued a defense called "commercial impracticability," claiming that she should not be forced to rent space that was useless to her or buy advertising for a restaurant that had closed. From Polly's point of view, the claim was understandable. But we can also respect the arguments made by the landlord and the advertiser, that they did not cause the burst water main. Claims of commercial impracticability are difficult to win, and Polly lost against both of these opponents. Though she was making no money at all from the restaurant, the court found her liable in full for the lease and the advertising contract.[2]

Polly's argument against Caesar raised another issue of discharge. Caesar claimed that his cooking was good professional work and that all chefs have occasional disasters, especially in a new restaurant. But Polly responded that they had a "personal satisfaction" contract. Under such contracts, "good" work may not suffice if it fails to please the promisee. Polly won this argument, and Caesar recovered nothing.

As to Eddie's suit, Polly raised a defense called "condition precedent," meaning that some event had to occur before she was obligated to pay. Polly claimed that she owed Eddie money only if and when the restaurant was 80 percent full for a month, and that had never happened. The court agreed and discharged Polly on Eddie's claim.

We will analyze each of these issues, and begin with a look at conditions.

CONDITIONS

Condition
An event that must occur before a party becomes obligated under a contract.

Parties often put conditions in a contract. A **condition** is an event that must occur before a party becomes obligated under a contract. "I'll agree to do something, but only if something else happens first." Polly agreed to pay Eddie, the agent, a percentage of her profits, but with an important condition: 80 percent of the tables had to be booked for a month. Unless and until those tables were occupied, Polly owed Eddie nothing. That never happened, or, in contract language, the *condition failed,* and so Polly was discharged.

Conditions can take many forms. Alex would like to buy Kevin's empty lot and build a movie theater on it, but the city's zoning law will not permit that kind of business in that

---

[1]The parties could also decide that one party's duties will be performed by someone else, a modification called a **novation**. Alternatively, they could create an **accord and satisfaction**, in which they agree that one party will substitute a new kind of performance in place of his contract obligations. See Chapter 16, on third parties, and Chapter 12, on consideration.

[2]Based on *Luminous Neon v. Parscale,* 17 Kan. App. 2d 241, 836 P.2d 1201, 1992 Kan. App. LEXIS 572 (Kan. Ct. App. 1992).

location. Alex signs a contract to buy Kevin's empty lot in 120 days, *provided that* within 100 days, the city re-zones the area to permit a movie theater. If the city fails to re-zone the area by day 100, Alex is discharged and need not complete the deal.

Another example: Friendly Insurance issues a policy covering Vivian's house, promising to pay for any loss due to fire, but only if Vivian furnishes proof of her losses within 60 days of the damage. If the house burns down, Friendly becomes liable to pay. But if Vivian arrives with her proof 70 days after the fire, she collects nothing. Friendly, though it briefly had a duty to pay, was discharged when Vivian failed to furnish the necessary information on time.

How Conditions Are Created

Express Conditions

The parties may expressly state a condition. Alex's contract with Kevin expressly discharged all obligations if the city failed to re-zone within the stated period. Notice that **no special language is necessary to create the condition**. Phrases such as "provided that" frequently indicate a condition, but neither those nor any other specific words are essential. So long as the contract's language indicates that the parties *intended* to create a condition, a court will enforce it.

Because informal language can create a condition, the parties may dispute whether they intended one or not. Sand Creek Country Club, in Indiana, was eager to expand its clubhouse facilities and awarded the design work to CSO Architects. The club wanted the work done quickly but had not secured financing. The architects sent a letter confirming their agreement:

> It was our intent to allow Mr. Dan Moriarty of our office to start work on your project as early as possible in order to allow you to meet the goals that you have set for next fall. Also, it was the intent of CSO to begin work on your project and delay any billings to you until your financing is in place. As I explained to you earlier, we will continue on this course until we reach a point where we can no longer continue without receiving some payment.

The club gave CSO the go-ahead to begin design work, and the architects did their work and billed Sand Creek for $33,000. But the club, unable to obtain financing, refused to pay. Sand Creek claimed that CSO's letter created a *condition* in their agreement; namely, that the club would have to pay only if and when it obtained financing. The court was unpersuaded and ruled that the parties had never intended to create an express condition. The architects were merely delaying their billing as a convenience to the club. It would be absurd, said the court, to assume that CSO intended to perform $33,000 worth of work for free.[3]

Professional sports contracts are often full of conditions. Assume that the San Francisco Giants want to sign Tony Fleet to play center field. The club considers him a fine defensive player but a dubious offensive performer. The many conditional clauses in his contract reflect hard bargaining over an athlete who may or may not become a star. The Giants guarantee Fleet only $500,000, a very modest salary by Major League Baseball standards. If the speedy outfielder appears in at least 120 games, his pay increases to $1 million. Winning a Gold Glove award is worth an extra $200,000 to him. The Giants insist on a team option to re-sign Fleet for the following season at a salary of $800,000, but if the center-fielder plays in fewer than 100 games, the team loses that right, leaving Fleet free to negotiate for higher pay with other teams.

---

[3]*Sand Creek Country Club, Ltd. v. CSO Architects, Inc.*, 582 N.E.2d 872, 1991 Ind. App. LEXIS 2151 (Ind. Ct. App. 1991).

Implied Conditions

At other times, the parties say nothing about a condition, but it is clear from their agreement that they have implied one. Charlotte orally rents an apartment to Hakan for one year and promises to fix any problems in the unit. It is an implied condition that Hakan will promptly notify Charlotte of anything needing repair. Although the parties have not said anything about notice, it is only common sense that Hakan must inform his landlord of defects since she will have no other way to learn of them.

Types of Conditions

Courts divide conditional clauses into three categories: (1) condition precedent, (2) condition subsequent, and (3) concurrent conditions.[4] But what they have in common is more important than any of their differences. The key to all conditional clauses is this: **if the condition does not occur, one party will probably be discharged without having to perform his obligations under a contract.**

Condition Precedent

In this kind of condition, an event must occur *before* a duty arises. Polly's contract with Eddie concerned a condition precedent. Polly had no obligation to pay Eddie anything *unless and until* the restaurant was 80 percent full for a month. Since that never happened, she was discharged. If the parties agreed to a condition precedent, the *plaintiff* has the burden to prove that the condition happened and that the defendant was obligated to perform.

In the following case, the plaintiff claimed that it had met a condition precedent and was entitled to a payment. Not surprisingly, the defendant had a different point of view.

American Electronic Components, Inc. v. Agere Systems, Inc.

2009 U.S. App. LEXIS 12763
Third Circuit Court of Appeals, 2009

Facts: American Electronic Components, Inc. (AECI), agreed to a three-year contract under which it would sell Agere Systems's equipment. The contract said in part, "AECI shall receive a percentage of the sale price for each item of Equipment sold."

Agere announced that it planned to close a subsidiary in Madrid. AECI found potential buyers for the Madrid equipment, but Agere ultimately sold it to a different buyer.

AECI sued, arguing that it should be paid a commission because of its effort in trying to sell the equipment. It also argued that when Agere sold the equipment, it had interfered with AECI's ability to fulfill the contract's condition precedent.

The trial court dismissed the complaint, and AECI appealed.

Issues: ***Was a* completed sale *a condition precedent in this agreement? Was Agere liable for interfering with AECI's sales efforts?***

Excerpts from Judge Smith's Decision: As the District Court determined, the contract clearly sets forth when AECI is owed a commission: when AECI consummated a sale of equipment.

AECI argues that summary judgment is not appropriate because the parties dispute whether AECI expended substantial effort to find a buyer for the equipment. AECI

[4]The Restatement (Second) of Contracts has officially abandoned the terms *condition precedent* and *condition subsequent*. See Restatement §§224 et seq. But courts routinely use the terms, so it is difficult to avoid the old distinctions.

claims that it acted as Agere's broker and is thus owed a commission for merely finding a buyer for the Madrid equipment. This argument is unavailing, as the contract specifically limits AECI's entitlement to a commission to situations where it actually sold the designated equipment. Thus, whether AECI expended resources to—and did in fact—find a buyer for the Madrid equipment, are not material to whether AECI is owed a commission.

Finally, there is not sufficient evidence for a reasonable jury to conclude that Agere should be required to pay AECI a commission because Agere improperly prevented AECI from fulfilling the contract's condition precedent—consummating the sale. AECI correctly asserts that a party may not escape contractual liability by relying on the failure of a condition precedent where the party wrongfully prevented the performance of that condition. The record does not support this conclusion here. The facts that AECI located potential buyers for the Madrid equipment and that Agere eventually sold the equipment do not lead to the inference that Agere engaged in some sort of subterfuge to prevent AECI from earning a commission. Further, the non-exclusive contract allows Agere to sell its own equipment.

For the reasons stated above, we affirm.

Condition Subsequent

This type of condition must occur *after* a particular duty arises. If the condition does not occur, the duty is discharged. Vivian's policy with Friendly Insurance contains a condition subsequent. As soon as the fire broke out, Friendly became obligated to pay for the damage. But if Vivian failed to produce her proof of loss on time, Friendly's obligation ended – it was discharged. Note that, with a condition subsequent, it is the *defendant* who must prove that the condition occurred, relieving him of any obligation.

CONDITION PRECEDENT AND CONDITION SUBSEQUENT COMPARED

	Condition Created	Does Condition Occur?	Duty Is Determined	Result
Condition Precedent	"Fee to be paid when restaurant is filled to 80% capacity for one month."	Condition DOES occur: restaurant is packed.	Duty arises: Polly owes Eddie his fee.	Polly pays the fee.
		Condition DOES NOT occur: restaurant is empty.	Duty never arises: Polly is discharged.	Polly pays nothing.

	Condition Created	Duty Is Determined	Does Condition Occur?	Result
Condition Subsequent	"Vivian must give proof of loss within 60 days."	Fire damages property, and Friendly Insurance becomes obligated to pay Vivian.	Condition DOES occur: Vivian proves her losses within 60 days.	Friendly pays Vivian for her losses.
			Condition DOES NOT occur: Vivian fails to prove her losses within 60 days.	Friendly is discharged and owes nothing

Concurrent Conditions

Here, both parties have a duty to perform *simultaneously*. Renee agrees to sell her condominium to Tim on July 5. Renee agrees to furnish a valid deed and clear title to the property on that date, and Tim promises to present a cashier's check for $200,000. The parties have agreed to concurrent conditions. Each performance is the condition for the other's performance. If Renee arrives at the Registry of Deeds and can say only, "Don't worry. I'm totally sure I own this property," Tim need not present his check; similarly, if Tim arrives with

only an "IOU" scribbled on the back of a candy wrapper, Renee has no duty to hand over a valid deed.

EXAM Strategy

Question: Roberto wants to buy Naomi's house for $350,000 and is willing to make a 20 percent down payment, which satisfies Naomi. However, he needs a $280,000 mortgage in order to complete the purchase, and he is not certain he can obtain one. Naomi is worried that Roberto might change his mind about buying the house and then use alleged financing problems to skip out of the deal. How can the two parties protect themselves?

Strategy: Both parties should use conditional clauses in the sales agreement. Naomi must force Roberto to do his best to obtain a mortgage. How? Roberto's clause should protect him if he cannot obtain a sufficient mortgage. How?

Result: Naomi should demand the 20 percent down payment. Further, her conditional clause should state that Roberto forfeits the down payment unless he demonstrates that, within two weeks, he has applied in good faith for a mortgage to at least three banks. Roberto should insist that if he promptly and fully applies to three banks but fails to obtain a mortgage, his down payment is refunded.

Public Policy

At times, a court will refuse to enforce an express condition on the grounds that it is unfair and harmful to the general public. In other words, a court might agree that the parties created a conditional clause but conclude that permitting its enforcement would hurt society. Did the insurance contract in the following case harm society? You be the judge.

You be the Judge

Anderson v. Country Life Insurance Co.

180 Ariz. 625, 886 P.2d 1381, 1994 Ariz. App. LEXIS 240
Arizona Court of Appeals, 1994

Facts: On November 26, a Country Life Insurance agent went to the house of Donald and Anna Mae Anderson. He persuaded the Andersons to buy a life insurance policy and accepted a check for $1,600. He gave the Andersons a "conditional receipt for medical policy," dated that day. The form stated that the Andersons would have a valid life insurance policy with Country Life, effective November 26, but only when all conditions were met. The most important of these conditions was that the Country Life home office accepts the Andersons as medical risks. The Andersons were pleased with the new policy and glad that it was effective that same day.

It was not. Donald Anderson died of a heart attack a few weeks later. Country Life declined the Andersons as medical risks and refused to issue a policy. Anna Mae Anderson sued. Country Life pointed out that medical approval was a condition precedent. In other words, the company argued that the policy would be effective as of November 26, but only if it later decided to make the policy effective. Based on this argument, the trial court gave summary judgment for Country Life. Ms. Anderson appealed, claiming that the conditional clause was a violation of public policy.

You Be the Judge: ***Did the conditional clause violate public policy?***

Argument for Ms. Anderson: Your honors, this policy is a scam. This so-called "conditional receipt for medical policy" is designed to trick customers and then steal their money. The company leads people to believe they are covered as of the day they write the check. But they aren't covered until *much later*, when the insurer gets around to deciding the applicant's medical status.

The company gets the customer's money right away and gives nothing in exchange. If the company, after taking its time, decides the applicant is not medically fit, it returns the money, having used it for weeks or even months to earn interest. If, on the other hand, the insurance company decides the applicant is a good bet, it then issues the policy effective for weeks or months *in the past, when coverage is of no use*. No one can die retroactively, your honors. The company is being paid for a period during which it had no risk.This is a fraud and a disgrace, and the company should pay the benefits it owes.

Argument for Country Life: Your honors, is Country Life supposed to issue life insurance policies without doing a medical check? That is the road to bankruptcy and would mean that no one could obtain this valuable coverage. Of course we do a medical inquiry, as quickly as possible. It's in our interest to get the policy decided one way or the other.

The policy clearly stated that coverage was effective *only when approved by the home office*, after all inquiries were made. The Andersons knew that as well as the agent. If they were covered immediately, why would the company do a medical check? Country Life resents suggestions that this policy is a scam, when in reality it is Ms. Anderson who is trying to profit from a tragedy that the company had nothing to do with.

The facts of this case are unusual. Obviously, most insureds do not die between application and acceptance. It would be disastrous for society to rewrite every insurance policy in this state based on one very sad fact pattern. The contract was clear and it should be enforced as written.

Performance

Caitlin has an architect draw up plans for a monumental new house, and Daniel agrees to build it by September 1. Caitlin promises to pay $900,000 on that date. The house is ready on time, but Caitlin has some complaints. The living room was supposed to be 18 feet high, but it is only 17 feet; the pool was to be azure, yet it is aquamarine; the maid's room was not supposed to be wired for cable television, but it is. Caitlin refuses to pay anything for the house. Is she justified? Of course not, it would be absurd to give her a magnificent house for free when it has only tiny defects. But in this easy answer lurks a danger. Technically, Daniel did breach the contract, and yet the law allows him to recover the full contract price, or virtually all of it. Once that principle is established, how far will a court stretch it? Suppose the living room is only 14 feet high, or 12 feet, or 5 feet? What if the foundation has a small crack? A vast and dangerous split? What if Daniel finishes the house a month late? Six months late? Three years late? At some point, a court will conclude that Daniel has so thoroughly botched the job that he deserves little or no money. But where, exactly, is that point? This is a question that businesses—and judges—face often.

The more complex a contract, the more certain that at least one party will perform imperfectly. Nearly every house ever built has at least some small defects. A delivery of a thousand bushels of apples is sure to include a few rotten ones. A custom-designed computer system for a huge airline is likely to have some glitches. The cases raise several related doctrines, all concerning *how well* a party performed its contractual obligations.

Strict Performance and Substantial Performance

Strict Performance

When Daniel built Caitlin's house with three minor defects, she refused to pay, arguing that he had not *strictly performed* his obligations. Her assertion was correct, yet she lost anyway. Courts dislike strict performance because it enables one party to benefit without paying and sends the other one home empty-handed. A party is generally not required to render

Strict performance
Requires one party to perform its obligations precisely, with no deviation from the contract terms.

strict performance unless the contract expressly demands it *and* such a demand is reasonable. Caitlin's contract never suggested that Daniel would forfeit all payment if there were minor problems. Even if Caitlin had insisted on such a clause, few courts would have enforced it because the requirement would be unreasonable for a project as complicated as the construction of a $900,000 home.

There are some cases where strict performance does make sense. Marshall agrees to deliver 500 sweaters to Leo's store, and Leo promises to pay $20,000 cash on delivery. If Leo has only $19,000 cash and a promissory note for $1,000, he has failed to perform, and Marshall need not give him the sweaters. Leo's payment represents 95 percent of what he promised, but there is a big difference between getting the last $1,000 in cash and receiving a promissory note for that amount.

Substantial Performance

Substantial performance
Occurs when one party fulfills enough of its contract obligations to warrant payment.

Daniel, the house builder, won his case against Caitlin because he fulfilled *most* of his obligations, even though he did an imperfect job. Courts often rely on the substantial performance doctrine, especially in cases involving services as opposed to those concerning the sale of goods or land. In a contract for services, a party that **substantially performs** its obligations will generally receive the full contract price, minus the value of any defects. Daniel receives $900,000, the contract price, minus the value of a ceiling that is 1 foot too low, a pool the wrong color, and so forth. It will be for the trial court to decide how much those defects are worth. If the court decides the low ceiling is a $10,000 defect, the pool color is worth $5,000, and the cable television wiring error is worth $500, then Daniel receives $884,500.

© Wally Stemberger/Shutterstock

Substantial performance is vital, unless you enjoy working for free.

On the other hand, a **party that fails to perform substantially receives nothing on the contract itself and will recover only the value of the work, if any.** If the foundation cracks in Caitlin's house and the walls collapse, Daniel will not receive his $900,000. In such a case, he collects only the market value of the work he has done, which, since the house is a pile of rubble, is probably zero.

When is performance substantial? There is no perfect test, but courts look at these issues:

- How much benefit has the promisee received?
- If it is a construction contract, can the owner use the thing for its intended purpose?
- Can the promisee be compensated with money damages for any defects?
- Did the promisor act in good faith?

EXAM Strategy

Question: Jade owns a straight track used for drag racing. She hires Trevor to resurface it, for $180,000, paying $90,000 down. When the project is completed, Jade refuses to pay the balance and sues Trevor for her down payment. He counterclaims for the $90,000 still due. At trial, Trevor proves that all of the required materials were applied by trained workers in an expert fashion, the dimensions were

perfect, and his profit margin very modest. The head of the national drag racing association testifies that his group considers the strip unsafe. He noticed puddles in both asphalt lanes, found the concrete starting pads unsafe, and believed the racing surface needed to be ground off and reapplied. His organization refuses to sanction races at the track until repairs are made. Who wins the suit?

Strategy: When one party has performed imperfectly, we have an issue of substantial performance. To decide whether Trevor is entitled to his money, we apply four factors: (1) How much benefit did Jade receive? (2) Can she use the racing strip for its intended purpose? (3) Can Jade be compensated for defects? (4) Did Trevor act in good faith?

Result: Jade has received no benefit whatsoever. She cannot use her drag strip for racing. Compensation will not help Jade—she needs a new strip. Trevor's work must be ripped up and replaced. Trevor may have acted in good faith, but he failed to deliver what Jade bargained for. Jade wins all of the money she paid. (As we will see in the next chapter, she may also win additional sums for her lost profits.)

Personal Satisfaction Contracts

Sujata, president of a public relations firm, hires Ben to design a huge multimedia project for her company, involving computer software, music, and live actors, all designed to sell frozen bologna sandwiches to supermarkets. His contract guarantees him two years' employment, provided all of his work "is acceptable in the sole judgment of Sujata." Ben's immediate supervisor is delighted with his work and his colleagues are impressed, but Sujata is not. Three months later, she fires him, claiming that his work is "uninspired." Does she have the right to do that?

This is a **personal satisfaction contract**, in which the promisee makes a personal, subjective evaluation of the promisor's performance. Employment contracts may require personal satisfaction of the employer; agreements for the sale of goods may demand that the buyer be personally satisfied with the product; and deals involving a credit analysis of one party may insist that his finances be satisfactory to the other party. In resolving disputes like Ben and Sujata's, judges must decide: when is it *fair* for the promisee to claim that she is not satisfied? May she make that decision for any reason at all, even on a whim?

Personal satisfaction contracts
Permit the promisee to make a subjective evaluations of the promisor's performance.

A court applies a subjective standard only if assessing the work involves personal feelings, taste, or judgment and the contract explicitly demanded personal satisfaction. A "subjective standard" means that the promisee's personal views will greatly influence her judgment, even if her decision is foolish and unfair. Artistic or creative work, or highly specialized tasks designed for a particular employer, may involve subtle issues of quality and personal preference. Ben's work combines several media and revolves around his judgment. Accordingly, the law applies a subjective standard to Sujata's decision. Since she concludes that his work is uninspired, she may legally fire him, even if her decision is irrational.

Either the system works or it does not.

Note that the promisee, Sujata, has to show two things: that assessing Ben's work involves her personal judgment *and* that their contract explicitly demands personal satisfaction. If the contract were vague on this point, Sujata would lose. Had the agreement merely said, "Ben will at all times make his best efforts," Sujata could not fire him.

In all other cases, a court applies an *objective* standard to the promisee's decision. In other words, the objective standard will be used if assessing the work does not involve

personal judgment *or* if the contract failed to explicitly demand personal satisfaction. An objective standard means that the promisee's judgment of the work must be reasonable. Suppose Sujata hires Leila to install an alarm system for her company, and the contract requires that Sujata be "personally satisfied." Leila's system passes all tests, but Sujata claims, "It just doesn't make me feel secure. I know that someday it's going to break down." May Sujata refuse to pay? No. Even though the contract used the phrase "personally satisfied," a mechanical alarm system does not involve personal judgment and taste. Either the system works or it does not. A reasonable person would find that Leila's system is just fine and therefore, under the objective standard, Sujata must pay. The law strongly favors the objective standard because the subjective standard gives unlimited power to the promisee.

Good Faith

The parties to a contract must carry out their obligations in good faith. The difficulty, of course, is applying this general rule to the wide variety of problems that may arise when people or companies do business. How far must one side go to meet its good faith burden? Marvin Shuster was a physician in Florida. Three patients sued him for alleged malpractice. Shuster denied any wrongdoing and asked his insurer to defend the claims. But the insurance company settled all three claims without defending and with a minimum of investigation. Shuster paid nothing out of his own pocket, but he sued the insurance company, claiming that it acted in bad faith. The doctor argued that the company's failure to defend him caused emotional suffering and meant that it would be impossible for him to obtain new malpractice insurance. The Florida Supreme Court found that the insurer acted in good faith. The contract clearly gave all control of malpractice cases to the company. It could settle or defend as it saw fit. Here, the company considered it more economical to settle quickly, and Shuster should have known, from the contract language, that the insurer might choose to do so.[5]

© Photodisc/Getty Images

How far must one side go to meet its good faith burden?

In the following case, one party to a contract played its cards very close to its chest. Too close?

Brunswick Hills Racquet Club Inc. v. Route 18 Shopping Center Associates

182 N.J. 210, 864 A.2d 387
Supreme Court of New Jersey, 2005

Facts: Brunswick Hills Racquet Club (Brunswick) owned a tennis club on property that it leased from Route 18 Shopping Center Associates (Route 18). The lease ran for 25 years, and Brunswick had spent about $1 million in capital improvements. The lease expired, and Brunswick had the option of either buying the property

[5] *Shuster v. South Broward Hospital Dist. Physicians' Prof. Liability Ins. Trust*, 591 So. 2d 174, 1992 Fla. LEXIS 20 (Fla. 1992).

or purchasing a 99-year lease, both on very favorable terms. To exercise its option, Brunswick had to notify Route 18 no later than September 30 and had to pay the option price of $150,000. If Brunswick failed to exercise its options, the existing lease automatically renewed as of September 30, for 25 more years, but at more than triple the current rent.

Brunswick's lawyer wrote to Rosen Associates, the company that managed Route 18, nineteen months before the option deadline, stating that Brunswick intended to exercise the option for a 99-year lease. He requested that the lease be sent well in advance so that he could review it. He did not make the required payment of $150,000. Rosen replied that it had forwarded Spector's letter to its attorney, who would be in touch. In April, Spector again wrote, asking for a reply from Rosen or its lawyer.

Over the next six months, the lawyer continually asked for a copy of the lease or further information, but neither Route 18's lawyer nor anyone else provided any data. Eventually, the September deadline passed.

Route 18's lawyer notified Brunswick that it could not exercise its option to lease because it had failed to pay the $150,000 by September 30.

Brunswick sued, claiming that Route 18 had breached its duty of good faith and fair dealing. The trial court found that Route 18 had no duty to notify Brunswick of impending deadlines, and it gave summary judgment for Route 18. The appellate court affirmed, and Brunswick appealed to the state supreme court.

Issue: ***Did Route 18 breach its duty of good faith and fair dealing?***

Excerpts from Justice Albin's Decision: Courts generally should not tinker with a finely drawn and precise contract entered into by experienced business people that regulates their financial affairs. [However,] every party to a contract is bound by a duty of good faith and fair dealing in both the performance and enforcement of the contract. Good faith is a concept that defies precise definition. Good faith conduct is conduct that does not violate community standards of decency, fairness, or reasonableness. The covenant of good faith and fair dealing calls for parties to a contract to refrain from doing anything which will have the effect of destroying or injuring the right of the other party to receive the benefits of the contract.

Our review of the undisputed facts of this case leads us to the inescapable conclusion that defendant breached the covenant of good faith and fair dealing. Nineteen months in advance of the option deadline, plaintiff notified defendant in writing of its intent to exercise the option to purchase the 99-year lease. Plaintiff mistakenly believed that the purchase price was not due until the time of closing.

During a 19-month period, defendant, through its agents, engaged in a pattern of evasion, sidestepping every request by plaintiff to discuss the option and ignoring plaintiff's repeated written and verbal entreaties to move forward on closing the 99-year lease despite the impending option deadline and obvious potential harm to plaintiff.

Defendant never requested the purchase price of the lease. Indeed, as defendant's attorney candidly admitted at oral argument, defendant did not want the purchase price because the successful exercise of the option was not in defendant's economic interest.

Ordinarily, we are content to let experienced commercial parties fend for themselves and do not seek to introduce intolerable uncertainty into a carefully structured contractual relationship by balancing equities. But there are ethical norms that apply even to the harsh and sometimes cutthroat world of commercial transactions. We do not expect a landlord or even an attorney to act as his brother's keeper in a commercial transaction. We do expect, however, that they will act in good faith and deal fairly with an opposing party. Plaintiff's repeated letters and telephone calls to defendant concerning the exercise of the option and the closing of the 99-year lease obliged defendant to respond, and to respond truthfully.

[Plaintiff is entitled to exercise the 99-year lease.]

EXAM Strategy

Question: Sun operates an upscale sandwich shop in New Jersey, in a storefront that she leases from Ricky for $18,000 per month. The lease, which expires soon, allows Sun to renew for five years at $22,000 per month. Ricky knows, but Sun does not, that in a year, Prada will open a store on the same block. The dramatic increase in pedestrian traffic will render Sun's space more valuable. Ricky says nothing about Prada, Sun

declines to renew, and Ricky leases the space for $40,000 a month. Sun sues Ricky, claiming he breached his duty of good faith and fair dealing. Based on the *Brunswick Hills* case, how would the New Jersey Supreme Court rule?

Strategy: In the *Brunswick Hills* case, the court, on the one hand, criticized the defendant for cynically evading the plaintiff's efforts to renew. However, the court also said, "We do not expect a landlord or even an attorney to act as his brother's keeper in a commercial transaction." Using those opposing themes as guidelines, examine the court's decision and predict the ruling in Sun's suit.

Result: *Brunswick Hills* begins: "Courts generally should not tinker with a finely drawn and precise contract entered into by experienced business people." Sun's lease imposes no responsibility on Ricky to report on neighborhood changes or forecast profitability. Further, Sun made no requests to Ricky about the area's future. Sun is asking Ricky to be "her brother's keeper," and neither this court nor any other will do that. She loses.

Time of the Essence Clauses

> Go, sir, gallop, and don't forget that the world was made in six days. You can ask me for anything you like, except time.
>
> *Napoleon, to an aide, 1803*

Generals are not the only ones who place a premium on time. Ask Gene LaSalle. The Seabreeze Restaurant agreed to sell him all of its assets. The parties signed a contract stating the price and closing date. Seabreeze insisted on a clause saying, "Seabreeze considers that time is of the essence in consummating the proposed transaction." Such clauses are common in real estate transactions and in any other agreement where a delay would cause serious damage to one party. LaSalle was unable to close on the date specified and asked for an extension. Seabreeze refused and sold its assets elsewhere. A Florida court affirmed that Seabreeze acted legally.

Time of the essence clauses
Generally make contract dates strictly enforceable.

A **time of the essence clause** will generally make contract deadlines strictly enforceable. Seabreeze regarded a timely sale as important, and LaSalle agreed to the provision. There was nothing unreasonable about the clause, and LaSalle suffered the consequences of his delay.[6]

Suppose the contract had named a closing date but included no time of the essence clause. If LaSalle offered to close three days late, could Seabreeze sell elsewhere? No. **Merely including a date for performance does not make time of the essence.** Courts dislike time of the essence arguments because even a short delay may mean that one party forfeits everything it expected to gain from the bargain. If the parties do not *clearly* state that prompt performance is essential, then both are entitled to reasonable delays.

Breach

When one party breaches a contract, the other party is discharged. The discharged party has no obligation to perform and may sue for damages. Edwin promises that on July 1, he will deliver 20 tuxedos, tailored to fit male chimpanzees, to Bubba's circus for $300 per suit.

[6] *Seabreeze Restaurant, Inc. v. Paumgardhen*, 639 So.2d 69, 1994 Fla. App. LEXIS 4546 (Fla. Dist. Ct. App. 1994).

After weeks of delay, Edwin concedes he hasn't a cummerbund to his name. Bubba is discharged and owes nothing. In addition, he may sue Edwin for damages.

Material Breach

As we know, parties frequently perform their contract duties imperfectly, which is why courts accept substantial performance rather than strict performance, particularly in contracts involving services. In a more general sense, **courts will discharge a contract only if a party committed a *material* breach.** A material breach is one that substantially harms the innocent party and for which it would be hard to compensate without discharging the contract. Suppose Edwin fails to show up with the tuxedos on June 1 but calls to say they will arrive under the big top the next day. He has breached the agreement. Is his breach material? No. This is a trivial breach, and Bubba is not discharged. When the tuxedos arrive, he must pay.

The following case raises the issue in the context of a major college sports program.

O'Brien v. Ohio State University

2007 WL 2729077
Ohio Court of Appeals, 2007

Facts: The Ohio State University (OSU), experiencing a drought in its men's basketball program, brought in Coach Jim O'Brien to turn things around. The plan was successful. In only his second year, he guided the team to its best record ever. The team advanced to the Final Four, and O'Brien was named national coach of the year. OSU's athletic director promptly offered the coach a new, multi-year contract worth about $800,000 per year.

Section 5.1 of the contract included termination provisions. The university could fire O'Brien *for cause* if (a) there was a material breach of the contract by the coach or (b) O'Brien's conduct subjected the school to NCAA sanctions. OSU could also terminate O'Brien *without cause*, but in that case, it had to pay him the full salary owed.

O'Brien began recruiting a talented 21-year-old Serbian player named Alex Radojevic. While getting to know the young man, O'Brien discovered two things. First, it appeared that Radojevic had been paid to play briefly for a Yugoslavian team, meaning that he was ineligible to play college basketball. Second, it was clear that Radojevic's family had suffered terribly during the strife in his homeland.

O'Brien concluded that Radojevic would never play for OSU or any major college. He also decided to loan Radojevic's mother some money. Any such loan would violate an NCAA rule if done to recruit a player, but O'Brien believed the loan was legal since Radojevic could not play in the NCAA anyway. Several years later, the university learned of the loan and realized that O'Brien had never reported it. Hoping to avoid trouble with the NCAA, OSU imposed sanctions on itself. The university also fired the coach, claiming he had lied, destroyed the possibility of postseason play, and harmed the school's reputation.

O'Brien sued, claiming he had not materially breached the contract. The trial court awarded the coach $2.5 million, and the university appealed.

Issue: ***Did O'Brien materially breach the contract?***

Excerpts from Judge Tyack's Decision: OSU argued that it was substantially injured by the self-imposed sanctions, which included a ban from post-season and NCAA tournament play [during the current season], and relinquishing two basketball scholarships from the [next] recruiting class. Contrary to OSU's argument, however, the trial court found these sanctions to be insubstantial. [Athletic Director] Geiger announced the one-year post-season ban in December, and it appears from the timing of that announcement that Geiger made the decision based on the fact that the team was unlikely to be invited to a post-season tournament in the first place.

The second alleged harm was harm to OSU's reputation. The trial court found that any reputational harm was similarly exaggerated, at least as it specifically related to the Radojevic matter. Radojevic never enrolled at OSU, and never played a single second for OSU's basketball team.

NCAA violations happen all the time. It's the nature of the beast. Also relevant to the issue of OSU's allegedly

damaged reputation is the fact that almost immediately after firing O'Brien, OSU was able to lure one of the nation's top coaching prospects, [Thad Matta], to assume O'Brien's former position. Shortly thereafter, Matta successfully recruited possibly the best recruiting class ever. Based on this evidence, the trial court could reasonably find the Radojevic loan did not cause serious harm to OSU.

OSU argues that O'Brien acted in bad faith by covering up his misconduct for several years. In the words of OSU's counsel at oral argument: "*If lying to your employer for four years is not a material breach, it's hard to imagine what would be!*" Although the premise for counsel's argument is sound, it is unsound in application because it assumes facts not in evidence. Counsel for OSU assumes for the purposes of the argument that O'Brien systematically either denied allegations about the Radojevic loan, or took affirmative steps to conceal it from OSU. The evidence does not support such a conclusion. After Radojevic was drafted by the NBA, there is not a single inference that can be drawn from the record to suggest that O'Brien even thought about the loan. In O'Brien's own mind, he did not believe he had done anything wrong; thus, he would not have had a motive to conceal what he had done.

[There was no material breach.]

Affirmed.

Anticipatory Breach

Sally will receive her bachelor's degree in May and already has a job lined up for September. She has signed a two-year contract to work as window display designer for Surebet Department Store. The morning of graduation, she reads in the paper that Surebet is going out of business that very day. Surebet has told Sally nothing about her status. Sally need not wait until September to learn her fate. Surebet has committed an **anticipatory breach by making it unmistakably clear that it will not honor the contract**. Sometimes a promisor will actually inform the promisee that it will not perform its duties. At other times, as here, the promisor takes some step that makes the breach evident. Sally is discharged and may immediately seek other work. She is also entitled to file suit for breach of contract. The court will treat Surebet's anticipatory breach just as though the store had actually refused to perform on September 1.

Statute of Limitations

Statute of limitations
A statutory time limit within which an injured party must file suit.

A party injured by a breach of contract should act promptly. A **statute of limitations** begins to run at the time of injury and will limit the time within which the injured party may file suit. These laws set time limits for filing lawsuits. Statutes of limitation vary from state to state and from issue to issue within a state. Failure to file suit within the time limits discharges the party who breached the contract. Always consult a lawyer promptly in the case of a legal injury.

IMPOSSIBILITY

"Your honor, my client wanted to honor the contract. He just couldn't. *Honest.*" This plea often echoes around courtrooms as one party seeks discharge without fulfilling his contract obligations. Does the argument work? It depends. If performing a contract was truly impossible, a court will discharge the agreement. But if honoring the deal merely imposed a financial burden, the law will generally enforce the contract.

True Impossibility

These cases are easy—and rare. **True impossibility means that something has happened making it literally impossible to do what the promisor said he would do.** Francoise owns a vineyard that produces Beaujolais Nouveau wine. She agrees to ship 1,000 cases of her

wine to Tyrone, a New York importer, as soon as this year's vintage is ready. Tyrone will pay $50 per case. But a fungus wipes out her entire vineyard. Francoise is discharged. It is theoretically impossible for Francoise to deliver wine from her vineyard, and she owes Tyrone nothing.

Meanwhile, though, Tyrone has a contract with Jackson, a retailer, to sell 1,000 cases of Beaujolais Nouveau wine at $70 per case. Tyrone has no wine from Francoise, and the only other Beaujolais Nouveau available will cost him $85 per case. Instead of earning $20 per case, Tyrone will lose $15. Does this discharge Tyrone's contract with Jackson? No. It is possible for him to perform—it's just more expensive. He must fulfill his agreement.

True impossibility is generally limited to these three causes:

- ***Destruction of the Subject Matter,*** as happened with Francoise's vineyard.
- ***Death of the Promisor in a Personal Services Contract.*** When the promisor agrees personally to render a service that cannot be transferred to someone else, her death discharges the contract. Producer hires Josephine to write the lyrics for a new Broadway musical, but Josephine dies after writing only two words: "Act One." The contract was personal to Josephine and is now discharged. Neither Josephine's estate nor Producer has any obligation to the other. But notice that most contracts are not for personal services. Suppose that Tyrone, the wine importer, dies. His contract to sell wine to Jackson is not discharged because anyone can deliver the required wine. Tyrone's estate remains liable on the deal with Jackson.
- ***Illegality.*** Chet, a Silicon Valley entrepreneur, wants to capitalize on his computer expertise. He contracts with Construction Co. to build a factory in Iran that will manufacture computers for sale in that country. Construction Co. fails to build the factory on time, and Chet sues. Construction Co. defends by pointing out that the President of the United States has issued an executive order barring trade between the United States and Iran. Construction Co. wins; the executive order discharged the contract.

Commercial Impracticability and Frustration of Purpose

It is rare for contract performance to be truly impossible but very common for it to become a financial burden to one party. Suppose Bradshaw Steel in Pittsburgh agrees to deliver 1,000 tons of steel beams to Rice Construction in Saudi Arabia at a given price, but a week later, the cost of raw ore increases 30 percent. A contract once lucrative to the manufacturer is suddenly a major liability. Does that change discharge Bradshaw? Absolutely not. Rice signed the deal *precisely to protect itself against price increases.* As we have seen, the primary purpose of contracts is to enable the parties to control their future.

Yet there may be times when a change in circumstances is so extreme that it would be unfair to enforce a deal. What if a strike made it impossible for Bradshaw to ship the steel to Saudi Arabia, and the only way to deliver would be by air, at *five times* the sea cost? Must Bradshaw fulfill its deal? What if a new war meant that any ships or planes delivering the goods might be fired upon? Other changes could make the contract undesirable for *Rice.* Suppose the builder wanted steel for a major public building in Riyadh, but the Saudi government decided not to go forward with the construction. The steel would then be worthless to Rice. Must the company still accept it?

None of these hypotheticals involves true impossibility. It is physically possible for Bradshaw to deliver the goods and for Rice to receive. But in some cases, it may be so dangerous, costly, or pointless to enforce a bargain that a court will discharge it instead.

Courts use the related doctrines of commercial impracticability and frustration of purpose to decide when a change in circumstances should permit one side to escape its duties.

Commercial impracticability means some event has occurred that neither party anticipated and *fulfilling the contract would now be extraordinarily difficult and unfair to one party.* If a shipping strike forces Bradshaw to ship by air, the company will argue that neither side expected the strike and that Bradshaw should not suffer a fivefold increase in shipping costs. Bradshaw will probably win the argument.

Frustration of purpose means some event has occurred that neither party anticipated and *the contract now has no value for one party.* If Rice's building project is canceled, Rice will argue that the steel now is useless to the company. Frustration cases are hard to predict. Some states would agree with Rice, but others would hold that it was Rice's obligation to protect itself with a government guarantee that the project would be completed. Courts consider the following factors in deciding impracticability and frustration claims:

- *Mere financial difficulties will never suffice to discharge a contract.* Barbara and Michael Luber divorced, and Michael agreed to pay alimony. He stopped making payments and claimed that it was impracticable for him to do so because he had hit hard times and simply did not have the money. The court dismissed his argument, noting that commercial impracticability requires some objective event that neither party anticipated, not merely the financial deterioration of one party.[7]

- *The event must have been truly unexpected.* Wayne Carpenter bought land from the state of Alaska, intending to farm it and agreeing to make monthly payments. The sales contract stated that Alaska did not guarantee the land for agriculture or any other purpose. Carpenter struggled to farm the land but failed; as soon as the ground thawed, the water table rose too high for crops. Carpenter abandoned the land and stopped making payments. Alaska sued and won. The high court rejected Carpenter's claim of impracticability since the "event"—bad soil—was not unexpected. Alaska had warned that the land might prove unworkable, and Carpenter had no claim for commercial impracticability.[8]

- *If the promisor must use a different means to accomplish her task, at a greatly increased cost, she probably does have a valid claim of impracticability.* If a shipping strike forces Bradshaw to use a different means of delivery—say, air—and this multiplies its costs several times, the company is probably discharged. But a mere increase in the cost of raw materials, such as a 30 percent rise in the price of ore, will almost never discharge the promisor.

- *A* force majeure *clause is significant but not necessarily dispositive.* To protect themselves from unexpected events, companies sometimes include a *force majeure* clause, allowing cancellation of the agreement in case of extraordinary and unexpected events. A typical clause might permit the seller of goods to delay or cancel delivery in the event of "acts of God, fire, labor disputes, accidents, or transportation difficulties." A court will always consider a *force majeure* clause, but it may not enforce it if one party is trying to escape from routine financial problems.

---

[7] *Luber v. Luber*, 418 Pa. Super. 542, 614 A.2d 771, 1992 Pa. Super. LEXIS 3338 (Pa. Super. Ct. 1992).
[8] *State v. Carpenter*, 869 P.2d 1181, 1994 Alaska LEXIS 23 (Alaska 1994).

Chapter Conclusion

Negotiate carefully. A casually written letter may imply a condition precedent that the author never intended. The term *personal satisfaction* should be defined so that both parties know whether one party may fire the other on a whim. Never assume that mere inconvenience or financial loss will discharge contractual duties.

EXAM REVIEW

1. **CONDITION** A condition is an event that must occur before a party becomes obligated. It may be stated expressly or implied, and no formal language is necessary to create one. (pp. 382–387)

EXAM Strategy

Question: Stephen Krogness, a real estate broker, agreed to act as an agent for Best Buy Co., which wanted to sell several of its stores. The contract provided that Best Buy would pay Krogness a commission of 2 percent for "a sale to any prospect submitted directly to Best Buy by Krogness." Krogness introduced Corporate Realty Capital (CRC) to Best Buy, and the parties negotiated but could not reach agreement. CRC then introduced Best Buy to BB Properties (BB). Best Buy sold several properties to BB for $46 million. CRC acted as the broker. Krogness sought a commission of $528,000. Is he entitled to it?

Strategy: This contract contains a conditional clause. What is it? What must occur before Best Buy is obligated to pay Krogness? Did that event happen? (See the "Result" at the end of this section.)

2. **SUBSTANTIAL PERFORMANCE** Strict performance, which requires one party to fulfill its duties perfectly, is unusual. In construction and service contracts, substantial performance is generally sufficient to entitle the promisor to the contract price, minus the cost of defects in the work. (pp. 388–389)

3. **PERSONAL SATISFACTION** Personal satisfaction contracts are interpreted under an objective standard, requiring reasonable ground for dissatisfaction, unless the work involves personal judgment *and* the parties intended a subjective standard. (pp. 389–390)

4. **GOOD FAITH** Good faith performance is required in all contracts. (pp. 390–392)

5. **TIME OF THE ESSENCE** Time of the essence clauses result in strict enforcement of contract deadlines. (p. 392)

EXAM Strategy

Question: Colony Park Associates signed a contract to buy 44 acres of residential land from John Gall. The contract stated that closing would take place exactly one year later. The delay was to enable Colony Park to obtain building permits to develop condominiums. Colony Park worked diligently to obtain all permits, but delays in sewer permits forced Colony Park to notify Gall it could not close on the agreed date. Colony Park suggested a date exactly one month later. Gall refused the new date and declined to sell. Colony Park sued. Gall argued that since the parties specified a date, time was of the essence and Colony Park's failure to buy on time discharged Gall. Please rule.

Strategy: A time of the essence clause generally makes a contract date strictly enforceable. Was there one in this agreement? (See the "Result" at the end of this section.)

6. **MATERIAL BREACH** A material breach is the only kind that will discharge a contract; a trivial breach will not. (pp. 393–394)

7. **IMPOSSIBILITY** True impossibility means that some event has made it impossible to perform an agreement. It is typically caused by destruction of the subject matter, the death of an essential promisor, or intervening illegality. (pp. 394–396)

EXAM Strategy

Question: Omega Concrete had a gravel pit and factory. Access was difficult, so Omega contracted with Union Pacific Railroad (UP) for the right to use a private road that crossed UP property and tracks. The contract stated that use of the road was solely for Omega employees and that Omega would be responsible for closing a gate that UP planned to build where the private road joined a public highway. In fact, UP never constructed the gate; Omega had no authority to construct the gate. Mathew Rogers, an Omega employee, was killed by a train while using the private road. Rogers's family sued Omega, claiming that Omega failed to keep the gate closed as the contract required. Is Omega liable?

Strategy: True impossibility means that the promisor cannot do what he promised to do. Is this such a case? (See the "Result" at the end of this section.)

8. **COMMERCIAL IMPRACTICABILITY** Commercial impracticability means that some unexpected event has made it extraordinarily difficult and unfair for one party to perform its obligations. (pp. 395–396)

9. **FRUSTRATION OF PURPOSE** Frustration of purpose may occur when an unexpected event renders a contract completely useless to one party. (pp. 395–396)

1. Result: The conditional clause requires Best Buy to pay a commission for "a sale to any prospect submitted directly to Best Buy by Krogness." Krogness did not in fact introduce BB Properties to Best Buy. The condition has not occurred, and Best Buy is under no obligation to pay.

5. Result: Merely including a date for performance does not make time of the essence. A party that considers a date critical must make that clear. This contract did not indicate that the closing date was vital to either party, so a short delay was reasonable. Gail was ordered to convey the land to Colony Park.

7. Result: There was no gate, and Omega had no right to build one. This is a case of true impossibility. Omega was not liable.

Multiple-Choice Questions

1. *CPA QUESTION* Nagel and Fields entered into a contract in which Nagel was obligated to deliver certain goods by September 10. On September 3, Nagel told Fields that he had no intention of delivering the goods. Prior to September 10, Fields may successfully sue Nagel under the doctrine of:

(a) Promissory estoppel
(b) Accord and satisfaction
(c) Anticipatory breach
(d) Substantial performance

2. Most contracts are discharged by …

(a) Agreement of the parties
(b) Full performance
(c) Failure of conditions
(d) Commercial impracticability
(e) A material breach

3. If a contract contains a condition precedent, the ____________ has the burden of proving that the condition actually happened. If a condition subsequent exists, the ____________ has the burden of showing that the condition occurred.

(a) plaintiff; plaintiff
(b) plaintiff; defendant
(c) defendant; plaintiff
(d) defendant; defendant

4. Big Co., a construction company, builds a grocery store. The contract calls for a final price of $5 million. Big Co. incurred $4.5 million in costs and stands to make a profit of $500,000. On a final inspection, the grocery store owner is upset. His blueprints called for 24 skylights, but the finished building has only 12. Installing the additional skylights would cost $100,000. Big Co. made no other errors. How much must the grocery store owner pay Big Co.?

(a) $5,000,000
(b) $4,900,000
(c) $4,500,000
(d) $0

5. Lenny makes K2, a synthetic form of marijuana, in his basement. He signs an agreement with the Super Smoke Shop to deliver 1,000 cans of K2 for $10,000. After the contract is signed, but before the delivery, Super Smoke Shop's state legislature makes the sale of K2 illegal. Lenny's contract will be discharged because of ___________.
   (a) true impossibility
   (b) commercial impracticability
   (c) frustration of purpose
   (d) None of the above

Essay Questions

1. ***ETHICS*** Commercial Union Insurance Co. (CU) insured Redux, Ltd. The contract made CU liable for fire damage but stated that the insurer would not pay for harm caused by criminal acts of any Redux employees. Fire destroyed Redux's property. CU claimed that the "criminal acts" clause was a condition precedent, but Redux asserted it was a condition subsequent. What difference does it make, and who is legally right? Does the insurance company's position raise any ethical issues? Who drafted the contract? How clear were its terms?

2. Stephen Muka owned U.S. Robotics. He hired his brother Chris to work in the company. His letter promised Chris $1 million worth of Robotics stock at the end of one year, "provided you work reasonably hard & smart at things in the next year." (We should all have such brothers.) Chris arrived at Robotics and worked the full year, but toward the end of the year, Stephen died. His estate refused to give Chris the stock, claiming their agreement was a personal satisfaction contract and only Stephen could decide whether Chris had earned the reward. Comment.

3. Ken Ward was an Illinois farmer who worked land owned by his father-in-law, Frank Ruda. To finance his operation, he frequently borrowed money from Watseka First National Bank, paying back the loans with farming profits. But Ward fell deeper and deeper into debt, and Watseka became concerned. When Ward sought additional loans, Watseka insisted that Ruda become a guarantor on all of the outstanding debt, and the father-in-law agreed. The new loans had an acceleration clause, permitting the bank to demand payment of the entire debt if it believed itself "insecure"; that is, at risk of a default. Unfortunately, just as Ward's debts reached more than $120,000, Illinois suffered a severe drought, and Ward's crops failed. Watseka asked Ruda to sell some of the land he owned to pay back part of the indebtedness. Ruda reluctantly agreed but never did so. Meanwhile, Ward decreased his payments to the bank because of the terrible crop. Watseka then "accelerated" the loan, demanding that Ruda pay off the entire debt. Ruda defended by claiming that Watseka's acceleration at such a difficult time was bad faith. Who should win?

4. Loehmann's clothing stores, a nationwide chain with headquarters in New York, was the anchor tenant in the Lincoln View Plaza Shopping Center in Phoenix, Arizona, with a 20-year lease from the landlord, Foundation Development, beginning in 1978. Loehmann's was obligated to pay rent the first of every month and to pay common-area charges four times a year. The lease stated that if Loehmann's failed

to pay on time, Foundation could send a notice of default, and that if the store failed to pay all money due within 10 days, Foundation could evict. On February 23, 1987, Foundation sent to Loehmann's the common-area charges for the quarter ending January 31, 1987. The balance due was $3,500. Loehmann's believed the bill was in error and sent an inquiry on March 18, 1987. On April 10, 1987, Foundation insisted on payment of the full amount within 10 days. Foundation sent the letter to the Loehmann's store in Phoenix. On April 13, 1987, the Loehmann's store received the bill and, since it was not responsible for payments, forwarded it to the New York office. Because the company had moved offices in New York, a Loehmann's officer did not see the bill until April 20. Loehmann's issued a check for the full amount on April 24 and mailed it the following day. On April 28, Foundation sued to evict; on April 29, the company received Loehmann's check. Please rule.

5. **YOU BE THE JUDGE WRITING PROBLEM** Kuhn Farm Machinery, a European company, signed an agreement with Scottsdale Plaza Resort, of Arizona, to use the resort for its North American dealers' convention during March 1991. Kuhn agreed to rent 190 guest rooms and spend several thousand dollars on food and beverages. Kuhn invited its top 200 independent dealers from the United States and Canada and about 25 of its own employees from the United States, Europe, and Australia, although it never mentioned those plans to Scottsdale.

   On August 2, 1990, Iraq invaded Kuwait, and on January 16, 1991, the United States and allied forces were at war with Iraq. Saddam Hussein and other Iraqi leaders threatened terrorist acts against the United States and its allies. Kuhn became concerned about the safety of those traveling to Arizona, especially its European employees. By mid-February, 11 of the top 50 dealers with expense-paid trips had either canceled their plans to attend or failed to sign up. Kuhn postponed the convention. The resort sued. The trial court discharged the contract under the doctrines of commercial impracticability and frustration of purpose. The resort appealed. Did commercial impracticability or frustration of purpose discharge the contract? **Argument for Scottsdale Plaza Resort:** The resort had no way of knowing that Kuhn anticipated bringing executives from Europe, and even less reason to expect that if anything interfered with their travel, the entire convention would become pointless. Most of the dealers could have attended the convention, and the resort stood ready to serve them. **Argument for Kuhn:** The parties never anticipated the threat of terrorism. Kuhn wanted this convention so that its European executives, among others, could meet top North American dealers. That is now impossible. No company would risk employee lives for a meeting. As a result, the contract has no value at all to Kuhn, and its obligations should be discharged by law.

Discussion Questions

1. Evans built a house for Sandra Dyer, but the house had some problems. The garage ceiling was too low. Load-bearing beams in the "great room" cracked and appeared to be steadily weakening. The patio did not drain properly. Pipes froze. Evans wanted the money promised for the job, but Dyer refused to pay. Comment.

2. Krug International, an Ohio corporation, had a contract with Iraqi Airways to build aeromedical equipment for training pilots. Krug then contracted for Power Engineering, an Iowa corporation, to build the specialized gearbox to be used in

the training equipment for $150,000. Power did not know that Krug planned to resell the gearbox to Iraqi Airways. When Power had almost completed the gearbox, the Gulf War broke out and the United Nations declared an embargo on all shipments to Iraq. Krug notified Power that it no longer wanted the gearbox. Power sued. Please rule.

3. The death of a promisor in a *personal services* contract discharges an agreement. But if a promisor dies, other kinds of contracts live on. Is this sensible? Would it be better to discharge all kinds of agreements if one of the parties passes away?

4. Is commercial impracticability (such as the shipping strike described earlier in the chapter) a good reason for discharge? What about frustration of purpose (such as the cancellation of the construction project in Saudi Arabia)? Is one more justified than the other? Are parties who back out of contracts on these grounds acting reasonably?

5. Franklin J. Moneypenny hires Angela to paint his portrait. She is to be paid $50,000 if the painting is acceptable "in Franklin's sole judgment." At the big unveiling, 99 of 100 attendees think that Angela has done a masterful job. Franklin disagrees. He thinks the painting makes him look like a toad. (He does in fact look like a toad, but he does not like to contemplate this fact.) Franklin refuses to pay, and, because he signed a personal satisfaction contract, Angela gets nothing. Is this fair? Should the law allow personal satisfaction contracts?

CHAPTER 18

© picsbyst/Shutterstock.com

REMEDIES

Ben is the general manager of an NFL football team. Driving home in his truck, he is in a sour humor. Spencer, the team's best running back, under contract to play for one more year at $2.5 million, has announced he is leaving the team to act in a new sitcom. Ben wonders whether he can stop Spencer from leaving the team. Even if it is possible, would it be worthwhile to make a disgruntled, out-of-condition athlete carry (and fumble) the ball? If Spencer leaves, it will cost at least $5 million to hire a runner with equal speed and power.

The G.M.'s phone rings. Louise, a dealer in rare autos, has bad news.

"I hate to tell you, Ben, but the deal just fell through."

"What are you talking about? We both signed! That's a binding contract!" A seller in Florida had agreed in writing to sell Ben a 1955 Ferrari for $900,000.

"*I* know it's true, and *you* know it," Louise murmurs soothingly. "But the seller has decided he just can't part with it."

Ben slams his cell phone down, turns into his driveway—and notices that the back door is open. Did he leave it that way? No. The burglar did. Ben has lost about $100,000 worth of jewelry, clothing, and sports memorabilia. Why didn't the alarm sound? When he demands an explanation from Alarmist, his home security provider, the quality assurance representative assures Ben that he will receive the full compensation due under his contract—$600. Later that night, Ben will have a long talk with his lawyer about breached contracts and remedies.

Ben slams his cell phone down, turns into his driveway—and notices that the back door is open. Did he leave it that way? No. The burglar did.

Breaching A Contract

Someone breaches a contract when he fails to perform a duty without a valid excuse. Spencer is legally committed to play for the team for one more year and is clearly breaching his contract when he informs the team that in the future, he will be playing for laughs. But what can the team do about the runner's breach? In other words, what is the team's *remedy?* **A remedy is the method a court uses to compensate an injured party.**

Injunction
A court order that requires someone to do something or refrain from doing something.

Should a court stop Spencer from performing in his new sitcom? Force him to carry the ball instead? An order forcing someone to refrain from doing something is an **injunction.** Courts frequently grant injunctions to an employer, blocking an employee from *leaving* to work elsewhere. However, courts almost never use an order to force an employee to *complete* a contract with his employer because that would force two antagonistic parties to work together. In other words, Ben can probably stop Spencer from working in television, but no court will order the running back to suit up and play.

Expectation damages
The money required to put one party in the position she would have been in had the other side performed the contract.

Courts also award **expectation damages**, meaning the money required to put one party in the position he would have been in had the other side performed the contract. If Spencer's team is forced to hire another running back for double the money they expected to pay Spencer, the team will probably recover the difference between the two players' salaries.

Specific performance
Forces both parties to complete the deal.

The Ferrari seller has breached his deal with Ben. What is Ben's remedy? He does not want money damages; he wants that lovely red car. In cases of property that is rare or difficult to replace, courts often award **specific performance**, forcing both parties to complete the deal. Ben should get his car.

Liquidated damages clause
A provision in the contract that declares in advance what one party will receive if the other side breaches.

Finally, the alarm company is trying to *insist* upon a remedy—a very limited one, which will leave Ben largely uncompensated for the burglary. Alarmist is relying on a **liquidated damages clause,** meaning a provision in the contract that declares in advance what one party will receive if the other side breaches. Courts sometimes enforce these clauses. But as we will see later, Alarmist's liquidated clause may be too harsh, and thus unenforceable.

How to best help an injured party, without unfairly harming the other person, is the focus of remedies. The questions and issues created by Ben's Bad Day are typical remedy problems. Courts have struggled with remedies for centuries, but we will master the subject in one chapter.

Ethics Though a court may have several alternative remedies available, it is important to note that most have one thing in common: the focus is on compensating the injured party rather than punishing the party in breach. A court must decide whether to prevent Spencer from leaving the gridiron for the television studio, but it will not consider fining or jailing him.

Some critics argue that someone who willfully breaches a contract should pay a penalty. The Ferrari seller knows he is obligated to part with his car but tries to keep it anyway. Spencer blithely ignores his obligations to the team. Should a remedy reflect morality? In this chapter, we will see very few instances in which a court *punishes* unethical conduct. Is this right? Should contract law exact a price for bad behavior?

Identifying the "Interest" to Be Protected

Interest
A legal right in something.

The first step that a court takes in choosing a remedy is to decide what interest it is trying to protect. An **interest** is a legal right in something. Someone can have an interest in property, for example, by owning it, or renting it to a tenant, or lending money so someone else may buy it. He can have an interest in a *contract* if the agreement gives him some benefit. There are four principal contract interests that a court may seek to protect:

- ***Expectation interest.*** This refers to what the injured party reasonably thought she would get from the contract. The goal is to put her in the position she would have been in if both parties had fully performed their obligations.
- ***Reliance interest.*** The injured party may be unable to demonstrate expectation damages, perhaps because it is unclear he would have profited. But he may still prove that he *spent money* in reliance on the agreement and that in fairness, he should receive compensation.
- ***Restitution interest.*** The injured party may be unable to show an expectation interest or reliance. But perhaps she has conferred a benefit *on the other party*. Here, the objective is to restore to the injured party the benefit she has provided.
- ***Equitable interest.*** In some cases, money damages will not suffice to help the injured party. Something more is needed, such as an order to transfer property to the injured party (specific performance) or an order forcing one party to stop doing something (an injunction).

In this chapter, we look at all four interests.

Expectation Interest

This is the most common remedy that the law provides for a party injured by a breach of contract. **The expectation interest is designed to put the injured party in the position she would have been in had both sides fully performed their obligations.** A court tries to give the injured party the money she would have made from the contract. If accurately calculated, this should take into account all the gains she reasonably expected and all the expenses and losses she would have incurred. The injured party should not end up better off than she would have been under the agreement, nor should she suffer a loss.

If you ever go to law school, you will almost certainly encounter the following case during your first week of classes. It has been used to introduce the concept of damages in contract lawsuits for generations. Enjoy the famous "case of the hairy hand."

Landmark Case

Hawkins v. McGee

84 N.H. 114, 146 A. 641
Supreme Court of New Hampshire, 1929

Facts: Hawkins suffered a severe electrical burn on the palm of his right hand. After years of living with disfiguring scars, he went to visit Dr. McGee, who was well known for his early attempts at skin-grafting surgery. The doctor told Hawkins "I will guarantee to make the hand a hundred percent perfect." Hawkins hired him to perform the operation.

McGee cut a patch of healthy skin from Hawkins's chest and grafted it over the scar tissue on Hawkins' palm. Unfortunately, the chest hair on the skin graft was very thick, and it continued to grow after the surgery. The operation resulted in a hairy palm for Hawkins. Feeling rather … embarrassed … Hawkins sued Dr. McGee.

The trial court judge instructed the jury to calculate damages in this way: "If you find the plaintiff entitled to anything, he is entitled to recover for what pain and suffering he has been made to endure and what injury

he has sustained over and above the injury that he had before."

The jury awarded Hawkins $3,000, but the court reduced the award to $500. Dissatisfied, Hawkins appealed.

Issue: ***How should Hawkins' damages be calculated?***

Excerpts from Justice Branch's Decision: The jury was permitted to consider two elements of damage, (1) pain and suffering due to the operation, and (2) positive ill effects of the operation upon the plaintiff's hand. [T]he foregoing instruction was erroneous.

By damages as that term is used in the law of contracts, is intended compensation to put the plaintiff in as good a position as he would have been in had the defendant kept his contract. The measure of recovery is what the defendant should have given the plaintiff, not what the plaintiff has given the defendant or otherwise expended.

We conclude that the true measure of the plaintiff's damage in the present case is the difference between the value to him of a perfect hand and the value of his hand in its present condition, including any incidental consequences fairly within the contemplation of the parties when they made their contract.

The extent of the plaintiff's suffering does not measure this difference in value. The pain necessarily incident to a serious surgical operation was a part of the contribution which the plaintiff was willing to make to his joint undertaking with the defendant to produce a good hand. It furnished no test of the difference between the value of the hand which the defendant promised and the one which resulted from the operation.

[Remanded for a] new trial.

Now let's consider a more modern example.

William Colby was a former director of the CIA. He wanted to write a book about his 15 years in Vietnam. He paid James McCarger $5,000 for help in writing an early draft and promised McCarger another $5,000 if the book was published. Then he hired Alexander Burnham to cowrite the book. Colby's agent secured a contract with Contemporary Books, which included a $100,000 advance. But Burnham was hopelessly late with the manuscript and Colby missed his publication date. Colby fired Burnham and finished the book without him. Contemporary published *Lost Victory* several years late, and the book flopped, earning no significant revenue. Because the book was so late, Contemporary paid Colby a total of only $17,000. Colby sued Burnham for his lost expectation interest. The court awarded him $23,000, calculated as follows:

	$100,000	advance, the only money Colby was promised
	– 10,000	agent's fee
	= 90,000	Fee for the two authors, combined
divided by 2	= 45,000	Colby's fee (the other half went to the coauthor)
	– 5,000	owed to McCarger under the earlier agreement
	= 40,000	Colby's expectation interest
	– 17,000	Fee Colby eventually received from Contemporary
	= 23,000	Colby's expectation damages; that is, the additional amount he would have received had Burnham finished on time

The *Colby* case[1] presented a relatively easy calculation of damages. Other contracts are complex. Courts typically divide the expectation damages into three parts: (1) direct (or "compensatory") damages, which represent harm that flowed directly from the contract's breach; (2) consequential (or "special") damages, which represent harm caused by the injured party's unique situation; and (3) incidental damages, which are minor costs such as

[1]*Colby v. Burnham*, 31 Conn. App. 707, 627 A.2d 457, 1993 Conn. App LEXIS 299 (Conn. App. Ct. 1993).

storing or returning defective goods, advertising for alternative goods, and so forth. The first two, direct and consequential, are the important ones.

Note that punitive damages are absent from our list. The golden rule in contracts cases is to give successful plaintiffs "the benefit of the bargain" and not to punish defendants. Punitive damages are occasionally awarded in lawsuits that involve both a contract *and* either an intentional tort (such as fraud) or a breach of fiduciary duty, but they are not available in "simple" cases involving only a breach of contract.

Direct Damages

Direct damages are those that flow directly from the contract. They are the most common monetary award for the expectation interest. These are the damages that inevitably result from the breach. Suppose Ace Productions hires Reina to star in its new movie, *Inside Straight*. Ace promises Reina $3 million, providing she shows up June 1 and works until the film is finished. But in late May, Joker Entertainment offers Reina $6 million to star in its new feature, and on June 1, Reina informs Ace that she will not appear. Reina has breached her contract, and Ace should recover direct damages.

Direct damages
Are those that flow directly from the contract.

What are the damages that flow directly from the contract? Ace has to replace Reina. If Ace hires Kayla as its star and pays her a fee of $4 million, Ace is entitled to the difference between what it expected to pay ($3 million) and what the breach forced it to pay ($4 million), or $1 million in direct damages.

Consequential Damages

In addition to direct damages, the injured party may seek consequential damages or, as they are also known, "special damages." **Consequential damages** reimburse for harm that results from the *particular* circumstances of the plaintiff. These damages are only available if they are a *foreseeable consequence* of the breach. Suppose, for example, Raould breaches two contracts—he is late picking both Sharon and Paul up for a taxi ride. His breach is the same for both parties, but the consequences are very different. Sharon misses her flight to San Francisco and incurs a substantial fee to rebook the flight. Paul is simply late for the barber, who manages to fit him in anyway. Thus, Raould's damages would be different for these two contracts. The rule concerning this remedy comes from a famous 1854 case, *Hadley v. Baxendale*. This is another case that all American law students read. Now it is your turn.

Consequential damages
Are those resulting from the unique circumstances of *this injured party*.

Landmark Case

Hadley v. Baxendale

9 Ex. 341, 156 Eng. Rep. 145
Court of Exchequer, 1854

Facts: The Hadleys operated a flour mill in Gloucester. The crankshaft broke, causing the mill to grind to a halt. The Hadleys employed Baxendale to cart the damaged part to a foundry in Greenwich, where a new one could be manufactured. Baxendale promised to make the delivery in one day, but he was late transporting the shaft, and as a result, the Hadleys' mill was shut for five extra days. They sued, and the jury awarded damages based in part on their lost profits. Baxendale appealed.

Issue: ***Should the defendant be liable for profits lost because of his delay in delivering the shaft?***

Excerpts from Judge Alderson's Decision: Where two parties have made a contract which one of them has broken, the damages which the other party ought to receive in respect of such breach of contract should be such as may fairly and reasonably be considered either arising naturally, i.e. according to the usual course of things, from such breach of contract itself, or such as may reasonably be supposed to have been in the contemplation of both parties, at the time they made the contract, as the probable result of the breach of it. Now, if the special circumstances under which the contract was actually made were communicated by the plaintiffs to the defendants, and thus known to both parties, the damages resulting from the breach of such a contract, which they would reasonably contemplate, would be the amount of injury which would ordinarily follow from a breach of contract under these special circumstances so known and communicated. But, on the other hand, if these special circumstances were wholly unknown to the party breaking the contract, he, at the most, could only be supposed to have had in his contemplation the amount of injury which would arise generally, and in the great multitude of cases not affected by any special circumstances, from such a breach of contract.

Now, in the present case, if we are to apply the principles above laid down, we find that the only circumstances here communicated by the plaintiffs to the defendants at the time the contract was made, were that the article to be carried was the broken shaft of a mill, and that the plaintiffs were the millers of that mill. But how do these circumstances shew reasonably that the profits of the mill must be stopped by an unreasonable delay in the delivery of the broken shaft by the carrier to the third person? Suppose the plaintiffs had another shaft in their possession put up or putting up at the time, and that they only wished to send back the broken shaft to the engineer who made it; it is clear that this would be quite consistent with the above circumstances, and yet the unreasonable delay in the delivery would have no effect upon the intermediate profits of the mill. It follows, therefore, that the loss of profits here cannot reasonably be considered such a consequence of the breach of contract as could have been fairly and reasonably contemplated by both the parties when they made this contract.

[The court ordered a new trial, in which the jury would *not* be allowed to consider the plaintiffs' lost profits.]

The rule from *Hadley v. Baxendale* has been unchanged ever since: **The injured party may recover consequential damages only if the *breaching party* should have *foreseen* them when the two sides formed the contract.**

Let us return briefly to *Inside Straight.* Suppose that, long before shooting began, Ace had sold the film's soundtrack rights to Spinem Sound for $2 million. Spinem believed it would make a profit only if Reina appeared in the film, so it demanded the right to discharge the agreement if Reina dropped out. When Reina quit, Spinem terminated the contract. Now, when Ace sues Reina, it will also seek $2 million in consequential damages for the lost music revenue.

The $2 million is not a direct damage. The contract between Reina and Act has nothing directly to do with selling soundtrack rights. But the loss is nonetheless a consequence of Reina bailing out on the project. And so, if Reina knew about Ace's contract with Spinem when she signed to do the film, the loss would be foreseeable to her, and she would be liable for $2 million. If she never realized she was an essential part of the music contract, and if a jury determines that she had no reason to expect the $2 million loss, she owes nothing for the lost soundtrack profits.

Injured plaintiffs often try to recover lost profits. Courts will generally award these damages if (1) the lost profits were foreseeable and (2) plaintiff provides enough information so that the fact finder can reasonably estimate a fair amount. The calculation need not be done with mathematical precision. In the following case, the plaintiffs lost not only profits—but their entire business. Can they recover for harm that is so extensive? You decide.

You be the Judge

Bi-Economy Market, Inc. v. Harleysville Ins. Co. of New York

2008 WL 423451
New York Court of Appeals, 2008

Facts: Bi-Economy Market was a family-owned meat market in Rochester, New York. The company was insured by Harleysville Insurance. The "Deluxe Business Owner's" policy provided replacement cost for damage to buildings and inventory. Coverage also included "business interruption insurance" for one year, meaning the loss of pretax profit plus normal operating expenses, including payroll.

The company suffered a disastrous fire, which destroyed its building and all inventory. Bi-Economy immediately filed a claim with Harleysville, but the insurer responded slowly. Harleysville eventually offered a settlement of $163,000. A year later, an arbitrator awarded the Market $407,000. During that year, Harleysville paid for seven months of lost income but declined to pay more. The company never recovered or reopened.

Bi-Economy sued, claiming that Harleysville's slow, inadequate payments destroyed the company. The company also sought consequential damages for the permanent destruction of its business. Harleysville claimed that it was only responsible for damages specified in the contract: the building, inventory, and lost income. The trial court granted summary judgment for Harleysville. The appellate court affirmed, claiming that when they entered into the contract, the parties did not contemplate damages for termination of the business. Bi-Economy appealed to the state's highest court.

You Be the Judge: ***Is Bi-Economy entitled to consequential damages for the destruction of its business?***

Argument for Bi-Economy: Bi-Economy is a small, family business. We paid for business interruption insurance for an obvious reason: in the event of a disaster, we lacked the resources to keep going while buildings were constructed and inventory purchased. We knew that in such a calamity, we would need prompt reimbursement—compensation covering the immediate damage and our ongoing lost income. Why else would we pay the premiums?

At the time we entered into the contract, Harleysville could easily foresee that if it responded slowly, with insufficient payments, we could not survive. They knew that is what we wanted to avoid—and it is just what happened. The insurer's bad faith offer of a low figure, and its payment of only seven months' lost income, ruined a fine family business. When the insurance company agreed to business interruption coverage, it was declaring that it would act fast and fairly to sustain a small firm in crisis. The insurer should now pay for the full harm it has wrought.

Argument for Harleysville: We contracted to insure the Market for three losses: its building, inventory, and lost income. After the fire, we performed a reasonable, careful evaluation and made an offer we considered fair. An arbitrator later awarded Bi-Market additional money, which we paid. However it is absurd to suggest that in addition to that, we are liable for an open-ended commitment for permanent destruction of the business.

Consequential damages are appropriate in cases where a plaintiff suffers a loss that was not covered in the contract. In this case, though, the parties bargained over exactly what Harleysville would pay in the event of a major fire. If the insurer has underpaid for lost income, let the court award a fair sum. However, the parties never contemplated an additional, enormous payment for cessation of the business. There is almost no limit as to what that obligation could be. If Bi-Market was concerned that a fire might put the company permanently out of business, it should have said so at the time of negotiating for insurance. The premium would have been dramatically higher.

Neither Bi-Market nor Harleysville ever imagined such an open-ended insurance obligation, and the insurer should not pay an extra cent.

Incidental Damages

Incidental damages are the relatively minor costs that the injured party suffers when *responding to* the breach. When Reina, the actress, breaches the film contract, the producers may have to leave the set and fly back to Los Angeles to hire a new actress. The travel cost is an incidental damage. In another setting, suppose Maud, a manufacturer, has produced 5,000 pairs of

Incidental damages
Relatively minor costs that the injured party suffers when responding to the breach.

running shoes for Foot The Bill, a retail chain, but Foot The Bill breaches the agreement and refuses to accept the goods. Maud will have to store the shoes and advertise for alternate buyers. The storage and advertising costs are incidental expenses, and Maud will recover them.

The UCC and Damages

Under the Uniform Commercial Code (UCC), remedies for breach of contract in the sale of goods are similar to the general rules discussed throughout this chapter. UCC §§2-703 through 2-715 govern the remedies available to buyers and sellers.[2]

Seller's Remedies

If a buyer breaches a sale of goods contract, the seller generally has at least two remedies. She may resell the goods elsewhere. If she acts in good faith, she will be awarded **the difference between the original contract price and the price she was able to obtain in the open market**. Assume that Maud, the manufacturer, had a contract to sell her shoes to Foot The Bill for $55 per pair and Foot The Bill's breach forces her to sell them on the open market, where she gets only $48 per pair. Maud will win $7 per pair times 5,000 pairs, or $35,000, from Foot The Bill.

Alternatively, the buyer may choose not to resell and settle for the difference between the contract price and the market value of the goods. Maud, in other words, may choose to keep the shoes. If she can prove that their market value is $48 per pair, for example, by showing what other retailers would have paid her for them, she will still get her $7 each, representing the difference between what the contract promised her and what the market would support. In either case, the money represents direct damages. Maud is also entitled to incidental damages, such as the storage and advertising expenses described above. But there is one significant difference under the UCC: **most courts hold that the seller of goods is *not* entitled to consequential damages**. Suppose Maud hired two extra workers to inspect, pack, and ship the shoes for Foot The Bill. Those are consequential damages, but Maud will not recover them because she is the seller and the contract is for the sale of goods.

Buyer's Remedies

Cover
To make a good faith purchase of goods similar to those in the contract.

The buyer's remedies in sale of goods contracts (which are, as always, governed by the Uniform Commercial Code) are similar to those we have already considered. She typically has two options. First, the buyer can "cover" by purchasing substitute goods. To **cover** means to make a good faith purchase of goods similar to those in the contract. The buyer may then obtain **the difference between the original contract price and her cover price**. Alternatively, if the buyer chooses not to cover, she is entitled to the difference between the original contract price and the market value of the goods.

Suppose Mary has contracted to buy 1,000 six-foot Christmas trees at $25 per tree from Elmo. The market suddenly rises, and not feeling the spirit of the season, Elmo breaches his deal and sells the trees elsewhere. If Mary makes a good faith effort to cover but is forced to pay $40 per tree, she may recover the difference from Elmo, meaning $15 per tree times 1,000 trees, or $15,000. Similarly, if she chooses not to cover but can prove that $40 is now the market value of the trees, she is entitled to her $15 per tree.

Under the UCC, **the buyer *is* entitled to consequential damages, provided that the seller could reasonably have foreseen them**. If Mary tells Elmo, when they sign their deal, that she has a dozen contracts to resell the trees for an average price of $50 per tree, she may recover $25 per tree, representing the difference between her contract price with Elmo and the value of the tree *to her*, based on her other contracts.[3] If she failed to inform Elmo of the

---

[2]We discuss these remedies in greater detail in Unit 3, on commercial transactions.

[3]As we discuss in the section on mitigation later in the chapter, Mary will get only her consequential damages if she attempts to cover.

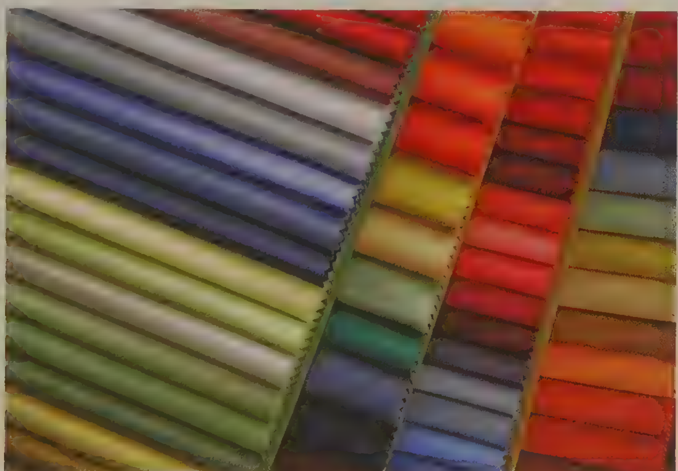
other contracts, she would not receive any money based on them. The buyer is also entitled to whatever incidental damages may have accrued.

EXAM Strategy

Question: Chloe is a fashion designer. Her recent collection of silk-velvet evening gowns was gobbled up by high-end retailers, who now clamor for more. Chloe needs 300 yards of the same fabric by August 15. Mill House, which has supplied fabric to Chloe for many years, agrees to sell her 300 yards at $100 per yard, delivered on August 15. The market value of the fabric is $125, but Mill House gives Chloe a break because she is a major customer.

Chloe contracts with Barney's and Neiman Marcus to sell a total of 50 dresses, at an *additional* profit to Chloe of $800 per dress. On August 15, Mill House delivers defective fabric. Chloe cannot make her dresses in time, and the retailers cancel their orders. Chloe sues Mill House and wins—but what are her damages?

Strategy: To determine damages, first ask whether the contract is governed by the common law or the UCC. This agreement concerns goods, so the Code applies. The UCC permits a buyer to recover damages for the difference between the contract price and the market value of the goods. The Code also allows consequential damages if the seller could have foreseen them. Apply those standards.



For a fashion designer, defective fabric is a calamity. But how do we calculate the damages?

Result: Because Chloe's contract enabled her to save $25 per yard for 300 yards, she is entitled to $7,500. Chloe has also lost profits of $40,000. Mill House could easily have foreseen those losses because the supplier knew that Chloe was a designer who fabricated and sold dresses. Chloe is entitled to $47,500.

We turn now to cases where the injured party cannot prove expectation damages.

Reliance Interest

To win expectation damages, the injured party must prove the breach of contract caused damages that can be *quantified with reasonable certainty*. This rule sometimes presents plaintiffs with a problem.

George plans to manufacture and sell silk scarves during the holiday season. In the summer, he contracts with Cecily, the owner of a shopping mall, to rent a high-visibility stall for $100 per day. George then buys hundreds of yards of costly silk and gets to work cutting and sewing. But in September, Cecily refuses to honor the contract. George sues and proves Cecily breached a valid contract. But what is his remedy?

George cannot establish an expectation interest in his scarf business. He *hoped* to sell each scarf for a $40 gross profit. He *planned* on making $2,000 per day. But how much would he *actually* have earned? Enough to retire on? Enough to buy a salami sandwich for lunch? He has no way of proving his profits, and a court cannot give him his expectation interest.

Reliance interest
Puts the injured party in the position he would have been in had the parties never entered into a contract.

Instead, George will ask for *reliance damages*. The **reliance interest** is designed to put an injured party in the position he would have been in had the parties never entered into a contract. This remedy focuses on the time and money the injured party spent performing his part of the agreement.

George should be able to recover reliance damages from Cecily. Assuming he is unable to sell the scarves to a retail store, which is probable since retailers will have made purchases long ago, George should be able to recover the cost of the silk fabric he bought and perhaps something for the hours of labor he spent cutting and sewing. But reliance damages can be difficult to win because *they are harder to quantify*. Courts prefer to compute damages using the numbers provided in a contract. If a contract states a price of $25 per Christmas tree and one party breaches, the arithmetic is easy. Judges can become uncomfortable when asked to base damages on vague calculations. How much was George's time worth in making the scarves? How good was his work? How likely were the scarves to sell? If George has a track record in the industry, he will be able to show a market price for his services. Without such a record, his reliance claim becomes a tough battle.

Promissory Estoppel

We have seen in earlier chapters that a plaintiff may sometimes recover damages based on promissory estoppel even when there is no valid contract. The plaintiff must show that the defendant made a promise knowing that the plaintiff would likely rely on it, that the plaintiff did rely, and that the only way to avoid injustice is to enforce the promise. **In promissory estoppel cases, a court will generally award *reliance damages*.** It would be unfair to give expectation damages for the full benefit of the bargain when, legally speaking, there has been no bargain.

In the following case, the victorious plaintiff demonstrates how unreliable reliance damages are and how winning can be hard to distinguish from losing.

Toscano v. Greene Music

124 Ca. App. 4th 685, 21 Ca. Rptr. 3d 732
Court of Appeal of California, 2004

Facts: Joseph Toscano was the general manager of Fields Pianos (Fields) in Santa Ana, California. He was unhappy with his job and decided to seek other employment. Toscano contacted Michael Greene, who owned similar stores. In July, Greene offered Toscano a sales management job starting September 1. Relying on that offer, Toscano resigned from Fields on August 1. However, in mid-August, Greene withdrew his employment offer. Toscano later found lower-paying jobs in other cities.

Toscano sued Greene for breach of contract and promissory estoppel. Greene argued that Toscano was not entitled to any expectation damages because his employment with Greene would have been at will, meaning he could lose the job at any time. Greene also urged that because Toscano was an at-will employee at Fields, he could recover at most one month's lost wage.

The trial court ruled that Toscano was entitled to reliance damages for all lost wages at Fields, starting from the day he resigned, going forward until his anticipated retirement in 2017. Toscano's expert accountant calculated his past losses (until the time of trial) at $119,061, and his future lost earnings at $417,772. The trial court awarded Toscano $536,833, and Greene appealed.

Issue: ***Was Toscano entitled to reliance damages?***

Excerpts from Judge O'Rourke's Decision: Given the equitable underpinnings of the promissory estoppel doctrine, we hold that a plaintiff such as Toscano, who relinquished his job in reliance on an unfulfilled promise of employment, may on an appropriate showing recover the lost wages he would have expected to earn from his former employer but for the defendant's promise. Such a damage measure is in keeping with the equitable nature of promissory estoppel. The object of equity is to do right and justice.

Our holding necessarily rejects the notion that the at-will nature of Toscano's former employment with Fields (undisputed by the parties here) is a strict impediment to recovery of future wages that Toscano would have earned at Fields had he not relied on Greene's promise.

[However,] we conclude that even drawing all inferences in Toscano's favor, the evidence was too speculative to lend support to the trial court's award of Toscano's lost future earnings from September 1 to his retirement.

Roberta Spoon, Toscano's damages expert, testified that in calculating Toscano's lost wages for the remainder of his career, "[a]ll I have done is arithmetic. I have simply analyzed the numbers." She testified she was not aware that Toscano's employment with Fields called for any specific tenure. Indeed, Spoon admitted Toscano could have quit or been fired from that job from the time he resigned to the present. She simply assumed Toscano would have continued employment with Fields or another employer at a comparable salary, observing that he had never in the past changed employers for anything other than a pay increase.

Spoon's testimony does not establish Toscano had a definite expectation of continued employment with Fields for any particular period of time. It is evident her supposition was based only on Toscano's history of remaining with his employers until offered new employment. However, *Toscano's* intentions or practices are not relevant to whether he could expect to remain with Fields until his retirement. Evidence of Toscano's intentions does not establish with any reasonable certainty that Fields, an at-will employer who had the right to terminate Toscano at any time for any reason, had some different understanding of the terms of Toscano's employment, or that it would have continued to employ him until the end of his career. Neither party presented testimony from Jerry Goldman, Toscano's boss at Fields. An expert's opinion must not be based upon speculative or conjectural data.

The award of future earnings calculated from [the day he quit] to the date of Toscano's retirement in 2017 is vacated and the matter remanded for a new trial on the issue of damages only. The judgment is otherwise affirmed.

Notice that the court never even mentions that Toscano acted in good faith, relying on Greene's promise, while the latter offered no excuse for suddenly withdrawing his offer. Is it fair to permit Greene to escape all liability? This court, like most, simply will not award significant damages where there is no contract permitting a clear calculation of losses.

The judges, though, have not entirely closed the door on Toscano. What is the purpose of the remand? What might Toscano demonstrate on remand? What practical difficulties will he encounter?

Restitution Interest

Lillian and Harold Toews signed a contract to sell 1,500 acres of Idaho farmland to Elmer Funk. (No, not him—the Bugs Bunny character you are thinking of is Elmer Fudd.) He was to take possession immediately, but he would not receive the deed until he finished paying for the property, in 10 years. This arrangement enabled him to enroll in a government

program that would pay him "set-asides" for *not* farming. Funk kept most aspects of his agreement. He did move onto the land and did receive $76,000 from the government for a year's worth of inactivity. (Nice work if you can get it.) The only part of the bargain Funk did not keep was his promise to pay. Lillian and Harold sued. Funk had clearly breached the deal. But what remedy?

> He did move onto the land and did receive $76,000 from the government for a year's worth of inactivity. (Nice work if you can get it.)

The couple still owned the land, so they did not need it reconveyed. Funk had no money to pay for the farm, so they would never get their expectation interest. And they had expended almost no money based on the deal, so they had no reliance interest. What they had done, though, was to *confer a benefit* on Funk. They had enabled him to obtain $76,000 in government money. Harold and Lillian wanted a return of the benefit they had conferred on Funk, a remedy called *restitution*. The **restitution interest** is designed to return to the injured party a benefit that he has conferred on the other party, which it would be unjust to leave with that person. The couple argued that they had bestowed a $76,000 benefit on Funk and that it made absolutely no sense for him to keep it. The Idaho Court of Appeals agreed. It ruled that the couple had a restitutionary interest in the government set-aside money and ordered Funk to pay them the money.[4]

Restitution interest
Is designed to return to the injured party a benefit he has conferred on the other party.

Restitution is awarded in two types of cases. First, the law allows restitution when the parties have reached a contract and one of them breaches, as Funk did. In such cases, a court may choose restitution because no other remedy is available or because no other remedy would be as fair. Second, courts may award restitution in cases of quasi-contract, which we examined in Chapter 10. In quasi-contract cases, the parties never made a contract, but one side did benefit the other. We consider each kind of restitution interest in turn.

Restitution in Cases of a Voidable Contract

Restitution is a common remedy in contracts involving fraud, misrepresentation, mistake, and duress. In these cases, restitution often goes hand in hand with **rescission**, which means to "undo" a contract and put the parties where they were before they made the agreement. Courtney sells her favorite sculpture to Adam for $95,000, both parties believing the work to be a valuable original by Barbara Hepworth. Two months later, Adam learns that the sculpture is a mere copy, worth very little. A court will permit Adam to rescind the contract on the ground of mutual mistake. At the same time, Adam is entitled to restitution of the purchase price. Courtney gets the worthless carving, and Adam receives his money back.

Rescission
To "undo" a contract and put the parties where they were before they made the agreement.

The following case involved fraud in the sale of a valuable property.

Putnam Construction & Realty Co. v. Byrd

632 So. 2d 961, 1992 Ala. LEXIS 1289
Supreme Court of Alabama, 1992

Facts: Putnam Construction & Realty Co. owned the University Square Business Center (USBC), an office complex with several major tenants. William Byrd and his partners (the "buyers") entered into a contract to buy USBC. They financed the purchase with a $16.2 million loan from Northwestern Mutual Life. Northwestern's loan was secured with a mortgage on the USBC, meaning that if the borrowers failed to repay the loan,

[4] *Toews v. Funk*, 129 Idaho 316, 924 P.2d 217, 1994 Idaho App. LEXIS 75 (Idaho Ct. App. 1994).

Northwestern would own the property. Shortly after the sale closed, Byrd learned that several of the major tenants were leaving. The buyers sued Putnam, seeking rescission of the contract and restitution of their money. The trial court found that Putnam (the "sellers") had committed fraud. It rescinded the sales contract, returning the property to the sellers. It ordered the sellers to assume full liability for the mortgage. The trial court did not, however, order restitution of the buyers' expenses, such as the closing costs. The sellers appealed—which proved to be a big mistake.

Issue: ***Were the buyers entitled to rescission and/or restitution?***

Excerpts from Justice Steagall's Decision: With the departure of its major tenants, the USBC does not have the profit potential the buyers bargained for and is, in fact, a liability to them. While the buyers could receive money damages to approximate the value of the lost leases, such an award would be speculative at best and would not abrogate the fact that the buyers now have a property that operates at an increasing loss. The equitable remedy of rescission, while difficult to execute, would more completely provide the buyers with the compensation they seek. The jury was, therefore, correct in determining that rescission is the proper remedy to be applied in this case.

We agree with the trial court that a reconveyance of USBC to the sellers, subject to the mortgage, "constitutes the most equitable result which can be achieved." Accordingly, we affirm those portions of the court's order relating to the reconveyance of USBC subject to the mortgage. We must also recognize, however, that the buyers incurred other substantial out-of-pocket costs to finance a transaction that was born out of the sellers' fraud. After carefully considering the evidence in this case, we conclude that repayment of the following costs is necessary to more equitably restore the buyers to the position they occupied before the sale: $483,006.75 in closing costs on the purchase of USBC; $121,000 in interest payments they paid to the sellers on the $1.5 million note; and the $500,000 in nonrefundable fees the buyers paid to Northwestern to obtain the loan. We remand this case for the trial court to enter a judgment ordering repayment of these costs.

Ethics Imagine that you are the officer from Putnam in charge of negotiating the sale of USBC to the buyers. You learn that several major tenants are soon to depart and realize that if the buyers learn this, they will lower their offer or reject the deal altogether. Your boss insists you tell the buyers that all tenants will be staying. What will you do? What Life Principles will you apply?

Restitution in Cases of a Quasi-Contract

George Anderson owned a valuable 1936 Plymouth. He took it to Ronald Schwegel's repair shop, and the two orally agreed that Schwegel would restore the car for $6,000. Unfortunately, they never agreed on the meaning of the word *restore.* Anderson thought the term meant complete restoration, including body work and engine repairs, whereas Schwegel intended body work but no engine repairs. After doing some of the work, Schwegel told Anderson that the car needed substantial engine work, and he asked for Anderson's permission to allow an engine shop to do it. Anderson agreed, believing the cost was included in the original estimate. When the car was finished and running smoothly, Schwegel demanded $9,800. Anderson refused to pay more than the $6,000 agreed price, and Schwegel sued.

The court held that there was no valid contract between the parties. A contract requires a meeting of the minds. Here, said the court, there was no meeting of the minds on what *restore* included, and hence Schwegel could not recover either his expectation or his reliance interest since both require an enforceable agreement. Schwegel then argued that a quasi-contract existed. In other words, he claimed that even if there had been no valid agreement, he had performed a service for Anderson and that it would be unjust for Anderson to keep it without paying. **A court may award restitution, even in the absence of a contract, where one party has conferred a benefit on another and it would be unjust for the other party to retain**

the benefit. The court ruled that Schwegel was entitled to the full $3,800 above and beyond the agreed price because that was the fair market value of the additional work. Anderson had asked for the repairs and now had an auto that was substantially improved. It would be unjust, ruled the court, to permit him to keep that benefit for free.[5]

Other Remedies

In contract lawsuits, plaintiffs are occasionally awarded the remedies of specific performance, injunction, and reformation.

Specific Performance

Leona Claussen owned Iowa farmland. She sold some of it to her sister-in-law, Evelyn Claussen, and, along with the land, granted Evelyn an option to buy additional property at $800 per acre. Evelyn could exercise her option anytime during Leona's lifetime or within six months of Leona's death. When Leona died, Evelyn informed the estate's executor that she was exercising her option. But other relatives wanted the property, and the executor refused to sell. Evelyn sued and asked for *specific performance.* She did not want an award of damages; she wanted *the land itself.* The remedy of specific performance forces the two parties to perform their contract.

A court will award specific performance, ordering the parties to perform the contract, only in cases involving the sale of land or some other asset that is considered "unique." Courts use this remedy when money damages would be inadequate to compensate an injured party. If the subject is unique and irreplaceable, money damages will not put the injured party in the same position she would have been in had the agreement been kept. So a court will order the seller to convey the rare object and the buyer to pay for it.

Historically, every parcel of land has been regarded as unique, and therefore specific performance is always available in real estate contracts. Family heirlooms and works of art are also often considered unique. Evelyn Claussen won specific performance. The Iowa Supreme Court ordered Leona's estate to convey the land to Evelyn for $800 per acre.[6] Generally speaking, either the seller or the buyer may be granted specific performance. One limitation in land sales is that a buyer may obtain specific performance only if she was ready, willing, and able to purchase the property on time. If Evelyn had lacked the money to buy Leona's property for $800 per acre within the six-month time limit, the court would have declined to order the sale.

EXAM Strategy

Question: The Monroes, a retired couple who live in Illinois, want to move to Arizona to escape the northern winter. In May, the Monroes contract in writing to sell their house to the Temples for $450,000. Closing is to take place June 30. The Temples pay a deposit of $90,000. However, in early June, the Monroes travel through Arizona and discover it is too hot for them. They promptly notify the Temples they are no longer willing to sell, and return the $90,000, with interest. The Temples sue, seeking the house. In response, the Monroes offer evidence that

---

[5] *Anderson v. Schwegel,* 118 Idaho 362, 796 P.2d 1035, 1990 Idaho App. LEXIS 150 (Idaho Ct. App. 1990).
[6] *In re Estate of Claussen,* 482 N.W.2d 381, 1992 Iowa Sup. LEXIS 52 (Iowa 1992).

the value of the house has dropped from about $450,000 to about $400,000. They claim that the Temples have suffered no loss. Who will win?

Strategy: Most contract lawsuits are for money damages, but not this one. The Temples want the house. Because they want the house itself, and not money damages, the drop in value is irrelevant. What legal remedy are the Temples seeking? They are suing for specific performance. When will a court grant specific performance? Should it do so here?

Result: In cases involving the sale of land or some other unique asset, a court will grant specific performance, ordering the parties to perform the agreement,. All houses are regarded as unique. The court will force the Monroes to sell their house, provided the Temples have sufficient money to pay for it.

Other unique items, for which a court will order specific performance, include such things as secret formulas, patents, and shares in a closely held corporation. Money damages would be inadequate for all these things since the injured party, even if she got the cash, could not go out and buy a substitute item. By contrast, a contract for a new Cadillac Escalade is not enforceable by specific performance. If the seller breaches, the buyer is entitled to the difference between the contract price and the market value of the car. The buyer can take his money elsewhere and purchase a virtually identical SUV.

Injunction

In the opening scenario, the NFL team's general manager considered whether to seek an injunction against his running back who wanted to leave the team and act in a TV show. An **injunction** is a court order that requires someone to refrain from doing something.

In the increasingly litigious world of professional sports, injunctions are commonplace. In the following basketball case, the trial court issued a **preliminary injunction;** that is, an order issued early in a lawsuit prohibiting a party from doing something *during the course of the lawsuit.* The court attempts to protect the interests of the plaintiff immediately. If, after trial, it appears that the plaintiff has been injured and is entitled to an injunction, the trial court will make its order a **permanent injunction**. If it appears that the preliminary injunction should never have been issued, the court will terminate the order.

Milicic v. Basketball Marketing Company, Inc.

2004 Pa.A Super. 333, 857 A.2d 689
Superior Court of Pennsylvania, 2004

Facts: The Basketball Marketing Company (BMC) markets, distributes, and sells basketball apparel and related products. BMC signed a long-term endorsement contract with a 16-year-old Serbian player, Darko Milicic, who was virtually unknown in the United States. Two years later, Milicic became the second pick in the National Basketball Association draft, making him an immensely marketable young man.

Four days after his 18th birthday, Milicic made a buyout offer to BMC, seeking release from his contract so that he could arrange a more lucrative one elsewhere. BMC refused to release him. A week later, Milicic notified BMC in writing that he was disaffirming the contract, and he returned all money and goods he had received from the company. BMC again refused to release Milicic.

Believing that Milicic was negotiating an endorsement deal with either Reebok or Adidas, BMC sent both companies letters informing them it had an enforceable endorsement deal with Milicic that was valid for several more years. Because of BMC's letter, Adidas ceased negotiating with Milicic just short of signing a contract. Milicic sued BMC, seeking a preliminary injunction that would prohibit BMC from sending such letters to competitors. The trial court granted the preliminary injunction, and BMC appealed.

Issue: ***Is Milicic entitled to a preliminary injunction?***

Excerpts from Judge McCaffery's Decision:[7] BMC argues that the trial court erred by concluding that Milicic had proven the four essential prerequisites necessary for injunctive relief. However, Milicic did meet these four requirements.

1. Milicic had a strong likelihood of success on the merits.

   Pennsylvania law recognizes, except as to necessities, the contract of a minor is voidable if the minor disaffirms it at any reasonable time after the minor attains majority. Just 11 days after his 18th birthday, Milicic sent BMC a letter withdrawing from the agreement. This letter was sent within a reasonable time after Milicic's reaching the age of majority and stated his unequivocal revocation and voidance of the agreement. There exists more than a reasonable probability that Milicic will succeed in [nullifying the contract with BMC].

2. Injunctive relief was necessary to prevent immediate and irreparable harm that could not be adequately compensated by the awarding of monetary damages.

   Top N.B.A. draft picks generally solicit, negotiate, and secure endorsement contracts within a short time after the draft to take advantage of the publicity, excitement, and attendant marketability associated with the promotion. BMC blocked Milicic's efforts to enter into such an endorsement agreement. After being contacted by BMC, advanced negotiations between Milicic and Adidas were suspended. These business opportunity and market advantage losses may aptly be characterized as irreparable injury for purposes of equitable relief.

3. Greater injury would have occurred from denying the injunction than from granting the injunction.

   BMC's refusal to acknowledge Milicic's ability to disaffirm the contract is at odds with public policy. Because infants are not competent to contract, the ability to disaffirm protects them from their own immaturity and lack of discretion. It is established practice in Pennsylvania to petition the court to appoint a guardian for the child, to protect the interests of both parties. It confounds the Court that BMC, a corporation of great magnitude, whose business may be said to be based in contract law, failed to have a guardian appointed for Milicic.
   Harm to the public is an additional consideration. The public policy consideration underlying the rule which allows a child to disaffirm a contract within a reasonable time after reaching the age of majority is that minors should not be bound by mistakes resulting from their immaturity or the overbearance of unscrupulous adults.

4. The preliminary injunction restored the parties to the status quo that existed prior to the wrongful conduct:

   Enjoining BMC from further interfering with Milicic's ability to contract will place the parties where they were prior to BMC's wrongful conduct. As all four of the essential prerequisites have been satisfied in this case, the Court properly granted injunctive relief. Order affirmed.

© Elsa/Getty Images

Was Darko Milicic entitled to a preliminary injunction against BMC?

[7]Because we are unwilling to assume, as the court apparently does, that this decision will be read only by robots, the authors have substituted *BMC* for *appellant* and *Milicic* for *appellee.*

Reformation

The final remedy, and perhaps the least common, is **reformation**, a process in which a court will partially rewrite a contract. Courts seldom do this because the whole point of a contract is to enable the parties to control their own futures. But a court may reform a contract if it believes a written agreement includes a simple mistake. Suppose that Roger orally agrees to sell 35 acres to Hannah for $600,000. The parties then draw up a written agreement, accidentally describing the land as including 50 additional acres that neither party considered part of the deal. Roger refuses to sell. Hannah sues for specific performance but asks the court to *reform* the written contract to reflect the true agreement. Most but not all courts would reform the agreement and enforce it.

Reformation
A process in which a court will partially rewrite a contract.

A court may also reform a contract to save it. If Natasha sells her advertising business to Joseph and agrees not to open a competing agency in the same city anytime in the next 10 years, a court may decide that it is unfair to force her to wait a decade. It could reform the agreement and permit Natasha to compete, say, 3 years after the sale. But some courts are reluctant to reform contracts and would throw out the entire noncompetition agreement rather than reform it. Parties should never settle for a contract that is sloppy or overbroad, assuming that a court will later reform errors. They may find themselves stuck with a bargain they dislike, or with no contract at all.

Special Issues

Finally, we consider some special issues of damages, beginning with a party's obligation to minimize its losses.

Mitigation of Damages

A party injured by a breach of contract may not recover for damages that he could have avoided with reasonable efforts. In other words, when one party perceives that the other has breached or will breach the contract, the injured party must try to prevent unnecessary loss. A party is expected to **mitigate** his damages; that is, to keep damages as low as he reasonably can.

Mitigate
To keep damages as low as reasonable.

Malcolm agrees to rent space in his mall to Zena, for a major department store. As part of the lease, Malcolm agrees to redesign the interior to meet her specifications. After Malcolm has spent $20,000 in architect and design fees, Zena informs Malcolm that she is renting other space and will not occupy his mall. Malcolm nonetheless continues the renovation work, spending an additional $50,000 on materials and labor. Malcolm will recover the lost rental payments and the $20,000 expended in reliance on the deal. He will *not* recover the extra $50,000. He should have stopped work when he learned of Zena's breach.

Nominal Damages

Nominal damages are a token sum, such as one dollar, given to a plaintiff who demonstrates that the defendant breached the contract but cannot prove serious injury. A school board unfairly fires Gemma, a teacher. If she obtains a teaching job at a better school for identical pay the very next day, she probably can show no damages at all. Nonetheless, the school wrongfully terminated her, and a court may award nominal damages. Nominal damages provide plaintiff with a "moral victory."

Nominal damages
A token sum, such as one dollar, given to a plaintiff who demonstrates a breach but no serious injury.

Liquidated Damages

It can be difficult or even impossible to prove how much damage the injured party has suffered. So lawyers and executives negotiating a deal may include in the contract a **liquidated damages** clause, a provision stating in advance how much a party must pay if it

Liquidated damages
A clause stating in advance how much a party must pay if it breaches.

breaches. Assume that Laurie has hired Bruce to build a five-unit apartment building for $800,000. Bruce promises to complete construction by May 15. Laurie insists on a liquidated damages clause providing that if Bruce finishes late, Laurie's final price is reduced by $3,000 for each week of delay. Bruce finishes the apartment building June 30, and Laurie reduces her payment by $18,000. Is that fair? The answer depends on two factors: **A court will generally enforce a liquidated damages clause if (1) at the time of creating the contract, it was very difficult to estimate actual damages, and (2) the liquidated amount is reasonable.** In any other case, the liquidated damage will be considered a mere penalty and will prove unenforceable.

We will apply the two factors to Laurie's case. When the parties made their agreement, would it have been difficult to estimate actual damages caused by delay? Yes. Laurie could not prove that all five units would have been occupied or how much rent the tenants would have agreed to pay. Was the $3,000 per week reasonable? Probably. To finance an $800,000 building, Laurie will have to pay at least $6,000 interest per month. She must also pay taxes on the land and may have other expenses. Laurie does not have to prove that every penny of the liquidated damages clause is justified, but only that the figure is reasonable. A court will probably enforce her liquidated damages clause.

On the other hand, suppose Laurie's clause demanded $3,000 per day. There is no basis for such a figure, and a court will declare it a penalty clause and refuse to enforce it. Laurie will be back to square one, forced to prove in court any damages she claims to have suffered from Bruce's delay.

In the chapter's opening scenario, the alarm company tries to invoke a liquidated damages clause that would leave Ben largely uncompensated. Depending on what the parties knew when they made the agreement, a court may well find the clause too harsh and permit Ben to sue for his actual losses.

EXAM Strategy

Question: In March, James was accepted into the September ninth-grade class at the Brookstone Academy, a highly competitive private school. To reserve his spot, James's father, Rex, sent in a deposit of $2,000 and agreed in writing to pay the balance due, $19,000. If James withdrew in writing from the school by August 1, Rex owed nothing more to Brookstone. However, once that date passed, Rex was obliged to pay the full $19,000, whether or not James attended. On August 5, Rex hand-delivered to Brookstone a letter stating that James would not attend. Brookstone demanded the full tuition and, when Rex refused to pay, sued for $19,000. Analyze the case.

Strategy: When one party seeks contract damages that are specified in the agreement, it is relying on a liquidated damages clause. A court will generally enforce a liquidated damages clause provided the plaintiff can prove two things. What are those two things? Can this plaintiff meet that standard?

Result: Brookstone must prove that at the time of creating the contract it was difficult to estimate actual damages and that the liquidated amount is reasonable. Rex will probably argue that the liquidated amount is unreasonable, contending that a competitive school can quickly fill a vacancy with another eager applicant. Brookstone will counter that budgeting, which begins in January, is difficult and imprecise. Tuition money goes toward staff salaries, maintenance, utilities, and many other expenses. If the school cannot not rely in January on a certain income, the calculation becomes impossible. Rex had four months to make up his mind, and by August 1, the

school was firmly committed to its class size and budget. In a similar case, the court awarded the full tuition to the school, concluding that the sum was a reasonable estimate of the damages.

Chapter Conclusion

The powers of a court are broad and flexible and may suffice to give an injured party what it deserves. But problems of proof and the uncertainty of remedies demonstrate that the best solution is a carefully drafted contract and socially responsible behavior.

EXAM REVIEW

1. **BREACH** Someone breaches a contract when he fails to perform a duty without a valid excuse. (pp. 404–405)

2. **REMEDY** A remedy is the method a court uses to compensate an injured party. (p. 405)

3. **INTERESTS** An interest is a legal right in something, such as a contract. The first step that a court takes in choosing a remedy is to decide what interest it is protecting. (pp. 404–405)

4. **EXPECTATION** The expectation interest puts the injured party in the position she would have been in had both sides fully performed. It has three components:

   (a) Direct damages, which flow directly from the contract.
   (b) Consequential damages, which result from the unique circumstances of the particular injured party. The injured party may recover consequential damages only if the breaching party should have foreseen them.
   (c) Incidental damages, which are the minor costs an injured party incurs responding to a breach. (pp. 405–411)

EXAM Strategy

Question: Mr. and Ms. Beard contracted for Builder to construct a house on property he owned and sell it to the Beards for $785,000. The house was to be completed by a certain date, and Builder knew that the Beards were selling their own home in reliance on the completion date. Builder was late with construction, forcing the Beards to spend $32,000 in rent. Ultimately, Builder never finished the house, and the Beards moved elsewhere. They sued. At trial, expert testimony indicated the market value of the house as promised would have been $885,000. How much money are the Beards entitled to, and why?

Strategy: Normally, in cases of property, an injured plaintiff may use specific performance to obtain the land or house. However, there *is* no house, so there will be no specific performance. The Beards will seek their expectation interest. Under the contract, what did they reasonably expect? They anticipated a finished house, on a particular date, worth $885,000. They did not expect to pay rent while waiting. Calculate their losses. (See the "Result" at the end of this section.)

5. **RELIANCE** The reliance interest puts the injured party in the position he would have been in had the parties never entered into a contract. It focuses on the time and money that the injured party spent performing his part of the agreement. If there was no valid contract, a court might still award reliance damages under a theory of promissory estoppel. (pp. 412–413)

EXAM Strategy

Question: Bingo is emerging as a rock star. His last five concerts have all sold out. Lucia signs a deal with Bingo to perform two concerts in one evening in Big City for a fee of $50,000 for both shows. Lucia then rents the Auditorium for that evening, guaranteeing to pay $50,000. Bingo promptly breaks the deal before any tickets are sold. Lucia sues, pointing out that the Auditorium seats 3,000 and she anticipated selling all tickets for an average of $40 each, for a total gross of $120,000. How much will Lucia recover, if anything?

Strategy: The parties created a valid contract, and Lucia relied on it. She claims two losses: the payment to rent the hall and her lost profits. A court may award reliance damages if the plaintiff can quantify them, provided the damages are not speculative. Can Lucia quantify either of those losses? Both of them? Were they speculative? (See the "Result" at the end of this section.)

6. **RESTITUTION** The restitution interest returns to the injured party a benefit that she has conferred on the other party which would be unjust to leave with that person. Restitution can be awarded in the case of a contract created, for example, by fraud, or in a case of quasi-contract, where the parties never created a binding agreement. (pp. 413–416)

7. **SPECIFIC PERFORMANCE** Specific performance, ordered only in cases of land or a unique asset, requires both parties to perform the contract. (pp. 416–417)

8. **INJUNCTION** An injunction is a court order that requires someone to do something or refrain from doing something. (pp. 417–418)

9. **REFORMATION** Reformation is the process by which a court will—occasionally—rewrite a contract to ensure that it accurately reflects the parties' agreement and/or to maintain the contract's viability. (p. 419)

10. **MITIGATION** The duty to mitigate means that a party injured by a breach of contract may not recover for damages that he could have avoided with reasonable efforts. (p. 419)

EXAM Strategy

Question: Ambrose hires Bierce for $25,000 to supervise the production of Ambrose's crop, but then breaks the contract by firing Bierce at the beginning of the season. A nearby grower offers Bierce $23,000 for the same growing season, but Bierce refuses to take such a pay cut. He stays home and sues Ambrose. How much money, if any, will Bierce recover from Ambrose, and why?

Strategy: Ambrose has certainly breached the contract. The injured party normally receives the difference between his expectation interest and what he actually received. Bierce expected $25,000 and received nothing. However, Bierce made no effort to minimize his losses. How much would Bierce have lost had he mitigated? (See the "Result" at the end of this section.)

11. **NOMINAL DAMAGES** Nominal damages are a token sum, such as one dollar, given to an injured plaintiff who cannot prove damages. (p. 419)

12. **LIQUIDATED DAMAGES** A liquidated damages clause will be enforced if and only if, at the time of creating the contract, it was very difficult to estimate actual damages and the liquidated amount is reasonable. (pp. 419–420)

4. Result: The Beards' direct damages represent the difference between the market value of the house and the contract price. They expected a house worth $100,000 more than their contract price, and they are entitled to that sum. They also suffered consequential damages. The Builder knew they needed the house as of the contract date, and he could foresee that his breach would force them to pay rent. He is liable for a total of $132,000.
5. Result: Lucia can easily demonstrate that Bingo's breach cost her $50,000—the cost of the hall. However, it is uncertain how many tickets she would have sold. Unless Lucia has a strong track record selling tickets to concerts featuring Bingo, a court is likely to conclude that her anticipated profits were speculative. She will probably receive nothing for that claim.
10. Result: Even if he had mitigated, Bierce would have lost $2,000. He is entitled to that sum. However, he cannot recover the remaining $23,000. After Ambrose breached, Bierce had identical work available to him, but he failed to take it. His failure to mitigate is fatal.

Multiple-Choice Questions

1. *CPA QUESTION* Master Mfg., Inc. contracted with Accur Computer Repair Corp. to maintain Master's computer system. Master's manufacturing process depends on its computer system operating properly at all times. A liquidated damages clause in the contract provided that Accur would pay $1,000 to Master for each day that Accur was

late responding to a service request. On January 12, Accur was notified that Master's computer system had failed. Accur did not respond to Master's service request until January 15. If Master sues Accur under the liquidated damage provision of the contract, Master will:

(a) Win, unless the liquidated damages provision is determined to be a penalty
(b) Win, because under all circumstances liquidated damage provisions are enforceable
(c) Lose, because Accur's breach was not material
(d) Lose, because liquidated damage provisions violate public policy

2. **CPA QUESTION** Kaye contracted to sell Hodges a building for $310,000. The contract required Hodges to pay the entire amount at closing. Kaye refused to close the sale of the building. Hodges sued Kaye. To what relief is Hodges entitled?

(a) Punitive damages and direct damages
(b) Specific performance and direct damages
(c) Consequential damages or punitive damages
(d) Direct damages or specific performance

3. A manufacturer delivers a new tractor to Farmer Ted on the first day of the harvest season. But, the tractor will not start. It takes two weeks for the right parts to be delivered and installed. The repair bill comes to $1,000. During the two weeks, some acres of Farmer Ted's crops die. He argues in court that his lost profit on those acres is $60,000. If a jury awards $1,000 for tractor repairs, it will be in the form of ____________ damages. If it awards $60,000 for the lost crops, it will be in the form of ____________ damages.

(a) direct; direct
(b) direct; consequential
(c) consequential; direct
(d) consequential; consequential
(e) direct; incidental

4. Julie signs a contract to buy Nick's 2002 Mustang GT for $5,000. Later, Nick changes his mind and refuses to sell his car. Julie soon buys a similar 2002 Mustang GT for $5,500. She then sues Nick and wins $500. The $500 represents her ____________.

(a) expectation interest
(b) reliance interest
(c) restitution interest
(d) None of the above

5. Under the Uniform Commercial Code, a seller ____________ generally entitled to recover consequential damages, and a buyer ____________ generally entitled to recover consequential damages.

(a) is; is
(b) is; is not
(c) is not; is
(d) is not; is not

Essay Questions

1. Lewis signed a contract for the rights to all timber located on Nine-Mile Mine. He agreed to pay $70 per thousand board feet ($70/mbf). As he began work, Nine-Mile became convinced that Lewis lacked sufficient equipment to do the job well and forbade him to enter the land. Lewis sued. Nine-Mile moved for summary judgment. The mine offered proof that the market value of the timber was exactly $70/mbf, and Lewis had no evidence to contradict Nine-Mile. The evidence about market value proved decisive. Why? Please rule on the summary judgment motion.

2. Twin Creeks Entertainment signed a deal with U.S. JVC Corp. in which JVC would buy 60,000 feature-film videocassettes from Twin Creeks over a three-year period. JVC intended to distribute the cassettes nationwide. Relying on its deal with JVC, Twin Creeks signed an agreement with Paramount Pictures, agreeing to purchase a minimum of $600,000 worth of Paramount cassettes over a two-year period. JVC breached its deal with Twin Creeks and refused to accept the cassettes it had agreed upon. Twin Creeks sued and claimed, among other damages, the money it owed to Paramount. JVC moved to dismiss the claim based on the Paramount contract, on the ground that Twin Creeks, the seller of goods, was not entitled to such damages. What kind of damages is Twin Creeks seeking? Please rule on the motion to dismiss.

3. Racicky was in the process of buying 320 acres of ranchland. While that sale was being negotiated, Racicky signed a contract to sell the land to Simon. Simon paid $144,000, the full price of the land. But Racicky went bankrupt before he could complete the *purchase* of the land, let alone its sale. Which of these remedies should Simon seek: expectation, restitution, specific performance, or reformation?

4. Parkinson was injured in an auto accident by a driver who had no insurance. Parkinson filed a claim with her insurer, Liberty Mutual, for $2,000 under her "uninsured motorist" coverage. Liberty Mutual told her that if she sought that money, her premiums would go "sky high," so Parkinson dropped the claim. Later, after she had spoken with an attorney, Parkinson sued. What additional claim was her attorney likely to make?

5. **YOU BE THE JUDGE WRITING PROBLEM** John and Susan Verba sold a Vermont lakeshore lot to Shane and Deborah Rancourt for $115,000. The Rancourts intended to build a house on the property, but after preparing the land for construction, they learned that a wetland protection law prevented building near the lake. They sued, seeking rescission of the contract. The trial court concluded that the parties had reached their agreement under a "mutual, but innocent, misunderstanding." The trial judge gave the Verbas a choice: they could rescind the contract and refund the purchase price, or they could give the Rancourts $55,000, the difference between the sales price and the actual market value of the land. The Rancourts appealed. Were the Rancourts entitled to rescission of the contract? **Argument for the Rancourts:** When the parties have made a mutual mistake about an important factual issue, either party is entitled to rescind the contract. The land is of no use to us and we want our money back. **Argument for the Verbas:** Both sides were acting in good faith and both sides made an honest mistake. We are willing to acknowledge that the land is worth somewhat less than we all thought, and we are willing to refund $55,000. The buyers shouldn't complain—they are getting the property at about half the original price, and the error was as much their fault as ours.

Discussion Questions

1. **ETHICS** The National Football League owns the copyright to the broadcasts of its games. It licenses local television stations to telecast certain games and maintains a "blackout rule," which prohibits stations from broadcasting home games that are not sold out 72 hours before the game starts. Certain home games of the Cleveland Browns team were not sold out, and the NFL blocked local broadcast. But several bars in the Cleveland area were able to pick up the game's signal by using special antennas. The NFL wanted the bars to stop showing the games. What did it do? Was it unethical of the bars to broadcast the games that they were able to pick up? Apart from the NFL's legal rights, do you think it had the moral right to stop the bars from broadcasting the games?

2. Consequential damages can be many times higher than direct damages. Consider the "Farmer Ted" scenario raised in multiple-choice question 3, which is based on a real case.[8] Is it fair for consequential damages to be 60 times higher than direct damages? The Supreme Court is skeptical that *punitive* damages should be more than 9 times compensatory damages in a tort case. Should a similar "soft limit" apply to consequential damages in contract cases?

3. Is reformation ever a reasonable remedy? Should courts be in the business of rewriting contracts, or should they stick to determining whether agreements are enforceable?

4. If someone breaks a contract, the other party can generally sue and win some form of damages. But for centuries, the law has considered land to be unique. And so, a lawsuit that involves a broken agreement for a sale of land will usually result in an order of specific performance. Is this ancient rule still reasonable? If someone backs out of an agreement to sell an acre of land, should he be ordered to turn over the land itself? Why not just require him to pay an appropriate number of dollars in damages?

5. Is it reasonable to require the mitigation of damages? If a person is wronged because the other side breached a contract, should she have any obligations at all? For example, suppose that a tenant breaches a lease by leaving early. Should the landlord have an obligation to try to find another tenant before the end of the lease?

Practical Contracts

Two true stories:

One

Holly (on the phone to her client Judd): Harry's lawyer just emailed me a letter that Harry says he got from you last year. I'm reading from the letter now: "Each year that you meet your revenue goals, you'll get a 1 percent equity interest." Is it possible you sent that letter?

Judd: I don't remember the exact wording, but probably something like that.

Holly: You told me, absolutely, positively, you had never promised Harry any stock. That he was making the whole thing up.

Judd: He was threatening to leave unless I gave him some equity, so I said what he wanted to hear. But that letter didn't *mean* anything. This is a family business, and no one but my children will ever get stock.

I don't know what the *contract* says—that's just the legal stuff.

Two

Grace (on the phone with her lawyer): Providential has raised its price to $12 a pound. I can't afford to pay that! We had a deal that the price would never go higher than 10 bucks. I've talked to Buddy over there, but he is refusing to back down. We need to do something!

Lawyer: Let me look at the contract.

Grace (her voice rising): I don't know what the *contract* says—that's just the legal stuff. Our *business* deal was no more than $10 a pound!

You have been studying the *theory* of contract law. This chapter is different—its purpose is to demonstrate how that theory operates in *practice*. We will look at the structure and content of a standard agreement and answer questions such as: do you need a written agreement? What do all these legal terms mean? Are any important provisions missing? By the end of the chapter, you will have a road map for understanding a written contract.[1] (Note that we do not repeat here what you have learned in prior chapters about the *substantive* law of contracts.) This chapter has another goal, too: we will look at the relationship between lawyers and their clients and their different roles in creating a contract.

Businesspeople, not surprisingly, tend to focus more on business than on the technicalities of contract law. However, *ignoring* the role of a written agreement can lead to serious trouble. Both of the clients in the opening scenario ended up being bound by a contract they did not want.

To illustrate our discussion of specific contract provisions, we will use a real contract between an actor and a producer to make a movie. For reasons of confidentiality, however, we have changed the names.

Before we begin our discussion of written contracts, let's ask: **do you need a written agreement at all?** Some years ago, this author was with a group of lawyers, all of whom had done a major home renovation and *none of whom* had signed a contract with their builder. All of the projects had turned out well. The lawyers had not prepared a written contract because they trusted their builders. They all had good recommendations from prior clients. Also, a building project by its very nature requires regular negotiations because it is impossible to predict all the potential changes: How much would it cost to move that door? How much do we save if we use Caesarstone instead of granite?

These cases worked out well without a written contract, but there are times when you should *definitely* sign an agreement:

1. The Statute of Frauds requires it.
2. The deal is crucial to your life or the life of your business.
3. The terms are complex.
4. You do not have an ongoing relationship of trust with the other party.

Once you decide you need a written contract, then what?

The Lawyer

The American Bar Association commissioned a study to find out what people think of lawyers. Survey participants responded with these words: greedy, corrupt, manipulative, snakes, and sharks.[2] Businesspeople refer to their lawyers with terms like *business prevention department*. They are reluctant to ask an attorney to draft a contract for fear of the time and expense that lawyers can inject into the process. And they worry that the lawyers will interfere in the business deal itself, at best causing unnecessary hindrance, at worst killing the deal. Part of the problem is that lawyers and clients have different views of the future.

Lawyers and Clients

Businesspeople are optimists—they believe that they have negotiated a great deal and everything is going to go well—sales will boom, the company will prosper. **Lawyers have a different perspective—their primary goal is to protect their clients by avoiding litigation, now and in the future.** For this reason, lawyers are trained to be pessimists—they try to foresee and protect against everything that can possibly go wrong. Businesspeople sometimes view this lawyering as a waste of time and a potential deal-killer. What if the two parties cannot agree about what to do in the event of a very unlikely circumstance? The deal might just collapse.

To take one example of this lawyerly perspective, a couple happily married nigh on 40 years went to see a lawyer about changes in their will. The husband wanted to transfer some assets to his wife. The lawyer advised against it—after all, the couple might divorce. They became angry and indignant because *they would never divorce.* And they may very well be right. However, just that week, the lawyer had seen another couple who did divorce after 41 years of marriage. He thought it better to be on the safe side and consider the possibility that such events might happen.

Lawyers also prefer to negotiate touchy subjects at the beginning of a relationship, when everyone is on friendly terms and eager to make a deal, rather than waiting until trouble strikes. In the long run, nothing harms a relationship more than unpleasant surprises. For example, the Artist in the movie contract we will refer to throughout this chapter did not know in advance what conditions on the set would be, how grueling the shooting schedule, or how many friends and family would visit him. So his lawyer negotiated a deal in which the Producer agreed to provide a driver, a "first-class star trailer (which shall be a double pop-out)," a luxury hotel suite, and an adjacent room for visitors. In the end, because the role called for the Artist to live in the wilderness, he ultimately slept in a tent on the set to experience his part more fully, so he did not need the double pop-out trailer or the luxury suite. He also dispensed with the driver. But, under different circumstances, he might have wanted those luxuries, and his lawyer's goal was to protect his interests. It is a lot easier to forgo an expense than to add one to a movie budget.

Another advantage of using lawyers to conduct these negotiations is that they can serve as the bad guys. Instead of the client raising tough issues, the lawyers do. Many a client has said, "but my lawyer insists ..." If the lawyer takes the blame, the client is able to maintain a better relationship with the other party. And hiring a lawyer communicates to the other parties that you are taking the deal seriously, and they will not be able to pull a fast one on you.

Of course, this lawyerly protection comes at a cost—legal fees, time spent bargaining, the hours used to read complex provisions, and the potential for good will to erode during negotiations.

Do you need a lawyer? The answer largely depends on the complexity of the deal. Most people do not hire a lawyer to review an apartment lease—the language is standard, and the prospective tenant has little power to change the terms of the deal. On the other hand, you should not undertake a significant acquisition or purchase agreement on your own.

Hiring a Lawyer

If you do hire a lawyer, be aware of certain warning signs. Although the lawyer's goal is to protect you, a good attorney should be a dealmaker, not a deal-breaker. She should help you do what you want and, therefore, should never (or, at least, hardly ever) say, "You cannot do this." Instead, she should say, "Here are the risks to this approach" or "Here is another way to achieve your goal."

Moreover, your lawyer's goal should not be to annihilate the other side. In the end, the contract will be more beneficial to everyone if the parties' relationship is harmonious. Trying

to exact every last ounce of flesh, using whatever power you have to an abusive extreme, is not a sound long-term strategy. In the end, the best deals are those in which all the parties' incentives are aligned. Success for one means success for all—or at least, success for one party does not *prohibit* a positive outcome for the other side. If either side in the movie contract behaved unreasonably, word would quickly spread in the insular Hollywood world, damaging the troublemaker's ability to make other deals.

Now either you have a lawyer or you do not. The next step is to think about developing the contract.

The Contract

In this section, we discuss how a contract is prepared and what provisions it should include.

Who Drafts It?

Once businesspeople have agreed to the terms of the deal, it is time to prepare a draft of the contract. Generally, both sides would prefer to *control the pen* (that is, to prepare the first draft of the contract) because the drafter has the right to choose a structure and wording that best represents his interests. Typically, the party with the most bargaining power prepares the drafts. In the movie contract, Producer's lawyer prepared the first draft. The contract then went to Artist's lawyer, who added the provisions that mattered to the client.

How to Read a Contract

Reading a contract is not like cracking open a novel. Instead, it should be a focused, multi-step process:

- **Pre-reading.** Before you begin reading the first draft of a contract, spend some time thinking about the provisions that are important to you. If you skip this step, you may find that as you read, your attention is so focused on the specific language of the contract that you lose sight of the larger picture.
- **The first read.** Read through once, just to get the basic idea of the contract—its structure and major provisions.
- **What-ifs.** This is the time to think about various outcomes, good and bad. Under the terms of the contract, what happens if all goes according to your plan? Also consider worst-case scenarios. In both situations, does the contract produce the result that you want? What happens if sales are higher than you expect, or if the product causes unexpected harm?
- **The second read.** Now read the contract to make sure that it handles the what-ifs in a manner that is satisfactory to you. Think about the relationship between various provisions—does it make sense?

Following this approach will help you avoid mistakes.

Mistakes

This author once worked with a lawyer who made a mistake in a contract. "No problem," he said. "I can win that one in court." Not a helpful attitude, given that one purpose of a contract is to *avoid* litigation. In this section, we look at the most common types of mistakes and how to avoid them.

Vagueness

Businesspeople sometimes *deliberately* choose vagueness. They do not want the terms of the contract to be clear. It may be that they are not sure what they can get from the other side, or in some cases, even what they really want. So they try to form a contract that leaves their options open. However, as the following case illustrates: **Vagueness is your enemy.**

Quake Construction v. American Airlines

141 Ill. 2d 281, 565 N.E.2d 990, 1990 Ill. LEXIS 151
Supreme Court of Illinois, 1990

Facts: Jones Brothers Construction was the general contractor on a job to expand American Airlines' facilities at O'Hare International Airport. Jones Brothers invited Quake Construction to bid on the employee facilities and automotive maintenance shop ("the project"). After Quake bid, Jones Brothers orally informed Quake that it was awarding Quake the project and would forward a contract soon. Jones Brothers wanted the license numbers of the subcontractors that Quake would be using, but Quake could not furnish those numbers until it had assured its subcontractors that they had the job. Quake did not want to give that assurance until *it* was certain of its own work. So Jones Brothers sent a letter of intent that stated, among other things:

> We have elected to award the contract for the subject project to your firm as we discussed on April 15. A contract agreement outlining the detailed terms and conditions is being prepared and will be available for your signature shortly.
>
> Your scope of work includes the complete installation of expanded lunchroom, restaurant, and locker facilities for American Airlines employees, as well as an expansion of American Airlines' existing Automotive Maintenance Shop. A sixty (60) calendar day period shall be allowed for the construction of the locker room, lunchroom, and restaurant area beginning the week of April 22. The entire project shall be completed by August 15.
>
> Subject to negotiated modifications for exterior hollow metal doors and interior ceramic floor tile material as discussed, this notice of award authorizes the work set forth in the [attached] documents at a lump sum price of $1,060,568.00.
> Jones Brothers Construction Corporation reserves the right to cancel this letter of intent if the parties cannot agree on a fully executed subcontract agreement.

The parties never signed a more detailed written contract, and ultimately Jones Brothers hired another company. Quake sued, seeking to recover the money it spent in preparation and its loss of anticipated profit.

Issue: ***Was the letter of intent a valid contract?***

Excerpts from Justice Calvo's Decision: [A]lthough letters of intent may be enforceable, such letters are not necessarily enforceable unless the parties intend them to be.

In determining whether the parties intended to reduce their agreement to writing, the following factors may be considered: whether the type of agreement involved is one usually put into writing, whether the agreement contains many or few details, whether the agreement involves a large or small amount of money, whether the agreement requires a formal writing for the full expression of the covenants, and whether the negotiations indicated that a formal written document was contemplated at the completion of the negotiations.

[We conclude that] the letter was ambiguous. The letter of intent included detailed terms of the parties' agreement. The letter stated that Jones awarded the contract for the project to Quake. The letter stated further, "this notice of award authorizes the work." Moreover the letter indicated that the work was to commence approximately 4 to 11 days after the letter was written. This short period of time reveals the parties intent to be bound by the letter so that work could begin on schedule. We also agree that the cancellation clause exhibited the parties' intent to be bound by the letter because no need would exist to provide for the cancellation of the letter unless the letter had some binding effect. The cancellation clause also implies the parties' intention to be bound by the letter, at least until they entered into the formal contract. These factors evinced the parties' intent to be bound by the letter.

On the other hand, the letter referred several times to the execution of a formal contract by the parties, thus indicating the parties' intent not to be bound by the letter. The cancellation clause could be interpreted to mean that the parties did not intend to be bound until they entered into a formal agreement.

Thus, we hold that the letter of intent in the case at bar is ambiguous regarding the parties' intent to be bound by it. Therefore, on remand, the circuit court shall allow the parties to present parol evidence regarding their intent. The trier of fact must then determine, based on the parties' intent, whether the letter of intent is a binding contract.

So after years of litigation, Jones Brothers and Quake had to go *back* to court to try to prove whether they intended the letter to be binding. The problem is that both sides permitted vagueness to enter their negotiations. Sometimes parties adopt vagueness as a *strategy*. One party may be trying to get a commitment from the other side without obligating itself. A party may feel *almost* ready to commit and yet still have reservations. It wants the *other* party to make a commitment so that planning can go forward. This is understandable but dangerous.

If you were negotiating for Jones Brothers and wanted to clarify negotiations without committing your company, how could you do it? State in the letter that it is *not a contract*, and that *neither side is bound by it*. State that it is a memorandum summarizing negotiations thus far, but that neither party will be bound until a full written contract is signed.

But what if Quake cannot get a commitment from its subcontractors until they are certain that it has the job? Quake should take the initiative and present Jones Brothers with its own letter of intent, stating that the parties *do* have a binding agreement for $1 million worth of work. Insist that Jones Brothers sign it. Jones Brothers would then be forced to decide whether it is willing to make a binding commitment. If Jones Brothers is not willing to commit, let it openly say so. At least both parties will know where they stand.

The movie contract provides another example of deliberate vagueness. In these contracts, nudity is always a contentious issue. Producers believe that nudity sells movie tickets; actors are afraid that it may tarnish their reputation. In the first draft of our contract, Artist's lawyer specified:

> Artist may not be photographed and shall not be required to render any services nude below the waist or in simulated sex scenes without Artist's prior written consent.

(This clause also applied to any double depicting Artist.) However, the script called for a scene in which Artist was swimming nude and the director wanted the option of showing him below the waist from the back. Ultimately, the nudity clause read as follows:

> Producer has informed Artist that Artist's role in the Picture might require Artist to appear and be photographed (a) nude, which nudity may include only above-the-waist nudity and rear below-the-waist nudity, but shall exclude frontal below-the-waist nudity; and (b) in simulated sex scenes. Artist acknowledges and agrees that Artist has accepted such employment in the Picture with full knowledge of Artist's required participation in nude scenes and/or in simulated sex scenes and Artist's execution of the Agreement constitutes written consent by Artist to appear in the nude scenes and simulated sex scenes and to perform therein as reasonably required by Producer. A copy of the scenes from the screenplay requiring Artist's nudity and/or simulated sex are attached hereto. Artist shall have a right of meaningful prior consultation with the director of the Picture regarding the manner of photography of any scenes in which Artist appears nude or engaged in simulated sex acts.
>
> Artist may wear pants or other covering that does not interfere with the shooting of the nude scenes or simulated sex scenes. Artist's buttocks and/or genitalia shall not be shown, depicted, or otherwise visible without Artist's prior written consent. Artist shall have the absolute right to change his mind and not perform in any nude scene or simulated sex scene, notwithstanding that Artist had prior thereto agreed to perform in such scene.

What does this provision mean? Has Artist agreed to perform in nude scenes or not? He has acknowledged that the script calls for nude scenes and he has agreed, in principle, that he will appear in them. However, he did not want to agree categorically, before shooting had even started and he had experience working with this director. Actor has a number of options—he can refuse to shoot nude scenes altogether, or he can shoot them and then, after viewing them, decide not to allow them in the movie. With a clause such as this one, the director shot different versions of the scene—some with nudity and some without—so that if Artist rejected the nude scene, the director still had options.

The true test of whether a vague clause belongs in a contract is this: would you sign the contract if you knew that the other side's interpretation would prevail in litigation? In this example, each side was staking out its position, and deferring a final negotiation until there was an actual disagreement about a nude scene. If you would be happy enough with the other side's position in the end, the vague clause simply defers a fight that you can afford to lose. But if the point is really important to you, it may be wiser to resolve the issue before you sign the contract by writing the clause in a way that clearly reflects your desired outcome.

EXAM Strategy

Question: The nudity provision in the movie contract is vague. Rewrite it so that it accurately expresses the agreement between the parties.

Strategy: This is easy! Just say what the parties intended the deal to be.

Result: "The script for the Picture includes scenes showing Artist (a) with frontal nudity from the waist up and with rear below-the-waist nudity (but no frontal below-the-waist nudity); and (b) in simulated sex scenes. However, no scenes shall be shot in which Artist's buttocks and/or genitalia are shown, depicted, or otherwise visible without Artist's prior written consent. Artist shall have the absolute right not to perform in any nude scene or simulated sex scene. If shot, no nude or sex scenes may appear in the Picture without Artist's prior written consent."

Ambiguity

Vagueness occurs when the parties do not want the contract to be clear. Ambiguity is different—it means that the provision is *accidentally* unclear. It occurs in contracts when the parties think only about what *they* want a provision to mean, without considering the literal meaning or the other side's perspective. When reading a contract, try to imagine all the different ways a clause can be interpreted. Because you think it means one thing does not mean that the other side will share your view. For example, suppose that an employment contract says, "Employee agrees not to work for a competitor for a period of three years from employment." Does that mean three years from the date of hiring or the date of termination? Unclear, so who knows?

To take another example, the dictionary defines vandalism as *deliberately mischievous or malicious destruction or damage of property*. Arson is *the malicious burning of a house or property*. Seems clear enough—but does arson count as vandalism? In the following case, no one thought about this question until a house burned down.

Cipriano v. Patrons Mutual Insurance Company of Connecticut

2005 Conn. Super. LEXIS 3577
Superior Court of Connecticut, 2005

Facts: Juacikino Cipriano purchased an insurance policy on his house from Patrons Mutual Insurance Company. The policy stated that the company would not pay for any damage to the residence caused by vandalism or burglary if the residence was vacant for more than 30 days in a row just before the loss. Furthermore, the company would not pay for damage to personal property caused by fire, lightning, or vandalism.

After Cipriano's house had been vacant for more than 30 days, an arsonist burned it down. Patrons denied his claim on the grounds that arson is vandalism, which his policy did not cover. Cipriano filed suit against Patrons. The insurance company filed a motion for summary judgment.

Issues: ***Does arson count as vandalism? Must Patrons pay Cipriano's claim?***

Excerpts from Judge Devine's Decision: [T]here are no genuine issues of fact that the fire was the result of arson and that the dwelling house was vacant for more than 30 days prior to the fire. The defendant contends that the term "vandalism" includes the act of arson. The plaintiff argues that, in reviewing the insurance policy as a whole, an insured may not be able to discern what "vandalism" means, as that term is used in the separate sections of the insurance policy.

Under our law, the terms of an insurance policy are to be construed according to the general rules of contract construction. It is a basic principle of insurance law that policy language will be construed as laymen would understand it and not according to the interpretation of sophisticated underwriters, and that ambiguities in contract documents are resolved against the party responsible for its drafting; the policyholder's expectations should be protected, as long as they are objectively reasonable from the layman's point of view. However, a court will not torture words to import ambiguity where the ordinary meaning leaves no room for ambiguity, and words do not become ambiguous simply because lawyers or laymen contend for different meanings.

In the present case, the defendant has drafted an insurance policy where "vandalism" and "fire" are undefined terms. Reading the insurance policy as whole, the terms "vandalism" and "fire" are found to be included as separate perils covered under the personal property coverage. In the exclusionary provision for the coverage of the residence, "vandalism" is listed as an excluded loss. "Fire" is not mentioned.

Because the terms "vandalism" and "fire" are undefined, and are listed as two distinct perils, it is ambiguous as to which peril, "vandalism" or "fire," covers arson. Therefore, "vandalism" is susceptible of two reasonable interpretations. As such, the insurance policy must be construed against the party responsible for its drafting.

The defendant's motion for summary judgment is hereby denied.

This case illustrates an important rule of contract drafting: **Any ambiguity is interpreted against the drafter of the contract**. (The *Cipriano* policy is a good example of how incomprehensible insurance policies can be. This complexity tends to erode judicial sympathy for the perpetrator.) Although both sides need to be careful in reading a contract—litigation benefits no one—the side that prepares the documents bears a special burden. This rule is meant to

1. Protect laypeople from the dangers of form contracts that they have little power to change. Even if the insured in this case had read the contract carefully, it is unlikely that an insurance company would change its form contract for him.
2. Protect people who are unlikely to be represented by a lawyer. Most people do not hire a lawyer to read insurance contracts (or any form contract). And without an experienced lawyer, it is highly unlikely that an insured would ask, "So is arson included in the vandalism clause?"
3. Encourage those who prepare contracts to do so carefully.

Typos

The bane of a lawyer's existence! This author worked on a securities offering in which the sales document almost went out with part of the company's name spelled *Pertoleum* instead of *Petroleum*. (And legend has it that a United Airlines securities offering once featured "Untied Airlines.") Although clients tend not to have a sense of humor about such errors, at least there would be no adverse legal result. That is not always the case with typos.

A group of condominium buyers ended up in litigation over a tiny typo in their purchase agreements: an "8" instead of a "9." What difference could that possibly

make? A lot, it turns out. Extell Development Corporation built the Rushmore, a luxury condominium complex in Manhattan. When Extell began selling the units, it agreed to refund any buyer's down payment if the first closing did not occur by September 1, 2009. (The goal was to protect buyers who might not have any place to live if the building was not finished on time.) In the end, the first closing occurred in February 2009. No problem, right? No problem except that, by accident, the purchase contract said September 1, *2008* rather than *2009*. In the meantime, the Manhattan real estate market tumbled, and many purchasers of Rushmore condominiums wanted to back out. After litigation all the way to the Federal Court of Appeals, Extell was required to refund the deposits.

What is the law of typos? First of all, the law has a fancier word than *typo*—it is **scrivener's error.** A scrivener is a clerk who copies documents. **In the case of a scrivener's error, a court will reform a contract if there is clear and convincing evidence that the mistake does not reflect the true intent of the parties.** In the Rushmore case, an arbitrator refused to reform the contract, ruling that there was no clear and convincing evidence that the parties intended something other than the contract term as written.

In the following case, even more money was at stake. What would you do if you were the judge?

Daisy Beatty

Because of a tiny typo, purchasers of condominiums in this building were able to back out of their deals.

Scrivener's error A typo.

You be the Judge

HERITAGE TECHNOLOGIES v. PHIBRO-TECH

2008 U.S. Dist. LEXIS 329
United States District Court for the Southern District of Indiana, 2008

Facts: Heritage wanted to buy a substance called tribasic copper chloride (TBCC) from Phibro but, because of uncertainty in the industry, the two companies could not agree on a price for future years. It turned out, though, that the price of TBCC tended to rise and fall with that of copper sulfate, so Heritage proposed that the amount it paid for TBCC would increase an additional \$15 per ton for each \$0.01 increase in the cost of copper sulfate over \$0.38 per pound.

Two top officers of Heritage and Phibro met in the Delta Crown Room at LaGuardia Airport to negotiate the purchase contract. At the end of their meeting, the Phibro officer hand wrote a document stating the terms of their deal and agreeing to the Heritage pricing proposal.

Negotiations between the two companies continued, leading to some changes and additions to their Crown Room agreement. In a draft prepared by Phibro, the \$.01 number was changed to \$0.1—that is, from 1 cent to 10 cents. In other words, in the original draft, Heritage agreed to a first increase if copper sulfate went above 39 cents per pound, an additional price rise at 40 cents, and so on. But in the Phibro draft, Heritage's first increase would not occur until the price of copper sulfate went to 48 cents a pound, with a second rise at 58 cents. In short, the Phibro draft was much more favorable to Heritage than the Heritage proposal had been.

At some point during the negotiations, the lawyer for Heritage asked his client if the \$0.1 figure was accurate. The Heritage officer said that the increase in this amount was meant to be payment for other provisions that favored Phibro. There is no evidence that this statement was true. The contract went through eight drafts and numerous changes, but after the Crown Room meeting, the two sides never again discussed the \$0.1 figure.

After the execution of the agreement, Heritage discovered a different mistake. When Heritage brought the error to Phibro's attention, Phibro agreed to make the change even though it was to Phibro's disadvantage to do so.

All was peaceful until the price of copper sulfate went to $0.478 per pound. Phibro believed that because the price was above $0.38 per pound, it was entitled to an increased payment. Heritage responded that the increase would not occur until the price went above $0.48. Phibro then looked at the agreement and noticed the $0.1 term for the first time. Phibro contacted Heritage to say that the $0.1 term was a typo and not what the two parties had originally agreed in the Delta Crown Room. Heritage refused to amend the agreement and Phibro filed suit.

You Be the Judge: ***Should the court enforce the contract as written or as the parties agreed in their Crown Room meeting? Which number is correct—$0.10 or $0.01?***

Argument for Phibro: In the Delta Crown Room, the two negotiators agreed to a $15 per ton increase in the price of TBCC for each 1-cent increase in copper sulfate price. Then by mistake, the contract said 10 cents. The two parties never negotiated the 10-cent provision, and there is no evidence that they had agreed to it. The court should revise this contract to be consistent with the parties' agreement, which was 1 cent.

Also, the 10-cent figure makes no economic sense. The point of the provision was that the price of TBCC would go up at the same rate as copper sulfate, and 1 cent for each ton is a much more accurate reflection of the relationship between these two commodities than 10 cents per ton.

Argument for Heritage: The Delta Crown Room agreement was nothing more than a draft. The contract went through eight rounds of changes. The change in price was in return for other provisions that benefited Phibro.

The parties conducted negotiations by sending drafts back and forth rather than by talking on the phone. Both parties were represented by a team of lawyers, the agreement went through eight drafts, and this pricing term was never altered despite several other changes and additions. There is no clear and convincing evidence that both parties were mistaken about what the document actually said. Ultimately, the parties agreed to 10 cents, and that is what the court should enforce.

Ethics When Heritage found a different mistake in the contract, Phibro agreed to correct it, even though the correction was unfavorable to Phibro. But when a mistake occurred in Heritage's favor, it refused to honor the intended terms of the agreement. Is Heritage behaving ethically? Does Heritage have an obligation to treat Phibro as well as Phibro behaved towards Heritage? Is it right to take advantage of other people's mistakes? What Life Principle would you apply in this situation?

Preventing Mistakes

Here are ways to prevent mistakes in a contract.

> As a general rule, your lawyer is less likely to make mistakes than you are.

Let your lawyer draft the contract. As a general rule, your lawyer is less likely to make mistakes than you are. Of all the players in the *Heritage* case, only one person noticed the error—Heritage's lawyer.

Resist overlawyering. Yes, your lawyer should draft the contract, but that does not mean she should have free rein, no matter what. This author once worked with a real estate attorney who had developed his own standard mortgage contract, of which he was immensely proud. Whenever he saw a provision in another contract that was missing from his own, he immediately added it. His standard form contract soon topped 100 pages. That contract was painful to read and did no service to his clients.

Read the important terms carefully. Before signing a contract, check *carefully* and *thoughtfully* the names of the parties, the dates, dollar amounts, and interest rates. If all these

elements are correct, you are unlikely to go too far wrong. And, of course, having read this chapter, *you* will never mistake $0.10 for $0.01.

Finally, when your lawyer presents you with a written contract, you should follow these rules:

1. Complain if your lawyer gives you a contract with provisions that are irrelevant to your situation.
2. If you do not know what a provision means, ask. If you still do not know (or if your lawyer does not know), ask her to take it out. Lawyers rarely draft from scratch; they tend to use other contracts as templates. Just because a provision was in another agreement does not mean that it is appropriate for you.
3. Remember that a contract is also a reference document. During the course of your relationship with the other party, you may need to refer to the contract regularly. That will be difficult if you do not understand portions of it, or if the contract is so disorganized you cannot find a provision when you need it.

Which brings us to our next topic—the structure of a contract. Once you understand the standard outline of a contract, it will be much easier for you to find your way through the thicket of provisions.

The Structure of a Contract

Traditional contracts tended to use archaic words—*whereas* and *heretofore* were common. Modern contracts are more straightforward, without as many linguistic flourishes. Our movie contract takes the modern approach.

Title

Contracts have a title, which generally is in capital letters, underlined, and centered at the top of the page. The title should be as descriptive as possible—a generic title such as AGREEMENT does not distinguish one contract from another. Much better to entitle it EMPLOYMENT AGREEMENT or CONFIDENTIALITY AGREEMENT. The title of our movie contract is MEMORANDUM OF AGREEMENT (not a particularly useful name), but in the upper right-hand corner, there is space for the date of the contract and the subject. Let's say the subject is Dawn Rising/Clay Parker. It would have been even better if the title of the movie had been: Agreement between Clay Parker and Winterfield Productions for Dawn Rising.

Introductory Paragraph

The introductory paragraph includes the date, the names of the parties, and the nature of the contract. The names of the parties and the movie are defined terms, e.g., Clay Parker ("Artist"). By defining the names, the actual names do not have to be repeated throughout the agreement. In this way, a standard form contract can be used in different deals without worrying about whether the names of the parties are correct throughout the document.

The introductory paragraph should also include specific language indicating that the parties entered into an agreement. In our contract, the opening paragraph states:

> This shall confirm the agreement ("Agreement") between WINTERFIELD PRODUCTIONS ("Producer') and CLAY PARKER ("Artist") regarding the acting services of Artist in connection with the theatrical motion picture tentatively entitled "DAWN RISING" (the "Picture")[3], as follows:

This introductory paragraph is not numbered.

[3]These are not the parties' real names but are offered to illustrate the concepts.

It is here that traditional contracts included their "Whereas" provisions. Thus, for example, a traditional movie contract might say the following:

> WHEREAS, Producer desires to retain the services of Artist for the purpose of making a theatrical motion picture; and
> WHEREAS, Artist desires to work for Producer on the terms and subject to the conditions set forth herein;
> NOW, THEREFORE, in consideration of the mutual covenants contained herein, and for other good and valuable consideration, the receipt and adequacy of which are hereby acknowledged, the parties agree as follows:

None of these flourishes are necessary, but some people prefer them.

Definitions

Most contracts have some definitions. As we have seen in the movie contract, *Artist*, *Producer*, and *Movie* were defined in the introductory paragraph. Sometimes, definitions are included in a separate section. Alternatively, they can appear throughout the contract. The movie contract does not have a definitions section, but many terms, such as *fixed compensation* and *teaser*, are defined within it.

Covenants

Covenant
A promise in a contract.

Now we get to the heart of the contract: What are the parties agreeing to do? Failure to perform these obligations constitutes a breach of the contract and damages will result. **Covenant** is a legal term that means a promise in a contract.

At this stage, the relationship between lawyer and client is particularly important. They will obtain the best result if they work well together. And to achieve a successful outcome, both need to contribute. Clients should figure out what they need for the agreement to be successful. It is at this point that they have the most control over the deal, and they should exercise it. *It is a mistake to assume that everything will work itself out.* Instead, clients need to protect themselves now as best they can. Lawyers can help in this process because they have worked on other similar deals and they know what can go wrong. Listen to them—they are on your side.

Imagine you are an actor about to sign a contract to make a movie. What provisions would you want? Begin by asking what your goals are for the project. Certainly, to make a movie that gets good reviews and good box office. So you will ask for as much control over the process and product as you can get—selection of the director and co-stars, for instance. Maybe influence on the editing process. But you also want to make sure that the movie does not hurt your career. What provisions would you need to achieve that goal? And shooting a movie can be grueling work, so you want to ensure that your physical and emotional needs are met, particularly when you are on location away from home. Try to think of all the different events that could happen and how they would affect you. The contract should make provisions for these occurrences.

Now take the other side and imagine what you would want if you were the producer. The producer's goal is to make money—which means creating a quality movie while spending as little as possible and maintaining control over the process and final product. As you can see, some of the goals conflict—both Artist and Producer want control over the final product. Who will win that battle?

Here are the terms of the movie contract.

The Artist negotiated:

1. A fixed fee of $1,800,000, to be paid in equal installments at the end of each week of filming.
2. Extra payment if the filming takes longer than 10 weeks.
3. 7.5 percent of the gross receipts of the movie.

4. A royalty on any product merchandising, the rate to be negotiated in good faith.
5. Approval over (but approval shall not be unreasonably withheld):
   a. the director, costars, hairdresser, makeup person, costume designer, stand-ins, and the look of his role (although he lists one director and costar whom he has preapproved)
   b. any changes in the script that materially affect his role
   c. all product placements, but he preapproves the placement of Snickers candy bars
   d. locations where the filming takes place
   e. all videos, photos, and interviews of him
   f. the translation of the script for French subtitles (he is fluent in French)
6. Approval (at his sole discretion) over the release of any blooper videos.
7. His name to be listed first in the movie credits, on a separate card (i.e., alone on the screen).
8. That the producer not give any photographs from the set to a tabloid (such as, the *National Enquirer* or the *Star*).
9. At least 12 hours off duty from the end of each day of filming to the start of the next day.
10. That he fly first class to any locations outside of Los Angeles.
11. That the producer pay for 10 first-class airline tickets for his friends to visit him on location.
12. A luxury hotel suite for himself and a room for his friends.
13. A driver and four-wheel-drive SUV to transport him to the set.
14. The right to keep some wardrobe items.

The Producer negotiated:

1. All intellectual property rights to the movie.
2. The right not to make the movie, although he would still have to pay Artist the fixed fee.
3. Control over the final cut of the movie.
4. That the Artist will show up on a certain date and work in good faith for
   a. 2 weeks in pre-production (wardrobe and rehearsals)
   b. 10 weeks shooting the movie
   c. 2 free weeks after the shooting ends, in case the director wants to reshoot some scenes. The Artist must in good faith make himself available whenever the director needs him.
5. The right to fire Artist if his appearance or voice materially changes before or during the filming of the movie.
6. That the Artist help promote the movie on dates subject to Artist's approval, which shall not be unreasonably withheld.

Breach

So now we have the covenants in the movie contract. What happens if one of the parties breaches a covenant? Throughout the life of a contract, there could be many small breaches. Say, Artist shows up one day late for filming or he gains five pounds. Maybe Producer deposits Artist's paycheck a few days late. Perhaps a pop-out trailer is not available. Although these events may technically be violations, a court would not impose sanctions

Material breach

A violation of a contract that defeats an essential purpose of the agreement.

over such minor issues. To constitute a violation of the contract, the breach must be material. A **material breach** is important enough to defeat an essential purpose of the contract. Although a court would probably not consider one missed day to be a material breach, if Artist repeatedly failed to show up, that would be material.

Given that the goal of a contract is to avoid litigation, it is can be useful to define what a breach is. The movie contract uses this definition:

> Artist fails or refuses to perform in accordance with Producer's instructions or is otherwise in material breach or material default hereof," and "Artist's use of drugs [other than prescribed by a medical doctor]."

The contract goes on, however, to give Artist one free pass:

> It being agreed that with regard to one instance of default only, Artist shall have 24 hours after receipt of notice during principal photography, or 48 hours at all other times, to cure any alleged breach or default hereof.

Sometimes, you will recall, contracts state the consequences of a breach, such as the amount of damages. A damages clause can specify a certain amount, a limitation on the total, or other variations. In other words, the contract could say, "If Artist breaches, Producer is entitled to $1 million in damages." (You remember from prior chapters that these are called *liquidated damages.*) Alternatively, a damage clause could say, "Damages will not exceed $1 million." But the vast majority of contracts have neither liquidated damages nor damage caps.

Sole discretion

A party to a contract has the absolute right to make a decision on that issue.

Reasonable

Ordinary or usual under the circumstances.

Good faith

An honest effort to meet both the spirit and letter of a contract.

Good faith. Note that many of the covenants in the movie contract provide that the right must be exercised *reasonably* or that a decision must be made in *good faith* (except for the right to approve blooper videos, over which Artist has *sole discretion.*) A party with **sole discretion** has the absolute right to make any decision on that issue. Sole discretion clauses are not entered into lightly. **Reasonable** means ordinary or usual under the circumstances. **Good faith** means an honest effort to meet both the spirit and letter of the contract. These are the technical definitions. What do *material, reasonably,* and *in good faith* mean in practice?

In the following case, a famous athlete felt that the other party had committed a material breach of their contract, behaved unreasonably, and acted in bad faith. Do you agree?

LeMond Cycling, Inc. v. PTI Holding, Inc.

2005 U.S. Dist. LEXIS 742
United States District Court for the District of Minnesota, 2005

Facts: Before Lance Armstrong, Greg LeMond won the Tour de France, cycling's most prestigious race. *Sports Illustrated* named him one of the 40 most influential people in sports during the prior 40 years. He formed LeMond Cycling, Inc. (LCI) to handle his business dealings. Protective Technologies International, Inc. (PTI) sold cycling accessories under brand names like Barbie, Playskool, and Tonka to retailers such as Target, Wal-Mart, K-Mart, and Toys R Us.

LeMond and PTI signed a contract (the Deal Memo) providing that PTI would use LeMond's name to sell bicycle accessories. In return, PTI would pay LCI $500,000 a year plus a 6 percent royalty on annual sales exceeding $8.33 million. The Deal Memo required PTI to

- Use commercially reasonable efforts to produce and market LeMond bicycle accessories
- Keep LCI apprised of PTI's efforts, including information about marketing and media plans

PTI tried to sell LeMond products to Target, Wal-Mart, and Toys R Us. Only Target was interested, and then only in a minor way. It agreed to allocate just 6 feet of shelf space to LeMond products. It also rejected PTI's proposal to install a video kiosk that featured LeMond. PTI did not tell LCI about this deal.

LeMond accessories sold poorly at Target. PTI itself did not do any promotional activities or advertising for the products beyond the initial video for the kiosk, which

Thierry Prat/Sygma/Corbis

Greg LeMond was one of the greatest cyclists ever. Why didn't his products sell?

Target rejected. PTI argued that it was Target's role to advertise the products.

Because of poor sales, Target reduced the amount of shelf space for LeMond items to just 4 feet. Ultimately, Target discontinued these products altogether. In neither instance did PTI inform LCI. PTI did try to sell LeMond accessories to Wal-Mart, Toys R Us, and other stores, but there were no takers.

Shortly thereafter, PTI began to sell Schwinn bicycle accessories to the retailers that had rejected LeMond products. PTI earned over $30 million from Schwinn sales. The company then abandoned all efforts to sell LeMond items.

LCI filed suit against PTI for breach of contract. In response, PTI filed a motion for summary judgment, seeking to have the suit dismissed.

Issue: ***Did PTI breach its contract with LCI?***

Excerpts from Judge Magnuson's Decision: To prevail on a breach of contract claim, LCI must prove that PTI breached a material term of the contract. A material breach goes to the root or essence of the contract and is so fundamental to the contract that the failure to perform that obligation defeats an essential purpose of the contract. Even when express conditions of the contract are violated, the breach is not necessarily material.

LCI contends that PTI's alleged failure to provide LCI with annual marketing and media plans was material. LCI submits that these documents serve a critical purpose in licensing agreements because they allow the licensor to monitor sales and corresponding royalty payments.

The Court disagrees. The fact that PTI failed to give reports or other documents to LeMond does not frustrate the essential purpose of the contract. Furthermore, there is no causal connection between PTI's failure to provide LCI with these reports and LCI's lost profit. Therefore, these terms of the Deal Memo, by themselves, are not material as a matter of law.

However, whether or not PTI used commercially reasonable efforts to produce [and] market the Product Line is a material term of the contract, as it is the primary purpose of the contract itself. Thus, the issue is whether PTI breached this duty.

The Deal Memo fails to define commercially reasonable. LCI is convinced that commercially reasonable requires an examination of customary practices within the licensing industry. LCI's broad argument that only industry standards are relevant to the commercial reasonableness determination is unpersuasive. Although an objective component is instructive as to whether or not PTI acted with commercial reasonableness, there must be a subjective evaluation as well. No business would agree to perform to its detriment, and therefore whether or not PTI performed with commercial reasonableness also depends on the financial resources, business expertise, and practices of PTI.

The Complaint also alleges that PTI breached its implied covenant of good faith and fair dealing with LCI. Good faith requires a party to act honestly. Bad faith exists when a party's refusal to fulfill its obligations is based on an ulterior motive. LCI submits that PTI abandoned LCI and its obligations under the Deal Memo when it engaged in its relationship with Schwinn. Indeed, LCI has submitted evidence that PTI narrowly focused on its Schwinn obligations despite its continuing obligation to LCI under the Deal Memo. There is a dispute of fact as to whether PTI exercised good faith in its performance under the terms of the Deal Memo. Thus, PTI's Motion on this point is denied.

IT IS HEREBY ORDERED that:

Defendants' Motion for Summary Judgment is GRANTED in part and DENIED in part as set forth in this Order.

In drafting covenants, there are two issues to keep in mind.

Reciprocal Promises and Conditions. Suppose that a contract provides that:

1. Actor shall take part in the principal photography of Movie for 10 weeks, commencing on March 1.

2. Producer shall pay Artist $180,000 per week.

Reciprocal promises
Promises that are each enforceable independently.

Conditional promises
Promises that a party agrees to perform only if the other side has first done what it promised.

In this case, even if Artist does not show up for shooting, Producer is still required to pay him. These provisions are **reciprocal promises, which means that they are each enforceable independently.** Producer must make payment and then sue Artist, hoping to recover damages in court.

The better approach is for the covenants to be **conditional**—a party agrees to perform them only if the other side has first done what it promised. For example, in the real movie contract, Producer promises to pay Artist "On the condition that Artist fully performs all of Artist's services and obligations and agreements hereunder and is not in material breach or otherwise in material default hereof." And Artist has the right to attend any premieres of the movie and invite three friends, "On the condition that Artist fully performs all services and material obligations hereunder."

In short, if you do not expect to perform under the contract until the other side has met its obligations, be sure to say so.

Language of the covenants. To clarify *who* exactly is doing what, covenants in a contract should use the active, not passive voice. In other words, a contract should say "Producer shall pay Artist \$1.8 million," not "Artist shall be paid \$1.8 million."

For important issues where disputes are likely to arise, the language should be precise, detailed, and complete. The movie contract uses 453 words to define the Artist's services just for shooting the movie, not including promotional efforts once the film is released. These acting services include, "dubbing, retakes, reshoots, and added scenes."

Representations and Warranties

Representations and warranties
Statements of fact about the past or present.

Covenants are the promises the parties make about what they will do in the future. Representations and warranties are statements of fact about the past or present; they are true when the contract is signed (or at some other specific, designated time).[4] These representations and warranties are important—without them, the other party might not have agreed to the contract. For example, in the movie contract, Artist warrants that he is a member of the Screen Actors Guild. This provision is important because, if it were not true, Producer would either have to obtain a waiver or pay a substantial penalty.

In a contract between two companies, each side will generally represent and warrant facts such as: they legally exist, they have the authority to enter into the contract, their financial statements are accurate, they have revealed all material litigation, and they own all relevant assets. In a contract for the sale of goods, the contract will include warranties about the condition of the goods being sold.

EXAM Strategy

Question: Producer does not want Artist to pilot an airplane during the term of the contract. Would that provision be a warranty and representation or a covenant? How would you phrase it?

Strategy: Warranties and representations are about events in the past or present. A covenant is a promise for the future. If, for example, Producer wanted to know that Artist had never used drugs in the past, that provision would be a warranty and representation.

[4] Although, technically, there is a slight difference between a representation and a warranty, many lawyers confuse the two terms, and the distinction is not important. We will treat them as synonyms, as many lawyers do.

Result: A promise not to pilot an airplane is a covenant. The contract could say, "Until Artist completes all services required hereunder, he shall not pilot an airplane."

Boilerplate

These standard previsions are typically placed in a section entitled *Miscellaneous*. Many people think that *boilerplate* is a synonym for *boring and irrelevant*, but it is worth remembering that the term comes from the iron or steel that protects the hull of a ship—something that shipbuilders ignore to the passengers' peril. A contract without boilerplate is valid and enforceable—so it can be tempting to skip these provisions, but they do play an important protective role. In essence, boilerplate creates a private law that governs disputes between the parties. Courts can also play this role and, indeed, in the absence of boilerplate they will. But remember that an important goal of a contract is to avoid court involvement.

Here are some standard, and important, boilerplate provisions.

Choice of Law and Forum. **Choice of law** provisions determine which state's laws will be used to interpret the contract. **Choice of forum** determines the state in which any litigation would take place. (One state's courts can apply another state's laws.) Lawyers often view these two provisions as the most important boilerplate. Individual states might have dramatically different laws. Even the so-called uniform statutes, such as the Uniform Commercial Code, can vary widely from state to state. Variations are even more pronounced in other areas of the law, in particular in the common law, which is created by state courts. As for forum, it is a lot more convenient and cheaper to litigate a case in one's home courts.

Choice of law provisions
Determine which state's laws will be used to interpret the contract.

Choice of forum provisions
Determine the state in which any litigation would take place.

When resolving a dispute, the choice of law and forum can strongly influence the outcome. For this reason, sometimes parties are reluctant to negotiate the provision and instead decide not to designate a forum and just take their chances. Or they may choose a neutral, equally inconvenient forum like Delaware. Without a choice of forum clause, the parties may well end up litigating where to litigate, or they may find themselves even worse off—with parallel cases filed by each in his preferred forum.

The movie contract states: "This Agreement shall be deemed to have been made in the State of California and shall be construed and enforced in accordance with the law of the State of California." The contract did not, but might have, also specified the forum—that any litigation would be tried in California.

Modification. Contracts should contain a provision governing modification. The movie contract states: "This Agreement may not be amended or modified except by an instrument in writing signed by the party to be charged with such amendment or modification."

"Charged with such amendment" means the party who is adversely affected by the change. For example, if Producer agrees to pay Artist more, then Producer must sign the amendment. Without this provision, a conversation over beers between Producer and Artist about a change in pay might turn out to be an enforceable amendment.

The original version of the movie contract said that Artist would be photographed nude only above the waist. He ultimately agreed to rear-below-the-waist photography. That amendment (which the parties called a **rider**—another term for amendment or addition) took the form of a letter from Artist agreeing to the change. Producer then signed the letter, acknowledging receipt and acceptance. The amendment would have been valid even without Producer's signature because Artist was "charged with such Amendment."

Rider
An amendment or addition to a contract.

If a contract has a provision requiring that amendments be in writing, there are three ways to amend it:

1. Signing an amendment (or rider).
2. Crossing out by hand the wrong language and replacing it with the correct terms. It is good practice for both parties to initial each change. This method is typically used before the document is signed—say, at the closing if the parties notice a mistake.
3. Rewriting the entire contract to include the changed provisions. In this case, the contract is typically renamed: The Amended and Restated Agreement. This method is most appropriate if there are many complex alterations.

Note that amending a contract may raise issues of consideration, a topic discussed in Chapter 12.

Assignment of rights
A transfer of benefits under a contract to another person.

Delegation of duties
A transfer of obligations in a contract.

Assignment of Rights and Delegation of Duties. An **assignment of rights** is a transfer of your benefits under a contract to another person, while **delegation of duties** is a transfer of your obligations. In the movie contract, Producer has the right to *assign* the contract, but he must stay secondarily liable to it. In other words, someone else can take over the contract for him, but if that person fails to live up to his obligations, Producer is liable. Artist might be unhappy if another production company takes over the movie, but he is still required under the contract to perform his acting services. At least he knows that Producer is liable for his paycheck.

Delegation means that someone else performs the duties under the contract. It certainly matters to Producer which actor shows up to do the shooting. Artist cannot say, "I'm too busy—here's my cousin Jack." So the movie contract provides:

> It is expressly understood and agreed that the services to be rendered by Artist hereunder are of the essence of this Agreement and that such services shall not be delegated to any other person or entity, nor shall Artist assign the right to receive compensation hereunder.

In essence, Producer not only cares who shows up for shooting, he also wants to make sure that no one else cashes the checks. He wants to deal only with Artist. And he worries that if Artist assigns the right to receive payment, he will feel less motivated to do his job well.

Arbitration. Some contracts prohibit the parties from suing in court and require that disputes be settled by an arbitrator. The parties to a contract do not have to arbitrate a dispute unless the contract specifically requires it. Arbitration has its advantages—flexibility and savings in time and money—but it also has disadvantages. For example, most contracts between consumers and brokerage houses require arbitration. Consumer advocates argue that the arbitrators in these disputes are biased in favor of the brokerage houses—who engage in many arbitrations—over consumers who are likely to be one-time customers. And many believe that employees receive a less favorable result when they arbitrate, rather than litigate, disputes with their employer. Also, if a court makes a mistake in applying the law, an appellate court can correct the error. But if an arbitrator makes a mistake, there is generally no appeal. The movie contract does not include an arbitration provision.

Attorney's fees. As a general rule, parties to a contract must pay their own legal fees, no matter who is in the wrong. But contracts may override this general rule and provide that the losing party in a dispute must pay the attorney's fees for both sides. Such a provision tends to discourage the poorer party from litigating with a rich opponent for fear of having to pay two sets of attorney's fees. The movie contract provides:

> Artist hereby agrees to indemnify Producer from and against any and all losses, costs (including, without limitation, reasonable attorneys' fees), liabilities, damages, and claims of any nature arising from or in connection with any breach by Artist of any agreement, representation, or warranty made by Artist under this Agreement.

There is no equivalent provision for breaches by Producer. What does that omission tell you about the relative bargaining power of the two parties?

Integration. During contract negotiations, the parties may discuss many ideas that are not ultimately included in the final version. The point of an integration clause is to prevent either side from later claiming that the two parties had agreed to additional provisions. The movie contract states:

> This Agreement, along with the exhibits attached hereto, shall constitute a binding contract between the parties hereto and shall supersede any and all prior negotiations and communications, whether written or oral, with respect hereto.

Without this clause, even a detailed written contract can be amended by an undocumented conversation—a dangerous situation since the existence and terms of the amendment will depend on what a court *thinks* was said and intended, which may or may not be what actually happened.

EXAM Strategy

Question: Daniel and Annie signed a contract providing that Annie would sell craft beers to Daniel's grocery stores at a price of $20 per case. During negotiations, Daniel and Annie agreed that the price would go up to $22 per case once he had bought 1,000 cases. This provision never made it into the contract. After the contract had been signed, Daniel agreed to a price of $23 per case once volume exceeded 1,000 cases. The contract had an integration provision but no modification clause. What price must Daniel pay for cases in excess of 1,000?

Strategy: If a contract has an integration provision, then side agreements made during negotiations are unenforceable unless included in the written contract. Without a modification provision, oral agreements made after the contract was signed may be enforceable.

Result: A court would not enforce the side agreement that required Daniel to pay $22 a case. It is possible that a court would enforce the $23 agreement—which leaves Daniel with a choice of paying $23 a case or the cost of having his lawyer defend a lawsuit.

Severability. If, for whatever reason, some part of the contract turns out to be unenforceable, a severability provision asks the court simply to delete the offending clause and enforce the rest of the contract. For example, courts will not enforce *unreasonable* non-compete clauses. (California courts will not enforce *any* non-competes, unless made in connection with the sale of a business.) In one case, a consultant signed an employment contract that prohibited him from engaging in his occupation "anyplace in the world." The court struck down this non-compete provision but ruled that the rest of the contract (which contained trade secret clauses) was valid.

The movie contract states:

> In the event that there is any conflict between any provision of this Agreement and any statute, law, or regulation, the latter shall prevail; provided, however, that in such event, the provision of this Agreement so affected shall be curtailed and limited only to the minimum extent necessary

to permit compliance with the minimum requirement, and no other provision of this Agreement shall be affected thereby and all other provisions of this Agreement shall continue in full force and effect.

Force majeure event
A disruptive, unexpected occurrence for which neither party is to blame that prevents one or both parties from complying with a contract.

Force Majeure. A **force majeure event** is a disruptive, unexpected occurrence for which neither party is to blame that prevents one or both parties from complying with the contract. Force majeure events typically include war, terrorist attack, fire, flood, or general acts of God. If, for example, a major terrorist event were to halt air travel, Artist might not be able to appear on set as scheduled. The movie contract defines force majeure events thus:

> fire, war, governmental action or proceeding, third-party breach of contract, injunction, or other material interference with the production or distribution of motion pictures by Producer, or any other unexpected or disruptive event sufficient to excuse performance of this Agreement as a matter of law or other similar causes beyond Producer's control or by reason of the death, illness, or incapacity of the producer, director, or a member of the principal cast or other production personnel.

Notices. After a contract is signed, there may be times when the parties want to send each other official notices—of a breach, an objection, or an approval, for example. In this section, the parties list the addresses where these notices may be sent. For Producer, it is company headquarters. For Artist, there are three addresses: his agent, his manager, and his lawyer. The notice provision also typically specifies when the notice is effective: when sent, when it would normally be expected to arrive, or when it actually does arrive.

Closing. To indicate that the parties have agreed to the terms of the contract, they must sign it. A simple signature is sufficient, but contracts often contain flourishes. The movie contract, for example, states:

> IN WITNESS WHEREOF, the parties hereto have executed this Agreement as of the date first written above.

With clauses like this, it is important to make sure that there is an (accurate) date on the first page. If not otherwise provided in the "Notices" section, it is a good idea to include the parties' addresses. The movie contract also listed Artist's social security number.

When a party to the contract is a corporation, the signature lines should read like this:

Winterfield Productions, Inc.
By:____________
Name:
Title:

If an individual signs her own name without indicating that she is doing so in her role as an employee of Winterfield Productions, Inc., she would be personally liable.

In the end, both parties signed the contract and the movie was made. According to Rotten Tomatoes, the online movie site, professional reviewers rated it 7.9 out of 10.

Chapter Conclusion

You will undoubtedly sign many contracts in your life. Their length and complexity can be daunting. (In the movie contract, one of the paragraphs is 1,000 words.) The goal of this chapter is to help you understand the structure and meaning of the most important provisions so that you can read and analyze contracts more effectively.

Exam Review

1. **AMBIGUITY** Any ambiguity in a contract is interpreted against the party that drafted the agreement. (pp. 433–434)

2. **SCRIVENER'S ERROR** A scrivener's error is a typographical mistake. In the case of a scrivener's error, a court will reform a contract if there is clear and convincing evidence that the mistake does not reflect the true intent of the parties. (p. 435)

EXAM Strategy

Question: Martha intended to transfer a piece of land to Paul. By mistake, she signed a contract transferring two parcels of land. Each piece was accurately described in the contract. Will the court reform this contract and transfer one piece of land back to her?

Strategy: Begin by asking if this was a scrivener's error. Then consider whether the court will correct the mistake.

3. **BEFORE SIGNING A CONTRACT** Before signing a contract, check carefully and thoughtfully the names of the parties, the dates, dollar amounts, and interest rates. (p. 437)

4. **MATERIAL BREACH** A material breach is important enough to defeat an essential purpose of the contract. (pp. 439–442)

EXAM Strategy

Question: Laurie's contract to sell her tortilla chip business to Hudson contained a provision that she must continue to work at the business for five years. One year later, she quit. Hudson refused to pay her the amounts still owing under the contract. Laurie alleged that he is liable for the full amount because her breach was not material. Is Laurie correct?

Strategy: What was the essential purpose of the contract? Was Laurie's breach important enough to defeat it?

5. **SOLE DISCRETION** A party with sole discretion has the absolute right to make any decision on that issue. (p. 440)

EXAM Strategy

Question: A tenant rented space from a landlord for a seafood restaurant. Under the terms of the lease, the tenant could assign the lease only if the landlord gave her consent, which she had the right to withhold "for any reason whatsoever, at her sole discretion." The tenant grew too ill to run the restaurant and asked permission to assign the lease. The landlord refused. In court, the tenant argued that the landlord could not unreasonably withhold her consent. Is the tenant correct?

Strategy: A sole discretion clause grants the absolute right to make a decision. Are there any exceptions?

6. **REASONABLE** Reasonable means ordinary or usual under the circumstances. (p. 440)

7. **GOOD FAITH** Good faith means an honest effort to meet both the spirit and letter of the contract. (p. 440)

8. **STRUCTURE OF A CONTRACT** The structure of a contract looks like this:

   a. Title
   b. Introductory Paragraph
   c. Definitions
   d. Covenants
   e. Conditions
   f. Representations and Warranties
      i. Covenants are the promises the parties make about what they will do in the future.
      ii. Representations and warranties are statements of fact about the present or past—they are true when the contract is signed (or at some other specific, designated time).
   g. Remedies
   h. Boilerplate
      i. Choice of Law and Forum
      ii. Modification
      iii. Assignment of Rights and Delegation of Duties
      iv. Arbitration
      v. Attorney's Fees
      vi. Integration
      vii. Severability
      viii. Force Majeure
      ix. Notices
      x. Closing (pp. 437–446)

2. Result: The court ruled that it was not a scrivener's error because it was not a typo or clerical error. Therefore, the court did not reform the contract and the land was not transferred back to Martha.

4. Result: The purpose of the contract was for Hudson to build up the business and make a profit. Laurie's departure interfered with that goal. The court ruled that the breach was material and Hudson did not have to pay the sums still owing under the contract.

5. Result: The court ruled for the landlord. She had the absolute right to make any decision as long as the decision was not illegal. The moral: Sole discretion clauses are serious business. Do not enter into one lightly.

Multiple-Choice Questions

1. In the *Quake* case, the appellate court ruled
   (a) the letter of intent was a valid contract.
   (b) letters of intent are *never* a valid contract.
   (c) a letter of intent can be a valid contract, but this one was not.
   (d) the trial court had to determine if the letter of intent was a valid contract.

2. In the *Cipriano* case, what happened?
   (a) The jury decided in favor of Cipriano because arson is vandalism.
   (b) The jury decided against Cipriano because arson is not vandalism.
   (c) The judge dismissed the motion for summary judgment because the contract was ambiguous.
   (d) The judge granted the motion for summary judgment because the contract was not ambiguous.

3. In the case of a scrivener's error, what happens?
   (a) A court will not reform the contract. The parties must live with the document they signed.
   (b) A court will reform the contract if there is clear and convincing evidence that the clause in question does not reflect the true intent of the parties.
   (c) A court will reform the contract if a preponderance of the evidence indicates that that the clause in question does not reflect the true intent of the parties.
   (d) A court will invalidate the contract in its entirety.

4. In the *LeMond* case, the court ruled:
   (a) PTI's failure to supply marketing and media plans was a material breach of the contract because without those plans, LCI could not monitor sales.
   (b) PTI's failure to supply marketing and media plans was a material breach of the contract because PTI had agreed to supply the plans.
   (c) the requirement that PTI use commercially reasonable means to promote the product line was not enforceable because the term was ambiguous.
   (d) PTI's failure to supply marketing and media plans was not a material breach of the contract.

5. A contract states (1) that Buzz Co. legally exists and (2) will provide 2,000 pounds of wild salmon each week. Which of the following statements is true?
   (a) Clause 1 is a covenant and Clause 2 is a representation.
   (b) Clause 1 is a representation and Clause 2 is a covenant.
   (c) Both clauses are representations.
   (d) Both clauses are covenants.

Essay Questions

1. List three types of contracts that should definitely be in writing, and one that probably does not need to be.

2. Make a list of provisions that you would expect in an employment contract.

3. List three provisions in a contract that would be material, and three that would not be.

4. Slimline and Distributor signed a contract which provided that Distributor would use reasonable efforts to promote and sell Slimline's diet drink. Slimline was already being sold in Warehouse Club. After the contract was signed, Distributor stopped conducting in-store demos of Slimline. It did not repackage the product as Slimline and Warehouse requested. Sales of Slimline continued to increase during the term of the contract. Slimline sued Distributor, alleging a violation of the agreement. Who should win?

5. **YOU BE THE JUDGE WRITING PROBLEM** Chip bought an insurance policy on his house from Insurance Co. The policy covered damage from fire but explicitly excluded coverage for harm caused "by or through an earthquake." When an earthquake struck, Chip's house suffered no fire damage, but the earthquake caused a building some blocks away to catch on fire. That fire ultimately spread to Chip's house, burning it down. Is Insurance Co. liable to Chip? **Argument for Insurance Co.:** The policy could not have been clearer or more explicit. If there had been no earthquake, Chip's house would still be standing. The policy does not cover his loss. **Argument for Chip:** His house was not damaged by an earthquake; it burned down. The policy covered fire damage. If a contract is ambiguous, it must be interpreted against the drafter of the contract.

Discussion Questions

1. In the movie contract, which side was the more successful negotiator? Can you think of any terms that either party left out? Are any of the provisions unreasonable?

2. What are the advantages and disadvantages of hiring a lawyer to draft or review a contract?

3. What are the penalties if Artist breaches the movie contract? Why are the penalties so light?

4. **ETHICS** In the *Heritage* case, the two companies had agreed to a price change of $0.01. When Heritage's lawyer pointed out to his client the change to $0.10, the Heritage officer did not tell Phibro. The change was subtle in appearance but important in its financial impact. Was Heritage's behavior ethical? When the opposing side makes a mistake in a contract, do you have an ethical obligation to tell them? What Life Principles would you apply in this situation?

5. Blair Co.'s top officers approached an investment bank to find a buyer for the company. The bank sent an engagement letter to Blair with the following language:

    > If, within 24 months after the termination of this agreement, Blair is bought by anyone with whom Bank has had substantial discussions about such a sale, Blair must pay Bank its full fee.

    Is there any problem with the drafting of this provision? What could be done to clarify the language?

Commercial Transactions

CHAPTER 20

INTRODUCTION TO SALES

© Stas Volik/Shutterstock.com

He Sued, She Sued. Harold and Maude made a great couple because both were compulsive entrepreneurs. One evening they sat on their penthouse roofdeck, overlooking the twinkling Chicago skyline. Harold sipped a decaf coffee while negotiating, over the phone, with a real estate developer in San Antonio. Maude puffed a cigar as she bargained on a different line with a toy manufacturer in Cleveland. They hung up at the same time. "I did it!" shrieked Maude, "I made an incredible deal for the robots—five bucks each!" "No, *I* did it!" trumpeted Harold, "I sold the 50 acres in Texas for $300,000 more than it's worth." They dashed indoors.

> Confirming our deal—100,000 Psychopath Robots—you deliver Chicago—end of summer.

Maude quickly scrawled a handwritten memo, which said, "Confirming our deal—100,000 Psychopath Robots—you deliver Chicago—end of summer." She didn't mention a price, or an exact delivery date, or when payment would be made. She signed her memo and faxed it to the toy manufacturer. Harold took more time. He typed a thorough contract, describing precisely the land he was selling, the $2.3 million price, how and when each payment would be made and the deed conveyed. He signed the contract and faxed it, along with a plot plan showing the surveyed land. Then the happy couple grabbed a bottle of champagne, returned to the deck—and placed a side bet on whose contract would prove more profitable. The loser would have to cook and serve dinner for six months.

Neither Harold nor Maude ever heard again from the other parties. The toy manufacturer sold the Psychopath Robots to another retailer at a higher price. Maude was forced to buy comparable toys elsewhere for $9 each. She sued. And the Texas property buyer changed his mind, deciding to develop a Club Med in Greenland and refusing to pay Harold for his land. He sued. Only one of the two plaintiffs succeeded. Which one?

The adventures of Harold and Maude illustrate the Uniform Commercial Code (UCC) in action. The Code is the single most important source of law for people engaged in commerce and controls the vast majority of contracts made every day in every state. The Code is ancient in origin, contemporary in usage, admirable in purpose, and flawed in application. "Yeah, yeah, that's fascinating," snaps Harold, "but who wins the bet?" Relax, Harold, we'll tell you in a minute.

Development of Commercial Law

In England in the 1500s, it was far more important to hold land than it was to have money. Large landowners—barons, earls, and dukes—stood in excellent positions. They had access to the king or queen, they were exempt from many kinds of arrest, and, if they did get into trouble, they generally were tried before other members of the nobility in special courts. It is not surprising that law was then centered squarely upon *real property*, which mainly consists of land and permanent structures. But society changes, and so do businesses. When this happens, the law may fall behind the times.

In the 1500s, merchants in England began to have problems using existing law to resolve commercial disputes. There were many laws about land, but few for contracts. English judges were only beginning to acknowledge that an exchange of mere promises, with no money or property changing hands, might lead to an enforceable agreement. But merchants dealt in the sale of goods, not real estate. Their livelihood depended upon promises, on the rapid movement of their wares, and on their ability to enforce bargains. Dissatisfied with the few remedies that courts offered, businessmen throughout England and the Continent began to treat their own customs as law and to settle disputes in trade organizations rather than civil courts. The body of rules they relied on became known as the *lex mercatoria*, or **law merchant**. The law merchant was thus a "custom made" law, created by the merchants who used it. The new doctrine focused on promises, the sale and exchange of goods, and payment.

In the middle of the 20th century, contract law again required a reinvention. Two problems had become apparent in the United States.

1. Old contract law principles often did not reflect modern business practices.
2. Laws had become different from one state to another.

On many legal topics, contract law included, the national government has had little to say and has allowed the states to act individually. Texas decides what kinds of agreements count as contracts in Texas, and next door in Oklahoma, the rules may be very different. On many issues, states reached essentially similar conclusions, so contract law developed in the same direction. But sometimes, the states disagreed, and contract law took on the aspect of a patchwork quilt.

The UCC was created as an attempt to solve these two problems. It was a proposal written by legal scholars and not a law drafted by members of Congress or state legislatures. The scholars at the American Law Institute and the National Conference of Commissioners on Uniform State Laws had great ideas, but they had no legal authority to make anyone do anything.

Over time, lawmakers in all 50 states were persuaded to adopt many parts of the Uniform Commerical Code. They responded to these persuasive arguments:

1. Businesses will benefit if most commercial transactions are governed by the modern and efficient contract law principles that are outlined in the UCC.
2. Businesses everywhere will be able to operate more efficiently, and transactions will be more convenient, if the law surrounding most of their transactions is the same in all 50 states.

This chapter will focus on Article 2 of the UCC, which applies to the sale of goods. A **good** is a moveable physical object except for money and securities (like stock certificates). A house is not a good, but the *stuff* in the house—the car in the garage, the televisions, the furniture, and almost everything else—is. Article 2 applies to contracts that sell goods, as well as to contracts that sell a mix of goods and services if the *predominant purpose* of the deal is to sell goods.

It is worth noting that the UCC is not a total replacement for older principles in contract law. Contract lawsuits not involving goods are still resolved using the older common law rules. The table below outlines the UCC and the types of contracts that it does govern.

The entire Code is available online at **http://www.law.cornell.edu/ucc/ucc.table.html.**

Article 1:	
General Provisions	The purpose of the code, general guidance in applying it, and definitions.
Article 2:	
Sale of Goods	The sale of *goods*, such as a new car, 20,000 pairs of gloves, or 101 Dalmatians. This is one of the two most important articles in the UCC.
Article 2A:	
Leases	A temporary exchange of goods for money, such as renting a car.
Article 3:	
Negotiable Instruments	The use of checks, promissory notes, and other negotiable instruments.
Article 4:	
Bank Deposits and Collections	The rights and obligations of banks and their customers.
Article 4A:	
Funds Transfers	An instruction, given by a bank customer, to credit a sum of money to another's account.
Article 5:	
Letters of Credit	The use of credit, extended by two or more banks, to facilitate a contract between two parties who do not know each other and require guarantees by banks they trust.
Article 6:	
Bulk Transfers	The sale of a major part of a company's inventory or equipment. This article has been repealed in all but a few states.
Article 7:	
Warehouse Receipts, Bills of Lading, and Other Documents of Title	Documents proving ownership of goods that are being transported or stored. This article is being revised as we go to press.

Article 8:	
Investment Securities	Rights and liabilities concerning shares of stock or other ownership of an enterprise.
Article 9:	
Secured Transactions	A sale of goods in which the seller keeps a financial stake in the goods he has sold, such as a car dealer who may repossess the car if the buyer fails to make payments. This is one of the two most important articles in the Code.

Harold and Maude, Revisited

Harold and Maude each negotiated what they believed was an enforceable agreement, and both filed suit: Harold for the sale of his land, Maude for the purchase of toy robots. Only one prevailed. The difference in outcome demonstrates one of the changes that the UCC has wrought in the law of commercial contracts and illustrates why everyone in business needs a working knowledge of the Code. As we revisit the happy couple, Harold is clearing the dinner dishes. Maude sits back in her chair, lights a cigar, and compliments her husband on the apple tart. Harold, scowling and spilling coffee, wonders what went wrong.

Harold's contract was for the sale of land and governed by the common law of contracts. The common law statute of frauds requires any agreement for the sale of land to be in writing and *signed by the defendant,* in this case the buyer in Texas. Harold signed it, but the buyer never did, so Harold's meticulously detailed document was worth less than a five-cent cigar.

Maude's quickly scribbled memorandum concerning psychotic robot toys was for the sale of goods and was governed by Article 2 of the UCC. The Code requires less detail and formality in a writing. Because Maude and the seller were both merchants, the document she scribbled could be enforced *even against the defendant,* who had never signed anything. The fact that Maude left out the price and other significant terms was not fatal to a contract under the UCC, although under the common law such omissions would have made the bargain unenforceable. We will look in greater detail at these UCC changes. For now it is enough to see that the Code has carved major changes into the common law of contracts, alterations that Harold is beginning to appreciate.

This Unit and This Chapter

This unit covers three principal subjects, all relating to commercial transactions that the Code governs. The first chapters concern the sale of goods and focus primarily on Article 2. In the present chapter we emphasize how Code provisions work together to change the common law. In the following chapters we examine title to goods (Chapter 21), then warranties and product liability (Chapter 22), and, finally, performance and remedies (Chapter 23).

Future chapters (Chapters 25–26) survey the law of negotiable instruments. Checks are the most common kind of negotiable instrument, but we will see that there are many other varieties and that each creates different rights and obligations. We include in the unit a chapter devoted to secured transactions (Chapter 24), that is, a sale of goods in which the seller keeps a financial stake in the goods he has sold, and later in the text a chapter that analyzes bankruptcy law (Chapter 37).

The remainder of this chapter examines contract formation under Article 2 of the UCC. When an agreement is struck, the first fundamental question of contract law is this: has an enforceable contract been formed? As you read the chapter, keep the following ideas in mind:

1. *The UCC is pro-business*. The whole point of the UCC is to make business transactions more reliable, convenient, and predictable.
2. *Tie goes to the contract*. In baseball, a tie goes to the runner. Under the UCC, the preference is to declare an agreement to be a contract if no clear reason exists to declare it invalid.

UCC Basics

Code's Purpose

The Uniform Commercial Code proclaims its purposes clearly:

UCC §1-102(2): Underlying purposes and policies of this Act are

(a) to simplify, clarify and modernize the law governing commercial transactions;

(b) to permit the continued expansion of commercial practices through custom, usage and agreement of the parties;

(c) to make uniform the law among the various jurisdictions.

This is not mere boilerplate. To "modernize," in (a), requires a focus on the needs of contemporary businesspeople, not on rules developed when judges rode horseback. Suppose a court must decide whether a writing is detailed enough to satisfy the Code's statute of frauds. The judge may rely on §1-102 to decide that because modern commerce is so fast, even the skimpiest of writings is good enough to demonstrate that the parties had reached a bargain. In doing so, the judge would deliberately be turning away from legal history to accommodate business practices in an electronic age.

Section 1-102 also states that "[t]his Act shall be liberally construed and applied to promote its underlying purposes," meaning that when in doubt, courts should focus on the goals described. The Code emphasizes *getting the right results* rather than following rigid rules of contract law.

Scope of Article 2

Because the UCC changes the common law, it is essential to know whether the Code applies in a given case. Negotiations may lead to an enforceable agreement when the UCC applies, even though the same bargaining would create no contract under the common law.

Goods
Are things that are moveable, other than money and investment securities.

UCC §2-102: Article 2 applies to the sale of goods.[1] **Goods** are things that are moveable, other than money and investment securities. Hats are goods, and so are railroad cars, lumber, books, and bottles of wine. Land is not a good, nor is a house. So an agreement for the delivery of 10,000 board feet of white pine is a contract for the sale of goods, and Article 2 governs it. But the article does not apply to a contract for the sale of an office building. A skyscraper is not moveable (although an entire city *may* be[2]).

---

[1]Officially, Article 2 tells us that it applies to *transactions* in goods, which is a slightly broader category than sale of goods. But most sections of Article 2, and most court decisions, focus exclusively on sales, and so shall we.

[2]"If you are lucky enough to have lived in Paris as a young man, then wherever you go for the rest of your life, it stays with you, for Paris is a moveable feast." Ernest Hemingway, 1950.

Article 2 regulates **sales**, which means that one party transfers title to the other in exchange for money. If you sell your motorcycle to a friend, that is a sale of goods. If you lend the bike to your friend for the weekend, that is not a sale and Article 2 does not apply. Article 2 also does not apply to the leasing of goods, for example, when you rent a car. A sale involves a permanent change in ownership whereas a lease concerns a temporary change in possession.

Mixed Contracts

To determine whether the UCC governs, we need to know what kind of an agreement the parties made. Was it one for the sale of goods (UCC) or one for services (common law)? In fact the agreement combined both goods and services and was therefore a *mixed contract.* **In a mixed contract involving sales and services, the UCC will govern if the *predominant purpose* is the sale of goods, but the common law will control if the predominant purpose is providing services.**

For example, assume that you take your car to a mechanic for repairs and that there are problems with the work. If a lawsuit ensues, a court will have to determine whether the predominant purpose of the contract was the parts (goods) which were replaced or the labor (service) involved in the work.

Merchants

UCC §2-104: A **merchant** is someone who routinely deals in the particular goods involved, *or* who appears to have special knowledge or skill in those goods, *or* who uses agents with special knowledge or skill in those goods. A used car dealer is a "merchant" when it comes to selling autos, because he routinely deals in them. A man selling his own car to someone who responded to his classified ad is not acting a merchant.

Merchant
Generally, someone who routinely deals in the particular goods involved.

The UCC frequently holds a merchant to a higher standard of conduct than a non-merchant. For example, a merchant may be held to an oral contract if she received written confirmation of it, even though the merchant herself never signed the confirmation. That same confirmation memo, arriving at the house of a non-merchant, would *not* create a binding deal. We will see many instances of this dual level of responsibility, one for a merchant and the other for a non-merchant.

© Brand X/Corbis

The UCC gives merchants greater freedom to contract—and greater responsibility.

Good Faith and Unconscionability

The UCC imposes a duty of good faith in the performance of all contracts. For *non-merchants,* good faith means honesty in fact. For a *merchant,* good faith means honesty in fact *plus* the exercise of reasonable commercial standards of fair dealing.[3] Thus, when parties perform a contract, or in certain cases when they negotiate, neither side may lie or mislead. Further, a party who is a merchant must act as fairly as the business community routinely expects.

The UCC employs a second principle to encourage fair play and just results: the doctrine of unconscionability. UCC §2-302: A contract may be **unconscionable** if it is shockingly one-sided and fundamentally unfair. If a court concludes that some part of a contract is

Unconscionable
A contract that is shockingly one-sided and fundamentally unfair.

[3]UCC §§1-201(19), 1-203, and 2-103.

unconscionable, it will refuse to enforce that provision. Courts seldom find a contract unconscionable if the two parties are businesses, but they are quicker to apply the doctrine when one party is a consumer.

The doctrine of good faith focuses on a party's behavior as it performs an agreement: was it attempting to carry out its obligations in a reasonable manner and do what both sides expected when they made the deal? Unconscionability looks primarily at the contract itself. Are any terms so grossly unfair that a court should reform or ignore them?

Contract Formation

The common law expected the parties to form a contract in a fairly predictable and traditional way: the offeror made a clear offer that included all important terms, and the offeree agreed to all terms. Nothing was left open. The drafters of the UCC recognized that businesspeople frequently do not think or work that way and that the law should reflect business reality.

Formation Basics: Section 2-204

UCC §2-204 provides three important rules that enable parties to make a contract quickly and informally:

1. ***Any Manner That Shows Agreement.*** The parties may make a contract in any manner sufficient to show that they reached an agreement. They may show the agreement with words, writings, or even their conduct. Lisa negotiates with Ed to buy 300 barbecue grills. The parties agree on a price, but other business prevents them from finishing the deal. Then six months later, Lisa writes, "Remember our deal for 300 grills? I still want to do it if you do." Ed doesn't respond, but a week later, a truck shows up at Lisa's store with the 300 grills and Lisa accepts them. The combination of their original discussion, Lisa's subsequent letter, Ed's delivery, and her acceptance all adds up to show that they reached an agreement. The court will enforce their deal, and Lisa must pay the agreed-upon price.

2. ***Moment of Making Is Not Critical.*** The UCC will enforce a deal even though it is difficult, in common law terms, to say exactly when it was formed. Was Lisa's deal formed when they orally agreed? When he delivered? She accepted? The Code's answer: it does not matter. The contract is enforceable.

3. ***One or More Terms May Be Left Open.*** The common law insisted that the parties clearly agree on all important terms. If they did not, there was no meeting of minds and no enforceable deal. The Code changes that. **Under the UCC, a court may enforce a bargain even though one or more terms were left open.** Lisa's letter never said when she required delivery of the barbecues or when she would pay. Under the UCC, the omission is not fatal. As long as there is some certain basis for giving damages to the injured party, the court will do just that. Suppose Lisa refused to pay, claiming that the agreement included no date for her payment. A court would rule that the parties assumed she would pay within a commercially reasonable time, such as 30 days.

In the following case, we can almost see the roller coasters, smell the cotton candy—and hear the carnival owners arguing. Because the cases in this chapter involve more than one Code section, we will outline the relevant provisions at the outset.

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Section
1. What law governs?	UCC §2-102: Article 2 applies to the sale of goods.
2. Did the parties form a contract?	UCC §2-204: The parties may make a contract in any manner sufficient to show agreement.

JANNUSCH V. NAFFZIGER

2008 WL 540877
Illinois Court of Appeals, 2008

Facts: Gene and Martha Jannusch owned a food concession business. They believed they had an agreement to sell it to Lindsey and Louann Naffziger. When the Naffzigers backed out, the Jannuschs sued. The trial court ruled that there had been no meeting of the minds and hence no contract. The Jannuschs appealed. Because the court's decision refers to its exposition of the facts, we will allow a judge to explain what happened.

Issues: ***Does the common law govern or the UCC? Did the parties form a contract?***

Excerpts from Justice Cook's Decision: Plaintiffs operated a business, Festival Foods, which served concessions at festivals and events throughout Illinois and Indiana. The assets included a truck and servicing trailer and equipment such as refrigerators, roasters, chairs and tables, and lighting equipment.

Defendants were interested in purchasing the concession business, met several times with plaintiffs, and observed the business in operation. Gene testified that plaintiffs entered into an oral agreement to sell Festival Foods to defendants for $150,000. Defendants would receive the truck and trailer, all necessary equipment, and the opportunity to work at event locations secured by plaintiffs. Defendants paid $10,000 immediately, with the balance to be paid when defendants received their loan money from the bank. Defendants took possession of Festival Foods the next day and operated Festival Foods for the remainder of the season.

Louann acknowledged testifying during a deposition that an oral agreement to purchase Festival Foods for $150,000 existed but later testified she could not recall specifically making an oral agreement on any particular date. Lindsey testified she and Louann met with plaintiffs and paid the $10,000 for the right to continue to purchase the business because plaintiffs had another interested buyer. According to Lindsey, Gene suggested the parties sign something and she replied that defendants were "in no position to sign anything" because they had not received any loan money from the bank and did not have an attorney. Lindsey admitted taking possession of Festival Foods, receiving the income from the business, purchasing inventory, replacing equipment, paying taxes on the business and paying employees.

Defendants operated six events. Gene attended the first two festivals with defendants, who paid him $10 an hour. Two days after the business season ended, defendants returned Festival Foods to the storage facility where it had been stored by Gene. Lindsey testified one of the reasons defendants returned Festival Foods was because the income from the events they operated was lower than expected.

[Application of the UCC]

Defendants argue the UCC should not apply because this case involves the sale of a business rather than just the sale of goods. The "predominant purpose" test is used to determine whether a contract for both the sale of goods and the rendition of services falls within the scope of article 2 of the UCC. Certainly significant tangible assets were involved in this case. The evidence presented in this case was sufficient to support the conclusion that the proposed agreement was predominantly one for the sale of goods.

[Formation of Contract]

Defendants argue that nothing was said in the contract about allocating a price for good will, a covenant not to compete, allocating a price for the equipment, how to release liens, what would happen if there was no loan approval, and other issues. Defendants argue these are essential terms for the sale of a business.

A contract may be enforced even though some contract terms may be missing or left to be agreed upon, but if the essential terms are so uncertain that there is no basis for deciding whether the agreement has been kept or broken, there is no contract.

The essential terms were agreed upon in this case. The purchase price was $150,000, and the items to be transferred were specified. No essential terms remained to be agreed upon; the only action remaining was the performance of the contract. Defendants took possession of the items to be transferred and used them as their own.

Louann admitted there was an agreement to purchase Festival Foods for $150,000 but could not recall specifically making an oral agreement on any particular date. An agreement sufficient to constitute a contract for sale may be found even though the moment of its making is undetermined. Returning the goods at the end of the season was not a rejection of plaintiffs' offer to sell, it was a breach of contract.

We conclude there was an agreement to sell Festival Foods for the price of $150,000 and that defendants breached that agreement. Reversed and remanded.

Based on the UCC, the Jannuschs won a case they would have lost under the common law. Next we look at changes the Code has made in the centuries-old requirement of a writing.

Statute of Frauds

UCC §2-201 requires a writing for any sale of goods worth $500 or more. However, under the UCC, the writing need not summarize the agreement completely, and it need not even be entirely accurate. Once again, the Code is modifying the common law rule, permitting parties to enforce deals with less formality. In some cases, the court grants an exception and enforces an agreement with no writing at all. Here are the rules.

Contracts for Goods Worth $500 or More

Section 2-201 demands a writing for any contract of goods over this limit, meaning that virtually every significant sale of goods has some writing requirement. Remember that a contract for goods costing less than $500 is still covered by the UCC, but it may be oral.

Writing Sufficient to Indicate a Contract

The Code only requires a writing *sufficient to indicate* that the parties made a contract. In other words, the writing need not *be* a contract. A simple memo is enough, or a letter or informal note, mentioning that the two sides reached an agreement, is enough. **In general, the writing must be signed by the defendant,** that is, whichever party is claiming there was no deal. Dick signs and sends to Shirley a letter saying, "This is to acknowledge your agreement to buy all 650 books in my rare book collection for $188,000." Shirley signs nothing. A day later, Louis offers Dick $250,000. Is Dick free to sell? No. He signed the memo, it indicates a contract, and Shirley can enforce it against him.

Now reverse the problem. Suppose that after Shirley receives Dick's letter, she decides against rare books in favor of original scripts from the *South Park* television show. Dick sues. Shirley wins because *she* signed nothing.

Incorrect or Omitted Terms

If the writing demonstrates the two sides reached an agreement, it satisfies §2-201 even if it omits important terms or states them incorrectly. Suppose Dick writes "$1888,000," indicating almost $2 million, when he meant to write "$188,000." The letter still shows that the parties made a deal, and the court will enforce it, relying on oral testimony to determine the correct price.

Enforceable Only to the Quantity Stated

Since the writing only has to indicate that the parties agreed, it need not state every term of their deal. But one term is essential: quantity. **The Code will enforce the contract only up to the quantity of goods stated in the writing.** This is logical, since a court can surmise other terms, such as price, based on market conditions. Buyer agrees to purchase pencils from Seller. The market value of the pencils is easy to determine, but a court would have no way of knowing whether Buyer meant to purchase 1,000 pencils or 100,000; the quantity must be stated.

Exceptions

In the following three sets of circumstances, the UCC statute of frauds is "turned off".

Merchant Exception. This is a major change from the common law. **When two merchants make an oral contract, and one sends a confirming memo to the other within a reasonable time, and the memo is sufficiently definite that it could be enforced against the sender herself, then the memo is also valid against the merchant who receives it, unless he objects within 10 days.** Laura, a tire wholesaler, signs and sends a memo to Scott, a retailer, saying, "Confm yr order today—500 tires cat #886—cat price." Scott realizes he can get the tires cheaper elsewhere and ignores the memo. Big mistake. Both parties are merchants, and Laura's memo is sufficient to bind her. So it also satisfies the statute of frauds *against Scott*, unless he objects within 10 days.

Specialty Goods Exception. If a buyer orders goods that are to be specially manufactured for the buyer and are not suitable for sale to others in the ordinary course of the seller's business, then a verbal agreement is enforceable even if it exceeds $500.

Judicial Admission Exception. If a defendant admits in his pleading, testimony, or otherwise in court that a contract for sale was made, then the contract he admitted to is enforceable against him.

The following case examines all three of these exceptions in the context of an agreement to buy carpet and tile. When the Supreme Court of Virginia issued its ruling, one company was floored.

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Section
1. Is there a confirmatory memo?	UCC 2-201(2)
2. Has the buyer ordered specialty goods?	UCC 2-201(3)(a)
3. Did the buyer admit in its testimony that an agreement existed?	UCC 2-201(3)(b)

Delta Star, Inc. v. Michael's Carpet World

276 Va. 524
Supreme Court of Virginia, 2008

Facts: Ivan Tepper, the CEO of Delta Star, met with the sales manager at Michael's, a flooring company. In a verbal agreement, he hired Michael's to install carpet in the entryway of his office suite, and tile in his personal office and the office of Nash, his assistant.

Michael's faxed Delta Star a purchase order which read, "Carpet for entrance to lobby, $832.22." Michael's installed the carpet and Delta Star paid the $832.22. But, Delta Star sought to cancel part of the remaining work installing tile, and Michael's sued.

At trial, Delta Star argued that, because the tiling was priced at more than $500, the UCC statute of frauds made the agreement unenforceable. The trial court disagreed, holding that the tile was specially manufactured, because Michael's had never ordered that type of tile for a customer before. The lower court also determined that Delta Star had admitted the existence of the contract in its testimony, and that the purchase order amounted to a writing in any event. Michael's was awarded $2,565 in damages, and Delta Star appealed.

Issue: ***Was the contract enforceable?***

Excerpts from Judge Stephenson's Decision: We first consider the trial court's finding that the flooring materials

were specially manufactured goods or products for [Delta Star] and not readily suitable for sale [to] others in the ordinary course of [Michael's] business. The flooring materials chosen by Delta Star were selected from samples displayed, were not altered in any way to suit only Delta Star, and were suitable for sale to others in Michael's ordinary course of business. Therefore, the flooring materials were not "specifically manufactured" for Delta Star.

We next consider the trial court's finding that there exists a confirmatory writing establishing an enforceable contract. We do not agree that such a writing exists. At trial, Michael's contended that its invoice for the purchase and installation of flooring in Delta Star's entryway constituted confirmatory writings. [It] cannot serve as confirmation of a contract for the purchase and installation of flooring in Tepper's office. The invoice confirms only the parties' agreement with regard to the entryway flooring.

Finally, we consider the trial court's ruling that Delta Star admitted in its testimony the existence of a contract for the purchase and installation of flooring in Tepper's office. At trial, Michael's contended that Nash's testimony regarding her attempt to cancel that portion of the alleged contract dealing with Tepper's office constituted an admission that a contract existed because "you can't cancel something unless you're admitting that you got a contract and you want to cancel it." Delta Star contends that Nash did not admit that there existed a contract for the purchase and installation of flooring in Tepper's office.

We agree with Delta Star. A review of Nash's trial testimony reveals that she stated that Delta Star "didn't want to act on the estimate" [and] that Delta Star "hadn't agreed to ... order [the flooring for Tepper's office] yet." Therefore, Nash did not admit the existence of a contract for the purchase and installation of flooring in Tepper's office.

For the foregoing reasons, we hold that the trial court erred in overruling Delta Star's Statute of Frauds defense and in finding that an enforceable contract existed between Michael's and Delta Star for the purchase and installation of flooring in Tepper's office.

Reversed.

Added Terms: Section 2-207

Under the common law's mirror image rule, when one party makes an offer, the offeree must accept those exact terms. If the offeree adds or alters any terms, the acceptance is ineffective and the offeree's response becomes a counteroffer. In one of its most significant modifications of contract law, the UCC changes that result. **Under §2-207, an acceptance that adds or alters terms will often create a contract.** The Code has made this change in response to *battles of the form.* Every day, corporations buy and sell millions of dollars of goods using pre-printed forms. The vast majority of all contracts involve such documents. Typically, the buyer places an order using a pre-printed form, and the seller acknowledges with its own pre-printed acceptance form. Because each form contains language favorable to the party sending it, the two documents rarely agree. The Code's drafters concluded that the law must cope with real practices.

We discuss §2-207 in detail in Chapter 11 and summarize it here only to emphasize how it works with other UCC provisions. The section is confusing, and a diagram helps. **For a schematic look at UCC §2-207, see the illustration on page 463.**

Intention

The parties must still *intend* to create a contract. Section 2-207 is full of exceptions, but there is no change in this basic requirement of contract law. If the differing forms indicate that the parties never reached agreement, there is no contract.

Additional or Different Terms

An offeree may include a new term in his acceptance and still create a binding deal. Suppose Breeder writes to Pet Shop, offering to sell 100 guinea pigs at $2 each. Pet Shop faxes a memo saying, "We agree to buy 100 g.p. We get credit for any unhealthy pig." Pet Shop has added a new term, concerning unhealthy pigs, but the parties *have* created a binding contract because the writings show they intended an agreement. Now the court must decide what the terms of the contract are, since there is some discrepancy. The first step is to decide whether the new language is an *additional term* or a *different term.*

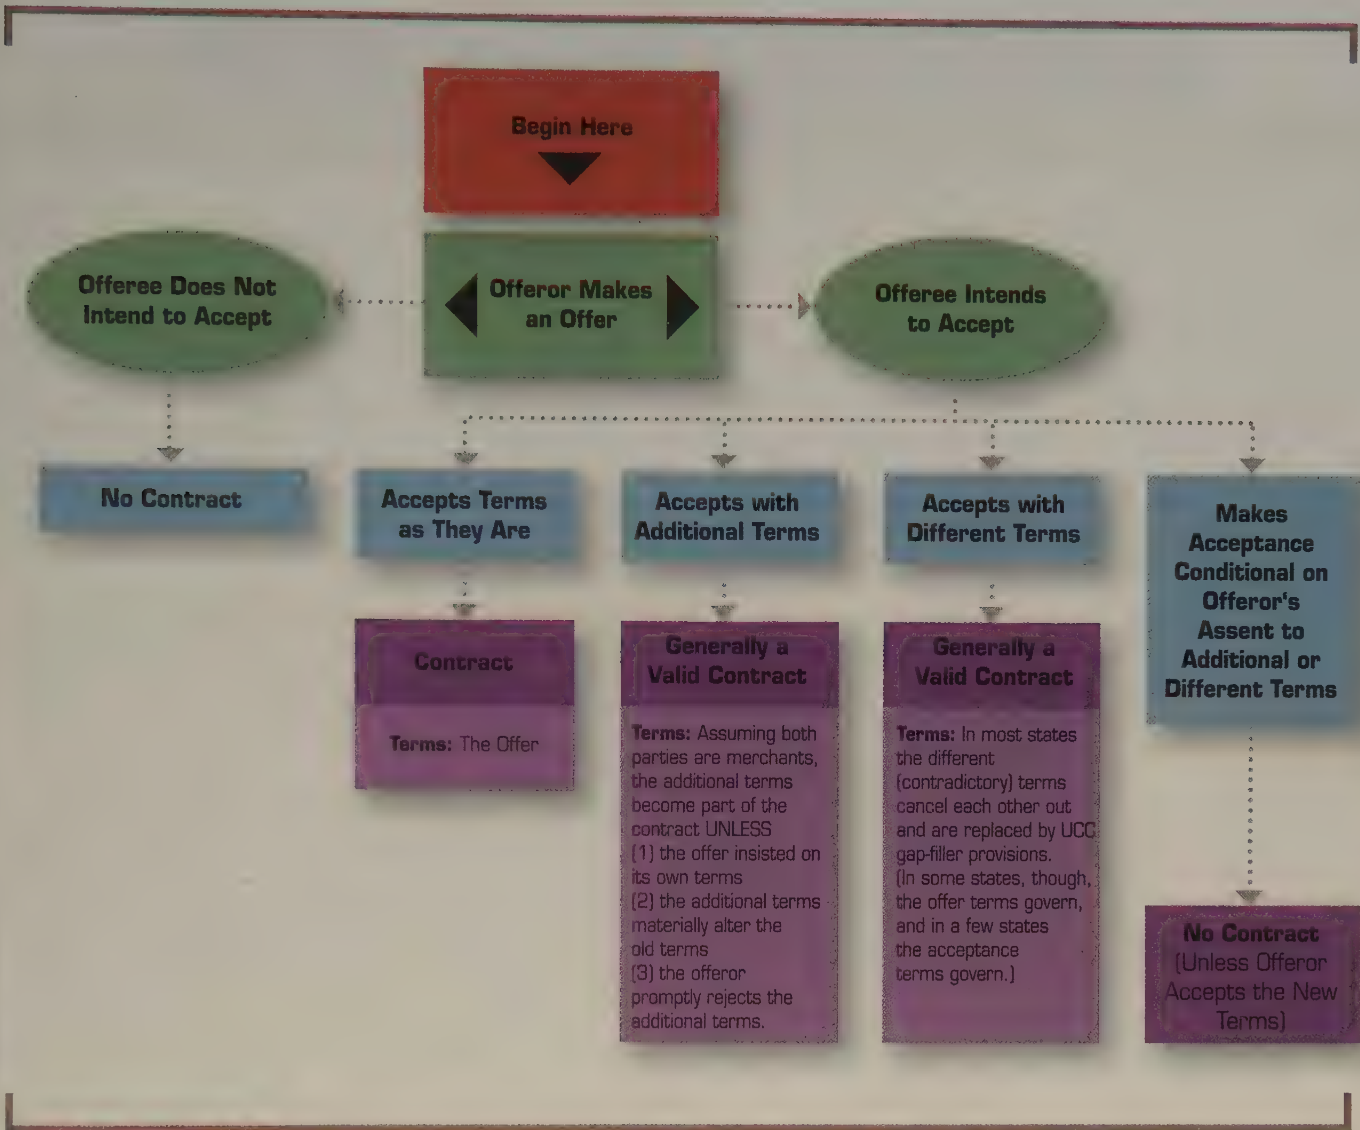

EXHIBIT 20.1 UCC §2-207.

Additional Terms. **Additional terms** are those that raise issues not covered in the offer. The "unhealthy pig" issue is an additional term because the offer said nothing about it. **When both parties are *merchants*, additional terms generally become part of the bargain.** Pet Shop's insistence on credit for sick guinea pigs is binding on Breeder. In three circumstances, however, additional terms *do not* bind the parties:

Additional terms
Terms that raise issues not covered in the offer.

- If the original offer *insisted on its own terms.* If Breeder offered the pets for sale "on these and no other terms," Pet Shop's additional language would not become part of their deal.
- If the additional terms *materially alter* the offer. Pet Shop's new language about credit for unhealthy animals is fairly uncontroversial. But suppose Pet Shop wrote back, "Breeder is liable for any illness of any animal in Pet Shop within 90 days of shipment

of guinea pigs." Breeder would potentially have to pay for a $500 iguana with pneumonia or a $6,000 parrot with gout. This is a material alteration of the bargain and is not part of the contract.

- If the offeror *promptly objects* to the new terms. If Breeder received Pet Shop's fax and immediately called up to say "No credit for unhealthy pigs," then Pet Shop's additional term is not part of their deal.

In all other circumstances, additional terms do become part of an agreement between merchants.

Different Terms. Different terms are terms that *contradict* those in the offer. Suppose Brilliant Corp. orders 1,500 cellular phones from Makem Co., for use by Brilliant's sales force. Brilliant places the order using a pre-printed form stating that the product is fully warranted for normal use and that seller is liable for compensatory *and consequential* damages. This means, for example, that Makem could be liable for lost profits if a salesman's phone fails during a lucrative sales pitch. Makem responds with its own memo stating that in the event of defective phones, Makem is liable only to repair or replace, and *is not liable for consequential damages, lost profits, or any other damages.*

Makem's acceptance has included a *different* term because its language contradicts the offer. Almost all courts would agree that the parties intended to reach an agreement and therefore the contract is enforceable. The question is, what are its terms? Is the full warranty of the offer included, or the very limited warranty of the acceptance? The majority of states hold that **different terms cancel each other out**. Neither party's language goes into the contract. But what then *are* the terms of the deal?

If the evidence indicates that the parties had orally agreed on the issue disputed in the forms, then the courts will ignore the contradictory writings and enforce the oral contract. **If there is no clear oral agreement, the Code supplies its own terms, called gap-fillers,** which cover prices, delivery dates and places, warranties, and other subjects. In the cellular phone case, the contradicting warranty provisions cancel each other out. The parties had not orally agreed on a warranty, so a court would enforce the Code's gap-filler warranty, which does permit recovery of compensatory and consequential damages. Therefore, Makem *would* be liable for lost profits. We outline most of the gap-filler terms in Chapter 11. Warranty provisions are analyzed in greater detail in Chapter 22.

In the following case, the Rhode Island Supreme Court seeks the fairest method of sorting out conflicting terms.

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Section
1. Which are the terms of this agreement?	UCC §2-207: *Additional* terms generally but not always become part of the bargain. *Different* terms generally cancel each other out.
2. What is the Code's provision concerning delivery?	UCC §2-309: The time for shipment or delivery if not agreed upon is a reasonable time.
3. What is a "reasonable" delivery time?	UCC §1-204: A "reasonable" time depends on the nature, purpose, and circumstances of the action.

Superior Boiler Works, Inc. v. R. J. Sanders, Inc.

1998 R.I. LEXIS 153
Supreme Court of Rhode Island, 1998

Facts: R. J. Sanders, Inc., had a contract with the federal government to install the heating system at a federal prison camp. The company negotiated with Superior Boiler Works to purchase three large commercial units. On March 27, Superior sent a proposal to Sanders, offering to sell three boilers for a total of $156,000 and estimating time of delivery at four weeks. The parties exchanged further documents and held various discussions. Finally, on July 20, Sanders sent a "purchase order" for three boilers, agreeing to pay $145,827 and stating "Date required: 4 Weeks," that is, August 20. On August 6, Superior sent a "sales order," agreeing to sell the three boilers at that price, but providing a shipping date of October 1. This later delivery date forced Sanders to rent temporary boilers at a cost of $45,315. On October 1, Superior shipped the boilers, which arrived on October 5. Sanders sent a check in the amount of $100,000, claiming that Superior had delivered the boilers late and deducting the cost of its rental equipment. Superior sued for the additional $45,000 and moved for summary judgment, which the trial court granted. Sanders appealed, claiming that the contract had required Superior to deliver the boilers within four weeks.

Issue: ***Did Superior's October delivery breach the contract?***

Excerpts from Justice Flanders's Decision: Sanders' amended purchase order of July 20 and Superior's August 6 response agree exactly on the specifications and on the price of the boilers. The fact that these two documents disagree on one important term—the time for delivery—does not prevent the formation of a contract under the UCC because it is apparent from their subsequent conduct that both parties intended to be bound contractually. What becomes of the parties' conflicting positions on the shipment period (Sanders' specified four-week delivery versus Superior's stated October 1 shipping date) is a question that must be considered in light of section 2-207(2).

[The court mentioned that other states had responded in various ways to "different" terms, that is, those that conflict. Judge Flanders declared that Rhode Island would side with the majority and adopt the "knock-out" rule, meaning that conflicting terms knock each other out, leaving a hole in the contract that is filled by one of the Code's gap-filler provisions.] Here, the void relating to delivery time would be filled by Section 2-309, which reads, "The time for shipment or delivery ... if ... not agreed upon shall be a reasonable time."

Because of the UCC's gap-filling provisions, we recognize that this approach might result in the enforcement of a contract term that neither party agreed to and, in fact, in regard to which each party expressed an entirely different preference. We note in response to this concern that the offeror and the offeree both have the power to protect any term they deem critical by expressly making acceptance conditional on assent to that term. And as merchants, both parties should have been well aware that their dealings were subject to the UCC and to its various gap-filling provisions. In this case, because the two variant shipping-date terms cancel each other out, the amended purchase order and the August 6 sales order formed a contract that required the three boilers to be delivered within a reasonable period after August 6.

In the usual case the question of what constitutes a reasonable time under the UCC is one for the finder of fact to determine from the nature, the purpose, and the circumstances surrounding the transaction, including the parties' course of dealing, usages of trade in the pertinent industry, or the parties' course of performance. See [UCC §1-204(2). In this case, however, the only available evidence indicated that Superior's performance was reasonable, by industry standards.]

For the foregoing reasons the appeal is denied, and the Superior Court's judgment is affirmed.

EXAM Strategy

Question: Martin, a diamond wholesaler, writes Serge, a jewelry retailer, offering to sell 75 specified diamonds for $2 million. Martin's offer sheet specifies the price, quantity, date of delivery and other key terms. The sheet also states, "Offer is made

on these terms and no other." Serge sends Martin his own purchase order, naming the diamonds, price and so forth, but adding a clause requiring any disputes to be settled by a diamond-industry arbitrator. In the diamond industry, arbitration by such a person is standard. Martin does not object to the arbitration clause. Martin delivers the gems but Serge refuses to pay the full price, claiming that many of the stones are of inferior quality. Martin sues for the balance due, but Serge insists that any dispute must be settled by arbitration. May Martin litigate, or must he arbitrate the case?

Strategy: Under the common law, there might not be a contract between these parties, because Serge added a new term. However, this agreement concerns the sale of goods, meaning that the UCC governs. Under UCC §2-207, when both parties are merchants (as they are here), additional terms become part of the contract except in three instances. Review those three instances, and apply them here.

Result: Additional terms become part of the agreement unless the original offeror insisted on its own terms, the new term materially alters the offer, or the offeror promptly rejects the new term. Martin's offer insisted on its own terms and Serge's arbitration clause does not become part of the agreement. Martin may litigate his dispute.

Open Terms: §§2-305 and 2-306

Open Prices

Under §2-305, the parties may conclude a contract even though they have not settled the price. Again, this is a change from the common law, which required certainty of such an important contract term. Under the Code, if the parties have not stated one, **the price is a reasonable price at the time of delivery.** A court will use market value and other comparable sales to determine what a reasonable price would have been. If the contract permits the buyer or seller to *determine* the price during contract performance, §2-305 requires that she do so in good faith, as the following case demonstrates.

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Sections
1. May the parties form a binding agreement without specifying the price?	UCC §2-305(1): The parties may conclude a contract even though they have not settled the price.
2. May a contract permit one party to settle the price?	UCC §2-305(2): "A price to be fixed by the seller or by the buyer" requires that it be fixed in good faith.
3. What does *good faith* mean?	UCC §§1-201(19), 1-203 and 2-103: For *non-merchants*, good faith means honesty in fact. For a *merchant*, good faith means honesty in fact *plus* the exercise of reasonable commercial standards of fair dealing.

Mathis v. Exxon Corporation

302 F.3d 448
Fifth Circuit Court of Appeals, 2002

Facts: Exxon marketed gasoline to retailers in three ways. *Franchisees* (who owned local gas stations) were required to purchase a minimum number of gallons per month. Exxon set the price each month, known as the dealer tank wagon price (DTW). *Jobbers* (distributors who could resell to dealers) paid the "rack price," which was generally lower than the DTW. *Company-operated retail stores* (CORS) paid nothing, because Exxon owned them.

A group of 54 Texas franchisees sued, claiming that Exxon set their gasoline prices artificially high. The plaintiffs alleged that Exxon wanted to drive them out of business and replace their franchises with more profitable CORS. The evidence indicated that the franchisees' DTW was consistently higher than the rack price paid by jobbers. Many plaintiffs testified that their franchises had become unprofitable. One study showed that 62 percent of franchisees in Corpus Christi, Texas, were selling gas below the price they paid for it. Plaintiffs' expert testified that 75 percent of their competitors could buy gasoline at a lower price.

The plaintiffs argued that this evidence demonstrated that Exxon set the prices in bad faith. The jury agreed, awarding the plaintiffs $5.7 million, plus $2.3 million in attorney's fees. Exxon appealed.

Issue: ***Did Exxon set the prices in bad faith?***

Excerpts from Judge Smith's Decision: [UCC §2-305(2) rejects the idea that the seller may fix any price he wants.] The price must be fixed in good faith. Good faith includes observance of reasonable commercial standards of fair dealing in the trade if the party is a merchant. In the normal case a "posted price" or a future seller's or buyer's "given price," "price in effect," "market price," or the like satisfies the good faith requirement.

The franchisees here are alleging a breach of good faith grounded not in Exxon's failure to price in accord with an established schedule, but in its failure to set the price in good faith. Suits recognizing such a cause of action are rare, and with good reason: We would be ill-advised to consider a case to be outside the norm based only on an allegation of improper motive by the party setting the price.

Plaintiffs produced enough evidence to escape [the] "normal case" limitation. They showed, for example, that Exxon planned to replace a number of its franchises with CORS, that the DTW price was higher than the sum of the rack price and transportation, that Exxon prevented the franchisees from purchasing gas from jobbers, and that a number of franchisees were unprofitable or noncompetitive.

For example, one Exxon document stated that the company's "Marketing Strategy is to reduce Dealer stores (est. 30%)." Another document set forth Exxon's plans to reduce dealer stations in Houston from 95 to 45, and to increase CORS from 83 to 150. James Carter, the regional director of the Exxon/Mobil Fuels Marketing Company, testified that Exxon made more of a profit from a CORS than from an independent lessee store. These plans and observations were validated by the fact that the number of dealer stations steadily declined.

Further indication of plans to shift from dealer-lessees to CORS is shown by Exxon's dissatisfaction with outlets featuring service bays. Exxon documents showed that service bays—generally associated with lessee-dealer locations—were becoming less profitable, while stations with convenience stores—generally associated with CORS—were the wave of the future.

Exxon's bad faith, in this regard, is shown by the record. Facing the competition of self-service stations that were either selling food and other goods or had bare pumps with no overhead costs incurred in servicing vehicles, Exxon decided years ago that retail marketing through franchise dealers was becoming economically unsound. Although Exxon decided to move to CORS in Houston and jobbers in Corpus Christi, this decision was not communicated to its franchisees. Because of profit from their other sales, CORS could, and did, sell gas for less than the franchise dealers paid to Exxon for their gas. And the jobbers delivered Exxon gas to their dealers for less than Exxon franchisees were required to pay for their delivered gas, but Exxon prohibited its franchisees from buying at this lower price from the jobbers.

Accordingly, the jury's finding that Exxon breached its duty of good faith in setting the DTW price it charged the plaintiffs is not without foundation in the law or the evidence. As we have recounted, plaintiffs offered ample evidence tending to prove their version of price-setting.

[Affirmed.]

EXAM Strategy

Facts: Coffee Retailer sends a form to Cupper, ordering 100 cartons of specified coffee cups to be delivered the first of each month for six months. The order form says nothing about price. For three months, Cupper delivers on time and sends an invoice, which Retailer pays. On the fourth month, Cupper's invoice is 8 percent higher than before. Retailer refuses to pay the increase and informs Cupper that it will accept no more deliveries. Cupper sues. Retailer claims there was no enforceable contract. Cupper says there was a bargain and that it has the right to determine the price. Who is right?

Strategy: Retailer's offer included no price. Under the common law, the absence of such an essential term would mean there was no contract. However, these are goods, and under the UCC the parties can make an enforceable deal without specifying the price. This is a valid contract. The companies may, if they choose, permit one party to determine the price. Did they do so here? If so, is Cupper's conduct reasonable? If the parties did not allow one side to set the price, how would a court do so?

Result: This contract neither stated a price nor allowed one party to determine it. That means that the price is a reasonable one at the time of delivery. A court will use market value, and any comparable sales, to determine the price.

Output and Requirements Contracts

Under §2-306, an output contract obligates the seller to sell all of his output to the buyer, who agrees to accept it. Suppose Joel has a small plant in which he manufactures large plants; that is, handcrafted artificial flowers and trees, made of silk and other expensive materials. Joel isn't sure how many he can produce in a year, but wants a guaranteed market. He makes an output contract with Yolanda, in which he promises to sell the entire output of his plant, and she agrees to buy it all.

A requirements contract is the reverse, obligating a buyer to purchase all his needed goods from the seller. Joel might sign a requirements contract with Worm Express, agreeing to buy from Worm all the silk he needs. Both output and requirements contracts are valid under the Code, although they create certain problems. By definition, the exact quantity of goods is not specified. But then how much may one party demand? Is there any upper or lower limit?

The UCC requires that the parties in an output or requirements contract make their demands in good faith. For example, in a requirements contract, a buyer may not suddenly increase her demand far beyond what the parties expected merely because there has been a market change. Suppose the price of silk skyrockets. Joel's requirements contract obligates Worm Express to sell him all the silk he needs. Could Joel demand 10 times the silk he had anticipated, knowing he could resell it at a big profit to other manufacturers? No. That would be bad faith. Come on, Joel, play by the rules.

May the buyer *reduce* his demand far below what the parties anticipated? Yes, as long as he makes the reduction in good faith.

The following case involves several issues, including a claim that an output contract existed. Some contracts are meticulously written by veteran lawyers who use deliberate and precise legal terms in every part of the agreement. Of course, agreements are not always done so carefully. See what sense you can make of the "Weaner Pig Purchase Agreement."

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Section
Which law governs this agreement?	UCC 2-102
Is there a writing sufficient to indicate a contract?	UCC 2-201
Was an output contract formed?	UCC 2-306

You be the Judge

Lohman v. Wagner

862 A.2d 1042
Court of Special Appeals of Maryland, 2004

Facts: Legal research can take you in odd directions. Today, for example, we learn that a "weaner pig" is a very young pig that has just been weaned from its mother. You must raise and sell a lot of them to make a living. Farmers who raise pigs to full size need to sell fewer animals to get by.

Farmer Charles Lohman talked extensively with John Wagner about raising weaner pigs for a new "pork network" that Wagner, the owner of Swine Services, was thinking of putting together. Lohman eventually decided to join Wagner and convert his pig farm to one that specialized in raising weaner pigs. He needed to borrow money to remodel his farm, and he needed to convince his bankers that, if they loaned him the necessary money, he would be in a reasonable position to repay them.

He told Wagner that he "would need something to show his banker." Wagner faxed over a document with several blanks entitled "Weaner Pig Purchase Agreement." It said, in part, "PRODUCER agrees to supply _ weaner pigs weekly." When he received the fax, Lohman wrote "300" in the blank. After showing the fax to his banker, Lohman was able to secure his loan. He never sent Wagner a copy of the document with the blank filled in.

For awhile, everyone was happy. Lohman shipped weaner pigs to Wagner and was paid $28 each for them. But eventually, problems arose. The price Wagner offered for weaner pigs dropped to $18, and Wagner never assembled the promised pork network, which Lohman argued would have helped to boost prices. Lohman sued Wagner for breach of contract.

The trial court found that the agreement did not meet the UCC's requirement that a quantity term be included, that it was unenforceable, and that Lohman was entitled to nothing. Lohman appealed.

You Be the Judge: ***Does Lohman have an enforceable agreement with Wagner?***

Argument for Lohman: Your honor, I'm not a ham, and I won't "boar" you with a long story. Our arguments, briefly stated, are these.

First, the UCC's statute of frauds, and its requirement that a quantity term be included, should not apply. This agreement is essentially one for services, and not for goods. My client furnishes housing for weaner pigs, labors to raise them, and ships them to the defendant. His services are the largest part of this contract.

Even if this contract is deemed to be a sale of goods, there is a quantity term included in the Weaner Pig Purchase Agreement—300. The number was entered by my client as a good-faith estimate of the number of animals he could produce.

In any event, UCC 2-306 does not require a quantity term in this case. This agreement was an output contract. Lohman sold every weaner pig he produced to Wagner, and Wagner accepted and paid for them. Output contracts, by definition, do not include specific quantity terms; they merely obligate a seller to sell all of his output to the buyer.

This case amounts to nothing more or less than a greedy man trying to reap what he did not sow and to use legal technicalities to hog all the profits for himself.

Argument for Wagner: My counterpart has managed to make several nifty pig-related references in his argument, but nevertheless, no contract exists. The

UCC does apply to this agreement, because pigs are clearly goods. Most products require some labor to assemble and bring to market. Someone "labored" to make my shoes, my necktie, and my pen. But all are goods.

In a UCC contract, a quantity must be written by the defendants, but here the "300" was written by the plaintiff. It was never communicated to my client. He never agreed to it, or even had a chance to review it. The same holds true for the claim that this is an output contract. My client never agreed to buy all the pigs that Lohman produced.

My opponent is grasping at straws. Which pigs eat. I think. Get it? Oh, forget it …

Modification

Another way in which the UCC is pro-contract and pro-business is in its treatment of contract modifications. If two sides have a contract and seek to make changes, are the changes enforceable?

Example 1. Being the best at almost anything pays well, and soccer is no exception. Cristiano Ronaldo's contract with Real Madrid runs through 2015 and averages a whopping $22 million per season. Assume that this year, he leads Real to the fabled treble—a La Liga championship, a victory in the Copa del Rey, and a win in the Champions League. Afterward, the club offers him a raise to $28 million per season through 2015, and Ronaldo accepts. If Spanish law is the same as American law, does the team have a legal obligation to pay the extra millions? No.

This is a services contract, and not a sale of goods. Therefore, common law principles would apply, and they require new consideration for contract modifications to stand. Since Ronaldo did not agree to play any additional seasons or give any other new value to the team, no consideration exists.

We hate to leave out fans of Spain's other big club, so for the next example, we will pay our 65 euros for a ticket on the AVE train and settle in for a three-hour, 500-kilometer trip eastward to Barcelona.

Example 2. FC Barcelona is planning "Lionel Messi Bobblehead Day," and the team orders 10,000 units for the occasion. Unfortunately, the boat carrying the shipment from China is boarded by Somali pirates, who are, it turns out, Barca supporters. The entire shipment is stolen, and the headlines read, "*Trade Hobbled! Pirates Gobble Bobbles!*"

The manufacturer calls the team and asks for a three-week extension on the original delivery deadline. The team is very understanding, agrees to the delay, and reschedules the promotion for a later game. Is this modification which extends the delivery deadline now a valid part of the contract? Yes.

In §2-209, the UCC does away with the consideration requirement for changes to contracts, so long as both sides agree to the modification. In this example, no consideration exists to support the extended deadline because the manufacturer gets all the benefit, and the team gets nothing. But, that does not create a problem in enforcing the new deal.

Parties make a contract attempting to control their futures. But one party's certainty can be undercut by the ease with which the other party may obtain a modification. Section 2-209 acknowledges this tension by enabling the parties to limit changes. The UCC allows the parties to modify some contracts orally, but **they may agree to prohibit oral modifications and insist that all modifications be in writing and signed. Between merchants, such a clause is valid. But if either party is *not* a merchant, such a clause is valid only if the non-merchant *separately* signs it.**

Once again the Code gives greater protection to non-merchants than to merchants. Two merchants may agree, as part of their bargain, that any future modifications will be valid only if written and signed. But this limitation on modifications is not valid against a non-merchant unless she separately signs the limiting clause itself. Suppose a furniture retailer orders 200 beds from a manufacturer. The retailer's order form requires any modifications to be in writing. The manufacturer initials the retailer's form at the bottom. The parties have a valid agreement and no oral modifications will be enforced. But suppose the retailer sells a bed to a customer. The sales form also bars oral modifications. That prohibition is void unless the customer separately signs it.

EXAM Strategy

Question: Dale turns 18. For his birthday, he gets $500 cash and his grandmother's ancient station wagon. And yes, it is the kind with wood paneling on the side. Dale can't do much about how the car looks, but he decides that he can at least make it sound awesome. So, he immediately takes the car to Big Mike's Custom Stereo.

At Big Mike's, Dale makes a verbal agreement to buy an amplifier and two Rockford Fosgate speakers and to have them installed at a cost of $499. The amp and speakers come to $420, and the installation charge is $79. He decides to have them installed while he waits.

After an hour, a clerk finds him and says, "Hey, man, we're out of stock on those speakers. But I can get you some Alpines right now—same size, same price, just as loud." Dale is eager to drive out with a new system, and agrees to the speaker substitution. Moments later, Dale finds the clerk and says, "Wait, I'm not sure about all of this. I don't think I want to buy any of it after all." Can Dale get his money back, or is he stuck with his purchases?

Strategy: Under UCC principles, a contract is considered to be for the sale of goods if the value of the items far exceeds the cost of the labor (installation), and the contract's predominant purpose is a sale of goods. The UCC statute of Frauds does not apply to a transaction under $500. A contract can be modified without consideration.

Result: The UCC governs this contract because the speakers are much more expensive than the labor. The contract does not have to be in writing because it is for less than $500. The agreement to use Alpine speakers rather than Rockford Fosgates is enforceable, even without consideration for the change. Dale will have to live with the deal, including the Alpine speakers.[4]

[4]Bonus point from chapter 14 material: Since this is Dale's 18th birthday, if he were even one day younger, he could back out of this deal on the grounds that he is a minor and has formed a voidable agreement.

The following table concludes this chapter with an illustration of the Code's impact on the common law.

SELECTED CODE PROVISIONS THAT CHANGE THE COMMON LAW

Issue	Common Law Rule	UCC Sec.	UCC Rule	Example
Contract formation	Offer must be followed by acceptance that shows meeting of the minds on all important terms.	§2-204 and §2-305	Contract can be made in any manner sufficient to show agreement; moment of making not critical; one or more terms, including the price, may be left open.	Tilly writes Meg, "I need a new van for my delivery company." Meg delivers a van and Tilly starts to use it. Under the common law, there is no contract, because no price was ever mentioned; under the UCC, the writing plus the conduct show an intention to contract (2-204). The price is a *reasonable* one (2-305).
Writing requirement	All essential terms must be in writing.	§2-201	Any writing is sufficient if it indicates a contract; terms may be omitted or misstated; "merchant" exception can create a contract enforceable against a party who receives the writing and does nothing within 10 days.	Douglas, a car dealer, signs and sends to Michael, another dealer, a memo saying, "Confirming our deal for your blue Rolls." Michael reads it but ignores it; 10 days later Douglas has satisfied the statute of frauds under the UCC's merchant exception.
Added terms in acceptance	An acceptance that adds or changes any term is a counteroffer.	§2-207	Additional or different terms are not necessarily counteroffers; their presence does not prevent a contract from being formed, and in some cases the new terms will become a part of the bargain.	Roberts sends a pre-printed form to Julia, offering to buy 25 computers and stating a price; Julia responds with her own pre-printed form, accepting the offer but adding a term that balances unpaid after 30 days incur a finance charge. The additional term is not a counteroffer; there is a valid contract; and the finance charge is part of the bargain.
Modification	A modification is valid only if supported by new consideration.	§2-209	A modification needs no consideration to be binding.	Martin, a computer manufacturer, agrees to sell Steve, a retailer, 500 computers at a specified price, including delivery. The next day Martin learns that his delivery costs have gone up 20%; he calls Steve, who faxes a note agreeing to pay 15% extra. Under the common law, the modification would be void; under the Code, it is enforceable.

Chapter Conclusion

The Uniform Commercial Code (UCC) enables parties to create a contract quickly. While this can be helpful in a fast-paced business world, it also places responsibility on executives. Informal conversations may cause at least one party to conclude that it has a binding agreement—and the law may agree.

EXAM REVIEW

1. **UNIFORM COMMERCIAL CODE** The Code is designed to modernize commercial law and make it uniform throughout the country. (pp. 453–455)

2. **SALE OF GOODS** Article 2 applies to the sale of goods, which are movable things other than money and investment securities. (pp. 456–457)

EXAM Strategy

Question: While shopping at his local mall, Fred buys an iPad for $499, a barbecue grill for $509, and then pays $25 to have his watchband cleaned. Which of Fred's transactions are governed by Article 2 of the UCC?

Strategy: To answer this question, you must identify the transactions that amount to a sale of goods. Land and buildings are not goods. Neither are money and securities, but other moveable physical objects are. Also, be sure not to confuse the question "Does Article 2 apply?" with the question "Does this agreement need to be in writing?" (See the "Result" at the end of this section)

3. **LEASING** Article 2A governs the leasing of goods. (p. 454)

4. **MIXED CONTRACTS** In a mixed contract involving goods and services, the UCC applies if the predominant purpose is the sale of goods. (p. 457)

5. **MERCHANTS** A merchant is someone who routinely deals in the particular goods involved, or who appears to have special knowledge or skill in those goods, or who uses agents with special knowledge or skill. The UCC frequently holds a merchant to a higher standard of conduct than a non-merchant. (p. 457)

6. **GOOD FAITH** The UCC imposes a duty of good faith in the performance of all contracts. (pp. 457–458)

7. **UNCONSCIONABILITY** A contract is unconscionable if it is shockingly one-sided and fundamentally unfair. A court is much likelier to use unconscionability to protect a consumer than a corporation. (pp. 457–458)

EXAM Strategy

Question: Jim Dan, Inc. owned a golf course that had trouble with crabgrass. Jim Dan bought 20 bags of Scotts Pro Turf Goosegrass/Crabgrass Control for $835 and applied it to the greens. The Pro Turf caused over $36,000 in damage to the greens. Jim Dan sued Scotts. Scotts defended by claiming that it sold the Pro Turf with a clearly written, easy-to-read disclaimer that stated that in the event of damage, the buyer's only remedy would be a refund of the purchase price. Jim Dan, Inc. argued that the clause was unconscionable. Please rule.

Strategy: There are two steps to deciding an issue of unconscionability. First, does the contract involve a consumer, or is this an agreement between two businesses? Second, is the agreement shockingly one-sided? (See the "Result" at the end of this section.)

8. **FORMATION** UCC §2-204 permits the parties to form a contract in any manner that shows agreement. (pp. 458–460)

9. **WRITING** For the sale of goods worth $500 or more, UCC §2-201 requires some writing that indicates an agreement. Terms may be omitted or misstated, but the contract will be enforced only to the extent of the quantity stated. (p. 460)

EXAM Strategy

Question: To satisfy the UCC statute of frauds regarding the sale of goods, which of the following must generally be in writing?

a. Designation of the parties as buyer and seller

b. Delivery terms

c. Quantity of the goods

d. Warranties to be made

Strategy: Okay, this may be overkill. But the question illustrates two basic points of UCC law: first, the Code allows a great deal of flexibility in the formation of contracts. Second, there is one term for which no flexibility is allowed. Make sure you know which it is. (See the "Result" at the end of this section.)

10. **MERCHANT'S EXCEPTION** When two merchants make an oral contract, and one sends a confirming memo to the other within a reasonable time, and the memo is sufficiently definite that it could be enforced against the sender herself, then the merchant who receives it will also be bound unless he objects within 10 days. (pp. 461–462)

11. **ADDITIONAL TERMS** UCC §2-207 governs an acceptance that does not "mirror" the offer. *Additional terms* usually, but not always, become part of the contract. *Different terms* contradict a term in the offer. When that happens, most courts reject both parties' proposals and rely on gap-filler terms. (pp. 462–464)

EXAM Strategy

Question: Cookie Co. offered to sell Distrib Markets 20,000 pounds of cookies at $1.00 per pound, subject to certain specified terms for delivery. Distrib replied in writing as follows: "We accept your offer for 20,000 pounds of cookies at $1.00 per pound, weighing scale to have valid city certificate." Under the UCC:

a. A contract was formed between the parties.

b. A contract will be formed only if Cookie agrees to the weighing scale requirement.

c. No contract was formed because Distrib included the weighing scale requirement in its reply.

d. No contract was formed because Distrib's reply was a counteroffer.

Strategy: Distrib's reply included a new term. That means it is governed by UCC §2-207. Is the new term an additional term or a different term? An additional term goes beyond what the offeror stated. Additional terms become a part of the contract except in three specified instances. A different term contradicts one made by the offeror. Different terms generally cancel each other out. (See the "Result" at the end of this section.)

12. PRICE Under UCC §2-305 a contract is enforceable even if the price is not stated. In such cases the price must be reasonable. (pp. 466–468)

13. MODIFICATION UCC §2-209 permits contracts to be modified even if there is no consideration. The parties may prohibit oral modifications, but such a clause is ineffective against a non-merchant unless she signed it. (pp. 470–471)

2. Result: The purchases of the iPad and the barbecue grill are covered by Article 2 of the UCC. Both agreements involve goods. $500 is a figure that is relevant to whether the statute of frauds applies to the agreements, but it is not material to the threshold question of whether Article 2 applies in the first place. All sales of goods, from pencils to Ferarris, fall under Article 2.

The watch cleaning is a service, and not a sale of goods. It is not governed by Article 2.

7. Result: This is a bargain between two businesses, and courts rarely find clauses in such agreements unconscionable. The assumption is that sophisticated businesspeople understand what they are getting into and are able to protect themselves. If Jim Dan could run a golf course, the company was sophisticated enough to understand the simple disclaimer in this contract. Scotts wins.

9. Result: (D). The contract will be enforced only to the extend of the quantity stated.

11. Result: The "valid city certificate" phrase raises a new issue; it does not contradict anything in Cookie's offer. That means it is an additional term, and becomes part of the deal unless Cookie insisted on its own terms, the additional term materially alters the offer, or Cookie promptly rejects it. Cookie did not insist on its terms, this is a minor addition, and Cookie never rejected it. The new term is part of a valid contract and the answer is "a."

Multiple-Choice Questions

1. For a contract governed by the UCC sales article, which one of the following statements is correct?
   (a) Merchants and non-merchants are treated alike.
   (b) The contract may involve the sale of any type of personal property.
   (c) The obligations of the parties to the contract must be performed in good faith.
   (d) The contract must involve the sale of goods for a price of $500 or more.

2. Which of the following transactions is *not* governed by Article 2 of the UCC?
   (a) Purchasing an automobile for $35,000
   (b) Leasing an automobile worth $35,000
   (c) Purchasing a stereo worth $501
   (d) Purchasing a stereo worth $499

3. Fred assembles computers in his garage and sells them. He makes an agreement with Alpha Company under which Alpha will deliver 100 keyboards. The agreement does not specify when payment is due. Which of the following is true?
   (a) Fred has no obligation to pay, because there was no "meeting of the minds" and no contract was formed
   (b) Fred must pay within 10 days of making the agreement.
   (c) Fred must pay within 10 days of accepting the keyboards.
   (d) Fred must pay within a commercially reasonable time.

4. Under the UCC statute of frauds, a contract must be signed by the __________ to count as being "in writing." Also, the __________ of the goods must be written.
   (a) plaintiff; price
   (b) plaintiff; quantity
   (c) defendant; price
   (d) defendant; quantity

5. Assume that a contract is modified. New consideration must be present for the modification to be binding if the deal is governed by which of the following?
   (a) The common law
   (b) The UCC
   (c) Both A and B
   (d) Neither A nor B

Essay Questions

1. The Massachusetts Bay Transit Authority (MBTA) awarded the Perini Corp. a large contract to rehabilitate a section of railroad tracks. The work involved undercutting the existing track, removing the ballast and foundation, rebuilding the track, and disposing of the old material. Perini solicited an offer from Atlantic Track &

Turnout Co. for Atlantic to buy whatever salvageable material Perini removed. Perini estimated the quantity of salvageable material that would be available. Atlantic offered to purchase "all available" material over the course of Perini's deal with the MBTA, and Perini accepted. But three months into the project, the MBTA ran short of money and told Perini to stop the undercutting part of the project. That was the work that made Perini its profit, so Perini requested that the MBTA terminate the agreement, which the agency did. By that point Perini had delivered to Atlantic only about 15 percent of the salvageable material that it had estimated. Atlantic sued. What kind of contract do the parties have? Who should win and why?

2. Hasbro used to manufacture a toy called "Wonder World Aquarium." The toy included a powder that, when mixed with water, formed a gel that filled a plastic aquarium. Children could then place plastic fish in the aquarium and create underwater scenes. Cloud Corporation supplied the powder to Hasbro. The toy sold poorly, and Hasbro's need for the powder diminished.

The two companies discussed changing the powder's formula. Cloud believed the conversation amounted to an indication that Hasbro would continue to buy powder, so it produced large quantities. Although it did not receive an order from Hasbro, Cloud sent an order acknowledgment for 9.5 million packets to Hasbro. Hasbro made no objection to it.

Did the order acknowledgment creat an enforceable agreement? What specific facts determine your answer?

3. Nina owns a used car lot. She signs and sends a fax to Seth, a used car wholesaler who has a huge lot of cars in the same city. The fax says, "Confirming our agrmt—I pick any 15 cars fr yr lot—30% below blue book." Seth reads the fax, laughs, and throws it away. Two weeks later, Nina arrives and demands to purchase 15 of Seth's cars. Is he obligated to sell?

4. The Brugger Corp. owned a farm, operated by Jason Weimer, who acted as the company's business agent. Tri-Circle, Inc. was a farm equipment company. On behalf of Brugger, Weimer offered to buy from Tri-Circle certain equipment for use on the farm. Tri-Circle accepted the offer, using a pre-printed form. The form included a finance charge for late payment. Weimer's offer had said nothing about finance charges, but he made no objection to the new term. Tri-Circle supplied the farm equipment but later alleged that Brugger had refused to pay for $12,000 worth of the supplies. Tri-Circle sued. In deciding whether Tri-Circle was entitled to finance charges, the court first inquired whether Brugger, Weimer, and Tri-Circle were merchants. Why did it look into that issue? *Were* they merchants?

5. ***YOU BE THE JUDGE* WRITING PROBLEM** Brewster manufactured plastic bottles. Dial made personal care products at many plants around the country, including one in Salem, Virginia. The companies agreed that Dial would purchase from Brewster all of the plastic bottles it needed for its Salem factory. Dial estimated its requirements for one year at 7,850,000 bottles, but added a clause stating that "quantities are estimated only and do not bind Dial to purchase any minimum quantity." A few months later, Dial concluded that its Salem plant was unprofitable. The company closed the factory and notified Brewster that it would buy no bottles at all. Brewster sued. Did Dial have the right to reduce its orders to zero? **Argument for Brewster:** The parties had a clear contract for a massive

number of bottles. Dial knew that this contract was extremely important to Brewster. Although Dial had some right to adjust its orders, it had no right to reduce them to zero. **Argument for Dial:** The issue is whether Dial acted in good faith. It did. The company had a legitimate reason for closing the factory—it was losing money—and with no factory it certainly did not need any bottles.

Discussion Questions

Apply the following facts to the next two questions.

The publication of the original UCC in 1952 sparked an expansion of the statute of frauds in the United States to cover sales of goods of $500 or more. At about the same time (in 1954), the British Parliament repealed its longstanding statute of frauds as applied to sales of goods. Some have argued that we should scrap UCC §2-201 on the grounds that it encourages misdealing as much as it prevents fraud. Consider the following two hypotheticals:

(In the United States) Johnny is looking at a used Chevy Tahoe. He knows that the $7,000 price is a good one, but he wants to go online and see if he can find an even better deal. In the 20 minutes he has been with the car's current owner, the owner has received three phone calls about the car. Johnny wants to make sure that no one else buys the car while he is thinking the deal over, so he makes a verbal agreement to buy the car and shakes the seller's hand. He knows that because of the statute of frauds and the fact that nothing is in writing, he does not yet have any enforceable obligation to buy the car.

(In the United Kingdom) Nigel sells used Peugeots in Liverpool. When he senses interest from customers, he aggressively badgers them until they verbally commit to buy. If the customers later get cold feet and try to back out of the deal, he holds them to the verbal contracts. Because there is no longer a UCC-style statute of frauds in Britain, the buyers are stuck.

1. Rate the degree to which you believe Johnny and Nigel acted wrongfully. Did one behave more wrongfully than the other? If so, which one, and why?

2. Do you think that the UCC statute of frauds as it currently exists is more likely to prevent fraud, or is it more likely to encourage misunderstandings and deception? Why? Overall, is it sensible to require that purchases of big-ticket items be in writing before they are final?

3. The Uniform Commercial Code was written by a group of scholars and adopted by elected state legislators. But many contracts that do not involve a sale of goods are still governed by old common-law principles that have been created by judges over a period of centuries. Who makes for better lawmakers—judges or legislators? Do you prefer the way in which common-law principles or UCC rules were created?

4. Under UCC §2-207, "added terms" in an acceptance can become part of a contract between merchants. Does this seem reasonable to you? Are businesses likely to take advantage of it?

5. This chapter revisits the idea of unconscionability. Courts will sometimes refuse to enforce deals that are, as UCC §2-302 states it, "shocking and fundamentally unfair".

Consider the following two cases. In each, an electronics store sells an HDTV with a fair market value of $600 for $1500.

(a) Sale #1 is made to Ann. She has a terrible credit score, and is willing to pay $1500 because the store offers to finance the TV, and she has no other available credit.

(b) Sale #2 is made to Franklin J. Moneypenny, a very wealthy investment banker, on Christmas Eve. He knows the price is much too high, but he is in a big hurry to finish his last minute shopping.

In both cases, the consumers paid 2.5 times the fair value of the TV. In your opinion, is either transaction unconscionable? If so, why? If not, why not?

CHAPTER 21

OWNERSHIP AND RISK

© Stas Volik/Shutterstock.com

He drove his truck fast along the rough country road, hurrying through the shadows of the Cascade Mountains, passing close to the Rogue River. The door panel, freshly painted, read "Ernest Jenkins, Cattle Buyer." Spinning the wheel hard left, he drove through an impressive gate and under a wooden sign which read "Double Q Ranch." He knew the ranch by reputation and quickly saw that it was prosperous—a good place for a man like him to do business.

He introduced himself to Kate Vandermeer, the Double Q's business manager, and expressed an interest in buying 300 head of cattle. Vandermeer and the man mounted horses and rode out to inspect the herd. Vandermeer noticed that his boots were brand new and that he rode awkwardly.

Vandermeer noticed that his boots were brand new and that he rode awkwardly.

He was satisfied with the cattle, so the two bargained, sitting on horseback and looking into the sunset. Vandermeer started at $310,000 and was surprised at how quickly they reached an agreement, at $285,000, a price she considered excellent. They agreed that Vandermeer would deliver the cattle by truck, in one week, in a nearby town. He would pay with a cashier's check and take possession of the cattle and all ownership documents, such as brand inspection certificates and veterinarian's certificates. Back at the ranch, Vandermeer offered him a drink, but he said he had to hurry to another appointment.

The next week, right on schedule, he arrived on Thursday and presented his cashier's check for the full amount. When they had transferred the livestock, Vandermeer suggested they talk over some future business, but he was again in a rush. They shook hands and parted, the man heading due east, fast.

The Double Q's bank sent the cashier's check for collection but learned early the following week that it was forged. Vandermeer called the State Police, who traced the man's movements to the state line. Three weeks later and 1,600 miles east, the FBI located

the cattle, with the prominent "QQ" brand, in stockyards in Omaha. Ned Munson had purchased the cattle from the man for $225,000, which he considered a bargain. He had paid with a cashier's check. Ernest Jenkins, of course, had disappeared—literally. The truck's freshly painted door now read, "Ted J. Pringle, Grain Merchant," and it was parked a long, long way from Omaha.

Legal Interest

Who owns the cows? The Double Q wanted its cattle back or $285,000. If Munson was foolish enough to pay money to a thief, that wasn't the ranch's problem. But Ned Munson claimed the cows were his. He had paid a fair price to a man who appeared to own them. If Vandermeer was so foolish as to give up the cattle to a con artist, let the ranch suffer the consequences. The Double Q sued. Both parties to this lawsuit are unhappy, but fortunately for us, they have illustrated the theme for our chapter: When two parties claim a conflicting legal interest in particular goods, *who wins?* Who obtains the law's protection? These are disputes over *conflicting interests in goods.*

An interest is a legal right in something. More than one party can have an interest in particular goods. Suppose you lease a new car from a dealer, agreeing to pay $400 per month for three years. Several parties will have legal interests in the car. The dealer still *owns* the car—interest number one. At the end of three years, the dealer gets it back. For three years, you have the *use* of the car—interest number two. You may use the car for all normal purposes, and you are obligated to make monthly payments. Your payments go to a finance agency, which has made an arrangement with the dealer to obtain the right to your $400 monthly payment. The finance agency has a *security interest* in the car—interest number three. If you fail to pay on time, the finance company has the right to repossess your car. If you take the car to a garage for maintenance, the garage has *temporary possession* of the car—interest number four. The garage has the right to keep the car locked up overnight, to work on it, and to test-drive it. Sometimes legal interests clash, and it is those conflicts we look at here.

Often the parties will claim ownership, each arguing that his interest is stronger than the other's. But in this chapter, we also consider cases where each party argues that the *other* one owns the goods. Suppose a seller manufactures products for a buyer, but while the goods are being shipped, they are destroyed in a fire. The seller may argue that it no longer owned the goods, and the fire is the buyer's misfortune. But the buyer will claim it had not yet acquired the items.

In other cases, a *third party* will be involved. You pay $30,000 cash to buy a new car and expect to pick it up in three days. But the day before you arrive, the dealer's bank seizes all of the cars on the lot, claiming the dealer has defaulted on loans. Now the fight over legal interest is between you and the bank, with the dealer a relatively passive observer.

In the cattle case, three parties had a legal interest in the goods. The Double Q ranch originally had valid **title** to the cattle, meaning the normal rights of ownership. Ernest Jenkins, the con artist, acquired a lesser interest. His contract with Double Q was fraudulent because Jenkins intended to cheat the ranch. Nonetheless, he did have an agreement. He obtained **voidable title**, meaning limited rights in the goods, inferior to those of the owner.[1] Finally, Ned Munson makes a claim to the cattle based on his payment and his possession of the cows and all documents.

Voidable title
Limited rights in goods, inferior to those of the owner.

The court will use various sections of the Uniform Commercial Code (UCC) to determine who keeps the cows and who ultimately bears the loss. Ned Munson should

[1]We discuss voidability in detail in Chapter 14, on capacity and consent.

win the cattle. He was acting in good faith and a commercially reasonable manner when he bought the cows from a man who appeared to be a lawful cattle buyer. The Double Q must bear the loss. If, however, the Double Q can convince a court that Munson acted irresponsibly because he had specific grounds for suspecting Jenkins, the court might order Munson to pay for the cattle.[2]

Ethics As we look at this issue and others like it, ask yourself whether the UCC rules and the court decisions accomplish two sensible goals: (1) to be fair to innocent parties and (2) to encourage reasonable business practices. Both Munson and the Double Q were innocent parties. Jenkins was the bad guy. Why let Munson keep the livestock? Because he probably did all that a reasonable businessperson should do in buying cattle. He paid a fair (though low) price to a man who had all the normal ownership documents. The law *could* place a greater burden on Munson and require, for example, that he investigate Jenkins's background. The law *could* force Munson to thoroughly check the history of the cattle and find out how Jenkins acquired them. But such rules would hogtie the cattle industry. Most sales are legitimate; cattle ranchers and buyers must be able to buy and sell quickly, responding to market conditions and opportunities for profit.

Notice that in this case and most others, the UCC focuses on basic fairness and sensible business practices. Munson wins because he acted reasonably and in good faith, not simply because he happens to hold certain certificates to the animals. The Code's authors have labored to get away from legal formalities and give results that make sense.

Identification, Title, and Insurable Interest

Historically, courts settled disputes about legal interest by looking at one thing: title. But the drafters of the UCC concluded that "title" was too abstract an answer for the assorted practical questions that arose. It sometimes could be hard to prove exactly who did have title, and it made no sense to settle a wide variety of business problems with one legal idea. Today, title is only one of several issues that a court will use to resolve conflicting interests in goods. *Identification* and *insurable interest* have become more important, and title has diminished in significance. We can begin to understand all three doctrines if we examine how title passes from seller to buyer.

Existence and Identification

Title in goods can pass from one person to another only if the goods exist and have been identified to the contract.

Existence

Goods must exist before title can pass.[3] Although most goods do exist when people buy and sell them, some have not yet come into being, such as crops to be grown later or goods that have not yet been manufactured. A farmer may contract to sell corn even before it is planted, but title to the corn cannot pass until it actually exists.

---

[2]For a cattle case that raises these and other issues, see *Rudiger Charolais Ranches v. Van De Graaf Ranches*, 994 F.2d 670, 1993 U.S. App. LEXIS 12412 (9th Cir. 1993).
[3]UCC §2-105(2).

Identification

Goods must be identified to the contract before title can pass.[4] This means that the parties must have designated the specific goods being sold. Often, identification is obvious. If Dealer agrees to sell to Buyer a 60-foot yacht with identification number AKX472, the parties have identified the goods. But suppose Paintco agrees to sell Brushworks 1,000 gallons of white base paint at a specified price. Paintco has 25,000 gallons in its warehouse. Title cannot pass until Paintco identifies the specific gallons that will go to Brushworks.

The parties may agree in their contract how and when they will identify the goods.[5] They are free to identify them to the contract in any way they want. Paintco and Brushworks might agree, for example, that within one week of signing the sales agreement, Paintco will mark appropriate gallons. If the gallons are stored 50 to a crate, then Paintco will have a worker stick a "Brushworks" label on 20 crates. Once the label is on, the goods are identified to the contract.

If the parties do not specify any particular method, identification will occur according to these rules:

- Identification occurs when the parties enter into a contract if the agreement describes specific goods that already exist. If the Dealer agrees to sell a yacht and the parties include the ID number in their contract, the goods are identified (even though the parties never use the term "identify").
- For unborn animals, identification generally takes place when they are conceived; for crops, identification normally happens when they are planted.
- For other goods, identification occurs when the seller marks, ships, or in some other way indicates the *exact* goods that are going to the buyer.[6]

EXAM *Strategy*

Question: Arielle, an artist, has 25 hand-painted room screens in her studio. She contracts to sell five of them to Retailer for $5,000 each. The contract allows Arielle to choose which five she will sell. Arielle moves five screens from her studio to a warehouse, but a week later, a fire destroys the building and its contents. Two insurance companies dispute whether title to the screens has passed to Retailer. The warehouse insurer claims the goods were identified and title passed; Retailer's insurer says the goods were not identified and title never passed. The contract says nothing about identification. Have the goods been identified?

Strategy: Title cannot pass until the goods have been identified to the contract. Identification can occur in three ways: the parties describe specific goods that already exist; animals are conceived or crops planted; or the seller marks, ships, or otherwise indicates which are going to the buyer. Did any of those things happen?

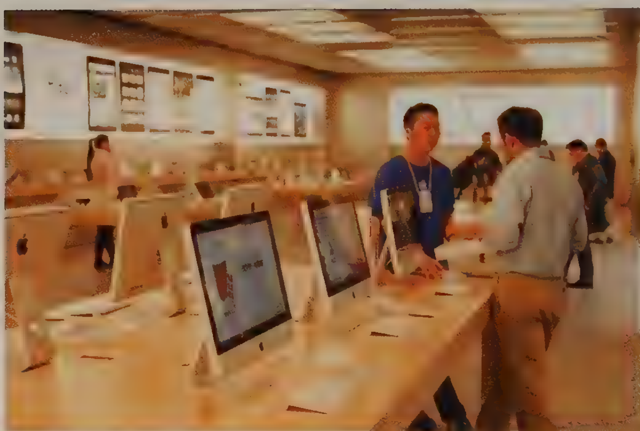
---

[4]UCC §2-401(1).
[5]UCC §2-501(1).
[6]UCC §2-501.

Result: The parties never described the goods. The goods are neither animals nor crops. However, when Arielle moved five of the screens to the warehouse, she "indicated which goods were going to the buyer." The goods were identified.

Passing of Title

Once goods exist and are identified to the contract, ownership can pass from one person to another. **Title may pass in any manner on which the parties agree (UCC §2-401).** Once again, the Code allows the parties to control their affairs with commonsense decisions. The parties can agree, for example, that title passes when the goods leave the manufacturer's factory, or when they reach the shipper who will transport them, or at any other time and place. If the parties do not agree on passing title, §2-401 decides. There are three possibilities:



© pcruciatti / Shutterstock.com

Where the goods were identified will determine whether sales tax is due.

- *When the goods are being moved,* title passes to the buyer when the seller completes whatever transportation it is obligated to do. Suppose the Seller is in Milwaukee and the Buyer is in Honolulu. The contract requires the Seller to deliver the goods to a ship in San Francisco. Title passes when the Seller completes its last *contractually required* step. In this example, that happens when the goods reach the ship in San Francisco.
- *When the goods are* not *being moved and a contract calls for delivery of ownership documents,* title passes when the seller delivers these documents to the buyer. Suppose Seller, located in Louisville, has manufactured 5,000 baseball bats, which are stored in a warehouse in San Diego. Under the terms of their contract, Buyer will take possession of the bats at the warehouse. When Seller gives Buyer ownership documents, title passes.
- *When the goods are* not *being moved and the contract does* not *call for delivery of ownership documents,* title passes when the parties form the contract. For example, if the Buyer owns the warehouse where the bats are stored, Buyer needs no documents to take possession; title passes when the parties reach agreement.

The following case raises issues of identification and title.

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Section
1. In which state were goods identified to the contracts?	UCC §2-501(1): The parties may agree in their contract how and when they will identify the goods; otherwise, they are identified as specified in §2-501 (a),(b) or (c).
2. In which state did title pass?	UCC §2-402: Title may pass in any manner on which the parties agree; otherwise, it passes as specified in §2-401.

Circuit City Stores, Inc. v. Commissioner of Revenue

439 Mass. 629, 790 N.E.2d 636
Supreme Judicial Court of Massachusetts, 2003

Facts: Circuit City, which sold electronic goods, permitted customers to pay for goods at one store but pick them up at another. Because Massachusetts imposed a 5 percent sales tax on all goods sold in the state, but neighboring New Hampshire had no sales tax, many Massachusetts customers chose to save the 5 percent by collecting their goods at a New Hampshire store.

For these "alternative location" sales, the customer receipt indicated where the item had been bought and where it would be picked up. The receipt also said, "reserved," meaning simply that in the collection store, one less item was available to other customers. Until the merchandise was picked up, the customer could demand a refund or request to collect the item in the store where she had paid for it.

The Massachusetts Commissioner of Revenue demanded sales tax on the "alternative location" sales, claiming that it was a sale in Massachusetts because that is where title passed. Circuit City claimed that it owed no sales tax because (1) the goods were not identified to the contract until a customer picked them up in New Hampshire, and (2) title passed in New Hampshire. The case reached the highest court in Massachusetts.

Issue: ***Where were the goods identified to the contract? Where did title to the goods pass?***

Excerpts from Justice Greaney's Decision: We discern no explicit agreement between the parties concerning passage of title. Circuit City claims that testimony at the hearing with respect to its handling of alternative location sales (i.e., that Circuit City does not book the sale, credit the sale, or consider the sale to have occurred until the product is physically released to the customer) indicates an understanding between the parties that the transaction that takes place in Massachusetts constitutes, not a concluded sale, but only an order for merchandise. We disagree. The events transpiring at the cash register in Massachusetts reflect a significant degree of understanding between Circuit City and its customers that a sale, and not a mere deposit on an order, has occurred. The customer sales receipt, although not a document of title, contains a description of the item or items purchased, as well as the time and date of the sale. The record suggests that, in an ordinary case, any period of warranty relevant to the purchase begins as of this date. The purchase price reflected on the receipt represents full consideration paid for the merchandise. From the vantage point of the customer, the sales receipt represents proof of his or her right to the purchased merchandise. The fact the sale is credited to the Massachusetts store, and the commission accorded the sales associate in Massachusetts, in our view, is indicative of an intent on Circuit City's part that more than an order for merchandise takes place in Massachusetts.

As under the UCC, the inquiry centers, not on physical transfer of the goods, but on whether goods are placed within the actual or constructive possession of another. Here, Circuit City performed its obligations with respect to delivery when the sale was entered as an alternative location sale into Circuit City's system and the purchased merchandise was "reserved" for the customer at the designated location. It was the customer from that point on who assumed responsibility for acquiring physical receipt of the purchased merchandise.

It is clear that, under the UCC, no title can pass under a contract for sale "prior to their identification to the contract." G.L. c. 106, §2-401(1). This was also true in common law. We reject, however, Circuit City's argument that "identification to the contract" cannot be made in alternative location sales prior to the time that the merchandise is physically removed from inventory and the serial number is scanned in the New Hampshire store. The reserve notation marked on the customer sales receipt for the purchased merchandise sufficiently reflects its status of being set aside, or identified, to that particular transaction. The Circuit City district manager described the reserving system as moving merchandise to a "phantom" location to await customer pick-up, and, indeed, the situation presented to the customer is just as though the merchandise actually is set aside and waiting for the customer at the pick-up counter. Because customers do not choose items in a store such as Circuit City by a particular serial number, but only by make and model, identification by serial number is unnecessary to the sale.

Affirmed.

Insurable Interest

Closely related to identification and title is the idea of insurable interest. Anyone buying or selling expensive goods should make certain that the goods are insured. There are some limits, though, on who may insure goods, and when. As we saw in Chapter 13, a party may insure something such as property or a a human life only when she has a legitimate interest in it. If the person buying the policy lacks a real interest in the thing insured, the law regards the policy as a gambling agreement and considers it void.

When does someone have an insurable interest in goods? The UCC gives one answer for buyers and one for sellers. **A buyer obtains an insurable interest when the goods are identified to the contract (UCC §2-501).** Suppose that in January, Grain Broker contracts with Farmer to buy his entire wheat crop. Neither party mentions "identification." In January, the crop is not identified and Broker has no insurable interest. In May, after weeks of breaking the soil, Farmer plants his wheat crop. Once he has planted it, the goods are identified. The Broker now has an insurable interest and purchases insurance. In July, a drought destroys the crop, and the Broker never gets one grain of wheat. The Broker need not worry: his insurance policy will cover his losses.

The seller's insurable interest is different. **The seller retains an insurable interest in goods as long as she has either title to the goods or a security interest in them (UCC §2-501).** "Security interest" refers to cases in which the buyer still owes money for the goods and the seller can repossess the goods if payment is not made. Suppose Flyola Manufacturing sells a small aircraft to WingIt, a dealer, for $300,000. WingIt pays $30,000 cash and agrees to pay interest on the balance until it sells the plane. Flyola has an insurable interest even while the aircraft is in WingIt's showroom and may purchase insurance anytime until WingIt pays off the last dime.

And so, a seller and buyer can have an insurable interest in the same goods simultaneously. Suppose the heavy-metal band Flulike Symptoms hires Inkem Corp., in Minneapolis, to make 25,000 T-shirts with the band's logo, for sale at rock concerts. The parties agree that the T-shirts are identified as soon as the logo is printed, and that title will pass when Inkem delivers the T-shirts to the office of the Symptoms' manager in Kansas City. Inkem obviously has an insurable interest while the company is making the T-shirts and continues to have an interest until it delivers the T-shirts in Kansas City. But the Flulike Symptoms' insurable interest arises the moment their logo is stamped on each shirt, so the Symptoms could insure the goods while they are still stored in Inkem's factory. Why would the Symptoms spend hard-earned cash to insure goods they do not have? They may be uncertain that Inkem has obtained proper insurance.

In the following case, a car accident leads several insurance companies to dispute who owned the damaged auto. Each company wants to claim that the car belonged to—someone *else*.

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Section
1. Which party had title to the car?	UCC §2-401: Title to goods may pass in any manner on which the parties agree.
2. Did the seller have an insurable interest in the car?	UCC §2-501: The seller retains an insurable interest in the goods as long as it holds title to or a security interest in them.

Valley Forge Insurance Co. v. Great American Insurance Co.

1995 Ohio App. LEXIS 3939
Ohio Court of Appeals, 1995

Facts: On a Friday afternoon, Karl and Linda Kennedy went to John Nolan Ford to buy a new Mustang. The parties signed all necessary documents, including a New Vehicle Buyer's Order, an Agreement to Provide Insurance, and credit applications. The Kennedys made a down payment, but they could not arrange financing before the dealership closed. John Nolan Ford determined that the Kennedys were creditworthy and allowed them to take the car home for the weekend. That evening, Karl Kennedy permitted his brother-in-law, Cella, to take the car for a drive, along with a passenger named Campbell. Cella wrecked the car, injuring his passenger. Campbell sued, and the question was which insurance company was liable: John Nolan Ford's insurer (Milwaukee Mutual), Cella's insurer (Valley Forge), or Kennedy's insurer (Great American). The trial court ruled that title had never passed to Kennedy and found Milwaukee Mutual liable. The insurance company appealed.

Issue: ***Had title passed to Kennedy at the time of the accident?***

Excerpts from the *Per Curiam* Decision: Milwaukee argues that the risk of loss and insurable interest had passed because the car had been delivered. Further, Milwaukee states that the Kennedys explicitly agreed to provide insurance. Great American counters that the parties had "otherwise explicitly agreed" in the New Vehicle Buyer's Order that any interest in the car would not pass until "either the full purchase price is paid in cash or a satisfactory deferred payment agreement is executed by the parties[.]" No financing had been arranged at the time of the accident.

Two terms of the New Vehicle Buyer's Order apply to the situation at bar. Under the "Agreement" provision, the contract states that "it is expressly agreed that the purchaser acquires no right, title or interest in or to the property which he agrees to purchase hereunder until such property is delivered to him and either the full purchase price is paid in cash or a satisfactory deferred payment agreement is executed by the parties hereto[.]"

Milwaukee also argues that the Kennedys explicitly agreed to provide insurance by signing the "Agreement to Provide Insurance." While the agreement does state that the Kennedys agreed to provide insurance, it is not clear when the Kennedys were to obtain the insurance. In fact, because the agreement refers to an "instalment [sic] contract," it is possible that the Kennedys were to provide insurance once a financing agreement was reached. In light of the fact that the agreement is ambiguous, we construe the contract strictly against the drafter and hold that any agreement to provide insurance was to take effect after financing was obtained.

We hold that because the parties had otherwise agreed that interest in the car, including insurable interest, would not pass until the financing was complete, John Nolan Ford still had the risk of loss and the insurable interest when the accident occurred. [Affirmed.]

Imperfect Title

Bona Fide Purchaser

Some people are sleazy, and sales law must accommodate that reality. In the chapter opener we saw a scam artist purchase cattle from a respectable ranch and sell them to an honest dealer. The bad guy skipped town, leaving a dispute between two innocent parties. Either the original owner (the ranch) or the buyer (the cattle dealer) must bear the loss. Who loses?

THE QUESTION: WHO MUST SUFFER THE LOSS?

Owner →	**Bad Guy** →	**Buyer**
(has valid title)	(obtains goods from Owner and sells)	(buys goods from Bad Guy)

Let's consider a new example, from the beginning. First, we need to know what kind of title Bad Guy obtains: is it void or voidable? The key is this: did Bad Guy *take* the item against the will of the owner, or did he fraudulently *trick* the owner into voluntarily handing the item to him?

Abe steals Marvin's BMW in the middle of the night and promptly sells it to Elaine for $35,000 cash. Two weeks later, the police locate the car. When Abe stole it, he obtained void title, which is no title at all. When Bad Guy sells the goods to Buyer, she also gets *no title at all.* Elaine must return the car to Marvin and suffer the $35,000 loss for Abe's theft. This policy makes sense because Marvin has done nothing wrong. If the law permitted Elaine to get valid title, it would encourage theft.

If Bad Guy *attempts to purchase* the goods from Owner using fraud or deception, he obtains **voidable** title, meaning limited rights in the goods, inferior to those of the owner. The owner should be able to recover the goods from Bad Guy (if he can be found), but not from anyone else who ends up with them. Suppose Connie agrees to buy Mark's Jeep. She gives him a check for $20,000 and he signs the vehicle over to her. Connie knows her check will bounce; she has used fraud to obtain the car. As a result, Connie obtains only voidable title. If Mark learns of the deception before Connie sells the car to someone else, he will get his Jeep back.

Unfortunately, Connie is slippery, not stupid. She quickly sells the Jeep to Seth for cash. By the time Connie's check bounces, she is long gone, and Seth has the car. Who keeps the Jeep? Seth wins the car if he is a bona fide purchaser. **A person with voidable title has power to transfer valid title for value to a good faith purchaser, generally called a *bona fide purchaser* or *BFP*.**[7]

Seth can prove that he is a bona fide purchaser by showing two things:

- That he gave value for the goods, *and*
- That he acted in good faith.

It is generally easy for purchasers to show that they gave value. The buyer could give cash or a check or could agree to extinguish a debt; that is, to forgive some money that Bad Guy owed. The real issue becomes whether the buyer acted in good faith. If Seth paid a reasonable purchase price and Connie showed him convincing identification and signed over to him all purchase documents, Seth acted in good faith. He keeps the Jeep and Mark loses.

On the other hand, suppose Seth knows the brand-new Jeep is worth more than $28,000. Connie seems in a frantic hurry to sell the car. She cannot produce the car's registration but promises to send it within three days. Connie's conduct, together with the $8,000 discount, would make a reasonable person suspicious. Seth is not acting in good faith and therefore is not a bona fide purchaser. Mark receives the car back, and Seth pays dearly for his automotive lust.

In the following case, German soldiers confiscated property during World War II. What kind of title did they obtain? Could ownership of looted art be passed on to someone else?

[7]UCC §2-403(1).

Bakalar v. Vavra

619 F.3d 136
Second Circuit Court of Appeals, 2010

Facts: Franz Grunbaum was a Jewish man who lived in Vienna before World War II. In 1938, the Nazis imprisoned him in the Dachau concentration camp, where he died three years later. The Nazis also confiscated his property, which included a valuable drawing.

This drawing changed hands several times until it was eventually sold to David Bakalar in 1963. Years later, Franz Grumbaum's heirs, Milos Vavra and Leon Fischer, argued that they were the true owners of the picture. At this point, it was was worth an estimated $675,000. The trial court disagreed, finding that Bakalar was the drawing's owner. Vavra and Fischer appealed.

Issue: ***Did Bakalar own the painting?***

Excerpts from Judge Korman's Decision: [I]n New York, a thief cannot pass good title. This means that, under New York law, absent other considerations, an artwork stolen during World War II still belongs to the original owner, even if there have been subsequent buyers and even if each of those buyers was completely unaware that she was buying stolen goods. The manner in which the rule is applied reflects an overarching concern that New York not become a marketplace for stolen goods. New York case law has long protected the right of the owner whose property has been stolen to recover that property, even if it is in the possession of a good-faith purchaser for value.

Until demand is made, the statute of limitations does not begin to run.

Consequently, if the Drawing was stolen or otherwise unlawfully taken from Grunbaum, that circumstance would affect the validity of Bakalar's title. Indeed, if Vavra and Fischer have made a showing that they have a claim to the Drawing, New York law places the burden on Bakalar, the current possessor, to prove that the Drawing was not stolen.

Accordingly, we vacate the judgment of the district court and remand the case.

EXAM *Strategy*

Question: In this chapter's introduction, a con artist uses a forged check to buy cattle. The issue raised is who must bear the loss—the original owner or the buyer. As presented, Vandermeer (the original owner) would lose the case. Add facts to the story such that Vandermeer *wins* the case.

Strategy: If the con artist had *stolen* the cattle, he could convey no title, and Vandermeer would win. However, the bad guy in fact used a forged check, so he obtained *voidable* title. A buyer is a BFP, and receives good title from such a seller, if the buyer gives value and acts in good faith. We know that Munson gave value. Focus on the issue of good faith.

Result: Facts such as these would disqualify Munson as a BFP: "Munson knew that the market value of the cattle was about $275,000. The 'merchant' wanted to sell him the cows instantly and was willing to give an enormous discount, down to $225,000. In a liquid market, with plenty of buyers, there was no legitimate business reason for such a discount." Under those facts, Munson should have been suspicious, and is not a BFP.

Entrustment

Your old Steinway grand piano needs a complete rebuilding. You hire Fred Showpan, Inc., a company that repairs and sells instruments. Showpan hauls your piano away and promises to return it in perfect shape. Two months later, you are horrified to spot Showpan's showroom boarded up and pasted with bankruptcy notices. Worse still, you learn that Fred sold your beloved instrument to a customer, Frankie List. When you track down List, he claims he paid $18,000 for the piano and likes it just fine. Is he entitled to keep it?

Quite likely he is. Section 2-403(1), the BFP provision we just discussed, would not apply because Showpan did not *purchase* the piano from you. But §2-403(2) does apply. This is the "entrustment" section, and it covers cases in which the owner of goods voluntarily *leaves* them with a merchant, who then sells the goods without permission. According to **UCC §2-403(2), any entrusting to a merchant who deals in goods of that kind gives him power to transfer all rights of the entruster to a buyer in the ordinary course of business (BIOC)**. There are several important ideas in this section:

Buyer in the ordinary course of business (BIOC)
One who acts in good faith, without knowing that the sale violates the owner's rights.

Entrusting means delivering goods to a merchant or permitting the merchant to retain them.[8] In the piano example, you clearly entrusted goods to a merchant. If you buy a used car from Fast Eddie's and then leave it there for a week while you obtain insurance, you have entrusted it to Eddie.

Deals in Goods of That Kind

The purpose of the section is to protect innocent buyers who enter a store, see the goods they expect to find, and purchase something, having no idea that the storekeeper is illegally selling the property of others. Shoppers should not have to demand proof of title to everything in the store. Further, if someone has to bear the risk, let it be the person who has entrusted her goods; she is in the best position to investigate the merchant's integrity. But this protection does not extend to a buyer who arrives at a vacuum cleaner store and buys an $80,000 mobile home parked in the lot.

In the Ordinary Course of Business

A **buyer in the ordinary course of business (BIOC)** is one who acts in good faith, without knowing that the sale violates the owner's rights. If Frank List buys your piano assuming that Showpan owns it, he has acted in good faith. If Frank was your neighbor, recognized your instrument, and bought it anyway, he is not buying in the ordinary course of business and must hand over the piano.

Of course, a merchant who violates the owner's rights is liable to that owner. If Showpan were still in business when you discovered your loss, you could sue and recover the value of the piano. The problems arise when the merchant is bankrupt or otherwise unable to reimburse the owner.

EXAM *Strategy*

Question: Pamela went to University Used Auto and asked if the company had a Lincoln Navigator. University had no such SUV, but a sales representative told Pamela that he would find her one. The representative contacted Royal auto dealership, which sold new and used cars. Royal agreed to supply University with a car, on the understanding that an interested buyer would pay *Royal*, which in turn would give a finder's fee to University. The companies had worked this way in the past. Royal delivered a Navigator as requested. But when the used car company sold

[8] For a discussion of who is and who is not a merchant, see Chapter 20.

the vehicle to Pamela, the company instructed her to pay University directly, which she did. Royal sued Pamela, seeking the car, and the court had to determine whether there had been an entrustment. Royal argued that it never entrusted the Navigator to University because the parties agreed to require payment to Royal.

Strategy: Entrustment means delivering goods to a merchant who routinely deals in such articles.

Result: Royal delivered a used car to a used car dealer. That is entrustment. It is true that both dealers understood that Pamela was to pay Royal—but she did not know that. Entrustment protects good faith buyers, and Pamela wins.

© Stockbyte/Getty Images

Entrustment protects good faith buyers—but was there entrustment?

In the following case, we definitely have an entrustment. Do we have a BIOC?

LINDHOLM V. BRANT

283 Conn. 65, 925 A.2d 1048
Supreme Court of Connecticut, 2007

Facts: Kerstin Lindholm and her husband, Magnus, were art collectors. For over 30 years, an art dealer named Anders Malmberg sold paintings for the couple and bought others for them, including an Andy Warhol picture called *Red Elvis*. In 1989, Malmberg arranged for Kerstin Lindholm to loan Red Elvis to the Museum of Modern Art in New York, as part of a major exhibition on Warhol. The exhibit also included paintings owned by Peter Brant. Brant saw *Red Elvis* at the show, was interested in the painting, and learned that Kerstin was the owner, represented by Malmberg.

A decade later, another dealer, Stellan Holm, told Brant that Malmberg had purchased *Red Elvis* and might sell it. In fact, the Lindholms still owned the picture.

Brant orally agreed to pay Malmberg $2.9 million for *Red Elvis*. With nothing put in writing, he made a $900,000 deposit. Then Brant learned that the Lindholms were involved in a bitter divorce. Concerned that Magnus Lindholm might make claims to the picture, he hired a lawyer to investigate. The lawyer reported finding no liens or art-loss claims but told Brant that this did not prove that Malmberg owned the painting.

Brant asked Malmberg for documents proving that Kerstin had sold him the picture, but Malmberg refused, pointing out that confidentiality was the norm in the art world. Eventually, after Malmberg arranged loans of *Red Elvis* to the Guggenheim Museum and yet another exhibition, in Denmark, Brant paid the remaining $2 million and received the picture. Meanwhile Kirsten, assuming she owned *Red Elvis*, arranged to sell to a Japanese buyer for $4.6 million, only to learn that Brant now claimed to own it.

Kerstin sued. The trial court ruled that Brant was a BIOC, entitled to keep the painting. Kerstin appealed, and the case reached Connecticut's highest court.

Issue: ***Was Brant a BIOC?***

Excerpts from Justice Sullivan's Decision: As we have indicated, the defendant presented expert testimony that the vast majority of art transactions, in which the buyer has no reason for concern about the seller's ability to convey good title, are "completed on a handshake and an exchange of an invoice." It is not customary for sophisticated buyers and sellers to obtain a signed invoice from the original seller to the dealer prior to a transaction, nor is it an ordinary or customary practice to request the underlying invoice or corroborating information as to a dealer's authority to convey title.

We are compelled to conclude, however, that the sale from Malmberg to the defendant was unlike the vast majority of art transactions. Because of his concern that Magnus Lindholm might make a claim to *Red Elvis*, the defendant took the extraordinary step of hiring counsel to conduct an investigation and to negotiate a formal contract of sale on his behalf. In addition, during the course of the investigation, the defendant's counsel conducted both a lien search and an Art Loss Register search that revealed no competing claims to *Red Elvis*. Although the defendant was cautioned that the searches provided only minimal assurance that Malmberg had good title to the painting, such searches typically are not conducted during the course of a normal art transaction and, therefore, provided the defendant with at least some assurance that Lindholm had no claims to the painting.

Both Malmberg and Holm had reputations as honest, reliable, and trustworthy art dealers. The defendant had little reason to doubt Malmberg's claim that he was the owner of *Red Elvis*, and any doubts that he did have reasonably were allayed by relying on Holm's assurances that Malmberg had bought the painting from the plaintiff because she needed money due to her divorce. The defendant established that it is customary to rely on the assurances of respected art dealers when conducting a transaction, and the defendant had no reason to depart from this practice.

The defendant's concerns were further allayed when Malmberg delivered *Red Elvis* to a bonded warehouse in Denmark, the delivery location the parties had agreed to in the contract of sale. At the time of the sale, the painting was on loan to the Guggenheim, whose policy it was to release a painting on loan only to the true owner, or to someone the true owner had authorized to take possession.

The judgment is affirmed.

Creditor's Rights

In the "Entrustment" section of this chapter, we considered the rights of the *owner* of goods and how her interests might conflict with those of a merchant and a buyer. A related issue concerns a *creditor;* that is, someone with a financial stake in the goods that the merchant is selling. Suppose a merchant borrows money from a finance company to buy fish tanks with built-in televisions to entertain bored guppies. The finance company is now the merchant's creditor. The merchant agrees that when she sells any of the TV tanks, she will pay a percentage of the proceeds to the finance company. But if she sells tanks to a buyer without giving one cent to her creditor, does the buyer get to keep the fish tanks? To determine an answer, we need to know whether the sale was made in the ordinary course of business.

Yoyo grabs the money and sails into the horizon, leaving the bank in his wake.

Ordinary Sales

Article 9 of the UCC controls the rights of secured parties. We look closely at it in Chapter 24. Briefly stated, **UCC §9-320 generally permits a buyer in the ordinary course of business to take goods free and clear of a security interest**. Suppose the Nickel & Dime Bank loans Yoyo's Yachts $100,000 to purchase two yachts wholesale. The yachts arrive at Yoyo's and remain in the showroom, but Nickel & Dime retains a security interest in both. If Yoyo fails to repay its loan, the bank is entitled to repossess the yachts. Further, Yoyo is obligated to notify the bank immediately of a sale and hold the money until the bank gets its share. Unaware of Nickel & Dime's security interest, Liz pays $80,000 for one of the yachts. Yoyo grabs the money and sails into the horizon, leaving the bank in his wake. May Nickel & Dime take Liz's new yacht? No, because Liz was a buyer in the ordinary course, she takes the yacht free of any security interest.

Naturally, there are exceptions, and you will *not* want to miss the full story in Chapter 24, on secured transactions. But for present purposes, the ordinary customer who purchases goods from a store will keep them regardless of any problems the store has with its creditors. The policy behind the law is obvious: to enable consumers to buy and merchants to sell. If you had to trace the chain of title before you bought a pair of sneakers at Discount City, commerce would grind to a halt and many of us would be barefoot. Section 9-320 keeps things flowing along.

Returnable Goods

Sometimes the seller will allow the buyer to return goods even when he has no complaints about their quality. This, too, can create a problem for creditors. A bank may extend a loan to a business based on the inventory. The bank is willing to lend money because it can seize the goods if the merchant fails to pay on time. But what if the merchant *does not own* some of the goods because he intends to return them to the original owner? If the merchant fails to pay his loan, who gets the goods—the creditor (bank) or the owner of the goods? The UCC considers two types of contract that permit a buyer to return goods.

Sale on Approval

If a buyer takes goods intending to use them herself but has the right to return the goods to the seller, it is a **"sale on approval."** Max manufactures bar code readers, the machines that scan bar codes at checkout lines. He wants to sell half a dozen to Pinky's store, but Pinky isn't sure the machines are worth the price. To encourage Pinky, Max allows her to take the machines and try them out. At the end of 60 days, she may return them or pay full price. There really is no *sale* until Pinky has formally accepted the goods.

Sale on approval
Occurs when a buyer takes goods intending to use them herself but has the right to return them.

Under UCC §2-326(2), in a sale on approval, the goods *are not* subject to the buyer's creditors until the buyer accepts them. Suppose Pinky has borrowed $200,000 from the bank and has given a security interest "in all goods in the store now or in the future." The bar code machines are "goods in the store," and if Pinky fails to pay her loans, the bank will try to seize the equipment. But this is a sale on approval, and the bank has no right to Max's machines.

A finance company will often extend credit based on a merchant's inventory. A creditor considering such a loan must determine what goods, if any, are "sale on approval" since those goods give the creditor no security.

Sale or Return

If a buyer takes goods intending to *resell* them but has the right to return the goods to the seller, it is a **"sale or return."** This is generally the same as a *consignment*. Yvonne runs a used car lot. Trent offers to sell Yvonne his extremely used car for $1,000, but it is in such poor shape Yvonne doubts there's a teenager in the county dumb enough to buy it. "My sister's boyfriend is real dumb," Trent suggests hopefully. Yvonne offers instead to place the car on

Sale or return
Occurs when a buyer takes goods intending to *resell* them but has the right to return them to the seller.

her lot and try to sell it. She will pay Trent nothing upfront for the car and will keep 20 percent of the price if she can sell it.

Under **UCC §2-326, in a sale or return, the goods are subject to the claims of the buyer's creditors**. Suppose Yvonne fails to pay back some loans. Her creditors will instantly round up Trent's car, and he will never get a dime.[9]

Risk of Loss

Many of the issues we have looked at thus far involve someone doing something wrong, often a scoundrel selling goods that he never owned. Now we turn to cases where there may be no wrongdoer.

Accidents hurt businesses. When goods are damaged, the law may again need to decide whether it is the seller or buyer who must suffer the loss. In the cases we have seen thus far, the parties were arguing, "It's mine!"—"Like heck it is, it's *mine!*" In risk of loss cases, the parties are generally shouting, "It was yours!"—"No way, dude, it was *yours!*"

Athena, a seafood wholesaler, is gearing up for the Super Bowl, which will bring 150,000 hungry visitors to her city for a week of eating and gabbing. Athena orders 25,000 lobsters from Poseidon's Fishfoods, 500 miles distant, and simultaneously contracts with a dozen local restaurants to resell them. Poseidon loads the lobsters, still kicking, into refrigerated railcars owned by Demeter Trucking. But halfway to the city, the train collides with a prison van. None of the convicts escape, but the lobsters do, hurtling into swamps from which they are never recaptured. Athena loses all of her profits and sues. As luck would have it, Demeter Trucking had foolishly let its insurance lapse. Poseidon claims the goods were out of its hands. Who loses?

The common law answered this problem by looking at which party had title to the goods at the time of loss. But the Uniform Commercial Code again rejects the old concept, striving once more for a practical solution. The UCC permits the parties to agree on who bears the risk of loss. **UCC §2-509(4) states that the parties may allocate the risk of loss any way they wish.**

Often the parties will do just that, avoiding arguments and litigation in the event of an accident. As part of her agreement with Poseidon, Athena should have included a one-sentence clause, such as "Seller bears all risk of loss until the lobsters are delivered to Athena's warehouse." So long as the parties make their risk allocation clear, the Code will enforce their terms.

Shipping Terms

The parties can quickly and easily allocate the risk of loss by using common shipping terms that the Code defines. FOB means free on board; FAS indicates free alongside a ship; and CIF stands for cost, insurance, and freight. By combining these designations with other terms, the parties can specify risk in a few words:

- ***FOB place of shipment.*** The seller is obligated to put the goods into the possession of the carrier at the place named. The seller bears the expense and risk until they are in the carrier's possession. From that moment onward, the buyer bears the risk.
- ***FOB place of destination.*** The seller must deliver the goods at the place named and bears the expense *and risk* of shipping.

[9]**Article 2 Alert.** Section 2-326 previously permitted a consignor to protect her goods from a creditor by taking any of three specified steps. Those three protective steps *have been deleted* (the changes are not mere proposals), so that this section conforms to Article 9 revisions. Anyone considering consignment should be aware of the risk of losing goods to a creditor, and should take appropriate steps to protect them pursuant to Article 9.

- ***FAS a named vessel.*** The seller at his expense *and risk* must deliver the goods alongside the named vessel and obtain proper receipts.
- ***CIF.*** The price includes in a lump sum: the cost of the goods and the insurance and freight to the named destination.
- ***C & F.*** The price includes in a lump sum: the cost of the goods and freight, but *not* insurance.

Thus, if Athena had put a clause in her contract saying, "FOB Athena's warehouse," Poseidon would have had the risk of any loss up to the time the lobsters were unloaded in Athena's possession. Poseidon would then have known that it must insure the lobsters during transit.

When the Parties Fail to Allocate the Risk

If the parties fail to specify when the risk passes from seller to buyer, the Code provides the answer. When neither party breached the contract, §2-509 determines the risk; when a party has breached the contract, §2-510 governs. The full analysis of risk is somewhat intricate, so we first supply you with a short version: **when neither party has breached the contract, the risk of loss generally passes from seller to buyer when the seller has transported the goods as far as he is obligated to. When a party has breached, the risk of loss generally lies with that party.**

And now, for the courageous student, the full version of how the UCC allocates the risk of loss when the parties failed to specify it.

When Neither Party Breaches

In the example of Athena and Poseidon, both parties did what they were supposed to do, so there was no breach of contract. To settle these cases, we need to know whether the contract obligated the seller to ship the goods or whether the goods were handled in some other way. There are three possibilities: (1) the contract required the seller to ship the goods, or (2) the contract involved a bailment, or (3) other cases.

If the Seller Must Ship the Goods. Most contracts require the seller to arrange shipment of the goods. In a *shipment contract*, the seller must deliver the goods *to a carrier*, which will then transport the goods to the buyer. The carrier might be a trucking company, railroad, airline, or ship, and is generally located near the seller's place of business. **In a shipment contract, the risk passes to the buyer when the seller delivers the goods to the carrier.** Suppose Old Wood, in North Carolina, agrees to sell $100,000 worth of furniture to Pioneer Company, in Anchorage. The contract requires Old Wood to deliver the goods to Great Northern Railroad lines in Chicago. From North Carolina to Chicago, Old Wood bears the risk of loss. If the furniture is damaged, stolen, or destroyed, Old Wood is out of luck. But once the furniture is on board the train in Chicago, the risk of loss passes to Pioneer. If the train derails in Montana and every desk and chair is smashed to kindling, Pioneer must nevertheless pay the full $100,000 to Old Wood.

In a *destination contract,* the seller is responsible for delivering the goods *to the buyer*, and risk passes to the buyer when the goods reach the destination. If the contract required Old Wood to deliver the furniture to Pioneer's warehouse in Anchorage, then Old Wood bears the loss for the entire trip. If the train travels 3,000 miles and then plunges off a bridge in Alaska, 45 feet from its destination, Old Wood picks up the tab.

If There Is a Bailment. Freezem Corp. produces 500 room air conditioners and stores them in Every-Ware's Warehouse. This is a **bailment, meaning that one person or company is legally holding goods for the benefit of another**. Freezem is the **bailor**, the one who owns the goods, and Every-Ware is the **bailee**, the one with temporary possession. Suppose Freezem agrees to sell 300 of its air conditioners to KeepKool Appliances. KeepKool does

Bailor
The one who owns goods legally held by another.

Bailee
The one with temporary possession of another's goods.

not need the machines in its store for six months, so it plans to keep them at Every-Ware's until then. But two weeks after Freezem and KeepKool make their deal, Every-Ware burns to the ground. Who bears the loss of the 300 air conditioners? **If the contract requires a bailee to hold the goods for the buyer, the risk passes when the buyer obtains documents entitling her to possession, or when the bailee acknowledges her right to the goods.** If fire broke out in Every-Ware's before KeepKool received any documents enabling it to take the air conditioners away, then the loss would fall on Freezem.

Other Cases. The great majority of contracts involve either shipment by the seller or a bailment. In the remaining cases, if the seller is a *merchant*, risk passes to the buyer on receipt. This means that a merchant is only off the hook if the buyer actually accepts the goods. If the seller is *not a merchant*, risk passes when the seller tenders the goods, meaning that she makes them available to the buyer. The Code is giving more protection to buyers when they deal with a merchant.

When One Party Breaches

Still there? Really? Excellent. You are indeed a dedicated student. We strive to make all legal topics interesting, but every once in awhile, we find ourselves ... largely powerless. Ah, well, so it goes.

We now look at how the Code allocates risk when one of the parties *does* breach. Again there are three possibilities: (1) seller breaches and buyer rejects; (2) seller breaches, buyer accepts, but then revokes; or (3) buyer breaches.

Seller Breaches and Buyer Rejects. PlayStore, a sporting goods store, orders 75 canoes from Floataway. PlayStore specifies that the canoes must be 12 feet long, light-weight metal, dark green. Floataway delivers 75 canoes to Truckit, a trucking company. When Truckit's trucks arrive, PlayStore finds that the canoes are the right material and color, but 18 feet long. PlayStore rejects the craft, and Truckit heads back to Floataway. But one of the trucks is hijacked and the 25 canoes it carries are never recovered. Floataway demands its money for the 25 lost canoes. Who loses?

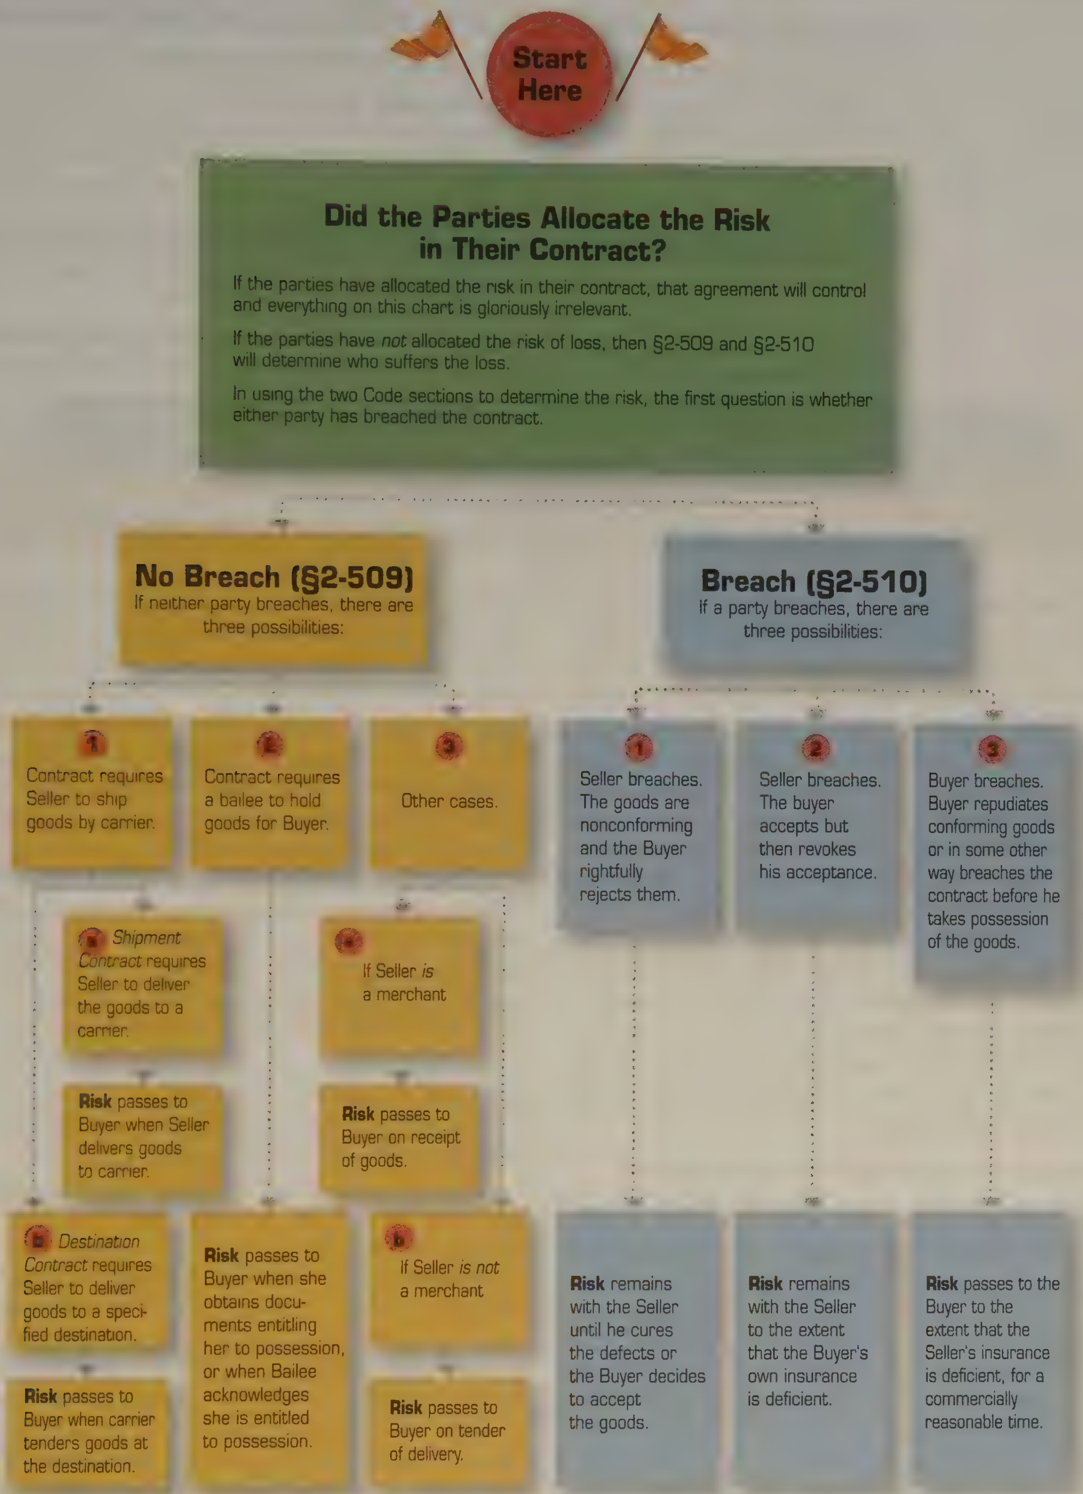
Nonconforming goods
Merchandise that differs from that specified in the contract.

Floataway had delivered **nonconforming goods;** that is, merchandise which differs from that specified in the contract. A buyer has a right to reject such goods. **When the buyer rejects nonconforming goods, the risk of loss remains with the seller until he cures the defect or the buyer decides to accept the goods.** In our example, Floataway must suffer the loss for the stolen canoes. If PlayStore had decided to accept the canoes, even though they were the wrong size, then the risk would have passed to the sports store.

Seller Breaches, Buyer Accepts, but Then Revokes. PlayStore orders 200 tennis rackets from High Strung. When the rackets arrive, they seem fine, so the store accepts them. But then a salesperson notices that the grips are loose. Every racket has the same problem. PlayStore returns the rackets to High Strung, but they are destroyed when a blimp crashes into the delivery truck. **When a buyer accepts goods but then rightfully revokes acceptance, the risk remains with the seller to the extent that the buyer's insurance will not cover the loss.** If PlayStore's insurance covers the damaged rackets, there is no problem. If PlayStore's insurance does not cover the loss of goods in transit, High Strung must pay.

Buyer Breaches. One last time. PlayStore orders 60 tents from ExploreMore. About the time the tents leave the factory, PlayStore decides to drop its line of camping goods and specialize in team sports. PlayStore notifies ExploreMore that it wants to explore less and will not pay. The tents are destroyed in a collision involving a prison van and a train carrying lobsters. This time, PlayStore is liable. **When a buyer breaches the contract before taking possession, it assumes the risk of loss to the extent that the seller's insurance is deficient.**

Exhibit 21.1 should clarify.



Start Here
Did the Parties Allocate the Risk in Their Contract?
If the parties have allocated the risk in their contract, that agreement will control and everything on this chart is gloriously irrelevant.
If the parties have *not* allocated the risk of loss, then §2-509 and §2-510 will determine who suffers the loss.
In using the two Code sections to determine the risk, the first question is whether either party has breached the contract.
No Breach (§2-509)
If neither party breaches, there are three possibilities:
1 Contract requires Seller to ship goods by carrier.
2 Contract requires a bailee to hold goods for Buyer.
3 Other cases.
a *Shipment Contract* requires Seller to deliver the goods to a carrier.
Risk passes to Buyer when Seller delivers goods to carrier.
b *Destination Contract* requires Seller to deliver goods to a specified destination.
Risk passes to Buyer when carrier tenders goods at the destination.
Risk passes to Buyer when she obtains documents entitling her to possession, or when Bailee acknowledges she is entitled to possession.
a If Seller *is* a merchant
Risk passes to Buyer on receipt of goods.
b If Seller *is not* a merchant
Risk passes to Buyer on tender of delivery.
Breach (§2-510)
If a party breaches, there are three possibilities:
1 Seller breaches. The goods are nonconforming and the Buyer rightfully rejects them.
2 Seller breaches. The buyer accepts but then revokes his acceptance.
3 Buyer breaches. Buyer repudiates conforming goods or in some other way breaches the contract before he takes possession of the goods.
Risk remains with the Seller until he cures the defects or the Buyer decides to accept the goods.
Risk remains with the Seller to the extent that the Buyer's own insurance is deficient.
Risk passes to the Buyer to the extent that the Seller's insurance is deficient, for a commercially reasonable time.

EXHIBIT 21.1

In the following case, neither party breached, so §2-509 governs.

CODE PROVISIONS DISCUSSED IN THIS CASE

Issue	Relevant Code Section
1. Did the parties create a bailment?	In a bailment, one person legally holds goods for the benefit of another.
2. Which party bore the risk of the horse's death?	UCC §2-509(2): If the contract requires a bailee to hold the goods for the buyer, the risk passes when the buyer obtains documents entitling her to possession, or when the bailee acknowledges her right to the goods.

Harmon v. Dunn

1997 Tenn. App. LEXIS 217
Tennessee Court of Appeals, 1997

Facts: Bess Harmon owned a two-year-old Tennessee Walking Horse named Phantom Recall. Harmon, who lived in Tennessee, boarded her horse with Steve Dunn at his stables in Florence, Alabama. Dunn cared for Phantom Recall and showed him at equestrian events. Harmon instructed Dunn to sell the horse for $25,000, and Dunn arranged for his friend Scarbrough to buy the colt. On June 30, Dunn delivered Scarbrough's $25,000 check to Harmon, who handed over the horse's certificate of registration and a "transfer of ownership" document. That night at a horse show, Dunn told Scarbrough that he had delivered the check and had the ownership papers in his car. Dunn did not actually give the documents to his friend. Scarbrough knew that Phantom Recall was at Dunn's stable, where Scarbrough had boarded other horses. Sadly, the colt developed colitis and died suddenly, on July 4. Scarbrough stopped payment on his check, and Harmon sued for her money. The trial court found for Harmon, and Scarbrough appealed.

Issue: ***Which party bore the risk of Phantom Recall's death?***

Excerpts from Judge Farmer's Decision: [UCC §2-509 states:] Risk of loss in the absence of breach....

(2) Where the goods are held by a bailee to be delivered without being moved, the risk of loss passes to the buyer:

(a) on his receipt of a negotiable document of title covering the goods, or
(b) on acknowledgment by the bailee of the buyer's right to possession of the goods, or
(c) after his receipt of a non-negotiable document of title or other written direction to deliver...

We conclude that the facts before us clearly establish a bailor-bailee relationship between Harmon and Dunn. It is not disputed that the latter was the agent of the former. Here, it was agreed that Dunn would train and care for Phantom Recall at the Dunn Stables in Florence, Alabama. He was also responsible for transporting the horse to various shows. The record establishes that prior to the horse's death, he had been entered and shown by Dunn himself in three separate events.

Having established Dunn a bailee for purposes of [§2-509(2)] and in the absence of any prior arrangement with Dunn or Harmon that the horse be delivered elsewhere upon purchase from the latter, we find that the risk of loss passed to Scarbrough if and when the applicable provisions under subsection (2) occurred. Subsection (2)(a) and (b) provide that the risk of loss passes to the buyer "on his receipt of a negotiable document of title covering the goods; or on acknowledgment by the bailee of the buyer's right to possession of the goods."

We find that Scarbrough received the ability to control possession of the horse no later than July 1 irrespective of the fact that he did not actually receive physical possession of the ownership documents at that time. The documents which were necessary for transfer of ownership and taking possession of the horse were already in the hands of the bailee. We find an actual physical back and forth exchange between the two unnecessary under these facts where the bailee and the seller's agent are one and the same. Certainly Scarbrough had the ability to control possession of the horse no later than July 1 when he was made aware that Dunn had the transfer papers.

[Affirmed.]

Chapter Conclusion

The Code enables the parties in most commercial transactions to control their own destiny. It reduces the importance of abstract terms like "title" and allows buyer and seller to specify when goods are identified and when risk shifts. Owners and creditors can anticipate problems and protect themselves. But the provisions only work if businesspeople understand the rules and apply them.

Exam Review

1. **INTEREST AND TITLE** An *interest* is a legal right in something. *Title* means the normal rights of ownership. (pp. 481–486)

2. **IDENTIFICATION** Goods must *exist* and be *identified* to the contract before title can pass. The parties may agree in their contract how and when they will identify goods; if they do not specify, the Code stipulates when it happens. The parties may also state when title passes, and once again, if they do not, the Code provides rules. (pp. 482–484)

EXAM Strategy

Question: On September 10, Bell Corp. entered into a contract to purchase 50 lamps from Glow Manufacturing. Bell prepaid 40 percent of the purchase price. Glow became insolvent on September 19 before segregating, in its inventory, the lamps to be delivered to Bell. Bell will not be able to recover the lamps because:

a. Bell is regarded as a merchant.

b. The lamps were not identified to the contract.

c. Glow became insolvent fewer than 10 days after receipt of Bell's prepayment.

d. Bell did not pay the full price at the time of purchase.

Strategy: In analyzing issues about ownership, remember that title can never change hands until the goods have been identified to the contract. Identification can occur in three ways: the parties describe specific goods that already exist; animals are conceived or crops planted; or the seller marks, ships, or otherwise indicates which are going to the buyer. (See the "Result" at the end of this section.)

3. **INSURABLE INTEREST** A buyer obtains an *insurable interest* when the goods are identified to the contract. A seller retains an insurable interest in goods as long as she has either title or a security interest in them. (pp. 486–487)

4. **VOID AND VOIDABLE TITLE** *Void title* is no title at all. *Voidable title* means limited rights in the goods, inferior to those of the owner. A person with voidable title has power to transfer good title to a *bona fide purchaser (BFP);* that is, someone who purchases in good faith, for value. (pp. 487–489)

5. **ENTRUSTING** Any *entrusting* of goods to a merchant who deals in goods of that kind gives him the power to transfer all rights of the entruster to a buyer in the ordinary course of business. (pp. 490–492)

6. **BIOC** A buyer in the ordinary course of business generally takes goods free and clear of any security interest. (p. 490)

EXAM Strategy

Question: Fay Witcher owned a Ford Bronco. Steve Risher operated a used car lot. Witcher delivered his automobile to Risher, asking him to resell it if he could. Witcher specified that he wanted all cash for his car, not cash plus a trade-in. Risher sold the car to Richard Parker for $12,800, but he took a trade-in as part payment. Risher promised to deliver the Bronco's certificate of title to Parker within a few days but never did. He was also obligated to deliver proceeds of the sale to Witcher, and, of course, he failed to do that. Parker claimed that the car was rightfully his. Witcher argued that Parker owned nothing because he never got the title and because Witcher never got his money. Who loses?

Strategy: Any *entrusting* of goods to a merchant who deals in goods of that kind gives him the power to transfer all rights of the entruster to a buyer in the ordinary course of business. A buyer in the ordinary course of business generally takes goods free and clear of any security interest. Did Witcher entrust the auto? Was Parker a BIOC? Why or why not? (See the "Result" at the end of this section.)

7. **SALE ON APPROVAL** In a sale on approval, the goods *are not* subject to the buyer's creditors until the buyer accepts them; in a sale or return, the goods *are* subject to the buyer's creditors. (p. 493)

8. **RISK OF LOSS** In their contract, the parties may allocate the *risk of loss* any way they wish. If they fail to do so, the Code provides several steps to determine who pays for any damage. When neither party has breached, the risk of loss generally passes from seller to buyer when the seller has transported the goods as far as he is obligated to. When a party has breached, the risk of loss generally lies with the party that has breached. (pp. 494–498)

EXAM Strategy

Question: Bradkeyne International, Ltd., an English company, bought a large quantity of batteries from Duracell, Inc. The contract specified delivery "FOB cargo ship, Jacksonville, Florida." Duracell supervised the loading of the batteries onto a ship in Jacksonville in early July, and they arrived in England in August. When loaded onto the ship, the batteries were conforming goods that could be used for normal purposes. But on board the ship, excessive heat damaged them. By the time they reached England, they were worth only a fraction of the original price. Bradkeyne sued Duracell. Who loses?

Strategy: The advantage of standard shipping terms is that they make business predictable and exam questions easy. If you know what "FOB cargo ship, Jacksonville, Florida" means, you know the answer. (See the "Result" at the end of this section.)

2. Result: The contract was silent about which goods were involved; neither animals nor plants were involved; and Glow never segregated the lamps. The lamps were never identified to the contract, and the correct answer is (b).

6. Result: Risher was a merchant dealing in automobiles, meaning that Witcher did entrust the car to him. Parker was a BIOC: he acted in good faith, without knowing that the sale violated the agreement between Witcher and Risher. Parker wins, and he keeps the car.

8. Result: "FOB cargo ship, Jacksonville, Florida" means that the seller bears all risks until the goods are placed in the carrier's possession. From that moment onward, the buyer bears the risk. The batteries were fine when delivered, so Duracell was off the hook once they were on board. Bradkeyne bears the loss.

Multiple-Choice Questions

1. **CPA QUESTION** On Monday, Wolfe paid Aston Co., a furniture retailer, $500 for a table. On Thursday, Aston notified Wolfe that the table was ready to be picked up. On Saturday, while Aston was still in possession of the table, it was destroyed in a fire. Who bears the loss of the table?
   (a) Wolfe, because Wolfe had title to the table at the time of loss
   (b) Aston, unless Wolfe is a merchant
   (c) Wolfe, unless Aston breached the contract
   (d) Aston, because Wolfe had not yet taken possession of the table

2. **CPA QUESTION** Under UCC Article 9 on secured transactions, which of the following statements is correct concerning the disposition of goods by a secured creditor after a debtor defaults on a loan?
   (a) A good faith purchaser of the goods, for value and without knowledge of any defects in the sale, takes free of any security interest.
   (b) The debtor may not redeem the goods after the default.
   (c) Secured creditors retain the right to redeem the goods after they are sold to a third party.
   (d) The goods may be disposed of only at a public sale.

3. **CPA QUESTION** Quick Corp. agreed to purchase 200 typewriters from Union Suppliers, Inc. Union is a wholesaler of appliances and Quick is an appliance retailer. The contract required Union to ship the typewriters to Quick by common carrier, "FOB Union Suppliers, Inc. Loading Dock." Which of the parties bears the risk of loss during shipment?
   (a) Union, because the risk of loss passes only when Quick receives the typewriters
   (b) Union, because both parties are merchants
   (c) Quick, because title to the typewriters passed to Quick at the time of shipment
   (d) Quick, because the risk of loss passes when the typewriters are delivered to the carrier

4. Sheri signs a contract with Farmer Charlie on February 1. Under the deal, she will pay $25,000 for Charlie's entire pumpkin crop on October 1. Charlie plants pumpkin seeds on March 1, and they begin to sprout on April 1. When are the pumpkins identified?
   (a) February 1
   (b) March 1
   (c) April 1
   (d) October 1

5. Sam obtains a Patek Philippe watch from Greg by fraud. It has a retail price of $10,000. He sells it to Melissa for $9,000. She believes he owns the watch. Melissa ________ a bona fide purchaser. Sam disappears. If Greg discovers that she has the watch and demands that it be returned, Melissa ________ have to give the watch to Greg.
   (a) is; will
   (b) is; will not
   (c) is not; will
   (d) is not; will not

ESSAY QUESTIONS

1. Franklin Miller operated Miller Seed Co. in Pea Ridge, Arkansas. He bought, processed, and sold fescue seed, which is used for growing pasture and fodder grass. Farmers brought seed to Miller, who would normally clean, bag, and store it. In some cases, the farmers authorized Miller to sell the seed, in some cases not. Miller mixed together the seed that was for sale with the seed in storage so that a customer could not see any difference between them. Miller defaulted on a $380,000 loan from the First State Bank of Purdy. First State attempted to seize all of the seed in the store. Tony Havelka, a farmer, protested that his 490,000 pounds of seed was merely in storage and not subject to First State's claim. Who is entitled to the seed?

2. **ETHICS** Myrna and James Brown ordered a $35,000 motor home from R.V. Kingdom, Inc. The manufacturer delivered the vehicle to R.V. Kingdom, with title in the dealer's name. The Browns agreed to accept the motor home, but they soon regretted spending the money and asked R.V. Kingdom to resell it. The motor home stayed on R.V. Kingdom's lot for quite a few months, but when the Browns decided to come get it, they learned that R.V. Kingdom had illegally used the vehicle as collateral for a loan and that a bank had repossessed it. The Browns filed a claim with their insurance company, State Farm. The insurer agreed that the vehicle had been stolen and agreed that the Browns' policy covered newly acquired vehicles. But the company refused to pay, claiming that the Browns had not taken title or possession to the goods and therefore had no insurable interest. The Browns sued. Please rule on their case.

   Let us also look at the ethics of the case by creating a contrasting hypothetical. Suppose that among the insurance company's thousands of customers was Arvee, a recreational vehicle dealership similar to the one in the real case. Imagine that Arvee had taken in an automobile for resale from a customer named Parker and kept the vehicle on its lot. If Parker's auto were stolen, what argument would the insurance company be making? How would the company define insurable interest in *that* case?

3. John C. Clark, using an alias, rented a Lexus from Alamo Rent-A-Car in San Diego, California. Clark never returned the car to Alamo and obtained a California "quick title" using forged signatures. He then advertised in the *Las Vegas Review Journal* newspaper and sold the car to Terry and Yvonne Mendenhall for $34,000 in cash. The Mendenhalls made improvements to the car, had it insured, smog- and safety-tested, registered, licensed, and titled in the state of Utah. When Alamo reported the car stolen, the Nevada Department of Motor Vehicles seized the auto and returned it to Alamo. The Mendenhalls sued Alamo. The trial court concluded that the Mendenhalls had purchased the car for value and without notice that it was stolen, and so they were bona fide purchasers entitled to the Lexus. Alamo appealed. Please rule.

4. Universal Consolidated Cos. contracted with China Metallurgical Import and Export Corp. (CMIEC) to provide CMIEC with new and used equipment for a cold rolling steel mill. Universal then contracted with Pittsburgh Industrial Furnace Co. (Pifcom) to engineer and build much of the equipment. The contract required Pifcom to deliver the finished equipment to a trucking company, which would then transport it to Universal. Pifcom delivered the goods to the trucking company as scheduled. But before all of the goods reached Universal, CMIEC notified Universal it was canceling the deal. Universal, in turn, notified Pifcom to stop work, but all goods had been delivered to the shipper and ultimately reached Universal. Pifcom claimed that it retained title to the goods, but Universal claimed that title had passed to it. Who is right?

5. **YOU BE THE JUDGE WRITING PROBLEM** Construction Helicopters paid Heli-Dyne Systems $315,000 for three helicopters that were in Argentina. Two were ready to fly, and one was disassembled for routine maintenance. The contract said nothing about risk of loss (the parties could have saved a lot of money by reading this chapter). Heli-Dyne arranged for an Argentine company to oversee their loading on board the freight ship *Lynx*. The two helicopters and 25 crates containing the disassembled craft were properly loaded, but when the ship arrived in Miami, only 7 of the crates appeared. Heli-Dyne refused to supply more parts, and Construction sued. Who bears the loss? **Argument for Construction:** Construction had no control over the goods until they reached Miami. Although we do not know exactly what happened to the crates, we know the one party that had *nothing* to do with the loss: Construction. The company should not pay for damage it never caused. **Argument for Heli-Dyne:** Because the contract failed to specify risk of loss, it is a shipment contract. In such an agreement, risk of loss passes to the buyer when the seller delivers the goods to a carrier. Heli-Dyne delivered the goods and has no further responsibility.

Discussion Questions

1. In the opening scenario with the con artist and the cattle, we learned that the original owner would be left out in the cold under the UCC. Is this a fair result? Would it be better to require Vandermeer and the buyer in Omaha to share the loss?

2. In the *Bakalar* case involving artwork stolen during World War II, do you agree with the court's decision? Should the heirs get a chance to recover the drawing that was stolen from their ancestor? Or should Bakalar, who has owned the drawing for 50 years and knew nothing about its origin, be able to keep ownership?

3. Imagine that your laptop gets a virus, and you take it to a local computer repair shop. The shop sells your computer to Heidi. Under the entrustment rules in the UCC, Heidi is a buyer in the ordinary course of business. And so, even if you find Heidi and demand that she return your laptop, *she gets to keep it.* Is this fair? Does the law give too much protection to purchasers in this situation, and not enough to victims?

4. You are about to move, and you take your furniture to a consignment shop. The shop's creditors seize everything in the store, including your furniture. You demand that the creditors give back your stuff, but under UCC §2-326, *they don't have to.* Is this fair? Should the law change?

5. Greg manufactures and sells T-shirts. As a seller, would he be better off if his contracts indicated "FOB (place of shipment)" or "FOB (place of destination)" ? Explain your answer.

CHAPTER 22

WARRANTIES AND PRODUCT LIABILITY

© Stas Volik/Shutterstock.com

You are sitting in a fast-food restaurant. Your friend Harley, who works for a state senator, is eating with one hand and gesturing with the other.

"I'm mostly working on product liability reform. We think it might actually pass this time," he proclaims, stabbing the air with his free hand. "Some of our constituents want it *right now*."

"What would be different?" you ask.

"Well, for starters, we'd cap lawsuit judgments. It's absurd, these multimillion dollar verdicts, just because something has a *slight defect*."

"But if someone gets hurt," you reply, "shouldn't she get everything she's entitled to?"

Harley waves off your remark. "Ridiculous!" he exclaims. "Most of these 'victims' wouldn't have any problem if they'd just be more careful in the first place." Still feeling agitated, he takes a ferocious bite from his burger—and *CRACK*—he breaks a tooth.

Feeling agitated, he takes a ferocious bite from his burger—and *CRACK*—he breaks a tooth.

"Aaaahhhh! My toof! My TOOF!" Harley howls in pain and throws down the bun, revealing a large piece of bone in the meat. He tips his chair back in disbelief and says loudly, "I'll sue these sons of aaaahhhh …" Just then, his defective chair collapses. Harley falls backwards and slams into the tile floor, knocking himself unconscious. Hours later, when he revives in the hospital, he refuses to speak to you until he puts in a call to his lawyer.

Harley and his lawyer will be chatting about **product liability**, which refers to goods that have caused an injury. The harm may be physical, as it was in Harley's case. Sometimes, it is purely economic, as when a corporation buys a computer so defective it must be replaced, costing the buyer lost time and profits. The injured party's remedies may be derived from several legal ideas, including:

- ***Warranty***, which is an assurance provided in a sales contract;
- ***Negligence***, which refers to unreasonable conduct by the defendant; and
- ***Strict liability***, which allows lawsuits over defective products whether the defendant acted reasonably or not.

We discuss each of these ideas in this chapter. What all product liability cases have in common is that a person or business has been hurt by goods. We focus primarily on cases where the *sale* of goods leads to the injury, but we also examine product liability issues where there has been no sale. We begin with warranties.

Express Warranties

Warranty
A contractual assurance that goods will meet certain standards.

A **warranty** is a contractual assurance that goods will meet certain standards. It is normally a manufacturer or a seller who gives a warranty and a buyer who relies on it. A warranty might be explicit and written: "The manufacturer warrants that the light bulbs in this package will illuminate for 2,000 hours." Or a warranty could be oral: "Don't worry, this machine can harvest any size of wheat crop ever planted in the state." The manufacturer may offer a warranty as a means of attracting buyers: "We provide the finest bumper-to-bumper warranty in the automobile industry." Or *the law itself* may impose a warranty on goods, requiring the manufacturer to meet certain standards whether it intends to or not. Here we consider express warranties.

Express warranty
One that the seller creates with his words or actions.

An **express warranty** is one that the seller creates with his words or actions.[1] Whenever a seller *clearly indicates* to a buyer that the goods being sold will meet certain standards, she has created an express warranty. For example, if the sales clerk for a paint store tells a professional house painter that "this exterior paint will not fade for three years, even in direct sunlight," that is an express warranty and the store is bound by it. Or, if the clerk gives the painter a brochure that makes the same promise, the store is again bound by its express warranty. On the other hand, if the salesperson merely says, "I know you're going to be happy with this product," there is no warranty because the promise is too vague. The Uniform Commercial Code establishes that the seller may create an express warranty in three ways: (1) with an affirmation of fact or a promise; (2) with a description of the goods; or (3) with a sample or model. In addition, the buyer must demonstrate that what the seller said or did was part of the *basis of the bargain*.

Affirmation of Fact or Promise

Any affirmation of fact—or any promise—can create an express warranty.[2] An affirmation of fact is simply a statement about the nature or quality of the goods, such as "this scaffolding is made from the highest grade of steel available at any price" or "this car will accelerate

[1]UCC §2-313.
[2]UCC §2-313(1)(a).

from 0 to 60 in 5.3 seconds." A promise can include phrases such as, "we guarantee you that this air conditioning system will cool your building to 72 degrees, regardless of the outdoor temperature."

A common problem in cases of express warranty is to separate true affirmations of fact from mere sales puffery or seller's opinion, which creates no express warranty. "You meet the nicest people when you ride a Honda motorcycle," is mere puffery. If you purchase a Honda and meet only deadbeats, the manufacturer owes you nothing.

A statement is more likely to be an affirmation of fact if:

- ***It is specific and can be proven true or false.*** Suppose the brochures of a home builder promise to meet "the strictest building codes." Since there is a code on file, the builder's work can be compared to it, and his promise is binding.
- ***It is written.*** An oral promise *can* create an express warranty. But promises in brochures are more likely to be taken seriously. Statements in a *written contract* are the likeliest of all to create a binding warranty.
- ***Defects are not obvious.*** If a used car salesman tells you that a car is rust-free when the driver's door is pockmarked with rust, you should not take the statement seriously—since a court will not, either.
- ***Seller has greater expertise.*** If the seller knows more than the buyer, his statements will be more influential with buyer and court alike. If your architect assures you that the new porch will be warm in winter, the law recognizes that you will naturally rely on her expertise.

Description of Goods

Any description of the goods can create an express warranty.[3] The statement can be oral or written. A description might be a label on a bag of seed, referring to the seed as a particular variety of tomato; it could be a tag on airplane parts, assuring the buyer that the goods have met safety tests. Wherever the words appear, if they describe the goods as having particular characteristics or qualities, the seller has probably created an express warranty.

Sample or Model

Any sample or model can create an express warranty.[4] A sample can be a very effective way of demonstrating the quality of goods to a customer. However, a seller who uses a sample is generally warranting that the merchandise sold will be just as good.

Basis of Bargain

The seller's conduct must have been part of the basis of the bargain. To prove an express warranty, a buyer must demonstrate that the two parties *included the statements or acts in their bargain*. Some courts have interpreted this to mean that the buyer must have *relied* on the seller's statements. There is logic to this position. For example, suppose a sales brochure makes certain assurances about the quality of goods, but the buyer never sees the brochure until she files suit. Should the seller be held to an express warranty? Some courts would rule that the seller is not liable for breach of warranty.

Other courts, however, have ruled that a seller's statement can be part of the basis of the bargain even when the buyer has not clearly relied on it. These courts are declaring that a seller who chooses to make statements about his goods will be held to them *unless the seller*

---

[3]UCC §2-313(1)(b).
[4]UCC §2-313(1)(c).

can convince a court that he should not be liable. This is a policy decision, taken by many courts, to give the buyer the benefit of the doubt since the seller is in the best position to control what he says. The issue arises in the following case.

RITE AID CORP. V. LEVY-GRAY

894 A.2d 563, 391 Md. 698
Court of Appeals of Maryland, 2006

Facts: Dr. Ronald Geckler diagnosed Ellen Levy-Gray with Lyme disease and prescribed doxycycline. Geckler told Levy-Gray that while taking the drug, she must stop nursing her son, but he provided her with no other information. Levy-Gray had the prescription filled at a Rite-Aid pharmacy she knew and trusted. With the medication, the pharmacy included its own pamphlet, called "Rite Advice." The cover page said, "Inside is everything you need to know about your prescription. It covers everything in writing from dosage to side effects." The inside of the pamphlet stated, in part:

> IMPORTANT NOTE: THE FOLLOWING INFORMATION IS INTENDED TO SUPPLEMENT, NOT SUBSTITUTE FOR, THE EXPERTISE AND JUDGMENT OF YOUR PHYSICIAN, PHARMACIST, OR OTHER HEALTHCARE PROFESSIONAL.
>
> HOW TO TAKE THIS MEDICATION: Take each dose with a full glass of water (4 oz. or 120 ml) or more. Take with food or milk if stomach upset occurs unless your doctor directs you otherwise.

Doxycycline immediately upset Levy-Gray's stomach, so she began to take the medicine with milk. In order to maintain her breast milk so that she could resume nursing when the treatment ended, Levy-Gray also consumed eight glasses of milk per day, grilled cheese sandwiches, ice cream, and so forth. Because her Lyme disease did not improve, her brother, a doctor in another specialty, recommended that she stop using dairy products. Her symptoms briefly improved, but ultimately she was diagnosed with post-Lyme syndrome, a chronic autoimmune response.

Levy-Gray sued Rite-Aid for breach of an express warranty. She claimed that the instructions to take Doxycycline with milk rendered the drug ineffective and caused her chronic condition. At trial, her expert witness testified that taking dairy products with the drug prevented the drug from being absorbed into the body. Rite-Aid's expert stated any loss of absorption was modest and had no effect on her treatment. The company also claimed that the pamphlet could not have been part of the basis of the bargain because Levy-Gray never saw it until after she bought the medication.

The jury found that Rite-Aid had breached a warranty and awarded Levy-Gray $250,000. Rite-Aid appealed; the intermediate appeals court affirmed, and the state's highest court took the case.

Issue: ***Did Rite-Aid breach an express warranty?***

Excerpts from Justice Battaglia's Decision: Rite Aid contends that the statements about doxycycline contained in the "Rite Advice" pamphlet were not part of the basis of the bargain because Ms. Levy-Gray did not receive them and was not aware of their existence until after the sale was completed. Rite Aid argues that for an affirmation to become "part of the basis of the bargain," the affirmation must be a negotiated term of the agreement, or the consumer must at least have been aware of its existence prior to the consummation of the deal. Based on the circumstances surrounding most purchases in modern commercial dealing, we disagree.

The precise time when words of description or affirmation are made or samples are shown is not material. The sole question is whether the language is fairly to be regarded as part of the contract. Express warranties may be formed prior to the completion of the sale or even after the sale has been consummated. What is paramount is the relationship between the sale of the goods and the affirmations made by the seller. As it is common knowledge that sellers will deliver written warranties after the contract has been made, some courts are recognizing that later statements found in these writings are part of the basis of the bargain.

Rite Aid also relies on the "learned intermediary" doctrine, which applies to the tripartite relationship between the drug manufacturer, the prescribing physician, and the patient, as supporting the proposition that pharmacists cannot be held liable for the breach of express warranty because the patient is presumed to have relied upon the advice rendered by her physician.

The jury further could have inferred from the evidence presented at trial that the language contained in the "Rite Advice" pamphlet encouraged Ms. Levy-Gray to rely on the information contained therein based upon its assertion on the cover that "[i]nside is everything that

you need to know about your prescription"; thus, the statement "take with food or milk if upset stomach occurs" had the effect of warranting that for the duration of Ms. Levy-Gray's doxycycline treatment, the doxycycline will not be adversely affected by her consumption of milk. The jury reasonably could have inferred that Ms. Levy-Gray relied on the veracity of Rite Aid's affirmation each time she took the dose of doxycycline with milk.

Affirmed.

Devil's Advocate How can a statement be the basis of the bargain if one party never heard or read it until *after* she purchased the product? Obviously, the pamphlet had no influence on the consumer's decision to form the contract. And even if the unread notice was somehow part of the bargain, it never urged users to consume eight glasses of milk per day while eating grilled cheese sandwiches and ice cream. The right step for any patient, before adopting such an extreme course, is to check with her doctor. Common sense should be part of good legal doctrine.

EXAM Strategy

Question: Melinda, a rock singer, goes to Stereo Shop to buy equipment for her home recording studio. She likes a $5,000 unit on display, and the sales clerk shows her how to record and edit her music. "It's a terrific unit," he says. "Record a song, see if you like it." She records a song in the store, and the audio file she creates is flawless. Impressed, Melinda buys the equipment. However, when the equipment is set up in her home, Melinda's recordings frequently have static in them, forcing her to re-record them. When Stereo Shop is unable to remedy the problem, Melinda sues for breach of warranty. Did Stereo Shop create a warranty? Who is likely to win?

Strategy: Begin by recalling how a seller creates a warranty. One way that this can happen is with an affirmation of fact. These claims are generally strongest if the statement was in writing and specific. A description of the goods may also lead to a warranty, as may use of a sample or model.

Result: The clerk's statement that "It's a terrific unit" is oral and general. Courts will consider it nothing more than puffery. The clerk made no additional description of the goods. However, the clerk used a model, knowing that Melinda would rely on the demonstration, which she did. A seller who takes advantage of a model warrants that the merchandise sold will be just as good. Melinda will win her claim for breach of an express warranty unless Stereo Shop can show that the static is caused by Melinda's improper use of the equipment.

Implied Warranties

Sean decides to plow driveways during the winter. Emily sells him a snowplow and installs it on his truck, but she makes no promises about its performance. When winter arrives, Sean has plenty of business, but he finds that the plow cannot be raised or lowered whenever the temperature falls below 40 degrees. He demands a refund from Emily, but

she declines, saying, "I never said that thing would work in the winter. Tough luck." Is she off the hook? No. It is true she made no express warranties. But many sales are covered by implied warranties.

Implied warranties are those created by the Uniform Commercial Code itself, not by any act or statement of the seller. The Code's drafters concluded that goods should generally meet certain standards of quality, regardless of what the seller did or did not say. So the UCC creates both an implied warranty of merchantability and an implied warranty of fitness.

Implied Warranty of Merchantability

Merchantable
Means that the goods are fit for the ordinary purposes for which they are used.

This is the most important warranty in the UCC. Buyers, whether individual consumers or billion-dollar corporations, are more likely to rely on this than any other section, and sellers must understand it thoroughly when they market goods. **Unless excluded or modified, a warranty that the goods shall be merchantable is implied in a contract for their sale if the seller is a merchant with respect to goods of that kind. Merchantable** means that the goods are fit for the ordinary purposes for which they are used.[5] This rule contains several important principles:

- *Unless excluded or modified* means that the seller does have a chance to escape this warranty. We later discuss what steps a seller may take if she wants to sell goods that are *not* merchantable.
- *Merchantability* requires that goods be fit for their normal purposes. To be merchantable, a ladder must be able to rest securely against a building and support someone who is climbing it. The ladder need not be serviceable as a boat ramp.
- *Implied* means that the law itself imposes this liability on the seller even if it is not written down.
- *A merchant with respect to goods of that kind* means that the seller is someone who routinely deals in these goods or holds himself out as having special knowledge about these goods. If it is selling vehicles, a car dealer is acting as a merchant. An accountant who sells his used car by listing it online is not a merchant.

Dacor Corp. manufactured and sold scuba diving equipment. Dacor ordered air hoses from Sierra Precision, specifying the exact size and couplings so that the hose would fit tightly and safely into Dacor's oxygen units. Within about one year, customers returned a dozen Dacor units, complaining that the hose connections had cracked or sheared and were unusable. Dacor recalled 16,000 units and refit them with safe hoses, at a cost of more than $136,000. Dacor sued Sierra, claiming a breach of the implied warranty of merchantability. The Illinois court first ruled that Sierra was a merchant with respect to scuba hoses because it routinely manufactured and sold them. The court then ruled:

> There is no evidence suggesting that these hose assemblies were subjected to anything other than normal use. Since the kind of failure experienced in connection with the returned hose assemblies would be life-threatening if it occurred under water, the hose assemblies were not fit for the purpose for which they were used within the meaning of UCC section 2-314.

The court ordered Sierra to pay the cost of Dacor's recall.[6]

The scuba equipment was not merchantable because a properly made scuba hose should never crack under normal use. But what if the product being sold is food, and the food contains something that is harmful—yet quite normal? Remember the legislative aide in the opening scenario? Let's see how a similar real case turned out.

---

[5]UCC §2-314(1).

[6]*Dacor Corp. v. Sierra Precision*, 1993 U.S. Dist. LEXIS 8009 (N.D. Ill. 1993).

GOODMAN V. WENCO FOODS, INC.

333 N.C. 1, 423 S.E.2d 444, 1992 N.C. LEXIS 671
Supreme Court of North Carolina, 1992

Facts: Fred Goodman and a friend stopped for lunch at a Wendy's restaurant in Hillsborough, North Carolina. Goodman had eaten about half of his double hamburger when he bit down and felt immediate pain in his lower jaw. He took from his mouth a triangular piece of cow bone, about one-sixteenth to one-quarter inch thick and one-half inch long, along with several pieces of his teeth. Goodman's pain was intense, and his dental repairs took months.

The restaurant purchased all of its meat from Greensboro Meat Supply Company (GMSC). Wendy's required its meat to be chopped and "free from bone or cartilage in excess of 1/8 inch in any dimension." GMSC beef was inspected continuously by state regulators and was certified by the United States Department of Agriculture (USDA). The USDA considered any bone fragment less than three-quarters of an inch long to be "insignificant."

Goodman sued, claiming a breach of the implied warranty of merchantability. The trial court dismissed the claim, ruling that the bone was natural to the food and that the hamburger was therefore fit for its ordinary purpose. The appeals court reversed this, holding that a hamburger could be unfit even if the bone occurred naturally. Wendy's appealed to the state's highest court.

Issue: ***Was the hamburger unfit for its ordinary purpose?***

Excerpts from Justice Exum's Decision: We hold that when a substance in food causes injury to a consumer, it is not a bar to recovery against the seller that the substance was "natural" to the food, provided that the substance's presence should not reasonably have been anticipated by the consumer.

A triangular, one-half-inch, inflexible bone shaving is indubitably "inherent" in or "natural" to a cut of beef, but whether it is so "natural" to hamburger as to put a consumer on his guard—whether it "is to be reasonably expected by the consumer"—is, in most cases, a question for the jury. We are not requiring that the respondent's hamburgers be perfect, only that they be fit for their intended purpose. It is difficult to conceive of how a consumer might guard against the type of injury present here, short of removing the hamburger from its bun, breaking it apart and inspecting its small components.

Wendy's argues that the evidence supported its contention that its hamburger complied with [legal] standards. Wendy's reasons that [regulators permit] some bone fragments in meat and that its hamburgers are therefore merchantable as a matter of law. The court of appeals rejected this argument, noting that compliance "with all state and federal regulations is only some evidence which the jury may consider in determining whether the product was merchantable." We agree.

We thus conclude, as did the court of appeals majority, that a jury could reasonably determine the meat to be of such a nature and the bone in the meat of such a size that a consumer should not reasonably have anticipated the bone's presence. The court of appeals therefore properly reversed the directed verdict for Wendy's on plaintiff's implied warranty of merchantability claim.

Implied Warranty of Fitness for a Particular Purpose

The other warranty that the Uniform Commercial Code imposes on sellers is the implied warranty of fitness for a particular purpose. This cumbersome name is often shortened and referred to as simply the *warranty of fitness.* **Where the seller at the time of contracting *knows* about a particular purpose for which the buyer wants the goods, and knows that the buyer is relying on the seller's skill or judgment, there is (unless excluded or modified) an implied warranty that the goods shall be fit for the purpose.**[7] Here are the key points:

- ***Particular purpose.*** The seller must know about some *special* use that the buyer plans for the goods. For example, if a lumber salesman knows that a builder is purchasing lumber to construct houses in a swamp, the UCC implies a warranty that the lumber will withstand water.

[7]UCC §2-315.

- ***Seller's skill.*** The buyer must be depending upon the seller's skill or judgment in selecting the product, and the seller must know it. Suppose the builder says to the lumber salesman, "I need four-by-eights that I will be using to build a house in the swamp. What do you have that will do the job?" The builder's reliance is obvious, and the warranty is established. By contrast, suppose that an experienced Alaskan sled driver offers to buy your three huskies, telling you she plans to use them to pull sleds. She has the experience and you do not, and if the dogs refuse to pull more than a one-pound can of dog food, you have probably not breached the implied warranty of fitness.
- ***Exclusion or modification.*** Once again, the seller is allowed to modify or exclude any warranty of fitness.

WARRANTIES COMPARED

Express Warranty	**Implied Warranty of Merchantability**	**Implied Warranty of Fitness for a Particular Purpose**
The Rule: Seller can create an express warranty with any affirmation or promise, with any description of the goods, or with any sample or model, provided the words or sample is part of the basis of the bargain	*The Rule:* With certain exceptions, the Code implies a warranty that the goods will be fit for their ordinary purpose.	*The Rule:* With some exceptions, the Code implies a warranty that the goods are fit for the buyer's special purpose, provided that the seller knows of that purpose when the contract is made and knows of the buyer's reliance.
Example: Manufacturer sends Retailer a brochure describing its brand of children's bicycle. The brochure states that "these bikes will last for a minimum of eight years of normal use." If the handlebars snap off after six months, Manufacturer has breached its express warranty.	*Example:* Manufacturer sells Retailer 300 "children's bicycles." There is no brochure and no promise made by Manufacturer about the bikes' quality. The UCC implies a warranty that the bikes will be fit for ordinary riding by children. But the cycles might not be strong enough to withstand mountain racing, and there is no warranty to that effect.	*Example:* Retailer orders from Manufacturer "300 mountain bikes, for racing," and Manufacturer agrees. The UCC implies a warranty that the bikes will withstand the added stress of mountain racing.

Two Last Warranties: Title and Infringement

Strapped for cash, Maggie steals her boyfriend's rusty Chevy and sells it to Paul for $2,500. As we saw in Chapter 21, Maggie gets no valid title by her theft, and therefore Paul receives no title either. When the boyfriend finds his car parked at a nightclub, he notifies the police and gets his wheels back. Poor Paul is out of pocket $2,500 and has no car to show for it. That clearly is unjust, and the UCC provides Paul with a remedy: **the seller of goods warrants that her title is valid and that the goods are free of any security interest that the buyer knows nothing about unless the seller has clearly excluded or modified this warranty.**[8] Once again, the Code is imposing a warranty on any seller except those who explicitly exclude or modify it. When Maggie sells the car to Paul, she warrants her valid title to the car and simultaneously breaches that warranty since she obviously has no title. If he can find her, Paul will win a lawsuit against Maggie for $2,500.

The same Code section imposes a warranty against claims of infringement by third parties. **Unless otherwise agreed, a seller who is a merchant warrants that the goods are free of any rightful claim of copyright, patent, or trademark infringement.**[9] Wesley sells to Komputer Corp. a device that automatically blasts purple smoke out of a computer screen anytime a student's paper is really dreadful. Unless Komputer Corp. agrees otherwise, Wesley is automatically giving the buyer a warranty that no one else invented the device or has any copyright, patent, or trademark in it.

---

[8] UCC §2-312(1).
[9] UCC §2-313(3).

Disclaimers and Defenses

There are several limitations on warranties. A seller may disclaim *warranties*, meaning that he eliminates express or implied warranties covering the goods. Or the seller may limit the buyer's *remedy*, which means that even if there is a breach of warranty, the buyer still may have only a very limited chance to recover against the seller.

Disclaimers

A **disclaimer** is a statement that a particular warranty *does not* apply. The Code permits the seller to disclaim most warranties.

Disclaimer
A statement that a particular warranty does not apply.

Oral Express Warranties

Under the Code, a seller may disclaim an oral express warranty. Suppose Traffic Co. wants to buy a helicopter from HeliCorp for use in reporting commuter traffic. HeliCorp's salesman tells Traffic Co., "Don't worry, you can fly this bird day and night for six months with nothing more than a fuel stop." HeliCorp's contract may disclaim the oral warranty. The contract could say, "HeliCorp's entire warranty is printed below. Any statements made by any agent or salesperson are disclaimed and form no part of this contract." That disclaimer is valid. If the helicopter requires routine servicing between flights, HeliCorp has not breached an oral warranty.

VisionsofAmerica/Joe Sohm/Getty Images

Would you fly in a helicopter protected by an oral express warranty?

Written Express Warranties

This is the one type of warranty that is almost impossible to disclaim. If a seller includes an express warranty in the *sales contract*, any disclaimer is definitely invalid. Suppose HeliCorp sells an industrial helicopter for use in hauling building equipment. The sales contract describes the aircraft as "operable to 14,000 feet." Later, in the contract, a limited warranty disclaims "any other warranties or statements that appear in this document or in any other document." That disclaimer is invalid and does not cancel the assurance that the helicopter can operate to 14,000 feet. The Code will not permit a seller to take contradictory positions in a document. The goal is simply to be fair, and the UCC assumes that it is confusing and unjust for a seller to say one thing to help close a deal and the opposite to limit its losses.[10]

What if the express written statement is in a different document, such as a sales brochure? The disclaimer is void if it would *unfairly surprise* the buyer. Assume, again, that HeliCorp promises a helicopter that requires no routine maintenance for six months, but this time, the promise appears in a sales brochure that Traffic Co. reads and relies on. If HeliCorp attempts to disclaim the written warranty, it will probably fail. Most people take written information seriously, and courts usually find that consumers would be unfairly surprised if a company tried to go back on promises made in a sales brochure.

[10] UCC §2-316(1).

Implied Warranties

A seller may disclaim the implied warranty of merchantability provided he *actually mentions the word* merchantability *and makes the disclaimer conspicuous.* Courts demand to see the specific word *merchantability* in the disclaimer to be sure the buyer realized she was giving up this fundamental protection. If the word is there, and the disclaimer is conspicuous enough that the buyer should have seen it, she has forfeited the warranty. A seller may disclaim the implied warranty of fitness with any language that is clear and conspicuous.

To make life easier, the Uniform Commercial Code permits a seller to disclaim *all* implied warranties by conspicuously stating that the goods are sold "as is" or "with all faults." Notice the tension between this provision and the one just discussed. A seller who wants to disclaim *only* the warranty of merchantability must explicitly mention that term; but a seller wishing to exclude *all* implied warranties may do so with a short expression, such as "sold as is."

Many states, though, prohibit a seller from disclaiming implied warranties in the sale of consumer goods. In these states, if a home furnishings store sells a bunk bed to a consumer, and the top bunk tips out the window on the first night, the seller is liable. Even if the sales contract clearly stated "no warranties of merchantability," the court would reject the clause and find that the seller breached the implied warranty of merchantability.

As the following case illustrates, courts tend to impose high standards on defendants who disclaim warranties.

CCB Ohio, LLC v. Chemque, Inc.

649 F. Supp. 2d 757
United States District Court for the Southern District of Ohio, 2009

Facts: CCB Ohio specializes in upgrading power lines in a way that makes it possible to offer broadband service over an electrical grid. Chemque manufactures Q-gel.

Transformers reduce the 100,000 or more volts flowing through a typical power line to the 120 volts that actually arrive at the outlets in your home. Unfortunately, transformers completely block digital signals, so, to offer broadband over an electrical grid, data must take a "detour" around transformers. Couplers allow for this detour.

CCB and its contractors purchased Q-gel. This substance was supposed to create a waterproof seal that would bind newly installed couplers to power lines. Unfortunately, the gel did not gel, at least not for long. Within 18 months, 40 percent of CCB Ohio's couplers were leaking liquefied Q-gel. Ultimately, 90 percent of the couplers throughout the Cincinnati area leaked and caused millions of dollars in losses.

CCB Ohio sued for breach of warranty. Chemque argued that it had disclaimed all implied warranties. It moved for summary judgment.

Issue: ***Did Chemque disclaim its warranties?***

Excerpts from Judge Spiegel's Decision: Defendant's argument is that [it] disclaimed any warranties, as its specification sheet states "all information is given without warranty or guarantee." Plaintiffs respond that several genuine issues of fact remain as to whether Defendant effectively disclaimed all warranties. Specifically, Plaintiffs argue facts remain as to whether Plaintiffs ever received the specification sheet containing the disclaimer, whether the disclaimer was conspicuous, and whether the disclaimer effectively disclaimed the implied warranty of merchantability and Defendant's express warranties.

The Court finds Plaintiffs' argument well-taken that the record neither establishes they received a disclaimer, nor that the disclaimer Defendant has proffered amounts to a conspicuous disclaimer that a reasonable person ought to have noticed. The Court further concludes that Defendant's purported disclaimer that "all information is given without warranty or guarantee" did not effectively disclaim the implied warranty of merchantability, as the disclaimer does not mention merchantability. Finally, questions of fact exist as to whether Defendant's disclaimer is reasonable vis à vis its express warranties.

As such, the Court rejects Defendant's motion for summary judgment as to Plaintiffs' warranty claims.

EXAM Strategy

Question: Marcos's backyard pool, which measured 35 feet by 18 feet, needed a new filter. A sales brochure stated, "This filter will keep any normal backyard pool, up to 50 feet by 25, clean and healthy all summer for a minimum of 5 years." Marcos signed a sales contract, which included this disclaimer: "The filter will work to normal industry standards. This is the only warranty. No other statements, written or oral, apply. Pools vary widely, and the Seller cannot guarantee any specific level of performance or cleanliness. Buyer agrees to this disclaimer." The filter failed to keep Marcos's pool clean, and he sued for breach of warranty. Who should win?

Strategy: Sellers are often able to disclaim oral warranties, but written warranties are difficult to disclaim. Here, the initial promise and the disclaimer were in different documents. Does that change the outcome? Finally, Marcos was a consumer. Courts treat consumers differently from corporate buyers.

Result: It is difficult or impossible for sellers to disclaim written warranties, even if the promise and disclaimer are in different documents. A disclaimer that would unfairly surprise the buyer is void. Marcos relied on the sales brochure—as the company intended—and the seller will probably lose. Furthermore, most states give extra protection to consumers, knowing that they are less sophisticated buyers. A court is likely to find in favor of Marcos based on the seller's express warranty, as well as the implied warranties of merchantability and fitness.

Remedy Limitations

Simon Aerials, Inc., manufactured boomlifts, the huge cranes used to construct multistoried buildings. Simon agreed to design and build eight unusually large machines for Logan Equipment Corp. Simon delivered the boomlifts late, and they functioned poorly. Logan requested dozens of repairs and modifications, which Simon attempted to accomplish over many months, but the equipment never worked well. Logan gave up and sued for $7.5 million, representing the profits it expected to make from renting the machines and the damage to its reputation. Logan clearly had suffered major losses, and it recovered—nothing. How could that be?

Simon had negotiated a **limitation of remedy** clause, by which the parties may limit or exclude the normal remedies permitted under the Uniform Commercial Code.[11] These important rights are entirely distinct from disclaimers. A disclaimer limits the seller's warranties and thus affects whether the seller has breached her contract in the first place. A remedy limitation, by contrast, states that if a party *does* breach its warranty, the injured party will not get all of the damages the Code normally allows.

In its contract, Simon had agreed to repair or replace any defective boomlifts, but that was all. The agreement said that if a boomlift was defective, and Logan lost business, profits, and reputation, Simon was not liable. The court upheld the remedy limitation. Since Simon had repeatedly attempted to repair and redesign the defective machines, it had done everything it promised to do. Logan got nothing.[12]

---

[11]UCC §2-719. A few states prohibit remedy limitations, but most permit them.

[12]*Logan Equipment Corp. v. Simon Aerials, Inc.*, 736 F. Supp. 1188, 1990 U.S. Dist. LEXIS 5720 (D. Mass. 1990).

We compare disclaimers and remedy limitations in the table below.

COMPARISON OF DISCLAIMERS AND REMEDY LIMITATIONS

Code Section	Purpose	Setting	Contract Language	Result
Disclaimers: UCC §2-316	Limits warranties, whether express or implied. This section will determine *whether there has been a breach.*	Seller sells Buyer a used "tire shredding machine." UCC §2-314 implies a warranty of merchantability, meaning that the machine will be good for its ordinary purpose, which is shredding tires in a commercial recycling business.	Seller includes in the contract a clause stating that the tire shredder is sold "as is." Under §2-316, this phrase excludes all implied warranties, meaning that the implied warranty of merchantability will NOT apply here.	One tire goes through the machine, the tire emerges completely intact, and the machine falls to pieces. *Result:* Seller has NOT breached the contract, and Buyer gets no damages.
Remedy limitations: UCC §2-719	Limits the remedies available *when one party has breached* the contract.	Seller sells Buyer 10,000 computer circuit boards at $200 each, which Buyer uses in its laptops.	Seller requires a clause limiting Buyer's remedies to "replace or repair." If the boards fail, Seller will replace or repair them for free. But Buyer is permitted NO OTHER REMEDY. Buyer may not seek consequential damages, which would include lost profits and injured reputation.	All of the boards malfunction, and Buyer's customers are angry *at Buyer.* Buyer must take the computers back, losing all of its expected profits and also suffering a serious loss of reputation in the high-tech world. Seller IS in breach of the contract and must repair or replace all circuit boards at its expense. But Seller owes NOTHING for Buyer's lost profits or injured reputation.

Consequential Damages

Simon's contract clause was a typical one. Sellers frequently use a remedy limitation to avoid liability for consequential damages, which can be vast. Recall that a party injured by breach of contract normally gets direct, or *compensatory* damages.[13] In the sale of goods, that means the difference between the value of the goods promised and those actually delivered. A seller can anticipate and probably tolerate such damages since the seller understands exactly how much it costs to repair or replace the goods it has sold. **Consequential damages**, however, are different. They are losses stemming from the particular requirements of the buyer. The buyer might have entered into dozens of contracts in reliance on the goods it expects from the seller. The seller will have no way of knowing how great the consequential damages could be. Logan Equipment claimed that it would have earned profits in the millions, and it was just such a claim that Simon had determined to avoid.

Notice that there is one major restriction on limitation of remedy clauses: **an exclusion of consequential damages is void if it is unconscionable.** The word *unconscionable* means that a remedy restriction is shockingly one-sided and fundamentally unfair.[14] If the buyer is a consumer, a court will be likelier to consider such an exclusion unfair since the typical consumer will not understand the terms and may never even notice them. If the buyer is a

[13]Compensatory, consequential, and incidental damages are discussed in Chapter 18, on remedies.
[14]UCC §2-719.

consumer who suffers a *personal injury*, a court is nearly certain to reject the exclusion. It is unfair for a corporation to market defective goods and escape liability because an unsuspecting consumer failed to understand contract language. Suppose Byron buys a hot-air popcorn popper that comes with a label which attempts to limit remedies. Byron is seriously burned when the popper ignites. Virtually all courts will ignore the label and permit Byron to recover his full damages. However, when the buyer is a corporation, courts assume it had adequate legal advice and an opportunity to reject unacceptable terms. When two companies agree to a remedy limitation, they are allocating the risk of loss as one part of their bargain. A court will seldom substitute its judgment for that of the contracting companies. In the *Logan Equipment* case, both parties were corporations, and sophisticated executives negotiated the boomlift sale. The court found nothing unconscionable in the bargain and enforced the limitation that the parties had agreed to.[15]

Privity

When two parties contract, they are *in privity*. If Lance buys a chainsaw from the local hardware store, he is in privity with the store. But Lance has no privity with Kwiksaw, the manufacturer of the chainsaw. Under traditional contract law, a plaintiff injured by a breach of contract could sue only a defendant with whom he had privity. So, many years ago, if Lance's chainsaw had been seriously defective, he could have sued only the store. Kwiksaw would have defended successfully, claiming "lack of privity." This hurt consumers because the local retailer might have lacked assets to compensate for serious injuries. Today, privity is gradually disappearing as a defense. Various states are approaching the issue in different ways, so there is no one rule. We can, however, highlight the trends.

Personal Injury

Where a product causes a personal injury, most states permit a warranty lawsuit even without privity. If the chain on Lance's power saw flies off and slashes his arm, he has suffered a personal injury. Of course, he may sue the store, with which he has privity. But he will want to sue the manufacturer, which has more money. In the majority of states, he will be able to sue the manufacturer for breach of warranty even though he had no privity with it.[16] (Note that Lance is sure to make other claims against the manufacturer, including *negligence* and *strict liability*, both discussed below.)

---

[15] *Logan Equipment*, 736 F. Supp. at 1195.

[16] The Code offers three alternative versions of its rule concerning privity: UCC §2-318, Alternatives A, B, and C, with each state free to adopt whichever version the legislature prefers. Alternative A, the most restrictive, extends a warranty in the cases of personal injury to the buyer and members of his household. But the comments of this section indicate that this extension to household members does not *preclude* claims brought by non-household members. The drafters have left it up to the states to decide whether additional injured parties could sue. Several states that have adopted this version of the privity rule have permitted warranty claims by injured parties who were not household members. Dahlia buys a weed cutter manufactured by Thorn and sold by Hardware, and she loans it to Rose, who is cut when it malfunctions. Many, but not all, states that have adopted Alternative A would allow Rose to sue Thorn.

Alternative B is more expansive, explicitly permitting a warranty suit by any injured natural person (non-corporation), who could reasonably be affected by the product. In states that have adopted this section, Rose would certainly be permitted to sue Thorn. Alternative C, the most expansive, permits recovery by natural persons and corporations and allows suits for economic loss as well as personal injury. What does all this mean? The privity requirement is disappearing in personal injury cases and diminishing in cases of economic loss.

Economic Loss

If the buyer suffers only economic loss, privity may still be required to bring a suit for breach of warranty. If the buyer is a *business*, the majority of states require privity. Fab-Rik makes fabric for furniture and drapes, which it sells to various wholesalers. Siddown makes sofas. Siddown buys Fab-Rik fabric from a wholesaler and, after installing it on 200 sofas, finds the material defective. Siddown may sue the wholesaler but, in most states, will be unable to sue Fab-Rik for breach of any warranties. There was no privity.

By contrast, when the buyer is a *consumer*, more states will permit a suit against the manufacturer, even without privity. Lance, the consumer, buys his power saw to landscape his property. This time, the saw malfunctions without injuring him, but Lance must buy a replacement saw for considerably more money. Many states—but not all—will permit him to recover his losses from Kwiksaw, the manufacturer, on the theory that Kwiksaw intends its product to reach consumers and is in the best position to control losses.

In the following case, a jailhouse tragedy prompts a product liability suit.

Reed v. City of Chicago

263 F.Supp.2d 1123
United States District Court for the Northern District of Illinois, 2003

Facts: J. C. Reed was arrested and brought to Chicago's Fifth District Police Station. Police were allegedly aware that he was suicidal, having seen him slash his wrists earlier. They removed his clothing and dressed him in a paper isolation gown. Sadly, Reed used the gown to hang himself.

Reed's mother, on his behalf, sued the police (for failing to monitor a suicidal inmate) and also Cypress Medical Products, the manufacturer of the isolation gown. The claim was that the gown should have been made of material that would tear if someone attempted to hang himself with it. Cypress moved to dismiss the suit, claiming that Reed had no privity with the company.

Issue: ***Could Reed maintain a lawsuit against Cypress despite lack of privity?***

Excerpts from Judge Moran's Decision: The single issue we must decide is whether plaintiff, as a non-purchaser, can recover from the manufacturer and designer of the gown for breach of warranty. Historically, Illinois law has required privity. Lack of privity occurs when a user of the product, beside the consumer, is injured. Section 2-318 of the Uniform Commercial Code (UCC), as adopted by the Illinois legislature, contains mandatory exceptions to the general requirement of privity:

> A seller's warranty whether express or implied extends to any natural person who is in the family or household of his buyer or who is a guest in his home if it is reasonable to expect that such person may use, consume or be affected by the goods and who is injured in person by breach of the warranty.

The Illinois Supreme Court has determined that the privity is no longer an absolute requirement for breach of warranty actions. While section 2-318 lists specific exceptions to the privity requirement, Illinois courts have noted that this list is not necessarily exhaustive.

The vast majority of cases examining the limits of section 2-318 in Illinois have dealt with the employment context, expanding the class of potential breach of warranty plaintiffs to employees of the ultimate purchaser. In [a case called *Whitaker*,] plaintiff was injured while using a bandsaw that had been purchased by his employer. The court determined that the employee was essentially a third party beneficiary to the sale in that the employee's safety while using the bandsaw was "either explicitly or implicitly part of the basis of the bargain when the employer purchased the goods."

In cases examining the limits of section 2-318 in other contexts, courts have been reluctant to find additional exceptions to the privity requirement. In [a case called *Hemphill*,] the court refused to allow a breach of warranty claim by a university football player against the manufacturer of his helmet.

While no Illinois courts have expanded the plaintiff class for breach of warranty actions beyond employees, we believe that the law requires us to do so here. The beneficiary of any warranty made by the manufacturer and designer of the gown is necessarily a potentially suicidal detainee like Reed. If protection is not provided to plaintiffs like Reed, any warranty as to the safety of the gown would have little, if any, effect. In designing

and manufacturing the gown, defendants contemplated that the users of the gown would be detainees. Moreover, the safety of these detainees was necessarily a part of the bargain, whether explicitly or implicitly, between the seller and buyer. For these reasons, a detainee of the City like Reed must be able to enforce the protections of any warranties made by the manufacturer and designer of the gown.

For the foregoing reasons, defendants' motion to dismiss is denied.

Buyer's Misuse

Misuse by the buyer will generally preclude a warranty claim.[17] Common sense tells us that the seller only warrants its goods if they are properly used. Lord & Taylor warranted that its false eyelashes would function well and cause no harm. But when Ms. Caldwell applied them, they severely irritated one eye. She sued, but the store prevailed. Why? Caldwell applied the eyelashes improperly, getting the glue into one eye. On her other eye, she used the product correctly and suffered no harm. Her misuse proved painful to her eye—and fatal to her lawsuit.[18]

Statute of Limitations and Notice of Breach

It is right that a seller be responsible for the goods it places in the market. On the other hand, a seller should not face potential liability *forever*. A company cannot be a perpetual insurer for goods that it sold decades earlier. And so the UCC imposes two important time limits on a buyer's claim of breach.

The Code prescribes a four-year statute of limitations. This means that the buyer must bring any lawsuit for breach of a warranty no later than four years after the goods were delivered. When the parties contract, they may shorten that period to no less than one year, but they may not extend it. Suppose PlaneJane, an airline, buys 10 new aircraft from Flyem, a manufacturer, taking delivery on June 1, 2012. In the fall of 2015, PlaneJane begins to discover structural weaknesses in the wings, which Flyem repeatedly repairs over the next few months. PlaneJane must decide whether to file a lawsuit. If the airline believes all problems are corrected, fine. But if it has any doubts about the aircraft fitness, PlaneJane must sue promptly. On June 2, 2016, any lawsuit for breach of warranty is barred by the statute of limitations.

The Code puts an additional burden on a buyer asserting a breach of warranty. **The UCC requires that a buyer notify the seller of defects within a reasonable time.**[19] The purpose here is to enable the seller to cure, by repairing or replacing, any problems with the goods. Ideally, a seller that receives notice of a potential breach will fix the problem and there will *be* no lawsuit.

The circumstances will determine what is a "reasonable" amount of time. An inexperienced consumer could reasonably take many months to figure out that a new laptop computer had a serious operating defect. Further, a delay of six or eight months would not harm a large computer manufacturer. On the other hand, a corporate buyer of perishable food products must act very quickly if it wishes to claim the goods are defective.

---

[17]Some courts characterize the misuse as "comparative negligence" or "contributory negligence" or "failure of proximate cause." These tort terms are discussed in Chapter 7, dealing with negligence and strict liability. For our purposes here, though, it is enough to understand that misuse generally precludes a warranty claim.

[18]*Caldwell v. Lord & Taylor, Inc.*, 142 Ga. App. 137, 235 S.E.2d 546 (Ga. Ct. App. 1977).

[19]UCC §2-607.

Negligence

A consumer injured by an exploding cola bottle is unlikely to have bargained for her beverage with the CEO of the cola company.

A buyer of goods may have remedies other than warranty claims. One is negligence, which we discussed in detail in Chapter 7. Here, we focus on how this law applies to the sale of goods. Negligence, as you will recall, is notably different from contract law. In a contract case, the two parties have reached an agreement, and the terms of their bargain will usually determine how to settle any dispute. If the parties agreed that the seller disclaimed all warranties, then the buyer may be out of luck. But in a negligence case, there has been no bargaining between the parties, and they may never have met. A consumer injured by an exploding cola bottle is unlikely to have bargained for her beverage with the CEO of the cola company. Instead, the law *imposes* a standard of conduct on everyone in society, corporation and individual alike. The two key elements of this standard, for present purposes, are *duty* and *breach*. A plaintiff injured by goods she bought must show that the defendant, usually a manufacturer or seller of a product, had a duty to her and breached that duty.[20] A defendant has a duty of due care to anyone who could *foreseeably* be injured by its misconduct. Generally, the duty is to act as a reasonable person would in like circumstances; a defendant who acts unreasonably has breached its duty.

In negligence cases concerning the sale of goods, plaintiffs most often raise one or more of these claims:

- ***Negligent design.*** The buyer claims that the product injured her because the manufacturer designed it poorly. Negligence law requires a manufacturer to design a product free of *unreasonable* risks. The product does not have to be absolutely safe. An automobile that nearly guaranteed a driver's safety could be made, in theory, but it would be prohibitively expensive. Reasonable safety features must be built in, if they can be included at a tolerable cost.

- ***Negligent manufacture.*** The buyer claims that the design was adequate but that failure to inspect or some other careless conduct caused a dangerous product to leave the plant.

- ***Failure to warn.*** A manufacturer is liable for failing to warn the purchaser or users about the dangers of normal use and also foreseeable misuse. However, there is no duty to warn about obvious dangers, a point evidently lost on some manufacturers. A Batman costume came with this statement: "For play only: cape does not enable user to fly."

In the following case, the plaintiffs raise issues of negligent design and failure to warn, concerning a disposable lighter. Did they breach their duty? You decide.

[20] A plaintiff in a negligence case must also prove three other elements: factual causation, foreseeable type of harm, and injury. For a discussion of those elements, see Chapter 7. We focus in this chapter on duty and breach because those two elements take on special importance in product liability cases.

You be the Judge

Boumelhem v. Bic Corp.

211 Mich. App. 175, 535 N.W.2d 574, 1995 Mich. App. LEXIS 228
Michigan Court of Appeals, 1995

Facts: Ibrahim Boumelhem, aged four, began playing with a Bic disposable lighter that his parents had purchased. He started a fire that burned his legs and severely burned his six-month-old brother over 85 percent of his body. Ibrahim's father sued Bic, claiming that the lighter was negligently designed because it could have been childproof. He also claimed failure to warn because the lighter did not clearly warn of the danger to children.

The *Boumelhem* court considered evidence and analyses from several other cases against Bic. The court noted that consumers use over 500 million disposable lighters annually in the United States. Each lighter provides 1,000 to 2,000 lights. During one three-year period, children playing with disposable lighters started 8,100 fires annually, causing an average of 180 people to die every year, of whom 140 were children under five. Another 990 people were injured. The average annual cost of deaths, injuries, and property damage from child-play fires was estimated at $310 to $375 million, or 60 to 75 cents per lighter sold. Bic had acknowledged in earlier litigation that it was foreseeable lighters would get into children's hands and injure them. Bic had also agreed that it was feasible to make a more child-resistant lighter.

The trial court relied on a Michigan case. In *Adams v. Perry Furniture Co.*,[21] four minor children had died in a fire started when one of them was playing with a Bic lighter. The *Adams* court had found no negligent design and no failure to warn, and it dismissed all claims. The trial court in the present case followed *Adams* and dismissed Boumelhem's claims. He appealed.

You Be the Judge: ***Did Bic negligently design its disposable lighter? Did Bic negligently fail to warn of the lighter's dangers?***

Argument for Boumelhem: Your honors, the *Adams* court decided the issues wrongly. There is a reason that new plaintiffs are back in this court, the year after *Adams*, raising related issues against Bic: the company is killing hundreds of children every year. In its efforts to maximize corporate profits, it is literally burning these children to death and injuring hundreds more. That's wrong.

Bic has acknowledged that its disposable lighters can and will get into the hands of children. Bic knows full well that its product will injure or kill a certain percentage of these children—very young children. Bic has admitted that it could design a childproof lighter, and it knows perfectly well how to include effective warnings on its lighters. But rather than improve product design and give effective warnings, Bic prefers to do business as usual and litigate liability for injured children.

We ask this court to rule that Bic breached its duty to design and manufacture a lighter that will keep our kids safe, and breached its duty to warn.

Argument for Bic: Your honors, the Bic Corp. is as horrified as anyone over the injuries to these children and the deaths of other kids. But Bic is not responsible. The children's parents are responsible. We sympathize with their grief, but not with their attempt to pass parental responsibility onto the shoulders of a corporation. There are several reasons Bic is not liable in this case.

First, the *Adams* court decided the matter, and that precedent is binding.

Second, Bic has no duty to design a different lighter. The test in design defect cases is whether the risks are unreasonable in light of the foreseeable injuries. Young children can hurt themselves in countless ways, from falls to poisonings to automobile injuries. There is one answer to these dangers, and it is called good parenting. The parents who bought this lighter purchased it because it could start a fire. The moment they purchased it, they assumed the obligation to keep it away from their children. These are useful products, which is why Bic sells hundreds of millions per year. Other consumers should not be forced to pay an outrageously high price for a simple tool, just because some parents fail to do their job.

The failure to warn argument is even weaker. The law imposes no failure to warn when the danger is obvious. Every adult knows that lighters are *potentially* dangerous, if misused, or if passed on to children. No one would be helped by a warning that said, "This lighter starts fires. Don't give it to children."

[21] 198 Mich. App. 1, 497 N.W.2d 514, 1993 Mich. App. LEXIS 33 (Mich. Ct. App. 1993).

Strict Liability

The other tort claim that an injured person can often bring against the manufacturer or seller of a product is strict liability. Like negligence, strict liability is a burden created by the law rather than by the parties. And, as with all torts, strict liability concerns claims of physical harm. But there is a key distinction between negligence and strict liability: in a negligence case, the injured buyer must demonstrate that the seller's conduct was unreasonable. Not so in strict liability.

In strict liability, the injured person need not prove that the defendant's conduct was unreasonable. The injured person must show only that the defendant manufactured or sold a product that was defective and that the defect caused harm. Almost all states permit such lawsuits, and most of them have adopted the following model:

1. One who sells any product in a defective condition unreasonably dangerous to the user or consumer or to his property is subject to liability for physical harm thereby caused to the ultimate user or consumer, or to his property, if
   a. the seller is engaged in the business of selling such a product, and
   b. it is expected to and does reach the user or consumer without substantial change in the condition in which it is sold.
2. The rule stated in Subsection (1) applies although
   a. the seller has exercised all possible care in the preparation and sale of his product, and
   b. the user or consumer has not bought the product from or entered into any contractual relation with the seller.[22]

© Ariel Skelley / Blend Images / Jupiterimages

Because prescription drugs may cause harm even when taken correctly, drug manufacturers are required to provide adequate warnings of potential dangers involved in taking their products.

These are the key terms in subsection (1):

- ***Defective condition unreasonably dangerous to the user.*** The defendant is liable only if the product is defective when it leaves his hands. There must be something wrong with the goods. If they are reasonably safe and the buyer's mishandling of the goods causes the harm, there is no strict liability. If you attempt to open a soda bottle by knocking the cap against a counter, and the glass shatters and cuts you, the manufacturer owes nothing. A carving knife can produce a lethal wound, but everyone knows that, and a sharp knife is not unreasonably dangerous. On the other hand, prescription drugs may harm in ways that neither a layperson nor a doctor would anticipate. The manufacturer *must provide adequate warnings* of any dangers that are not apparent.
- ***In the business of selling.*** The seller is liable only if she normally sells this kind of product. Suppose your roommate makes you a peanut butter sandwich and, while eating it, you cut your mouth on a sliver of glass that was in the jar. The peanut butter manufacturer faces strict liability, as does the grocery store where your roommate bought the goods. But your roommate is not strictly liable because he is not in the food business.

[22]Restatement (Second) of Torts §402A.

- ***Reaches the user without substantial change.*** Obviously, if your roommate put the glass in the peanut butter thinking it was funny, neither the manufacturer nor the store is liable.

And here are the important phrases in subsection (2).

- ***Has exercised all possible care.*** This is the heart of strict liability, which makes it a potent claim for consumers. *It is no defense that the seller used reasonable care.* If the product is dangerously defective and injures the user, the seller is liable even if it took every precaution to design and manufacture the product safely. Suppose the peanut butter jar did in fact contain a glass sliver when it left the factory. The manufacturer proves that it uses extraordinary care in keeping foreign particles out of the jars and thoroughly inspects each container before it is shipped. The evidence is irrelevant. The manufacturer has shown that it was not *negligent* in packaging the food, but reasonable care is irrelevant in strict liability cases.

- ***No contractual relation.*** Remember "privity," from the warranty discussion? Privity only exists between the user and the person from whom she actually bought the goods, but in strict liability cases, *privity is not required*. Suppose the manufacturer that made the peanut butter sold it to a distributor, which sold it to a wholesaler, which sold it to a grocery store, which sold it to your roommate. You may sue the manufacturer, distributor, wholesaler, and store, even though you had no privity with any of them.

Contemporary Trends

If the steering wheel on a brand new car falls off, and the driver is injured, that is a clear case of defective manufacturing, and the company will be strictly liable. Those are the easy cases. But defective design cases have been more contentious. Suppose a vaccine that prevents serious childhood illnesses inevitably causes brain damage in a very small number of children because of the nature of the drug. Is the manufacturer liable? What if a racing sailboat, designed only for speed, is dangerously unstable in the hands of a less-experienced sailor? Is the boat's maker responsible for fatalities? Suppose an automobile made of lightweight metal uses less fuel but exposes its occupants to more serious injuries in an accident. How is a court to decide whether the design was defective? Often, these design cases also involve issues of warnings: did the drug designer diligently detail dangers to doctors? Should a sailboat seller sell speedy sailboats solely to seasoned sailors?

Over the years, most courts have adopted one of two tests for design and warning cases. The first is *consumer expectation*. Here, a court finds the manufacturer liable for defective design if the product is less safe than a reasonable consumer would expect. If a smoke detector has a 3 percent failure rate and the average consumer has no way of anticipating that danger, effective cautions must be included, though the design may be defective anyway.

Many other states use a *risk-utility test*. Here, a court must weigh the benefits for society against the dangers that the product poses. Principal factors in the risk-utility test include:

- The *value* of the product,
- The *gravity*, or seriousness, of the danger,
- The *likelihood* that such danger will occur,
- The mechanical feasibility of a *safer alternative* design, and
- The *adverse consequences* of an alternative design.

Tort Reform

Some people believe that jury awards are excessive and need statutory reform. About two-thirds of the states have passed at least some limits on damages in tort actions. About one-third of states have created new rules for particular kinds of product liability. *Unavoidably unsafe* prescription drugs are an example. Suppose that a plaintiff proves that a prescription medicine caused her grievous, permanent harm, and that 1 percent of all users will suffer similar damage. If the pharmaceutical company can demonstrate that it is impossible to manufacture the drug to eliminate all danger, many states will deny the plaintiff any damages. These states have essentially decided that the benefits of that prescription medicine outweigh its risks. If the medicine is unavoidably unsafe—that is, it cannot be made safer—the company should not be held liable; large verdicts might drive pharmaceutical firms out of a business that has great social value.

Opponents consider tort reform dangerous to society. They argue that the real goal of the so-called reform is to free irresponsible corporations from any potential liability, enabling them to save money while injuring innocent people. They insist that giving the 12 average members of society on a jury a say in product safety benefits everyone.

Time Limits: Statutes of Limitations in Tort Cases

We have seen that for *warranty* cases, the UCC imposes a four-year statute of limitations. By contrast, most states have a different statute of limitations for tort claims. Many states set a three-year limit, though some are shorter and others longer. But the key element is this: in a tort case, the statute of limitations runs *from the time the defect was discovered.*

Many product liability cases involve both warranty and tort claims. Should a court apply the statute of limitations from the Code or from tort law? The analysis begins with the **economic loss doctrine**: when an injury is purely economic and arises from a contract made by two businesses, the injured party may only sue under the UCC. (If the buyer is a consumer, most courts will not apply this doctrine.)

Economic loss doctrine
When an injury is purely economic, and arises from a contract made by two businesses, the injured party may only sue under the UCC.

So, **the four-year statute of limitations will apply in all cases covered by the economic loss doctrine**. Suppose a corporation discovers that a product it purchased six years ago is defective and has caused major losses. The company probably has no remedy. Neibarger purchased an automated milking system for his dairy from Universal Cooperatives. Over the next few years, many of his cows became sick; some died, and others had to be sold for beef. Seven years after he bought the equipment, Neibarger learned that Universal had improperly designed and installed the vacuum system that is an essential part of the machine. He sued, claiming massive damage to his farming operation, but the Michigan Supreme Court applied the economic loss doctrine. Neibarger's loss was commercial, resulting from a contract that two corporations had negotiated. His only possible remedy was under the UCC, but the Code's statute of limitations had expired. In the end, he had no remedy.[23]

A Final Issue: Statutes of Repose

In tort cases, the passage of time provides a seller with two possible defenses. We have seen that the statute of limitations requires that a lawsuit be brought within a specified period, such as three years, beginning when the defect is discovered or should have been discovered. **A statute of repose places an absolute limit on when a lawsuit may be filed,**

---

[23] *Neibarger v. Universal Cooperatives, Inc.*, 439 Mich. 512, 486 N.W.2d 612, 1992 Mich. LEXIS 1502 (1992).

regardless of when the defect is discovered. Jeffrey Oats was riding in the back seat of a Nissan sports car when it was involved in an accident. Tragically, Oats suffered spinal cord injuries that left him a quadriplegic. Oats sued Nissan, based on defective design, claiming that the rear seat lacked adequate head and leg room and that the car's body panels lacked sufficient strength. He argued that these defects only became apparent in an accident. But the Idaho Supreme Court dismissed his claims because the car was 11 years old at the time of the accident. The Idaho statute of repose prohibits most product liability suits filed more than 10 years after the goods were sold, regardless of when the defects were discoverable.[24]

EXAM Strategy

Question: Stuart lives in a state that sets a three-year statute of limitations on tort claims. His state also has an eight-year statute of repose. Stuart bought a television on June 1, 2010. On July 1, 2017, a manufacturing defect causes the television to malfunction and cause an electrical fire. Stuart waits for a year and then files a lawsuit on July 1, 2018. Will he win, or will his case be dismissed?

Strategy: Since Stuart is a consumer, the court will not apply either the economic loss doctrine or the UCC's four-year statute of limitations. When does the state's three-year statute of limitations begin to run? What effect will the state's statute of repose have on Stuart's case?

Result: The statute of limitations' three-year period starts to run only when Stuart discovers the defect. Since he filed one year from the fire, the statute of limitations does not bar his recovery. But unfortunately, Stuart's lawsuit will fail because of the statute of repose. That eight-year limit begins to expire when Stuart buys the TV, and the lawsuit is not filed for eight years and one month from the time of the sale. Stuart loses.

OTHER LEGISLATION

Lemon Laws

It is intensely frustrating—and expensive—for consumers when a new car is defective and spends more time in the repair shop than on the road. So, many states have passed lemon laws, which entitle the buyer to receive a refund if the car has defects that substantially impair its value and safety. This right may prove more valuable than a limited warranty, which might only entitle the buyer to repeated attempts at servicing.

Consumer Protection Laws

Virtually all states also have consumer protection laws, which focus on a merchant's bad faith or deceit. Consumers can use these statutes, which are discussed in Chapter 39, to recover for defective goods or inadequate service.

[24] *Oats v. Nissan Motor Corp.*, 126 Idaho 162, 879 P.2d 1095, 1994 Ida. LEXIS 116 (1994).

Chapter Conclusion

Both sellers and buyers of goods must understand the basic principles of product liability law. A seller must understand warranty, negligence, and strict liability law and consider all of those principles when designing, manufacturing, marketing, and selling goods. A buyer, on the other hand, should be aware each theory provides a possible basis for compensation and that consumers receive particularly strong protection.

Exam Review

Products can injure. The harm may be economic or physical. The plaintiff might have a remedy in *warranty*, which is found in the UCC, or one in *tort*, either for negligence or strict liability. The economic loss doctrine states that, when the injured party is a corporation and the harm is purely economic, the only remedies available are the warranty provisions of the Code. If a corporation suffers physical injury, it will probably be able to sue in tort. A consumer who suffers a physical injury can definitely sue in both tort and warranty, and a consumer who suffers an economic injury can generally, but not always, sue in both.

The Code prescribes a four-year statute of limitation for breaches of warranty. In tort cases, the statute of limitations runs from whenever the plaintiff should have discovered the defect. For ease of review, the following chart summarizes the different warranty and tort remedies.

	Contract or Tort	Source of Law	Summary of the Rule	Example	Potential Issue
Express Warranty	Contract	UCC §2-313	May be created by an affirmation of fact, a promise, a description of goods, or a sample, but it must have been the basis of the bargain.	Salesman says, "This helicopter will operate perfectly at 16,000 feet."	Written contract may disclaim any and all *oral* warranties.
Implied Warranty of Merchantability	Contract	UCC §2-314	The Code implies that the goods are fit for their ordinary use.	Buyer purchases a deep freezer. The Code implies a warranty that it will keep food frozen.	Seller may disclaim this warranty only if a conspicuous disclaimer includes the word "merchantability."
Implied Warranty of Fitness	Contract	UCC §2-315	The Code implies that the goods are fit for buyer's special purpose that seller knows about.	Where seller knows (1) buyer wants pine trees to plant in sandy soil, and (2) buyer is relying on seller's judgment, the trees carry an implied warranty that they will grow in that soil.	Seller may disclaim this warranty with conspicuous writing, but note that some states will disregard a disclaimer of *any* implied warranty in a consumer sale.

	Contract or Tort	Source of Law	Summary of the Rule	Example	Potential Issue
Implied Warranty of Title	Contract	UCC §2-312	The Code implies that seller has good title, free of any security interests and claims of patent, copyright, or trademark.	Seller sells a stolen car to buyer, who must later return it to the rightful owner. Seller has breached his warranty of good title and owes buyer her full damages.	Buyer is not protected against any security interests that she knows about.
Negligence	Tort	Common law	Seller is liable if she fails to show level of conduct that a *reasonable person* would use.	Manufacturer sells bathing suit made of miracle fabric; buyer swims in ocean where saltwater makes garment transparent; seller's failure to test the suit in saltwater was unreasonable and leaves seller liable. If seller had thoroughly tested and this was a freak occurrence, there would probably be no negligence.	No duty to warn if the danger is obvious. (In the bathing suit example, the danger is *not* obvious and there was a duty to warn.)
Strict Liability	Tort	State statutes and common law	Seller liable if the product leaves in a dangerously defective condition.	Can of barbecue lighter fluid explodes in the user's hand because the can's metal was defective; manufacturer took every reasonable precaution to test and inspect every can leaving factory; that reasonable care is *irrelevant* and seller is liable.	Injured buyer need not prove negligence but must prove that the product was defective.

Multiple-Choice Questions

1. **CPA QUESTION** Vick bought a used boat from Ocean Marina that disclaimed "any and all warranties." Ocean was unaware the boat had been stolen from Kidd. Vick surrendered it to Kidd when confronted with proof of the theft. Vick sued Ocean. Who prevails?
   (a) Vick, because the implied warranty of title has been breached
   (b) Vick, because a merchant cannot disclaim implied warranties
   (c) Ocean, because of the disclaimer of warranties
   (d) Ocean, because Vick surrendered the boat to Kidd

2. **CPA QUESTION** To establish a cause of action based on strict liability in tort for personal injuries resulting from using a defective product, one of the elements the plaintiff must prove is that the seller (defendant):
   (a) Failed to exercise due care
   (b) Was in privity of contract with the plaintiff
   (c) Defectively designed the product
   (d) Was engaged in the business of selling the product

3. **CPA QUESTION** Which of the following conditions must be met for an implied warranty of fitness for a particular purpose to arise?

   I. The warranty must be in writing.

   II. The seller must know that the buyer was relying on the seller in selecting the goods.

   (a) I only
   (b) II only
   (c) Both I and II
   (d) Neither I nor II

4. **CPA QUESTION** Under the UCC sales article, an action for breach of the implied warranty of merchantability by a party who sustains personal injuries may be successful against the seller of the product only when:
   (a) The seller is a merchant of the product involved.
   (b) An action based on negligence can also be successfully maintained.
   (c) The injured party is in privity of contract with the seller.
   (d) An action based on strict liability in tort can also be successfully maintained.

5. **CPA QUESTION** Which of the following factors is least important in determining whether a manufacturer is strictly liable in tort for a defective product?
   (a) The negligence of the manufacturer
   (b) The contributory negligence of the plaintiff
   (c) Modifications to the product by the wholesaler
   (d) Whether the product caused injuries

Essay Questions

1. Leighton Industries needed steel pipe to build furnaces for a customer. Leighton sent Callier Steel an order for a certain quantity of "A 106 Grade B" steel. Callier confirmed the order and created a contract by sending an invoice to Leighton, stating that it would send "A 106 Grade B" steel, as ordered. Callier delivered the steel, and Leighton built the furnaces, but they leaked badly and required rebuilding. Tests demonstrated that the steel was not in fact "A 106 Grade B," but an inferior steel. Leighton sued. Who wins?

2. **YOU BE THE JUDGE WRITING PROBLEM** United Technologies advertised a used Beechcraft Baron airplane for sale in an aviation journal. Thompson Comerford, an attorney, was interested and spoke with a United agent, who described the plane as "excellently maintained" and said it had been operated "under §135 flight regulations," meaning the plane had been subject to airworthiness inspections every 100 hours. Comerford arrived at a Dallas airport to pick up the plane, where he paid $80,000 for it. He signed a sales agreement stating that the plane was sold "as is" and that there were "no representations or warranties, express or implied, including the condition of the aircraft, its merchantability, or its fitness for any particular

purpose." Comerford attempted to fly the plane home but immediately experienced problems with its brakes, steering, ability to climb, and performance while cruising. (Otherwise, it was fine.) He sued, claiming breach of express and implied warranties. Did United Technologies breach an express or implied warranty? **Argument for Comerford:** United described the airplane as "excellently maintained," knowing that Mr. Comerford would rely on that information. United bragged about §135 servicing when that was obviously a lie. The company should not be allowed to say one thing and put the opposite in writing. **Argument for United Technologies:** Comerford is a lawyer, and we assume he can read. The contract could not have been clearer. The plane was sold as is. There were no warranties. If Comerford disliked the terms, he should have bargained for a different contract—or walked away. He knew he was buying a risky plane, and it is his to keep.

3. Round Tire Co. sells 1,000 tires to Green Rent-a-Car for use on Green's fleet. The same day, it sells one new tire to Betty Blue for use on her car. For both sales, Round uses a sales agreement that includes: "LIMITATION OF REMEDIES. Round agrees to repair or replace any tire which Round determines was defective, within 12 months or 25,000 miles, whichever comes first. Buyer agrees that this is Buyer's SOLE REMEDY; Buyer is not entitled to consequential or incidental damages or any other remedy of any kind." All of Round's tires prove defective. Green is so disgusted, it immediately purchases substitute tires from another manufacturer. Green loses $12,000 in extra tire costs and $75,000 in lost rental payments because many of its cars must be off the road waiting for tires. Betty Blue's new tire blows out as she is driving to church, and Betty suffers broken bones. Green and Blue both sue. Predict the outcomes.

4. Texaco, Inc., and other oil companies sold mineral spirits in bulk to distributors, which then resold to retailers. Mineral spirits are used for cleaning. Texaco allegedly knew that the retailers, such as hardware stores, frequently packaged the mineral spirits (illegally) in used half-gallon milk containers and sold them to consumers, often with no warnings on the packages. Mineral spirits are harmful or fatal if swallowed. David Hunnings, aged 21 months, found a milk container in his home, swallowed the mineral spirits, and died. The Hunnings sued Texaco for negligence. The trial court dismissed the complaint, and the Hunnings appealed. What is the legal standard in a negligence case? Have the plaintiffs made out a valid case of negligence? Remember that at this stage, a court is not deciding who wins, but what standard a plaintiff must meet in order to take its case to a jury. Assume that Texaco knew about the repackaging and the grave risk but continued to sell in bulk because doing so was profitable. (If the plaintiffs cannot prove those facts, they will lose even if they *do* get to a jury.) Would that make you angry? Does that mean such a case should go to a jury? Or would you conclude that the fault still lies with the retailer, the parents, or both?

5. Boboli Co. wanted to promote its "California-style" pizza, which it sold in supermarkets. The company contracted with Highland Group, Inc., to produce 2 million recipe brochures, which would be inserted in the carton when the freshly baked pizza was still very hot. Highland contracted with Comark Merchandising to print the brochures. But when Comark asked for details concerning the pizza, the carton, and so forth, Highland refused to supply the information. Comark printed the first lot of 72,000 brochures, which Highland delivered to Boboli. Unfortunately, the hot bread caused the ink to run, and customers opening the carton often found red or blue splotches on their pizzas. Highland refused to accept additional brochures, and Comark sued for breach of contract. Highland defended by claiming that Comark had breached its warranty of merchantability. Please comment.

Discussion Questions

1. Consider the opening scenario, in which a diner cracked a tooth on a fragment of bone hidden in a hamburger. Would society be better off if lawsuits over such injuries were more difficult to win and yielded smaller damages? Or should the person with the cracked tooth have a good chance to get a large payday in court? Does your answer depend upon whether you are the person with the cracked tooth?

2. A seller can disclaim all implied warranties by stating that goods are sold "as is" (or by using other, more specific language). Is this fair? The UCC's implied warranties seem reasonable—that goods are fit for their normal purposes, for example. Should it be so easy for sellers to escape their obligations?

3. After learning more about implied warranties and disclaimers, would you ever buy an item sold "as is?" Imagine a car salesman who offers you a car for $8,000, but who also says that he can knock the price down to $6,500 if you will buy the car "as is." If you live in a state that does not give consumers special protections, which deal would be more appealing?

4. Assume that two computer manufacturers—Alpha and Beta—deliver identical shipments of malfunctioning laptops. The defective machines each cause customers $10,000 in direct damages and $50,000 in consequential damages. Alpha's contract contained a limitation of damages clause, and it pays only $10,000. Beta's contract had no such clause, and it is on the hook for $60,000. Is this fair?

5. "Lemon laws" usually only cover cars. Are there other products that should be covered by similar laws? If so, which ones?

CHAPTER 23

Performance and Remedies

© Stas Volik/Shutterstock.com

Was it a 1930s roadster? A drag racing car from the 1950s? Both. When the Plymouth Prowler first hit the road, with its motorcycle-styled front fenders and low-slung hot rod body, it was nearly impossible to get your hands on one. Dealers were swamped with orders, but they did not know if they would receive a single car from the manufacturer.

Donald Hessler wanted a Prowler—and he was a determined man.

Donald Hessler wanted a Prowler—and he was a determined man. Hessler went to Crystal Lake Chrysler-Plymouth, met with its owner, Gary Rosenberg, and signed an agreement to buy a Prowler anytime during the next year for $5,000 over the manufacturer's list price. Three months later, Rosenberg revealed that the list price would be $39,000. However, the car dealer also entered into a contract to sell a Prowler to another customer for $50,000.

The next time they spoke, Rosenberg told Hessler that Crystal Lake would not be allotted any Prowlers. The eager buyer, though, responded that a Chrysler representative had told him Crystal Lake would receive at least one car. Rosenberg was furious with a customer who had "gone behind his back" to contact Chrysler, and said he would not sell Hessler a car, even if he did receive one.

Hessler telephoned 38 Chrysler dealers, but none would promise him a car. One month later, at a promotional event for the car, he saw a new Prowler—with Crystal Lake's name on it! He located Rosenberg, offered to buy the car on the spot—and was again rebuffed. Frustrated and angry, but still determined, Hessler somehow found a Prowler later the same day from another dealer, and bought it—for $77,706.

Ecstatic with his new car, Hessler drove straight to court, where he sued Crystal Lake. Was Rosenberg within his rights, refusing to sell a car to Hessler? Was the customer entitled to compensation for spending so much more on the coveted auto? These are typical issues of contract performance under the Uniform Commercial Code. We look at the issue in this chapter, along with principles of *remedy*. When Hessler bought a car elsewhere,

he was *covering.* Did he act reasonably in spending almost $40,000 above list price? You will have to wait a few pages to find out, but we promise to give you the answer before anyone else gets it.

Obligation on All Parties: Good Faith

Surely it is a good idea to begin this final chapter on sale of goods issues in good faith.

The R. G. Ray Corp. needed T-bolts to use in automobile parts it was manufacturing for the Garrett Co. Ray contracted for Maynard Manufacturing to deliver 57,000 T-bolts and provided Maynard with detailed specifications. The contract stated that Ray would be the "final judge" of whether the T-bolts conformed to its specifications and that Ray had the right to return any or all non-conforming bolts. **Conforming goods satisfy the contract terms. Non-conforming goods do not.**[1]

Unfortunately, Ray rejected the 57,000 bolts and sued, demanding every penny it had paid as well as additional damages for its lost business with Garrett. Ray moved for summary judgment, pointing out that the contract explicitly allowed it to judge the bolts, to reject any it found unsatisfactory, and to cancel the contract. The court acknowledged that the contract did give Ray these one-sided powers, yet it denied summary judgment. There was still an issue of *good faith.*

The UCC requires *good faith* in the performance and enforcement of every contract. Good faith means honesty in fact. Between merchants, it also means the use of reasonable commercial standards of fair dealing.[2] So Ray's right to reject the T-bolts was not absolute. There was some evidence that Ray had lost its contract with Garrett for reasons having nothing to do with Maynard's T-bolts. If that was true, and Ray had rejected the T-bolts simply because it no longer needed them, then Ray acted in bad faith and would be fully liable on the contract. The court ruled that Maynard should have its day in court to prove bad faith.[3]

Seller's Rights and Obligations

The seller's primary obligation is to deliver conforming goods to the buyer.[4] But because a buyer might not be willing or able to accept delivery, the UCC demands only that the seller make a reasonable *attempt* at delivery. **The seller must *tender* the goods, which means to make conforming goods available to the buyer.**[5] Normally, the contract will state where and when the seller is obligated to tender delivery. For example, the parties may agree that Manufacturer is to tender 1,000 printers at a certain warehouse on July 3. If Manufacturer makes the printers available on that date, Buyer is obligated to pick them up then and there and is in breach if it fails to do so.

---

[1]UCC §2-106(2).

[2]UCC §§1-203, 2-103(1)(b).

[3]*R. G. Ray Corp. v. Maynard Manufacturing Co.*, 1993 U.S. Dist. LEXIS 15754 (N.D. Ill. 1993).

[4]UCC §2-301.

[5]UCC §2-503.

Although a seller must always tender delivery, that does not mean a seller always transports the goods. Sometimes the contract will require the buyer to collect the goods. Regardless of where delivery is being made, however, the seller must (1) make the goods available at a reasonable time, (2) keep the goods available for a reasonable period, and (3) deliver to the buyer any documents that it needs to take possession. And as we have said, the seller is expected to deliver *conforming* goods, which brings us to the next rule.

Perfect Tender Rule

Under the perfect tender rule, the buyer may reject the goods if they fail *in any respect* to conform to the contract.[6]

Stanley and Joan Jakowski agreed to buy a new Camaro automobile from Carole Chevrolet. The contract stated that Carole would apply a polymer undercoating. The Jakowskis paid in full for the car, but the next day, they informed Carole that the car lacked the undercoating. Carole acknowledged the defect and promised to apply the undercoating, but before it could do so, a thief stole the car. The Jakowskis demanded their money back, but Carole refused, saying that the risk of loss had passed to the Jakowskis when Carole tendered delivery. The Jakowskis sued, claiming that they had rejected the Camaro as non-conforming. Carole responded that this was absurd: the car was perfect in every respect except for the very minor undercoating, which Carole had promised to fix promptly. Carole Chevrolet lost the case because of the perfect tender rule.

The New Jersey court found that the defect was minor but said that "despite seller's assertion to the contrary, the degree of their nonconformity is irrelevant in assessing the buyer's right to reject them… . [N]o particular quantum of nonconformity is required." The Jakowskis had lawfully rejected non-conforming goods, and Carole Chevrolet was forced to pay them the full value of the missing car.[7]

Restrictions on the Perfect Tender Rule

The UCC includes sections that limit the perfect tender rule's effect. Indeed, courts often apply the limitations more enthusiastically than the rule itself, and so while perfect tender is the law, it must be understood in the context of other provisions. We will look at the most common ways that the law undercuts the perfect tender rule. In doing so, we will see the typically flexible approach that the Code takes to a business transaction.

Usage of Trade, Course of Dealing, and Course of Performance

The Uniform Commercial Code takes the commonsense view that a contract for the sale of goods does not exist in a vacuum. It requires courts to consider three things when they apply the perfect tender rule.

"Usage of trade" means any practice that members of an industry *expect* to be part of their dealings.[8] The perfect tender rule may not permit a buyer to reject goods with minor flaws. For example, the textile industry interprets the phrase "first-quality fabric" to permit a limited number of flaws in most materials. If a seller delivers 1,000 bolts of fabric and 5 of them have minor defects, the seller has *not* violated the perfect tender rule.

The course of dealing between the two parties may also limit the rule. **The term *course of dealing* refers to previous commercial transactions between the *same parties*.**[9] The UCC requires

---

[6]UCC §2-601.

[7]*Jakowski v. Carole Chevrolet, Inc.*, 180 N.J. Super. 122, 433 A.2d 841, 1981 N.J. Super. LEXIS 635 (N.J. Super. Ct. 1981).

[8]UCC §1-205(2).

[9]UCC §1-205(1).

that a current contract be interpreted in the light of any past dealings that have created reasonable expectations. Suppose a buyer orders 20,000 board feet of "highest-grade pine" from a lumber company, just as it has in each of the three previous years. In the earlier deliveries, the buyer accepted the lumber even though 1 or 2 percent was not the highest grade. That course of dealing will probably control the present contract, and the buyer will not be permitted suddenly to reject an entire shipment because 1 percent is a lower grade of pine. Such a tender is not "perfect," but it would be good enough.

The course of performance has the same effect on contract interpretation. **The term *course of performance* refers to the history of dealings between the parties *in a single contract*, and thus assumes that it is the kind of contract demanding an ongoing relationship.**[10] Suppose a newspaper company signs a deal to purchase 5 tons of newsprint from a paper company every week for a year, and the contract also specifies the grade of paper to be delivered. If, during the first three months, the newspaper company routinely accepts paper containing a small number of flaws, that course of performance will control the contract. During the final month, the newspaper may not suddenly reject the type of paper it had earlier accepted.

Parties' Agreement

The parties may also choose to limit the effect of the perfect tender rule *themselves* by drafting a contract that *permits* imperfection in the goods. In some industries, this practice is routine. For example, contracts requiring the seller to design or engineer goods especially for the buyer will generally state a level of performance that the equipment must meet. If the goods meet the level described, the buyer has no right to reject, even if the product has some flaws.

Cure

A basic goal of the UCC is a fully performed contract that leaves both parties satisfied. The seller's right to *cure* helps achieve this goal. **When the buyer rejects non-conforming goods, the seller has the right to cure by delivering conforming goods before the contract deadline.**[11] LightCo is obligated to deliver 10,000 specially manufactured bulbs to Burnout Corp. by September 15. LightCo delivers the bulbs on August 20, and on August 25, Burnout notifies the seller that the bulbs do not meet contract specifications. If LightCo promptly notifies Burnout that it intends to cure and then delivers conforming lightbulbs on September 15, it has fulfilled its contract obligations and Burnout must accept the goods. The seller may even cure *after the contract deadline* if the seller (1) reasonably believed the original goods were acceptable and (2) promptly notified the buyer of his intent to cure within a reasonable time. This gives the seller a second chance to replace defective goods. Suppose Chip Co. delivers 25,000 computer chips to Assembler one day before the contract deadline, and two days later, Assembler notifies Chip that the goods are defective. If Chip had tested the chips thoroughly before they left its factory and reasonably believed they met contract specifications, then Chip may cure by promptly notifying Assembler that it will supply conforming goods within a *reasonable* period. Thus, even if the conforming chips arrive two weeks after the contract deadline, Chip will have cured unless Assembler can show that the delay caused it serious harm.

What if a shipment of goods has several nonconformities and the seller offers to fix *some* of the problems? The following case addresses the issue.

[10]UCC §2-208(1).
[11]UCC §2-508.

ZION TEMPLE FIRST PENTECOSTAL CHURCH OF CINCINNATI, OHIO, INC. v. BRIGHTER DAY BOOKSTORE & GIFTS

2004 WL 23150323
Court of Appeals of Ohio, 2004

Facts: Zion Temple First Pentecostal Church ordered new choir robes from Brighter Day Bookstore, a retailer that sold robes manufactured by Murphy Cap & Gown.

When Brighter Day delivered the robes to the Zion Temple, the church members found many faults. They did not like the color or material, which they considered very different from a sample they had reviewed at Brighter Day. The sleeves had been attached facing the wrong way. And on the overlays, the Velcro and tags were visible.

Zion complained to Murphy. The manufacturer offered to repair the sleeves, but Zion declined the offer because of the other problems. Zion returned the robes and, when it failed to get its money back, filed suit.

The trial court gave summary judgment for the defendants, and Zion Temple appealed.

Issue: ***Did Zion Temple afford Murphy a chance to cure?***

Excerpts from Judge Doan's Decision: The record shows that the choir members actually inspected the robes when Brighter Day delivered them and Zion found what it deemed to be nonconformities. This inspection was reasonable and was made within a reasonable time. Thus, Zion never accepted the robes but instead rejected them as not conforming to the contract. Since Zion rejected the goods, Murphy had a right to cure.

Murphy offered to cure any problem with the sleeves. Where the buyer rejects a nonconforming tender which the seller had reasonable ground to believe would be acceptable with or without money allowance, the seller may, if he seasonably notifies the buyer, have a further reasonable time to substitute a conforming tender. Murphy manufactured the sleeves on the robes according to its design specifications. Because of an error in the catalog that Zion had consulted before placing its order, the sleeves as properly manufactured appeared different from the sleeves as depicted in the catalog. Murphy clearly had the right to cure this nonconformity and indicated its intention to do so within a reasonable time.

Zion had other reasons for contending that the robes did not conform to the contract. It claimed that Velcro was visible on the reversible overlays and that the tags on the overlays could be seen when the overlays were reversed. Murphy never indicated its intention to cure these alleged nonconformities. Consequently, the trial court erred in granting Murphy's motion for summary judgment.

We reverse the entry of summary judgment for Murphy and remand this case for trial or further proceedings consistent with this court's opinion.

EXAM Strategy

Question: Xuberant Inc. orders 2000 wristwatches from Timely Co. The watches, with Xuberant's logo on the face, are to be delivered by September 15 so that Xuberant can give them away at its September 25 sales convention. Timely tests the watches and is satisfied they work. But when Xuberant receives them, on September 15, the company rejects them because its name is misspelled. Timely offers to correct the error and deliver the new watches by September 22, but Xuberant refuses and sues. Likely outcome?

Strategy: Timely has delivered nonconforming goods, and Xuberant is entitled to reject them. However, the seller has the right to cure by delivering conforming goods

before the contract deadline. Timely is offering to deliver shortly after the deadline. Is it entitled to do so?

Result: If the seller reasonably believed the goods were conforming, it may cure within a reasonable time after the deadline. If the court believes that Timely's spelling error was unreasonable, the company has no right to cure. However, a basic goal of the code is a fully performed contract. A court is likely to declare that the error was excusable and the new delivery date adequate for Xuberant's purpose. Timely will probably win.

Substantial Impairment

Sometimes the Code holds buyers to a higher standard and makes it more difficult to refuse goods. Perfect tender is the usual rule, but in two circumstances, a buyer who claims goods are non-conforming must show that the defects *substantially impair* their value. This standard applies: (1) if the buyer is revoking acceptance of goods or (2) if the buyer is rejecting an installment.

For example, a buyer who initially *accepts* a dozen cement mixers but *later* discovers problems with their engines may revoke his acceptance only by showing that the defects have caused him serious problems. Similarly, if a contract requires a buyer to accept one shipment of diesel fuel each month for two years, the buyer may reject one monthly installment only if the problem with the fuel substantially lowers its value.

Destruction of the Goods

A farmer contracts to sell 250,000 pounds of sunflower seeds to a broker. The contract describes the 125 acres that the farmer will plant to grow the sunflowers. He plants his crop on time, but a drought destroys most of the plants and he is able to deliver only 75,000 pounds. Is the farmer liable for the seeds he could not deliver? No. Is the broker required to accept the smaller crop? No. **If identified goods are *totally* destroyed before risk passes to the buyer, the contract is void. If identified goods are *partially* destroyed, the buyer may choose whether to accept the goods at a reduced price or void the contract.**[12]

The crop of sunflowers was identified to the contract when the farmer planted it. When a drought destroyed most of the crop, the contract became voidable. The buyer had the right to accept the smaller crop, at a reduced price, or to reject the crop entirely. The farmer is not liable for the shortfall because the destruction was not his fault.[13]

If a valuable crop is destroyed, who suffers the loss?

[12]UCC §2-613. Identification of goods is discussed in Chapter 20, on ownership and risk.
[13]Based on *Red River Commodities, Inc. v. Eidsness*, 459 N.W.2d 805, 1990 N.D. LEXIS 159 (N.D. 1990).

Commercial Impracticability

Commercial impracticability means that a supervening event excuses performance of a contract, if the event was *not* within the parties' contemplation when they made the agreement.[14] An event is "supervening" if it interrupts the normal course of business and dominates performance of the contract. But a supervening event will excuse performance only if neither party had thought there was a serious chance it would happen.

Harris RF Systems was an American company that manufactured radio equipment. Svenska, a Swedish corporation, bought Harris radio systems and sold them in many countries, including Iran. One contract required Harris to ship a large quantity of spare radio parts, which Svenska would pay $600,000 for and then resell in Iran. Harris attempted to ship the parts to Svenska, but U.S. Customs seized the goods, and the U.S. Department of Defense notified Harris that it believed the parts would be of military value to Iran.

The Defense Department acknowledged that technically, Harris was licensed to ship the goods, but it made two things clear: first, that it would litigate rather than permit the goods to reach Iran; and second, that if Harris attempted to complete the sale in Iran, the department would place all of Harris's future radio shipments on a Munitions List, making it difficult to ship them anywhere in the world. Svenska, on the other hand, pointed out that it had binding contracts to deliver the radio parts to various customers in Iran. If the parts were not forthcoming, Svenska would hold Harris liable for all of its losses. Harris attempted to reach a satisfactory compromise with all parties but failed and eventually agreed not to ship the parts overseas.

Svenska sued. Harris defended, relying on commercial impracticability. Harris persuaded the court that neither party had foreseen the government's intervention and that both parties realized it would be virtually impossible to export goods the Defense Department was determined to block. The court dismissed Svenska's suit.[15]

Sellers offer many excuses to avoid contracts. In the following case, you decide whether the seller's problem was "within the parties' contemplation" when they made the agreement.

[14]UCC §2-615.

[15]*Harriscom Svenska AB v. Harris Corp.*, 1990 U.S. Dist. LEXIS 20006 (W.D.N.Y. 1990).

You be the Judge

United Aluminum Corporation v. Linde, Inc.

2009 U.S. Dist. LEXIS 74259
United States District Court for the District of Connecticut, 2009

Facts: United Aluminum Corporation (UAC) manufactured aluminum coil. For many years, Linde supplied UAC with the nitrogen it needed for its manufacturing processes. The companies signed a long-term contract in 1997, which said, in part:

> Linde agrees that at UAC's sole option, UAC may extend the term of this Agreement for a maximum of five years commencing upon August 31, 2008.

The contract also called for a price of $0.23 per unit of nitrogen.

In 2007, UAC sent Linde a letter which stated, in part, "UAC intends to exercise its option to extend the term for an additional five years from September 1, 2008 to August 31, 2013." Linde replied that the price of nitrogen had risen significantly over the life of the contract and that it would have to increase prices by 38 percent.

UAC sued, seeking the right to continue buying nitrogen from Linde at $0.23 per unit. Linde defended on the grounds of commercial impracticability.

You Be the Judge: ***Should Linde be discharged on the grounds of commercial impracticability?***

Argument for Linde: Your honor, our industry has seen substantial increases in costs since 1997. The price of nitrogen is much higher, but that is just the tip of the iceberg. We must pay our workers more, our property taxes have increased, and, because of the rising price of gasoline, our transportation costs are much higher.

We did not anticipate these increases when we made the original agreement. At that time, costs in our industry had been fairly stable for many years. We have small margins even under ideal circumstances. To continue selling at 1997 prices forces us to operate at a substantial loss. Our request for a 38 percent price increase is reasonable.

It is commercially impracticable for use to ship nitrogen for another five years at the prices quoted in the original contract.

Argument for UAC: The Uniform Commercial Code does not allow for a claim of commercial impracticability every time prices increase. It allows such a claim only in the case of an event that was not in the parties' contemplation when they made an agreement.

In some exceptional circumstances, excusing performance is entirely reasonable. But nothing unusual or unforeseeable has happened here. Nitrogen prices have gone up. But over a decade, the price of nearly everything increases. Gasoline, groceries, cable television—the list goes on. Surely Linde knew that price increases were possible.

We made the original contract because Linde offered us long-term stability on the price of nitrogen. Without that part of the bargain, we would likely have sought another supplier. It is not right to allow Linde to back out of its clear contractual obligations.

The accompanying chart outlines the seller's obligations.

Basic Obligation: The seller's basic obligation is to deliver conforming goods. **The perfect tender rule permits the buyer to reject the goods if they are in any way non-conforming.** But many Code provisions limit the harshness of the perfect tender rule.

Limitation on Seller's Obligation	Code Provision	Effect on Seller's Obligations
Good faith	§1-201(19) and §2-103(1)(b)	Prohibits the buyer from using the perfect tender rule as a way out of a contract that has become unprofitable.
Course of dealing, usage of trade, and course of performance	§1-205(1), §1-205(2), and §2-208	If applicable, will limit the buyer's right to reject for relatively routine defects.
The parties' agreement	§2-106	May describe tolerances for imperfections in the goods.
Cure	§2-508	Allows the seller to replace defective goods with conforming goods, if time permits.
Revocation of acceptance	§2-608	A buyer who has accepted goods may later revoke them only if she can show that the defects *substantially impair* its value.
Installment contracts	§2-612	A buyer may reject an installment only if the defects *substantially impair* its value.
Destruction of goods	§2-613	If goods identified to the contract are destroyed, the contract is void.
Commercial impracticability	§2-615	A supervening event excuses performance of a impracticability contract, if the event was not within the parties' contemplation when they made the agreement.

BUYER'S RIGHTS AND OBLIGATIONS

The buyer's primary obligation is to accept conforming goods and pay for them.[16] The buyer must also **provide adequate facilities to receive the goods**.[17] For example, if the contract requires the seller to deliver to the buyer's warehouse, and the parties anticipate that delivery will be by rail, then the buyer must have facilities for unloading railcars at its warehouse.

Inspection and Acceptance

The buyer generally has the right to inspect the goods before paying or accepting.[18] If the contract is silent on this issue, the buyer may inspect. Typically, a buyer will insist on this right, but contracts can be created which do *not* give the parties a right to inspect—for example, a contract allowing shipment C.O.D., which means "cash on delivery." In that case, the buyer must pay upon receipt and do her inspecting later.

Along with the right of inspection comes the obligation to do it within a reasonable time and to notify the seller promptly if the buyer intends to reject the goods. **The buyer accepts goods** if (1) after a reasonable opportunity to inspect, she indicates to the seller that the goods are conforming or that she will accept them in spite of non-conformity; or (2) she has had a reasonable opportunity to inspect the goods and has *not rejected them;* or (3) she performs some act indicating that she now owns the goods, such as altering or reselling them.[19]

Partial Acceptance

A buyer has the right to accept some goods while rejecting others if the goods can be divided into *commercial units*. Such a unit is any grouping of goods that the industry normally treats as a whole. For example, one truckload of gravel would be a commercial unit. If the contract called for 100 truckloads of gravel, a buyer could accept 10 that conformed to contract specifications while rejecting 90 that did not.

Revocation

As we mentioned earlier, a buyer has a limited right to revoke acceptance of goods. **A buyer may revoke acceptance but only if the non-conformity *substantially impairs* the value of the goods and only if she had a legitimate reason for the initial acceptance.**[20] This means the perfect tender rule does *not* apply: a buyer in this situation may not revoke because of minor defects. Further, the buyer must show that she had a good reason for accepting the goods originally. Acceptable reasons would include defects that were not visible on inspection or defects that the seller promised but failed to cure.

Rejection

The buyer may reject non-conforming goods by notifying the seller within a reasonable time.[21] Huntsville Hospital purchased electrocardiogram equipment from Mortara Instrument for $155,000. The equipment failed to work properly, and the hospital notified Mortara within a reasonable time that it was rejecting. The hospital asked Mortara to pick up the equipment and refund the full purchase price, but Mortara did neither. When the hospital sued, Mortara claimed that the hospital should have returned the equipment to Mortara and

[16]UCC §2-301.
[17]UCC §2-503(1)(b).
[18]UCC §2-513.
[19]UCC §2-606.
[20]UCC §§2-607, 608.
[21]UCC §§2-601, 602.

that its failure left it liable for the full cost. The court of appeals was unpersuaded and gave judgment for the hospital, declaring that the hospital's only obligation was to notify the seller of a rejection and hold the goods for the seller to collect.[22]

The rule is different in the case of an installment contract. An **installment contract** is one that *requires* goods to be delivered in *separate lots*. If Bus Co. contracts for Oil Co. to deliver 5,000 gallons of gasoline every week for one year, that is an installment contract. **A buyer may reject a non-conforming installment but only if it *substantially impairs* the value of that installment and cannot be cured.**[23] The perfect tender rule does not apply. Bus Co. has no right to reject an installment containing 4,900 gallons of gasoline because the minor shortfall does not impair the shipment's substantial value. On the other hand, if Oil Co. delivered gasoline with lead in it, Bus Co. could reject it since Bus Co. would be legally prohibited from using the gas. (Remember, though, that Oil Co., like all sellers, has the right to cure.)

The following case deals with rejection and revocation. Have a peek inside the trailer, but mind the slippery puddles.

Lile v. Kiesel

871 N.E. 2d 995
Indiana Court of Appeals, 2007

Facts: Edward and Kelly Kiesel bought a new pull-behind trailer from James Lile, the owner of Lile's Trailer Sales. That same day, the couple took their new trailer on its first outing. Because this was a camping trip, it rained all night, and in the morning, the Kiesels noticed water inside the trailer near the door. The next time it rained, Edward noticed more water pooling in various parts of the trailer. A week later, Edward brought the trailer in for repairs.

Lile repaired the roof, using new silicone. However, a week later the trailer again leaked, and Kelly reported this to Lile, demanding a full refund. Lile refused a refund but offered to seal any leaks, replace interior walls, and sand and paint the exterior. The Kiesels instead took the trailer to a different auto body shop, where the owner said that extensive interior rust indicated the trailer had leaked longer than the Kiesels owned it. The Kiesels sued. Lile claimed that the Kiesels had accepted the vehicle and unfairly refused repairs. The trial court awarded the Kiesels the full price of the trailer, and Lile appealed.

Issue: ***Were the Kiesels entitled to the trailer's purchase price?***

Excerpts from Judge Riley's Decision:[24] Lile's asserts that the Kiesels accepted the trailer and consequently could not reject the goods. We agree that in purchasing the trailer, using it on more than one occasion, as well as licensing and titling it in their names, the Kiesels accepted the trailer and lost any right to reject the sale of the trailer. However, even though acceptance precludes the rejection of goods, it does not impair a buyer's ability to revoke acceptance and seek a remedy for the nonconformity of goods. Specifically, [UCC § 2-608] provides for the revocation of acceptance of goods in whole or in part, stating:

> The buyer may revoke his acceptance of a lot or commercial unit whose non-conformity substantially impairs its value to him if he has accepted it ... without discovery of such non-conformity if his acceptance was reasonably induced either by the difficulty of discovery before acceptance or by the seller's assurances.

In our view, there is no question that leaking and rust damage substantially impairs the value of a trailer. In addition, leaks due to rain would have been difficult to discover prior to the trailer's purchase. Furthermore, in reporting the

[22]*Huntsville Hospital v. Mortara Instrument*, 57 F.3d 1043, 1995 U.S. App. LEXIS 16925 (11th Cir. 1995).

[23]UCC §2-612.

[24]Once again, the authors of this text have substituted the parties' names for the court's "appellant" and "appellee."

problem to Lile's within less than a week of purchasing the trailer, the Kiesels undoubtedly notified Lile's within a reasonable time after they discovered the leaks. As a result, we conclude the Kiesels met the requisite elements under [§ 2-608] for revocation of acceptance of the trailer.

Lile's also asks this court to hold that the Kiesels did not act in good faith following their acceptance of the trailer when they refused to allow Lile's to make repairs on the trailer. Lile's relies on [§ 2-508] to argue that the Kiesels had to give Lile's an opportunity to cure the trailer's defects. We disagree. First, we note that [§ 2-508] pertains to a buyer's *rejection* of nonconforming goods upon delivery. Lile's has already asked us and we have already concluded that the Kiesels accepted the trailer; consequently, as previously determined, the Kiesels can only *revoke* their acceptance at this point. Additionally, there is no evidence in the record to suggest that the Kiesels did not act in good faith in dealing with Lile's. In fact, although they were not obligated to do so, the record clearly shows that the Kiesels gave Lile's an opportunity to cure the leaks when they brought the trailer into Lile's for replacement of silicone on parts of the trailer's roof.

The trial court properly ordered Lile's to reimburse the Kiesels for the purchase price of the trailer. Affirmed.

Seller's Remedies

When a buyer breaches a contract, the UCC provides the seller with a variety of potential remedies. Exactly which ones are available depends upon who has the goods (buyer or seller) and what steps the seller took after the buyer breached. The seller can always **cancel the contract**. She may also be able to:

- stop delivery of the goods,
- identify goods to the contract,
- resell and recover damages,
- obtain damages for non-acceptance, or
- obtain the contract price.

Stop Delivery

Sometimes a buyer breaches before the seller has delivered the goods (for example, by failing to make a payment due under the contract or perhaps by repudiating the contract). A party **repudiates** when it indicates that it will not perform, which it can do either by its conduct or by failing to answer a written demand for assurances that it intends to perform.

If a buyer breaches, **the seller may refuse to deliver the goods**.[25] If, when the buyer breaches, the seller has already placed the goods in the hands of a carrier (such as UPS), the seller may instruct the carrier not to deliver the goods, provided the shipment is at least a carload or larger.

Identify Goods to the Contract

If the seller has not yet identified goods to the contract when the buyer breaches, he may do so as soon as he learns of the breach.[26] Suppose an electronics manufacturer, with 5,000 Blu-ray players in its warehouse, learns that a retailer refuses to pay for the 800 units it contracted to buy. The manufacturer may now attach a label to 800 units in its warehouse, identifying them

[25] UCC §2-705.
[26] UCC §2-704.

to the contract. This will help it recover damages when it resells the identified goods or uses one of the other remedies described below.

Resale

A seller may resell goods that the buyer has refused to accept, provided she does it reasonably. **If the resale is commercially reasonable, the seller may recover the difference between the resale price and contract price, plus incidental damages, minus expenses saved.**[27] Incidental damages are expenses the seller incurs in holding the goods and reselling them—costs such as storage, shipping, and advertising for resale. The seller must deduct expenses saved by the breach. For example, if the contract required the seller to ship heavy machinery from Detroit to San Diego, and the buyer's breach enables the seller to sell its goods in Detroit, the seller must deduct from its claimed losses the transportation costs that it saved.

A seller who acts in a commercially reasonable manner is entitled to the following damages:

	Contract price (the price Seller expected from the original contract)
–	the resale price (the money Seller got at resale)
+	incidental damages (storage, advertising, etc.)
–	expenses saved
=	Seller's damages

A seller is also permitted to resell goods privately; that is, by simply negotiating a deal with another party. But if the seller does so, she must first give the buyer reasonable notice of the private resale.

EXAM Strategy

Question: Fork manufactures forklift trucks. Fork agrees to sell 10 trucks, for $30,000 each, to McKnife. Fork will store the trucks in a warehouse near McKnife for 3 months, when the buyer will collect them. Storage will cost Fork $2,000 per month. A week after signing the deal, before Fork has moved the trucks to the warehouse, McKnife notifies Fork it cannot pay for the trucks. Fork spends $2,000 advertising the machines and sells them for $25,000 each in a commercially reasonable manner. Fork then sues McKnife. Fork will win—but how much?

Strategy: Apply the formula outlined above.

Result: Fork is entitled to

	The contract price	$300,000
–	the resale price	250,000
+	incidental damages	2,000
–	expenses saved	6,000
=	Fork's damages	46,000

[27] UCC §2-706.

Damages for Non-Acceptance

A seller who does not resell, or who resells unreasonably, may recover the difference between the original contract price and the market value of the goods at the time of delivery.[28] Oilko agrees to sell Refinery 100,000 barrels of oil for $100 per barrel, to be delivered on November 1. Oilko tenders the oil on November 1 but Refinery refuses to accept it. Three months later, on February 20, Oilko resells the oil to another purchaser for $92 per barrel and sues Refinery for $800,000 (the difference between its contract price and what it finally obtained), plus the cost of storage. Will Oilko win? No. Oilko's resale was unreasonable. Because there is a ready market for oil, Oilko should have resold immediately. Because Oilko acted unreasonably, it will not obtain damages under the Code's resale provision. Oilko will be forced to base its damages on market value.

Often this remedy will be less valuable to the seller than resale damages. Suppose that on November 1, the market value of Oilko's oil was $99 per barrel. Oilko's contract with Refinery was actually worth only $1 per barrel to Oilko—the amount by which its contract price exceeded the market value. That is all that Oilko will get in court.[29] A seller with a reasonable chance to resell should be certain to do it.

The following chart compares resale and non-acceptance damages:

Resale Damages §2-706		**Non-Acceptance Damages §2-708**	
Contract price	$10,000,000	Contract price	$10,000,000
Resale price	–9,200,000	Market value of goods	–9,900,000
	$ 800,000		$ 100,000

Action for the Price

The seller may recover the contract price if (1) the buyer has already accepted the goods *or* (2) the seller's goods are conforming and the seller is unable to resell after a reasonable effort.[30] Royal Jones was a company that constructed rendering plants—factories that use sophisticated equipment to extract valuable minerals from otherwise useless material. Royal Jones contracted for First Thermal to construct three rendering tanks, at a cost of $64,350. First Thermal built the tanks to Royal Jones's specifications, but Royal Jones never accepted or paid for them, and First Thermal sued. Royal Jones argued that First Thermal deserved no money because it had not attempted to resell the goods, but the court awarded the full contract price, stating:

> First Thermal proved that any effort at resale would have been unavailing because these were the only rendering tanks First Thermal ever made, the tanks were manufactured according to Royal Jones's specifications, First Thermal had no other customers to which it could resell the tanks, and it was unaware how the tanks could have been marketed for resale.[31]

Resale is normally the safest route for an injured seller to recover the maximum amount, but when it is unrealistic, as in the *First Thermal* case, a lawsuit for the full price is appropriate.

---

[28]UCC §2-708.

[29]Based on *Baii Banking Corp. v. Atlantic Richfield Co.*, 1993 U.S. Dist. LEXIS 14107 (S.D.N.Y. 1993).

[31]*Royal Jones & Associates, Inc. v. First Thermal Systems, Inc.*, 566 So. 2d 853, 1990 Fla. App. LEXIS 6596 (Fla. Ct. App. 1990).

All of the seller's remedies are summarized in the chapter review at the end of the chapter. We now move on to the buyer's remedies.

BUYER'S REMEDIES

The buyer, too, has a variety of potential remedies. If a seller fails to deliver goods, repudiates, or if the buyer rightfully rejects the goods, the buyer is entitled to **cancel the contract**. She may also **recover money paid** to the seller, assuming she has not received the goods. In addition, she may be entitled to:

- incidental and consequential damages,
- specific performance,
- cover,
- damages for non-delivery,
- accept the non-conforming goods and seek damages, or
- liquidated damages.

How much should the plaintiff recover per rosebush in consequential damages?

Incidental Damages and Consequential Damages

An injured buyer is generally entitled to incidental *and* consequential damages. Incidental damages for buyers include such costs as advertising for replacements, sending buyers to obtain new goods, and shipping the replacement goods. **Consequential damages**, or losses that are caused by a breach, can be much more extensive and may include lost profits caused by the seller's failure to deliver.

A buyer, however, only gets consequential damages for harm that was *unavoidable*. Suppose Wholesaler has a contract to sell 10,000 rosebushes at $10 per bush to FloraMora. Wholesaler contracts to buy 10,000 rosebushes from Growem at $6 per bush, but Growem fails to deliver. Wholesaler in fact could obtain comparable roses at $8 per bush but fails to do so and loses the chance to sell to FloraMora. Wholesaler sues Growem, seeking the $4-per-bush profit it would have made on the FloraMora deal. The company will receive only $2 per bush, representing the difference between its contract price and the market value of the plants. Wholesaler will be denied the additional $2 per bush.

In the following case, the court decides whether *future* profits may be too speculative to award as consequential damages.

Smith v. Penbridge Associates, Inc.

440 Pa. Super. 410, 655 A.2d 1015, 1995 Pa. Super. LEXIS 574
Superior Court of Pennsylvania, 1995

Facts: Donna and Alan Smith wanted to raise emus, which are flightless Australian birds that look like ostriches. The creatures reproduce rapidly in almost any terrain and are sold for their meat, which is high in protein and low in fat, and for their oil, leather, and feathers. The Smiths paid Tomie Clark, the manager of Penbridge Farms, $4,000 as a down payment for a "proven breeder pair." Since it is impossible to discern an emu's gender by looking, the Smiths asked Clark several times if the two birds were male and female, and he assured them that the pair had successfully produced chicks the previous breeding season.

The Smiths placed the prospective lovebirds in the same pen, but the breeding season passed without a hint of romance. Donna Smith phoned Penbridge Farms, which advised her on a procedure used to determine gender. Donna performed this task and learned that the emus were both gentlemen. The would-be breeders asked for their money back, but Penbridge refused, so the Smiths flew into court. The trial judge awarded the couple $105,215, representing lost profits from their anticipated chicks. Penbridge appealed, arguing that a buyer cannot count her chicks before they have hatched.

Issue: ***Did the trial court err by awarding lost profits?***

Excerpts from Judge Popovich's Decision: [Penbridge claimed that the] evidence was speculative and insufficient to support an award of consequential damages, including damages for lost profits. [Penbridge argued that, since] the breeding of emus is a relatively new business, and there is no reliable data to project the ultimate success in breeding emus, the [Smiths'] claims for loss of chick production are entirely speculative and do not meet the "reasonable certainty" requirement of the law of damages.

The Uniform Commercial Code provides the following circumstances for the recovery of consequential damages resulting from the breach of the seller: any loss resulting from general or particular requirements and needs of which the seller at the time of contracting had reason to know and which could not reasonably be prevented by "cover" or otherwise. [UCC §2-715(2).]

The determination of damages lies with the fact-finder, who weighs the evidence and assesses the credibility of the witnesses. Although the court recognized that emu breeding was a relatively new commercial business, it determined that the award of consequential damages could be calculated with a reasonable degree of certainty from the evidence adduced at trial. The court below initially found that the value of a three-month old chick produced from the [previous] season was $5,000. The lower court then concluded that [the Smiths] suffered incidental and consequential damages in the amount of $90,000.00. From our thorough evaluation of the record, we conclude that the evidence was sufficient for the lower court to measure lost profits with a reasonable degree of certainty. The basis for this rule is that the breaching party should not be allowed to shift the loss to the injured party when damages, even if uncertain in amount, were certainly the responsibility of the party in breach.

Order affirmed.

Specific Performance

If the contract goods are rare or unique, the buyer may be allowed *specific performance*, which means a court order requiring the seller to deliver those particular goods.[32] This remedy is most common when the goods are one-of-a-kind. Suppose Gallery agreed to sell to Trisha an original Corot painting for $120,000 but then refused to perform (because another buyer offered more money). Trisha can obtain specific performance because the painting cannot be replaced: the court will order Gallery to deliver the work. By contrast, a car rental company stymied by a dealer's refusal to sell 500 new Ford Mustangs will not obtain specific performance since the rental company can simply buy the same cars from another dealer and sue for the difference.

[32]UCC §2-716.

Cover

If the seller breaches, the buyer may "cover" by reasonably obtaining substitute goods; it may then obtain the difference between the contract price and its cover price, plus incidental and consequential damages, minus expenses saved.[33] Casein, a protein derived from milk, is used to make cheese and to process many other foods. Erie Casein Co. contracted with Anric Corp. to supply several hundred thousand pounds of casein for about $1 per pound. Half was to be delivered in March of the first year and the other half in March of the second year. By May of the first year, Anric had not finished its first delivery because it was having difficulty obtaining the casein, but Erie told Anric to keep trying. Anric delivered some of the casein later the same year, but by March of the second year was forced to admit it could not meet the second delivery. Anric suggested that it might be able to obtain more casein in the autumn of that second year.

Erie waited until August of the second year, but it finally obtained its casein elsewhere at a price of $1.45 per pound. Erie sued Anric for the extra money it had paid, about $66,000. Anric argued that Erie had no right to the difference because Erie had waited until the price of casein was sky-high before obtaining substitute goods.

The court found for Erie. Even though the company might have covered a year earlier, when the price was much lower, it was reasonable for the buyer to wait because Anric indicated it might be able to supply the goods later. Erie had acted in good faith, and when it ultimately covered, it did so at the best price it could find. An injured buyer does not have to do a perfect job of covering, only a reasonable job, and Erie got its full $66,000.[34]

> An injured buyer does not have to do a perfect job of covering, only a reasonable job.

Note that an injured buyer may also be awarded consequential damages, which we discuss below. Finally, if covering saves expense, the savings are deducted from any damages.

We hope that you recall Donald Hessler, whom we met in the chapter opener. We last saw him circling the courthouse in his Plymouth Prowler, anxiously awaiting the outcome of his suit against the dealership that promised him the same car for a lot less money. It has been a long wait; you and Donald deserve an answer.

Hessler v. Crystal Lake Chrysler-Plymouth, Inc.

338 Ill.App.3d 1010, 788 N.E.2d 405, 273 Ill.Dec. 96
Appellate Court of Illinois, 2003

Facts: The facts are provided in the chapter opening. The trial court awarded Hessler $29,853, representing the difference between his contract with Crystal Lake and the sum he ultimately spent purchasing a new Prowler. Crystal Lake appealed, arguing that Hessler covered unreasonably.

Issue: *Did Hessler cover reasonably?*

Excerpts from Judge Callum's Decision: We conclude that the trial court did not err in finding that defendant's foregoing actions reasonably indicated to plaintiff that defendant would not deliver to him a Prowler under the Agreement. As we determined above, defendant contracted to deliver a Prowler to plaintiff as soon as possible. It was not against the manifest weight of the evidence for the trial court to find that defendant [breached] the Agreement

---

[33] UCC §2-712.

[34] *Erie Casein Co. v. Anric Corp.*, 217 Ill. App. 3d 602, 577 N.E.2d 892, 1991 Ill. App. LEXIS 1429 (Ill. App. Ct. 1991).

when it repeatedly informed plaintiff that it would not deliver to him the first Prowler it received. Such actions made it sufficiently clear to plaintiff that defendant would not perform under the Agreement.

Defendant's final argument is that the trial court erred in calculating the damages award because plaintiff effected an inappropriate cover. Defendant contends that plaintiff did not recontact the 38 dealers he had called in September to inquire if they would sell him a Prowler. Instead, on the same day that Rosenberg refused to sell him a car, plaintiff visited another dealership and purchased a Prowler for about $40,000 over the list price.

Comment 2 to section 2-712 of the UCC provides, in relevant part:

> The test of proper cover is whether at the time and place the buyer acted in good faith and in a reasonable manner, and it is immaterial that hindsight may later prove that the method of cover used was not the cheapest and most effective.

Plaintiff testified that he called Rosenberg on September 22 to inform him that defendant was on a tentative list to receive a Prowler and that Rosenberg responded that he would not sell to plaintiff a car and that plaintiff was not the first person with whom he had contracted. Rosenberg testified that he informed plaintiff on this date that the Prowler was "already committed." The trial court also heard plaintiff's testimony that, following his September 22 conversation with Rosenberg, he had "serious doubts" that defendant would sell to him a Prowler and he contacted about 38 dealerships to inquire about purchasing a vehicle, but was unable to obtain a car.

Following Rosenberg's refusal to sell a car to plaintiff on October 25, plaintiff visited another dealership on that day and purchased a Prowler for about $30,000 over what he would have paid defendant for the same car. The trial court concluded that the price plaintiff ultimately paid for a Prowler was the "best price" he could receive after defendant refused to sell a car to him. We agree. The trial court heard testimony from both parties about the Prowler's limited supply. It also heard plaintiff's testimony about his efforts to obtain a car one month before his purchase date. We conclude that the court's determination that plaintiff effected a proper cover was not against the manifest weight of the evidence.

For the foregoing reasons, the judgment of the circuit court is affirmed.

Devil's Advocate It is fine for a buyer to cover, but Hessler's conduct is absurd. He bought a car for nearly *double* the contract price. A buyer's behavior must be reasonable, and no court should reward conduct that is clearly obsessive. This purchase was not required by business or financial pressures. We have here a man who believes he is entitled to whatever he wants. If Hessler decides he must have a Prowler *at any price*, then in fairness he should be the one to *pay* that price.

Non-Delivery

In some cases, the buyer does not cover, or fails to cover *reasonably*, leaving it with damages for non-delivery. **The measure of damages for non-delivery is the difference between the market price at the time the buyer learns of the breach and the contract price, plus incidental and consequential damages, minus expenses saved.**[35] Suppose that in the case described above, Erie had not covered but simply filed suit against Anric. Instead of its $66,000, Erie would have obtained the difference between its contract price with Anric and the market value on the date of breach. That market price was probably only a few pennies higher than the contract price, and Erie would have obtained less than $10,000.

[35]UCC §2-713.

Acceptance of Non-Conforming Goods

A buyer will sometimes accept non-conforming goods from the seller, either because no alternative is available or because the buyer expects to obtain some compensation for the defects. **Where the buyer has accepted goods but notified the seller that they are non-conforming, he may recover damages for the difference between the goods as promised and as delivered, plus incidental and consequential damages.**[36]

Liquidated Damages

Liquidated damages are those that the parties agree, at the time of contracting, will compensate the injured party. **They are enforceable, but only in an amount that is reasonable in light of the harm, the difficulties of proving actual loss, and the absence of other remedies.**[37] A clause that establishes unreasonably large or unreasonably small liquidated damages is void. Courts only enforce a liquidated damages clause if it would have been difficult to estimate actual damages when the parties reached the agreement.

© Ulrike Hammerich/Shutterstock.com

How do you avoid a bitter aftertaste?

Cessna Aircraft agreed to build a "Citation V" business jet and sell it to Aero Consulting for $3,995,000. Cessna's contract required Aero to pay an initial deposit of $125,000, a second deposit of $300,000 six months prior to delivery, and the balance upon delivery. The contract also stated that if Aero failed to pay the balance due, Cessna would keep all deposited monies by way of liquidated damages.

Aero made both deposits, and Cessna built the plane and tendered it to Aero, but Aero refused to pay the full balance due. Cessna notified Aero that it would keep the $425,000 deposited. When Aero sued, seeking a return of the deposits, the issue was whether this liquidated damage was fair. The court concluded that it was. At the time Cessna entered into the deal, it was difficult to estimate actual damages in the event of Aero's breach. The long period required to build a jet aircraft and the uncertainties about supply and demand in the marketplace meant that neither party could say for sure how much Cessna would lose should Aero breach. Further, the liquidated damage here was about 10 percent of the total cost, not an unreasonably high figure. Cessna kept the money (and the plane).[38]

EXAM Strategy

Question: You have a red wine problem. Your California vineyard has strong sales throughout the United States, and it is time to expand into Europe. To penetrate foreign markets, you offer your product at steep discounts to a Swiss importer. Your intent is that the importer will sell your wine inexpensively to retailers, so that low

[36]UCC §2-714.
[37]UCC §2-718.
[38]*Aero Consulting Corp. v. Cessna Aircraft Co.*, 867 F. Supp. 1480, 1994 U.S. Dist. LEXIS 16668 (D. Kan. 1994).

prices will entice consumers. The danger, though, is that the importer will return the wine to the United States and undersell your own product in an established market, taking advantage of your advertising and infuriating established dealers. Such a resale could occur before your wine ever left the country. What can you do to keep this problem from fermenting?

Strategy: A liquidated damages clause can put teeth into your plan to sell the wine to overseas consumers. You might specify substantial compensation if any of your exported wine finds its way back home. However, an overly aggressive clause will be declared a penalty—and void. How can you avoid such a disaster?

Result: **Liquidated damages are enforceable in an amount that is reasonable in light of the harm and the difficulties of proving actual loss.** Your clause may certainly compensate you for lost goodwill among domestic retailers and for harm to your efforts at establishing the brand in Europe. Make *good faith* estimates of those losses—if the clause gives you too much compensation, a court may void it altogether. Lost profits per case sold in the United States are probably easy to calculate and should *not* be part of the liquidated damages clause.

Chapter Conclusion

The drafters of the UCC intended the law to reflect contemporary commercial practices but also to require a satisfactory level of sensible, ethical behavior. For example, the Code allows numerous exceptions to the perfect tender rule so that a buyer may not pounce on minor defects in goods to avoid a contract that has become financially burdensome. Similarly, a seller forced to resell his goods must do so in a commercially reasonable manner. Good faith and common sense are the hallmarks of contract performance and remedies.

Exam Review

1. **GOOD FAITH** The Code requires good faith in the performance and enforcement of every contract. (p. 532)

2. **CONFORMING GOODS** Conforming goods are those that satisfy the contract terms; non-conforming goods fail to do so. (pp. 532–533)

3. **TENDER** The seller must tender the goods, which means make conforming goods available to the buyer. The perfect tender rule permits a buyer to reject goods that are non-conforming in any respect, although there are numerous exceptions. (p. 533)

4. **USAGE OF TRADE** Usage of trade, course of dealing, and course of performance may enable a seller to satisfy the perfect tender rule even though there are some defects in the goods. (pp. 533–534)

5. **CURE** When the buyer rejects non-conforming goods, the seller has the right to cure by delivering conforming goods before the contract deadline. (pp. 534–535)

EXAM Strategy

Question: Allied Semi-Conductors International agreed to buy 50,000 computer chips from Pulsar, for a total price of $365,750. Pulsar delivered the chips, which Allied then sold to Apple Computer. But at least 35,000 of the chips proved defective, so Apple returned them to Allied, which sent them back to Pulsar. Pulsar agreed to replace any defective chips, but only after Allied, at its expense, tested each chip and established the defect. Allied rejected this procedure and sued. Who wins?

Strategy: The chips were non-conforming goods, and Allied was entitled to reject them. Pulsar, in turn, had a right to cure the defects; that is, to solve the problem that it created. Did Pulsar offer to cure? (See the "Result" at the end of this section.)

6. **DESTRUCTION OF THE GOODS** If identified goods are destroyed before risk passes to the buyer, the contract is void. (p. 536)

EXAM Strategy

CPA Question Under a contract governed by the UCC sales article, which of the following statements is correct?

a. Unless both the seller and the buyer are merchants, neither party is obligated to perform the contract in good faith.

b. The contract will not be enforceable if it fails to expressly specify a time and a place for delivery of the goods.

c. The seller may be excused from performance if the goods are accidentally destroyed before the risk of loss passes to the buyer.

d. If the price of the goods is less than $500, the goods need not be identified to the contract for title to pass to the buyer.

Strategy: (a) Sounds unlikely. Remind yourself which contracts must be performed in good faith. (b) As we learned in Chapter 19, the Code permits open terms. What are they? (c) Review the rules on destruction of the goods (d) Goods must be identified to the contract before title can pass. Is there an exception for goods under $500? (See the "Result" at the end of this section.)

7. **COMMERCIAL IMPRACTICABILITY** Under commercial impracticability, a supervening event excuses performance if it was not within the parties' contemplation when they made the contract. (pp. 537–538)

8. **INSPECTION** The buyer generally has the right to inspect goods before paying or accepting. If the buyer does not reject goods within a reasonable time after inspecting them, she may be deemed to have accepted them. (pp. 539–541)

EXAM Strategy

CPA Question Smith contracted in writing to sell Peters a used personal computer for $600. The contract did not specifically address the time for payment, place of delivery, or Peters's right to inspect the computer. Which of the following statements is correct?

a. Smith is obligated to deliver the computer to Peters's home.

b. Peters is entitled to inspect the computer before paying for it.

c. Peters may not pay for the computer using a personal check unless Smith agrees.

d. Smith is not entitled to payment until 30 days after Peters receives the computer.

Strategy: This question should be no problem. Three of the four possible answers offer rules that appear *nowhere* in the Code. (a) There is no reference in the Code to "home delivery" of goods. (b) The buyer has the right to inspect goods before paying or accepting, unless the contract specifies otherwise. (c) Nowhere does the UCC prohibit payment by check. (d) You have never read in the Code any presumption of a 30-day delay in payment—so do not imagine one. (See the "Result" at the end of this section.)

9. **REVOCATION** A buyer may revoke his acceptance of non-conforming goods, but only if the defects substantially impair the value of the goods. (p. 539)

10. **REJECTION** A buyer may reject non-conforming goods by notifying the seller within a reasonable time. (pp. 539–540)

The following chart summarizes the contrasting remedies available to the two parties.

Seller's Remedies	Issue	Buyer's Remedies
§2-705: The seller generally may stop delivery, whether it was to be done by the seller herself or a carrier.	Delivery	§2-716: Specific performance: buyer may obtain specific performance only if the goods are unique.
§2-706: Resale: If the resale is made in good faith and a commercially reasonable manner, the seller may recover the difference between the resale price and the contract price, plus incidental costs, minus savings.	When the injured party makes an alternate contract	§2-712: Cover: The buyer may purchase alternate goods and obtain the difference in price, plus incidental and consequential damages, minus expenses saved.
§2-708: Non-acceptance: The measure of damages for non-acceptance is the the time and place of tender and the contract price (plus incidental damages minus expenses saved).	When the goods have not changed hands	§2-713: Non-delivery: If the seller fails to deliver, the buyer's damages are the difference between the market price at the time he learned of the breach and the contract price (plus incidental and consequential damages, minus expenses saved).
§2-709: The seller may sue for the price.	When the buyer has accepted the goods	§2-714: A buyer who has accepted non-conforming goods and notified the seller may recover damages for resulting losses.
§§2-706, 2-708, 2-709, 2-710: The seller is entitled to incidental damages but not consequential damages.	Incidental and consequential damages	§2-715: The buyer is entitled to incidental and consequential damages.
LIQUIDATED DAMAGES §2-718: Either party may obtain liquidated damages but only in an amount that is reasonable at the time of the contract.		

5. Result: Pulsar never offered a true cure. When the seller delivers defective goods and wishes to cure, it must take all steps—at its expense—to fix the problem. Pulsar could cure only by delivering, at its expense and in a timely manner, 50,000 conforming chips. Pulsar failed to cure, and Allied recovers the entire purchase price.

6. Result: Answer (a) is wrong because all contracts must be performed in good faith. Answer (b) is wrong because a contract with open terms is enforceable. Answer (c) is right because it correctly states the rule on destruction of goods. Answer (d) is wrong because title never passes unless the goods were identified to the contract.

8. Result: Answer (b) is correct. Peters is entitled to inspect the computer unless the contract states otherwise, which it did not.

Multiple-Choice Questions

1. **CPA QUESTION** Cara Fabricating Co. and Taso Corp. agreed orally that Taso would custom-manufacture a compressor for Cara at a price of $120,000. After Taso completed the work at a cost of $90,000, Cara notified Taso that the compressor was no longer needed. Taso is holding the compressor and has requested payment from Cara. Taso has been unable to resell the compressor for any price. Taso incurred storage fees of $2,000. If Cara refuses to pay Taso and Taso sues Cara, the most Taso will be entitled to recover is:

(a) $92,000
(b) $105,000
(c) $120,000
(d) $122,000

2. **CPA QUESTION** On February 15, Mazur Corp. contracted to sell 1,000 bushels of wheat to Good Bread, Inc., at $6 per bushel, with delivery to be made on June 23. On June 1, Good advised Mazur that it would not accept or pay for the wheat. On June 2, Mazur sold the wheat to another customer at the market price of $5 per bushel. Mazur had advised Good that it intended to resell the wheat. Which of the following statements is correct?

(a) Mazur can successfully sue Good for the difference between the resale price and the contract price.
(b) Mazur can resell the wheat only after June 23.
(c) Good can retract its anticipatory breach at any time before June 23.
(d) Good can successfully sue Mazur for specific performance.

3. Under the UCC, to tender delivery, a seller must:

(a) Make the goods available at a reasonable time
(b) Keep the goods available for a reasonable period
(c) Deliver to the buyer any documents that it needs to take possession
(d) All of the above
(e) None of the above

4. Blackburn FC (go Rovers!) orders 10,000 soccer jerseys from Alpha Co. to sell in its stadium store. They are to be delivered on July 10. When they arrive early on July 2, Blackburn is disappointed because the collars, which are supposed to be white, are blue. Blackburn notifies Alpha of the error. Alpha says that it wants a chance to "make it right." If Alpha delivers another shipment of 10,000 conforming jerseys on July 10, Blackburn ...

(a) absolutely must accept the new shipment

(b) must accept the new shipment if Alpha offers a reasonable discount

(c) must accept the new shipment if it has suffered no measureable losses

(d) may accept the new shipment, but has the option to reject it

5. Assume that a year has passed, and Blackburn FC once again orders 10,000 soccer jerseys from Alpha, to be delivered on July 10. This time, nonconforming jerseys are delivered on July 10. Alpha thoroughly inspected the shirts before shipping and had no reason to spot the error. When Blackburn notifies Alpha of the problem, Alpha says that it intends to cure the defect. If Blackburn cannot show that it will suffer any serious harm, does the UCC require Blackburn to give Alpha a chance to cure this time?

(a) No, because the contract's deadline has passed.

(b) Yes, it must give Alpha until July 17 to cure.

(c) Yes, it must give Alpha until July 20 to cure.

(d) Yes, it must give Alpha a reasonable amount of time to cure.

Discussion Questions

1. Jewell-Rung was a Canadian corporation that imported and sold men's clothing wholesale. Haddad was a New York corporation that manufactured and sold men's clothing under the "Lakeland" label. The companies agreed that Haddad would sell 2,325 Lakeland garments to Jewell-Rung for $250,000. Jewell-Rung began to take orders for the garments from its Canadian customers. Jewell-Rung had orders for about 372 garments when it learned that Haddad planned to allow another company, Olympic, the exclusive Canadian right to manufacture and sell Lakeland garments. Jewell-Rung sued Haddad for its lost profits. Haddad moved for summary judgment, claiming that Jewell-Rung could not recover lost profits because it had not covered. Is Haddad right? If so, why might Jewell-Rung not have covered?

2. Mastercraft Boat manufactured boats and often used instrument panels and electrical systems assembled or manufactured by Ace Industries. Typically, Ace would order electrical instruments and other parts and assemble them to specifications that Mastercraft provided. Mastercraft decided to work with a different assembler, M & G Electronics, so it terminated its relationship with Ace. Mastercraft then requested that Ace deliver all of the remaining instruments and other parts that it had purchased for use in Mastercraft boats. Ace delivered the inventory to Mastercraft, which inspected it and kept some of the items, but returned others to Ace, stating that the shipment had been unauthorized. Later, Mastercraft requested that Ace deliver the remaining parts (which Mastercraft had sent back to Ace) to M & G, which Ace did. Mastercraft then refused to pay for these parts, claiming that they were non-conforming. Is Ace entitled to its money for the parts?

3. Lewis River Golf, Inc., grew and sold sod. It bought seed from defendant, O. M. Scott & Sons, under an express warranty. But the sod grown from the Scott seeds developed weeds, a breach of Scott's warranty. Several of Lewis River's customers sued, unhappy with the weeds in their grass. Lewis River lost most of its customers, cut back its production from 275 acres to 45 acres, and destroyed all remaining sod grown from Scott's seeds. Eventually, Lewis River sold its business at a large loss. A jury awarded Lewis River $1,026,800, largely for lost profits and loss of goodwill. Scott appealed, claiming that a plaintiff may not recover for lost profits and goodwill. Comment.

4. The AM/PM Franchise association was a group of 150 owners of ARCO Mini-Market franchises in Pennsylvania and New York. Each owner had an agreement to operate a gas station and mini-market, obtaining all gasoline, food, and other products from ARCO. The association sued, claiming that ARCO had experimented with its formula for unleaded gasoline, using oxinol, and that the poor-quality gas had caused serious engine problems and a steep drop in customers. The association demanded (1) lost profits for gasoline sales, (2) lost profits for food and other items, and (3) loss of goodwill. The trial court dismissed the case, ruling that the plaintiff's claims were too speculative, and the association appealed. Please rule.

5. **YOU BE THE JUDGE WRITING PROBLEM** Clark Oil agreed to sell Amerada Hess several hundred thousand barrels of oil at $24 each by January 31, with the sulfur content not to exceed 1 percent. On January 26, Clark tendered oil from various ships. Most of the oil met specifications, but a small amount contained excess sulfur. Hess rejected all of the oil. Clark recirculated the oil, meaning that it blended the high-sulfur oil with the rest, and it notified Amerada that it could deliver 100 percent of the oil, as specified, by January 31. Hess did not respond. On January 30, Clark offered to replace the oil with an entirely new shipment, due to arrive February 1. Hess rejected the offer. On February 6, Clark retendered the original oil, all of which met contract terms, and Hess rejected it. Clark sold the oil elsewhere for $17.75 per barrel and filed suit. Is Clark entitled to damages? **Argument for Clark:** A seller is entitled to cure any defects. Clark did so in good faith and offered all of the oil by the contract deadline. Clark went even further, offering an entirely new shipment of oil. Hess acted in bad faith, seeking to obtain cheaper oil. Clark is entitled to the difference between the contract price and its resale price. **Argument for Hess:** Hess was entitled to conforming goods, and Clark failed to deliver. Under the perfect tender rule, that is the end of the discussion. Hess had the right to reject non-conforming goods, and it promptly did so. Hess chose not to deal further with Clark because it had lost confidence in Clark's ability to perform.

Discussion Questions

1. **ETHICS** Laura and Bruce Trethewey hired Basement Waterproofing Nationwide, Inc. (BWNI) to waterproof the walls in their basement for a fee of $2,500. BWNI's contract stated: "BWNI will service any seepage in the areas waterproofed at no additional cost to the customer. All labor and materials will be at the company's expense. Liability for any damage shall be limited to the total price paid for this contract." The material that BWNI used to waterproof the Tretheweys' walls swelled and caused large cracks to open in the walls. Water poured into the basement, and the

Tretheweys ultimately spent $38,000 to repair the damage. They sued, claiming negligence and breach of warranty, but BWNI claimed its liability was limited to $2,500. Please rule. Apart from the legal ruling, comment on ethics. BWNI wanted to protect itself against unlimited damage claims. Is this a legitimate way to do it? Is this how BWNI would wish to be treated itself? If you think BWNI *did* behave ethically, what advice would you have for consumers who hire home improvement companies? If you believe the company did *not* behave ethically, imagine that you are a BWNI executive, charged with drafting a standard contract for customers. How would you protect your company's interests while still acting in a way you consider moral?

2. Consider the UCC's exceptions to the perfect tender rule: usage of trade, course of dealing, and course of performance. Do these all seem reasonable, or are they too lenient on sellers who deliver non-conforming goods?

3. Are the UCC's rules related to cure sensible? If a seller ships goods that are not what you ordered, should you (in many circumstances) be *required* to give them a chance to make it right?

4. The opening scenario presented the true story of a man who paid a great deal of money for a Plymouth Prowler. Do you agree with the court's decision to award him nearly $30,000 in damages? Or do you agree with the Devil's Advocate feature and think that he was overcompensated for foolish spending?

5. Review the section "Damages for Non-Acceptance." In that section's example, Refinery refused Oilko's shipment on November 1, when the oil was worth $99 per barrel. Oilko waited three months to resell the oil, and at that time, it received only $92 per barrel. In such a case, the UCC allows Oilko to receive only $1 per barrel in damages rather than the $8-per-barrel reduction in price it actually received. Is this fair? Would it be more sensible to allow a company like Oilko to receive $8 per barrel in damages?

CHAPTER 24

SECURED TRANSACTIONS

© neelsky/Shutterstock.com

To: Allison@credit-help-for-all.com
From: Sam12345@yahoo.com

Hi, Allison.

Look, this just doesn't make any sense. When I got out of school, I paid a guy $18,000 for my Jeep. I made every payment on my loan—*every one*—for over two years. I paid out over 9,000 bucks for that thing. Then I got laid off and I missed a few payments, and the bank repossessed the car. And O.K., fair enough, I can see why they have to do that.

So they auctioned off the Jeep and somebody else owns it. But now the bank's lawyer called me and said I still owe $5,000. What is that, a joke? I owe money for a Jeep I don't even have anymore? That can't be right. I look forward to your advice.

Sam

I owe money for a Jeep I don't even have anymore?

To: Sam12345@yahoo.com
From: *Allison@credit-help-for-all.com*

Dear Sam,

I am sympathetic with your story, but unfortunately the bank is entitled to its money. Here is how the law sees your plight. When you bought the Jeep, you signed two documents: a note, in which you promised to pay the full balance owed, and a security agreement, which said that if you stopped making payments, the bank could repossess the vehicle and sell it.

There are two problems. First, even after two years of writing checks, you might still have owed about $10,000 (because of interest). Second, cars depreciate quickly. Your $18,000 vehicle probably had a market value of about $8,000 thirty months later. The security agreement allowed the bank to sell the Jeep at auction, where prices are still lower. Your car evidently fetched about $5,000. That leaves a deficiency of $5,000—for which you are legally responsible, regardless of who is driving the car.

I hope you have a good weekend.

Allison

Article 9: Terms and Scope

We can sympathize with Sam, but the bank is entitled to its money. The buyer and the bank entered into a secured transaction, meaning that one party gave credit to another, demanding in return an assurance of repayment. Whether a used-car lot sells a car on credit for $18,000 or a bank takes collateral for a $600 million corporate loan, the parties have created a secured transaction.

Article 9 of the Uniform Commercial Code (UCC) governs secured transactions in personal property. It is essential to understand the basics of this law because we live and work in a world economy based on credit. Gravity may cause the earth to spin, but it is secured transactions that keep the commercial world going 'round. The quantity of disputes tells us how important this law is: about *one-half* of all UCC lawsuits involve Article 9.

This part of the Code employs terms not used elsewhere, so we must lead off with some definitions.

Article 9 Vocabulary

- **Fixtures** are goods that have become attached to real estate. For example, heating ducts are *goods* when a company manufactures them and also when it sells them to a retailer. But when a contractor installs the ducts in a new house, they become *fixtures*.
- **Security interest** means an interest in personal property or fixtures that secures the performance of some *obligation*. If an automobile dealer sells you a new car on credit and retains a security interest in the car, it means she is keeping legal rights *in your car*, including the right to drive it away if you fall behind in your payments. Usually, your obligation is to pay money, such as the money due on the new car. Occasionally, the obligation is to perform some other action, but in this chapter, we concentrate on the payment of money because that is what security interests are generally designed to ensure.
- **Secured party** is the person or company that holds the security interest. The automobile dealer who sells you a car on credit is the secured party.
- **Collateral** is the property subject to a security interest. When a dealer sells you a new car and keeps a security interest, the vehicle is the collateral.
- **Debtor and obligor.** For our purposes, **debtor** refers to a person who has some *original* ownership interest in the collateral. Having a security interest in the collateral does *not* make one a debtor. If Alice borrows money from a bank and uses her Mercedes as collateral, she is the debtor because she owns the car. **Obligor** means a person who must repay money, or perform some other task.

Throughout this chapter, the obligor and debtor will generally be the same person, but not always. When Alice borrows money from a bank and uses her Mercedes as collateral, she is the obligor, because she must repay the loan; as we know, Alice is also the debtor. However, suppose that Toby borrows money from a bank and provides no collateral; Jake co-signs the loan as a favor to Toby, using his Steinway piano as collateral. *Jake* is the only debtor, because he owns the piano. *Both parties* are obligors, because both have agreed to repay the loan.

- **Security agreement** is the contract in which the debtor gives a security interest to the secured party. This agreement protects the secured party's rights in the collateral.
- **Default** occurs when the debtor fails to pay money that is due, for example, on a loan or for a purchase made on credit. Default also includes other failures by the debtor, such as failing to keep the collateral insured.

Fixtures
Goods that have become attached to real estate.

Security interest
An interest in personal property or fixtures that secures the performance of an obligation.

Secured party
A person or company that holds a security interest.

Collateral
Property that is subject to a security interest.

Debtor
A person who has original ownership interest in the collateral.

Obligor
A person who must repay money or perform some other task to satisfy a debt.

Security agreement
A contract in which the debtor gives a security interest to the secured party.

Default
The failure of a debtor to pay money due on a loan or credit purchase.

Repossession
Occurs when the secured party takes back collateral because the debtor has defaulted.

Perfection
A series of steps that the secured party must take to protect its rights in the collateral against people other than the debtor.

Financing statement
A document that the secured party files to give the general public notice that it has a secured interest in the collateral.

- **Repossession** occurs when the secured party takes back collateral because the debtor has defaulted. Typically, the secured party will demand that the debtor deliver the collateral; if the debtor fails to do so, the secured party may find the collateral and take it.
- **Perfection** is a series of steps the secured party must take to protect its rights in the collateral against people other than the debtor. This is important because if the debtor cannot pay his debts, several creditors may attempt to seize the collateral, but only one may actually obtain it. To perfect its rights in the collateral, the secured party will typically file specific papers with a state agency.
- **Financing statement** is a document that the secured party files to give the general public notice that it has a secured interest in the collateral.
- **Record** refers to information written on paper or stored in an electronic or other medium.
- **Authenticate** means to sign a document or to use any symbol or encryption method that identifies the person and clearly indicates she is adopting the record as her own. You authenticate a security agreement when you sign papers at an auto dealership, for example. A corporation electronically authenticates a loan agreement by using the Internet to transmit an encrypted signature.

An Example

Here is an example using the terms just discussed. A medical equipment company manufactures a CAT scan machine and sells it to a clinic for $2 million, taking $500,000 cash and the clinic's promise to pay the rest over five years. The clinic simultaneously authenticates a security agreement, giving the manufacturer a security interest in the CAT scan. If the clinic fails to make its payments, the manufacturer can repossess the machine. The manufacturer then electronically files a financing statement with an appropriate state agency. This *perfects* the manufacturer's rights, meaning that its security interest in the CAT scanner is now valid against all the world. If the clinic goes bankrupt and many creditors try to seize its assets, the manufacturer has first claim to the CAT scan machine. Exhibit 24.1 illustrates this transaction.

The clinic's bankruptcy is of great importance. When a debtor has money to pay all of its debts, there are no concerns about security interests. But what if there is not enough money to go around? A creditor insists on a security interest to protect itself in the event the debtor *cannot* pay all of its debts. The secured party intends (1) to give itself a legal interest in specific property of the debtor and (2) to establish a priority claim in that property, ahead of other creditors. In this chapter, we look at a variety of issues that arise in secured transactions.

Scope of Article 9

Article 9 applies to any transaction intended to create a security interest in personal property or fixtures.

Types of Collateral

The personal property used as collateral may be goods, such as cars or jewelry, but it may also be a variety of other things:

- **Instruments.** Drafts, checks, certificates of deposit, and notes may all be used as collateral, as may stocks, bonds, and other securities.
- **Investment property**, which refers primarily to securities and related rights.
- **Documents of title.** These are papers used by an owner of goods who ships or stores them. The documents are the owner's proof that he owns goods no longer in his

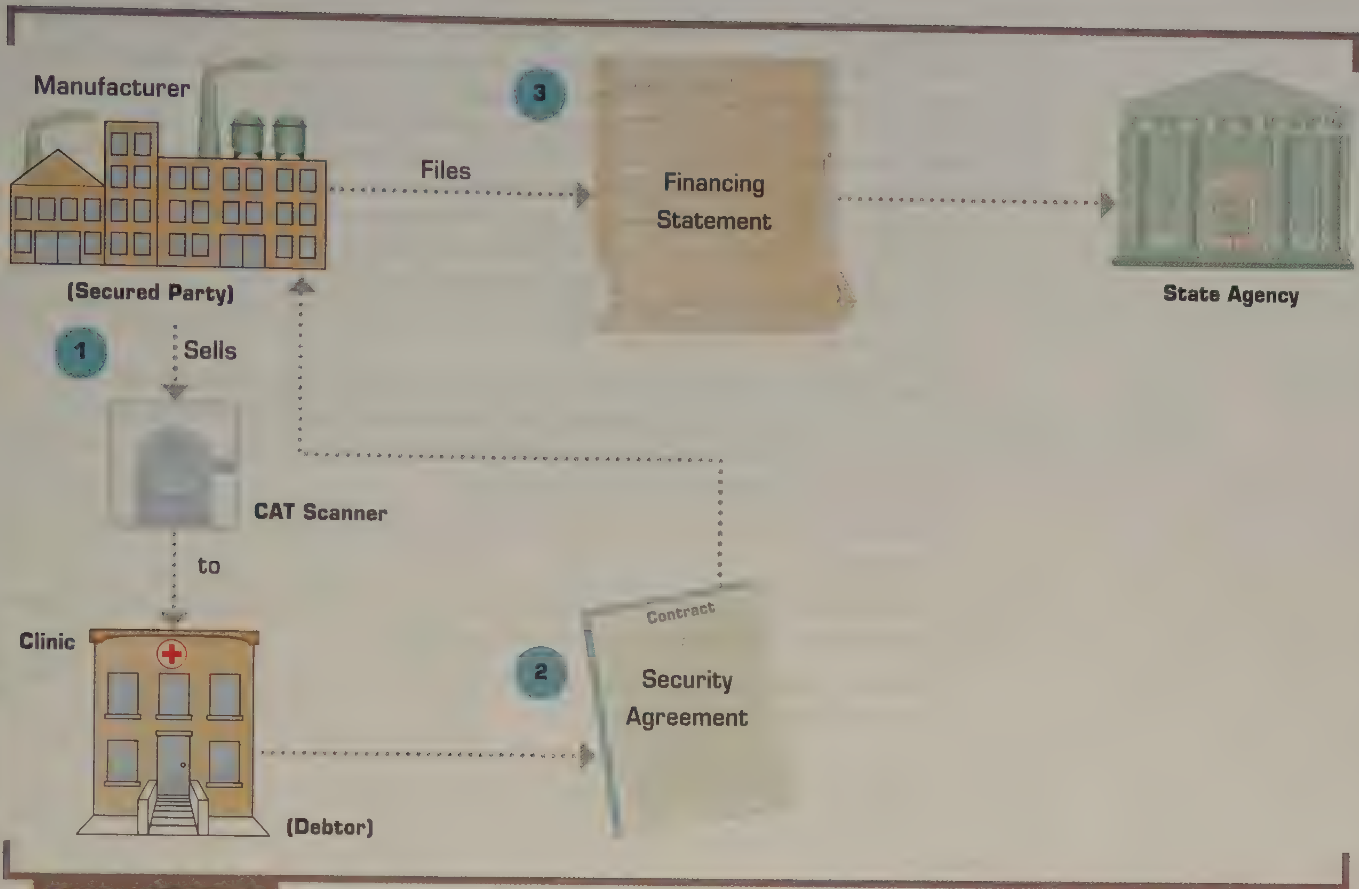

EXHIBIT 24.1 A simple security agreement:
(1) The manufacturer sells a CAT scan machine to a clinic, taking $500,000 and the clinic's promise to pay the balance over five years.
(2) The clinic simultaneously authenticates a security agreement.
(3) The manufacturer perfects by electronically filing a financing statement.

possession. For example, an owner sending goods by truck will obtain a *bill of lading,* a receipt indicating where the goods will be shipped and who gets them when they arrive. Similarly, a *warehouse receipt* is the owner's receipt for goods stored at a warehouse. The owner may use these and other similar documents of title as collateral.

- **Account** means a right to receive payment for goods sold or leased. This includes, for example, accounts receivable, indicating various buyers owe a merchant money for goods they have already received. The category now includes health-insurance receivables.
- **Deposit accounts.** Article 9 now covers security interests in deposit accounts (money placed in banks).
- **Commercial tort claims.** An organization that has filed a tort suit may use its claim as collateral. Personal injuries to *individuals* are not covered by this article.
- **General intangibles.** This is a residual category, designed to include many kinds of collateral that do not appear elsewhere on the list, such as copyrights, patents, trademarks, goodwill, and the right to payment of some loans.

- **Chattel paper.** This is a record that indicates two things: (1) an obligor owes money and (2) a secured party has a security interest in specific goods. Chattel paper most commonly occurs in a consumer sale on credit. If a dealer sells an air conditioner to a customer, who agrees in writing to make monthly payments and also agrees that the dealer has a security interest in the air conditioner, that agreement is chattel paper. The same chattel paper may be collateral for a second security interest. The dealer who sells the air conditioner could use the chattel paper to obtain a loan. If the dealer gives the chattel paper to a bank as collateral for the loan, the bank has a security interest *in the chattel paper*, while the dealer continues to have a security interest *in the air conditioner*. **Electronic chattel paper** is the same thing, except that it is an electronic record rather than a written one.
- **Goods** means movable things, including fixtures, crops, and manufactured homes. For purposes of secured transactions, the Code divides goods into additional categories. In some cases, the rights of the parties will depend upon what category the goods fall into. These are the key categories:
  - *Consumer goods* are those used primarily for personal, family, or household purposes.
  - *Farm products* are crops, livestock, or supplies used directly in farming operations (as opposed to the business aspects of farming).
  - *Inventory* consists of goods held by someone for sale or lease, such as all of the beds and chairs in a furniture store.
  - *Equipment* refers to things used in running a business, such as the desks, telephones, and computers needed to operate a retail store.

Software

Article 9 takes into account the increasingly important role that computer software plays in all business. The Code distinguishes *software* from *goods*, and this becomes important when competing creditors are fighting over both a computer system and the software inside it. A program embedded in a computer counts as goods *if* it is customarily considered part of those goods *or* if, by purchasing the goods, the owner acquires the right to use the program. A program that does *not* meet those criteria is termed *software*, and will be treated differently for some purposes.

In sum, Article 9 applies anytime the parties intended to create a security interest in any of the items listed above.

Attachment of a Security Interest

Attachment
A three-step process that creates an enforceable security interest.

Attachment is a vital step in a secured transaction. This means that the secured party has taken all of the following steps to create an enforceable security interest:

- The two parties made a security agreement, and either the debtor has *authenticated a security agreement* describing the collateral *or* the secured party has obtained *possession* or *control;*
- The secured party has given value to obtain the security agreement; and
- The debtor has rights in the collateral.[1]

[1] UCC §9-203.

Agreement

Without an agreement, there can be no security interest. Generally, the agreement will be in writing and signed by the debtor or electronically recorded and authenticated by the debtor. The agreement must reasonably identify the collateral. A description of collateral by *type* is often acceptable. For example, a security agreement may properly describe the collateral as "all equipment in the store at 123 Periwinkle Street."[2] In a security agreement for consumer goods, however, a description by type is *not* sufficient, and more specificity is required.

A security agreement at a minimum might:

- State that Happy Homes, Inc., and Martha agree that Martha is buying an Arctic Co. refrigerator and identify the exact unit by its serial number;
- Give the price, the down payment, the monthly payments, and interest rate;
- State that because Happy Homes is selling Martha the refrigerator on credit, it has a security interest in the refrigerator; and
- Provide that if Martha defaults on her payments, Happy Homes is entitled to repossess the refrigerator.

An actual security agreement will add many details, such as Martha's obligation to keep the refrigerator in good condition and to deliver it to the store if she defaults; a precise definition of "default"; and how Happy Homes may go about repossessing if Martha defaults and fails to return the refrigerator.

Control and Possession

In many cases, the security agreement need not be in writing if the parties have an oral agreement and the secured party has either **control** or **possession**. For many kinds of collateral, it is safer for the secured party actually to take the item than to rely upon a security agreement. The rules follow.

Control

For deposit accounts, electronic chattel paper and certain other collateral, the security interest attaches if the secured party has *control*. The UCC specifies exactly what the secured party must do to obtain control for each type of collateral. In a general sense, *control means that the secured party has certain exclusive rights to dispose of the collateral.*

- **Deposit account (in a bank).** The secured party has control if it is itself the bank holding the deposit or if the debtor has authorized the bank to dispose of funds according to the secured party's instructions.
- **Electronic chattel paper.** A secured party has control of electronic chattel paper when it possesses the only authoritative copy of it, and the record(s) designate the secured party as the assignee. This means that the parties have agreed on an electronic method to verify the uniqueness of the record, so that any copies of the electronic original are clearly recognizable as reproductions.
- **Investment property and letter-of-credit rights.** The Code specifies analogous methods of controlling investment properties and letter-of-credit rights.[3]

---

[2]A security agreement may not use a super-generic term such as "all of Smith's personal property." We will see later that, by contrast, such a super-generic description is legally adequate in a *financing statement.*

[3]*Control* is described in the following sections: 9-104 (deposit accounts), 9-105 (electronic chattel paper), 9-106 (investment property), and 9-107 (letter-of-credit rights).

Possession

For most other forms of collateral, including goods, securities, and most other items, a security interest attaches if the secured party has *possession*. For example, if you loan your neighbor $175,000 and he gives you a Winslow Homer watercolor as collateral, you have an attached security interest in the painting once it is in your possession. It would still be wise to put the agreement in writing, to be certain both parties understand all terms and can prove them if necessary, but the writing is not legally required.

The following case is typical of Article 9 disputes in that it was fought out in bankruptcy court. A debtor claimed to have a security interest in property owned by a bankrupt company. Had the parties made a security agreement?

In Re CFLC, Inc.

209 B.R. 508, 1997 Bankr. LEXIS 821
United States Bankruptcy Appellate Panel of the Ninth Circuit, 1997

Facts: Expeditors was a freight company that supervised importing and exporting for Everex Systems, Inc. Expeditors negotiated rates and services for its client and frequently had possession of Everex's goods. During a 17-month period, Expeditors sent over 300 invoices to Everex. Each invoice stated that the customer either had to accept all of the invoice's terms or to pay cash, receiving no work on credit. One of those terms gave Expeditors a general lien on all of the customer's property in its possession. In other words, if the customer failed to pay a bill, Expeditors claimed the right to retain the goods, auction them, and keep enough of the proceeds to pay its overdue bills.

Everex filed for bankruptcy. Expeditors expedited its way into the court proceedings, claiming the right to sell Everex's goods, worth about $81,000. The trial judge rejected the claim, ruling that Expeditors lacked a valid security interest. Expeditors appealed.

Issue: ***Did Expeditors have a security interest in Everex's goods?***

Excerpts from Judge Ollason's Decision: Under the common law, silence in the face of an offer is not an acceptance, unless there is a relationship between the parties or a previous course of dealing pursuant to which silence would be understood as acceptance.

In this case, Expeditors and Everex had been doing business for about one and one-half years. They had never discussed the terms of the invoice nor negotiated for a security interest. Everex had never expressly acknowledged the invoice terms by accepting or objecting to them, nor did it take actions which acknowledged Expeditors' alleged general lien on the goods. Its only pertinent acts were its payment of the invoices and silence as to the added terms.

The evidence consisting of Everex's receipt and payment of invoices containing terms for a general lien in the goods in favor of Expeditors did not amount to an agreement for such a security interest, pursuant to [revised section 9-102]. As a matter of law, the repetitive sending by Expeditors to Everex of terms which Expeditors wished to be made part of the oral contract was not evidence of course of dealing because an agreement did not exist as to the security interest which could be supplemented by such evidence.

Affirmed.

EXAM Strategy

Question: Hector needs money to keep his business afloat. He asks his uncle for a $1 million loan. The uncle agrees, but he insists that his nephew grant him a security interest in Hector's splendid gold clarinet, worth over $2 million. Hector agrees. The uncle prepares a handwritten document summarizing the agreement and asks his

nephew to sign it. Hector hands the clarinet to his uncle and receives his money, but he forgets to sign the document. Has a security agreement attached?

Strategy: Attachment occurs if the parties made a security agreement and there was authentication or possession; the secured party has given value; and the debtor had rights in the collateral.

Result: Hector agreed to give his uncle a security interest in the instrument. He never authenticated (signed) the agreement, but the uncle did take possession of the clarinet. The uncle gave Hector $1 million, and Hector owned the instrument. Yes, the security interest attached.

Value

For the security interest to attach, the secured party must give value. Usually, the value will be apparent. If a bank loans $400 million to an airline, that money is the value, and the bank, therefore, may obtain a security interest in the planes that the airline is buying. If a store sells a living room set to a customer for a small down payment and two years of monthly payments, the value given is the furniture.

Future Value

The parties may also agree that some of the value will be given in the future. For example, a finance company might extend a $5 million line of credit to a retail store, even though the store initially takes only $1 million of the money. The remaining credit is available whenever the store needs it to purchase inventory. The Uniform Commercial Code considers the entire $5 million line of credit to be value.[4]

Debtor Rights in the Collateral

The debtor can grant a security interest in goods only if he has some legal right to those goods himself. Typically, the debtor owns the goods. But a debtor may also give a security interest if he is leasing the goods or even if he is a bailee, meaning that he is lawfully holding them for someone else. Suppose Importer receives a shipment of scallops on behalf of Seafood Wholesaler. Wholesaler asks Importer to hold the scallops for three days as a favor, and to keep a customer happy, Importer agrees. Importer then arranges a $150,000 loan from a bank, using the scallops as collateral. Although Importer has acted unethically, it does have *some right* in the collateral—the right to hold them for three days. That is enough to satisfy this rule.

By contrast, suppose Railroad is transporting 10 carloads of cattle on behalf of Walter, the owner. A devious Meat Dealer uses forged documents to trick Railroad into believing that Meat Dealer is entitled to the animals. Meat Dealer trucks the cattle away and uses them to obtain a bank loan, giving the bank a security interest in the animals. That "security interest" has never attached and is invalid because Dealer had *no* legal interest in the cattle. When Walter, the rightful owner, locates his cattle, he may take them back. The bank can only hope to find the deceitful Dealer, who in fact has probably disappeared.

Once the security interest has attached to the collateral, the secured party is protected against the debtor. If the debtor fails to pay, the secured party may repossess the collateral.

---

[4]UCC §9-204(c).

Attachment to Future Property

The security agreement may specify that the security interest attaches to personal property that the debtor does not yet possess but might obtain in the future.

After-Acquired Property

After-acquired property
Items that the debtor obtains after the parties have made their security agreement.

After-acquired property refers to items that the debtor obtains after the parties have made their security agreement. **The parties may agree that the security interest attaches to after-acquired property.**[5] Basil is starting a catering business, but owns only a beat-up car. He borrows $55,000 from the Pesto Bank, which takes a security interest in the car. But Pesto also insists on an after-acquired clause. When Basil purchases a commercial stove, cooking equipment, and freezer, Pesto's security interest attaches to each item as Basil acquires it.

Proceeds

Proceeds are whatever is obtained by a debtor who sells the collateral or otherwise disposes of it. **The secured party *automatically* obtains a security interest in the *proceeds* of the collateral, unless the security agreement states otherwise.**[6] Suppose the Pesto Bank obtains a security interest in Basil's $4,000 freezer. Basil then decides he needs a larger model and sells the original freezer to his neighbor for $3,000. The $3,000 cash is proceeds, in which Pesto automatically obtains a security interest.

Perfection

Nothing Less than Perfection

Once the security interest has attached to the collateral, the secured party is protected against *the debtor,* but it may not be protected against *anyone else*. Pesto Bank loaned money to Basil and has a security interest in all of his property. If Basil defaults on his loan, Pesto may insist he deliver the goods to the bank. If he fails to do that, the bank can seize the collateral. But Pesto's security interest is valid only against Basil; if a third person claims some interest in the goods, the bank may never get them. For example, Basil might have taken out *another* loan, from his friend Olive, and used the same property as collateral. Olive knew nothing about the bank's original loan. To protect itself against Olive, and all other parties, the bank must *perfect* its interest.

There are several kinds of perfection:

- Perfection by filing
- Perfection by possession
- Perfection of consumer goods
- Perfection of movable collateral and fixtures

In some cases, the secured party will have a choice of which method to use; in other cases, only one method works.

---

[5]UCC §9-204(a).
[6]UCC §9-203(f).

Perfection by Filing

The most common way to perfect an interest is by filing a financing statement with one or more state agencies. A **financing statement** gives the names of all parties, describes the collateral, and outlines the security interest, enabling any interested person to learn about it. Suppose the Pesto Bank obtains a security interest in Basil's catering equipment and then perfects by filing with the Secretary of State. When Basil asks his friend Olive for a loan, she has the opportunity to check the records to see if anyone already has a security interest in the catering equipment. If Olive's search uncovers Basil's previous security agreement, she will realize it would be unwise to make the loan. If Basil were to default, the collateral would go straight to Pesto Bank, leaving Olive empty-handed. See Exhibit 24.2.

Financing statement
A statement that gives the names of all parties, describes the collateral, and outlines the security interest.

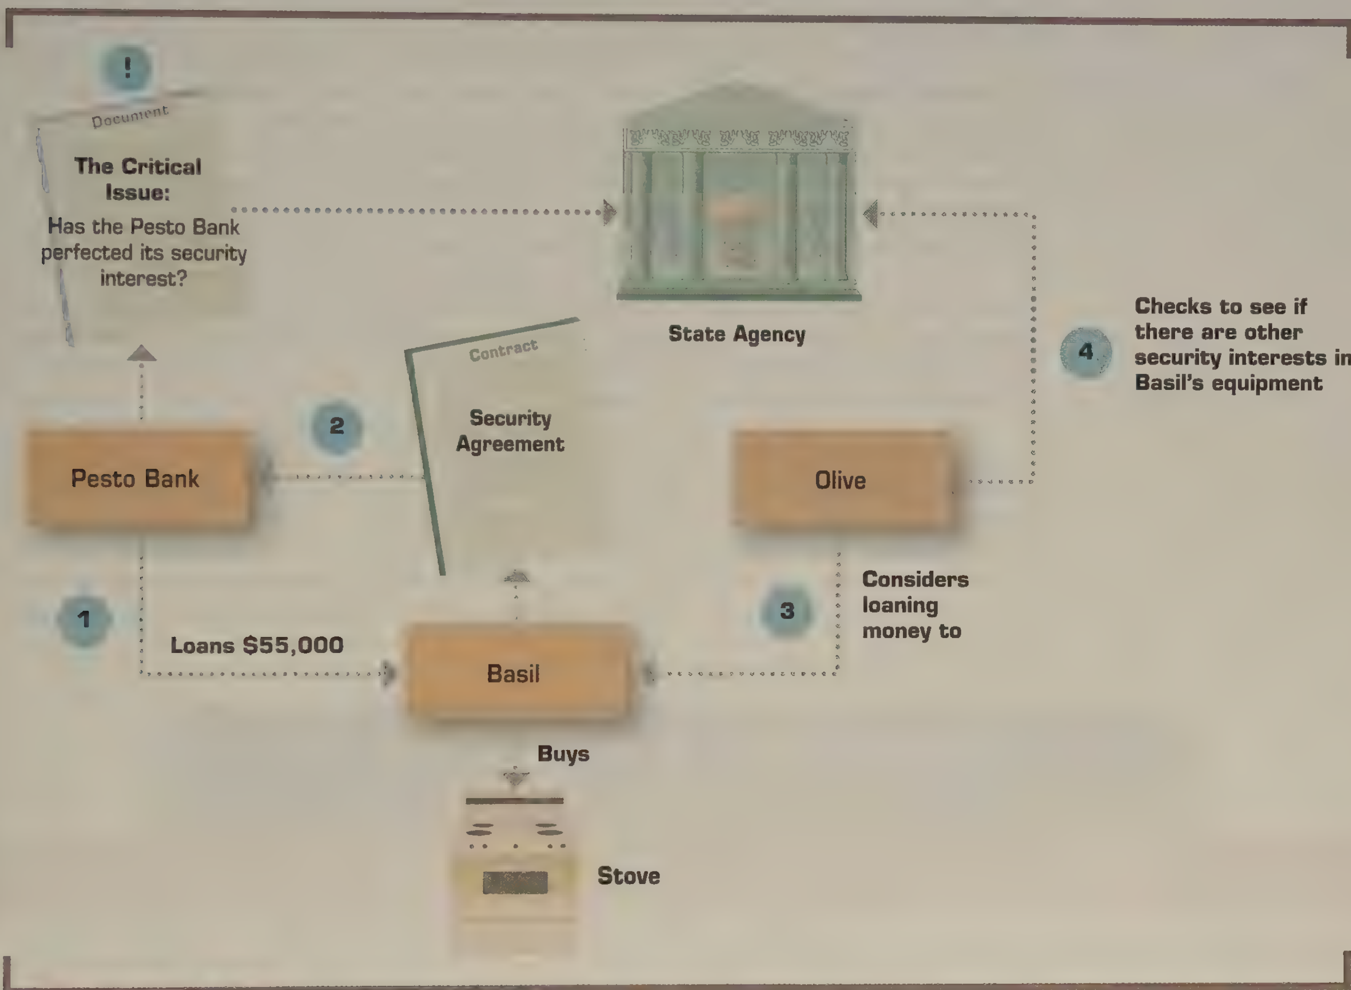

EXHIBIT 24.2 The Pesto Bank:
(1) Loans money to Basil and
(2) Takes a security interest in his equipment.
Later, when Olive:
(3) Considers loaning Basil money, she will
(4) Check to see if any other creditors already have a security interest in his goods.

Article 9 prescribes one form to be used nationwide for financing statements.[7] The financing form is available online at many websites. Remember that the filing may be done on paper or electronically.

If the collateral is either *accounts* or *general intangibles*, filing is the *only* way to perfect. Suppose Nester uses his copyright in a screenplay as collateral for a loan. The bank that gives him the loan may perfect *only* by filing.

The most common problems that arise in filing cases are (1) whether the financing statement contained enough information to put other people on notice of the security interest and (2) whether the secured party filed the papers in the right place.

Contents of the Financing Statement

A financing statement is sufficient if it provides the name of the debtor, the name of the secured party, and an indication of the collateral.[8]

The name of the debtor is critical because that is what an interested person will use to search among the millions of other financing statements on file. Faulty descriptions of the debtor's name have led to thousands of disputes and untold years of litigation, as subsequent creditors have failed to locate any record of an earlier claim on the debtor's property. In response, the UCC is now very precise about what name must be used. If the debtor is a "registered organization," such as a corporation, limited partnership, or limited liability company, the official registered name of the company is the only one acceptable. If the debtor is a person or an unregistered organization (such as a club), then the *correct* name is required. Trade names are not sufficient.

Because misnamed debtors have created so much conflict, the Code now offers a straightforward test: a financing statement is effective if a computer search run under the debtor's correct name produces it. That is true even if the financing statement used the *incorrect* name. If the search does not reveal the document, then the financing statement is ineffective as a matter of law. The burden is on the secured party to file accurately, not on the searcher to seek out erroneous filings.[9]

The collateral must be described reasonably so that another party contemplating a loan to the debtor will understand which property is already secured. A financing statement could properly state that it applies to "all inventory in the debtor's Houston warehouse." If the debtor has given a security interest in everything he owns, then it is sufficient to state simply that the financing statement covers "all assets" or "all personal property."

The filing must be done by the debtor's last name. But which name is the last? The answer is not always entirely straightforward, as the following case indicates. Did the court get it right?

Corona Fruits & Veggies, Inc. v. Frozsun Foods, Inc.

143 Cal. App. 4th 319, 48 Cal. Rptr. 3d 868
California Court of Appeals, 2006.

Facts: Corona Fruits & Veggies (Corona) leased farmland to a strawberry farmer named Armando Munoz Juarez. He signed the lease, "Armando Munoz." Corona advanced money for payroll and farm production expenses. The company filed a UCC-1 financing statement, claiming a security interest in the strawberry crop. The financing

---
[7]UCC §9-521.
[8]UCC §9-502(a).
[9]UCC §9-506(c).

statement listed the debtor's name as "Armando Munoz." Six months later, Armando Munoz Juarez contracted with Frozsun Foods, Inc., to sell processed strawberries. Frozsun advanced money and filed a financing statement listing the debtor's name as "Armando Juarez."

By the next year, the strawberry farmer owed Corona $230,000 and Frozsun $19,600. When he was unable to make payments on Corona's loan, the company repossessed the farmland. And, while it may sound a bit … lame … it also repossessed the strawberries.

Both Corona and Frozsun claimed the proceeds of the crop. The trial court awarded the money to Frozsun, finding that Corona had filed its financing statement under the wrong last name and therefore had failed to perfect its security interest in the strawberry crop. Corona appealed.

Issue: ***Did Corona correctly file its financing statement?***

Excerpts from Judge Yegan's Decision: Shakespeare asked, "What's in a name?" We supply an answer only for the Uniform Commercial Code lien priority statutes: Everything when the last name is true and nothing when the last name is false. When a creditor files a UCC-1 financing statement, the debtor's true last name is crucial because the financing statements are indexed by last names. A subsequent creditor who loans money to a debtor with the same name is put on notice that its lien is secondary.

Substantial evidence supports the finding that debtor's true last name was "Juarez" and not "Munoz." The pleadings state that debtor's last name is "Juarez," as do many of appellants' business records. Debtor provided appellants with a photo I.D. and Green Card bearing the name "Armando Munoz Juarez." The name appears on the sublease and other documents including the Farmer Agreement, a Crop Exhibit, a second sublease agreement (identifying debtor as "Juarez Farms, Armando Munoz Juarez"), a crop assignment, appellants' accounting records, receipts for advances, appellants' letters to debtor, and checks issued by appellants.

As a general rule, minor errors in a UCC financing statement do not affect the effectiveness of the financing statement unless the errors render the document seriously misleading to other creditors. If a search of the filing office's records under the debtor's correct name, using the filing office's standard search logic, would nevertheless disclose that financing statement, the name provided does not make the financing statement seriously misleading.

The record indicates that Frozsun's agent conducted a "Juarez" debtor name search and did not discover appellants' UCC-1 financing statement. No evidence was presented that the financing statement would have been discovered under debtor's true legal name, using the filing office's standard search logic. Absent such a showing, the trial court reasonably concluded that the "Armando Munoz" debtor name in appellants' financing statement was seriously misleading. The secured party, not the debtor or uninvolved third parties, has the duty of insuring proper filing and indexing of the notice.

Appellants contend that the debtor name requirement is governed by the naming convention of Latin American countries because debtor is from Mexico. We reject the argument because the strawberries were planted in and the debt obligation arose in Santa Barbara County, not Mexico. In most Latin American countries, the surname is formed by listing first the father's name, then the mother's name. This is exactly opposite Anglo-American tradition. Debtor's last name did not change when he crossed the border into the United States. The "naming convention" is legally irrelevant for UCC-1 purposes and, if accepted, would seriously undermine the concept of lien perfection.

Appellants knew that debtor's legal name was "Armando Juarez" or "Armando Munoz Juarez." Elodia Corona, appellants' account manager, prepared the UCC Financing Statements and testified: "I don't know why I didn't put his last name on the financing statement. I could have made a mistake." Ms. Corona was asked: "So the last name on all the Agreements is Juarez, but on the U.C.C. 1 Forms, you filed them as Munoz?" Ms. Corona answered, "Yes."

Appellants are [defeated by their own] pleadings, the contracts, business records, the checks for the cash advances, debtor's identification papers and tax papers, and the testimony of appellants' account manager. Appellants could have protected themselves by using both names on their financing statements. The trial court did not err in finding that the UCC-1 financing statement filed by Frozsun Foods perfected a security interest superior to appellants' liens.

The judgment is affirmed.

Article 9—2010 Amendments. In 2010, the authors of the UCC—The National Conference of Commissioners on Uniform State Laws (NCCUSL)—created a set of Amendments to Article 9. Remember that the NCCUSL has no power to make law. Once it creates a set of model rules, it is up to the states to decide whether or not to actually enact the proposals.

At the time of this writing, six states have adopted the changes to Article 9 as law, and several others are actively considering doing the same. It appears likely that many states will adopt the changes soon. For all adopting states, the Amendments will take effect on July 1, 2013.

While most of these changes are so technical as to be beyond the scope of this chapter, one of the Amendments addresses the issue of what name must appear on a financing statement. Under the proposed 2010 Amendments, states will require that for individuals, the name on a financing statement be the same as that *on a person's driver's license*. If a state also issues official identification cards from a driver's license office to non-drivers, then the name on such an ID card will be acceptable. If a person has neither kind of state ID card, then her surname and first personal name will be required to perfect by filing.

Debtor's Signature. Notice one important item that is *not* required on a financing statement: the debtor's signature. The drafters of the UCC have greatly facilitated electronic filing by eliminating the old requirement that a debtor sign. Does this allow a secured party to create any financing statement it wishes? No. The debtor must have entered into a valid security agreement before the secured party is entitled to file any financing statement. Of course, there is the possibility of a fraudulent filing, but the drafters reasoned that the efficiency achieved far outweighs the danger of occasional fraud.

Place of Filing

The United States is a big country, and potential creditors do not want to stagger from one end of it to the other to learn whether particular collateral is already secured elsewhere. Article 9 specifies *where* a secured party must file. These provisions may vary from state to state, so it is essential to check local law because a misfiled record accomplishes nothing. The general rules are as follows.

A secured party must file **in the state of the debtor's location**. An *individual* is located at his principal residence. If Luigi, the debtor, lives in Maryland, works in Virginia, and has a vacation home in Florida, a secured party must file in Maryland. An organization that has only one place of business is located in that state. If the organization has more than one place of business, it is considered to be located at its chief executive office.[10]

Article 9 prescribes central filing within the state for most types of collateral. For *goods*, the central location will typically be the Secretary of State's office, although a state may designate some other office if it wishes. For *fixtures*, the secured party generally has a choice between filing in the same central office that is used for goods (which, again, is usually the Secretary of State's office), or filing in the local *county* office that would be used to file real estate mortgages.[11]

Duration of Filing

Once a financing statement has been filed, it is effective for five years.[12] After five years, the statement will expire and leave the secured party unprotected, unless she files a continuation statement within six months prior to expiration. The continuation statement is valid for an additional five years, and if necessary, a secured party may continue to file one periodically, forever.[13]

Perfection by Possession or Control

For most types of collateral, in addition to filing, a secured party generally may perfect by possession or control. So if the collateral is a diamond brooch or 1,000 shares of stock, a bank may perfect its security interest by holding the items until the loan is paid off. When the

---

[10]UCC §9-307.
[11]UCC §9-501.
[12]The exception to this is for a manufactured home, where it lasts 30 years.
[13]UCC §9-515.

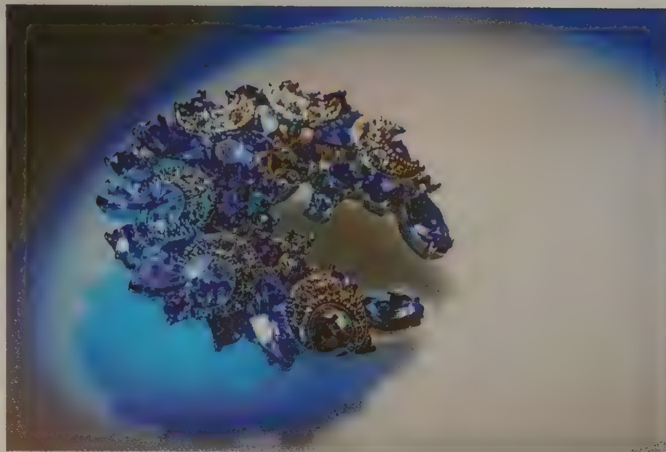
debtor gives collateral to the secured party, it is often called a **pledge**: the debtor pledges her goods to secure her performance, and the secured party (sometimes called the **pledgee**) takes the goods to perfect its interest.

Pledge
A secured transaction in which a debtor gives collateral to the secured party.

Possession

When may a party use possession? Whenever the collateral is **goods, negotiable documents, instruments, money, chattel paper that is tangible (as opposed to electronic), or most securities.**[14]

Perfection by possession has some advantages. First, notice to other parties is very effective. No reasonable finance company assumes that it can obtain a security interest in a Super Bowl championship ring when *another creditor* already holds the ring. Second, possession enables the creditor to ensure that the collateral will not be damaged during the life of the security interest. A bank that loans money based on a rare painting may worry about the painting's condition, but it knows the painting is safe if it is locked up in the bank's vault. Third, if the debtor defaults, a secured party has no difficulties repossessing goods that it already holds.



© Ivanova Inga/Shutterstock.com

A bank may wish to perfect its security interest by holding this valuable brooch in its vault.

Of course, for some collateral, possession is impractical. If a consumer buys a new yacht on credit, the seller can hardly expect to perfect its security interest by possession. The buyer would become edgy sailing the boat around the dealer's parking lot. In such a case, the secured party must perfect by filing.

Mandatory Possession

A party *must* perfect a security interest in *money* by taking possession.[15] Money is easy to transfer, and one $100 bill is the same as another, so only possession will do. Suppose Ed's Real Estate claims that Jennifer, a former employee, has opened her own realty business in violation of their noncompete agreement. Jennifer promises to move her business to another city within 90 days, and Ed agrees not to sue. To secure Jennifer's promise to move, Ed takes a security interest in $50,000 cash. If she fails to move on time, he is entitled to the money. To perfect that interest, Ed must take possession of the money and hold it until Jennifer is out of town.

Control

A security interest in investment property, deposit accounts, letter-of-credit rights, and electronic chattel paper may be perfected by control.[16] We have described control above, in the section on attachment. In general, *control means that the secured party has certain exclusive rights to dispose of the collateral.* Recall, for example, that a secured party which is a bank has control of any deposit account located in that bank.

Mandatory Control. **Security interests in deposit accounts and letter-of-credit rights may be perfected *only* by control.**[17] Once again, filing would be ineffectual with forms of collateral so easily moved, and the UCC will grant perfection only to a secured party that has control.

---

[14]UCC §9-313.
[15]UCC §9-312(b)(3).
[16]UCC §9-314(a).
[17]UCC §9-312(b)(1).

Care of the Collateral

Possession and control give several advantages to the secured party, but also one important duty: **a secured party must use reasonable care in the custody and preservation of collateral in her possession or control.**[18] If the collateral is something tangible, such as a painting, the secured party must take reasonable steps to ensure that it is safe from harm.

What does "reasonable care" mean when the collateral is something as volatile as shares of stock?

LAYNE V. BANK ONE

395 F.3d 271
United States Court of Appeals for the Sixth Circuit, 2005

Facts: Charles E. Johnson was the founder and CEO of PurchasePro.com, Inc., and Geoff Layne was its marketing director. When their Internet stock went public, both officers suddenly owned shares worth millions of dollars. To increase his liquidity, Johnson took out a loan for $2.8 million from Bank One, and Layne borrowed $3.25 million. Each secured the loan with shares of PurchasePro stock.

The loan agreement required a loan-to-value (LTV) ratio of 50 percent, meaning that the value of the shares had to be at least double the outstanding loan balance. If the value of the shares sank below the required level, the two men could either pay off some of the loan or offer additional security. If the two borrowers failed to remedy the problem, the bank was entitled (but not obligated) to sell the shares. Johnson secured his loan with $6.9 million worth of PurchasePro stock.

In February, Internet stocks suddenly plummeted, and both loans immediately exceeded their LTV ratio. Johnson and Layne spoke with the bank several times, stating that they would offer additional collateral. During March and April, more calls went back and forth, with the debtors occasionally suggesting that the collateral be sold, while at other times agreeing to provide more security. Finally, in July, over a four-day period, the bank sold Johnson's PurchasePro shares for $524,757, less than 10 percent of its original worth.

Johnson and Layne both filed suit against the bank, claiming that it failed to exercise reasonable care of the collateral. The trial court gave judgment for the bank, and the plaintiffs appealed.

Issue: ***Did the bank exercise reasonable care of the shares?***

Excerpts from Judge Moore's Decision: We first consider Johnson's argument that Bank One violated a duty under Kentucky law to preserve the value of the collateral held in its possession. With respect to the regulation of secured transactions, Kentucky has adopted the Uniform Commercial Code ("U.C.C."), which states that "a secured party shall use reasonable care in the custody and preservation of collateral in the secured party's possession. In the case of chattel paper or an instrument, reasonable care includes taking necessary steps to preserve rights against prior parties unless otherwise agreed."

The comment to §9-207 states that the provision "imposes a duty of care, similar to that imposed on a pledgee at common law, on a secured party in possession of collateral," and cites to [a different treatise that says,] "The pledgee is not liable *for a decline in the value* of pledged instruments, even if timely action could have prevented such decline." In the context of pledged stock, courts have used this language to hold that "a bank has no duty to its borrower to sell collateral stock of declining value."

As [another court] stated, "It is the borrower who makes the investment decision to purchase stock. A lender in these situations merely accepts the stock as collateral, and does not thereby itself invest in the issuing firm. Given the volatility of the stock market, a requirement that a secured party sell shares held as collateral, at a particular time, would be to shift the investment risk from the borrower to the lender."

We conclude that under Kentucky law a lender has no obligation to sell pledged stock held as collateral merely because of a market decline. If the borrower is concerned with the decline in the share value, it is his responsibility, rather than that of the lender, to take appropriate remedial steps, such as paying off the loan in return for the collateral, substituting the pledged stock with other equally valued assets, or selling the pledged stock himself and paying off the loan.

[18] UCC §9-207.

Perfection of Consumer Goods

The UCC gives special treatment to security interests in most consumer goods. Merchants sell a vast amount of consumer goods on credit. They cannot file a financing statement for every bed, television, and stereo for which a consumer owes money. Yet perfecting by possession is also impossible since the consumer expects to take the goods home. To understand the UCC's treatment of these transactions, we need to know two terms. The first is ***consumer goods***, which as we saw earlier means goods used primarily for personal, family, or household purposes. The second term is *purchase money security interest.*

A **purchase money security interest (PMSI)** is one taken by the person who sells the collateral or by the person who advances money so the debtor can buy the collateral.[19] Assume the Gobroke Home Center sells Marion a $5,000 stereo system. The sales document requires a payment of $500 down and $50 per month for the next three centuries, and gives Gobroke a security interest in the system. Because the security interest was "taken by the seller," the document is a PMSI. It would also be a PMSI if a bank had loaned Marion the money to buy the system and the document gave the bank a security interest.

Purchase money security interest (PMSI)
An interest taken by the person who sells the collateral or advances money so the debtor can buy it.

But aren't all security interests PMSIs? No, many are not. Suppose a bank loans a retail company $800,000 and takes a security interest in the store's present inventory. That is not a PMSI since the store did not use the $800,000 to purchase the collateral.

What must Gobroke Home Center do to perfect its security interest? Nothing. **A PMSI in *consumer goods* perfects *automatically*, without filing.**[20] Marion's new stereo is clearly consumer goods because she will use it only in her home. Gobroke's security interest is a PMSI, so the interest has perfected automatically. (See Exhibit 24.3.)

EXAM Strategy

Question: Winona owns a tropical fish store. To buy a spectacular new aquarium, she borrows $25,000 from her sister, Pauline, and signs an agreement giving Pauline a security interest in the tank. Pauline never files the security agreement. Winona's business goes belly up, and both Pauline and other creditors angle to repossess the tank. Does Pauline have a perfected interest in the tank?

Strategy: Generally, a creditor obtains a perfected security interest by filing or possession. However, a PMSI in consumer goods perfects automatically, without filing. Was Pauline's security agreement a PMSI? Was the fish tank a consumer good?

Result: A PMSI is one taken by the person who sells the collateral or advances money for its purchase. Pauline advanced the money for Winona to buy the tank, so Pauline does have a PMSI, but she has a problem, because PMSIs perfect automatically only for *consumer goods*. Consumer goods are those used primarily for personal, family, or household purposes, and so this was not a consumer purchase. Pauline failed to perfect and is unprotected against other creditors.

---

[19] UCC §9-103.
[20] UCC §9-309(1).

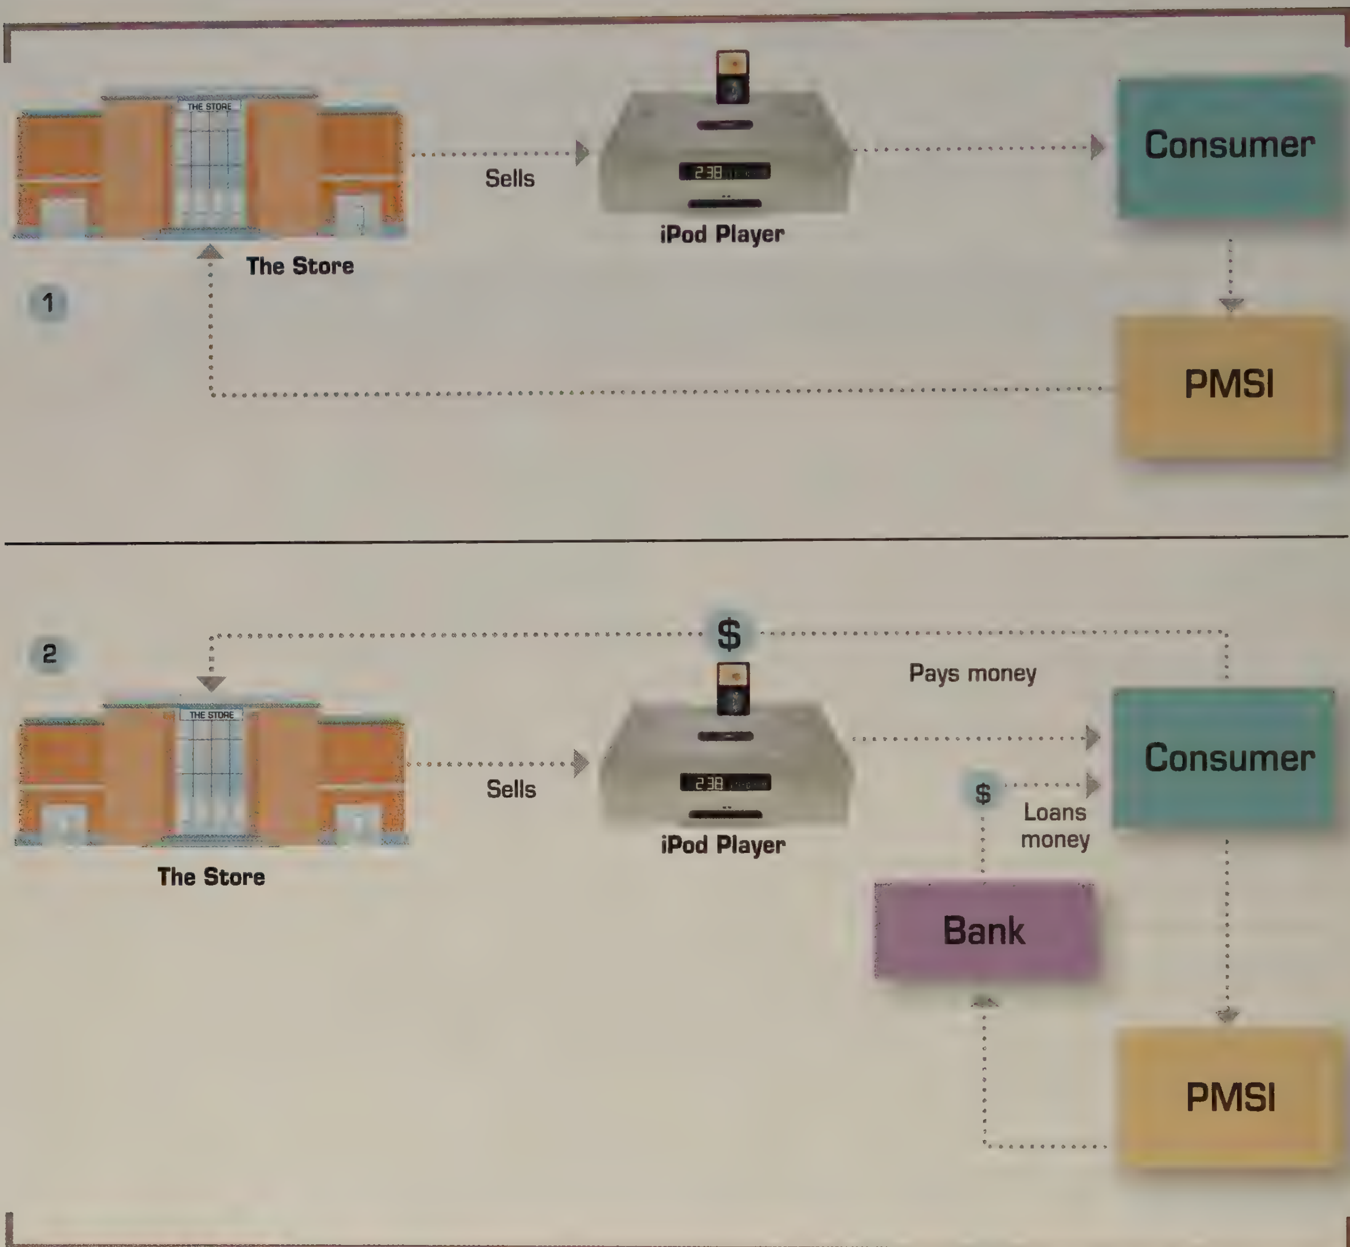


EXHIBIT 24.3 A purchase money security interest can arise in either of two ways. In the first example, a store sells a stereo to a consumer on credit; the consumer in turn signs a PMSI, giving the store a security interest in the stereo. In the second example, the consumer buys the stereo with money loaned from a bank; the consumer signs a PMSI giving the *bank* a security interest in the stereo.

Perfection of Movable Collateral and Fixtures

The rules for perfection are slightly different for security interests in movable goods, such as cars and boats, and in fixtures. We look briefly at each.

Movable Goods Generally

Goods that are easily moved create problems for creditors. Suppose a bank in Colorado loans Dorothy money, takes a security interest in her Degas sculpture, and perfects its interest in the proper state offices in Colorado. But then Dorothy moves to Ohio and uses the same collateral for another loan. A lender in Ohio will never discover the security interest perfected in Colorado. If Dorothy defaults, who gets the sculpture?

For most collateral, when the *debtor moves* to a new state, a security interest from the old state remains perfected for four months; when the *collateral is transferred* to a new state, the security interest remains perfected for one year.[21] If the secured party re-perfects in the new state within the time limits mentioned, the security interest remains valid until it would normally expire. If the secured party fails to re-perfect in the new state, the security interest lapses. Suppose Dorothy takes her Degas into Ohio on February 10 and on March 5 uses it as collateral for a new loan. The original Colorado bank still has a valid security interest in the sculpture and may seize the art if Dorothy defaults. But if Dorothy applies for her new loan on October 10, and the Colorado bank has failed to re-perfect, the Colorado bank has lost its protection.

Motor Vehicles and the Like

The UCC's provisions about perfecting generally do not apply to motor vehicles, trailers, mobile homes, boats, or farm tractors.[22] Because all of these are so numerous and so mobile, filing may be ineffective and possession is impossible. As a result, almost all states have created special laws to deal with this problem. Anyone offering or taking a security interest in any of these goods must consult local law.

State title laws generally require that a security interest in an automobile be noted directly on the vehicle's certificate of title. A driver needs a certificate of title to obtain registration plates, so the law presumes that the certificate will stay with the car. By requiring that the security interest be noted on the certificate, the law gives the best possible notice to anyone thinking of buying the car or accepting it as collateral. Generally, if a buyer or lender examines the certificate and finds no security interest, he may accept the vehicle for sale, or as collateral, and take it free of any interest. In most states, the same requirement applies to boats.

Fixtures

Fixtures, you recall, are goods that have become attached to real estate. A security interest may be created in goods that *are* fixtures and may continue in goods that *become* fixtures; however, the UCC does not permit a security interest in ordinary building materials, such as lumber and concrete, once they become part of a construction project.

The primary disputes in these cases are between a creditor holding a security interest in a fixture, such as a furnace, and another creditor with rights in the real estate, such as a bank holding a mortgage on the house. The issues are complex, involving local real property law, and we cannot undertake here a thorough explanation of them. However, we can highlight the issues that arise so that you can anticipate the potential problems. Common disputes concern:

- The status of the personal property when the security interest was created (was it still goods, or had it already been attached to real estate and become a fixture?);
- The status of the real estate (does the debtor *also* have a legal interest in the *real property?*);
- The type of perfection (which was recorded first, the security interest in the fixture or the real estate? does the secured party hold a PMSI?); and
- The physical status of the fixture (can it be removed without damaging the real estate?).[23]

---

[21] UCC §9-316(a).
[22] UCC §9-311(a)(2).
[23] UCC §9-334.

Any creditor who considers accepting collateral that might become a fixture must anticipate these problems and clarify with the debtor exactly what she plans to do with the goods. Armed with that information, the creditor should consult local law on fixtures and make an appropriate security agreement (or just refuse to accept the fixture as collateral).

Protection of Buyers

Generally, once a security interest is perfected, it remains effective regardless of whether the collateral is sold, exchanged, or transferred in some other way. Bubba's Bus Co. needs money to meet its payroll, so it borrows $150,000 from Francine's Finance Co., which takes a security interest in Bubba's 180 buses and perfects its interest. Bubba, still short of cash, sells 30 of his buses to Antelope Transit. But even that money is not enough to keep Bubba solvent: he defaults on his loan to Francine and goes into bankruptcy. Francine pounces on Bubba's buses. May she repossess the 30 that Antelope now operates? Yes. The security interest continued in the buses even after Antelope purchased them, and Francine can whisk them away. (Antelope has a valid claim against Bubba for the value of the buses, but the claim may prove fruitless, since Bubba is now bankrupt.)

There are some exceptions to this rule. The Code gives a few kinds of buyers special protection.

Buyers in Ordinary Course of Business

Buyer in ordinary course of business (BIOC)
Someone who buys goods in good faith from a seller who routinely deals in such goods.

As we saw in Chapter 21, a **buyer in ordinary course of business (BIOC)** is someone who buys goods in good faith from a seller who routinely deals in such goods.[24] For example, Plato's Garden Supply purchases 500 hemlocks from Socrates' Farm, a grower. Plato is a BIOC: he is buying in good faith, and Socrates routinely deals in hemlocks. This is an important status because a BIOC is generally *not affected* by security interests in the goods. However, if Plato *actually realized* that the sale violated another party's rights in the goods, there would be no good faith. If Plato knew that Socrates was bankrupt and had agreed with a creditor not to sell any of his inventory, Plato would not achieve BIOC status.

A buyer in ordinary course of business takes the goods free of a security interest created by its seller even though the security interest is perfected.[25] Suppose that, a month before Plato made his purchase, Socrates borrowed $200,000 from the Athenian Bank. Athenian took a security interest in all of Socrates' trees and perfected by filing. Then Plato purchased his 500 hemlocks. If Socrates defaults on the loan, Athenian will have *no right* to repossess the 500 trees that are now at the Garden Supply. Plato took them free and clear. (Of course, Athenian can still attempt to repossess other trees from Socrates.)

The BIOC exception is designed to encourage ordinary commerce. A buyer making routine purchases should not be forced to perform a financing check before buying. But the rule, efficient though it may be, creates its own problems. A creditor may extend a large sum of money to a merchant based on collateral, such as inventory, only to discover that by the time the merchant defaults the collateral has been sold to BIOCs.

---

[24]UCC §1-201(9).

[25]UCC §9-320(a). In fact, the buyer takes free of the security interest *even if the buyer knew of it.* Yet a BIOC, by definition, must be acting in good faith. Is this a contradiction? No. Plato might know that a third party has a security interest in Socrates' crops yet not realize that his purchase violates the third party's rights. Generally, for example, a security interest will permit a retailer to sell consumer goods, the presumption being that part of the proceeds will go to the secured party. A BIOC cannot be expected to determine what a retailer plans to do with the money he is paid.

EXAM Strategy

Question: Troy owns an art gallery specializing in Greek artifacts. To modernize the gallery, Troy borrows $150,000 from the Sparta Bank, which takes a security interest in all of his inventory. Sparta promptly perfects. A month later, Troy sells Helen an Athenian warrior's helmet for $675,000. Helen does not bother to perform a financing check, and she is unaware of Sparta's security interest. Troy soon goes bankrupt, and Sparta attempts to seize all of the inventory, including the helmet. Sparta proves that a routine financing check would have revealed its interest. Who wins the helmet?

Strategy: A creditor perfects a security interest to ensure that it is protected against all the world. However, exceptions leave the secured party unprotected in certain cases, including those of consumers. Analyze this case using that exception.

Result: A BIOC takes the goods free of a security interest created by his seller. Helen acted in good faith, buying from a dealer who routinely dealt in such goods. And it was Troy, Helen's seller, who created the security interest. Helen takes the helmet free of the bank's security interest, despite the fact that it was perfected.

Because the BIOC exception undercuts the basic protection given to a secured party, the courts interpret it narrowly. BIOC status is available only if the *seller* created the security interest. Oftentimes, a buyer will purchase goods that have a security interest created by someone other than the seller. If that happens, the buyer is not a BIOC. However, should that rule be strictly enforced even when the results are harsh? You make the call.

You be the Judge

CONSECO FINANCE SERVICING CORP. V. LEE

2004 WL 1243417
Court of Appeals of Texas, 2004

Facts: Lila Williams purchased a new Roadtrek 200 motor home from New World R.V., Inc. She paid about $14,000 down and financed $63,000, giving a security interest to New World. The RV company assigned its security interest to Conseco Finance, which perfected. Two years later, Williams returned the vehicle to New World (the record does not indicate why), and New World sold the RV to Robert and Ann Lee for $42,800. A year later, Williams defaulted on her payments to Conseco.

The Lees sued Conseco, claiming to be BIOCs and asking for a court declaration that they had sole title to the Roadtrek. Conseco counterclaimed, seeking title based on its perfected security interest. The trial court ruled that the Lees were BIOCs, with full rights to the vehicle. Conseco appealed.

You Be the Judge: ***Were the Lees BIOCs?***

Argument for Conseco: Under UCC §9-319, a buyer in ordinary course takes free of a security interest *created by the buyer's seller*. The buyers were the Lees. The seller was New World. New World did not create the security interest—Lila Williams did. There is no security interest created by New World. The security interest held by Conseco was created by someone else (Williams) and is not affected by the Lees' status as BIOC. The law is clear and Conseco is entitled to the Roadtrek.

Argument for the Lees: Conseco weaves a clever argument, but let's look at what they are really saying. Two honest buyers, acting in perfect good faith, can walk into an RV dealership, spend $42,000 for a used vehicle, and end up with—nothing. Conseco claims it is entitled to

an RV that the Lees paid for because someone that the Lees have never dealt with, never even heard of, gave *to this RV seller* a security interest which the seller, years earlier, passed on to a finance company. Conseco's argument defies common sense and the goals of Article 9.

Rebuttal from Conseco: The best part of the Lees' argument is the emotional appeal; the worst part is that it does not reflect the law. Yes, $42,000 is a lot of money. That is why a reasonable buyer is careful to do business with conscientious, ethical sellers. New World, which knew that Williams financed the RV and knew who held the security interest, never bothered to check on the status of the payments. If the Lees have suffered wrongdoing, it is at the hands of an irresponsible seller—the company they chose to work with, the company from whom they must seek relief.

Rebuttal from the Lees: The purpose of the UCC is to make dealing fair and commerce work; one of its methods is to get away from obscure, technical arguments. Conseco's suggestion would demolish the used-car industry. What buyers will ever pay serious money—*any* money—for a used vehicle, knowing that thousands of dollars later, the car might be towed out of their driveway by a finance company they never heard of?

Buyers of Consumer Goods

Another exception exists to protect buyers of consumer goods who do not realize that the item they are buying has a security interest in it. This exception tends to apply to relatively casual purchases, such as those between friends. Typically, the pattern is that one purchaser buys consumer goods on credit and then resells. The original purchaser is considered a debtor-seller since she still owes money but is now selling to a second buyer. **In the case of consumer goods purchased from a debtor-seller, a buyer takes free of a security interest if he is not aware of the security interest, he pays value for the goods, he is buying for his own family or household use, and the second party has not yet filed a financing statement.**[26]

Here is how this exception works. Charles Lau used a Sears credit card to buy a 46-inch TV, a sleeper sofa, love seat, entertainment center, diamond ring, gold chain, and microwave. He had the items delivered to the house of his girlfriend, Teresa Rierman, because he did not want his father to know he had been using the credit card (we can't imagine why). Lau later sold the items to Rierman's family and then (wait for it) defaulted on his payments to Sears and declared bankruptcy. Sears attempted to repossess its merchandise, but the Riermans claimed they were innocent buyers. The court ruled that if the Riermans could show that they knew nothing about Sears's security interest in the goods, they could keep the goods.[27]

This rule may be confusing because earlier, we discussed the automatic perfection of a security interest in consumer goods. When Sears sold the merchandise to Lau, it took a purchase money security interest in consumer goods. That interest perfected automatically (without filing) and was valid against *almost* everyone. Suppose Lau had used the furniture as collateral to obtain a bank loan. Sears would have retained its perfected security interest in the goods, and when Lau defaulted, Sears could have repossessed everything, leaving the bank with no collateral and no money.

The one person that Sears's perfect security interest could not defeat, however, was a buyer purchasing for *personal use without knowledge of the security interest*—in other words, the Riermans. Assuming the Riermans knew nothing of the security interest, they win. If Sears considers this type of loss important, it must, in the future, protect itself by filing a financing statement. Taking this extra step will leave Sears protected against everyone. Then, if a buyer defaults, Sears can pull the sofa out from under any purchaser.

---

[26]UCC §9-320.

[27]*In re Lau,* 140 B.R. 172, 1992 Bankr. LEXIS 671 (N.D. Ohio 1992).

Buyers of Chattel Paper, Instruments, and Documents

We have seen that debtors often use chattel paper, instruments, or documents as collateral. Because each of these is so easily transferred, Article 9 gives buyers special protection. **A buyer who purchases chattel paper or an instrument in the ordinary course of her business and then takes possession generally takes free of any security interest.**[28]

Suppose Tele-Maker sells 500 televisions to Retailer on credit, keeping a security interest in the televisions and the proceeds. The proceeds are any money or paper that Retailer earns from selling the sets. Retailer sells 300 of the sets to customers, most of whom pay on credit. The customers sign chattel paper, promising to pay for the sets over time (and giving Retailer a security interest in the sets). All of this chattel paper is proceeds, so Tele-Maker has a perfected security interest in it. The chattel paper is worth about $150,000 if all of the customers pay in full. But Retailer wants money now, so Retailer sells its chattel paper to Financer, who pays $120,000 cash for it. Next, Retailer defaults on its obligation to pay Tele-Maker for the sets. Tele-Maker cannot repossess the televisions because each customer was a BIOC (buyer in ordinary course of business) and took the goods free of any security interest. So Tele-Maker attempts to repossess the *chattel paper*. Will it succeed? No. The buyer of chattel paper takes it free of a perfected security interest. See Exhibit 24.4.

Other Paper

Similar rules apply for holders in due course of instruments and for purchasers of securities and documents of title. Those parties obtain special rights, described in Articles 3, 7, and 8 of the UCC. The details of those rules are beyond the scope of this chapter, but once again, the lesson for any lender is simple: a security interest is safest when the collateral is in your vault. If you do not take possession of the paper, you may lose it to an innocent buyer.[29]

Liens

Law student Paul King got a costly lesson when his $28.09 check for an oil change bounced and the repo man snatched his prized Corvette. The bill for the car's return: $644. King was a third-year law student, working part time in a private firm in Houston. He had just walked in from lunch when coworkers told him his car was being towed.

"I thought they were joking," King said. They weren't. King saw a tow truck backing up to his car and hurried out to speak with the workers. They advised him that Texas law authorized them to pick up his car to satisfy a lien for work done to the car. King hurried inside to telephone the company that had performed the oil change. Unable to make a deal on the phone, he ran back outside and found—no car.

King phoned Harris County Repossession to see about getting his car back. That's easy, they told him. But you owe some fees: $28.09 for the oil change, $20 for the returned check, $25 for the legal notice in the newspapers, $21.24 per day for storage—plus, of course, the $550 repossession fee.[30]

Is that legal? Probably. The service station had a lien on the car. A **lien** is a security interest created by law (rather than by agreement). State and federal law both allow parties

Lien
A security interest created by law, rather than by agreement.

[28]UCC §9-330(a)(b)(d).

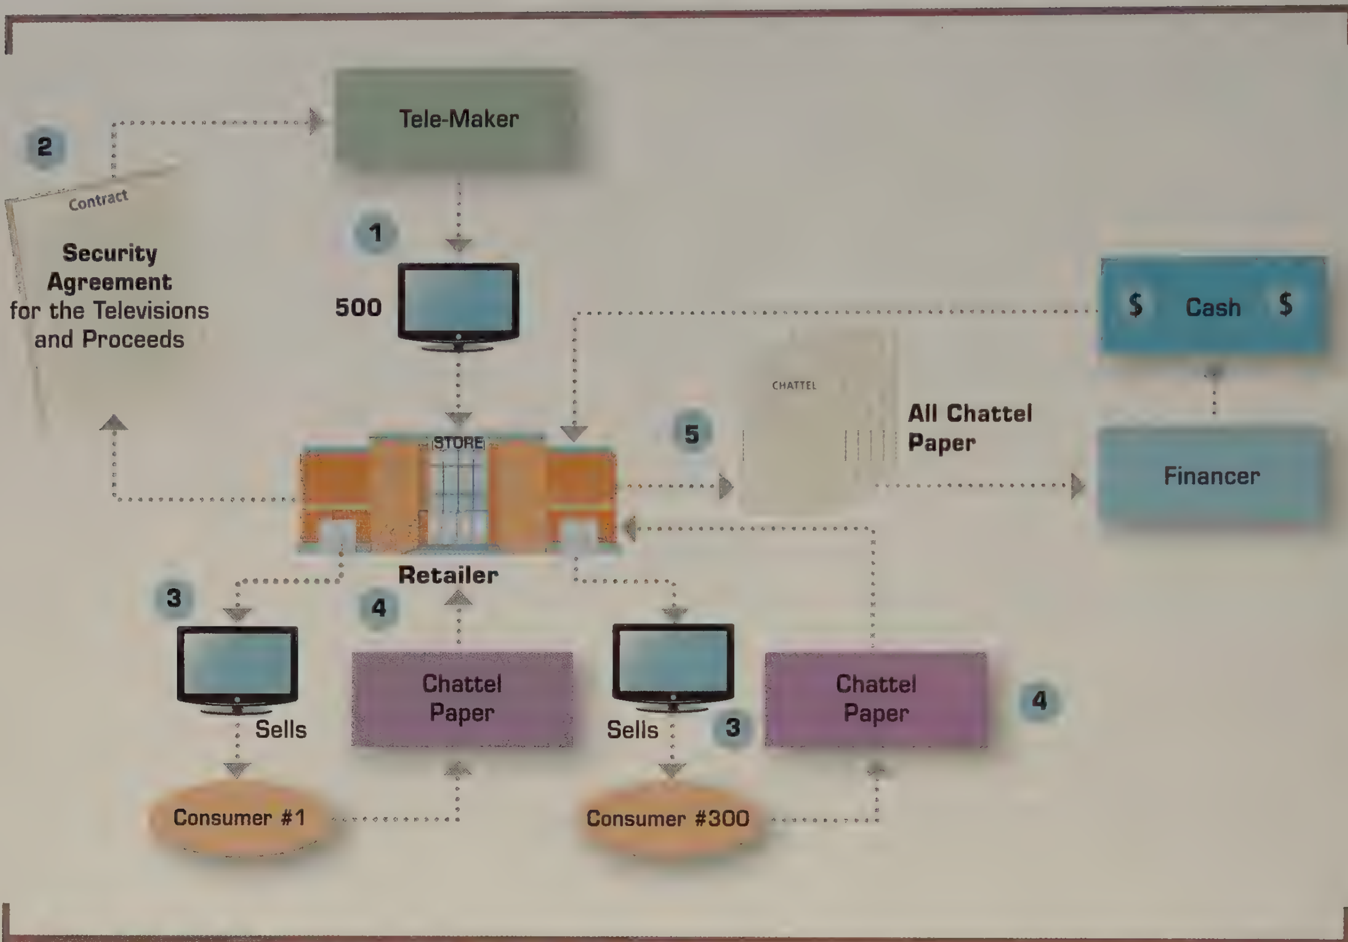

EXHIBIT 24.4 The buyer of chattel paper takes it free of a perfected security interest. In this case, Tele-Maker (1) sells 500 units to Retailer on credit, keeping (2) a security interest in the televisions and the proceeds. Retailer (3) sells the sets to customers who (4) sign chattel paper. Retailer (5) sells the chattel paper to Financer and then defaults on its obligations to Tele-Maker.

to assert a lien against a debtor under prescribed conditions. For example, a state may claim a lien based on unpaid taxes; the state is giving notice to the world that it may seize the debtor's property and sell it. A company may claim a lien based on work performed by the debtor.

To understand the difference between a lien and a security interest, assume that when Paul King bought his Corvette, he made a down payment and signed a security agreement to ensure future payments. *His agreement* gave the dealer a security interest in the sports car. Later, when he paid for an oil change, his check bounced. *State law* gave the service station a lien on the auto, meaning the right to hold the car if it is in the garage and to seize the auto if it is elsewhere. Because automobile repossessions provide such a graphic view of secured transactions, we will return to the subject later in the chapter. In this case, the oil company had an **artisan's lien**, meaning a security interest in personal property created when a worker makes some improvement to the property. A car mechanic, a computer repairman, and a furniture restorer all create artisan's liens. A **mechanic's lien** is similar and is created when a worker improves real property. A carpenter who puts an

Artisan's lien
A security interest in personal property.

Mechanic's lien
A security created when a worker improves real property.

addition on a kitchen and a painter who paints the kitchen's interior both have a mechanic's lien on the house. The owner of an apartment may obtain a **landlord's lien** in a tenant's personal property if the tenant fails to pay the rent. These security interests vary from state to state, so an affected person must consult local law. Because liens are the creation of statutes rather than agreements, Article 9 generally does not apply. The one aspect of liens that Article 9 does govern is priority between lienholders and other secured parties, which we examine in the following section. In Paul King's case, the repair shop certainly had a valid lien on his car, even though the amount in question was small. The company's method of *collecting* on its lien is more debatable. King admitted that the company had telephoned him and given him a chance to pay for the bounced check. Some courts would hold that the repair shop had done all it was required to do, but others might rule that it should have shown more patience and avoided running up the bill.

Priorities Among Creditors

What happens when two creditors have a security interest in the same collateral? The party who has **priority** in the collateral gets it. Typically, the debtor lacks assets to pay everyone, so all creditors struggle to be the first in line. After the first creditor has repossessed thecollateral, sold it, and taken enough of the proceeds to pay off his debt, there may be nothing left for anyone else. Who gets priority? There are three principal rules.

The first rule is easy: **a party with a perfected security interest takes priority over a party with an unperfected interest**.[31] This, of course, is the whole point of perfecting: to ensure that your security interest gets priority over everyone else's. On August 15, Meredith's Market, an antique store, borrows $100,000 from the Happy Bank, which takes a security interest in all of Meredith's inventory. Happy Bank does not perfect. On September 15, Meredith uses the same collateral to borrow $50,000 from the Suspicion Bank, which files a financing statement the same day. On October 15, as if on cue, Meredith files for bankruptcy and stops paying both creditors. Suspicion wins because it holds a perfected interest, whereas the Happy Bank holds merely an unperfected interest.

The second rule: **if neither secured party has perfected, the first interest to attach gets priority**.[32] Suppose that Suspicion Bank and Happy Bank had both failed to perfect. In that case, Happy Bank would have the first claim to Meredith's inventory since Happy's interest *attached* first.

And the third rule follows logically: **between perfected security interests, the first to file or perfect wins**.[33] Diminishing Perspective, a railroad, borrows $75 million from the First Bank, which takes a security interest in Diminishing's railroad cars and immediately perfects by filing. Two months later, Diminishing borrows $100 million from Second Bank, which takes a security interest in the same collateral and also files. When Diminishing arrives, on schedule, in bankruptcy court, both banks will race to seize the rolling stock. First Bank gets the railcars because it perfected first.

---

[31]UCC §9-322(a)(2).
[32]UCC §9-322(a)(3).
[33]UCC §9-322(a)(1).

March 1:	April 2:	May 3:	The Winner:
First Bank loans money and perfects its security interest by filing a financing statement.	Second Bank loans money and perfects its security interest by filing a financing statement.	Diminishing goes bankrupt, and both banks attempt to take the rolling stock.	First Bank, because it perfected first.

The general rules of priority are quite straightforward; however, you will not be surprised to learn that there are some exceptions.

Filing versus Control or Possession

Recall that a secured party *may* use either filing or control to perfect its security interest in deposit accounts, investment property, and letter-of-credit rights. Which method *should* the secured party use? Control. **For these three types of collateral, a secured party who has control wins over a party who merely filed.**[34] Early Bank obtains a security interest in Lionel's investment property and perfects by filing. Nine months later, Late Bank obtains a security interest in the same property and perfects by taking control. Late Bank wins.

Similarly, a secured party may perfect its interest in an *instrument* either by filing or possession. Once again, possession is the better idea: **between competing secured parties, the one who possesses wins, even over one who filed earlier.**[35]

Priority Involving a Purchase Money Security Interest

You may recall that a purchase money security interest (PMSI) is a security interest taken by the seller of the collateral or by a lender whose loan enables the debtor to buy the collateral. A PMSI can be created only in goods, fixtures, and software. On November 1, Manufacturer sells a specially built lathe to Tool Shop for $80,000 and takes a security interest in the lathe. The parties have created a PMSI. Parties holding a PMSI often take priority over other perfected security interests in the same goods, even if the other security interest was perfected first. How can the conflict arise? Suppose that on February 1, Tool Shop had borrowed $100,000 from the Gargoyle Bank, giving Gargoyle a security interest in after-acquired property. When the lathe arrives at the Tool Shop on November 1, Gargoyle's security interest attaches to it. But Manufacturer has a PMSI in the lathe, hence the conflict.

We need to examine PMSIs involving inventory and those involving noninventory. **Inventory** means goods that the seller is holding for sale or lease in the ordinary course of its business. The furniture in a furniture store is inventory; the store's computer, telephones, and filing cabinets are not.

Inventory
Goods that a seller is holding for sale or lease in the ordinary course of its business.

PMSI in Inventory

A PMSI in inventory takes priority over a conflicting perfected security interest (even one perfected earlier), if two conditions are met:

- Before filing its PMSI, the secured party must check for earlier security interests and, if there are any, must notify the holder of that interest concerning the new PMSI; and
- The secured party must then perfect its PMSI (normally by filing) *before* the debtor receives the inventory.[36]

---

[34]UCC §§9-327, 9-328, 9-329. If more than one creditor has control of the same collateral, the security interests rank according to the time of obtaining control.
[35]UCC §9-330(d).
[36]UCC §9-324(b)(c).

If the holder of the PMSI has met both of these conditions, its PMSI takes priority over any security interests filed earlier, as illustrated in the following chart.

1. February 1: Coltrane Bank loans Monk's Jazz Store $90,000, taking a security interest in all after-acquired property, including inventory.	**2. March 2:** Monk offers to buy 10 saxophones from Webster's Supply for $3,000 each.	**3. March 3:** Webster checks the financing records and learns that Coltrane Bank has a security interest in all of Monk's after-acquired property.	**4. March 4:** Webster notifies Coltrane Bank that he is selling 10 saxophones to Monk for $30,000 and is taking a PMSI in the instruments, which Webster carefully describes.
5. March 4: Webster files a financing statement indicating a PMSI in the 10 saxophones.	**6. March 5:** Webster sells the 10 saxophones to Monk.	**7. September:** Monk goes bankrupt.	**8. The Winner:** Webster. His PMSI in inventory takes priority over Coltrane's earlier interest.

PMSI in Noninventory Collateral

PMSIs are often given for noninventory goods. When Tool Shop bought the lathe, in the example above, the company gave a PMSI to the seller. The bank simultaneously obtained a security interest in the same lathe, based on its after-acquired property interest. Who wins?

A PMSI in collateral other than inventory takes priority over a conflicting security interest if the PMSI is perfected at the time the debtor receives the collateral or within 20 days after he receives it.[37] As long as Computer Co. perfects (by filing) within 20 days of delivering the computer, its PMSI takes priority over the bank's earlier security interest. Manufacturer may repossess the machine, and the bank may never get a dime back.

Again, we must note that the PMSI exception undercuts the ability of a creditor to rely on its perfected security interest. As a result, courts insist that a party asserting the PMSI exception demonstrate that it has complied with every requirement. In the following case, the creditor just got in under the wire.

In Re Roser

613 F.3d 1240; 2010 U.S. App. LEXIS 14817
United States Court of Appeals for the Tenth Circuit, 2010

Facts: Robert Roser obtained a loan from Sovereign Bank, which he promptly used to buy a car. Nineteen days later, Sovereign filed a lien with the state of Colorado. The bank expected that with a perfected interest, it would have priority over everyone else.

Unknown to Sovereign Bank, Roser had declared bankruptcy only *12* days after he purchased the car. Later, the bankruptcy trustee argued that he had priority over Sovereign because the bankruptcy filing happened *before Sovereign perfected* its security interest. When the court found for the trustee, Sovereign Bank appealed.

Issue: ***Did Sovereign Bank, a PMSI holder, obtain priority over the bankruptcy trustee?***

---

[37] UCC §9-324(a).

Excerpts from Judge Hartz's Decision: The Bankruptcy Code gives the bankruptcy trustee the rights and powers of a person who acquired a judicial lien on the debtor's property at the time that the bankruptcy petition was filed. In general, the trustee can avoid liens that are unperfected when the petition for bankruptcy is filed. But in some circumstances, a lien that is perfected after the bankruptcy filing may nevertheless have priority.

The Bank presents a straightforward argument why its lien would have priority under Colorado law over a lien of a judgment creditor who obtained judgment at the time Roser filed for bankruptcy. Under the UCC:

> If a person [1] files a financing statement [2] with respect to a purchase-money security interest [3] before or within twenty days after the debtor receives delivery of the collateral, the security interest takes priority over the rights of a buyer, lessee, or lien creditor which arise between the time the security interest attaches and the time of filing.

There is no doubt that the Bank satisfied the requirements of this section. The filing of a lien constitutes the filing of a financing statement. Nor is there any dispute that the Bank held a purchase-money security interest in Roser's vehicle. Thus, because the Bank filed its lien within 20 days of Roser's obtaining the vehicle, it contends that [the] UCC gives its lien a priority over any rights in the vehicle—including the Trustee's interest.

The Trustee's arguments to the contrary are not persuasive. The Trustee cannot avoid the Bank's lien. We REVERSE the judgment of the district court and REMAND for further proceedings consistent with this opinion.

Default and Termination

We have reached the end of the line. Either the debtor has defaulted or it has performed its obligations and may terminate the security agreement.

Default

The parties define "default" in their security agreement. **Generally, a debtor defaults when he fails to make payments due or enters bankruptcy proceedings.** The parties can agree that other acts will constitute default, such as the debtor's failure to maintain insurance on the collateral. When a debtor defaults, the secured party has two principal options: (1) it may take possession of the collateral, or (2) it may file suit against the debtor for the money owed. The secured party does not have to choose between these two remedies; it may try one remedy, such as repossession, and if that fails, attempt the other.[38]

Taking Possession of the Collateral

When the debtor defaults, the secured party may take possession of the collateral.[39] How does the secured party accomplish this? In either of two ways: the secured party may act on its own, without any court order, and simply take the collateral, provided this can be done *without a breach of the peace.* Otherwise, the secured party must file suit against the debtor and request that the court *order* the debtor to deliver the collateral.

Suppose a consumer bought a refrigerator on credit and defaulted. The security agreement may require the consumer to make the collateral available in a reasonable time and manner, such as by emptying the refrigerator of all food and having it ready for a carrier to take away. When the refrigerator is ready, the retailer can haul it away. What if the consumer refuses to cooperate? May the retailer break into the consumer's house to take the collateral? No. Breaking into a house is a clear breach of the peace and violates Article 9.

[38]UCC §9-601(a)(b)(c).
[39]UCC §9-609.

Secured parties often repossess automobiles without the debtor's cooperation. Typically, the security agreement will state that, in the event of default, the secured party has a right to take possession of the car and drive it away. As we saw earlier, the secured party could be the seller or it could be a mechanic with an artisan's lien on the car.

Disposition of the Collateral

Once the secured party has obtained possession of the collateral, it has two choices. The secured party may (1) dispose of the collateral or (2) retain the collateral as full satisfaction of the debt.

Disposal of the Collateral. **A secured party may sell, lease, or otherwise dispose of the collateral in any commercially reasonable manner.**[40] Typically, the secured party will sell the collateral in either a private or a public sale. First, however, the debtor must receive *reasonable notice* of the time and place of the sale so that she may bid on the collateral. The higher the price that the secured party gets for the collateral, the lower the balance still owed by the debtor. Giving the debtor notice of the sale and a chance to bid ensures that the collateral will not be sold for an unreasonably low price.

Suppose Bank loans $65,000 to Farmer to purchase a tractor. While still owing $40,000, Farmer defaults. Bank takes possession of the tractor and then notifies Farmer that it intends to sell the tractor at an auction. Farmer has the right to attend and bid on the tractor.

When the secured party has sold the collateral, it applies the proceeds of the sale: first, to its expenses in repossessing and selling the collateral, and second, to the debt.[41] Assume Bank sold the tractor for $35,000 and that the process of repossessing and selling the tractor cost $5,000. Bank applies the remaining $30,000 to the debt.

Deficiency or Surplus. The sale of the tractor yielded $30,000 to be applied to the debt, which was $40,000. The disposition has left a **deficiency;** that is, insufficient funds to pay off the debt. **The debtor is liable for any deficiency.** So the bank will sue the farmer for the remaining $10,000. On the other hand, sometimes the sale of the collateral yields a **surplus;** that is, a sum greater than the debt. In that case, the secured party must pay the surplus to the debtor.[42]

Deficiency
Having insufficient funds to pay off a debt.

Surplus
A sum of money greater than the debt incurred.

When a secured party disposes of collateral in a *commercially unreasonable* manner, then a deficiency or surplus claim may be adjusted based on the sum that *should* have been obtained.[43] Suppose that Seller, who is owed $300,000, repossesses 500 bedroom sets from a hotel and, without giving proper notice, quickly sells them for a net amount of $200,000. Seller sues for the $100,000 deficiency. If a court determines that a properly announced sale would have netted $250,000, Seller is only entitled to a deficiency judgment of $50,000. Similarly, if the collateral is sold *to the secured party* or someone related, and the price obtained is significantly below what would be expected, then any deficiency or surplus must be calculated on what the sale would normally have brought. This protects the debtor from a sale in which the secured party has followed all formalities but ended up owning the goods for a suspiciously low price.[44]

Acceptance of Collateral. In many cases, the secured party has the option to satisfy the debt simply by keeping the collateral. **Acceptance** refers to a secured party's retention of the collateral as full or partial satisfaction of the debt. *Partial satisfaction* means that the debtor will still owe some deficiency to the secured party. This is how the system works.[45]

Acceptance
Retention of the collateral by a secured party as full or partial satisfaction of a debt.

A secured party who wishes to accept the collateral must notify the debtor. If the debtor agrees in an authenticated record, then the secured party may keep the collateral as full *or*

---

[40]UCC §9-610.
[41]UCC §9-615(a).
[42]UCC §9-615(d).
[43]UCC §9-626(a)(3).
[44]UCC §§9-615(f), 9-626(a)(5).
[45]UCC §9-620.

In some cases, the secured party may choose to satisfy the debt by keeping the collateral, which is known as acceptance of collateral.

partial satisfaction of the debt. If the debtor does not respond within 20 days, the secured party may still accept the collateral as *full* satisfaction, but *not* as partial satisfaction. In other words, the debtor's silence does not give the secured party the right to keep the goods and still sue for more money.

Suppose the buyer of a $13 million yacht, *Icarus*, has defaulted, and the retailer has repossessed the boat. The firm may decide the boat is worth more than the debt, so it notifies the buyer that it plans to keep *Icarus*. If the buyer does not object, the retailer automatically owns the boat after 20 days.

If the buyer promptly objects to acceptance, the retailer must then dispose of *Icarus* as described above, typically by sale. Why would a debtor object? Because she believes the boat is worth more than the debt. The debtor anticipates that a sale will create a surplus.

Consumers receive additional protection. A secured party may not accept collateral that is consumer goods if the debtor has possession of the goods *or* if the debtor has paid 60 percent of the purchase price. If Maud has defaulted on an oven that is in her kitchen, the Gobroke retail store may be entitled to repossess the oven, but the company must then dispose of the goods (sell the oven) and apply the proceeds to Maud's debt. Similarly, if Ernest is paying for his $10,000 television set in a "layaway" plan, with Gobroke warehousing the goods until the full price is paid, the store may not accept the television once Ernest has paid $6,000. Finally, a secured party is never permitted to accept consumer goods in partial satisfaction.[46]

Redeem
To pay the full value of a debt to get the collateral back.

Right of Redemption. Up to the time the secured party disposes of the collateral, the debtor has the right to **redeem** it, that is, to pay the full value of the debt. If the debtor redeems, she obtains the collateral back. Sylvia borrows $25,000 from the bank and pledges a ruby necklace as collateral. She defaults, still owing $9,000, and the bank notifies her that it will sell the necklace. If Sylvia pays the full $9,000 before the sale occurs, plus any expenses the bank has incurred in arranging the sale, she receives her necklace back.[47]

Proceeding to Judgment

Occasionally, the secured party will prefer to ignore its rights in the collateral and simply sue the debtor. **A secured party may sue the debtor for the full debt.**[48] Why would a creditor, having gone to so much effort to perfect its security interest, ignore that interest and simply file a lawsuit? The collateral may have decreased in value and be insufficient to cover the debt. Suppose a bank loaned $300,000 to a debtor to buy a rare baseball cap worn by Babe Ruth in a World Series game. The debtor defaults, owing $190,000. The bank discovers that the cap is now worth only $110,000. It is true that the bank could sell the cap and sue for the deficiency. But the sale will take time, and the outcome is uncertain. Suppose the bank knows that the debtor has recently paid cash for a $2 million house. The bank may promptly file suit for the full $190,000. The bank will ask the court to freeze the debtor's bank account and legally hold the house until the suit is resolved. The bank expects to prove the debt quickly—the loan documents are clear, and the amount of debt is easily calculated. It will obtain its $190,000 without ever donning the cap. Of course, the bank has the option of doing both things simultaneously: it may slap on the cap and a lawsuit all at once.

[46]UCC §9-620(a)(3), (e), (g).
[47]UCC §9-623.
[48]UCC §9-601(a).

Termination

Finally, we need to look at what happens when a debtor *does not* default, but pays the full debt. (You are forgiven if you have lost track of the fact that things sometimes work out smoothly.) Once that happens, the secured party must complete a **termination statement**, a document indicating that it no longer claims a security interest in the collateral.[49]

Termination statement
A document indicating that a secured party no longer claims a security interest in the collateral.

For a consumer debt, the secured party must file the termination statement in every place that it filed a financing statement. The secured party must do this within one month from the date the debt is fully paid, or within 20 days of a demand from the consumer, whichever comes first. For other transactions, the secured party must, within 20 days, either file the termination statement or send it to the secured party so that he may file it himself. In both cases, the goal is the same: to notify all interested parties that the debt is extinguished.

Chapter Conclusion

Secured transactions are essential to modern commerce. Billions of dollars' worth of goods are sold on credit annually, and creditors normally demand an assurance of payment. A secured party that understands Article 9 and follows its provisions to the letter should be well protected. A company that operates in ignorance of Article 9 invites disaster because others may obtain superior rights in the goods, leaving the "secured" party with no money, no security—and no sympathy from the courts.

Exam Review

1. **ARTICLE 9** Article 9 applies to any transaction intended to create a security interest in personal property or fixtures. (pp. 559–562)

2. **ATTACHMENT** Attachment means that (1) the two parties made a security agreement *and* either the debtor has *authenticated a security agreement* describing the collateral *or* the secured party has obtained *possession* or *control;* and (2) the secured party gave value in order to get the security agreement; and (3) the debtor has rights in the collateral. (pp. 562–566)

3. **AFTER-ACQUIRED PROPERTY** A security interest may attach to after-acquired property. (p. 566)

4. **PERFECTION** Attachment protects against the debtor. Perfection of a security interest protects the secured party against parties other than the debtor. (pp. 566–576)

5. **FILING** Filing is the most common way to perfect. For many forms of collateral, the secured party may also perfect by obtaining either possession or control. (pp. 567–570)

6. **PMSI** A purchase money security interest (PMSI) is one taken by the person who sells the collateral or advances money so the debtor can buy the collateral. (p. 573)

[49]UCC §9-513.

7. **PMSI PERFECTION** A PMSI in consumer goods perfects automatically, without filing. (pp. 573–574)

EXAM Strategy

Question: John and Clara Lockovich bought a 22-foot Chaparrel Villian II boat from Greene County Yacht Club for $32,500. They paid $6,000 cash and borrowed the rest of the purchase price from Gallatin National Bank, which took a security interest in the boat. Gallatin filed a financing statement in Greene County, Pennsylvania, where the bank was located. But Pennsylvania law requires financing statements to be filed in the county of the debtor's residence, and the Lockoviches lived in Allegheny County. The Lockoviches soon washed up in bankruptcy court. Other creditors demanded that the boat be sold, claiming that Gallatin's security interest had been filed in the wrong place. Who wins?

Strategy: Gallatin National Bank obtained a special kind of security interest in the boat. Identify that type of interest. What special rights does this give to the bank? (See the "Result" at the end of this section.)

8. **BIOC** A buyer in ordinary course of business (BIOC) takes the goods free of a security interest created by his seller even though the security interest is perfected. (pp. 576–578)

9. **CHATTEL PAPER** A buyer who purchases chattel paper or an instrument in good faith in the ordinary course of his business and then obtains possession or control generally takes free of any security interest. (p. 579)

10. **PRIORITY** Priority among secured parties is generally as follows:

    a. A party with a perfected security interest takes priority over a party with an unperfected interest.

    b. If neither secured party has perfected, the first interest to attach gets priority.

    c. Between perfected security interests, the first to file or perfect wins. (pp. 581–584)

EXAM Strategy

Question: Barwell, Inc., sold McMann Golf Ball Co. a "preformer," a machine that makes golf balls, for $55,000. Barwell delivered the machine on February 20. McMann paid $3,000 down, the remainder to be paid over several years, and signed an agreement giving Barwell a security interest in the preformer. Barwell did not perfect its interest. On March 1, McMann borrowed $350,000 from First of America Bank, giving the bank a security interest in McMann's present and after-acquired property. First of America perfected by filing on March 2. McMann, of course, became insolvent, and both Barwell and the bank attempted to repossess the preformer. Who gets it?

Strategy: Two parties have a valid security interest in this machine. When that happens, there is a three-step process to determine which party gets priority. Apply it. (See the "Result" at the end of this section.)

11. **PMSIS AND PRIORITY** A PMSI may take priority over a conflicting perfected security interest (even one perfected earlier) if the holder of the PMSI meets certain conditions. (pp. 582–584)

12. **CONTROL OR POSSESSION** For deposit accounts, investment property, letter-of-credit rights, and instruments, a secured party who obtains control or possession takes priority over one who merely filed. (p. 582)

13. **DEFAULT** When the debtor defaults, the secured party may take possession of the collateral on its own, without a court order, if it can do so without a breach of the peace. (pp. 584–586)

14. **DISPOSAL OF COLLATERAL** A secured party may sell, lease, or otherwise dispose of the collateral in any commercially reasonable way; in many cases, it may accept the collateral in full or partial satisfaction of the debt. The secured party may also ignore the collateral and sue the debtor for the full debt. (p. 585)

EXAM Strategy

Question: Jerry Payne owed the First State Bank of Pflugerville $342,000. The loan was secured by a 9.25-carat diamond ring. The bank claimed a default on the loan and, without notifying Payne, sold the ring. But the proceeds did not pay off the full debt, and the bank sued Payne for the deficiency. Is Payne liable for the deficiency?

Strategy: A secured party may dispose of the collateral in any commercially reasonable way. What must the secured party do to ensure commercial reasonableness? (See the "Result" at the end of this section.)

15. **TERMINATION** When the debtor pays the full debt, the secured party must complete a termination statement, notifying the public that it no longer claims a security interest in the collateral. (p. 587)

7. Result: Gallatin advanced the money that the Lockoviches used to buy the boat, meaning the bank obtained a PMSI. A PMSI in consumer goods perfects automatically, without filing. The boat was a consumer good. Gallatin's security interest perfected without any filing at all, and so the bank wins.

10. Result: This question is resolved by the first of those three steps. A party with a perfected security interest takes priority over a party with an unperfected interest. The bank wins because its perfected security interest takes priority over Barwell's unperfected interest.

14. Result: The secured party must give the debtor notice of the time and place of the sale. This ensures that the debtor may bid on the collateral, preventing an unreasonably low sales price. The bank failed to give such notice, and so it lost its right to the deficiency.

Multiple-Choice Questions

1. **CPA QUESTION** Under the UCC Secured Transactions Article, which of the following actions will best perfect a security interest in a negotiable instrument against any other party?
   (a) Filing a security agreement
   (b) Taking possession of the instrument
   (c) Perfecting by attachment
   (d) Obtaining a duly executed financing statement

2. **CPA QUESTION** Under the UCC Secured Transactions Article, perfection of a security interest by a creditor provides added protection against other parties in the event the debtor does not pay its debts. Which of the following parties is not affected by perfection of a security interest?
   (a) Other prospective creditors of the debtor
   (b) The trustee in a bankruptcy case
   (c) A buyer in ordinary course of business
   (d) A subsequent personal injury judgment creditor

3. **CPA QUESTION** Mars, Inc., manufactures and sells VCRs on credit directly to wholesalers, retailers, and consumers. Mars can perfect its security interest in the VCRs it sells without having to file a financing statement or take possession of the VCRs if the sale is made to which of the following:
   (a) Retailers
   (b) Wholesalers that sell to distributors for resale
   (c) Consumers
   (d) Wholesalers that sell to buyers in ordinary course of business

4. When Michelle buys a laptop, she pays an extra fee so that the computer arrives at her door with the latest version of Microsoft Word pre-installed. Under Article 9, the word processing program is considered:
   (a) "goods"
   (b) "services"
   (c) "software"
   (d) none of the above

5. Alpha perfects its security interest by properly filing a financing statement on January 1, 2010. Alpha files a continuation statement on September 1, 2014. It files another continuation statement on September 1, 2018. When will Alpha's financing statement expire?
   (a) January 1, 2015
   (b) September 1, 2019
   (c) September 1, 2023
   (d) Never

Essay Questions

1. Eugene Ables ran an excavation company. He borrowed $500,000 from the Highland Park State Bank. Ables signed a note promising to repay the money and an agreement giving Highland a security interest in all of his equipment, including after-acquired equipment. Several years later, Ables agreed with Patricia Myers to purchase a Bantam Backhoe from her for $16,000, which he would repay at the rate of $100 per month, while he used the machine. Ables later defaulted on his note to Highland, and the bank attempted to take the backhoe. Myers and Ables contended that the bank had no right to take the backhoe. Was the backhoe covered by Highland's security interest? Did Ables have sufficient rights in the backhoe for the bank's security interest to attach?

2. The Copper King Inn, Inc., had money problems. It borrowed $62,500 from two of its officers, Noonan and Patterson, but that did not suffice to keep the inn going. So Noonan, on behalf of Copper King, arranged for the inn to borrow $100,000 from Northwest Capital, an investment company that worked closely with Noonan in other ventures. Copper King signed an agreement giving Patterson, Noonan, and Northwest a security interest in the inn's furniture and equipment. But the financing statement that the parties filed made no mention of Northwest. Copper King went bankrupt. Northwest attempted to seize assets, but other creditors objected. Is Northwest entitled to Copper King's furniture and equipment?

3. Sears sold a lawn tractor to Cosmo Fiscante for $1,481. Fiscante paid with his personal credit card. Sears kept a valid security interest in the lawnmower but did not perfect. Fiscante had the machine delivered to his business, Trackers Raceway Park, the only place he ever used the machine. When Fiscante was unable to meet his obligations, various creditors attempted to seize the lawnmower. Sears argued that because it had a purchase money security interest (PMSI) in the lawnmower, its interest had perfected automatically. Is Sears correct?

4. The state of Kentucky filed a tax lien against Panbowl Energy, claiming unpaid taxes. Six months later, Panbowl bought a powerful drill from Whayne Supply, making a down payment of $11,500 and signing a security agreement for the remaining debt of $220,000. Whayne perfected the next day. Panbowl defaulted. Whayne sold the drill for $58,000, leaving a deficiency of just over $100,000. The state filed suit, seeking the $58,000 proceeds. The trial court gave summary judgment to the state, and Whayne appealed. Who gets the $58,000?

5. **YOU BE THE JUDGE WRITING PROBLEM** Dupont Feed bought and sold agricultural products. Dupont borrowed $300,000 from Wells Fargo Bank and gave Wells Fargo a security interest in all inventory, including after-acquired inventory. Wells Fargo perfected its interest by filing on June 17, 1982. Later, Dupont borrowed $150,000 from the Rushville National Bank and used the money to buy fertilizer. Dupont gave a PMSI to Rushville in the amount of $150,000. Rushville filed its financing statement in February 1984 at the County Recorder's office—the wrong place to file a financing statement for inventory. Then Dupont took possession of the fertilizer, and finally, in December 1984, Rushville filed correctly, with the Indiana Secretary of State. Dupont defaulted on both loans. Rushville seized the fertilizer, and Wells Fargo sued, claiming that it had perfected first. Rushville asserted that it

had a PMSI, which took priority over an earlier-filed security interest. Does Rushville's PMSI take priority over Wells Fargo? (Go slowly, the rules are very technical.) **Argument for Rushville:** It is black-letter law that PMSIs take priority over virtually everything, including interests perfected earlier. We are not fools at Rushville: we would not loan $150,000 to buy inventory if our security interest in that inventory was instantly inferior to someone else's. **Argument for Wells Fargo:** A PMSI in inventory gets priority only if the secured party perfects before the debtor receives the collateral. When Dupont obtained the fertilizer, Rushville had not perfected because it had filed in the wrong office. It only perfected long after Dupont bought the inventory; thus, Rushville's PMSI does not get priority.

Discussion Questions

1. **ETHICS** The Dannemans bought a Kodak copier worth over $40,000. Kodak arranged financing by GECC and assigned its rights to that company. Although the Dannemans thought they had purchased the copier on credit, the papers described the deal as a lease. The Dannemans had constant problems with the machine and stopped making payments. GECC repossessed the machine and, without notifying the Dannemans, sold it back to Kodak for $12,500, leaving a deficiency of $39,927. GECC sued the Dannemans for that amount. The Dannemans argued that the deal was not a lease, but a sale on credit. Why does it matter whether the parties had a sale or a lease? Is GECC entitled to its money? Finally, comment on the ethics. Why did the Dannemans not understand the papers they had signed? Who is responsible for that? Are you satisfied with the ethical conduct of the Dannemans? Kodak? GECC?

2. In the opening scenario, the bank demanded $5,000 from poor Sam for his Jeep that had been repossessed and sold to someone else. As we have seen, Article 9 gives the bank the right to demand this payment. But is that fair? Should Article 9 change so that a person like Sam does not have to pay? Or is the law reasonable now?

3. After reading this chapter, will your behavior as a consumer change? Are there any types of transactions that you might be more inclined to avoid?

4. After reading this chapter, will your future behavior as a businessperson change? What specific steps will you be most careful to take to protect your interests?

5. A perfected security interest is far from perfect. We examined several exceptions to normal perfection rules involving BIOCs, consumer goods, and so on. Are the exceptions reasonable? Should the UCC change to give the holder of a perfected interest absolute rights against absolutely everyone else?

© neelsky/Shutterstock.com

Creating a Negotiable Instrument

The figure lay on the couch by the fireplace. No signs of violence were visible, and a casual observer would have thought the man was napping. But Detective Waterston's trained eye immediately recognized the unnatural stiffness and pallor of a corpse. Walking behind the body, she saw matted blood against black hair and a heavy brass fireplace iron on the floor. She also noticed the crumpled document clutched in the victim's hand.

In his rage and frustration, Jenkins picked up the first thing that came to hand and struck Haverstock with the brass iron.

As the coroner was removing the body, Waterston slipped the crumpled paper out of the corpse's grasp. Sergeant Malloy asked whether she was ready to interview witnesses. "No," she said thoughtfully, looking at the document, "I believe I have everything I need right here." An hour later, the police arrested Tony Jenkins, the dead man's business partner. Jenkins immediately confessed.

"How did you know?" Malloy demanded.

"Simple," Waterston responded, "The answer is right here on this promissory note." She spread the crumpled page on the table. "On the front, it's a straightforward note for $1 million, payable by Tony Jenkins, the accused, to Letitia Lamour on August 1. You remember—she was recently arrested for selling fraudulent securities. Jenkins must have invested in one of her enterprises.

"It gets even more interesting on the back, though," she said, turning the paper over. "Lamour held on to the note for some time. But you see, on August 15th, she wrote on the back 'Pay to the order of Sebastian Haverstock.'"

"The dead man," Malloy whistled through his teeth.

"Precisely. Haverstock and Jenkins were planning to take their Internet company public in a month or two. The sale would have made them both wealthy men.

But Haverstock called Jenkins to demand payment on the note. Jenkins did not have a million dollars; he had lost everything in a series of unfortunate investments. Haverstock demanded that Jenkins turn over his shares in the company as payment for the note. In his rage and frustration, Jenkins picked up the first thing that came to hand and struck Haverstock with the brass iron. An antique instrument and very heavy.

"It's a shame, really," Detective Waterston continued. "If Jenkins had understood Article 3 of the Uniform Commercial Code, he would not have been tempted to murder. In fact, he owed Haverstock nothing. You see, the note was overdue—it should have been paid on August 1st, but today is the 31st. You can't be a holder in due course on an overdue note. Since Haverstock was not a holder in due course, Jenkins could have used the fraud claim he had against Lamour as a defense to Haverstock's demand for payment. In any event, Haverstock was well aware that Lamour had committed fraud—he was the one who set her up in business in the first place. Jenkins could have used Haverstock's knowledge of the fraud as another weapon against any demands for payment. That legal weapon would have been a better choice than a fireplace iron," Waterston concluded wryly.

Commercial Paper

Commercial paper plays an important role in your life if you write checks or borrow money. Historically speaking, however, commercial paper is a relatively new development. In early human history, people lived on whatever they could hunt, grow, or make for themselves. Imagine what your life would be like if you had to subsist only on what you could make yourself. Over time, people improved their standard of living by bartering for goods and services they could not make themselves. But traders needed a method for keeping account of who owed how much to whom. That was the role of currency. Many items have been used for currency over the years, including silver, gold, copper, and cowrie shells. Even cigarettes were used briefly in Greece at the end of World War II after Hitler's troops left. These currencies have two disadvantages—they are easy to steal and cumbersome to carry.

Sweden had traditionally used copper as currency. These ingots were very large and heavy (heavier even than gold), so it was not surprising when, in 1661, Sweden became the first country in Europe to try paper currency. This effort was not a success because too much paper money was printed, and so the president of the bank went to prison.

Ultimately paper currency did catch on, but it created new problems—it was even easier to steal than gold. As a result, money had to be kept in a safe place, and banks developed to meet that need. However, money in a vault is not very useful unless it can be readily spent. Society needed a system for transferring paper funds easily. Commercial paper is that system.

Commercial paper is a contract to pay money. It is used as:

- **A Substitute for Money.** When Darla stops at Drive-In-Convenience to buy food for dinner, she has only 32¢ in her wallet. Not a problem, she can pay by check. Darla's check is a promise that she has money in the bank. It is also an order to the bank

to transfer funds to Drive-In-Convenience. Darla is going to eat immediately (in the car on the way home), and the store would also like to be paid quickly. For commercial paper to be a substitute for money, it must be payable on demand.

- **A Loan of Money.** This type of commercial paper is a contract to pay what is owed sometime in the future. Darla buys a beautiful concert grand piano that costs more than her parents paid for their first house. She does not have enough money in the bank to write a check for the full amount, so she signs a **promissory note**, that is, an assurance that she will pay for the piano in five years. The manager at the Angel House of Music does not expect to take the note to Darla's bank and be paid right away; he understands that he will have to wait.

Promissory note
A written promise to pay money.

Previous chapters covered the Uniform Commercial Code (UCC) and the sale of goods. This chapter and the following one focus on Article 3 of the UCC, which regulates commercial paper.[1] The purpose of the UCC articles on negotiable instruments is to facilitate commerce. When the United States Treasury issues money, it is consistent—all dollar bills look alike. But when practically the entire population of the United States issues commercial paper, creativity takes over and consistency disappears. The purpose of Article 3 is to transform these pieces of paper into something almost as easily transferable and reliable as currency.

The fundamental "rule" of commercial paper can be stated this way:

The possessor of a piece of commercial paper has an unconditional right to be paid, so long as (1) the paper is *negotiable;* (2) it has been *negotiated* to the possessor; (3) the possessor is a *holder in due course;* and (4) the issuer cannot claim any of a limited number of "real" *defenses.*

This rule is the backbone of the chapter, and in the following sections, we define and explain its terms: "negotiable," "negotiated," "holder in due course," and "defenses." You will want to keep this rule in mind throughout the chapter.

TYPES OF NEGOTIABLE INSTRUMENTS

There are two kinds of commercial paper: negotiable and non-negotiable instruments. Article 3 of the Code covers only negotiable instruments; non-negotiable instruments are governed by ordinary contract law. There are also two categories of negotiable instruments: notes and drafts. The essential difference between the two is that a note is a promise to do something while a draft is an *order* to someone else to do it. This is an overview; now for the details.

A note (also called a promissory note) is your promise that you will pay money. A promissory note is used in virtually every loan transaction, whether the borrower is buying a multimillion dollar company, a house, or a TV set. For example, the National Basketball Association permits players to borrow money from their team. If LeBron James borrows $5 million from

Serena Williams is the payee on this check for $1,550,000.

[1]In 2002, the Uniform Law Commissioners approved a revision of Article 3 that deals with changing technology for checks and other paper instruments. So far, only 10 states have passed this new version. Therefore, this chapter is based on the older version.

Maker
The issuer of a promissory note.

Payee
Someone who is owed money under the terms of an instrument.

Payable on demand
The maker must pay whenever he is asked.

Certificate of deposit
A note that is made by a bank. (Also known as a CD.)

Draft
The drawer of this instrument orders someone else to pay money.

Check
The most common form of a draft, it is an order telling a bank to pay money.

Drawer
The person who issues a draft.

Drawee
The one ordered by the drawer to pay money to the payee.

Issuer
The maker of a promissory note or the drawer of a draft.

the Miami Heat, he must sign a note promising to repay the money. James is the **maker** because he is the one who has made the promise. His team is called the **payee** because it expects to be paid. Remember that only *two* parties are involved in a note: the maker and the payee. Some notes are due at a definite date in the future. Others are **payable on demand**, which means that the maker must pay whenever he is asked. Thus, James's note could be payable, say, in three years when his contract expires, or it could be payable on demand (which means that, if his team is ever annoyed at him, it could insist on immediate payment).

If the note is made by a bank, it is called a **certificate of deposit** (also known as a CD). When investors loan money to a bank, the bank gives them a note promising to repay the loan at a specific date in the future. The bank is the maker and the investor is the payee. The bank pays a higher rate of interest on CDs than it does on regular savings accounts because the investor cannot demand payment on the CD until its due date. In return for the lower rate on a savings account, the depositor can withdraw that money anytime.

A **draft** is an order directing someone else to pay money for you. A **check** is the most common form of a draft—it is an order telling a bank to pay money. In a draft three people are involved: the **drawer** orders the **drawee** to pay money to the **payee**. Now before you slam the book shut in despair, let us sort out the players. Suppose that Serena Williams wins a tennis tournament. The WTA Tour writes her a check for $1 million. This check is an order by the WTA Tour (the drawer) to its bank (the drawee) to pay money to Williams (the payee). The terms make sense if you remember that, when you take money out of your account, you *draw* it out. Therefore, when you write a check, you are the drawer and the bank is the drawee. The person to whom you make out the check is being paid, so he is called the payee.

The following table illustrates the difference between notes and drafts. Even courts sometimes confuse the terms *drawer* (the person who signs a check) and *maker* (someone who signs a promissory note). But the UCC is a very precise set of rules, so it is important to get the details right. **Issuer** is an all-purpose term that means both maker and drawer.

	Who Pays	Who Plays
Note	You make a promise that you will pay.	Two people are involved: maker and payee.
Draft	You order someone else to pay.	Three people are involved: drawer, drawee, and payee.

Cashier's check
A check that is drawn by a bank on itself.

Williams presumably feels confident that the WTA Tour has enough money in its account to cover the check. When Stewart Student goes to the MegaLoud store to buy a $10,000 sound system, MegaLoud has no way of knowing if his check is good. Even if MegaLoud calls the bank to confirm Stewart's balance, he could withdraw it all by the time the check is deposited that evening. To protect itself, MegaLoud insists upon a cashier's check. A **cashier's check** is drawn by a bank on itself. When Stewart asks for a cashier's check, the bank takes the money out of his account on the spot and then issues a check itself, payable out of its own funds. When MegaLoud gets the cashier's check from Stewart, it knows that the check is good as long as the bank itself is solvent.

All checks are drafts, but not all drafts are checks. A draft is a check only if it is drawn on a bank. Sometimes drafts are drawn on individuals or companies. Suppose that in September, Sasha's Saddlery sells 16 saddles to the Circle S Stable. The stable expects that, in December, it will receive its first deposits from tourists making reservations for

the following summer. The stable promises to pay Sasha $8,000 in January. Sasha is happy to make the sale, but she needs the funds now. So she prepares a draft ordering Circle S to pay $8,000 to Citizen's Bank in January. After Circle S signs (**accepts**) the draft, Sasha takes it to Citizen's, which investigates Circle S's credit reputation. Satisfied, it agrees to buy the draft for $7,000. (It pays less than the full amount because it has to wait for the money and because there is always a chance Circle S will not pay.) Sasha is the drawer, Circle S the drawee, and Citizen's Bank the payee. So Sasha's Saddlery receives $7,000 from Citizen's in September. In January, Circle S pays Citizen's the full $8,000.

Accept
To sign a draft.

The draft on Circle S is a **trade acceptance**, which is a draft drawn by a seller of goods on the buyer and payable to the seller or some third party. In our case, Sasha is the seller, Circle S the buyer, and Citizen's the third party that will be paid. To be valid, the draft must be accepted (that is, signed) by the buyer. A **sight draft** is payable on demand; a **time draft** is payable in the future. Circle S's draft is a time draft because it is not payable until January.

Trade acceptance
A draft drawn by a seller of goods on the buyer and payable to the seller or some third party.

Sight draft
Payable on demand.

Time draft
Payable in the future.

NEGOTIABILITY

To work as a substitute for money, commercial paper must be freely transferable in the marketplace. In other words, it must be *negotiable*. Suppose that Krystal buys a used car from the Trustie Car Lot for her business, Krystal Rocks. She cannot afford to pay the full $15,000 right now, but she is willing to sign a note promising to pay later. As long as Trustie keeps the note, Krystal's obligation to pay is contingent upon the validity of the underlying contract. If, for instance, the car is defective, then Krystal might not be liable to Trustie for the full amount of the note. Trustie, however, does not want to keep the note. He needs the cash *now* so that he can buy more cars to sell to other customers. Reggie's Finance Co. is happy to buy Krystal's promissory note from Trustie, but the price Reggie is willing to pay depends upon whether her note is negotiable.

The possessor of *non*-negotiable commercial paper has the same rights—no more, no less—as the person who made the original contract. With non-negotiable commercial paper, the transferee's rights are *conditional* because they depend upon the rights of the original party to the contract. If, for some reason, the original party loses his right to be paid, so does the transferee. The value of non-negotiable commercial paper is greatly reduced because the transferee cannot be absolutely sure what his rights are or whether he will be paid at all.

If Krystal's promissory note is non-negotiable, Reggie gets exactly the same rights that Trustie had. As the saying goes, he steps into Trustie's shoes. Other people's shoes may not be a good fit. Suppose that Trustie tampered with the odometer and, as a result, Krystal's car is worth only $12,000 instead of the $15,000 she paid for it. If, under contract law, she owes Trustie only $12,000, then that is all she has to pay Reggie, even though the note *says* $15,000.

The possessor of *negotiable* commercial paper has *more* rights than the person who made the original contract. With negotiable commercial paper, the transferee's rights are *unconditional* and generally do not depend upon the rights of the original party to the contract. If Krystal's promissory note is a negotiable instrument, she must pay the full amount to whoever has possession of it, no matter what complaints she might have against Trustie. Even if the car explodes within the month, Krystal must still pay Reggie the full $15,000. If, however, Trustie keeps the note, Krystal can subtract from what she owes *him* any claims she has against him for breach of contract because, as the original party to the note, Trustie cannot be a **holder in due course**. Therefore, Reggie (and any subsequent holder in due course) is in a better position than Trustie.

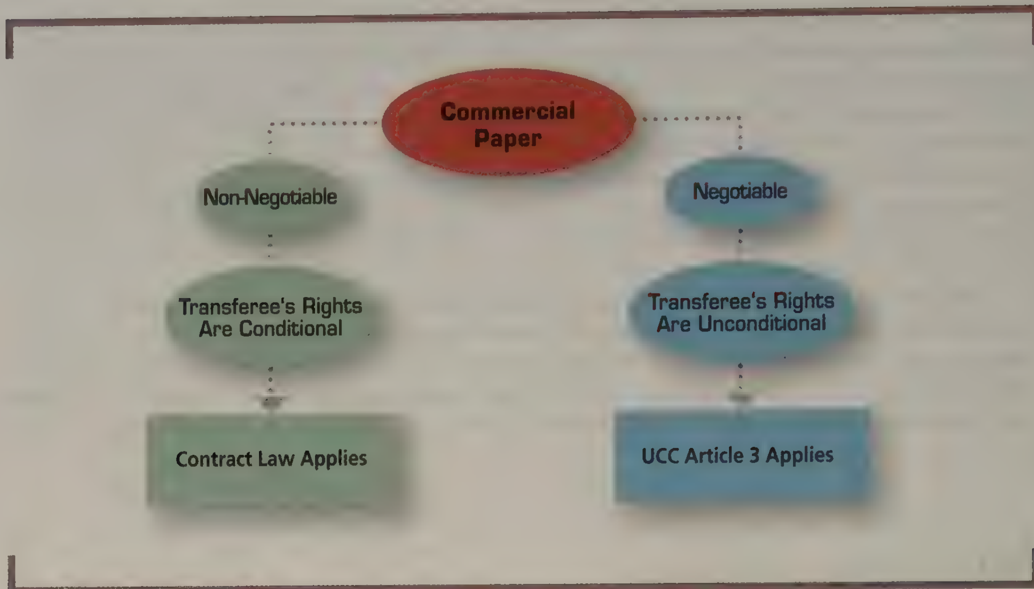

EXHIBIT 25.1

Exhibit 25.1 illustrates the difference between negotiable and non-negotiable commercial paper.

Requirements for Negotiability

Because negotiable instruments are more valuable than non-negotiable ones, it is important for buyers and sellers to be able to tell, easily and accurately, if an instrument is indeed negotiable. An instrument is negotiable if it meets the following six standards:[2]

1. **The Instrument Must Be in *Writing*.** Trustie cannot negotiate Krystal's *oral* promise to pay $15,000. However, the writing need not be on any official form or even on paper. To protest a speeding ticket, Barry Lee Brown of Missoula, Montana, wrote a check for the $35 fine on a pair of old (but clean!) underpants. The bank cashed it.

2. **The Instrument Must Be *Signed* by the Maker or Drawer.** Any signature counts—initials, an "X," a stamp—as long as the issuer intends to indicate her signature. If Krystal normally signs her documents with an interlocking heart logo, that symbol counts as a signature.

3. **The Instrument Must Contain an *Unconditional Promise* or *Order* to Pay.** The whole point of a negotiable instrument is that the holder can sleep soundly at night confident that he will be paid *without conditions*. If Krystal's promissory note says, "I will pay $15,000 as long as the car is still in working order," it is not negotiable. If, however, the note says, "I will pay $15,000 for the yellow car," it is negotiable because this statement is not a *condition*, it is simply describing the transaction.

   The instrument must also contain a promise or order to pay. It is not enough simply to say, "Krystal owes Trustie $15,000." She has to indicate that she owes the money and also that she intends to pay it. "Krystal promises to pay Trustie $15,000," would work.

[2]Section 3-104(a) sets out all the requirements of negotiability. Sections 3-105 to 3-119 then describe the requirements in more detail.

4. **The Instrument Must State a *Definite Amount* of Money.** It is not easy to sell an instrument if the buyer cannot tell how much it is worth; to be negotiable, therefore, the document must clearly state "within its four corners" how much money is owed. If the document is a note, with interest due, matters become more complicated. The holder may not be able to tell how much interest is owing simply by looking at the note. If Krystal's note says, "$15,000 with annual interest of 10 percent," Reggie can easily calculate the interest. If, on the other hand, the note says, "with interest at 1 percent above prime rate," Reggie cannot tell the total amount owed unless he checks the prime rate online. No matter, an instrument with a variable interest rate is considered to be negotiable even though the holder must look elsewhere to calculate the amount owing. Suppose that Krystal's note says, "I promise to pay $15,000 worth of diamonds." This note is not negotiable because it does not state a definite amount of *money*.

5. **The Instrument Must Be Payable on *Demand* or at a *Definite Time*.** To determine what an instrument is worth, the holder must know when he will be paid. Ten thousand dollars today is worth more than $10,000 the day the earth stands still.

   A demand instrument must be paid whenever the holder requests payment. If an instrument is undated, it is treated as a demand instrument and is negotiable. There is one exception to this rule. If an undated promissory note says, "payable in 90 days," the instrument is not payable on demand and is non-negotiable. The maker of the note clearly did not intend to pay it on demand, but there is no way of knowing when she did intend to pay it.

   An instrument can be negotiable even if it will not be paid until some time in the future, provided that the payment date can be determined *when the document is made*. A graduate of a well-known prep school wrote a generous check to his alma mater, but for payment date he put, "The day the headmaster is fired." This check is not negotiable because it is neither payable on demand nor at a definite time. When the check was written, no one knew when (or whether) the headmaster would be fired. If the headmaster is finally fired, the check does not suddenly become negotiable.

   Suppose that Krystal simply signs her note without specifying the due date. Reggie can demand payment anytime. By contrast, if the due date on the note is Easter 2015, Reggie may have to check his calendar to figure out when that is (since the date of Easter changes every year), but the note is nonetheless negotiable. If, however, the due date on the note is "three months after Krystal receives her MBA degree," the note is non-negotiable because the date of Krystal's graduation is uncertain.

6. **The Instrument Must Be Payable to *Order* or to *Bearer*.** To be negotiable, an instrument must be either order paper or bearer paper. **Order paper** must include the words "Pay to the order of" Trustie (or an equivalent, such as "Pay to Trustie, or order"). If the note simply says "Pay to Trustie," it is not negotiable. By including the word "order," the maker is indicating that the instrument is not limited to only one person. "Pay to the order of Trustie Car Lot" means that the money will be paid to Trustie *or to anyone Trustie designates*. If the note is made out "To bearer," it is **bearer paper** and can be redeemed by any holder in due course. The good news is that bearer paper is easily and freely transferable, but the bad news is that it may be too easily redeemed. Suppose that Krystal's note is payable to bearer, and Reggie mails it to his sweetheart Sue as a birthday present. If dastardly Dan steals the note from Sue's mailbox and sells it to unknowing Neal, Krystal will have to pay Neal when he presents the note.

   A note is bearer paper if it is made out to "bearer" or it is *not* made out to any specific person. If Krystal's note says, "Pay to the order of cash," or "Pay to the order of a Happy Birthday," it is bearer paper. If Krystal signs a note but leaves blank the space after "Pay to the order of," that note is bearer paper, and any holder in due course can redeem it.

Order paper
An instrument that includes the words "pay to the order of" or their equivalent.

Bearer paper
A note is bearer paper if it is made out to "bearer" or it is not made out to any specific person. It can be redeemed by any holder in due course.

The rules for checks are different from other negotiable instruments. If filled out properly, checks are negotiable. And sometimes they are negotiable even if not filled out

correctly. Most checks are pre-printed with the words, "Pay to the order of," but sometimes people inadvertently cross out "order of." Even so, the check is still negotiable. Checks are frequently received by consumers who, sadly, have not completed a course on business law. The drafters of the UCC did not think it fair to penalize them when the drawer of the check was the one who made the mistake. If a check is made out to "Reggie *and* Sue," both payees must sign it before it can be transferred. If the check is made out to "Reggie *or* Sue," the signature of either is sufficient.

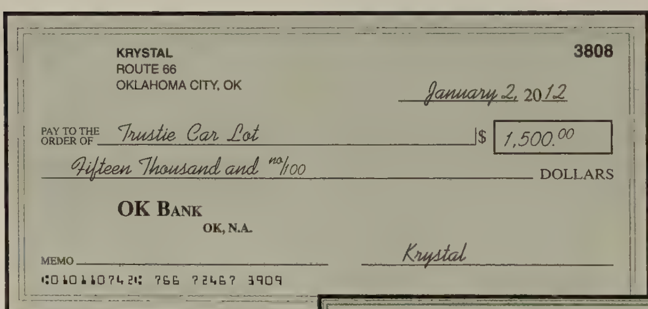
EXAM Strategy

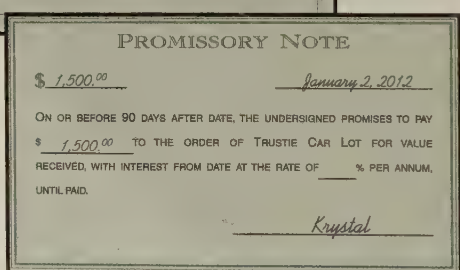
Question: Sam had a checking account at Piggy Bank. Piggy sent him special checks that he could use to draw down a line of credit. When he used these checks, Piggy did not take money out of his account; instead, it treated the checks as loans and charged him interest. The interest rate was not apparent from the face of the check. Piggy then sold these used checks to Wolfe. Were the checks negotiable instruments?

Strategy: When faced with a question about negotiability, begin by looking at the list of six requirements. In this case, there is no reason to doubt that the checks are in writing, signed by the issuer, with an unconditional promise to pay to order at a definite time. But do the checks state a definite amount of money? Can the holder "look at the four corners of the check" and determine how much Sam owes?

Result: Sam was required to pay back the face amount of the check *plus* interest. Wolfe does not know the amount of the interest unless he reads the loan agreement. Therefore, the checks are not negotiable.

Interpretation of Ambiguities





Perhaps you have noticed that people sometimes make mistakes. Although the UCC establishes simple and precise rules for creating negotiable instruments, people do not always follow these rules to the letter. It might be tempting simply to invalidate defective documents (after all, money is at stake here). But, instead, the UCC favors negotiability and has rules to resolve uncertainty and supply missing terms.

Notice anything odd about the check pictured here? Is it for \$1,500 or \$15,000? When the terms in a negotiable instrument contradict each other, three rules apply:

- Words take precedence over numbers.
- Handwritten terms prevail over typed and printed terms.
- Typed terms win over printed terms.

According to these rules, Krystal's check is for \$15,000 because, in a conflict between words and numbers, words win.

What is wrong with the promissory note shown here? The interest rate is left blank. When this happens, the UCC directs that the judgment rate applies.[3] The **judgment rate** is simply the rate that courts use on court-ordered judgments.

Judgment rate
The interest rate that courts use on court-ordered judgments.

In the following case, the amount of the check was not completely clear. Was it a negotiable instrument?

You be the Judge

Blasco v. Money Services Center

2006 Bankr. LEXIS 2899
United States Bankruptcy Court for the Northern District of Alabama, 2006

Facts: Christina Blasco ran out of money. She went to the Money Services Center (MSC) and borrowed $500. To repay the loan, she gave MSC a check for $587.50, which it promised not to cash for two weeks. This kind of transaction is called a "payday loan" because it is made to someone who needs money to tide over until the next paycheck. (Note that in this case, Blasco was paying 17.5 percent interest for a two-week loan, which is an annual compounded interest rate of 6500 percent. This is the dark side of payday loans—interest rates are often exorbitant.)

Before MSC could cash the check, Blasco filed for bankruptcy protection. Although MSC knew about Blasco's filing, it deposited the check. It is illegal for creditors to collect debts after a bankruptcy filing, except that creditors *are* entitled to payment on negotiable instruments.

Ordinarily, checks are negotiable instruments, but only if they are for a definite amount. This check had a wrinkle: the numerical amount of the check was $587.50 but the amount in words was written as "five eighty-seven and 50/100 dollars." Did the words mean "five *hundred* eighty-seven" or "five *thousand* eighty-seven" or perhaps "five *million* eighty-seven"? Was the check negotiable despite this ambiguity?

You be the Judge: ***Was this check a negotiable instrument? Was it for a definite amount?***

Argument for Blasco: For a check to be negotiable, two rules apply:

1. The check must state a definite amount of money, which is clear within its four corners.
2. If there is a contradiction between the words and numbers, words take precedence over numbers.

Words prevail over numbers, which means that the check is for "five eighty-seven and 50/100 dollars." This amount is not definite. A holder cannot be sure of the precise amount of the check simply by looking within its four corners. Therefore the check is not a negotiable instrument and MSC had no right to submit it for payment.

Argument for MSC: Blasco is right about the two rules. However, she is wrong in their interpretation. If there is a *contradiction* between the words and numbers, words take precedence over numbers. In this case, there was no contradiction. The words were ambiguous but they did not contradict the numbers. If the words had said "five *thousand* eighty-seven," that would have been a contradiction. Instead, the numbers simply clarified the words. Even someone who was a stranger to this transaction could safely figure out the amount of the check. Therefore, it is negotiable.

Negotiation

Remember the fundamental rule that underlies this chapter: the possessor of a piece of commercial paper has an unconditional right to be paid, as long as (1) the paper is negotiable, (2) it has been negotiated to the possessor, (3) the possessor is a holder in due course, and (4) the issuer cannot claim any of a limited number of *real* defenses.

[3]Section 3-112.

Negotiation means that an instrument has been transferred to the holder by someone *other than the issuer*. If the issuer has transferred the instrument to the holder, then it has not been negotiated and the issuer can refuse to pay the holder if there was some flaw in the underlying contract. Thus, if Jake gives Madison a promissory note for $2,000 in payment for a new computer, but the computer crashes and burns the first week, Jake has the right to refuse to pay the note. Jake was the issuer, and the note was not negotiated. But if, before the computer self-destructs, Madison indorses and transfers the note to Kayla, then Jake is liable to Kayla for the full amount of the note, regardless of his claims against Madison.

To be negotiable, an instrument must be order paper (payable to the order of someone) or bearer paper (payable to anyone in possession). (Note that a check made out to "cash" is bearer paper.) These two types of instrument have different rules for negotiation: **to be negotiated, order paper must first be *indorsed* and then *delivered* to the transferee. Bearer paper must simply be *delivered* to the transferee; no indorsement is required.**[4]

Indorsement
The signature of a payee.

In its simplest form, an **indorsement** is the signature of the payee. Tess writes a rent check for $475 to her landlord, Larnell. He would like to use this money to pay Patty for painting the building. If Larnell signs the back of the check and delivers it to Patty, he has met the two requirements for negotiating order paper: indorsement and delivery. (Note that, for indorsements, a signature is sufficient. Larnell need not write "pay to" or "pay to the order of.") If Larnell delivers the check to Patty but forgets to sign it, the check has not been indorsed and therefore cannot be negotiated—it has no value to Patty. Similarly, the check is no use to Patty if Larnell signs it but never gives it to her. If someone forges Larnell's name, the indorsement is invalid and no subsequent transfer counts as a negotiation.

There are three different types of indorsements:

- ***Blank Indorsement.*** A blank indorsement occurs when Larnell simply signs the check on the back without designating any particular payee. A blank indorsement turns the check into bearer paper. Larnell can give the check to Patty the painter or Ellen the electrician. In either case, he has properly negotiated the check.
- ***Special Indorsement.*** A special indorsement limits an instrument to one particular person. If Larnell writes on the back of the check, "Pay Ellen Wilson" or "Pay to the order of Ellen Wilson," then only Ellen can cash the check.
- ***Restrictive Indorsement.*** A restrictive indorsement limits the check to one particular use. When Ellen receives the check from Larnell, she writes on the back, "For deposit only," and then signs her name. The check can only be deposited in Ellen's account. If Conrad finds the check, he cannot cash it or deposit it in his own account. This type of indorsement is the safest.

EXAM Strategy

Question: Tess makes a check out to cash and delivers it to Larnell. He writes on the back, "Pay to the order of Patty." She signs her name. Is this check bearer paper or order paper? Has it been negotiated?

Strategy: Whenever a negotiable instrument is transferred, it is important to ask if the instrument has been properly negotiated. To be negotiated, order paper must be

[4]Section 3-201. The UCC spells the word "indorsed." Outside the UCC, the word is more commonly spelled "endorsed."

indorsed and delivered; bearer paper need only be delivered, but in both cases by someone other than the issuer.

Result: This check changes back and forth between order and bearer paper, depending on what the indorsement says. When Tess makes out a check to cash, it is bearer paper. When she gives it to Larnell, it is not negotiated because she is the issuer. When he writes on the back "Pay to the order of Patty," it becomes order paper. When he gives it to Patty, it is properly negotiated because he is not the issuer and he has both indorsed the check and transferred it to Patty. When she signs it, the check becomes bearer paper. And so on it could go forever.[5]

Tess makes a check out for Larnell.

Holder in Due Course

A holder in due course has an automatic right to receive payment for a negotiable instrument (unless the issuer can claim a limited number of *real* defenses). If the possessor of an instrument is not a holder in due course, then his right to payment depends upon the relationship between the issuer and payee. He inherits whatever claims and defenses arise out of that contract. Clearly, then, holder in due course status dramatically increases the value of an instrument because it enhances the probability of being paid.

> ... holder in due course status dramatically increases the value of an instrument because it enhances the probability of being paid.

[5]Even when all the space on the back of the check is filled, the holder can attach a separate paper for indorsements, called an *allonge.*

Requirements for Being a Holder in Due Course

Holder in due course
Someone who has given value for an instrument, in good faith, without notice of outstanding claims or other defects.

A holder in due course is a *holder* who has given *value* for the instrument, in *good faith*, *without notice* of outstanding claims or other defects.[6]

Holder

Holder
For order paper, anyone in possession of the instrument if it is payable to or indorsed to her. For bearer paper, anyone in possession.

A holder in due course must, first of all, be a holder. For order paper, a **holder** is anyone in possession of the instrument if it is payable to or indorsed to her. For bearer paper, a **holder** is anyone in possession. When Felix borrows money from his mother, she insists that he sign a promissory note for the loan. He promptly writes, "I hereby promise to pay to the order of Imogene $5,000." He signs his name and gives the note to her. She is a holder because she has possession of the instrument and it is payable to her. She would like to give the note to her lawyer, Lance, to pay the legal bill she incurred when Felix smashed up a nightclub. If she simply hands the note to Lance, he is not a holder because the note is not payable to him. If she writes on the back of the note, "Pay to the order of Lance," but does not give it to him, he is not a holder either.

Value

Value
The holder has *already* done something in exchange for the instrument.

A holder in due course must give value for an instrument. **Value** means that the holder has *already* done something in exchange for the instrument. Lance has already represented Felix, so he has given value. Once Imogene indorses and delivers the note to Lance, he is a holder in due course.

Although a promise to do something in the future is *consideration* under contract law, such a promise does not count as *value* under Article 3. If the holder receives an instrument in return for a promise, he does not deserve to be paid unless he performs the promise. But if he were a holder in due course, he would be entitled to payment whether he performed or not. For example, suppose that Imogene gave Lance the promissory note in exchange for his promise to represent Felix in an upcoming arson trial. Lance would not be a holder in due course because he had not yet performed the service. It would be unfair for him to be a holder in due course, with an unconditional right to be paid, if he, in fact, does not represent Felix.

Someone who receives a negotiable instrument as a gift is not a holder in due course because he has not given value. If Imogene gives Felix's note to her daughter, Joy, as a birthday present, Joy is not a holder in due course.

Good Faith

There are two tests to determine if a holder acquired an instrument in good faith. The holder must meet both of these tests:

- *Subjective Test.* Did the holder *believe* the transaction was honest in fact?
- *Objective Test.* Did the transaction *appear* to be commercially reasonable?

Felix persuades his elderly neighbor, Hope, that he has invented a fabulous beauty cream guaranteed to remove wrinkles. She gives him a $10,000 promissory note, payable in 90 days, in return for exclusive sales rights in Pittsburgh. Felix sells the note to his old friend Dick for $2,000. Felix never delivers the sales samples to Hope. When Dick presents the note to Hope, she refuses to pay on the grounds that Dick is not a holder in due course. She contends that he did not buy the note in good faith.

Dick fails both tests. Any friend of Felix knows he is not trustworthy, especially when presenting a promissory note signed by an elderly neighbor. Dick did not believe the transaction was honest in fact. Also, $10,000 notes are not usually discounted to $2,000; $9,000 would

[6]Section 3-302.

be more normal. This transaction is not commercially reasonable, and Dick should have realized immediately that Felix was up to no good.

In the following case, the plaintiff passed the subjective test but failed the objective one.

Buckeye Check Cashing, Inc. v. Camp

159 Ohio App. 3d 784; 825 N.E.2d 644; 2005 Ohio App. LEXIS 929
Court of Appeals of Ohio, 2005

Facts: On October 12, James Camp agreed to provide services to Shawn Sheth by October 15. In payment, Sheth gave Camp a check for $1,300 that was postdated October 15. On October 13, Camp sold the check to Buckeye Check Cashing for $1,261.31. On October 14, fearing that Camp would violate the contract, Sheth stopped payment on the check. Also, on October 14, Buckeye deposited the check with its bank, believing that the check would reach Sheth's bank on October 15. Buckeye was unaware of the stop payment order. Sheth's bank refused to pay the check. Buckeye filed suit against Sheth.

The trial court ruled that, because Buckeye was a holder in due course, the check was valid and Sheth had to pay Buckeye. Sheth appealed.

Issues: ***Was Buckeye a holder in due course? Must Sheth pay Buckeye?***

Excerpts from Justice Donovan's Decision: At issue is whether Buckeye acted in "good faith" when it chose to honor the postdated check originally drawn by Sheth. "Honesty in fact" is defined as the absence of bad faith or dishonesty with respect to a party's conduct within a commercial transaction. Under that standard, absent fraudulent behavior, an otherwise innocent party was assumed to have acted in good faith. The "honesty in fact" requirement, also known as the "pure heart and empty head" doctrine, is a subjective test under which a holder had to subjectively believe he was negotiating an instrument in good faith for him to become a holder in due course.

[H]owever, the Ohio legislature amended the definition of "good faith" to include not only the subjective "honesty in fact" test, but also an objective test: "the observance of reasonable commercial standards of fair dealing." A holder in due course must now satisfy both a subjective and an objective test of good faith.

Check cashing is an unlicensed and unregulated business in Ohio. Thus, there are no concrete commercial standards by which check-cashing businesses must operate. Buckeye argues that its own internal operating policies do not require that it verify the availability of funds, nor does Buckeye apparently have any guidelines with respect to the acceptance of postdated checks.

Under a purely subjective "honesty in fact" analysis, it is clear that Buckeye accepted the check from Camp in good faith and would therefore achieve holder-in-due-course status. When the objective prong of the good faith test is applied, however, we find that Buckeye did not conduct itself in a commercially reasonable manner. [T]he presentation of a postdated check should put the check cashing entity on notice that the check might not be good. Some attempt at verification should be made before a check-cashing business cashes a postdated check. Such a failure to act does not constitute taking an instrument in good faith under the current objective test of "reasonable commercial standards."

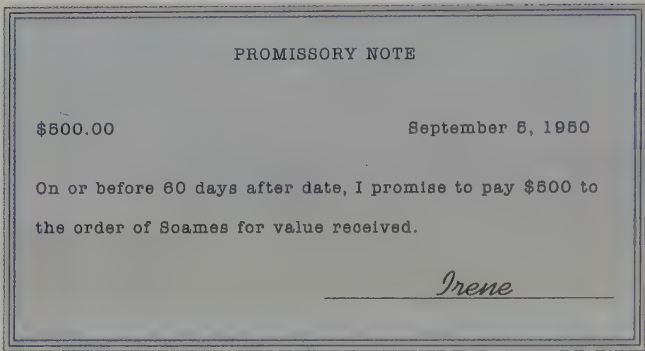
This court in no way seeks to curtail the free negotiability of commercial instruments. [However, without] taking any steps to discover whether the postdated check issued by Sheth was valid, Buckeye failed to act in a commercially reasonable manner and therefore was not a holder in due course.

Judgment reversed, and cause remanded.

Notice of Outstanding Claims or Other Defects

In certain circumstances, a holder is on notice that an instrument has an outstanding claim or other defect.

1. *The Instrument Is Overdue.* An instrument is overdue the day after its due date. At that point, the recipient is on notice that it may have a defect. He ought to wonder why no one has bothered to collect the money owed. However, an instrument is not overdue



PROMISSORY NOTE

$500.00 September 5, 1950

On or before 60 days after date, I promise to pay $500 to the order of Soames for value received.

Irene

The holder of this note should realize that there may be a problem.

simply because the interest is unpaid. If, on July 25, Dick buys Harriet's note that was due on July 24, Dick is not a holder in due course because the note is overdue. But if he buys the note on July 23, knowing that Harriet has not paid all the interest owing, he can still be a holder in due course.

A check is overdue 90 days after its date. Any other *demand* instrument is overdue (1) the day after a request for payment is made or (2) a reasonable time after the instrument was issued. Suppose that Felix tries to sell Tom a demand note from Hope. If Felix happens to mention, "I asked the old lady for the money yesterday, but so far, no luck," then Tom is not a holder in due course because he knows the note is overdue.

2. *The Instrument Is Dishonored.* To dishonor an instrument is to refuse to pay it. If Tom knows that Hope has refused to pay her note, then Tom cannot be a holder in due course. Likewise, once a check has been stamped "Insufficient Funds" by the bank, it has been dishonored, and no one who obtains it afterward can be a holder in due course.

3. *The Instrument Is Altered, Forged, or Incomplete.* Anyone who knows that an instrument has been altered or forged cannot be a holder in due course. Suppose Joe wrote a check to Tony for $200. While showing the check to Liza, Tony cackles to himself and says, "Can you believe what that goof did? Look, he left the line blank after the words 'two hundred.'" Taking his pen out with a flourish, Tony changes the zeroes to nines and adds the words, "ninety-nine." He then indorses the check over to Liza, who is definitely not a holder in due course. However, if, instead of giving the check to Liza, Tony sells it to Kate, she is a holder in due course because she had no idea the check had been altered.

   Likewise, if Joe filled out the check, but failed to sign it, Liza cannot be a holder in due course after she watches Tony fill in Joe's signature. And even if Liza did not see the forgery, she might be on notice if Tony has misspelled Joe's name as "Jo."

   Sometimes people (foolishly) sign blank promissory notes or checks. These issuers are liable for any amount subsequently filled in. However, anyone who is aware that a material term was added later is not a holder in due course. Suppose that Joe gives Tony a signed, blank check. If Tony fills in the amount in front of Liza, then naturally she is not a holder in due course. But if Tony fills in the check *before* he gives it to Liza, she is a holder in due course.

4. *The Holder Has Notice of Certain Claims or Disputes.* No one can qualify as a holder in due course if she is on notice that (1) someone else has a claim to the instrument or (2) there is a dispute between the original parties to the instrument. Matt hires Sheila to put aluminum siding on his house. In payment, he gives her a $15,000 promissory note with the due date left blank. They agree that the note will not be due until 60 days after completion of the work. Despite the agreement, Sheila fills in the date immediately and sells the note to Rupert at American Finance Corp., who has bought many similar notes from Sheila. Rupert knows that the note is not supposed to be due until after the work is finished. Usually, before he buys a note from her, he demands a signed document from the homeowner certifying that the work is complete. Also, he lives near Matt and can see that Matt's house is only half finished. Rupert is not a holder in due course because he has reason to suspect there is a dispute between Sheila and Matt.

Holder in due course status is determined *when the holder receives the instrument.* If, at the very moment when he takes possession, the holder has no notice of outstanding claims or other defects, then he is a holder in due course, no matter what else happens afterward. If Rupert knows nothing of Sheila's sneaky ways when he buys Matt's note, then he is a holder in due course even if Matt calls him 10 minutes later to report that Sheila has violated their contract.

In the following case, Avon thought that American Express should have realized something fishy was going on.

Hartford Accident & Indemnity Co. v. American Express, Co.

74 N.Y.2d 153, 542 N.E.2d 1090, 1989 N.Y. LEXIS 881
New York Court of Appeals, 1989

Facts: As manager of the import/export department at Avon Products, Stratford Skalkos had authority to requisition checks up to $25,000 on his signature alone. For nearly three years, Skalkos used that authority to steal $162,538.65 from Avon. Skalkos followed a simple pattern: he altered the names of the payees so that, although they *sounded* like company suppliers, they were actually businesses to whom he owed money personally. For example, he used Avon checks made out to "Amerex Corp." to pay his American Express bill and checks to "Metropolitan Opng. Co." to pay the Metropolitan Opera Association, Inc. for opera tickets. By the movement of one letter, E.J. Audi, Inc. (a furniture store) became "E. Jaudi, Inc."

Avon sued the recipients of the checks, demanding that the funds be returned. The trial court ruled that the defendants were entitled to keep the money because they were holders in due course and thus took the checks free of any claims or defenses. Avon appealed.

Issue: ***Were the defendants holders in due course?***

Excerpts from Judge Kaye's Decision: To be a holder in due course a party must take the instrument "without notice that it is overdue or has been dishonored or of any defense against or claim to it on the part of any person." Plaintiff contends that defendants took the checks from Skalkos with notice of Avon's claim—in particular, that they took with notice that Avon had not authorized defendants to apply its funds to Skalkos' personal indebtedness.

[It] will be rare that an instrument will be so irregular as to call into question its validity, terms or ownership. By any measure, the misnomers—correctly portrayed by [the trial court] as minor errors or misspellings—were not irregularities of such magnitude as to put a holder on notice that something was wrong.

As [the trial court] observed, the use of corporate checks to pay employees' debts "is an everyday occurrence in the business world." Employers often help an employee to maintain a residence as an inducement to continued employment in an area where living expenses are high. Employers often pay for the entertainment of customers by an employee. Defendants themselves have indicated that they regularly receive payment through corporate accounts for goods or services furnished to individuals.

Parties who take commercial paper for value [are] not bound at [their] peril to be upon the alert for circumstances which might possibly excite the suspicions of wary vigilance. Thus we conclude as a matter of law that defendants did not have notice of Avon's claim under UCC §3-304.

Finally, the result we reach promotes the policy favoring ready negotiability of commercial paper, assuring that good faith purchasers need not stand as insurers of the honesty of a drawer corporation's employees. And it assigns losses by the relative responsibility of the parties, allocating liability to the party best able to prevent them. As among the eight parties to this dispute Avon—whose misplaced trust or inattention enabled its employee to misappropriate funds, undetected, for several years—was plainly the party best able to prevent the losses and to protect itself by insurance. The losses were therefore properly allocated to Avon, not defendants.

Accordingly, the order of the appellate division dismissing the complaint should be *affirmed*, with costs.

Shelter Rule

Under the shelter rule, the transferor of an instrument passes on all of his rights. When a holder in due course transfers an instrument, the recipient acquires all the same rights *even if she is not a holder in due course herself.*[7]

Cigna Insurance Company sent James Mills a check for $484.12 in payment for his insurance claim. Dishonest fellow that he was, Mills told Cigna that he had never received the check because it had been sent to the wrong address. Cigna stopped payment and issued a new check. Mills took the old check to Sun's Market and used it to buy goods there. When Sun deposited the check at its bank, the bank refused to pay and stamped the check "Stop Payment." At this point, Sun was a holder in due course and was entitled to payment from Cigna. Instead of presenting the check itself, Sun sold it to Robert Triffin, who was in the business of buying dishonored instruments. Triffin then sued Cigna for payment. Triffin acknowledged that he was not a holder in due course because he knew the check had been dishonored. However, under the shelter rule, he acquired Sun's rights as a holder in due course, and he was entitled to payment.[8]

The point of the shelter rule is not to benefit Mills or Triffin; it is to protect Sun. It would not do Sun much good to be a holder in due course if it were unable to sell the instrument to anyone.

There is one small exception to the shelter rule. If a holder in due course transfers the instrument back to a prior holder who was a party to fraud involving the instrument, that prior holder does not acquire the rights of a holder in due course. Thus, if Triffin transferred the check back to Mills, then Mills would not be entitled to payment from Cigna (even if he had the nerve to ask).

Defenses against a Holder in Due Course

Negotiable instruments are meant to be a close substitute for money, and, as a general rule, holders expect to be paid. However, an issuer may legitimately refuse to pay an instrument under certain circumstances. The UCC lists so-called *real* defenses that an issuer may legitimately use even against a holder in due course.[9] If the holder is not in due course but is simply a plain ordinary holder, the issuer may use both real defenses and *personal* defenses. **Real and personal defenses are valid against an ordinary holder; only real defenses can be used against a holder in due course.**

Real Defenses

The following real defenses are valid against both a holder and a holder in due course:

Forgery. If Sharon forges Jared's name to a promissory note and sells it to Jennifer, Jared does not have to pay Jennifer, even if she is a holder in due course.

Bankruptcy. If Jared's debts are discharged in a bankruptcy proceeding after he has signed a promissory note, he does not have to pay the note, even to a holder in due course.

Being Underage. If someone who is underage (typically under 18) has the right to void a contract under state law, then he also has the right not to pay a negotiable instrument, even to a holder in due course.

Alteration. If the amount of an instrument is wrongfully changed, the holder in due course can collect only the original (correct) amount. If the instrument was incomplete, the holder in due course can collect the full face amount, even if the instrument was incorrectly filled in. Suppose that Jared gives a $2,000 promissory note to Rose. As soon as he leaves, she whips out

---

[7]Section 3-203(b).

[8]*Triffin v. Cigna*, 297 N.J. Super. 199; 687 A.2d 1045; 1997 N.J. Super. LEXIS 50 (Sup. Ct. N.J., App. Div., 1997).

[9]Section 3-305.

her pen and adds a zero to the note. She then takes it to the auto showroom to pay for her new car. If the showroom is a holder in due course, it is entitled to be paid the original amount of the note ($2,000), not the altered amount ($20,000). But, if Jared had accidentally forgotten to fill out the amount of the note, and Rose wrote in $20,000, the showroom could recover the full $20,000. Although the two notes *look* the same, they have a different result. In the case where Rose changed the amount, Jared was not to blame; but he *was* at fault for signing a blank note.

Duress, Mental Incapacity, or Illegality. These are customary contract defenses that you remember well from your study of contracts. They are a defense against a holder in due course if they are severe enough to make the underlying transaction void (not simply voidable) under state law. An instrument is not valid even in the hands of a holder in due course if, for example, Rose holds a gun to Jared's head to force him to sign it; or Jared has been declared mentally incompetent at the time he signs it; or Jared is using the instrument to pay for something illegal (cocaine, say).

Fraud in the Execution. In cases of fraud in the execution, the issuer has been tricked into signing without knowing what the instrument is and without any reasonable way to find out. In such instances, even a holder in due course cannot recover. Jared cannot read English. Helen, his boss, tells him that he must sign a document required by the company's health insurance plan. In fact, the document is a promissory note, payable to Helen. Jared does not have to pay the note, even to a holder in due course, because of fraud in the execution.

Personal Defenses

Personal defenses are valid against a holder, but *not* against a holder in due course. Typically, personal defenses have some connection to the initial transaction in which the instrument was issued.

Breach of Contract. Ross signs a contract to sell a new airplane to Paige in return for a $1 million promissory note. If Paige discovers that the plane is defective and that Ross has breached the contract, she can refuse to pay him because he is a mere holder. If, however, Ross sells the note to Helga, a holder in due course, Paige must pay her.

Lack of Consideration. Ross gives his mother, Gertrude, a $1,000 check for her birthday. Then they have a disagreement over where to spend Thanksgiving, so Ross stops payment on Gertrude's check. Gertrude has no right to the $1,000 because she is a mere holder who did not give value for the check. But if Gertrude has already cashed the check at her bank, Ross must pay the bank because it is a holder in due course. Even though the check was a gift, and therefore lacking in value, the bank is a holder in due course because it has given value for the check, even if Gertrude has not.

Prior Payment. Two years before, Gertrude had loaned Ross money to start his business. When he paid off the note to Gertrude, he forgot to retrieve the original from her. Angry at him over the check, she sells the note to Carla. Of course, Ross would not have to pay Gertrude *again*, but he cannot refuse to pay Carla, who is a holder in due course. The moral is: when you pay off a note, be sure to retrieve it or mark it canceled.

Unauthorized Completion. Ross writes a check to Carla to pay the note. He forgets to fill in the amount of the check, but Carla very helpfully does, for $5,000 more than he actually owes. If she uses that check to pay her debt at the bank, the bank is a holder in due course, and Ross must honor the check. Remember, however, that if the bank knew Carla had filled in the amount, it would not be a holder in due course and could not recover on the check.

Fraud in the Inducement. Suppose that Carla gives Sean a promissory note to buy stock in his company. It turns out that the company is a fraud. Carla would not have to pay Sean (a holder), but, if Sean transfers the note to Peter, a holder in due course, Carla must pay Peter even though the underlying contract was fraudulent. Note that *fraud in the execution* (real defense) has a different result from *fraud in the inducement* (personal defense).

Non-Delivery. The note that Carla issued to Sean was bearer paper. When Oliver steals it and sells it to a holder in due course, Carla must pay the note even though neither she nor Sean had ever delivered it to the holder. Carla would not have to pay Oliver because he is a mere holder and she did not deliver it to him.

The following table lists, for quick reference, real and personal defenses.

Real Defenses	Personal Defenses
Forgery	Breach of contract
Bankruptcy	Lack of consideration
Minority	Prior payment
Alteration	Unauthorized completion
Duress	Fraud in the inducement
Mental incapacity	Non-delivery
Illegality	
Fraud in the execution	

Claims in Recoupment

Claim in recoupment

The issuer subtracts (i.e., "sets off") any other claims he has against the initial payee from the amount he owes on the instrument.

A **claim in recoupment** is not the same as a defense, but it has a similar impact. It means that the issuer subtracts (i.e., "sets off") any *other* claims he has against the initial payee from the amount he owes on the instrument. The distinction is subtle, but a *claim in recoupment* means, "I'm not going to pay the full amount of the instrument because she owes me money for something else" whereas a *defense* means, "I'm not going to pay the full amount of the instrument because there is some problem with the instrument itself or the underlying deal on which the instrument is based."

A claim in recoupment is valid against a holder but not against a holder in due course. Carla gives Sean a promissory note to pay for stock that turns out to be fraudulent. Therefore, Carla has a defense against Sean when he requests that she pay her note. Suppose, however, that the stock is perfectly legitimate, but Sean has never paid Carla $18,000 for the used car he bought from her. When Sean presents the note on the stock deal for payment, Carla makes a claim for recoupment and subtracts $18,000 from the amount owing on the note. If, however, Sean had already sold the note to Olaf, a holder in due course, Carla would have to pay the full amount of the note and then sue Sean for the $18,000.

EXAM Strategy

Question: Jack agreed to loan Tim money. Although Tim signed a promissory note, Jack never actually gave Tim the money. Jack sold the note to Leslie. Can Leslie collect from Tim? Would it matter if Leslie knew that Tim never received the money?

Strategy: Whenever a question asks if someone will be paid on a negotiable instrument, the first step is to determine if she is a holder in due course. The second step is to ask if there are any applicable defenses.

Result: If Leslie *knew* that Jack had never paid Tim, then she is a mere holder, not a holder in due course. Tim can use any personal defenses (such as lack of consideration) against a holder. In that case, Tim does not have to pay Leslie. But, if Leslie did not know of the dispute, she is a holder in due course and can collect from Tim, despite the fact that Tim never received payment from Jack.

Consumer Exception

In the eighteenth and nineteenth centuries, negotiable instruments often circulated through several hands. The business community treated them as money. The concept of holder in due course was essential because the instruments had little use if they could not be transferred for value. In the modern banking system, however, instruments are much less likely to circulate. Currently, the most common use for negotiable instruments is in consumer transactions. A consumer pays for a refrigerator by giving the store a promissory note. The store promptly sells the note to a finance company. Even if the refrigerator is defective, under Article 3 the consumer must pay full value on the note because the finance company is a holder in due course.

Some commentators have argued that the concept of holder in due course no longer serves a useful purpose and that it should be eliminated once and for all (and with it Article 3 of the UCC). No state has yet taken such a dramatic step. Instead, some states require promissory notes given by a consumer to carry the words "consumer paper." Notes with this legend are non-negotiable.

Meanwhile, the Federal Trade Commission (FTC) has special rules for consumer credit contracts. A **consumer credit contract** is one in which a consumer borrows money from a lender to purchase goods and services from a seller who is affiliated with the lender. If Sears loans money to Gerald to buy a high-definition TV at Sears, that is a consumer credit contract. It is not a consumer credit contract if Gerald borrows money from his cousin Vinnie to buy the TV from Sears. The FTC requires all promissory notes in consumer credit contracts to contain the following language:

Consumer credit contract
A contract in which a consumer borrows money from a lender to purchase goods and services from a seller who is affiliated with the lender.

NOTICE

ANY HOLDER OF THIS CONSUMER CREDIT CONTRACT IS SUBJECT TO ALL CLAIMS AND DEFENSES WHICH THE DEBTOR COULD ASSERT AGAINST THE SELLER OF GOODS OR SERVICES OBTAINED WITH THE PROCEEDS HEREOF.

Under the UCC, no one can be a holder in due course of an instrument with this language.[10] If the language is omitted from a consumer note, it is possible to be a holder in due course, but the seller is subject to a fine.

In the following case, consumers found that a home improvement contract, far from improving their home, almost caused them to lose it.

Antuna v. Nescor, Inc.

2002 Conn. Super. LEXIS 1003
Superior Court of Connecticut, 2002

Facts: Steven Vlohotis was a salesman for NESCOR, a home improvement company. He convinced the Antunas to sign a consumer credit contract with NESCOR to install vinyl siding and windows. The contract provided that the Antunas would pay for the improvements in installments. NESCOR assigned the contract to First Consumer Credit, LLC, which reassigned it to The Money Store (TMS). In keeping with FTC requirements, the contract contained the following language: "Any holder of this consumer credit contract is subject to all claims and defenses which the debtor could assert against the Seller of the goods or services pursuant hereto or with the proceeds hereof."

A Connecticut statute (the Act) provides that, "No home improvement contract shall be valid or enforceable against an owner unless it is entered into by a registered salesman or a registered contractor." The NESCOR salesman, Vlohotis, was not registered.

Unhappy with NESCOR's work, the Antunas stopped making payments under the contract. TMS filed suit, seeking

[10] Section 3-106(d).

to foreclose on their house. The Antunas moved for summary judgment, arguing that TMS could not enforce the contract because it was not a holder in due course.

Issue: ***Does TMS have the right to foreclose on the Antunas' home? Was TMS a holder in due course?***

Excerpts from Judge Shortall's Decision: In employing Vlohotis to call on the plaintiffs as its salesman, NESCOR was performing an illegal act, one explicitly prohibited. Accordingly, the court finds that NESCOR's material noncompliance with [the Act] renders the home improvement contract invalid and unenforceable and precludes it from enforcing the consumer credit contract against the plaintiffs.

The plaintiffs are seeking summary judgment against TMS on its counterclaim, which seeks to foreclose upon the plaintiffs' home because of their default under the consumer credit contract now held by TMS. They argue that summary judgment is appropriate because NESCOR's violation of the Act bars any recovery by TMS.

It is only by giving consumers like the plaintiffs a shield against enforcement of these consumer credit contracts that the Act's declaration that a contract is invalid and unenforceable has any meaning. The language appearing in the consumer credit contract held by TMS, viz., that the contract is "subject to all claims and defenses which" the plaintiffs could assert against NESCOR is mandated in all such contracts by the FTC to prevent the seller of goods from cutting off the consumer's right to assert claims and defenses against the seller's assignee. So, in this case, where the Act, itself, gives the plaintiffs the right to defend against enforcement of the home improvement contract, the language in the consumer credit contract held by TMS gives them the same right as against TMS.

Accordingly, because the TMS is subject to those same claims and defenses under the very language of its contract with the plaintiffs. TMS may not enforce the consumer credit contract it holds by foreclosing on the plaintiffs' property for nonpayment.

The plaintiffs' motion for summary judgment is granted.

Chapter Conclusion

Whenever someone acquires commercial paper, the first question he ought to ask is "How certain is it that I will be paid the face value of this document?" Article 3 of the UCC contains the answer to this question: if a negotiable instrument is negotiated to a holder in due course, then that holder knows he has an unconditional right (subject only to a few real defenses) to be paid the value of the note. In some ways, Article 3 is like a marine drill instructor: rigid, but predictable if you follow the rules.

Exam Review

1. **COMMERCIAL PAPER** Commercial paper is a contract to pay money. It can be used either as a substitute for money or as a loan of money. (pp. 594–595)

2. **THE FUNDAMENTAL RULE OF COMMERCIAL PAPER** The possessor of a piece of commercial paper has an unconditional right to be paid, so long as:
   - The paper is negotiable,
   - It has been negotiated to the possessor,
   - The possessor is a holder in due course, and
   - The issuer cannot claim any of the few "real" defenses. (p. 595)

3. **NEGOTIABILITY** The possessor of non-negotiable commercial paper has the same rights—no more, no less—as the person who made the original contract. The possessor of negotiable commercial paper has more rights than the person who made the original contract. (pp. 597–600)

4. **REQUIREMENTS FOR NEGOTIABILITY** To be negotiable, an instrument must:
   - Be in writing,
   - Be signed by the maker or drawer,
   - Contain an unconditional promise or order to pay,
   - State a definite amount of money,
   - Be payable on demand or at a definite time, and
   - Be payable to order or to bearer. (pp. 598–600)

5. **AMBIGUITY** When the terms in a negotiable instrument contradict each other, three rules apply:
   - Words take precedence over numbers.
   - Handwritten terms prevail over typed and printed terms.
   - Typed terms win over printed terms. (pp. 600–601)

6. **NEGOTIATION** To be negotiated, order paper must first be indorsed and then delivered to the transferee. Bearer paper must simply be delivered to the transferee; no indorsement is required. (pp. 601–603)

7. **HOLDER IN DUE COURSE** A holder in due course is a holder who has given value for the instrument, in good faith, without notice of outstanding claims or other defects. (pp. 603–607)

EXAM Strategy

Question: After Irene fell behind on her mortgage payments, she answered an advertisement from Best Financial Consultants offering attractive refinancing opportunities. During a meeting at a McDonald's restaurant, a Best representative told her that the company would arrange for a complete refinancing of her home, pay off two of her creditors, and give her an additional $5,000 in spending money. Irene would only have to pay Best $4,000. Irene signed a blank promissory note that was filled in later by Best representatives for $14,986.61. Best did not fulfill its promises to Irene, but within two weeks, it sold the note to Robin for just under $14,000. Irene refused to pay the note, alleging that Robin was not a holder in due course. Is Irene liable to Robin?

Strategy: Whenever a question asks if someone is a holder in due course, begin by reviewing the requirements for being a holder in due course. Is this person a *holder* who has given *value* for the instrument, in *good faith*, *without notice* of outstanding claims or other defects? (See the "Result" at the end of this section.)

8. **REAL DEFENSES** These real defenses are valid against both a holder and a holder in due course:
   - Forgery
   - Bankruptcy
   - Minority
   - Alteration
   - Duress, mental incapacity, or illegality
   - Fraud in the execution (pp. 608–609)

9. **PERSONAL DEFENSES** These personal defenses are valid against any holder except a holder in due course:
   - Breach of contract
   - Lack of consideration
   - Prior payment
   - Unauthorized completion
   - Fraud in the inducement
   - Non-delivery (pp. 609–610)

EXAM Strategy

Question: Gary, a farmer in Missouri, was having financial problems. He agreed to let Nasib assume control of his farm's finances. After a few months, Gary begged Nasib for money. One week later, $30,000 was wire-transferred to Gary from the Rexford State Bank. Gary thought that Nasib would be responsible for repaying this sum. A man who worked for Nasib stopped Gary on the street and asked him to sign a receipt for the $30,000. Gary signed without intending to commit himself to repaying the money. In fact, the document Gary signed was a blank promissory note, payable to Rexford. Someone later filled in the blanks, putting in $50,000 instead of $30,000. Nasib had received $50,000 before transferring $30,000 to Gary. When Rexford sued Gary to enforce the note, Gary asserted the defense of fraud. Is Gary liable on the note?

Strategy: Whenever someone alleges a defense, the first step is to determine if the defense is real or personal. Personal defenses are not valid against a holder in due course. (See the "Result" at the end of this section.)

10. **A CLAIM IN RECOUPMENT** A claim in recoupment cannot be used against a holder in due course. (p. 610)

11. **CONSUMER CREDIT CONTRACTS** The FTC requires all promissory notes in consumer credit contracts to contain language preventing any subsequent holder from being a holder in due course. (pp. 611–612)

EXAM Strategy

Question: Gina purchased a Chrysler car with a 70,000-mile warranty. She signed a loan contract with the dealer to pay for the car in monthly installments. The dealer sold the contract to the Chrysler Credit Corp. Soon, the car developed a tendency to accelerate abruptly and without warning. Two Chrysler dealers were unable to correct the problem. Gina filed suit against Chrysler Credit Corp., but the company refused to rescind the loan contract. The company argued that, as a holder in due course on the note, it was entitled to be paid regardless of any defects in the car. How would you decide this case if you were the judge?

Strategy: Whenever consumers are involved, consider the possibility that there is a consumer credit contract. The plaintiff in this case is a consumer who borrowed money from a lender to purchase goods from a seller who is affiliated with the lender (both seller and lender are owned by Chrysler). Thus the contract is a consumer credit contract. (See the "Result" at the end of this section.)

7. Result: In this case, Robin is a holder who has given value. Did she act in good faith? We don't know if she actually *believed* the transaction was honest, but the court held that the transaction did not *appear* to be commercially reasonable because Robin's profit was so high. Thus, Robin was not a holder in due course, and Irene was not liable to her.

9. Result: Fraud in the execution is a real defense; fraud in the inducement is personal. In this case, there was no fraud in the execution. Gary could have read the note he signed, but he did not bother. Nasib committed fraud in the inducement, but that is not a valid defense because the Bank is a holder in due course.

11. Result: Chrysler Credit was not a holder in due course. Therefore, it is subject to any defenses that the Gina might have against the dealer, including that the car was defective.

Multiple-Choice Questions

1. Which of the following statements are true?
   (a) A draft is always a check.
   (b) A check is always a draft.
   (c) A note must involve at least three people.
   (d) All of the above.

2. Which of the following standards are *required* for negotiability?
   (a) The instrument must be signed by the payee.
   (b) The instrument must be payable on demand.
   (c) The instrument must be payable to order.
   (d) None of the above.

3. Marla is not a holder in due course if she takes an instrument
   (a) believing that the underlying contract was honest, although it turned out to be dishonest.
   (b) that is a consumer credit contract
   (c) that appeared commercially reasonable when made but turned out to be dishonest.
   (d) All of the above.

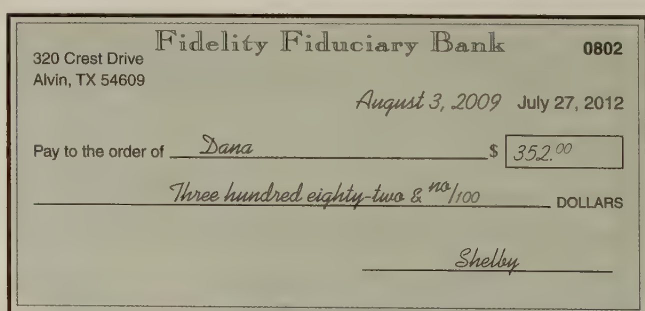
4. ***CPA QUESTION*** In order to negotiate bearer paper, one must:
   (a) indorse the paper.
   (b) indorse and deliver the paper with consideration.
   (c) deliver the paper.
   (d) deliver and indorse the paper.

5. ***CPA QUESTION*** Bond fraudulently induced Teal to make a note payable to Wilk, to whom Bond was indebted. Bond delivered the note to Wilk. Wilk negotiated the instrument to Monk, who purchased it with knowledge of the fraud and after it was overdue. If Wilk qualifies as a holder in due course, which of the following statements is correct?
   (a) Monk has the standing of a holder in due course through Wilk.
   (b) Teal can successfully assert the defense of fraud in the inducement against Monk.
   (c) Monk personally qualifies as a holder in due course.
   (d) Teal can successfully assert the defense of fraud in the inducement against Wilk.

Essay Questions

1. Kay signed a promissory note for $220,000 that was payable to Investments, Inc. The company then indorsed the note over to its lawyers to pay past and future legal fees. Were the lawyers holders in due course?

2. Shelby wrote the following check to Dana. When is it payable, and for how much?



Fidelity Fiduciary Bank 0802
320 Crest Drive
Alvin, TX 54609
August 3, 2009 July 27, 2012
Pay to the order of Dana $ 352.00
Three hundred eighty-two & no/100 DOLLARS
Shelby

3. On June 30, John signed a demand promissory note for $2,000 to the Camelot Country Club. The note stated that it was being given in payment for a membership

in the country club, but in fact, the club was insolvent, its memberships had no value, and John was already a member. He was also the club's golf pro. John signed the note at the request of the club's manager to enable the club to borrow money from the National Bank. The Bank of Dallas purchased the note on July 14 and immediately made demand. John alleged the note was overdue, and therefore the bank could not be a holder in due course. Do you agree? What is the moral of this story?

4. Duncan Properties, Inc. agrees to buy a car from Shifty for $25,000. The company issues a promissory note in payment. The car that Duncan bought is defective. If Shifty still has the note, does Duncan have to pay it?

5. Shifty sells that note to Honest Abe for $22,000. Does Duncan have to pay Abe?

6. Abe gives the note to his daughter, Prudence, for her birthday. Is Prudence a holder in due course? Does Duncan have to pay Prudence?

Discussion Questions

1. In the *Buckeye* case, the court ruled that Buckeye was not a holder in due course and the check was not valid because Buckeye should have checked with Sheth's bank before buying the check. Would this remedy have worked? What could Buckeye have done to protect itself?

2. In the *Antuna* case, the Antunas were foolish to sign an agreement with an unlicensed contractor to install aluminum siding. There is no evidence that TMS was acting in bad faith. Why should it suffer for the Antunas' mistake? What could TMS have done to protect itself?

3. Catherine suffered serious physical injuries in an automobile accident and became acutely depressed as a result. One morning, she received a check for $17,400 in settlement of her claims arising out of the accident. She indorsed the check and placed it on the kitchen table. She then called Robert, her longtime roommate, to tell him the check had arrived. That afternoon, she jumped from the roof of her apartment building, killing herself. The police found the check and a note from her, stating that she was giving it to Robert. Had Catherine negotiated the check to Robert?

4. ***ETHICS*** In desperate financial trouble and fearful of losing his house, Abbott asked his friend Taylor for help. Taylor had been an officer of the Bank, so she put Abbott in touch with some of her former colleagues there. When a $300,000 loan was ready for closing, Taylor informed Abbott that she expected a commission of $15,000. Taylor threatened to block the loan if her demands were not met. Abbott was desperate, so he agreed to give Gardner $4,000 in cash and a promissory note for $11,000. On what grounds might Abbott claim that the note is invalid? Would this be a valid defense? Even if Gardner was in the right legally, was she in the right ethically?

CHAPTER 26

Liability for Negotiable Instruments

© neelsky/Shutterstock.com

Willie groaned under his breath. How had he ever gotten into this mess? Producing a video for the Hot Tamales had seemed a golden opportunity. He loved the music, and he didn't even mind living in a trailer on location, but the business end was driving him to despair. That morning, he had glanced out his trailer window and seen Vidalia slinking across the set. How could he have been so stupid as to let her finance the video? "Willie, darling," she had purred, as a circle of smoke from her cigarette caught in his throat, "I know that your promissory note for $50,000 isn't due 'til next month, but I simply do *not* like the music in this video, and I *cannot* support what I do not like. It would be so bad for my karma. But, take your time, dearest one, my driver will be back this afternoon to collect what you owe me."

I *cannot* support what I do not like. It would be so bad for my karma.

Sitting in his trailer holding his head in his hands, Willie heard a timid knock. Opening the door, he saw a teenage girl smiling at him. "Hi, Mister Willie," she beamed. "I'm Vera Brown. My mom sent me over to collect the rent check for the trailer. And could I please, please have your autograph? Your work is so awesome."

Willie smiled. "Sure, kiddo, here's my autograph and here's the rent check."

Seeing a helpful, enthusiastic kid like Vera helped brighten an otherwise dark day. But his spirits took a blow later that afternoon when the landlady came by for her check and Willie discovered she had no daughter. He immediately called his bank to stop payment on the check, only to discover that his balance was zero dollars and zero cents. Vera had used her computer to create a second check drawn on Willie's account. She had then forged his signature and cashed both checks before skipping town.

To understand the full impact of the day's catastrophes, Willie needs a crash course on liability for negotiable instruments:

- *The Promissory Note to Vidalia.* When Willie gave a promissory note in payment for the debt, the debt was *suspended* until the note comes due. *Verdict:* Vidalia cannot collect her money until next month, when the note is due.
- *The Rent Check to the Landlady.* Vera was not Mrs. Brown's lovely daughter; she was an impostor. Banks are not liable on checks that the issuer voluntarily gives to an impostor.[1] *Verdict:* The bank will not reimburse Willie for the rent check. Of course, Willie must still pay the landlady.
- *The Check That Vera Forged.* A bank is liable if it pays a check on which the issuer's name is forged. *Verdict:* The bank must reimburse Willie for the second check.

INTRODUCTION

In Chapter 25, you learned that the issuer of a negotiable instrument is liable to a holder in due course, unless the issuer can assert one of a limited number of real defenses. Against a mere holder, an issuer can assert both personal and real defenses. The life of a negotiable instrument, however, is more complicated than these simple statements indicate. Not everyone who signs a negotiable instrument is an issuer, and not everyone who presents an instrument for payment is a holder in due course or even a holder. This chapter focuses on the liability of these extra players: non-issuers who sign an instrument and non-holders who receive payment. The liability of someone who has signed an instrument is called **signature liability**. The liability of someone who receives payment on an instrument is called **warranty liability**.

Signature liability
The liability of someone who signs an instrument.

Warranty liability
The liability of someone who receives payment on an instrument.

The Contract versus the Instrument

People generally do not hand out promissory notes or checks to random strangers. Negotiable instruments are issued to fulfill a contract. The instruments create a *second* contract to pay the debt created by the *first* agreement. When Beverly agrees to buy a house from John, that is Contract No. 1. When she gives him a promissory note in payment, that is Contract No. 2. When Jodie buys lunch with a Visa card, her promise to repay Visa by check at the end of the month is Contract No. 1. The check she mails to Visa is Contract No. 2.

Once an instrument has been accepted in payment for a debt, the debt is *suspended* until the instrument is paid or dishonored. When Beverly buys a house from John, she pays with a promissory note that is not due for five years. Until she defaults on the note, he cannot sue her for payment even if, after a year, he decides he wants all the money right away. When Visa receives Jodie's check, her debt is suspended until the company tries to cash the check. If the check is returned for insufficient funds, the obligation is revived and Visa can pursue Jodie until she pays it for real.

Enforcing an Instrument

The signature liability rules determine who is liable on an instrument. But *to whom* are they liable? Who has the right to demand payment? The Uniform Commercial Code (UCC) provides this list:[2]

[1]You remember from Chapter 25 that *issuer* means the *drawer* of a check or the *maker* of a note.
[2]UCC §3-301.

- A holder of the instrument
- Anyone to whom the **shelter rule** applies (that is, any non-holder with the rights of a holder; review the shelter rule discussion in Chapter 25 if this explanation makes no sense to you)
- A holder who has lost the instrument.[3]

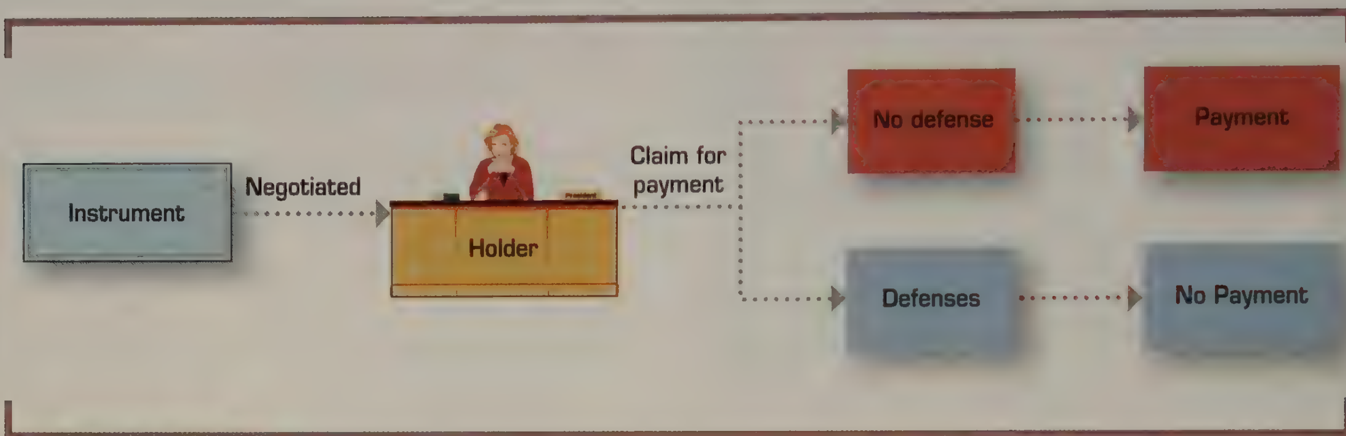


EXHIBIT 26.1

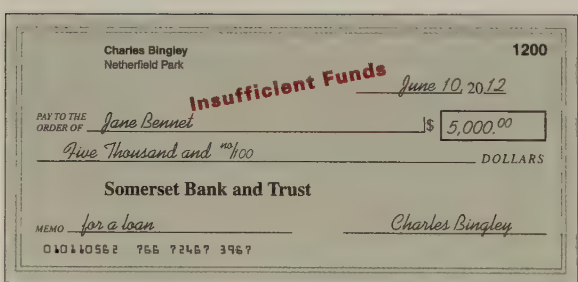
Recall that a holder is someone in possession of an instrument that has been validly negotiated.[4] Keep in mind, however, that the real and personal defenses discussed in Chapter 25 can be used against a holder. Therefore, in practice, the answer to the question "Who has the right to demand payment on an instrument?" is "A holder against whom no defenses can be used." Exhibit 26.1 illustrates this concept.



This check has been dishonored.

Primary versus Secondary Liability

A number of different people may be liable on the same negotiable instrument, but some are *primarily* liable, others are only *secondarily* liable. Someone with **primary liability** is unconditionally liable—he must pay unless he has a valid defense. Those with **secondary liability** pay only if the person with primary liability does not. The holder of an instrument must first ask for payment from those who are primarily liable before making demand against anyone who is only secondarily liable.

The Payment Process

The payment process comprises as many as three steps:

Presentment
A holder of an instrument demands payment from someone who is obligated to pay it.

- ***Presentment.*** Presentment means that the holder of the instrument demands payment from someone who is obligated to pay it (such as the maker or drawee).[5] To present, the holder must (1) exhibit the instrument, (2) show identification, and (3) surrender the instrument (if paid in full) or give a receipt (if only partially paid).

---

[3]Although technically some non-holders (such as a holder who has lost the instrument) can demand payment, in this chapter we use "holder" as shorthand to include anyone entitled to enforce an instrument.
[4]Negotiation is discussed in Chapter 25.
[5]UCC §3-501.

- ***Dishonor***. The instrument is due, but the maker (of a note) or the drawee (of a draft) refuses to pay.[6]
- ***Notice of Dishonor***. The holder of the instrument notifies those who are secondarily liable that the instrument has been dishonored.[7] This notice can be given by any reasonable means, including oral, written, or electronic communication. It must, however, be given within 30 days of the dishonor (except in the case of banks, which must give notice by midnight of the next banking day). The notice must simply identify the instrument and indicate that it has been dishonored. Anyone who has ever bounced a check has received a notice of dishonor—a check stamped "Insufficient Funds."

Dishonor
An obligor refuses to pay an instrument that is due.

Signature Liability

Virtually everyone who signs an instrument is potentially liable for it, but the liability depends upon the capacity in which it was signed. The maker of a note, for example, has different liability from an indorser. Capacity can sometimes be difficult to determine if the signature is not labeled—"maker," "indorser," "guarantor," "acceptor," etc. (All of these terms will be defined below.) In the absence of a label, courts generally look at the location of the signature. Someone who signs a check or a note in the lower right-hand corner is presumed to be an issuer. If a drawee bank signs on the face of a check, it is an acceptor. Someone who signs on the back of an instrument is considered to be an indorser.

Maker

As you remember from Chapter 25, the issuer of a note is called the **maker**. The maker is *primarily* liable.[8] He has promised to pay, and pay he must, unless he has a valid defense.[9] If two makers sign a note, they are both *jointly and severally* liable. The holder can demand full payment from either or partial payment from both. Suppose that Shane offers to buy Marilyn's bookstore in return for a $20,000 promissory note. Because Shane has no assets, Marilyn insists that his supplier, Alexis, also sign the note as co-maker. Once Alexis signs the note, Marilyn has the right to demand full payment from either her or Shane. Of course, if Alexis pays the note, she can demand that Shane reimburse her. If Shane refuses, it is Alexis's problem, not Marilyn's.

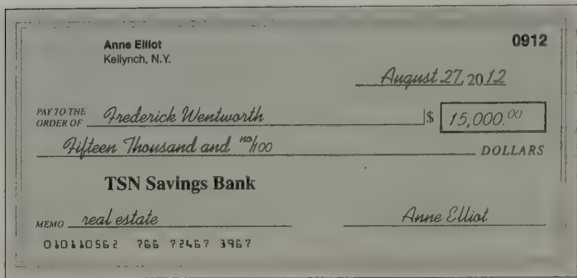
Drawer

A check is the most common form of a draft—it is an order telling a bank to pay money. Throughout this chapter, we will use checks as an example because they are the most familiar form of draft, but these same rules apply to all drafts. The drawer is the person who writes the check.

The drawer of a check has *secondary* liability. He is not liable until he has received notice that the bank has dishonored the check.[10] Although the bank pays the check with the drawer's funds, the drawer is secondarily liable in the sense that he does not have to write a new check or give cash to the holder unless the bank dishonors the original check. Suppose that Shane writes a $10,000 check to pay Casey for new inventory. Casey is nervous and, before he can get to the bank to deposit the check, he calls Shane seven times to ask

---

[6]UCC §3-502.
[7]UCC §3-503.
[8]UCC §3-412.
[9]For example, if the maker goes bankrupt, he does not have to pay the note because bankruptcy is a defense even against a holder in due course.
[10]UCC §3-414.



Anne Elliot is only secondarily liable, but no one is primarily liable until the bank accepts the check.

whether the check is good. He even asks Shane for payment in cash instead of by check. Shane finally snarls at Casey, "Just go cash the check and get off my back, will you?" At this point, Casey has no recourse against Shane because Shane is only secondarily liable.
